VOL. II.—JUNE, 1858.—NO. VIII.

CHESUNCOOK.

AT 5, P. M., September 13th, 185—, I left Boston in the steamer for Bangor by the outside course. It was a warm and still night,—warmer, probably, on the water than on the land,—and the sea was as smooth as a small lake in summer, merely rippled. The passengers went singing on the deck, as in a parlor, till ten o'clock. We passed a vessel on her beam-ends on a rock just outside the islands, and some of us thought that she was the "rapt ship" which ran

"on her side so low
That she drank water, and her keel ploughed
air,"

not considering that there was no wind, and that she was under bare poles. Now we have left the islands behind and are off Nahant. We behold those features which the discoverers saw, apparently unchanged. Now we see the Cape Ann lights, and now pass near a small village-like fleet of mackerel fishers at anchor, probably off Gloucester. They salute us with a shout from their low decks; but I understand their "Good evening" to mean, "Don't run against me, Sir." From the wonders of the deep we go below to get deeper sleep. And then the absurdity of being waked up in the night by a man who wants the job of blacking your

boots! It is more inevitable than seasickness, and may have something to do with it. It is like the ducking you get on crossing the line the first time. I trusted that these old customs were abolished. They might with the same propriety insist on blacking your face. I heard of one man who complained that somebody had stolen his boots in the night; and when he found them, he wanted to know what they had done to them,—they had spoiled them,—he never put that stuff on them; and the boot-black narrowly escaped paying damages.

Anxious to get out of the whale's belly, I rose early, and joined some old salts, who were smoking by a dim light on a sheltered part of the deck. We were just getting into the river. They knew all about it, of course. I was proud to find that I had stood the voyage so well, and was not in the least digested. We brushed up and watched the first signs of dawn through an open port; but the day seemed to hang fire. We inquired the time; none of my companions had a chronometer. At length an African prince rushed by, observing, "Twelve o'clock, gentlemen!" and blew out the light. It was moon-rise. So I slunk down into the monster's bowels again.

The first land we make is Manheigan Island, before dawn, and next St. George's Islands, seeing two or three lights. Whitehead, with its bare rocks and funereal bell, is interesting. Next I remember that the Camden Hills attracted my eyes, and afterward the hills about Frankfort. We reached Bangor about noon.

When I arrived, my companion that was to be had gone up river, and engaged an Indian, Joe Aitteon, a son of the Governor, to go with us to Chesuncook Lake. Joe had conducted two white men a-moose-hunting in the same direction the year before. He arrived by cars at Bangor that evening, with his canoe and a companion, Sabattis Solomon, who was going to leave Bangor the following Monday with Joe's father, by way of the Penobscot, and join Joe in moose-hunting at Chesuncook, when we had done with him. They took supper at my friend's house and lodged in his barn, saying that they should fare worse than that in the woods. They only made Watch bark a little, when they came to the door in the night for water, for he does not like Indians.

The next morning Joe and his canoe were put on board the stage for Moosehead Lake, sixty and odd miles distant, an hour before we started in an open wagon. We carried hard bread, pork, smoked beef, tea, sugar, etc., seemingly enough for a regiment; the sight of which brought together reminded me by what ignoble means we had maintained our ground hitherto. We went by the Avenue Road, which is quite straight and very good, north-westward toward Moosehead Lake, through more than a dozen flourishing towns, with almost every one its academy,—not one of which, however, is on my General Atlas, published, alas! in 1824; so much are they before the age, or I behind it! The earth must have been considerably lighter to the shoulders of General Atlas then.

It rained all this day and till the middle of the next forenoon, concealing the landscape almost entirely; but we had hardly got out of the streets of Bangor

before I began to be exhilarated by the sight of the wild fir and spruce tops, and those of other primitive evergreens, peering through the mist in the horizon. It was like the sight and odor of cake to a schoolboy. He who rides and keeps the beaten track studies the fences chiefly. Near Bangor, the fence-posts, on account of the frost's heaving them in the clayey soil, were not planted in the ground, but were mortised into a transverse horizontal beam lying on the surface. Afterwards, the prevailing fences were log ones, with sometimes a Virginia fence, or else rails slanted over crossed stakes,—and these zigzagged or played leap-frog all the way to the lake, keeping just ahead of us. After getting out of the Penobscot Valley, the country was unexpectedly level, or consisted of very even and equal swells, for twenty or thirty miles, never rising above the general level, but affording, it is said, a very good prospect in clear weather, with frequent views of Katadn,—straight roads and long hills. The houses were far apart, commonly small and of one story, but framed. There was very little land under cultivation, yet the forest did not often border the road. The stumps were frequently as high as one's head, showing the depth of the snows. The white hay-caps, drawn over small stacks of beans or corn in the fields, on account of the rain, were a novel sight to me. We saw large flocks of pigeons, and several times came within a rod or two of partridges in the road. My companion said, that, in one journey out of Bangor, he and his son had shot sixty partridges from his buggy. The mountain-ash was now very handsome, as also the wayfarer's-tree or hobble-bush, with its ripe purple berries mixed with red. The Canada thistle, an introduced plant, was the prevailing weed all the way to the lake,—the road-side in many places, and fields not long cleared, being densely filled with it as with a crop, to the exclusion of everything else. There were also whole fields full of ferns, now rusty and withering, which in older countries are commonly confined to wet ground. There

were very few flowers, even allowing for the lateness of the season. It chanced that I saw no asters in bloom along the road for fifty miles, though they were so abundant then in Massachusetts,—except in one place one or two of the aster acuminatus,—and no golden-rods till within twenty miles of Monson, where I saw a three-ribbed one. There were many late buttercups, however, and the two fire-weeds, erechthites and epilobium, commonly where there had been a burning, and at last the pearly everlasting. I noticed occasionally very long troughs which supplied the road with water, and my companion said that three dollars annually were granted by the State to one man in each school-district, who provided and maintained a suitable water-trough by the road-side, for the use of travellers,—a piece of intelligence as refreshing to me as the water itself. That legislature did not sit in vain. It was an Oriental act, which made me wish that I was still farther down East,—another Maine law, which I hope we may get in Massachusetts. That State is banishing bar-rooms from its highways, and conducting the mountain-springs thither.

The country was first decidedly mountainous in Garland, Sangerville, and onwards, twenty-five or thirty miles from Bangor. At Sangerville, where we stopped at mid-afternoon to warm and dry ourselves, the landlord told us that he had found a wilderness where we found him. At a fork in the road between Abbot and Monson, about twenty miles from Moosehead Lake, I saw a guide-post surmounted by a pair of moose-horns, spreading four or five feet, with the word "Monson" painted on one blade, and the name of some other town on the other. They are sometimes used for ornamental hat-trees, together with deers' horns, in front entries; but, after the experience which I shall relate, I trust that I shall have a better excuse for killing a moose than that I may hang my hat on his horns. We reached Monson, fifty miles from Bangor, and thirteen from the lake, after dark.

At four o'clock the next morning, in

the dark, and still in the rain, we pursued our journey. Close to the academy in this town they have erected a sort of gallows for the pupils to practise on. I thought that they might as well hang at once all who need to go through such exercises in so new a country, where there is nothing to hinder their living an outdoor life. Better omit Blair, and take the air. The country about the south end of the lake is quite mountainous, and the road began to feel the effects of it. There is one hill which, it is calculated, it takes twenty-five minutes to ascend. In many places the road was in that condition called *repaired*, having just been whittled into the required semi-cylindrical form with the shovel and scraper, with all the softest inequalities in the middle, like a hog's back with the bristles up, and Jehu was expected to keep astride of the spine. As you looked off each side of the bare sphere into the horizon, the ditches were awful to behold,—a vast hollowness, like that between Saturn and his ring. At a tavern hereabouts the hostler greeted our horse as an old acquaintance, though he did not remember the driver. He said that he had taken care of that little mare for a short time, a year or two before, at the Mount Kineo House, and thought she was not in as good condition as then. Every man to his trade. I am not acquainted with a single horse in the world, not even the one that kicked me.

Already we had thought that we saw Moosehead Lake from a hill-top, where an extensive fog filled the distant lowlands, but we were mistaken. It was not till we were within a mile or two of its south end that we got our first view of it,—a suitably wild-looking sheet of water, sprinkled with small low islands, which were covered with shaggy spruce and other wild wood,—seen over the infant port of Greenville, with mountains on each side and far in the north, and a steamer's smoke-pipe rising above a roof. A pair of moose-horns ornamented a corner of the public-house where we left our horse, and a few rods distant lay the

small steamer *Moosehead*, Captain King. There was no village, and no summer road any farther in this direction,—but a winter road, that is, one passable only when deep snow covers its inequalities, from Greenville up the east side of the lake to Lily Bay, about twelve miles.

I was here first introduced to Joe. He had ridden all the way on the outside of the stage the day before, in the rain, giving way to ladies, and was well wetted. As it still rained, he asked if we were going to “put it through.” He was a good-looking Indian, twenty-four years old, apparently of unmixed blood, short and stout, with a broad face and reddish complexion, and eyes, methinks, narrower and more turned-up at the outer corners than ours, answering to the description of his race. Beside his under-clothing, he wore a red flannel shirt, woollen pants, and a black Kossuth hat, the ordinary dress of the lumberman, and, to a considerable extent, of the Penobscot Indian. When, afterward, he had occasion to take off his shoes and stockings, I was struck with the smallness of his feet. He had worked a good deal as a lumberman, and appeared to identify himself with that class. He was the only one of the party who possessed an India-rubber jacket. The top strip or edge of his canoe was worn nearly through by friction on the stage.

At eight o'clock, the steamer with her bell and whistle, scaring the moose, summoned us on board. She was a well-appointed little boat, commanded by a gentlemanly captain, with patent life-seats, and metallic life-boat, and dinner on board, if you wish. She is chiefly used by lumberers for the transportation of themselves, their boats, and supplies, but also by hunters and tourists. There was another steamer, named *Amphitrite*, laid up close by; but, apparently, her name was not more trite than her hull. There were also two or three large sail-boats in port. These beginnings of commerce on a lake in the wilderness are very interesting,—these larger white birds that come to keep company with the gulls. There

were but few passengers, and not one female among them: a St. Francis Indian, with his canoe and moose-hides, two explorers for lumber, three men who landed at Sandbar Island, and a gentleman who lives on Deer Island, eleven miles up the lake, and owns also Sugar Island, between which and the former the steamer runs; these, I think, were all beside ourselves. In the saloon was some kind of musical instrument, cherubim or seraphim, to soothe the angry waves; and there, very properly, was tacked up the map of the public lands of Maine and Massachusetts, a copy of which I had in my pocket.

The heavy rain confining us to the saloon awhile, I discoursed with the proprietor of Sugar Island on the condition of the world in Old Testament times. But at length, leaving this subject as fresh as we found it, he told me that he had lived about this lake twenty or thirty years, and yet had not been to the head of it for twenty-one years. He faces the other way. The explorers had a fine new birch on board, larger than ours, in which they had come up the Piscataquis from Howland, and they had had several messes of trout already. They were going to the neighborhood of Eagle and Chamberlain Lakes, or the head-waters of the St. John, and offered to keep us company as far as we went. The lake to-day was rougher than I found the ocean, either going or returning, and Joe remarked that it would swamp his birch. Off Lily Bay it is a dozen miles wide, but it is much broken by islands. The scenery is not merely wild, but varied and interesting; mountains were seen, farther or nearer, on all sides but the north-west, their summits now lost in the clouds; but Mount Kineo is the principal feature of the lake, and more exclusively belongs to it. After leaving Greenville, at the foot, which is the nucleus of a town some eight or ten years old, you see but three or four houses for the whole length of the lake, or about forty miles, three of them the public-houses at which the steamer is advertised to stop, and the shore is an unbroken wilderness. The

prevailing wood seemed to be spruce, fir, birch, and rock-maple. You could easily distinguish the hard wood from the soft, or "black growth," as it is called, at a great distance,—the former being smooth, round-topped, and light green, with a bowery and cultivated look.

Mount Kineo, at which the boat touched, is a peninsula with a narrow neck, about midway the lake on the east side. The celebrated precipice is on the east or land side of this, and is so high and perpendicular that you can jump from the top many hundred feet into the water which makes up behind the point. A man on board told us that an anchor had been sunk ninety fathoms at its base before reaching bottom! Probably it will be discovered ere long that some Indian maiden jumped off it for love once, for true love never could have found a path more to its mind. We passed quite close to the rock here, since it is a very bold shore, and I observed marks of a rise of four or five feet on it. The St. Francis Indian expected to take in his boy here, but he was not at the landing. The father's sharp eyes, however, detected a canoe with his boy in it far away under the mountain, though no one else could see it. "Where is the canoe?" asked the captain, "I don't see it"; but he held on nevertheless, and by and by it hove in sight.

We reached the head of the lake about noon. The weather had in the mean while cleared up, though the mountains were still capped with clouds. Seen from this point, Mount Kineo, and two other allied mountains ranging with it north-easterly, presented a very strong family likeness, as if all cast in one mould. The steamer here approached a long pier projecting from the northern wilderness and built of some of its logs,—and whistled, where not a cabin nor a mortal was to be seen. The shore was quite low, with flat rocks on it, overhung with black ash, arbor-vitæ, etc., which at first looked as if they did not care a whistle for us. There was not a single cabman to cry "Coach!" or inveigle us to the United

States Hotel. At length a Mr. Hinckley, who has a camp at the other end of the "carry," appeared with a truck drawn by an ox and a horse over a rude log-railway through the woods. The next thing was to get our canoe and effects over the carry from this lake, one of the heads of the Kennebec, into the Penobscot River. This railway from the lake to the river occupied the middle of a clearing two or three rods wide and perfectly straight through the forest. We walked across while our baggage was drawn behind. My companion went ahead to be ready for partridges, while I followed, looking at the plants.

This was an interesting botanical locality for one coming from the South to commence with; for many plants which are rather rare, and one or two which are not found at all, in the eastern part of Massachusetts, grew abundantly between the rails,—as Labrador tea, *kalmia glauca*, Canada blueberry, (which was still in fruit, and a second time in bloom,) *Clintonia* and *Linnaea Borealis*, which last a lumberer called *moxon*, creeping snowberry, painted trillium, large-flowered bell-wort, etc. I fancied that the aster *radula*, *diplopappus umbellatus*, *solidago lanceolatus*, red trumpet-weed, and many others which were conspicuously in bloom on the shore of the lake and on the carry, had a peculiarly wild and primitive look there. The spruce and fir trees crowded to the track on each side to welcome us, the arbor-vitæ with its changing leaves prompted us to make haste, and the sight of the canoe-birch gave us spirits to do so. Sometimes an evergreen just fallen lay across the track with its rich burden of cones, looking, still, fuller of life than our trees in the most favorable positions. You did not expect to find such *spruce* trees in the wild woods, but they evidently attend to their toilets each morning even there. Through such a front-yard did we enter that wilderness.

There was a very slight rise above the lake,—the country appearing like, and perhaps being, partly a swamp,—and at

length a gradual descent to the Penobscot, which I was surprised to find here a large stream, from twelve to fifteen rods wide, flowing from west to east, or at right angles with the lake, and not more than two and a half miles from it. The distance is nearly twice too great on the Map of the Public Lands, and on Colton's Map of Maine, and Russell Stream is placed too far down. Jackson makes Moosehead Lake to be nine hundred and sixty feet above high water in Portland harbor. It is higher than Chesuncook, for the lumberers consider the Penobscot, where we struck it, twenty-five feet lower than Moosehead,—though eight miles above it is said to be the highest, so that the water can be made to flow either way, and the river falls a good deal between here and Chesuncook. The carry-man called this about one hundred and forty miles above Bangor by the river, or two hundred from the ocean, and fifty-five miles below Hilton's on the Canada road, the first clearing above, which is four and a half miles from the source of the Penobscot.

At the north end of the carry, in the midst of a clearing of sixty acres or more, there was a log camp of the usual construction, with something more like a house adjoining, for the accommodation of the carryman's family and passing lumberers. The bed of withered fir-twigs smelled very sweet, though really very dirty. There was also a store-house on the bank of the river, containing pork, flour, iron, bateaux, and birches, locked up.

We now proceeded to get our dinner, which always turned out to be tea, and to pitch canoes, for which purpose a large iron pot lay permanently on the bank. This we did in company with the explorers. Both Indians and whites use a mixture of rosin and grease for this purpose,—that is, for the pitching, not the dinner. Joe took a small brand from the fire and blew the heat and flame against the pitch on his birch, and so melted and spread it. Sometimes he put his mouth over the suspected spot and sucked, to see if it admitted air; and at

one place, where we stopped, he set his canoe high on crossed stakes, and poured water into it. I narrowly watched his motions, and listened attentively to his observations, for we had employed an Indian mainly that I might have an opportunity to study his ways. I heard him swear once mildly, during this operation, about his knife being as dull as a hoe,—an accomplishment which he owed to his intercourse with the whites; and he remarked, "We ought to have some tea before we start; we shall be hungry before we kill that moose."

At mid-afternoon we embarked on the Penobscot. Our birch was nineteen and a half feet long by two and a half at the widest part, and fourteen inches deep within, both ends alike, and painted green, which Joe thought affected the pitch and made it leak. This, I think, was a middling-sized one. That of the explorers was much larger, though probably not much longer. This carried us three with our baggage, weighing in all between five hundred and fifty and six hundred pounds. We had two heavy, though slender, rock-maple paddles, one of them of bird's-eye maple. Joe placed birch bark on the bottom for us to sit on, and slanted cedar splints against the cross-bars to protect our backs, while he himself sat upon a cross-bar in the stern. The baggage occupied the middle or widest part of the canoe. We also paddled by turns in the bows, now sitting with our legs extended, now sitting upon our legs, and now rising upon our knees; but I found none of these positions endurable, and was reminded of the complaints of the old Jesuit missionaries of the torture they endured from long confinement in constrained positions in canoes, in their long voyages from Quebec to the Huron country; but afterwards I sat on the cross-bars, or stood up, and experienced no inconvenience.

It was dead water for a couple of miles. The river had been raised about two feet by the rain, and lumberers were hoping for a flood sufficient to bring down the logs that were left in the spring.

Its banks were seven or eight feet high, and densely covered with white and black spruce,—which, I think, must be the commonest trees thereabouts,—fir, arbor-vitæ, canoe, yellow, and black birch, rock, mountain, and a few red maples, beech, black and mountain ash, the large-toothed aspen, many civil-looking elms, now imbrowned, along the stream, and at first a few hemlocks also. We had not gone far before I was startled by seeing what I thought was an Indian encampment, covered with a red flag, on the bank, and exclaimed, "Camp!" to my comrades. I was slow to discover that it was a red maple changed by the frost. The immediate shores were also densely covered with the speckled alder, red osier, shrubby willows or sallows, and the like. There were a few yellow-lily-pads still left, half drowned, along the sides, and sometimes a white one. Many fresh tracks of moose were visible where the water was shallow, and on the shore, and the lily-stems were freshly bitten off by them.

After paddling about two miles, we parted company with the explorers, and turned up Lobster Stream, which comes in on the right, from the south-east. This was six or eight rods wide, and appeared to run nearly parallel with the Penobscot. Joe said that it was so called from small fresh-water lobsters found in it. It is the Matahumkeag of the maps. My companion wished to look for moose signs, and intended, if it proved worth the while, to camp up that way, since the Indian advised it. On account of the rise of the Penobscot, the water ran up this stream quite to the pond of the same name, one or two miles. The Spencer Mountains, east of the north end of Moosehead Lake, were now in plain sight in front of us. The kingfisher flew before us, the pigeon woodpecker was seen and heard, and nuthatches and chickadees close at hand. Joe said that they called the chickadee *kecunnilessu* in his language. I will not vouch for the spelling of what possibly was never spelt before, but I pronounced after him till he said it would do. We passed close to

a woodcock, which stood perfectly still on the shore, with feathers puffed up, as if sick. This, Joe said, they called *nipsque-cohossus*. The kingfisher was *skuscum-onsuck*; bear was *wassus*; Indian Devil, *lunxus*; the mountain-ash, *upahsis*. This was very abundant and beautiful. Moose-tracks were not so fresh along this stream, except in a small creek about a mile up it, where a large log had lodged in the spring, marked "W-cross-girdle-crow-foot." We saw a pair of moose-horns on the shore, and I asked Joe if a moose had shed them; but he said there was a head attached to them, and I knew that they did not shed their heads more than once in their lives.

After ascending about a mile and a half, to within a short distance of Lobster Lake, we returned to the Penobscot. Just below the mouth of the Lobster we found quick water, and the river expanded to twenty or thirty rods in width. The moose-tracks were quite numerous and fresh here. We noticed in a great many places narrow and well-trodden paths by which they had come down to the river, and where they had slid on the steep and clayey bank. Their tracks were either close to the edge of the stream, those of the calves distinguishable from the others, or in shallow water; the holes made by their feet in the soft bottom being visible for a long time. They were particularly numerous where there was a small bay, or *pokelogan*, as it is called, bordered by a strip of meadow, or separated from the river by a low peninsula covered with coarse grass, wool-grass, etc., wherein they had waded back and forth and eaten the pads. We detected the remains of one in such a spot. At one place, where we landed to pick up a summer duck, which my companion had shot, Joe peeled a canoe-birch for bark for his hunting-horn. He then asked if we were not going to get the other duck, for his sharp eyes had seen another fall in the bushes a little farther along, and my companion obtained it. I now began to notice the bright red berries of the tree-cranberry, which grows

eight or ten feet high, mingled with the alders and cornel along the shore. There was less hard wood than at first.

After proceeding a mile and three quarters below the mouth of the Lobster, we reached, about sundown, a small island at the head of what Joe called the Moosehorn Dead-water, (the Moosehorn, in which he was going to hunt that night, coming in about three miles below,) and on the upper end of this we decided to camp. On a point at the lower end lay the carcass of a moose killed a month or more before. We concluded merely to prepare our camp, and leave our baggage here, that all might be ready when we returned from moose-hunting. Though I had not come a-hunting, and felt some compunctions about accompanying the hunters, I wished to see a moose near at hand, and was not sorry to learn how the Indian managed to kill one. I went as reporter or chaplain to the hunters,—and the chaplain has been known to carry a gun himself. After clearing a small space amid the dense spruce and fir trees, we covered the damp ground with a shingling of fir-twigs, and, while Joe was preparing his birch-horn and pitching his canoe,—for this had to be done whenever we stopped long enough to build a fire, and was the principal labor which he took upon himself at such times,—we collected fuel for the night, large wet and rotting logs, which had lodged at the head of the island, for our hatchet was too small for effective chopping; but we did not kindle a fire, lest the moose should smell it. Joe set up a couple of forked stakes, and prepared half a dozen poles, ready to cast one of our blankets over in case it rained in the night, which precaution, however, was omitted the next night. We also plucked the ducks which had been killed for breakfast.

While we were thus engaged in the twilight, we heard faintly, from far down the stream, what sounded like two strokes of a woodchopper's axe, echoing dully through the grim solitude. We are wont to liken many sounds, heard at a distance

in the forest, to the stroke of an axe, because they resemble each other under those circumstances, and that is the one we commonly hear there. When we told Joe of this, he exclaimed, "By George, I'll bet that was moose! They make a noise like that." These sounds affected us strangely, and by their very resemblance to a familiar one, where they probably had so different an origin, enhanced the impression of solitude and wilderness.

At starlight we dropped down the stream, which was a dead-water for three miles, or as far as the Moosehorn; Joe telling us that we must be very silent, and he himself making no noise with his paddle, while he urged the canoe along with effective impulses. It was a still night, and suitable for this purpose,—for if there is wind, the moose will smell you, —and Joe was very confident that he should get some. The harvest moon had just risen, and its level rays began to light up the forest on our right, while we glided downward in the shade on the same side, against the little breeze that was stirring. The lofty spiring tops of the spruce and fir were very black against the sky, and more distinct than by day, close bordering this broad avenue on each side; and the beauty of the scene, as the moon rose above the forest, it would not be easy to describe. A bat flew over our heads, and we heard a few faint notes of birds from time to time, perhaps the myrtle-bird for one, or the sudden plunge of a musquash, or saw one crossing the stream before us, or heard the sound of a rill emptying in, swollen by the recent rain. About a mile below the island, when the solitude seemed to be growing more complete every moment, we suddenly saw the light and heard the crackling of a fire on the bank, and discovered the camp of the two explorers; they standing before it in their red shirts, and talking aloud of the adventures and profits of the day. They were just then speaking of a bargain, in which, as I understood, somebody had cleared twenty-five dollars. We glided by without speaking, close under the

bank, within a couple of rods of them; and Joe, taking his horn, imitated the call of the moose, till we suggested that they might fire on us. This was the last we saw of them, and we never knew whether they detected or suspected us.

I have often wished since that I was with them. They search for timber over a given section, climbing hills and often high trees to look off,—explore the streams by which it is to be driven, and the like,—spend five or six weeks in the woods, they two alone, a hundred miles or more from any town,—roaming about, and sleeping on the ground where night overtakes them,—depending chiefly on the provisions they carry with them, though they do not decline what game they come across,—and then in the fall they return and make report to their employers, determining the number of teams that will be required the following winter. Experienced men get three or four dollars a day for this work. It is a solitary and adventurous life, and comes nearest to that of the trapper of the West, perhaps. They work ever with a gun as well as an axe, let their beards grow, and live without neighbors, not on an open plain, but far within a wilderness.

This discovery accounted for the sounds which we had heard, and destroyed the prospect of seeing moose yet awhile. At length, when we had left the explorers far behind, Joe laid down his paddle, drew forth his birch horn,—a straight one, about fifteen inches long and three or four wide at the mouth, tied round with strips of the same bark,—and standing up, imitated the call of the moose,—*ugh-ugh-ugh*, or *oo-oo-oo-oo*, and then a prolonged *oo-o-o-o-o-o-o-o-o*, and listened attentively for several minutes. We asked him what kind of noise he expected to hear. He said, that, if a moose heard it, he guessed we should find out; we should hear him coming half a mile off; he would come close to, perhaps into, the water, and my companion must wait till he got fair sight, and then aim just behind the shoulder.

The moose venture out to the river-side to feed and drink at night. Earlier

in the season the hunters do not use a horn to call them out, but steal upon them as they are feeding along the sides of the stream, and often the first notice they have of one is the sound of the water dropping from its muzzle. An Indian whom I heard imitate the voice of the moose, and also that of the caribou and the deer, using a much longer horn than Joe's, told me that the first could be heard eight or ten miles, sometimes; it was a loud sort of bellowing sound, clearer and more sonorous than the lowing of cattle,—the caribou's a sort of snort,—and the small deer's like that of a lamb.

At length we turned up the Moosehorn, where the Indians at the carry had told us that they killed a moose the night before. This is a very meandering stream, only a rod or two in width, but comparatively deep, coming in on the right, fitly enough named Moosehorn, whether from its windings or its inhabitants. It was bordered here and there by narrow meadows between the stream and the endless forest, affording favorable places for the moose to feed, and to call them out on. We proceeded half a mile up this, as through a narrow winding canal, where the tall, dark spruce and firs and arbor-vitas towered on both sides in the moonlight, forming a perpendicular forest-edge of great height, like the spires of a Venice in the forest. In two places stood a small stack of hay on the bank, ready for the lumberer's use in the winter, looking strange enough there. We thought of the day when this might be a brook winding through smooth-shaven meadows on some gentleman's grounds; and seen by moonlight then, excepting the forest that now hems it in, how little changed it would appear!

Again and again Joe called the moose, placing the canoe close by some favorable point of meadow for them to come out on, but listened in vain to hear one come rushing through the woods, and concluded that they had been hunted too much thereabouts. We saw many times what to our imaginations looked like a

gigantic moose, with his horns peering from out the forest-edge; but we saw the forest only, and not its inhabitants, that night. So at last we turned about. There was now a little fog on the water, though it was a fine, clear night above. There were very few sounds to break the stillness of the forest. Several times we heard the hooting of a great horned-owl, as at home, and told Joe that he would call out the moose for him, for he made a sound considerably like the horn, —but Joe answered, that the moose had heard that sound a thousand times, and knew better; and oftener still we were startled by the plunge of a musquash. Once, when Joe had called again, and we were listening for moose, we heard come faintly echoing, or creeping from far, through the moss-clad aisles, a dull, dry, rushing sound, with a solid core to it, yet as if half smothered under the grasp of the luxuriant and fungus-like forest, like the shutting of a door in some distant entry of the damp and shaggy wilderness. If we had not been there, no mortal had heard it. When we asked Joe in a whisper what it was, he answered,—"Tree fall." There is something singularly grand and impressive in the sound of a tree falling in a perfectly calm night like this, as if the agencies which overthrow it did not need to be excited, but worked with a subtle, deliberate, and conscious force, like a boa-constrictor, and more effectively than even in a windy day. If there is any such difference, perhaps it is because trees with the dews of the night on them are heavier than by day.

Having reached the camp, about ten o'clock, we kindled our fire and went to bed. Each of us had a blanket, in which he lay on the fir-twigs, with his extremities toward the fire, but nothing over his head. It was worth the while to lie down in a country where you could afford such great fires; that was one whole side, and the bright side, of our world. We had first rolled up a large log some eighteen inches through and ten feet long, for a back-log, to last all

night, and then piled on the trees to the height of three or four feet, no matter how green or damp. In fact, we burned as much wood that night as would, with economy and an air-tight stove, last a poor family in one of our cities all winter. It was very agreeable, as well as independent, thus lying in the open air, and the fire kept our uncovered extremities warm enough. The Jesuit missionaries used to say, that, in their journeys with the Indians in Canada, they lay on a bed which had never been shaken up since the creation, unless by earthquakes. It is surprising with what impunity and comfort one who has always lain in a warm bed in a close apartment, and studiously avoided drafts of air, can lie down on the ground without a shelter, roll himself in a blanket, and sleep before a fire, in a frosty autumn night, just after a long rain-storm, and even come soon to enjoy and value the fresh air.

I lay awake awhile, watching the ascent of the sparks through the firs, and sometimes their descent in half-extinguished cinders on my blanket. They were as interesting as fireworks, going up in endless successive crowds, each after an explosion, in an eager serpentine course, some to five or six rods above the tree-tops before they went out. We do not suspect how much our chimneys have concealed; and now air-tight stoves have come to conceal all the rest. In the course of the night, I got up once or twice and put fresh logs on the fire, making my companions curl up their legs.

When we awoke in the morning, (Saturday, September 17,) there was considerable frost whitening the leaves. We heard the sound of the chickadee, and a few faintly lisping birds, and also of ducks in the water about the island. I took a botanical account of stock of our domains before the dew was off, and found that the ground-hemlock, or American yew, was the prevailing under-shrub. We breakfasted on tea, hard bread, and ducks.

Before the fog had fairly cleared away, we paddled down the stream again, and

were soon past the mouth of the Moosehorn. These twenty miles of the Penobscot, between Moosehead and Chesuncook Lakes, are comparatively smooth, and a great part dead-water; but from time to time it is shallow and rapid, with rocks or gravel-beds, where you can wade across. There is no expanse of water, and no break in the forest, and the meadow is a mere edging here and there. There are no hills near the river nor within sight, except one or two distant mountains seen in a few places. The banks are from six to ten feet high, but once or twice rise gently to higher ground. In many places the forest on the bank was but a thin strip, letting the light through from some alder-swamp or meadow behind. The conspicuous berry-bearing bushes and trees along the shore were the red osier, with its whitish fruit, hobble-bush, mountain-ash, tree-cranberry, choke-cherry, now ripe, alternate cornel, and naked viburnum. Following Joe's example, I ate the fruit of the last, and also of the hobble-bush, but found them rather insipid and seedy. I looked very narrowly at the vegetation, as we glided along close to the shore, and frequently made Joe turn aside for me to pluck a plant, that I might see by comparison what was primitive about my native river. Horehound, horsemint, and the sensitive fern grew close to the edge, under the willows and alders, and wool-grass on the islands, as along the Assabet River in Concord. It was too late for flowers, except a few asters, golden-rods, etc. In several places we noticed the slight frame of a camp, such as we had prepared to set up, amid the forest by the river-side, where some lumberers or hunters had passed a night, —and sometimes steps cut in the muddy or clayey bank in front of it.

We stopped to fish for trout at the mouth of a small stream called Ragmuff, which came in from the west, about two miles below the Moosehorn. Here were the ruins of an old lumbering-camp, and a small space, which had formerly been cleared and burned over, was now densely overgrown with the red cherry

and raspberries. While we were trying for trout, Joe, Indian-like, wandered off up the Ragmuff on his own errands, and when we were ready to start was far beyond call. So we were compelled to make a fire and get our dinner here, not to lose time. Some dark reddish birds, with grayer females, (perhaps purple finches,) and myrtle-birds in their summer dress, hopped within six or eight feet of us and our smoke. Perhaps they smelled the frying pork. The latter bird, or both, made the lisping notes which I had heard in the forest. They suggested that the few small birds found in the wilderness are on more familiar terms with the lumberman and hunter than those of the orchard and clearing with the farmer. I have since found the Canada jay, and partridges, both the black and the common, equally tame there, as if they had not yet learned to mistrust man entirely. The chickadee, which is at home alike in the primitive woods and in our wood-lots, still retains its confidence in the towns to a remarkable degree.

Joe at length returned, after an hour and a half, and said that he had been two miles up the stream exploring, and had seen a moose, but, not having the gun, he did not get him. We made no complaint, but concluded to look out for Joe the next time. However, this may have been a mere mistake, for we had no reason to complain of him afterwards. As we continued down the stream, I was surprised to hear him whistling "O Susanna," and several other such airs, while his paddle urged us along. Once he said, "Yes, Sir-ee." His common word was "Sartain." He paddled, as usual, on one side only, giving the birch an impulse by using the side as a fulcrum. I asked him how the ribs were fastened to the side rails. He answered, "I don't know, I never noticed." Talking with him about subsisting wholly on what the woods yielded, game, fish, berries, etc., I suggested that his ancestors did so; but he answered, that he had been brought up in such a way that he could not do it. "Yes," said he, "that's the way they got a

living, like wild fellows, wild as bears. By George ! I shan't go into the woods without provision,—hard bread, pork, etc." He had brought on a barrel of hard bread and stored it at the carry for his hunting. However, though he was a Governor's son, he had not learned to read.

At one place below this, on the east side, where the bank was higher and drier than usual, rising gently from the shore to a slight elevation, some one had felled the trees over twenty or thirty acres, and left them drying in order to burn. This was the only preparation for a house between the Moosehead carry and Chesuncook, but there was no hut nor inhabitants there yet. The pioneer thus selects a site for his house, which will, perhaps, prove the germ of a town.

My eyes were all the while on the trees, distinguishing between the black and white spruce and the fir. You paddle along in a narrow canal through an endless forest, and the vision I have in my mind's eye, still, is of the small dark and sharp tops of tall fir and spruce trees, and pagoda-like arbor-vitæ, crowded together on each side, with various hard

woods intermixed. Some of the arborescences were at least sixty feet high. The hard woods, occasionally occurring exclusively, were less wild to my eye. I fancied them ornamental grounds, with farm-houses in the rear. The canoe and yellow birch, beech, maple, and elm are Saxon and Norman ; but the spruce and fir, and pines generally, are Indian. The soft engravings which adorn the annuals give no idea of a stream in such a wilderness as this. The rough sketches in Jackson's Reports on the Geology of Maine answer much better. At one place we saw a small grove of slender sapling white-pines, the only collection of pines that I saw on this voyage. Here and there, however, was a full-grown, tall, and slender, but defective one, what lumbermen call a *konchus* tree, which they ascertain with their axes, or by the knots. I did not learn whether this word was Indian or English. It reminded me of the Greek *κόγχη*, a conch or shell, and I amused myself with fancying that it might signify the dead sound which the trees yield when struck. All the rest of the pines had been driven off.

[To be continued.]

LA CANTATRICE.

By day, at a high oak desk I stand,
And trace in a ledger line by line ;
But at five o'clock yon dial's hand
Opens the cage wherein I pine ;
And as faintly the stroke from the belfry peals
Down through the thunder of hoofs and wheels,
I wonder if ever a monarch feels
Such royal joy as mine !

Beatrice is dressed and her carriage waits ;
I know she has heard that signal-chime ;
And my strong heart leaps and palpitates,
As lightly the winding stair I climb
To her fragrant room, where the winter's gloom
Is changed by the heliotrope's perfume,
And the curtained sunset's crimson bloom,
To love's own summer prime.

She meets me there, so strangely fair
 That my soul aches with a happy pain ;—
 A pressure, a touch of her true lips, such
 As a seraph might give and take again ;
 A hurried whisper, " Adieu ! adieu !
 They wait for me while I stay for you !"
 And a parting smile of her blue eyes through
 The glimmering carriage-pane.

Then thoughts of the past come crowding fast
 On a blissful track of love and sighs ;—
 Oh, well I toiled, and these poor hands soiled,
 That her song might bloom in Italian skies !—
 The pains and fears of those lonely years,
 The nights of longing and hope and tears,—
 Her heart's sweet debt, and the long arrears
 Of love in those faithful eyes !

O night ! be friendly to her and me !—
 To box and pit and gallery swarm
 The expectant throngs ;—I am there to see ;—
 And now she is bending her radiant form
 To the clapping crowd ;—I am thrilled and proud ;
 My dim eyes look through a misty cloud,
 And my joy mounts up on the plaudits loud,
 Like a sea-bird on a storm !

She has waved her hand ; the noisy rush
 Of applause sinks down ; and silverly
 Her voice glides forth on the quivering hush,
 Like the white-robed moon on a tremulous sea !
 And wherever her shining influence calls,
 I swing on the billow that swells and falls,—
 I know no more,—till the very walls
 Seem shouting with jubilee !

Oh, little she cares for the fop who airs
 His glove and glass, or the gay array
 Of fans and perfumes, of jewels and plumes,
 Where wealth and pleasure have met to pay
 Their nightly homage to her sweet song ;
 But over the bravas clear and strong,
 Over all the flaunting and fluttering throng,
 She smiles my soul away !

Why am I happy ? why am I proud ?
 Oh, can it be true she is all my own ?—
 I make my way through the ignorant crowd ;
 I know, I know where my love hath flown.
 Again we meet ; I am here at her feet,
 And with kindling kisses and promises sweet,
 Her glowing, victorious lips repeat
 That they sing for me alone !

GOTTFRIED WILHELM VON LEIBNITZ.

THE philosophic import of this illustrious name, having suffered temporary eclipse from the Critical Philosophy, with its swift succession of transcendental dynasties,—the *Wissenschaftslehre*, the *Naturphilosophie*, and the *Encyclopédie*,—has recently emerged into clear and respectful recognition, if not into broad and effulgent repute. In divers quarters, of late, the attention of the learned has reverted to the splendid optimist, whose adventurous intellect left nothing unexplored and almost nothing unexplained. Biographers and critics have discussed his theories,—some in the interest of philosophy, and some in the interest of religion,—some in the spirit of discipleship, and some in the spirit of opposition,—but all with consenting and admiring attestation of the vast erudition and intellectual prowess and unsurpassed capacity* of the man.

A collection of all the works appertaining to Leibnitz, with all his own writings, would make a respectable library. We have no room for the titles of all, even of the more recent of these publications. We content ourselves with naming the Biography, by G. G. Gührer, the best that has yet appeared, called forth by the celebration, in 1846, of the ducentesimal birthday of Leibnitz,—the latest edition of his Philosophical Works, by Professor Erdmann of Halle,—the publication of his Correspondence with Arnauld, by Herr Grotefend, and of that with the Landgrave Ernst von Hessen Rhinefelds, by Chr. von Rommel,—of his Historical Works, by the

librarian Pertz of Berlin,—of the Mathematical, by Gerhardt,—Ludwig Jeuerbach's elaborate dissertation, "Darstellung, Entwicklung und Kritik der Leibnitzischen Philosophie,"—Zimmermann's "Leibnitz u. Herbart's Monadologie,"—Schelling's "Leibnitz als Denker,"—Hartenstein's "De Materiae apud Leibnit. Notione,"—and Adolph Helferich's "Spinoza u. Leibnitz: oder Das Wesen des Idealismus u. des Realismus." To these we must add, as one of the most valuable contributions to Leibnitian literature, M. Foucher de Careil's recent publication of certain MSS. of Leibnitz, found in the library at Hanover, containing strictures on Spinoza, (which the editor takes the liberty to call "Refutation Inédite de Spinoza,")—"Sentiment de Worcester et de Locke sur les Idées,"—"Correspondance avec Foucher, Bayle et Fontenelle,"—"Réflexions sur l'Art de connaître les Hommes,"—"Fragmens Divers," etc., accompanied by valuable introductory and critical essays.*

M. de Careil complains that France has done so little for the memory of a man "qui lui a fait l'honneur d'écrire les deux tiers de ses œuvres en Français." England does not owe him the same obligations, and England has done far less than France,—in fact, nothing to illustrate the memory of Leibnitz; not so much as an English translation of his works, or an English edition of them, in these two centuries. Nor have M. de Careil's countrymen in times past shared all his enthusiasm for the genial Saxon. The barren Psychology of Locke obtained a currency in France, in the last century, which the friendly Realism of his great contemporary could never boast. Raspe, the first who edited the "Nouveaux Es-

* The author of a notice of Leibnitz, more clever than profound, in four numbers of the *Gentleman's Magazine* for 1852, distinguishes between capacity and faculty. He gives his subject credit for the former, but denies his claim to the latter of these attributes. As if any manifestation of mind were more deserving of that title than the power of intellectual concentration, to which nothing that came within its focus was insoluble.

* A second collection, by the same hand, appeared in 1857, with the title, *Nouvelles Lettres et Opuscules Inédits de Leibnitz. Précédés d'une Introduction. Par A. Foucher de Careil. Paris. 1857.*

sais," takes to himself no small credit for liberality in so doing, and hopes, by rendering equal justice to Leibnitz and to Locke, to conciliate those "who, with the former, think that their wisdom is the sure measure of omnipotence,"* and those who "believe, with the latter, that the human mind is to the rays of the primal Truth what a night-bird is to the sun."†

Voltaire pronounced him "le savant le plus universel de l'Europe," but characterized his metaphysical labors with the somewhat equivocal compliment of "méta-physicien assez délié pour vouloir réconcilier la théologie avec la métaphysique."‡

Germany, with all her wealth of erudite, celebrities, has produced no other who fulfils so completely the type of the GELEHRTE,—a type which differs from that of the *savant* and from that of the scholar, but includes them both. Feuerbach calls him "the personified thirst for Knowledge"; Frederic the Great pronounced him an "Academy of Sciences"; and Fontenelle said of him, that "he saw the end of things, or that they had no end." It was an age of intellectual adventure into which Leibnitz was born,—fit sequel and heir to the age of maritime adventure which preceded it. We please ourselves with fancied analogies between the two epochs and the nature of their discoveries. In the latter movement, as in the former, Italy took the lead. The martyr Giordano Bruno was the brave Columbus of modern thought,—the first who broke loose from the trammels of mediæval ecclesiastical tradition, and reported a new world beyond the watery waste of scholasticism. Campanella may represent the Vespucci of the new enter-

prise; Lord Bacon its Sebastian Cabot,—the "Novum Organum" being the New-found-land of modern experimental science. Des Cartes was the Cortés, or shall we rather say the Ponce de Leon, of scientific discovery, who, failing to find what he sought,—the Principle of Life, (the Fountain of Eternal Youth,)—yet found enough to render his name immortal and to make mankind his debtor. Spinoza is the spiritual Magalhaens, who, emerging from the straits of Judaism, beheld

"Another ocean's breast immense, unknown."

Of modern thinkers he was

———"the first
That ever burst
Into that silent sea."

He discovered the Pacific of philosophy,—that theory of the sole Divine Substance, the All-One, which Goethe in early life found so pacifying to his troubled spirit, and which, vague and barren as it proves on nearer acquaintance, induces at first, above all other systems, a sense of repose in illimitable vastness and immutable necessity.

But the Vasco de Gama of his day was Leibnitz. His triumphant optimism rounded the Cape of theological Good Hope. He gave the chief impulse to modern intellectual commerce. Full freighted, as he was, with Western thought, he revived the forgotten interest in the Old and Eastern World, and brought the ends of the earth together. Circumnavigator of the realms of mind, wherever he touched, he appeared as discoverer, as conqueror, as lawgiver. In mathematics, he discovered or invented the Differential Calculus,—the logic of transcendental analysis, the infallible method of astronomy, without which it could never have compassed the large conclusions of the "Mécanique Céleste." In his "Protogæa," published in 1693, he laid the foundation of the science of Geology. From his observations, as Superintendent of the Hartz Mines, and those which he made in his subsequent travels through Austria and Italy,—from an

* "Stimai già che 'l mio saper misura
Certa fosse e infallibile di quanto
Può far l' alto Fattor della natura."

TASSO, *Gerus.* xiv. 45.

† "Angel notturno al sole
E nostra mente a' rai del primo Vero."

Ib. 46.

‡ "On sait que Voltaire n'aimait pas Leibnitz. J'imagine que c'est le chrétien qu'il détestait en lui."—CH. WADDINGTON.

examination of the layers, in different localities, of the earth's crust, he deduced the first theory, in the geological sense, which has ever been propounded, of the earth's formation. Orthodox Lutheran as he was, he braved the theological prejudices which then, even more than now, affronted scientific inquiry in that direction. "First among men," says Flourens, "he demonstrated the two agencies which successively have formed and reformed the globe,—fire and water." In the region of metaphysical inquiry, he propounded a new and original theory of Substance, and gave to philosophy the Monad, the Law of Continuity, the Preestablished Harmony, and the Best Possible World.

Born at Leipzig, in 1646,—left fatherless at the age of six years,—by the care of a pious mother and competent guardians, young Leibnitz enjoyed such means of education as Germany afforded at that time, but declares himself, for the most part, self-taught.* So genius must always be, for want of any external stimulus equal to its own impulse. No normal training could keep pace with his abnormal growth. No school discipline could supply the fuel necessary to feed the consuming fire of that ravenous intellect. Grammars, manuals, compends,—all the apparatus of the classes,—were only oil to its flame. The Master of the Nicolai-Schule in Leipzig, his first instructor, was a steady practitioner of the Martinet order. The pupils were ranged in classes corresponding to their civil ages,—their studies graduated according to the baptismal register. It was not a question of faculty or proficiency, how a lad should be classed and what he should read, but of calendar years. As if a shoemaker should fit his last to the age instead of the foot. Such an age, such a

study. Gottfried is a genius, and Hans is a dunce; but Gottfried and Hans were both born in 1646; consequently, now, in 1654, they are both equally fit for the Smaller Catechism. Leibnitz was ready for Latin long before the time allotted to that study in the Nicolai-Schule, but the system was inexorable. All access to books cut off by rigorous proscription. But the thirst for knowledge is not easily stifled, and genius, like love, "will find out his way."

He chanced, in a corner of the house, to light on an odd volume of Livy, left there by some student boarder. What could Livy do for a child of eight years, with no previous knowledge of Latin, and no lexicon to interpret between them? For most children, nothing. Not one in a thousand would have dreamed of seriously grappling with such a mystery. But the brave Patavinian took pity on our little one and yielded something to childish importunity. The quaint old copy was garnished, according to a fashion of the time, with rude wood-cuts, having explanatory legends underneath. The young philologer tugged at these until he had mastered one or two words. Then the book was thrown by in despair as impracticable to further investigation. Then, after one or two weeks had elapsed, for want of other employment, it was taken up again, and a little more progress made. And so by degrees, in the course of a year, a considerable knowledge of Latin had been achieved. But when, in the Nicolai order, the time for this study arrived, so far from being pleased to find his instructions anticipated, or welcoming such promise of future greatness,—so far from rejoicing in his pupil's proficiency, the pedagogue chafed at the insult offered to his system by this empiric antepast. He was like one who suddenly discovers that he is telling an old story where he thought to surprise with a novelty; or like one who undertakes to fill a lamp, which, being (unknown to him) already full, runs over, and his oil is spilled. It was "oleum perdidit" in another sense than the

* "Duo mihi profuere mirifice, (quae tamen aliqui ambigua, et pluribus noxia esse solent,) primum quod fere essem ἀνοήδακτος, alterum quod quaererem nova in unaquaque scientia."—LEIBNITZ. *Opera Philosoph.* Erdmann. p. 162.

scholastic one. Complaint was made to the guardians of the orphan Gottfried of these illicit visits to the tree of knowledge. Severe prohibitory measures were recommended, which, however, judicious counsel from another quarter happily averted.

At the age of eleven, Leibnitz records, that he made, on one occasion, three hundred Latin verses without elision between breakfast and dinner. A hundred hexameters, or fifty distichs, in a day, is generally considered a fair *pensum* for a boy of sixteen at a German gymnasium.

At the age of seventeen, he produced, as an academic exercise, on taking the degree of Bachelor of Philosophy, his celebrated treatise on the Principle of Individuality, "*De Principio Individui*," the most extraordinary performance ever achieved by a youth of that age,—remarkable for its erudition, especially its intimate knowledge of the writings of the Schoolmen, and equally remarkable for its vigorous grasp of thought and its subtle analysis. In this essay Leibnitz discovered the bent of his mind and prefigured his future philosophy, in the choice of his theme, and in his vivid appreciation and strenuous positing of the individual as the fundamental principle of ontology. He takes Nominalistic ground in relation to the old controversy of Nominalist and Realist, siding with Abelard and Roscellin and Occam, and against St. Thomas and Duns Scotus. The principle of individuation, he maintains, is the entire entity of the individual, and not mere limitation of the universal, whether by "Existence" or by "*Haeceity*."* John and Thomas are individuals by virtue of their integral humanity, and not by fractional limitation of humanity. Dobbin is an actual positive horse (*Entitas tota*). Not

* "Aut enim principium individuationis ponitur *entitas tota*, (1) aut non tota. Non totam aut negatio exprimit, (2) aut aliquid positivum. Positivum aut pars physica est, essentiam terminans, *existentia*, (3) aut metaphysica, speciem terminans, *haecceitas*. (4) Pono igitur: omne individuum sua tota entitate individuatur." — *De Princ. Indiv.* 3 et 4.

a negation, by limitation, of universal equiety (*Negatio*). Not an individuation, by actual existence, of a non-existent but essential and universal horse (*Existentia*). Nor yet a horse only by limitation of kind,—a horse minus Dick and Bessie and the brown mare, etc. (*Haeceitas*). But an individual horse, simply by virtue of his equine nature. Only so far as he is an actual complete horse, is he an individual at all. (*Per quod quid est, per id unum numero est.*) His individuality is nothing superadded to his equiety. (*Unum supra ens nihil addit reale.*) Neither is it anything subtracted therefrom. (*Negatio non potest producere accidentia individualia.*) In fine, there is and can be no horse but actual individual horses. (*Essentia et existentia non possunt separari.*)

This was the doctrine of the Nominalists, as it was of Aristotle before them. It was the doctrine of the Reformers, except, if we remember rightly, of Huss. The University of Leipzig was founded upon it. It is the current doctrine of the present day, and harmonizes well with the current Materialism. Not that Nominalism in itself, and as Leibnitz held it, is necessarily materialistic, but Realism is essentially antimaterialistic. The Realists held with Plato,—but not in his name, for they, too, claimed to be Aristotelian, and preëminently so,—that the ideal must precede the actual. So far they were right. This was their strong point. Their error lay in claiming for the ideal an objective reality, an independent being. Conceptualism was only another statement of Nominalism, or, at most, a question of the relation of language to thought. It cannot be regarded as a third issue in this controversy,—a controversy in which more time was consumed, says John of Salisbury, "than the Cæsars required to make themselves masters of the world," and in which the combatants, having spent at last their whole stock of dialectic ammunition, resorted to carnal weapons, passing suddenly, by a very illogical *metabasis*, from "universals" to particulars.

Both parties appealed to Aristotle. By a singular fortune, a pagan philosopher, introduced into Western Europe by Mohammedans, became the supreme authority of the Christian world. Aristotle was the Scripture of the Middle Age. Luther found this authority in his way and disposed of it in short order, devoting Aristotle without ceremony to the Devil, as "a damned mischief-making heathen." But Leibnitz, whose large discourse looked before as well as after, reinstated not only Aristotle, but Plato, and others of the Greek philosophers, in their former repute;—"Car ces anciens," he said, "étaient plus solides qu'on ne croit." He was the first to turn the tide of popular opinion in their favor.

Not without a struggle was he brought to side with the Nominalists. Musing, when a boy, in the Rosenthal, near Leipzig, he debated long with himself,— "Whether he would give up the Substantial Forms of the Schoolmen." Strange matter for boyish deliberation! Yes, good youth, by all means, give them up! They have had their day. They served to amuse the imprisoned intellect of Christendom in times of ecclesiastical thralldom, when learning knew no other vocation. But the age into which you are born has its own problems, of nearer interest and more commanding import. The measuring-reed of science is to be laid to the heavens, the solar system is to be weighed in a balance; the age of logical quiddities has passed, the age of mathematical quantities has come. Give them up! You will soon have enough to do to take care of your own. What with Dynamics and Infinitesimals, Pasigraphy and Dyadik, Monads and Majesties, Concilium Ægyptiacum and Spanish Succession and Hanoverian cabals, there will be scant room in that busy brain for Substantial Forms. Let them sleep, dust to dust, with the tomes of Duns Scotus and the bones of Aquinas!

The "De Principio Individui" was the last treatise of any note in the sense and style of the old scholastic philosophy. It was also one of the last blows aimed at

scholasticism, which, long undermined by the Saxon Reformation, received its *coup de grace* a century later from the pen of an English wit. "Cornelius," says the author of "Martinus Scriblerus," "told Martin that a shoulder of mutton was an individual; which Crambe denied, for he had seen it cut into commons. 'That's true,' quoth the Tutor, 'but you never saw it cut into shoulders of mutton.' 'If it could be,' quoth Crambe, 'it would be the loveliest individual of the University.' When he was told that a *substance* was that which is subject to *accidents*: 'Then soldiers,' quoth Crambe, 'are the most substantial people in the world.' Neither would he allow it to be a good definition of accident, that it could be present or absent without the destruction of the subject, since there are a great many accidents that destroy the subject, as burning does a house and death a man. But as to that, Cornelius informed him that there was a *natural* death and a *logical* death; and that though a man after his natural death was incapable of the least parish office, yet he might still keep his stall among the logical predicaments. . . . Crambe regretted extremely that *Substantial Forms*, a race of harmless beings which had lasted for many years and had afforded a comfortable subsistence to many poor philosophers, should now be hunted down like so many wolves, without the possibility of retreat. He considered that it had gone much harder with them than with the *Essences*, which had retired from the schools into the apothecaries' shops, where some of them had been advanced into the degree of *Quintessences*. He thought there should be a retreat for poor *substantial forms* amongst the gentlemen-ushers at court; and that there were, indeed, substantial forms, such as forms of prayer and forms of government, without which the things themselves could never long subsist. . . . Metaphysics were a large field in which to exercise the weapons which logic had put in their hands. Here Martin and Crambe used to engage like any prize-fighters. And as prize-fighters will agree

to lay aside a buckler, or some such defensive weapon, so Crambe would agree not to use *simpliciter* and *secundum quid*, if Martin would part with *materialiter* and *formaliter*. But it was found, that, without the defensive armor of these distinctions, the arguments cut so deep that they fetched blood at every stroke. Their theses were picked out of Suarez, Thomas Aquinas, and other learned writers on those subjects. . . . One, particularly, remains undecided to this day,—‘An præter esse reale actualis essentiæ sit aliud esse necessarium quo res actualiter existat?’ In English thus: Whether, besides the real being of actual being, there be any other being necessary to cause a thing to be?”*

Arrived at maturity, Leibnitz rose at once to classic eminence. He became a conspicuous figure, he became a commanding power, not only in the intellectual world, of which he constituted himself the centre, but in part also of the civil. It lay in the nature of his genius to prove all things, and it lay in his temperament to seek *rapproch* with all sorts of men. He was infinitely related;—not an individual of note in his day but was linked with him by some common interest or some polemic grapple; not a *savant* or statesman with whom Leibnitz did not spin, on one pretence or another, a thread of communication. Europe was reticulated with the meshes of his correspondence. “Never,” says Voltaire, “was intercourse among philosophers more universal; *Leibnitz servait à l’animer*.” He writes now to Spinoza at the Hague, to suggest new methods of manufacturing lenses,—now to Magliabecchi at Florence, urging, in elegant Latin verses, the publication of his bibliographical discoveries,—and now to Grimaldi, Jesuit missionary in China, to communicate his researches in Chinese philosophy. He hoped by means of the latter to operate on the Emperor Cham-Hi with the *Dyadik*; † and even

suggested said *Dyadik* as a key to the cipher of the book “Ye Kim,” supposed to contain the sacred mysteries of Fo. He addresses Louis XIV., now on the subject of a military expedition to Egypt, (a magnificent idea, which it needed a Napoleon to realize,) now on the best method of promoting and conserving scientific knowledge. He corresponds with the Landgrave of Hesse-Rheinfels, with Bossuet, and with Madame Brinon on the Union of the Catholic and Protestant Churches, and with Privy-Counsellor von Spanheim on the Union of the Lutheran and Reformed,—with Père Des Bosses on Transubstantiation, and with Samuel Clarke on Time and Space,—with Remond de Montmort on Plato, and with Franke on Popular Education,—with the Queen of Prussia (his pupil) on Free-will and Predestination, and with the Electress Sophia, her mother, (in her eighty-fourth year,) on English Politics,—with the cabinet of Peter the Great on the Slavonic and Oriental Languages, and with that of the German Emperor on the claims of George Lewis to the honors of the Electorate,—and finally, with all the *savans* of Europe on all possible scientific questions.

Of this world-wide correspondence a portion related to the sore subject of his litigated claim to originality in the discovery of the Differential Calculus,—a matter in which Leibnitz felt himself grievously wronged, and complained with justice of the treatment he received at the hands of his contemporaries. The controversy between him and Newton, respecting this hateful topic, would never have originated with either of these illustrious men, had it depended on them alone to vindicate their respective claims. Officious and ill-advised friends of the English philosopher, partly from misguided zeal and partly from levelled malice, preferred on his behalf a charge of plagiarism against the German, which Newton was not likely to have urged for himself. “The new Calculus, which Europe lauds, is nothing less,” they suggested, “than your fluxionary method, which

* *Memoirs of Martinus Scriblerus*, Chap. VII.

† A species of binary arithmetic, invented by Leibnitz, in which the only figures employed are 0 and 1.—See KORTHOFF'S *G. G. Leibnitii Epistolæ ad Diversos*, Letter XVIII.

Mr. Leibnitz has pirated, anticipating its tardy publication by the genuine author. Why suffer your laurels to be wrested from you by a stranger?" Thereupon arose the notorious *Commercium Epistolicum*, in which Wallis, Fatio de Duillier, Collins, and Keill were perversely active. Melancholy monument of literary and national jealousy! Weary record of a vain strife! Ideas are no man's property. As well pretend to ownership of light, or set up a claim to private estate in the Holy Ghost. The Spirit blows where it lists. Truth inspires whom it finds. He who knows best to conspire with it has it. Both philosophers swerved from their native simplicity and nobleness of soul. Both sinned and were sinned against. Leibnitz did unhandsome things, but he was sorely tried. His heart told him that the right of the quarrel was on his side, and the general stupidity would not see it. The general malice, rejoicing in aspersion of a noble name, would not see it. The Royal Society would not see it,—nor France, until long after Leibnitz's death. Sir David Brewster's account of the matter, according to the German authorities, Gerhardt, Guhrauer, and others, is one-sided, and sins by *suppressio veri*, ignoring important documents, particularly Leibnitz's letter to Oldenburg, August 27, 1676. Gerhardt has published Leibnitz's own history of the Calculus as a counter-statement.* But even from Brewster's account, as we remember it, (we have it not by us at this writing,) there is no more reason to doubt that Leibnitz's discovery was independent of Newton's than that Newton's was independent of Leibnitz's. The two discoveries, in fact, are not identical; the end and application are the same, but origin and process differ, and the German method has long superseded the English. The question in debate has been settled by supreme authority. Leibnitz has been tried by his peers. Euler, Lagrange, Laplace, Poisson, and Biot have honorably acquitted

* *Historia et Origo Calculi Differentialis*, a G. G. LEIBNITIO conscripta.

him of plagiarism, and reinstated him in his rights as true discoverer of the Differential Calculus.

The one distinguishing trait of Leibnitz's genius, and the one preëminent fact in his history, was what Feserbach calls his *πολυπραγμοσύνη*, which, being interpreted, means having a finger in every pie. We are used to consider him as a man of letters; but the greater part of his life was spent in labors of quite another kind. He was more actor than writer. He wrote only for occasions, at the instigation of others, or to meet some pressing demand of the time. Besides occupying himself with mechanical inventions, some of which (in particular, his improvement of Pascal's Calculating Machine) were quite famous in their day,—besides his project of a universal language, and his labors to bring about a union of the churches,—besides undertaking the revision of the laws of the German Empire, superintending the Hanoverian mines, experimenting in the culture of silk, directing the medical profession, laboring in the promotion of popular education, establishing academies of science, superintending royal libraries, ransacking the archives of Germany and Italy to find documents for his history of the House of Brunswick, a work of immense research,*—besides these, and a multitude of similar and dissimilar avocations, he was deep in politics, German and European, and was occupied all his life long with political negotiations. He was a courtier, he was a *diplomat*, was consulted on all difficult matters of international policy, was employed at Hanover, at Berlin, at Vienna, in the public and secret service of ducal, royal, and imperial governments, and charged with all sorts of delicate and difficult commissions,—matters of finance, of pacification, of treaty and appeal. He was Europe's factotum. A complete biography of the

* *Annales Imperii Occidentis Brunsvicensis*. Leibnitz succeeded in discovering at Modena the lost traces of that connection between the lines of Brunswick and Este which had been surmised, but not proved.

man would be an epitome of the history of his time. The number and variety of his public engagements were such as would have crazed any ordinary brain. And to these were added private studies not less multifarious. "I am distracted beyond all account," he writes to Vincent Placcius. "I am making extracts from archives, inspecting ancient documents, hunting up unpublished manuscripts; all this to illustrate the history of Brunswick. Letters in great number I receive and write. Then I have so many discoveries in mathematics, so many speculations in philosophy, so many other literary observations, which I am desirous of preserving, that I am often at a loss what to take hold of first, and can fairly sympathize in that saying of Ovid, 'I am straitened by my abundance.'"*

His diplomatic services are less known at present than his literary labors, but were not less esteemed in his own day. When Louis XIV., in 1688, declared war against the German Empire, on the pretence that the Emperor was meditating an invasion of France, Leibnitz drew up the imperial manifesto, which repelled the charge and triumphantly exposed the hollowness of Louis's cause. Another document, prepared by him at the solicitation, it is supposed, of several of the courts of Europe, advocating the claims of Charles of Austria to the vacant throne of Spain, in opposition to the grandson of Louis, and setting forth the injurious consequences of the policy of the French monarch, was hailed by his contemporaries as a masterpiece of historical learning and political wisdom. By his powerful advocacy of the cause of the Elector of Brandenburg he may be said

to have aided the birth of the kingdom of Prussia, whose existence dates with the commencement of the last century. In the service of that kingdom he wrote and published important state-papers; among them, one relating to a point of contested right to which recent events have given fresh significance: "*Traité Sommaire du Droit de Frédéric I. Roi de Prusse à la Souveraineté de Neuchâtel et de Vallengin en Suisse.*"

In Vienna, as at Berlin, the services of Leibnitz were subsidized by the State. By the Peace of Utrecht, the house of Habsburg had been defeated in its claims to the Spanish throne, and the foreign and internal affairs of the Austrian government were involved in many perplexities, which, it was hoped, the philosopher's counsel might help to untangle. He was often present at the private meetings of the cabinet, and received from the Emperor the honorable distinction of *Kaiserlicher Hofrath*, in addition to that, which had previously been awarded to him, of Baron of the Empire. The highest post in the gift of government was open to him, on condition of renouncing his Protestant faith, which, notwithstanding his tolerant feeling toward the Roman Church, and the splendid compensations which awaited such a convertite, he could never be prevailed upon to do.

A natural, but very remarkable consequence of this manifold activity and lifelong absorption in public affairs was the failure of so great a thinker to produce a single systematic and elaborate work containing a complete and detailed exposition of his philosophical, and especially his ontological views. For such an exposition Leibnitz could find at no period of his life the requisite time and scope. In the vast multitude of his productions there is no complete philosophic work. The most arduous of his literary labors are historical compilations, made in the service of the State. Such were the "*History of the House of Brunswick*," already mentioned, the "*Accessiones Historiæ*," the "*Scriptores Rerum Brunsvicensium Illustrationi inservientes*," and

* "*Quam mirifice sim distractus dici non potest. Varia ex archivis eruo, antiquas chartas inspicio, manuscripta inedita conquiro. Ex his lucem dare conor Brunsvicensi historiæ. Magno numero litteras et accipio et dimitto. Habeo vero tam multa nova in mathematicis, tot cogitationes in philosophicis, tot alias literarias observationes, quas vellem non perire, ut sæpe inter agenda anceps hæream et prope illud Ovidianum sentiam: Inopem me copia facit.*"

the "Codex Juris Gentium Diplomaticus";—works involving an incredible amount of labor and research, but adding little to his posthumous fame. His philosophical studies, after entering the Hanoverian service, which he did in his thirtieth year, were pursued, as he tells his correspondent Placcius, by stealth,—that is, at odd moments snatched from official duties and the cares of state. Accordingly, his metaphysical works have all a fragmentary character. Instead of systematic treatises, they are loose papers, contributions to journals and magazines, or sketches prepared for the use of friends. They are all occasional productions, elicited by some external cause, not prompted by inward necessity. The "*Nouveaux Essais*," his most considerable work in that department, originated in comments on Locke, and was not published until after his death. The "*Monadology*" is a series of propositions drawn up for the use of Prince Eugene, and was never intended to be made public. And, probably, the "*Théodicée*" would never have seen the light except for his cultivated and loved pupil, the Queen of Prussia, for whose instruction it was designed.

It is a curious fact, and a good illustration of the state of letters in Germany at that time, that Leibnitz wrote so little—almost nothing of importance—in his native tongue. In Erdmann's edition of his philosophical works there are only two short essays in German; the rest are all Latin or French. He had it in contemplation at one time to establish a philosophical journal in Berlin, but doubts, in his letter to M. La Croye on the subject, in what language it should be conducted: "*Il y a quelque tems que j'ay pensé à un journal de Savans qu'on pourroit publier à Berlin, mais je suis un peu en doute sur la langue. . . . Mais soit qu'on prit le Latin ou le François,*"* etc. It seems never to have occurred to him that such a journal might be published in German. That language was then, and for a long time after, regarded by educated Germans very much as the

Russian is regarded at the present day, as the language of vulgar life, unsuited to learned or polite intercourse. Frederic the Great, a century later, thought as meanly of its adaptation to literary purposes as did the contemporaries of Leibnitz. When Gellert, at his request, repeated to him one of his fables, he expressed his surprise that anything so clever could be produced in German. It may be said in apology for this neglect of their native tongue, that the German scholars of that age would have had a very inadequate audience, had their communications been confined to that language. Leibnitz craved and deserved a wider sphere for his thoughts than the use of the German could give him. It ought, however, to be remembered to his credit, that, as language in general was one among the numberless topics he investigated, so the German in particular engaged at one time his special attention. It was made the subject of a disquisition, which suggested to the Berlin Academy, in the next century, the method adopted by that body for the culture and improvement of the national speech. In this writing, as in all his German compositions, he manifested a complete command of the language, and imparted to it a purity and elegance of diction very uncommon in his day. The German of Leibnitz is less antiquated at this moment than the English of his contemporary, Locke.

LEIBNITZ'S PHILOSOPHY.

THE interest to us in this extraordinary man—who died at Hanover, 1716, in the midst of his labors and projects—turns mainly on his speculative philosophy. It was only as an incidental pursuit that he occupied himself with metaphysic; yet no philosopher since Aristotle—with whom, though claiming to be more Platonic than Aristotelian, he has much in common—has furnished more luminous hints to the elucidation of metaphysical problems. The problems he attempted were those

* KORTHOOLT. *Epistolæ ad Diversos*, Vol. I.

which concern the most inscrutable, but, to the genuine metaphysician, most fascinating of all topics, the nature of substance, matter and spirit, absolute being,—in a word, *Ontology*. This department of metaphysic, the most interesting, and, *agonistically*,* the most important branch of that study, has been deliberately, purposely, and, with one or two exceptions, uniformly avoided by the English metaphysicians so-called, with Locke at their head, and equally by their Scottish successors, until the recent “*Institutes*” of the witty Professor of St. Andrew’s. Locke’s “*Essay concerning the Human Understanding*,” a century and a half ago, diverted the English mind from metaphysic proper into what is commonly called Psychology, but ought, of right, to be termed *Noölogy*, or “*Philosophy of the Human Mind*,” as Dugald Stewart entitled his treatise. This is the study which has usually taken the place of metaphysic at Cambridge and other colleges,—the science that professes to show “how ideas enter the mind”; which, considering the rareness of the occurrence with the mass of mankind, we cannot regard as a very practical inquiry. We well remember our disappointment, when, at the usual stage in the college curriculum, we were promised “*metaphysics*” and were set to grind in Stewart’s profitless mill, where so few problems of either practical or theoretical importance are brought to the hopper, and where, in fact, the object is rather to show how the upper mill-stone revolves upon the nether, (reflection upon sensation,) and how the grist is conveyed to the feeder, than to realize actual metaphysical flour.

Locke’s reason for repudiating ontology is the alleged impossibility of arriving at truth in that pursuit,—“of finding satisfaction in a quiet and sure possession of truths that most concern us, whilst we let loose our thoughts into the vast ocean of being.”† Unfortunately, however, as

Kant has shown, the results of noölogical inquiry are just as questionable as those of ontology, whilst the topics on which it is employed are of far inferior moment. If, as Locke intimates, we can know nothing of being without first analyzing the understanding, it is equally sure that we can know nothing of the understanding except in union with and in action on being. And excepting his own fundamental position concerning the sensuous origin of our ideas,—to which few, since Kant, will assent,—there is hardly a theorem, in all the writings of this school, of prime and vital significance. The school is tartly, but aptly, characterized by Professor Ferrier: “Would people inquire directly into the laws of thought and of knowledge by merely looking to knowledge or to thought itself, without attending to what is known or what is thought of? Psychology usually goes to work in this abstract fashion; but such a mode of procedure is hopeless,—as hopeless as the analogous instance by which the wits of old were wont to typify any particularly fruitless undertaking,—namely, the operation of milking a he-goat into a sieve. No milk comes, in the first place, and even that the sieve will not retain! There is a loss of nothing twice over. Like the man milking, the inquirer obtains no milk in the first place; and, in the second place, he loses it, like the man holding the sieve. . . . Our Scottish philosophy, in particular, has presented a spectacle of this description. Reid obtained no result, owing to the abstract nature of his inquiry, and the nothingness of his system has escaped through all the sieves of his successors.”*

Leibnitz’s metaphysical speculations are scattered through a wide variety of writings, many of which are letters to his contemporaries. These Professor Erdmann has incorporated in his edition of the *Philosophical Works*. Beside these we may mention, as particularly deserving of notice, the “*Meditationes de Cognitione, Veritate et Ideis*,” the “*Système Nouveau de*

* That is, as a discipline of the faculties,—the chief benefit to be derived from any kind of metaphysical study.

† *Essay*, Book I. Chap. 1, Sect. 7.

la Nature," "De Primæ Philosophiæ Emendatione et de Notione Substantiæ," "Reflexions sur l'Essai de l'Entendement humain," "De Rerum Originatione Radicali," "De ipsa Natura," "Considerations sur la Doctrine d'un Esprit universel," "Nouveaux Essais sur l'Entendement humain," "Considerations sur le Principe de Vie." To these we must add the "Théodicée" (though more theological than metaphysical) and the "Monadologie," the most compact philosophical treatise of modern time. It is worthy of note, that, writing in the desultory, fragmentary, and accidental way he did, he not only wrote with unexampled clearness on matters the most abstruse, but never, that we are aware, in all the variety of his communications, extending over so many years, contradicted himself. No philosopher is more intelligible, none more consequent.

In philosophy, Leibnitz was a *Realist*. We use that term in the modern, not in the scholastic sense. In the scholastic sense, as we have seen, he was not a Realist, but, from childhood up, a Nominalist. But the Realism of the schools has less affinity with the Realism than with the Idealism of the present day.

His opinions must be studied in connection with those of his contemporaries.

Des Cartes, Spinoza, Locke, and Leibnitz, the four most distinguished philosophers of the seventeenth century, represent four widely different and cardinal tendencies in philosophy: Dualism, Idealism, Sensualism, and Realism.

Des Cartes perceived the incompatibility of the two primary qualities of being, thought and extension, as attributes of one and the same (created) substance. He therefore postulated two (created) substances, — one characterized by thought without extension, the other by extension without thought. These two are so alien and so incongruous, that neither can influence the other, or determine the other, or any way relate with the other, except by direct mediation of Deity. (The doctrine of Occasional Causes.) This is Dualism,—that sharp and rigorous antithesis of mind and matter, which Des Cartes,

if he did not originate it, was the first to develop into philosophic significance, and which ever since has been the prevailing ontology of the Western world. So deeply has the thought of that master mind inwrought itself into the very consciousness of humanity!

Spinoza saw, that, if God alone can bring mind and matter together and effect a relation between them, it follows that mind and matter, or their attributes, however contrary, do meet in Deity; and if so, what need of three distinct natures? What need of two substances beside God, as subjects of these attributes? Retain the middle term and drop the extremes and you have the Spinozan doctrine of one (uncreated) substance, combining the attributes of thought and extension. This is Pantheism, or *objective* idealism, as distinguished from the *subjective* idealism of Fichte. Strange, that the stigma of atheism should have been affixed to a system whose very starting-point is Deity and whose great characteristic is the *ignoration* of everything but Deity, inasmuch that the pure and devout Novalis pronounced the author a God-drunken man, and Spinozism a surfeit of Deity.* Naturally enough, the charge of atheism comes from the unbelieving Bayle, whose omnivorous mind, like the anaconda, assisted its enormous deglutition with a poisonous saliva of its own, and whose negative temper makes the "Dictionnaire Historique" more *Morgue* than *Valhalla*.

Locke, who combined in a strange union strong religious faith with philosophic unbelief, turned aside, as we have seen, from the questions which had occupied his predecessors; knew little and cared less about substance and accident, matter and spirit; but set himself to investigate the nature of the organ itself by which truth is apprehended. In this investigation he began by emptying the mind of all native elements of knowl-

* Let us not be misunderstood. Pantheism is not Theism, and the one substance of Spinoza is very unlike the one God of theology; but neither is the doctrine Atheism in any legitimate sense.

edge. He repudiated any supposed dower of original truths or innate or connate ideas, and endeavored to show how, by acting on the report of the senses and personal experience, the understanding arrives at all the ideas of which it is conscious. The mode of procedure in this case is empiricism; the result with Locke was sensualism,—more fully developed by Condillac,* in the next century. But the same method may lead, as in the case of Berkeley, to immaterialism, falsely called idealism. Or it may lead, as in the case of Helvetius, to materialism. Locke himself would probably have landed in materialism, had he followed freely the bent of his own thought, without the restraints of a cautious temper, and respect for the common and traditional opinion of his time. The “Essay” discovers an unmistakable leaning in that direction; as where the author supposes, “We shall never be able to know whether any mere material being thinks or no; it being impossible for us, by the contemplation of our own ideas, without revelation, to discover whether Omnipotency has not given to some systems of matter fitly disposed a power to perceive and think; . . . it being, in respect of our notions, not much more remote from our comprehension to conceive that God can, if he pleases, superadd to matter a faculty of thinking, than that he should superadd to it another substance with a faculty of thinking, since we know not wherein thinking consists, nor to what sort of substances the Almighty has been pleased to give that power, which cannot be in any created being but merely by the good pleasure and bounty of the Creator. For I see no contradiction in it, that the first thinking eternal Being should, if he pleased, give to certain systems of created, senseless matter, put together as he thinks fit, some degrees of sense, perception, and thought.” † With such notions of the nature of thought, as a kind of mechanical contrivance, that

can be conferred outright by an arbitrary act of Deity, and attached to one nature as well as another, it is evident that Locke could have had no idea of spirit as conceived by metaphysicians,—or no belief in that idea, if conceived. And with such conceptions of Deity and Divine operations, as consisting in absolute power dissociated from absolute reason, one would not be surprised to find him asserting, that God, if he pleased, might make two and two to be one, instead of four,—that mathematical laws are arbitrary determinations of the Supreme Will,—that a thing is true only as God wills it to be so,—in fine, that there is no such thing as absolute truth. The resort to “Omnipotency” in such matters is more convenient than philosophical; it is a dodging of the question, instead of an attempt to solve it. Divine ordination—“*Δὸς δ' ἐτελείετο βουλή*”—is a maxim which settles all difficulties. But it also precludes all inquiry. Why speculate at all, with this universal solvent at hand?

The “contradiction” which Locke could not see was clearly seen and keenly felt by Leibnitz. The arbitrary will of God, to him, was no solution. He believed in necessary truths independent of the Supreme Will; in other words, he believed that the Supreme Will is but the organ of the Supreme Reason: “Il ne faut point s’imaginer, que les vérités éternelles, étant dépendantes de Dieu, sont arbitraires et dépendent de sa volonté.” He felt, with Des Cartes, the incompatibility of thought with extension, considered as an immanent quality of substance, and he shared with Spinoza the unific propensity which distinguishes the higher order of philosophic minds. Dualism was an offence to him. On the other hand, he differed from Spinoza in his vivid sense of individuality, of personality. The pantheistic idea of a single, sole being, of which all other beings are mere modalities, was also and equally an offence to him. He saw well the illusoriness and unfruitfulness of such a universe as Spinoza dreamed. He saw it to be a vain imagination, a dream-world,

* *Essai sur l'Origine des Connaissances humaines.*

† Book IV. Chap. 3, Sect. 6.

"without form and void," nowhere blossoming into reality." The philosophy of Leibnitz is equally remote from that of Des Cartes on the one hand, and from that of Spinoza on the other. He diverges from the former on the question of substance, which Des Cartes conceived as consisting of two kinds, one active (thinking) and one passive (extended), but which Leibnitz conceives to be all and only active. He explodes Dualism, and resolves the antithesis of matter and spirit by positing extension as a continuous act instead of a passive mode, substance as an active force instead of an inert mass,—matter as substance appearing, communicating,—as the necessary band and relation of spirits among themselves.*

* The following passages may serve as illustrations of these positions:—

"Materia habet de se actum entitativum."

—*De Princip. Indiv. Coroll. I.*

"Dicam interim notionem virium seu virtutis, (quam Germani vocant *Kraft*, Galli, *la force*), cui ego explicandæ peculiarem Dynamices scientiam destinavi, plurimum lucis afferre ad veram notionem substantiæ intelligendam."—*De Primæ Philosoph. Emendat. et de Notione Substantiæ.*

"Corpus ergo est agens extensum; dici poterit esse substantiam extensam, modo teneatur omnem substantiam agere, at omne agens substantiam appellari." "Patebit non tantum mentes, sed etiam substantias omnes in loco, non nisi per operationem esse."—*De Vera Method. Phil. et Theol.*

"Extensionem concipere ut absolutum ex eo forte oritur quod spatium concipimus per modum substantiæ."—*Ad Des Bosses Ep. XXIX.*

"Car l'étendue ne signifie qu'une répétition ou multiplicité continuée de ce qui est répandu."—*Extrait d'une Lettre*, etc.

"Et l'on peut dire que l'étendue est en quelque façon à l'espace comme la durée est aux tems."—*Exam. des Principes de Malebranche.*

"La nature de la substance consistant à mon avis dans cette tendance réglée de laquelle les phénomènes naissent par ordre."—*Lettre à M. Bayle.*

"Car rien n'a mieux marqué la substance que la puissance d'agir."—*Réponse aux Objections du P. Lami.*

"S'il n'y avait que des esprits, ils seraient sans la liaison nécessaire, sans l'ordre des tems et des lieux."—*Théod. Sect. 120.*

He parts company with Spinoza on the question of individuality. Substance is homogeneous; but substances, or beings, are infinite. Spinoza looked upon the universe and saw in it the undivided background on which the objects of human consciousness are painted as momentary pictures. Leibnitz looked and saw that background, like the background of one of Raphael's Madonnas, instinct with individual life, and swarming with intelligences which look out from every point of space. Leibnitz's universe is composed of Monads, that is, units, individual substances, or entities, having neither extension, parts, nor figure, and, of course, indivisible. These are "the veritable atoms of nature, the elements of things."

The Monad is unformed and imperishable; it has no natural end or beginning. It could begin to be only by creation; it can cease to be only by annihilation. It cannot be affected from without or changed in its interior by any other creature. Still, it must have qualities, without which it would not be an entity. And monads must differ one from another, or there would be no changes in our experience; since all that takes place in compound bodies is derived from the simples which compose them. Moreover, the monad, though uninfluenced from without, is changing continually; the change proceeds from an internal principle. Every monad is subject to a multitude of affections and relations, although without parts. This shifting state, which represents multitude in unity, is nothing else than what we call *Perception*, which must be carefully distinguished from *Apperception*, or consciousness. And the action of the internal principle which causes change in the monad, or a passing from one perception to another, is *Appetition*. The desire does not always attain to the perception to which it tends, but it always effects something, and causes a change of perceptions.

Leibnitz differs from Locke in maintaining that perception is inexplicable and inconceivable on mechanical princi-

ples. It is always the act of a simple substance, never of a compound. And "in simple substances there is nothing but perceptions and their changes."* He differs from Locke, furthermore, on the question of the origin of ideas. This question, he says, "is not a preliminary one in philosophy, and one must have made great progress to be able to grapple successfully with it."—"Meanwhile, I think I may say, that our ideas, even those of sensible objects, *viennent de nôtre propre fond*. . . . I am by no means for the *tabula rasa* of Aristotle; on the contrary, there is to me something rational (*quelque chose de solide*) in what Plato called *reminiscence*. Nay, more than that, we have not only a reminiscence of all our past thoughts, but we have also a *presentiment* of all our thoughts."†

Mr. Lewes, in his "Biographical History of Philosophy," speaks of the essay from which these words are quoted, as written in "a somewhat supercilious tone." We are unable to detect any such feature in it. That trait was wholly foreign from Leibnitz's nature. "Car je suis des plus dociles," he says of himself, in this same essay. He was the most tolerant of philosophers. "Je ne méprise presque rien."—"Nemo est ingenio minus quam ego censorio."—"Mirum dictu: probo pleaque quæ lego."—"Non admodum refulat quæ quærere aut legere soleo."

To return to the monads. Each monad, according to Leibnitz, is, properly speaking, a soul, inasmuch as each is endowed with perception. But in order to distinguish those which have only perception from those which have also sentiment and memory, he will call the latter *souls*, the former *monads* or *entelechie*.‡ The

* *Monadol.* 17.

† *Reflexions sur l'Essai de l'Entendement humain*.

‡ *Entelechy* (ἐντελέχεια) is an Aristotelian term, signifying activity, or more properly perhaps, self-action. Leibnitz understands by it something complete in itself (ἐχόν τὸ ἐντελέχειν). Mr. Butler, in his *History of Ancient Philosophy*, lately reprinted in this country, translates it "act." *Function*, we

naked monad, he says, has perceptions without relief, or "enhanced flavor"; it is in a state of stupor. Death, he thinks, may produce this state for a time in animals. The monads completely fill the world; there is never and nowhere a void, and never complete inanimateness and inertness. The universe is a *plenum* of souls. Wherever we behold an organic whole, (*unum per se*), there monads are grouped around a central monad to which they are subordinate, and which they are constrained to serve so long as that connection lasts. Masses of inorganic matter are aggregations of monads without a regent, or sentient soul (*unum per accidens*). There can be no monad without matter, that is, without society, and no soul without a body. Not only the human soul is indestructible and immortal, but also the animal soul. There is no generation out of nothing, and no absolute death. Birth is expansion, development, growth; and death is contraction, envelopment, decrease. The monads which are destined to become human souls have existed from the beginning in organic matter, but only as sentient or animal souls, without reason. They remain in this condition until the generation of the human beings to which they belong, and then develop themselves into rational souls. The different organs and members of the body are also relatively souls which collect around them a number of monads for a specific purpose, and so on *ad infinitum*. Matter is not only infinitely divisible, but infinitely divided. All matter (so called) is living and active. "Every particle of matter may be conceived as a garden of plants, or as a pond full of fishes. But each branch of each plant, each member of each animal, each drop of their humors, is in turn another such garden or pond."* The connection between mon-

think, would be a better rendering. (See W. Archer Butler's *Lectures*, Last Series, Lect. 2.) Aristotle uses the word as a definition of the soul. "The soul," he says, "is the first entelechy of an active body."

* *Monadol.* 67.

ads, consequently the connection between soul and body, is not composition, but an organic relation,—in some sort, a spontaneous relation. The soul forms its own body, and moulds it to its purpose. This hypothesis was afterward embraced and developed as a physiological principle by Stahl. As all the atoms in one body are organically related, so all the beings in the universe are organically related to each other and to the All. One creature, or one organ of a creature, being given, there is given with it the world's history from the beginning to the end. *All bodies are strictly fluid; the universe is in flux.*

The principle of continuity answers the same purpose in Leibnitz's system that the single substance does in Spinoza's. It vindicates the essential unity of all being. Yet the two conceptions are immeasurably different, and constitute an immeasurable difference between the two systems, considered in their practical and moral bearings, as well as their ontological aspects. Spinoza* starts with the idea of the Infinite, or the All-One, from which there is no logical deduction of the individual. And in Spinoza's system the individual does not exist except as a modality. But the existence of the individual is one of the primordial truths of the human mind, the foremost fact of consciousness. With this, therefore, Leibnitz begins, and arrives, by logical induction, to the Absolute and Supreme. Spinoza ends where he begins, in pantheism; the moral result of his system, Godward, is fatalism,—manward, indifferentism and negation of moral good and evil. Leibnitz ends in theism; the moral result of his system, Godward, is optimism,—manward, liberty, personal responsibility, moral obligation.

He demonstrates the being of God by the necessity of a sufficient reason to account for the series of things. Each finite thing requires an antecedent or contingent cause. But the supposition of an endless series of contingent

causes, or finite things, is absurd; the series must have had a beginning, and that beginning cannot have been a contingent cause or finite thing. "The final reason of things must be found in a necessary substance in which the detail of changes exists eminently, (*ne soit qu'éminemment*,) as in its source; and this is what we call God."* The idea of God is of such a nature, that the being corresponding to it, if possible, must be actual. We have the idea; it involves no bounds, no negation, consequently no contradiction. It is the idea of a possible, therefore of an actual.

"God is the primitive Unity, or the simple original Substance of which all the creatures, or original monads, are the products, and *are generated, so to speak, by continual fulgurations from moment to moment, bounded by the receptivity of the creature*, of whose existence limitation is an essential condition."†

The philosophic theologian and the Christianizing philosopher will rejoice to find in this proposition a point of reconciliation between the extramundane God of pure theism and the cardinal principle of Spinozism, the immanence of Deity in creation,—a principle as dear to the philosophic mind as that of the extramundane Divinity is to the theologian. The universe of Spinoza is a self-existent unit, divine in itself, but with no Divinity behind it. That of Leibnitz is an endless series of units from a self-existent and divine source. The one is an infinite deep, the other an everlasting flood.

The doctrine of the *Preestablished Harmony*, so intimately and universally associated with the name of Leibnitz, has found little favor with his critics, or even with his admirers. Feuerbach calls it his weak side, and thinks that Leibnitz's philosophy, else so profound, was here, as in other instances, overshadowed by the popular creed; that he accommodated himself to theology, as a highly cultivated and intelligent man, conscious of his superiority, accommodates himself to a lady in his conversation with her, translating

* See Helferich's *Spinoza und Leibnitz*, p. 76.

* *Monadol.* 38.

† *Ib.* 47.

his ideas into her language, and even paraphrasing them. From this view of Leibnitz, as implying insincerity, we utterly dissent.* The author of the "Théodicée" was not more interested in philosophy than he was in theology. His thoughts and his purpose did equal justice to both. The deepest wish of his heart was to reconcile them, not by formal treaty, but in loving and condign union. We do not, however, object to an esoteric and exoteric view of the doctrine in question; and we quite agree with Feuerbach that the phrase *préétablie* does not express a metaphysical determination. It is one thing to say, that God, by an arbitrary decree from everlasting, has so predisposed and predetermined every motion in the world of matter that each volition of a rational agent finds in the constant procession of physical forces a concurrent event by which it is executed, but which would have taken place without his volition, just as the mail-coach takes our letter, if we have one, but goes all the same, when we do not write,—this is the gross, exoteric view,—and a very different thing it is to say, that the monads composing the human system and the universe of things are so related, adjusted, accommodated to each other, and to the whole, each being a representative of all the rest and a mirror of the universe, that each feels all that passes in the rest, and all conspire in every act,† more or less effectively, in the ratio of their nearness to the prime agent. This is Leibnitz's idea of preëstablished harmony, which, perhaps, would be better

expressed by the term "necessary consent." "In the ideas of God, each monad has a right to demand that God, in regulating the rest from the commencement of things, shall have regard to it; for since a created monad can have no physical influence on the interior of another, it is only by this means that one can be dependent on another."—"The soul follows its own laws and the body follows its own, and they meet in virtue of the pre-established harmony which exists between all substances, as representatives of one and the same universe. Souls act according to the laws of final causes by appetitions, etc. Bodies act according to the laws of efficient causes or the laws of motion. And the two kingdoms, that of efficient causes and that of final causes, harmonize with each other."*

The Preëstablished Harmony, then, is to be regarded as the philosophic statement of a fact, and not as a theory concerning the cause of the fact. But, like all philosophic and adequate statements, it answers the purpose of a theory, and clears up many difficulties. It is the best solution we know of the old contradiction of free-will and fate,—individual liberty and a necessary world. This antithesis disappears in the light of the Leibnizian philosophy, which resolves freedom and necessity into different points of view and different stages of development. The principle of the Preëstablished Harmony was designed by Leibnitz to meet the difficulty, started by Des Cartes, of explaining the conformity between the perceptions of the mind and the corresponding affections of the body, since mind and matter, in his view, could have no connection with, or influence on, each other. The Cartesians explained this correspondence by the theory of *occasional causes*, that is, by the intervention of the Deity, who was supposed by his arbitrary will to have decreed a certain perception or sensation in the mind to go with a certain affection of the body, with which, however, it had no real connection. "Car il" (that is, M. Bayle) "est persuadé avec les

* See, in connection with this point, two admirable essays by Lessing,—the one entitled *Leibnitz on Eternal Punishment*, the other *Objections of Andreas Wissocatus to the Doctrine of the Trinity*. Of the latter the real topic is Leibnitz's *Defensio Trinitatis*. The sharp-sighted Lessing, than whom no one has expressed a greater reverence for Leibnitz, emphatically asserts and vigorously defends the philosopher's orthodoxy.

† In this connection, Leibnitz quotes the remarkable saying of Hippocrates, *Σύμπνοια πάντα*. The universe breathes together, conspires.—*Monadol.* 61.

Cartésiens modernes, que les idées des qualités sensibles que Dieu donne, selon eux, à l'âme, à l'occasion des mouvemens du corps, n'ont rien qui représente ces mouvemens, ou qui leur ressemble; de sorte qu'il étoit purement arbitraire que Dieu nous donnât les idées de la chaleur, du froid, de la lumière et autres que nous expérimentons, ou qu'il nous en donnât de tout-autres à cette même occasion." * If the body was exposed to the flame, there was no more reason, according to this theory, why the soul should be conscious of pain than of pleasure, except that God had so ordained. Such a supposition was shocking to our philosopher, who could tolerate no arbitrariness in God and no gap or discrepancy in nature, and who, therefore, sought to explain, by the nature of the soul itself and its kindred monads, the correspondence for which so violent an hypothesis was embraced by the Cartesians.

We have left ourselves no room to speak as we would of Leibnitz as theosopher. It was in this character that he obtained, in the last century, his widest fame. The work by which he is most commonly known, by which alone he is known to many, is the "*Théodicée*,"—an attempt to vindicate the goodness of God against the cavils of unbelievers. He was one of the first to apply to this end the cardinal principle of the Lutheran Reformation,—the liberty of reason. He was one of the first to treat unbelief, from the side of religion, as an error of judgment, not as rebellion against rightful authority. The latter was and is the Romanist view. The former is the Protestant theory, but was not then, and is not always now, the Protestant practice. Theology then was not concerned to vindicate the reason or the goodness of God. It gloried in his physical strength by which he would finally crush dissenters from orthodoxy. Leibnitz knew no authority independent of Reason, and no God but the Supreme Reason directing

Almighty Good-will. The philosophic conclusion justly deducible from this view of God, let cavillers say what they will, is Optimism. Accordingly, Optimism, or the doctrine of the best-possible world, is the theory of the "*Théodicée*." Our limits will not permit us to analyze the argument of this remarkable work. Bunsen says, "It necessarily failed because it was a not quite honest compound of speculation and divinity." * Few at the present day will pretend to be entirely satisfied with its reasoning, but all who are familiar with it know it to be a treasury of wise and profound thoughts and of noble sentiments and aspirations. Bonnet, the naturalist, called it his "*Manual of Christian Philosophy*"; and Fontenelle, in his eulogy, speaks enthusiastically of its luminous and sublime views, of its reasonings, in which the mind of the geometer is always apparent, of its perfect fairness toward those whom it controverts, and its rich store of anecdote and illustration. Even Stewart, who was *not* familiar with it, and who, as might be expected, strangely misconceives and misrepresents the author, is compelled to echo the general sentiment. He pronounces it a work "in which are combined together in an extraordinary degree the acuteness of the logician, the imagination of the poet, and the *impenetrable yet sublime darkness* of the metaphysical theologian." The Italics are ours. Our reason for doubting Stewart's familiarity with the "*Théodicée*," and with Leibnitz in general, is derived in part from these phrases. We do not believe that any sincere student of Leibnitz has found him dark and impenetrable. Be it a merit or a fault, this predicate is inapplicable. Never was metaphysician more explicit and more intelligible. Had he been disposed to mysticize and to shroud himself in "*impenetrable darkness*," he would have found it difficult to indulge that propensity in French. Thanks to the strict *régime* and happy limitations of that idiom, the French is not a language in which philosophy can

* *Théodicée*. Partie II. 340.

* *Outlines of the Philos. of Univ. Hist.* Vol. I. Chap. 6.

hide itself. It is a tight-fitting coat, which shows the exact form, or want of form, of the thought it clothes, without pad or fold to simulate fullness or to veil defects. It was a Frenchman, we are aware, who discovered that "the use of language is to conceal thought"; but that use, so far as French is concerned, has been hitherto monopolized by diplomacy.

Another reason for questioning Stewart's familiarity with Leibnitz is his misconception of that author, which we choose to impute to ignorance rather than to wilfulness. This misconception is strikingly exemplified in a prominent point of Leibnitian philosophy. Stewart says: "The zeal of Leibnitz in propagating the dogma of Necessity is not easily reconcilable with the hostility which he uniformly displays against the congenial doctrine of Materialism."* Now it happens that "the zeal of Leibnitz" was exerted in precisely the opposite direction. A considerable section of the "*Théodicée*" (34-75) is occupied with the illustration and defence of the Freedom of the Will. It was a doctrine on which he laid great stress, and which forms an essential part of his system; † in proof of which, let one declaration stand for many: "*Je suis d'opinion que notre volonté n'est pas seulement exempte de la contrainte, mais encore de la nécessité.*" How far he succeeded in establishing that doctrine in accordance with the rest of his system is another question. That he believed it and taught it is a fact of which there can be no more doubt with those who have studied his writings, than there is that he wrote the works ascribed to him. But the freedom of will maintained by Leibnitz was not indeterminism. It was not the indifference of the tongue of the balance be-

tween equal weights, or that of the ass between equal bundles of hay. Such an equilibrium he declares impossible. "*Cet équilibre en tout sens est impossible.*" Buridan's imaginary case of the ass is a fiction "*qui ne sauroit avoir lieu dans l'univers.*"* The will is always determined by motives, but not necessarily constrained by them. This is his doctrine, emphatically stated and zealously maintained. We doubt if any philosopher, equally profound and equally sincere, will ever find room in his conclusions for a greater measure of moral liberty than the "*Théodicée*" has conceded to man. "In respect to this matter," says Arthur Schopenhauer, "the great thinkers of all times are agreed and decided, just as surely as the mass of mankind will never see and comprehend the great truth, that the practical operation of liberty is not to be sought in single acts, but in the being and nature of man."† Leibnitz's construction of the idea of a possible liberty consistent with the preëstablished order of the universe is substantially that of Schelling in his celebrated essay on this subject. We must not dwell upon it, but hasten to conclude our imperfect sketch.

The ground-idea of the "*Théodicée*" is expressed in the phrase, "Best-possible world." Evil is a necessary condition of finite being, but the end of creation is the realization of the greatest possible perfection within the limits of the finite. The existing universe is one of innumerable possible universes, each of which, if actualized, would have had a different measure of good and evil. The present, rather than any other, was made actual, as presenting to Divine Intelligence the smallest measure of evil and the greatest amount of good. This idea is happily

embodied in the closing apologue, designed to supplement one of Laurentius Valla, a writer of the fifteenth century. Theodorus, priest of Zeus at Dodona, demands why that god has permitted to Sextus the evil will which was destined to bring so much misery on himself and others. Zeus refers him to his daughter Athene. He goes to Athens, is commanded to lie down in the temple of Pallas, and is there visited with a dream. The vision takes him to the Palace of Destinies, which contains the plans of all possible worlds. He examines one plan after another; in each the same Sextus plays a different part and experiences a different fate. The plans improve as he advances, till at last he comes upon one whose superior excellence enchants him with delight. After revelling awhile in the contemplation of this perfect world, he is told that this is the actual world in which he lives. But in this the crime of Sextus is a necessary constituent; it

could not be what it is as a whole, were it other than it is in its single parts.

Whatever may be thought of Leibnitz's success in demonstrating his favorite doctrine, the theory of Optimism commends itself to piety and reason as that view of human and divine things which most redounds to the glory of God and best expresses the hope of man,—as the noblest and *therefore* the truest theory of Divine rule and human destiny.

We recall at this moment but one English writer of supreme mark who has held and promulged, in its fullest extent, the theory of Optimism. That one is a poet. The "Essay on Man," with one or two exceptions, might almost pass for a paraphrase of the "Théodicée"; and Pope, with characteristic vigor, has concentrated the meaning of that treatise in one word, which is none the less true, in the sense intended, because of its possible perversion,—"*Whatever is is right.*"

LOO LOO.

A FEW SCENES FROM A TRUE HISTORY.

[Concluded.]

SCENE IV.

THEY had lived thus nearly a year, when, one day as they were riding on horseback, Alfred saw Mr. Grossman approaching. "Drop your veil," he said, quickly, to his companion; for he could not bear to have that Satyr even look upon his hidden flower. The cotton-broker noticed the action, but silently touched his hat, and passed with a significant smile on his anomalous countenance. A few days afterward, when Alfred had gone to his business in the city, Loo Loo strolled to her favorite recess on the hill-side, and, lounging on the rustic

seat, began to read the second volume of "Thaddeus of Warsaw." She was so deeply interested in the adventures of the noble Pole, that she forgot herself and all her surroundings. Masses of glossy dark hair fell over the delicate hand that supported her head; her morning-gown, of pink French muslin, fell apart, and revealed a white embroidered skirt, from beneath which obtruded one small foot, in an open-work silk stocking; the slipper having fallen to the ground. Thus absorbed, she took no note of time, and might have remained until summoned to dinner, had not a slight rustling disturbed her. She

looked up, and saw a coarse face peering at her between the pine boughs, with a most disgusting expression. She at once recognized the man they had met during their ride; and starting to her feet, she ran like a deer before the hunter. It was not till she came near the house, that she was aware of having left her slipper. A servant was sent for it, but returned, saying it was not to be found. She mourned over the loss, for the little pink kid slippers, embroidered with silver, were a birth-day present from Alfred. As soon as he returned, she told him the adventure, and went with him to search the arbor of pines. The incident troubled him greatly. "What a noxious serpent, to come crawling into our Eden!" he exclaimed. "Never come here alone again, dearest; and never go far from the house, unless Madame is with you."

Her circle of enjoyments was already small, excluded as she was from society by her anomalous position, and educated far above the caste in which the tyranny of law and custom so absurdly placed her. But it is one of the blessed laws of compensation, that the human soul cannot miss that to which it has never been accustomed. Madame's motherly care, and Alfred's unvarying tenderness, sufficed her cravings for affection; and for amusement, she took refuge in books, flowers, birds, and those changes of natural scenery for which her lover had such quickness of eye. It was a privation to give up her solitary rambles in the grounds, her inspection of birds' nests, and her readings in that pleasant alcove of pines. But she more than acquiesced in Alfred's prohibition. She said at once, that she would rather be a prisoner within the house all her days than ever see that odious face again.

Mr. Noble encountered the cotton-broker, in the way of business, a few days afterward; but his aversion to the unclean conversation of the man induced him to conceal his vexation under the veil of common courtesy. He knew what sort of remarks any remonstrance would elicit, and he shrank from subjecting Loo

Loo's name to such pollution. For a short time, this prudent reserve shielded him from the attacks he dreaded. But Mr. Grossman soon began to throw out hints, about the sly hypocrisy of Puritan Yankees, and other innuendoes obviously intended to annoy him. At last, one day, he drew the embroidered slipper from his pocket, and, with a rakish wink of his eye, said, "I reckon you have seen this before, Mr. Noble."

Alfred felt an impulse to seize him by the throat, and strangle him on the spot. But why should he make a scene with such a man, and thus drag Loo Loo's name into painful notoriety? The old *roué* was evidently trying to foment a quarrel with him. Thoroughly animal in every department of his nature, he was boastful of brute courage, and prided himself upon having killed several men in duels. Alfred conjectured his line of policy, and resolved to frustrate it. He therefore coolly replied, "I have seen such slippers; they are very pretty"; and turned away, as if the subject were indifferent to him.

"Coward!" muttered Grossman, as he left the counting-house. Mr. Noble did not hear him; and if he had, it would not have altered his course. He could see nothing enviable in the reputation of being ever ready for brawls, and a dead-shot in duels; and he knew that his life was too important to the friendless Loo Loo to be thus foolishly risked for the gratification of a villain. This incident renewed his old feelings of remorse for the false position in which he had placed the young orphan, who trusted him so entirely. To his generous nature, the wrong seemed all the greater because the object was so unconscious of it. "It is I who have subjected her to the insolence of this vile man," he said within himself. "But I will repair the wrong. Innocent, confiding soul that she is, I will protect her. The sanction of marriage shall shield her from such affronts."

Alas for poor human nature! He was sincere in these resolutions, but he was

not quite strong enough to face the prejudices of the society in which he lived. Their sneers would have fallen harmless. They could not take from him a single thing he really valued. But he had not learned to understand that the dreaded power of public opinion is purely fabulous, when unsustained by the voice of conscience. So he fell into the old snare of moral compromise. He thought the best he could do, under the circumstances, was to hasten the period of his departure for the North, to marry Loo Loo in Philadelphia, and remove to some part of the country where her private history would remain unknown.

To make money for this purpose, he had more and more extended his speculations, and they had uniformly proved profitable. If Mr. Grossman's offensive conduct had not forced upon him a painful consciousness of his position with regard to the object of his devoted affection, he would have liked to remain in Mobile a few years longer, and accumulate more; but, as it was, he determined to remove as soon as he could arrange his affairs satisfactorily. He set about this in good earnest. But, alas! the great pecuniary crash of 1837 was at hand. By every mail came news of failures where he expected payments. The wealth, which seemed so certain a fact a few months before, where had it vanished? It had floated away, like a prismatic bubble on the breeze. He saw that his ruin was inevitable. All he owned in the world would not cancel his debts. And now he recalled the horrible recollection that Loo Loo was a part of his property. Much as he had blamed Mr. Duncan for negligence in not manumitting her mother, he had fallen into the same snare. In the fulness of his prosperity and happiness, he did not comprehend the risk he was running by delay. He rarely thought of the fact that she was legally his slave; and when it did occur to him, it was always accompanied with the recollection that the laws of Alabama did not allow him to emancipate her without sending her away from the State. But this never trou-

bled him, because there was always present with him that vision of going to the North and making her his wife. So time slipped away, without his taking any precautions on the subject; and now it was too late. Immersed in debt as he was, the law did not allow him to dispose of anything without consent of creditors; and he owed ten thousand dollars to Mr. Grossman. Oh, agony! sharp agony!

There was a meeting of the creditors. Mr. Noble rendered an account of all his property, in which he was compelled to include Loo Loo; but for her he offered to give a note for fifteen hundred dollars, with good endorsement, payable with interest in a year. It was known that his attachment to the orphan he had educated amounted almost to infatuation; and his proverbial integrity inspired so much respect, that the creditors were disposed to grant him any indulgence not incompatible with their own interests. They agreed to accept the proffered note, all except Mr. Grossman. He insisted that the girl should be put up at auction. For her sake, the ruined merchant condescended to plead with him. He represented that the tie between them was very different from the merely convenient connections which were so common; that Loo Loo was really good and modest, and so sensitive by nature, that exposure to public sale would nearly kill her. The selfish creditor remained inexorable. The very fact that this delicate flower had been so carefully sheltered from the mud and dust of the wayside rendered her a more desirable prize. He coolly declared, that ever since he had seen her in the arbor, he had been determined to have her; and now that fortune had put the chance in his power, no money should induce him to relinquish it.

The sale was inevitable; and the only remaining hope was that some friend might be induced to buy her. There was a gentleman in the city whom I will call Frank Helper. He was a Kentuckian by birth, kind and open-hearted,—a slave-holder by habit, not by nature. Warm feelings of regard had long exist-

ed between him and Mr. Noble; and to him the broken merchant applied for advice in this torturing emergency. Though Mr. Helper was possessed of but moderate wealth, he had originally agreed to endorse his friend's note for fifteen hundred dollars; and he now promised to empower some one to expend three thousand dollars in the purchase of Loo Loo.

"It is not likely that we shall be obliged to pay so much," said he. "Bad debts are pouring in upon Grossman, and he hasn't a mint of money to spare just now, however big he may talk. We will begin with offering fifteen hundred dollars; and she will probably be bid off for two thousand."

"Bid off! O my God!" exclaimed the wretched man. He bowed his head upon his outstretched arms, and the table beneath him shook with his convulsive sobs. His friend was unprepared for such an overwhelming outburst of emotion. He did not understand, no one but Alfred himself *could* understand, the peculiarity of the ties that bound him to that dear orphan. Recovering from this unwonted mood, he inquired whether there was no possible way of avoiding a sale.

"I am sorry to say there is no way, my friend," replied Mr. Helper. "The laws invest this man with power over you; and there is nothing left for us but to undermine his projects. It is a hazardous business, as you well know. *You* must not appear in it; neither can I; for I am known to be your intimate friend. But trust the whole affair to me, and I think I can bring it to a successful issue."

The hardest thing of all was to apprise the poor girl of her situation. She had never thought of herself as a slave; and what a terrible awakening was this from her dream of happy security! Alfred deemed it most kind and wise to tell her of it himself; but he dreaded it worse than death. He expected she would swoon; he even feared it might kill her. But love made her stronger than he thought. When, after much cautious circumlocution, he arrived at the crisis

of the story, she pressed her hand hard upon her forehead, and seemed stupefied. Then she threw herself into his arms, and they wept, wept, wept, till their heads seemed cracking with the agony.

"Oh, the avenging Nemesis!" exclaimed Alfred, at last. "I have deserved all this. It is all my own fault. I ought to have carried you away from these wicked laws. I ought to have married you. Truest, most affectionate of friends, how cruelly I have treated you! you, who put the welfare of your life so confidently into my hands!"

She rose up from his bosom, and, looking him lovingly in the face, replied,—

"Never say that, dear Alfred! Never have such a thought again! You have been the best and kindest friend that woman ever had. If I forgot that I was a slave, is it strange that *you* should forget it? But, Alfred, I will never be the slave of any other man,—never! I will never be put on the auction-stand. I will die first."

"Nay, dearest, you must make no rash resolutions," he replied. "I have friends who promise to save you, and restore us to each other. The form of sale is unavoidable. So, for my sake, consent to the temporary humiliation. Will you, darling?"

He had never before seen such an expression in her face. Her eyes flashed, her nostrils dilated, and she drew her breath like one in the agonies of death. Then pressing his hand with a nervous grasp, she answered,—

"For *your* sake, dear Alfred, I will."

From that time, she maintained outward calmness, while in his presence; and her inward uneasiness was indicated only by a fondness more clinging than ever. Whenever she parted from him, she kept him lingering, and lingering, on the threshold. She followed him to the road; she kissed her hand to him till he was out of sight; and then her tears flowed unrestrained. Her mind was filled with the idea that she should be carried away from the home of her childhood, as she had been by the rough Mr. Jackson,—

that she should become the slave of that bad man, and never, never see Alfred again. "But I can die," she often said to herself; and she revolved in her mind various means of suicide, in case the worst should happen.

Madame Labassé did not desert her in her misfortunes. She held frequent consultations with Mr. Helper and his friends, and continually brought messages to keep up her spirits. A dozen times a day, she repeated,—

"Tout sera bien arrangé. Soyez tranquille, ma chère ! Soyez tranquille !"

At last the dreaded day arrived. Mr. Helper had persuaded Alfred to appear to yield to necessity, and keep completely out of sight. He consented, because Loo Loo had said she could not go through with the scene, if he were present; and, moreover, he was afraid to trust his own nerves and temper. They conveyed her to the auction-room, where she stood trembling among a group of slaves of all ages and all colors, from iron-black to the lightest brown. She wore her simplest dress, without ornament of any kind. When they placed her on the stand, she held her veil down, with a close, nervous grasp.

"Come, show us your face," said the auctioneer. "Folks don't like to buy a pig in a poke, you know."

Seeing that she stood perfectly still, with her head lowered upon her breast, he untied the bonnet, pulled it off rudely, and held up her face to public view. There was a murmur of applause.

"Show your teeth," said the auctioneer. But she only compressed her mouth more firmly. After trying in vain to coax her, he exclaimed,—

"Never mind, gentlemen. She's got a string of pearls inside them coral lips of hers. I can swear to that, for I've seen 'em. No use tryin' to trot her out. She's a leetle set up, ye see, with bein' made much of. Look at her, gentlemen ! Who can blame her for bein' a bit proud ? She's a fust-rate fancy-article. Who bids ?"

Before he had time to repeat the ques-

tion, Mr. Grossman said, in a loud voice, "Fifteen hundred dollars."

This was rather a damper upon Mr. Helper's agent, who bid sixteen hundred.

A voice from the crowd called out, "Eighteen hundred."

"Two thousand," shouted Mr. Grossman.

"Two thousand two hundred," said another voice.

"Two thousand five hundred," exclaimed Mr. Grossman.

"Two thousand eight hundred," said the incognito agent.

The prize was now completely given up to the two competitors; and the agent, excited by the contest, went beyond his orders, until he bid as high as four thousand two hundred dollars.

"Four thousand five hundred," screamed the cotton-broker.

There was no use in contending with him. He was evidently willing to stake all his fortune upon victory.

"Going ! Going ! Going !" repeated the auctioneer, slowly. There was a brief pause, during which every pulsation in Loo Loo's body seemed to stop. Then she heard the horrible words, "Gone, for four thousand five hundred dollars ! Gone to Mr. Grossman !"

They led her to a bench at the other end of the room. She sat there, still as a marble statue, and almost as pale. The sudden cessation of excited hope had so stunned her, that she could not think. Everything seemed dark and reeling round her. In a few minutes, Mr. Grossman was at her side.

"Come, my beauty," said he. "The carriage is at the door. If you behave yourself, you shall be treated like a queen. Come, my love !"

He attempted to take her hand, but his touch roused her from her lethargy; and springing at him, like a wild-cat, she gave him a blow in the face that made him stagger,—so powerful was it, in the vehemence of her disgust and anger.

His coaxing tones changed instantly.

"We don't allow niggers to put on

such airs," he said. "I'm your master. You've got to live with me; and you may as well make up your mind to it first as last."

He glowered at her savagely for a moment; and drawing from his pocket an embroidered slipper, he added,—

"Ever since I picked up this pretty thing, I've been determined to have you. I expected to be obliged to wait till Noble got tired of you, and wanted to take up with another wench; but I've had better luck than I expected."

At the sight of that gift of Alfred's in his hated hand, at the sound of those coarse words, so different from *his* respectful tenderness, her pride broke down, and tears welled forth. Looking up in his stern face, she said, in tones of the deepest pathos,—

"Oh, Sir, have pity on a poor, unfortunate girl! Don't persecute me!"

"Persecute you?" he replied. "No, indeed, my charmer! If you'll be kind to me, I'll treat you like a princess."

He tried to look loving, but the expression was utterly revolting. Twelve years of unbridled sensuality had rendered his countenance even more disgusting than it was when he shocked Alfred's youthful soul by his talk about "Duncan's handsome wench."

"Come, my beauty," he continued, persuasively, "I'm glad to see you in a better temper. Come with me, and behave yourself."

She curled her lip scornfully, and repeated,—

"I will never live with you! Never!"

"We'll see about that, my wench," said he. "I may as well take you down a peg, first as last. If you'd rather be in the calaboose with niggers than to ride in a carriage with me, you may try it, and see how you like it. I reckon you'll be glad to come to my terms, before long."

He beckoned to two police-officers, and said, "Take this wench into custody, and keep her on bread and water, till I give further orders."

The jail to which Loo Loo was con-

veyed was a wretched place. The walls were dingy, the floor covered with puddles of tobacco-juice, the air almost suffocating with the smell of pent-up tobacco-smoke, unwashed negroes, and dirty garments. She had never seen any place so loathsome. Mr. Jackson's log-house was a palace in comparison. The prison was crowded with colored people of all complexions, and almost every form of human vice and misery was huddled together there with the poor victims of misfortune. Thieves, murderers, and shameless girls, decked out with tawdry bits of finery, were mixed up with modest-looking, heart-broken wives, and mothers mourning for the children that had been torn from their arms, in the recent sale. Some were laughing, and singing lewd songs. Others sat still, with tears trickling down their sable cheeks. Here and there the fierce expression of some intelligent young man indicated a volcano of revenge seething within his soul. Some were stretched out drowsily upon the filthy floor, their natures apparently stupefied to the level of brutes. When Loo Loo was brought in, most of them were roused to look at her; and she heard them saying to each other, "By gum, dat ar an't no nigger!" "What fur dey fotch *her* here?" "She be white lady ob quality, *she* be."

The tenderly-nurtured daughter of the wealthy planter remained in this miserable place two days. The jailer, touched by her beauty and extreme dejection, offered her better food than had been prescribed in his orders. She thanked him, but said she could not eat. When he invited her to occupy, for the night, a small room apart from the herd of prisoners, she accepted the offer with gratitude. But she could not sleep, and she dared not undress. In the morning, the jailer, afraid of being detected in these acts of indulgence, told her, apologetically, that he was obliged to request her to return to the common apartment.

Having recovered somewhat from the stunning effects of the blow that had fallen on her, she began to take more notice of

her companions. A gang of slaves, just sold, was in keeping there, till it suited the trader's convenience to take them to New Orleans; and the parting scenes she witnessed that day made an impression she never forgot. "Can it be," she said to herself, "that such things have been going on around me all these years, and I so unconscious of them? What should I now be, if Alfred had not taken compassion on me, and prevented my being sent to the New Orleans market, before I was ten years old?" She thought, with a shudder of the auction-scene the day before, and began to be afraid that her friends could not save her from that vile man's power.

She was roused from her reverie by the entrance of a white gentleman, whom she had never seen before. He came to inspect the trader's gang of slaves, to see if any one among them would suit him for a house-servant; and before long, he agreed to purchase a bright-looking mulatto lad. He stopped before Loo Loo, and said, "Are you a good sempstress?"

"She's not for sale," answered the jailer. "She belongs to Mr. Grossman, who put her here for disobedience." The man smiled, as he spoke, and Loo Loo blushed crimson.

"Ho, ho," rejoined the stranger. "I'm sorry for that. I should like to buy her, if I could."

He sauntered round the room, and took from his pocket oranges and candy, which he distributed among the black picaninnies tumbling over each other on the dirty floor. Coming round again to the place where she sat, he put an orange on her lap, and said, in low tones, "When they are not looking at you, remove the peel"; and, touching his finger to his lip, significantly, he turned away to talk with the jailer.

As soon as he was gone, she asked permission to go, for a few minutes, to the room she had occupied during the night. There she examined the orange, and found that half of the skin had been removed unbroken, a thin paper inserted, and the peel replaced. On the scrap of paper was writ-

ten: "When your master comes, appear to be submissive, and go with him. Plead weariness, and gain time. You will be rescued. Destroy this, and don't seem more cheerful than you have been." Under this was written, in Madame Labassé's hand, "Soyez tranquille, ma chère."

Unaccustomed to act a part, she found it difficult to appear so sad as she had been before the reception of the note. But she did her best, and the jailer observed no change.

Late in the afternoon, Mr. Grossman made his appearance. "Well, my beauty," said he, "are you tired of the calaboose? Don't you think you should like my house rather better?"

She yawned listlessly, and, without looking up, answered, "I am very tired of staying here."

"I thought so," rejoined her master, with a chuckling laugh. "I reckoned I should bring you to terms. So you've made up your mind not to be cruel to a poor fellow so desperately in love with you,—haven't you?"

She made no answer, and he continued: "You're ready to go home with me,—are you?"

"Yes, Sir," she replied, faintly.

"Well, then, look up in my face, and let me have a peep at those devilish handsome eyes."

He chuckled her under the chin, and raised her blushing face. She wanted to push him from her, he was so hateful; but she remembered the mysterious orange, and looked him in the eye, with passive obedience. Overjoyed at his success, he paid the jailer his fee, drew her arm within his, and hurried to the carriage.

How many humiliations were crowded into that short ride! How she shrank from the touch of his soft, swabby hand! How she loathed the gloating looks of the old Satyr! But she remembered the orange, and endured it all stoically.

Arrived at his stylish house, he escorted her to a large chamber elegantly furnished.

"I told you I would treat you like a

princess," he said; "and I will keep my word."

He would have seated himself; but she prevented him, saying, "I have one favor to ask, and I shall be very grateful to you, if you will please to grant it."

"What is it, my charmer?" he inquired. "I will consent to anything reasonable."

She answered, "I could not get a wink of sleep in that filthy prison; and I am extremely tired. Please leave me till to-morrow."

"Ah, why did you compel me to send you to that abominable place? It grieved me to cast such a pearl among swine. Well, I want to convince you that I am a kind master; so I suppose I must consent. But you must reward me with a kiss before I go."

This was the hardest trial of all; but she recollected the danger of exciting his suspicions, and complied. He returned it with so much ardor, that she pushed him away impetuously; but softening her manner immediately, she said, in pleading tones, "I am exceedingly tired; indeed I am!"

He lingered, and seemed very reluctant to go; but when she again urged her request, he said, "Good night, my beauty! I will send up some refreshments for you, before you sleep."

He went away, and she had a very uncomfortable sensation when she heard him lock the door behind him. A prisoner, with *such* a jailer! With a quick movement of disgust, she rushed to the water-basin and washed her lips and her hands; but she felt that the stain was one no ablution could remove. The sense of degradation was so cruelly bitter, that it seemed to her as if she should die for very shame.

In a short time, an elderly mulatto woman, with a pleasant face, entered, bearing a tray of cakes, ices, and lemonade.

"I don't wish for anything to eat," said Loo Loo, despondingly.

"Oh, don't be givin' up, in dat ar way," said the mulatto, in kind, motherly tones. "De Lord a'n't a-gwine to forsake ye.

Ye may jus' breeve what Aunt Debby tells yer. I'se a poor ole nigger; but I hab 'sarved dat de darkest time is allers jus afore de light come. Eat some ob dese yer goodies. Ye oughter keep yourself strong fur de sake ob yer friends."

Loo Loo looked at her earnestly, and repeated, "Friends? How do you know I *have* any friends?"

"Oh, I'se poor ole nigger," rejoined the mulatto. "I don't knows nothin'."

The captive looked wistfully after her, as she left the room. She felt disappointed; for something in the woman's ways and tones had excited a hope within her. Again the key turned on the outside; but it was not long before Debby reappeared with a bouquet.

"Massa sent young Missis dese yer fowers," she said.

"Put them down," rejoined Loo Loo, languidly.

"Whar shall I put 'em?" inquired the servant.

"Anywhere, out of my way," was the curt reply.

Debby cautioned her by a shake of her finger, and whispered, "Massa's out dar, waitin' fur de key. Dar's writin' on dem ar fowers." She lighted the lamps, and, after inquiring if anything else was wanted, she went out, saying, "Good night, missis. De Lord send ye pleasant dreams."

Again the key turned, and the sound of footsteps died away. Loo Loo eagerly untwisted the paper round the bouquet, and read these words: "Be ready for travelling. About midnight your door will be unlocked. Follow Aunt Debby with your shoes in your hand, and speak no word. Destroy this paper." To this Madame Labassé had added, "Ne craigner rien, ma chère."

Loo Loo's heart palpitated violently, and the blood rushed to her cheeks. Weary as she was, she felt no inclination to sleep. As she sat there, longing for midnight, she had ample leisure to survey the apartment. It was, indeed, a bower fit for a princess. The chairs, tables, and French bedstead were all ornament-

ed with roses and lilies gracefully intertwined on a delicate fawn-colored ground. The tent-like canopy, that partially veiled the couch, was formed of pink and white striped muslin, draped on either side in ample folds, and fastened with garlands of roses. The pillow-cases were embroidered, perfumed, and edged with frills quilled as neatly as the petals of a dahlia. In one corner stood a small table, decorated with a very elegant Parisian tea-service for two. Lamps of cut glass illumined the face of a large Psyche mirror, and on the toilet before it a diamond necklace and ear-rings sparkled in their crimson velvet case. Loo Loo looked at them with a half-scornful smile, and repeated to herself:

"He bought me somewhat high;
Since with me came a heart he couldn't
buy."

She lowered the lamps to twilight softness, and tried to wait with patience. How long the hours seemed! Surely it must be past midnight. What if Aunt Debby had been detected in her plot? What if the master should come, in her stead? Full of that fear, she tried to open the windows, and found them fastened on the outside. Her heart sank within her; for she had resolved, in the last emergency, to leap out and be crushed on the pavement. Suspense became almost intolerable. She listened, and listened. There was no sound, except a loud snoring in the next apartment. Was it her tyrant, who was sleeping so near? She sat with her shoes in her hand, her eyes fastened on the door. At last it opened, and Debby's brown face peeped in. They passed out together,—the mulatto taking the precaution to lock the door and put the key in her pocket. Softly they went down stairs, through the kitchen, out into the adjoining alley. Two gentlemen with a carriage were in attendance. They sprang in, and were whirled away. After riding some miles, the carriage was stopped; one of the gentlemen alighted and handed the women out.

"My name is Dinsmore," he said. "I am uncle to your friend, Frank Helper. You are to pass for my daughter, and Debby is our servant."

"And Alfred,—Mr. Noble, I mean,—where is he?" asked Loo Loo.

"He will follow in good time. Ask no more questions now."

The carriage rolled away; and the party it had conveyed were soon on their way to the North by an express-train.

It would be impossible to describe the anxiety Alfred had endured from the time Loo Loo became the property of the cotton-broker until he heard of her escape. From motives of policy he was kept in ignorance of the persons employed, and of the measures they intended to take. In this state of suspense, his reason might have been endangered, had not Madame Labassé brought cheering messages, from time to time, assuring him that all was carefully arranged, and success nearly certain.

When Mr. Grossman, late in the day, discovered that his prey had escaped, his rage knew no bounds. He offered one thousand dollars for her apprehension, and another thousand for the detection of any one who had aided her. He made successive attempts to obtain an indictment against Mr. Noble; but he was proved to have been distant from the scene of action, and there was no evidence that he had any connection with the mysterious affair. Failing in this, the exasperated cotton-broker swore that he would have his heart's blood, for he knew the sly, smooth-spoken Yankee was at the bottom of it. He challenged him; but Mr. Noble, notwithstanding the arguments of Frank Helper, refused, on the ground that he held New England opinions on the subject of duelling. The Kentuckian could not understand that it required a far higher kind of courage to refuse, than it would have done to accept. The bully proclaimed him a coward, and shot at him in the street, but without inflicting a very serious wound. Thenceforth he went armed, and his friends kept him in sight. But he probably owed his life to

the fact that Mr. Grossman was compelled to go to New Orleans suddenly, on urgent business. Before leaving, the latter sent messengers to Savannah, Charleston, Louisville, and elsewhere; exact descriptions of the fugitives were posted in all public places, and the offers of reward were doubled; but the activity thus excited proved all in vain. The runaways had travelled night and day, and were in Canada before their pursuers reached New York. A few lines from Mr. Dinsmore announced this to Frank Helper, in phraseology that could not be understood, in case the letter should be inspected at the post-office. He wrote: "I told you we intended to visit Montreal; and by the date of this you will see that I have carried my plan into execution. My daughter likes the place so much that I think I shall leave her here awhile in charge of our trusty servant, while I go home to look after my affairs."

After the excitement had somewhat subsided, Mr. Noble ascertained the process by which his friends had succeeded in effecting the rescue. Aunt Debby owed her master a grudge for having repeatedly sold her children; and just at that time a fresh wound was rankling in her heart, because her only son, a bright lad of eighteen, of whom Mr. Grossman was the reputed father, had been sold to a slave-trader, to help raise the large sum he had given for Loo Loo. Frank Helper's friends, having discovered this state of affairs, opened a negotiation with the mulatto woman, promising to send both her and her son into Canada, if she would assist them in their plans. Aunt Debby chuckled over the idea of her master's disappointment, and was eager to seize the opportunity of being reunited to her last remaining child. The lad was accordingly purchased by the gentleman who distributed oranges in the prison, and was sent to Canada, according to promise. Mr. Grossman was addicted to strong-drink, and Aunt Debby had long been in the habit of preparing a potion for him before he retired to rest. "I mixed it powerful, dat ar night," said

the laughing mulatto; "and I put in something dat de gemmen guv to me. I reckon he waked up awful late." Mr. Dinsmore, a maternal uncle of Frank Helper's, had been visiting the South, and was then about to return to New York. When the story was told to him, he said nothing would please him more than to take the fugitives under his own protection.

SCENE V.

MR. NOBLE arranged the wreck of his affairs as speedily as possible, eager to be on the way to Montreal. The evening before he started, Frank Helper waited upon Mr. Grossman, and said: "That handsome slave you have been trying so hard to catch is doubtless beyond your reach, and will take good care not to come within your power. Under these circumstances, she is worth nothing to you; but for the sake of quieting the uneasiness of my friend Noble, I will give you eight hundred dollars to relinquish all claim to her."

The broker flew into a violent rage. "I'll see you both damned first," he replied. "I shall trip 'em up yet. I'll keep the sword hanging over their cursed heads as long as I live. I wouldn't mind spending ten thousand dollars to be revenged on that infernal Yankee."

Mr. Noble reached Montreal in safety, and found his Loo Loo well and cheerful. Words are inadequate to describe the emotions excited by reunion, after such dreadful perils and hairbreadth escapes. Their marriage was solemnized as soon as possible; but the wife being an article of property, according to American law, they did not venture to return to the States. Alfred obtained some writing to do for a commercial house, while Loo Loo instructed little girls in dancing and embroidery. Her character had strengthened under the severe ordeals through which she had passed. She began to question the rightfulness of living so indolently as she had done. Those painful scenes in the slave-prison made her reflect that sympathy

with the actual miseries of life was better than weeping over romances. She was rising above the deleterious influences of her early education, and beginning to feel the dignity of usefulness. She said to her husband, "I shall not be sorry, if we are always poor. It is so pleasant to help *you*, who have done so much for *me*! And Alfred, dear, I want to give some of my earnings to Aunt Debby. The poor old soul is trying to lay up money to pay that friend of yours who bought her son and sent him to Canada. Surely, I, of all people in the world, ought to be willing to help slaves who have been less fortunate than I have. Sometimes, when I lie awake in the night, I have very solemn thoughts come over me. It was truly a wonderful Providence that twice saved me from the dreadful fate that awaited me. I can never be grateful enough to God for sending me such a blessed friend as my good Alfred."

They were living thus contented with their humble lot, when a letter from Frank Helper announced that the extensive house of Grossman & Co. had stopped payment. Their human chattels had been put up at auction, and among them was the title to our beautiful fugitive. The chance of capture was considered so hopeless, that, when Mr. Helper bid sixty-two dollars, no one bid over him; and she became his property, until there was time to transfer the legal claim to his friend.

Feeling that they could now be safe under their own vine and fig-tree, Alfred returned to the United States, where he became first a clerk, and afterward a prosperous merchant. His natural organization unfitted him for conflict, and though his peculiar experiences had im-

bued him with a thorough abhorrence of slavery, he stood aloof from the ever-increasing agitation on that subject; but every New Year's day, one of the Vigilance Committees for the relief of fugitive slaves received one hundred dollars "from an unknown friend." As his pecuniary means increased, he purchased several slaves, who had been in his employ at Mobile, and established them as servants in Northern hotels. Madame Labassé was invited to spend the remainder of her days under his roof; but she came only in the summers, being unable to conquer her shivering dread of snow-storms.

Loo Loo's personal charms attracted attention wherever she made her appearance. At church, and other public places, people pointed her out to strangers, saying, "That is the wife of Mr. Alfred Noble. She was the orphan daughter of a rich planter at the South, and had a great inheritance left to her; but Mr. Noble lost it all in the financial crisis of 1837." Her real history remained a secret, locked within their own breasts. Of their three children, the youngest was named Loo Loo, and greatly resembled her beautiful mother. When she was six years old, her portrait was taken in a gypsy hat garlanded with red berries. She was dancing round a little white dog, and long streamers of ribbon were floating behind her. Her father had it framed in an arched environment of vine-work, and presented it to his wife on her thirtieth birth-day. Her eyes moistened as she gazed upon it; then kissing his hand, she looked up in the old way, and said, "I thank you, Sir, for buying me."

LETTER-WRITING.

A FRIEND, who happens to have an idea or two of his own, is constantly advising his acquaintances in no case to become parties to a regular correspondence. He is a great letter-writer himself, but never answers an epistle, unless it contain queries as to matters of fact, or be an invitation to a ball or a dinner,—unless, in a word, real, not what he considers conventional, politeness requires; in which event, his reply is despatched at once. Under all other circumstances, he ignores the last missive from him or her to whom his envelope is addressed. He studiously frames his own communications in such wise, that they do not call for an answer. He will totally neglect an intimate friend for months, then let fly at him epistle after epistle, and then give no sign of life for a long while again. If asked to exchange letters once a week or once a fortnight, he solemnly inquires whether the wind goes by machinery, and is, after a given interval, invariably at such o'clock,—adding, that it is his aim, not to keep up, but to keep down, correspondence. If accused of “owing a letter,” he repudiates the obligation, and affirms that he will go to jail sooner than pay it off. If taxed with heartlessness, he retorts by asking whether it can be the duty of a moral being to insult a man by writing to him when there is nothing to say.

That these notions, whether they did or did not originate in an unfortunate love-affair, which my friend is said to have gone through in his youth, contain grains of truth may be easily shown.

I drop a letter in the New York post-office to-day; my friend in Boston receives it to-morrow and pens a reply at once, which finds me in New York within twenty-four hours. He may have understood and really answered my epistle. But suppose him to have waited a week. New matters have, meantime, taken possession of both his mind and mine; the

topics, which were fresh when I wrote, have lost their interest; the bridge between us is broken down. His reply is worth little more to me than water to flowers cut a month since, or seed to a canary that was interred with tears last Saturday.

Correspondence is conversation carried on under certain peculiar conditions, but subject to the same rules as conversation by word of mouth, except so far forth as they may be modified by those necessary conditions. You do not take your partner's bright saying home with you and bring a repartee to the next ball, by which time she has forgotten what her *bon mot* was, and has another, every whit as good, upon her lips; you do not return a lead in whist at the next rubber; you do not postpone the laugh over the jokes of the dinner-table, as is fabulously narrated of Washington, until you have retired for the night. In social intercourse, minds must meet before one person can be brought to another's mood or both to a middle ground; it is the friction of contact, that creates conversation. A remark, not answered the instant after it has been made, is never answered. The bores and boors of society, not the gentlemen and ladies, ruminate upon what has been said, elaborate replies at leisure, and serve them up unseasonably.

For the purposes of correspondence, one may and must throw himself back into the immediate past and assume the mood that was his when he wrote and in which alone a reply can find him. But there is a limit to this power, which is soon reached. Not many letters will keep sweet more than two days. A little indulgence may, perhaps, be shown toward persons who are a week or a fortnight from us by the post, since otherwise we could never converse together. But even they should reply to only the weightier matters suggested, since what they say will probably be stale before it

reaches the eyes for which it was written. For the like reasons, I hold a Californian or European correspondence to be an impossibility. As for him whose want of politeness fixes a gulf, a week broad, between himself and his correspondent, there is no excuse. As one reads a letter, an answer to whatever worth answering may be in it leaps to the lips; to give it utterance that moment is the only natural, courteous, and truthful course. Ten days hence, the reply, which now comes of its own accord, cannot be found; what might have been a source of pleasure to two persons will have become a piece of thankless drudgery. In vain the conscientious correspondent, at the appointed time, takes the letter which she would answer out of the compartment of her portfolio, whereon stationers, cunningly humoring a popular weakness, have gilded,—"UNANSWERED LETTERS." In vain she cons it with care, comments upon every observation in it, answers all its questions one by one, and propounds a series of her own, as a basis for the next epistle. Everything has been done decently and in order; but the laboriously-produced letter is a letter which killeth, and contains no infusion of the spirit that giveth life. This is not the writer's fault. It is and must be all but impossible, after a lapse of time, to reproduce the natural reply to a remark, or to concoct one that shall be vital and satisfactory to the other party.

Lovers, of all persons, it would seem, might with least danger postpone answering each other's missives, since their common topic of interest is always with them, and the *billet-doux*, after having been carried in the bosom a week, is as fresh as when taken from the post-office. What need for "sweet sixteen" to consume the very night of its reception in essaying a reply, which she might have written next week as well, since next week they two will stand in substantially the same relations to one another as now? "Sweet sixteen" smiles at such cold-blooded logic. "To you others," thinks she to herself, "all sunsets may be alike;

but in our horizon are constant changes, delicate tones of color, each

'Shade so finely touched love's sense must seize it.'

The mood into which Walter's note put me may never return again. Now it is correspondent to the mood in which he wrote; now or never must I reply. In this way alone can we keep up a correspondence between our natures."

But the stupid world will not accept, cannot even understand, these fine sayings. It looks at the question with very different eyes from those of lovers, boarding-school misses, and persons in the first moon of a first marriage. The peculiar relations between them may supply inspiration and vitality to such correspondence. But would Dean Swift have put the daily record of his life upon paper for another than Stella to peruse? Would Leander have swum the Hellespont for the sake of meeting any girl but Hero upon the distant shore? As it was, he was drowned for his pains. The rest of us cannot swim Hellesponts, keep diaries, nor correspond, as foolish young people have done and do. We have books to read, business to attend to, duties to perform, tastes to gratify, ambition to feed. Who could bear to have his correspondents always upon his hands? Who could endure such a tax upon his patience as they would become? Who would send for his letters? Who would not rather run away from the post-men, for fear of the next discharge?

In the analogy between conversation and correspondence may, perhaps, be found a key to the problem. Those of us who are not lovers, school-girls, or spinsters are not desirous of keeping up a colloquy, day in and day out. Nor are we in the habit of resuming a subject, in the next interview, at the precise point where we left it. A "regular" conversation, after the fashion of a regular correspondence, is, as between two individuals mutually unknown, or as among a number, invariably a failure. However recently persons may have parted company, at meeting they commence *de no-*

vo; a new talk grows out of the circumstances and thoughts of the moment, which ends as naturally as it began, when the talkers get tired or are obliged to stop. Sometimes but one of two or three opens her lips, but conversation, nevertheless, goes on; since an open ear is the most pointed question, and sympathy is the same, whether or not put into words.

To conversation carried on at a distance of space and time, through the pen, not the lips, the simple and obvious principles upon which people act in the drawing-room or the fireside-circle are easily applied. Between those who really wish to talk together letters should fly as rapidly as the post can deliver them. If only one feels like writing, he should pour forth his heart to his friend, although that friend remain as silent as the grave. It would be as absurd to say that either party "owes the letter," as to charge him who had the penultimate word in a dialogue with the duty of making the first remark the next time he encounters her who had the last word. When the topic of immediate interest has been disposed of, a correspondence is over. It matters as little who contributed the larger proportion to it, as who contributes the most to a dialogue. When the end is reached, the story is done. It is for the party who is first in the mood of writing, after an interval of silence, to open a new correspondence, in which there shall be no reference to previous communications, and which may die with the first letter or be protracted for a week or a month.

Thus we are brought to a position not very far from that taken by my eccentric friend. General or regular correspondence is useless, baneful, and in most cases impossible; but special correspondence, born of the necessities of man as a social being, and circumscribed by them, may be from time to time possible. There can be no harm in an occasional exchange of bulletins of health and happiness, like the "good morning" and "how d'ye do" of the street and the parlor, or in making new-year's calls, as it were, annually upon one's distant friends. I know two ladies

who have done this as respects each other for twenty years. But, as a rule, the shorter epistles of this description are, the better. Some simple formula, which might be printed for convenience's sake, would answer the purpose, and complete the analogy with the practice of paying three-minute visits of ceremony or of leaving a card at the door.

The employment of a printed formula in all cases, indeed, where one feels not impelled, but obliged to write, would save both time and temper. We lay down nine out of ten of our letters with feelings of disappointment. Were we to imitate the Scotch servant who returned hers to the postmaster, after a glance at the address had assured her of the writer's health, we should be quite as well off as we are now. My correspondent often begins with the remark, that he has nothing to communicate. Then why in the world did he write? Why has he covered four pages with specimens of poor chirography, which it cost him an hour to put upon paper, and us almost as much time to decipher? He sends me news which was in the papers a week ago; or speculations upon it, which professional journalists have already surfeited me with; or short treatises, after the fashion of Cicero's epistolary productions. He talks about the weather, past, present, and to come. He serves up, with piquant sauce, occurrences which he would not have thought worthy of mention at his own breakfast-table. He spins out his two or three facts or ideas into the finest and flimsiest gossamer; or tucks them into a postscript, which alone, with the formula, should have been forwarded. He writes in a large hand, and resorts to every kind of device to fill up his sheet, instead of taking the manly course of writing only so long as he had something to say, or, if nothing, of keeping silence. A kindly sentence or two may redeem the epistle from utter condemnation; for love, according to Solomon, makes a dinner of herbs palatable. But "LOVE," written beneath a formula, would have answered as well.

I should not dare to describe the productions of my female correspondents in detail. Suffice it to say, that most of them contain a smaller proportion of useless information, and a larger proportion of sentiment, vague aspiration, and would-be-picturesque description, than those of the men who pay postage on my behalf. They are longer, and sometimes crossed; it is therefore a greater task to read them.

My "fair readers"—as the snobs who write for magazines call women—have not, I trust, misapprehended my meaning and lost patience with me. I would not be understood as expressing a preference for one description of letters over another. Every person to his tastes and his talents. But a letter, which does not represent the writer's real mood, reflect what is uppermost in his or her mind, deal with things and thoughts rather than with words, and express, if not strengthen, the peculiar ties between the person writing and the person written to,—a letter which is not genuine,—is no letter, but a sham and a lie. A real letter, on the other hand, whatever its topic, cannot fail to be worth reading. Great thoughts, profound speculations, matters of experience, bits of observation, delicate fancies, romantic sentiments, humorous criticisms on people and things, funny stories, dreams of the future, memories of the past, pictures of the present, the merest gossip, the veriest trifling, everything, nothing, may form the theme, if naturally spoken of, not hunted up to fill out a page.

No reason for modifying my conclusions occurs to me. It may be said, that, after all, a poor letter is better than none, because advices from distant friends are always welcome. But would not a glance at the well-known handwriting supply this want as fully as the perusal of a lengthy epistle, written with the hand, but not with the heart? Does not our chagrin at finding so little of our friends in their letters more than counterbalance our gratification that they have been (presumably) kind and thoughtful enough to write? Would we not gladly give four

of their ordinary letters for one of their best? But the instant they strike off the shackles of regular correspondence, and despatch letters only when they feel inclined, replies only while they are fresh, and formulas at other times, if need be, we have our wish; the miles between our friends and ourselves shorten, they are really with us now and then, and we take solid pleasure in chatting with them.

Am I told, that, until these ideas find general acceptance, it is dangerous to act upon them? that for an individual here and there to go out of the common course is only to make himself notorious, a stranger or a bore to his friends? Were such statements true, they would still be cowardly. We should be faithful to our convictions of what is due to truth and manhood and self-respect, be the consequences what they may. Because a few are so, the world moves. The general voice always comes in as a chorus to a few particular voices. As for friends who cannot appreciate independence of character or of conduct, the fewer one has of them, the better.

Such suggestions as have been thrown out are too obvious to have escaped any one who has given the subject a moment's thought. But who has time for that? People live too fast, in these days, to pay such attention as should be paid to those who are more valuable as individuals than as parts of the great world. The good offices of friendship, which are the fulfilment of the highest social duties, are poorly performed, and, indeed, little understood. Not many of those who think at all think beyond the line of established custom and routine. They may take pains in their letters to obey the ordinary rules of grammar, to avoid the use of slang phrases and vulgar expressions, to write a clear sentence; but how few seek for the not less imperative rules which are prescribed by politeness and good sense! Of those who should know them, no small proportion habitually, from thoughtlessness or perverseness, neglect their observance.

I know men, distinguished in the

walks of literature, famed for a beautiful style of composition, who do not write a tolerable letter nor answer a note of invitation with propriety. Their sentences are slipshod, their punctuation and spelling beyond criticism, and their manuscript repulsive. A lady, to whose politeness such an answer is given, has a right to feel offended, and may very properly ask whether she be not entitled to as choice language as the promiscuous crowd which the "distinguished gentleman" addresses from pulpit or desk.

How the distinguished gentleman would open his eyes at the question! He is sure that what he sent her was well enough for a letter. As though a letter, especially a letter to a lady, should not be as perfect in its kind as a lecture or sermon in its kind! as though one's duties toward an individual were less stringent than one's duties toward an audience! Would the distinguished gentleman be willing to probe his soul in search of the true reason for the difference in his treatment of the two? Is he sure that it is not an outgrowth from a certain "mountainous me," which seeks approbation more ardently from the one source than from the other?

There are those who indite elegant notes to comparative strangers, but, probably upon the principle that familiarity breeds or should breed contempt, send the most villanous scrawls to their intimate friends and those of their own household. They are akin to the numerous wives, who, reserving not only silks and satins, but neatness and courtesy, for company, are always in dishabille in their husbands' houses.

Pericles, according to Walter Savage Landor, once wrote to Aspasia as follows:—

"We should accustom ourselves to think always with propriety in little things as well as in great, and neither be too solicitous of our dress in the parlor nor negligent because we are at home. I think it as improper and indecorous to write a stupid or silly letter to you, as one in a bad hand or upon coarse paper.

Familiarity ought to have another and a worse name, when it relaxes in its efforts to please."

The London Pericles, the Athenian gentleman,—and there are a few such as he still extant,—writes to his nearest and dearest friend none but the best letters. It appears to him as ill-bred to say stupid or silly things to her, as to say what he does say clownishly. He cannot conceive of doing what is so frequently done now-a-days. He brings as much of Pericles to the composition of a letter as to the preparation of a speech. We may feel sure, that, unless he acted counter to his own maxims, he never wrote a line more or a line less than he felt an impulse to write, and that he had no "regular correspondents."

It is not every one that can write such letters as are in that delightful book of Walter Savage Landor, or as charmed the friends of Charles Lamb, the poet Gray, and a few famous women, first, and the world afterwards. It is not every one who can, with the utmost and wisest painstaking, produce a thoroughly excellent letter. The power to do that is original and not to be acquired. The charm of it will not, cannot, disclose its secret. Like the charm of the finest manners, of the best conversation, of an exquisite style, of an admirable character, it is felt rather than perceived. But every person, who will be simply true to his or her nature, can write a letter that will be very welcome to a friend, because it will be expressive of the character which that friend esteems and loves. The bunch of flowers, hastily put together by her who gathered them, speaks as plainly of affection, although not in so delicate tones, as the most tastefully-arranged bouquet. But who desires to be presented with a nosegay of artificial flowers? Who can abide dead blossoms or violent discords of color? Freshness, sweetness, and an approach to harmony, that shall bring to mind the living, growing plants, and the bountiful Nature from whose embrace flowers are born, the acceptable gift must have.

To attempt a closer definition of a good letter than has been given would be a fruitless, as well as difficult task. "Complete letter-writers" are chiefly useful for the formulas—notes of invitation, answers to them, and the like—which they contain, and for their lessons in punctuation, spelling, and criticism. Their efforts to instruct upon other points are and must be worse than useless, because their precepts cramp without inspiring. A few good examples are more valuable, but a little practice is worth them all. Letter-writing is, after all, a *pas seul*, as it were; the novice has no partner to teach him manners, or the figures of the dance, or to set his wits astir. By effort, and through numerous failures, he must teach himself. The difficulties of the medium between him and his distant friend, who is generally in a similar predicament, must be surmounted. Gradually stiffness gives place to ease of composition, roughness to elegance, awkwardness to grace and tact, until his letters at length come to represent his mood, and to interest, if not to delight, his correspondent. A rigid adherence to times and places and ceremonial retards this process of growth and advance, which is slow enough, at best.

But, although most correspondence is, from want of truthfulness, thoughtfulness, life, good judgment, and good breeding,

very unsatisfactory, it cannot be denied that many good letters are written every day. Between lovers, parents and children, real and hearty friends, they pass. Young men on the threshold of life, while discussing together the grave questions then encountered, write them. Women, before their time to love and to be loved has come, or after it is passed,—women, who, disappointed in the great hope of every woman's life, turn to one another for support and shelter,—are sending them by every post. Mr. De Quincey somewhere says, that in the letters of English women, almost alone, survive the pure and racy idioms of the language; and the German Wolf is said to have asserted, that in corresponding with his betrothed he learnt the mysteries of style.

Such letters as these are worth one's reading, because the utterance is genuine and genial. The writers feel and express in every line an interest in what they are writing, and do not recognize the conventional rules which obtain where people rely less upon inspirations from within than upon fixed general maxims for their guidance. As in the drawing-room the gentleman or lady behaves naturally, and not according to the dancing-master, so in their correspondence the best-bred people act from nature, and not from instruction.

THE CATACOMBS OF ROME.

[Continued.]

Novit etiam pictura tacens in parietibus loqui.

ST. GREGORY OF NYSSA.

IV.

CHRISTIAN ART began in the catacombs. Under ground, by the feeble light of lanterns, upon the ceilings of crypts, or in the semicircular spaces left above some of the more conspicuous graves, the first Christian pictures were painted. Imperfect in design, exhibiting

often the influence of pagan models, often displaying haste of performance and poverty of means, confined for the most part within a limited circle of ideas, and now faded in color, changed by damp, broken by rude treatment, sometimes blackened by the smoke of lamps,—they still give abundant evidence of the feeling and the

spirit which animated those who painted them, a feeling and spirit which unhappily have too seldom found expression in the so-called religious Art of later times. Few of them are of much worth in a purely artistic view. The paintings of the catacombs are rarely to be compared, in point of beauty, with the pictures from Pompeii,—although some of them at least were contemporary works. The artistic skill which created them is of a lower order. But their interest arises mainly from the sentiment which they imperfectly embody, and their chief value is in the light which they throw upon early Christian faith and religious doctrine. They were designed not so much for the delight of the eye and the gratification of the fancy, as for stimulating affectionate imaginations, and affording lessons, easily understood, of faith, hope, and love. They were to give consolation in sorrow, and to suggest sources of strength in trial. “The Art of the first three centuries is entirely subordinate,—restrained partly by persecution and poverty, partly by a high spirituality, which cared more about preaching than painting.”

With the uncertain means afforded by the internal character of these mural pictures, or by their position in the catacombs, it is impossible to fix with definiteness the period at which the Christians began to ornament the walls of their burial-places. It was probably, however, as early as the beginning of the second century; and the greater number of the most important pictures which have thus far been discovered within the subterranean cemeteries were probably executed before Christianity had become the established religion of the empire. After that time the decline in painting, as in faith, was rapid; formality took the place of simplicity; and in the course of the fourth and fifth centuries the native fire of Art sank, till nothing was left of it but a few dying embers, which the workmen from the East, who brought in the stiff conventionalisms of Byzantine Art, were unfit and unable to rekindle.

In the pictures of the most interesting

period, that is, of the second and third centuries, there is no attempt at literal portraiture or historic accuracy. They were to be understood only by those who had the key to them in their minds, and they mostly arranged themselves in four broad classes. 1st. Representations of personages or scenes from the Old Testament regarded as types of those of the New. 2d. Literal or symbolic representations of personages or scenes from the New Testament. 3d. Miscellaneous figures, chiefly those of persons in the attitude of prayer. 4th. Ornamental designs, often copied from pagan examples, and sometimes with a symbolic meaning attached to them.

It is a noteworthy and affecting circumstance, that, among the immense number of the pictures in the catacombs which may be ascribed to the first three centuries, scarcely one has been found of a painful or sad character. The sufferings of the Saviour, his passion and his death, and the martyrdoms of the saints, had not become, as in after days, the main subjects of the religious Art of Italy. On the contrary, all the early paintings are distinguished by the cheerful and trustful nature of the impressions they were intended to convey. In the midst of external depression, uncertainty of fortune and of life, often in the midst of persecution, the Roman Christians dwelt not on this world, but looked forward to the fulfilment of the promises of their Lord. Their imaginations did not need the stimulus of painted sufferings; suffering was before their eyes too often in its most vivid reality; they had learned to regard it as belonging only to earth, and to look upon it as the gateway to heaven. They did not turn for consolation to the sorrows of their Lord, but to his words of comfort, to his miracles, and to his resurrection. Of all the subjects of pictures in the catacombs, the one, perhaps, more frequently repeated than any other, and under a greater variety of forms and types, is that of the Resurrection. The figure of Jonah thrown out from the body of the whale, as the type that had been used by our

Lord himself in regard to his resurrection, is met with constantly; and the raising of Lazarus is one of the commonest scenes chosen for representation from the story of the New Testament. Nor is this strange. The assurance of immortality was to the world of heathen converts the central fact of Christianity, from which all the other truths of religion emanated, like rays. It gave a new and infinitely deeper meaning than it before possessed to all human experience; and in its universal comprehensiveness, it taught the great and new lessons of the equality of men before God, and of the brotherhood of man in the broad promise of eternal life. For us, brought up in familiarity with Christian truth, surrounded by the accumulated and constant, though often unrecognized influences of the Christian faith upon all our modes of thought and feeling, the imagination itself being more or less completely under their control,—for us it is difficult to fancy the change produced in the mind of the early disciples of Christ by the reception of the truths which he revealed. During the first three centuries, while converts were constantly being made from heathenism, brought over by no worldly temptation, but by the pure force of the new doctrine and the glad tidings over their convictions, or by the contagious enthusiasm of example and devotion,—faith in Christ and in his teachings must, among the sincere, have been always connected with a sense of wonder and of joy at the change wrought in their views of life and of eternity. Their thoughts dwelt naturally upon the resurrection of their Lord, as the greatest of the miracles which were the seal of his divine commission, and as the type of the rising of the followers of Him who brought life and immortality to light.

The troubles and contentions in the early Church, the disputes between the Jew and the Gentile convert, the excesses of spiritual excitement, the extravagances of fanciful belief, of which the Epistles themselves furnish abundant evidence, ceased to all appearance at the

door of the catacombs. Within them there is nothing to recall the divisions of the faithful; but, on the contrary, the paintings on the walls almost universally relate to the simplest and most undisputed truths. It was fitting that among these the types of the Resurrection should hold a first place.

But the spiritual needs of life were not to be supplied by the promises and hopes of immortality alone. There were wants which craved immediate support, weaknesses that needed present aid, sufferings that cried for present comfort, and sins for which repentance sought the assurance of direct forgiveness. And thus another of the most often-repeated of the pictures in the catacombs is that of the Saviour under the form of the Good Shepherd. No emblem fuller of meaning, or richer in consolation, could have been found. It was very early in common use, not merely in Christian paintings, but on Christian gems, vases, and lamps. Speaking with peculiar distinctness to all who were acquainted with the Gospels, it was at the same time a figure that could be used without exciting suspicion among the heathen, and one which was not exposed to desecration or insult from them; and under emblems of this kind, whose inner meaning was hidden to all but themselves, the first Christians were often forced to conceal the expression of their faith. This figure recalled to them many of the sacred words and most solemn teachings of their Lord: "I am the Good Shepherd; the good shepherd giveth his life for the sheep." Often the good shepherd was represented as bearing the sheep upon his shoulders; and the picture addressed itself with touching and effective simplicity to him whom fear of persecution or the force of worldly temptations had led away. When one of his sheep is lost, doth not the shepherd go after it until he find it? "And when he hath found it, he layeth it on his shoulders, rejoicing." "There is joy in the presence of the angels of God over one sinner that repenteth." How often, before this picture, has some

saddened soul uttered the words of the Psalm: "I have gone astray like a lost sheep: seek thy servant, for I do not forget thy commandments"! And as it to afford still more direct assurance of the patience and long-suffering tenderness of the Lord, the Good Shepherd is sometimes represented in the catacombs as bearing, not a sheep, but a goat upon his shoulders. It was as if to declare that his forgiveness and his love knew no limit, but were waiting to receive and to embrace even those who had turned farthest from him. In a picture of very early date in the Catacomb of St. Callixtus, the Good Shepherd stands between a goat and a sheep, "as a shepherd divideth his sheep from the goats; and he shall set the sheep on his right hand and the goats on his left." But in this picture the order is reversed,—the goat is on his right hand and the sheep on his left. It was the strongest type that could be given of the mercy of God. Sometimes the Good Shepherd is represented, not bearing the sheep on his shoulders, but leaning on his crook, and with a pipe in his hands, while his flock stand in various attitudes around him. Here again the reference to Scripture is plain: "He calleth his own sheep by name, and leadeth them out; . . . and the sheep follow him, for they know his voice." Thus, under various forms and with various meanings, full of spiritual significance, and suggesting the most invigorating and consoling thoughts, the Good Shepherd appears oftener than any other single figure on the vaults and the walls of the catacombs. It is impossible to look at these paintings, poor in execution and in external expression as they are, without experiencing some sense, faint it may be, of the force with which they must have appealed to the hearts and consciences of those who first looked upon them. It is as if the inmost thoughts and deepest feeling of the Christians of those early times had become dimly visible upon the walls of their graves. The effect is undoubtedly increased by the manner in which these paintings are seen, by the unsteady light of wax ta-

pers, in the solitude of long-deserted passages and chapels. In such a place the dullest imagination is roused, troop on troop of associations and memories pass in review before it, and the fading colors and faint outlines of the paintings possess more power over it than the glow of Titian's canvas, or the firm outline of Michel Angelo's frescoes.

Another symbol of the Saviour which is frequently found in the works of the first three centuries, and which soon afterwards seems to have fallen almost entirely into disuse, is that of the Fish. It is not derived, like that of the Good Shepherd, immediately from the words of Scripture; though its use undoubtedly recalled several familiar narratives. It seems to have been early associated with the well-known Greek formula, Ἰησοῦς Χριστὸς Θεοῦ Υἱὸς Σωτὴρ, Jesus Christ the Saviour Son of God, arranged acrostically, so that the first letters of its words formed the word ἰχθῦς, fish. The first association that its use would suggest was that of Christ's call to Peter and Andrew, "Follow me, and I will make you fishers of men,"—and thus we find, among the early Christian writers, the name of "little fish," *pisciculi*, applied to the Christian disciples of their times. But it would serve also to bring to memory the miracle that the multitude had witnessed, of the multiplication of the fishes; and it would recall that last solemn and tender farewell meeting between the Apostles and their Lord on the shore of the Sea of Tiberias, in the early morning, when their nets were filled with fish,—and "Jesus then cometh, and taketh bread, and giveth them, and fish likewise." And with this association was connected, as we learn from the pictures in the catacombs, a still deeper symbolic meaning, in which it represented the body of our Lord as given to his apostles at the Last Supper. In the Cemetery of Callixtus, very near the recently discovered crypt of Pope Cornelius, are two square sepulchral chambers, adorned with pictures of an early date. Those of the first chamber have almost utterly perished, but on the wall of the second may be seen the image

of a fish swimming in the water, and bearing on his back a basket filled with loaves of the peculiar shape and color used by the Jews as an offering of the first fruits to their priests; beneath the bread appears a vessel which shows a red color, like a cup filled with wine. "As soon as I saw this picture," says the Cavaliere de Rossi, in his account of the discovery, "the words of St. Jerome came to my mind,—None is richer than he who bears the body of the Lord in an osier basket and his blood in a glass."

In the same cemetery, very near the crypt of St. Cecilia, there is a passage wider than common, upon whose side is a series of sepulchral cells of similar form, and ornamented with similar pictures. In one of them a table is represented, with four baskets of bread on the ground, on one side, and three on the other, while upon it three loaves and a fish are lying. In another of the chambers is a picture of a single loaf and of a fish upon a plate lying on a table, at one side of which a man stands with his hands stretched out towards it, while on the other side is a woman in the attitude of prayer. It seems no extravagance of interpretation to read in these pictures the symbol of that memorial service which Jesus had established for his followers,*—a service which has rarely been celebrated under circumstances more adapted to give to it its full effect, and to awaken in the souls of those who joined in it all the deep and

affecting memories of its first institution, than when the bread and wine were partaken of in memory of the Lord within the small and secret chapels of the early catacombs. To the Christians who assembled there in the days when to profess the name of Christ was to venture all things for his sake, his presence was a reality in their hearts, and his voice was heard as it was heard by his immediate followers who sat with him at the table in the upper chamber.

There are several instances, among these subterranean pictures, of a symbolic representation of the Saviour, drawn, not from Scripture, but from a heathen original. It is that of Orpheus playing upon his lyre, and drawing all creatures to him by the sweetness of his strains. It was a fiction widely spread soon after the introduction of Christianity among the Gentiles, that Orpheus, like the Sibyls and some other of the characters of mythology, had had some blind revelation of the coming of a saviour of the world, and had uttered indistinct prophecies of the event. Forgeries, similar to those of the Sibylline Verses, professing to be the remains of the poems of Orpheus, were made among the Alexandrian Christians, and for a long period his name was held in popular esteem, as that of a heathen prophet of Christian truth. Whether the paintings in the catacombs took their origin from these fictions must be uncertain; but driven, as the Roman Christians were, to hide the truth under a symbol that should be inoffensive, and should not reveal its meaning to pagan eyes, it was not strange that they should select this of the ancient poet. As he had drawn beasts and trees and stones to listen to the music of his lyre, so Christ, with persuasive sweetness and compelling force, drew men more savage than beasts, more rooted in the earth than trees, more cold than stones, to listen to and follow him. As Orpheus caused even the kingdom of Death to render back the lost, so Christ drew the souls of men from the very gates of hell, and made the grave restore its dead. And thus from the old

* The Cavaliere de Rossi, in his very learned tract, *De Christianis Monumentis IXOTN exhibentibus*, expresses the belief that these pictures, besides their direct and simple reference to the Lord's Supper, exhibit also the Catholic doctrine of the Real Presence in the Eucharist. The bread he considers as the obvious material symbol, the fish the mystical symbol of the transubstantiation. His interpretation is at least doubtful. The bread was to be eaten in remembrance of the Lord, and the fish was represented as the image which recalled his words, that have been perverted by materialistic imaginations so far from their original meaning,—“This is my body which is given for you.” But the date of the origin of false opinions is a matter of comparative unimportance.

heathen story the Christian drew new suggestions and fresh meaning, and beheld in it an unconscious setting-forth of many holy truths.

A subject from the Gospels, which is often represented, and which was used with a somewhat obscure symbolic meaning, is that of the man sick of the palsy, cured by the Saviour with the words, "Arise, take up thy bed, and go to thine house." It belongs, according to the ancient interpretation, to the series of subjects that embody the doctrine of the Resurrection. It is thus explained by St. Ambrose, St. Augustine, and others of the fathers. They understood the words of Christ as addressed to them with the meaning, "Arise, leave the things of this world, have faith, and go forward to thy abiding home in heaven." Such an interpretation is entirely congruous with the general tone of thought and feeling exhibited in many other common paintings in the catacombs. But later Romanist writers have attempted to connect its interpretation with the doctrine of the Forgiveness of Sins, as embodied in what is called the power of the Church in the holy sacrament of Penance. They lay stress on the words, "Be of good cheer, thy sins are forgiven thee," and suppose that the picture expresses the belief that the delegated power of forgiving sins still remained on earth. Undoubtedly the painting may well have recalled to mind these earlier words of the narrative, as well as the later ones, and with the same comforting assurance that was afforded by the emblem of the Good Shepherd; but there seems no just reason for supposing it to have borne any reference to the peculiar doctrine of the Roman Church. The pictures themselves, so far as we are acquainted with them, seem to contradict this assumption; for they, without exception, represent the paralytic in the last act of the narrative, already on his feet and bearing his bed.*

* One picture of this scene in the Catacombs of St. Hermes is said to be in immediate connection with the sacrament of Penance "represented literally, in the form of a Christian

Among the favorite subjects from the Old Testament are four from the life of Moses,—his taking off his shoes at the command of the Lord, his exhibiting the manna to the people, his receiving the tables of the Law, and his striking the rock in the desert. Of these, the first and the last are most common, and the truths which they were intended to typify seem to have been most dwelt upon. Moses was regarded in the ancient Church as the type, in the old dispensation, of our Saviour in the new. Thus as the narrative of the command to Moses to take off his shoes was immediately connected with the promise of the deliverance of the children of Israel from the land of bondage, so it was regarded as the figure under which was to be seen the promise of the greater deliverance of the world through faith in Jesus Christ, and its freedom from spiritual bondage. Moreover, the shoes were put off, "for the place whereon thou standest is holy ground"; and it is a natural supposition to regard the act as having been considered the symbol of that Holiness to the Lord which was the necessary preparation for the great deliverance. Like so many other of the paintings, it led forward the thoughts and the affections from time to eternity. And this figure was also, we may well suppose, taken as an immediate type of the Resurrection, in connection with the words of Jesus, "Now that the dead are raised even Moses showed at the bush, when he calleth the Lord" (or, as it should be translated, "when, in telling you of the bush, he says that the Lord called himself") "the God of Abraham, and the God of Isaac, and the God of Jacob. For God is not the God of the dead, but of the living." With this interpre-

kneeling on both knees before a priest, who is giving him absolution." We have not seen the original of this picture, and we know of no copy of it. It is not given either by Bosio or in Perret's great work. Before accepting it in evidence, its date must be ascertained, and the possibility of a more natural explanation of it excluded. How is one figure known to be that of a priest? and in what manner is the act of giving absolution expressed?

tation, it affords another instance of the constancy with which the Christians connected the thought of immortality with the presence of death.

So also the smiting of the rock, so that the water came forth abundantly, was adopted as the sign of the giving forth of the living water springing up into everlasting life. "The rock was Christ," said St. Paul, and it is possible, that, with a secondary interpretation, the smiting of the rock was sometimes regarded as typical of the sufferings of the Saviour. The picture of this miracle is repeated again and again, and one of the noblest figures in the whole range of subterranean Art, a figure of surpassing dignity and grandeur, is that of Moses in this sublime scene in one of the chapels of the Cemetery of St. Agnes. In the performance of this miracle, Moses is represented with a rod in his hand; and a similar rod, apparently as the sign of power, is seen in the hands of Christ, in the paintings which represent his miracles. It is a curious illustration of the gradual progress of the ideas now current in the Roman Church, that upon sarcophagi of the fourth and fifth centuries St. Peter is found sculptured with the same rod in his hands,—emblematic, unquestionably, of the doctrine of his being the Vicegerent of Christ,—and on the bottom of a glass vessel of late date, found in the catacombs, the miracle of the striking of the rock is depicted, but at the side of the figure is the name, not of Moses, but of Peter,—for the Church had by this time advanced far in its assumptions.

The story of Jonah appears also in four different scenes upon the walls of the chapels and burial-chambers. In the first, the prophet appears as being cast into the sea; in the second, swallowed by the great fish; in the third, thrown out upon dry land; and in the fourth, lying under the gourd. They are not found together, or in series; but sometimes one and sometimes another of these scenes was painted, according to the fancy or the thought of the artist. The swallowing of Jonah, and his deliverance from the belly of the

whale, has already been referred to as one of the naturally suggested types of the Resurrection. When the prophet is shown as lying under a gourd, (which is painted as a vine climbing over a trellis-work, to represent the booth that Jonah made for himself,) the picture may perhaps have been read as a double lesson. As God "made the gourd to come up over Jonah, that it might be a shadow over his head, to deliver him from his grief," so he would deliver from their grief those who now trusted in him; but as he also made the gourd to wither, so that "the sun beat upon the head of Jonah that he fainted and wished in himself to die," it was for them to remember their utter dependence on the will of God, to prepare themselves for the sorrows as for the joys of life. Nor was this all; the story of Jonah was one especially fitted to remind the recent convert of the long-suffering and grace of God, and to suggest to those who were enduring the extremities of persecution the rebuke with which the Lord had chastened even his prophet for his desire for vengeance upon those who had long dwelt in evil ways. It recalled to them the new commandment of love to their enemies, and it bade them welcome with rejoicing even the latest and most reluctant listener to the truth. It repressed spiritual pride, and checked too ready anger. Was not Rome even greater "than Nineveh, that great city, wherein are more than six-score thousand persons that cannot discern between their right hand and their left hand, and also much cattle"? Such were some, at least, of the meanings which the Christians of the catacombs may have seen in these pictures. It would be long to enter into the more subtle and less satisfactory interpretations of their symbolic meanings which are to be found in the works of some of the later fathers, and which afford, as in many other instances, illustrations of the extravagance of symbolism into which the studies of the cell, the darkness of their age, and the insufficiency of their education often led them.

Two subjects are of frequent repetition in the catacombs, which bear a direct reference to the personal circumstances in which the Christians from time to time found themselves. One is that of Daniel in the lions' den,—the other that of the Three Children of Israel in the fiery furnace. Both were types of persecution and of deliverance. "Thy God, whom thou servest continually, he will deliver thee." Daniel is uniformly represented in the attitude of prayer,—the attitude adopted by the early Christians, standing with arms outstretched. Very often single figures with no names attached to them are thus represented above or by the side of graves. They were probably intended as figures of those who lay within them, figures of those who had been constant in prayer; and this conjecture is almost established as a certainty by the existence of a few of these figures with names inscribed above them,—as, for instance, "HILARA IN PACE."

Noah in the ark is also one of the repeated subjects from the Old Testament; the ark being represented as a sort of square box, in the middle of which Noah stands, sometimes in prayer, and sometimes with the dove flying towards him, bearing a branch of olive. It was the type of the Church, the whole body of Christians, floating in the midst of storms, but with the promise of peace; or, with wider signification, it was the type of the world saved through the revelation of Christ. It bore reference also to the words of St. Peter, in his First Epistle, concerning the ark, "wherein few, that is eight souls, were saved by water; the like figure whereunto, even baptism, doth also now save us by the resurrection of Jesus Christ." Sometimes, indeed, the act of baptism is represented in a more literal manner, by a naked figure immersed in the water; sometimes, perhaps, by still other types.

Paintings of the temptation and the fall of Adam and Eve, in which the composition often reminds one of that adopted by the later masters, are often seen on the walls; and the sacrifice of Abraham, in

which with reverent and just simplicity the interference of the Almighty is represented by a hand issuing from the clouds, is a common subject. Less frequent are pictures of David with his sling, of Tobit with the fish, of Susanna and the elders, treated symbolically, and some few other Old Testament stories. Their typical meaning was plain to the minds of those who frequented the catacombs. From the Gospels many scenes are represented in addition to those we have already mentioned: among the most common are the miracle of the multiplication of the loaves; our Saviour seated, with two or more figures standing near him; and his restoring sight to the blind. Every year's new excavations bring to light some new picture, and our acquaintance with the Art of the catacombs is continually receiving interesting additions.

There appears to have been no definite rule in respect to the combination of subjects in a single chapel. The ceilings are generally divided into various compartments, each filled with a different subject. Thus, for example, we find on one of them the central compartment occupied by a figure of Orpheus; four smaller compartments are filled with sheep or cattle; and four others with Moses striking the rock, Daniel in the lions' den, David with his sling, and Jesus restoring the paralytic. At the angles of the vault are doves with branches of olive; and the ornaments of the ceiling are all of graceful and somewhat elaborate character. The purely ornamental portions of the paintings, though obviously formed on heathen originals, are almost universally of a pleasing and joyful character, and in many cases possess a symbolic meaning. Flowers, crowns of leaves, garlands, vines with clustering grapes, displayed more to the Christian's eyes than mere beauty of form. In these and other similar accessories the symbolism of the early Church delighted to manifest itself. On their terracotta lamps, fixed in the mortar at the head of graves, on their sepulchral tablets, on their rings, on their glass cups

and chalices, the Christians put these emblems of their faith, keeping in mind their spiritual significance. Many of these symbols have preserved their inner meaning to the present day, while others have long lost it. Thus, the crown and the laurel were the emblems of victory; the palm, of triumph; the olive, of peace; the vine loaded with grapes, of the joys of heaven. The dove was at once the figure of the Holy Spirit, and the symbol of innocence and purity of heart; the peacock the emblem of immortality. The ship reminded the Christian of the harbor of safety, or recalled to him the Church tossed upon the waves; the anchor was the sign of strength and of hope; the lyre was the symbol of the sweetness of religion; the stag, of the soul thirsting for the Lord; the cock, of watchfulness; the horse, of the course of life; the lamb, of the Saviour himself.

Many of these symbols were, it is plain, derived from the Scripture, but many also had a heathen origin, and were adopted by the Christians with a new or an additional significance. It was not strange that this should be so, for many associations still bound the Christians of the early centuries to the things they had turned away from. Thus, the horse is frequently found upon the funeral vases and marbles of the ancients; the peacock, the bird of Juno, was the emblem of the apotheosis of the Roman empresses; the palm and the crown had long been in use; and the funeral genii of the heathen Romans were in some sort the type of the later Christian angels. But although this adoption of ancient symbols is to be noticed, it is also to be observed that there is in the Christian cemeteries on the whole a remarkable absence of heathen imagery,—less by far than might have been expected in the works of those surrounded by heathen modes of thought and expression. The influence of Christianity, however, so changed the current of ideas, and so affected the feelings of those whom it called to new life, that heathenism became to them, as it were, a dead letter, devoid of all that could rouse

the fancy, or affect the inner thought. A great gulf was fixed between them and it,—a gulf which for three centuries, at least, charity alone could bridge over. It was not till near the fourth century that heathenism began, to any marked extent, to modify the character and to corrupt the purity of Christianity.

And with this is connected one of the most important historic facts with regard to the Art of the catacombs. In no one of the pictures of the earlier centuries is support or corroboration to be found of the distinctive dogmas and peculiar claims of the Roman Church. We have already spoken of the pictures that have been supposed to have symbolic reference to the doctrine of the Real Presence in the Eucharist, and have shown how little they require such an interpretation. The exaltation of St. Peter above the other Apostles is utterly unknown in the works of the first three centuries; in instances in which he is represented, it is as the companion of St. Paul. The Virgin never appears as the subject of any special reverence. Sometimes, as in pictures of the Magi bringing their gifts, she is seen with the child Jesus upon her lap. No attempt to represent the Trinity (an irreverence which did not become familiar till centuries later) exists in the catacombs, and no sign of the existence of the doctrine of the Trinity is to be met with in them, unless in works of a very late period. Of the doctrines of Purgatory and Hell, of Indulgences, of Absolution, no trace is to be found. Of the worship of the saints there are few signs before the fourth century,—and it was not until after this period that figures of the saints, such as those spoken of heretofore, in the account of the crypt of St. Cecilia, became a common adornment of the sepulchral walls. The use of the *nimbus*, or glory round the head, was not introduced into Christian Art before the end of the fourth century. It was borrowed from Paganism, and was adopted, with many other ideas and forms of representation, from the same source, after Romanism had taken the place of

Paganism as the religion of the Western Empire. The faith of the catacombs of the first three centuries was Christianity, not Romanism.

In the later catacombs, the change of belief, which was wrought outside of them, is plainly visible in the change in the style of Art. Byzantine models stiffened, formalized, and gradually destroyed the spirit of the early paintings. Richness of vestment and mannerism of expression took the place of simplicity and straightforwardness. The Art which is still the popular Art in Italy began to exhibit its lower round of subjects. Saints of all kinds were preferred to the personages of Scripture. The time of suffering and trial having passed, men stirred their slow imaginations with pictures of the crucifixion and the passion. Martyrdoms began to be represented; and the series—not even yet, alas! come to an end—of the coarse and bloody atrocities of painting, pictures worthy only of the shambles, beginning here, marked the decline of piety and the absence of feeling. Love and veneration for the older and simpler works disappeared, and through many of the ancient pictures fresh graves were dug, that faithless Christians might be buried near those whom they esteemed able to intercede for and protect them. These graves hollowed out in the wall around the tomb of some saint or martyr became so common, that the term soon arose of a burial *intra* or *retro sanctos*, among or behind the saints. One of the most precious pictures in the Catacombs of St. Callixtus, precious from its peculiar character, is thus in some of its most important parts utterly destroyed. It represents, so far as is to be seen now, two men in the attitude of preaching to flocks who stand near them,—and if the eye is not deceived by the uncertain light, and by the dimness of the injured colors, a shower of rain, typical of the showers of divine grace, is falling upon the sheep: on one who is listening intently, with head erect, the shower falls abundantly; on another who listens, but with less eagerness, the rain falls in less

abundance; on a third who listens, but continues to eat, with head bent downward, the rain falls scantily; while on a fourth, who has turned away to crop the grass, scarcely a drop descends. Into this parable in painting the irreverence of a succeeding century cut its now rifled and forlorn graves.

But the Art of the catacombs, after its first age, was not confined to painting. Many sculptured sarcophagi have been found within the crypts, and in the crypts of the churches connected with the cemeteries. Here was again the adoption of an ancient custom; and in many instances, indeed, the ancient sarcophagi themselves were employed for modern bodies, and the old heathens turned out for the new Christians. Others were obviously the work of heathen artists employed for Christian service; and others exhibit, even more plainly than the later paintings, some of the special doctrines of the Church. The whole character of this sculpture deserves fuller investigation than we can give to it here. The collection of these first Christian works in marble that has recently been made in the Lateran Museum affords opportunity for its careful study,—a study interesting not only in an artistic, but in an historic and doctrinal point of view.

The single undoubted Christian statue of early date that has come down to us is that of St. Hippolytus, Bishop of Porto, which was found in 1551, near the Basilica of St. Lawrence. Unfortunately, it was much mutilated, and has been greatly restored; but it is still of uncommon interest, not only from its excellent qualities as a work of Art, but also from the engraving upon its side of a list of the works of the Saint, and of a double paschal cycle. This, too, is now in the Christian Museum at the Lateran.

Another branch of early Christian Art, which deserves more attention than it has yet received, is that of the mosaics of the catacombs. Their character is widely different from that of those with which a few centuries afterwards the popes splendidly adorned their favorite

churches. But we must leave mosaics, gems, lamps, and all the lesser articles of ornament and of common household use that have been found in the graves, and which bring one often into strange familiarity with the ways and near sympathy with the feelings of those who occupied the now empty cells. Most of these trifles seem to have been buried with the dead as the memorials of a love that longed to reach beyond death with the expressions of its constancy and its grief. Among them have been found the toys of little children,—their jointed ivory dolls, their rattles, their little rings, and bells,—full, even now, of the sweet sounds of long-ago household joys, and of the tender recollections of household sorrows. In looking at them, one is reminded of the constant recurrence of the figure of the Good Shepherd bearing his

lamb, painted upon the walls of these ancient chapels and crypts.

It was thus that the dawn of Christian Art lighted up the darkness of the catacombs. While the Roman nobles were decorating their villas and summer-houses with gay figures, scenes from the ancient stories, and representations of licentious fancies,—while the emperors were paving the halls of their great baths with mosaic portraits of the famous prize-fighters and gladiators,—the Christians were painting the walls of their obscure cemeteries with imagery which expressed the new lessons of their faith, and which was the type and the beginning of the most beautiful works that the human imagination has conceived, and the promise of still more beautiful works yet to be created for the delight and help of the world.

[To be continued.]

BEATRICE.

How was I worthy so divine a loss,
 Deepening my midnights, kindling all my morns ?
 Why waste such precious wood to make my cross,
 Such far-sought roses for my crown of thorns ?

And when she came, how earned I such a gift ?
 Why spend on me, a poor earth-delving mole,
 The fireside sweetnesses, the heavenward lift,
 The hourly mercy of a woman's soul ?

Ah, did we know to give her all her right,
 What wonders even in our poor clay were done !
 It is not Woman leaves us to our night,
 It is our earth that grovels from her sun.

Our nobler cultured fields and gracious domes
 We whirl too oft from her who still shines on
 To light in vain our caves and clefts, the homes
 Of night-bird instincts pained till she be gone.

Still must this body starve our souls with shade ;
 But when Death makes us what we were before,
 Then shall her sunshine all our depths invade,
 And not a shadow stain heaven's crystal floor.

METEMPSYCHOSIS.

"The sense of the world is short,—
 Long and various the report,—
 To love and be beloved:
 Men and gods have not outlearned it;
 And how oft soe'er they've turned it,
 'Tis not to be improved!"—EMERSON.

MR. VANE and Mr. Payne both were eagerly describing to me their arrangements for an excursion to the Lake. I did not doubt it would be charming, but neither of these two gentlemen would be *endurable* on such a drive, and each was determined to ask me first. I stood pushing apart the crushed flowers of my bouquet, in which all the gardener's art vindicated itself by making the airy grace of Nature into a flat, unmeaning mosaic.

In the next room the passionate melancholy of a waltz was mocked and travestied by the frantic and ungraceful whirl that only Americans are capable of executing; the music lived alone in upper air; of men and dancing it was all unaware; the involved cadences rolled away over the lawn, shook the dew-drooped roses on their stems, and went upward into the boundless moonlight to its home. Through all, Messrs. Vane and Payne harangued me about the splendid bowling-alley at the Lake, the mountain-strawberries, the boats, the gravel-walks! At last it became amusing to see how skilfully they each evaded and extinguished the other; it was a game of chess, and he was to be victor who should first ask me; if one verged upon the question, the other quickly interposed some delightful circumstance about the excursion, and called upon the first to corroborate his testimony; neither, in Alexander's place, would have done anything but assure the other that the Gordian knot was very peculiarly tied, and quite tight.

Presently Harry Tempest stood by my side. I became aware that he had heard the discussion. He took my bouquet from my hand, and stood smelling it, while my two acquaintance went on. I was getting

troubled and annoyed; Mr. Tempest's presence was not composing. I played with my fan nervously; at length I dropped it. Harry Tempest picked it up, and, as I stooped, our eyes met; he gave me the fan, and, turning from Messrs. Vane and Payne, said, very coolly,—

"The Lake is really a charming place; I think, Miss Willing, you would find a carriage an easier mode of conveyance, so far, than your pony; shall I bring one for you? or do you still prefer to ride?"

This was so quietly done, that it seemed to me really a settled affair of some standing that I was to go to the Lake with Mr. Tempest. Mr. Vane sauntered off to join the waltzers; Mr. Payne suddenly perceived Professor Rust at his elbow and began to talk chemistry. I said, as calmly as I had been asked,—

"I will send you word some time tomorrow; I cannot tell just now."

Here some of my friends came to say good night; my duties as hostess drew me toward the door; Harry Tempest returned my bouquet and whispered, or rather said in that tone of society that only the person addressed can hear,—

"Clara! let it be a drive!"

My head bent forward as he spoke, for I could not look at him; when I raised it, he was gone.

The music still soared and floated on through the windows into the moonlight; one by one the older part of my guests left me; only a few of the gayest and youngest still persevered in that indefatigable waltz, the oval room looking as if a score of bubbles were playing hop and skip,—for in the crinoline expansions the gentlemen's black pen-and-ink outlines were all lost. At length even these

went; the music died; its soul went up with a long, broken cry; its body was put piecemeal into several green bags, shouldered by stout Germans, and carried quite out of sight. The servants gathered and set away such things as were most needful to be arranged, put out the lights, locked the doors and windows, and went to bed. Mrs. Reading, my good housekeeper, begged me to go up stairs.

"You look so tired, Miss Clara!"

"So I am, Delia!" said I. "I will rest. Go to bed you, and I shall come presently."

I heard her heavy steps ascend the stairs; I heard the door of her room close, creaking. How could I sleep? I knew very well what the coming day would bring; I knew why Harry Tempest preferred to drive. I had need of something beside rest, for sleep was impossible; I needed calmness, quiet, enough poise to ask myself a momentous question, and be candidly answered. This quiet was not to be found in my room, I well knew; every bit of its furniture, its drapery, was haunted, and in any hour of emotion the latent ghosts came out upon me in swarms; the quaint mandarins with crooked eyes and fat cheeks had eyed me a thousand times when Elsie's arm was clasped over my neck, and with her head upon my shoulder we lay and laughed, when we should have been dressing, at those Chinese chintz curtains. Elsie was gone; if she had been here, I had been at once counselled. Rest there, dead Past!—I could not go to my bedroom.

The green-house opened from the large parlor by a sash-door. At this season of the year the glazed roof and sides were withdrawn or lowered, but at night the lower sashes were drawn up and fastened, lest incursive cats or dogs should destroy my flowers. The great Newfoundland that was our guard slept on the floor here, since it was the weakest spot for any ill-meaning visitors to enter at.

I drew the long skirt of my lace dress up over my hair, and quietly went

into the green-house. The lawn and its black firs tempted me, but there was moonlight on the lawn, and moonlight I cannot bear; it burns my head more fiercely than any noon sun; it scorches my eyelids; it exhausts and fevers me; it excites my brain, and now I looked for calm. This the odor of the flowers and their pure expression promised me. A tall, thick-leaved camellia stood half-way down the border, and before it was a garden-chair. The moonlight shed no ray there, but through the sashes above streamed cool and fair over the blooms that clung to the wall and adorned the parterres and vases; for this house was set after a fashion of my own, a winter-garden under glass; no stages filled the centre. It was laid out with no stiff rule, but here and there in urns of stone, or in pyramidal stands, gorgeous or fragrant plants ran at their own wild will, while over all the wall and along the wood-work of the roof trailed passion-flowers, roses, honeysuckles, fragrant clematis, ivy, and those tropic vines whose long dead names belie their fervid luxuriance and fantastic growth; great trees of lemon and orange interspaced the vines in shallow niches of their own, and the languid drooping tresses of a golden acacia flung themselves over and across the deep glittering mass of a broad-leaved myrtle.

As I sat down in the chair, Pan reared his dusky length from his mat, and came for a recognition. It was wont to be something more positive than caresses; but to-night neither sweet biscuit nor savory bit of confectionery appeared in the hand that welcomed him; yet he was as loving as ever, and, with a grim sense of protection, flung himself at my feet, drew a long breath, and slept. I dared not yet think; I rested my head against the chair, and breathed in the odor of the flowers: the delicate scent of tea-roses; the Southern perfume, fiery and sweet, like Greek wine, of profuse heliotropes,—a perfume that gives you thirst, and longing, and regret. I turned my head toward the orange-trees; Southern, also, but sensuous and tropic, was the breath

of those thick white stars,—a tasted odor. Not so the cool air that came to me from a diamond-shaped bed of Parma violets, kept back so long from bloom that I might have a succession of them; these were the last, and their perfume told it, for it was at once a caress and a sigh. I breathed the gale of sweetness till every nerve rested and every pulse was tranquil as the air without.

I heard a little stir. I looked up. A stately calla, that reared one marble cup from its gracious cool leaves, was bending earthward with a slow and voluntary motion; from the cup glided a fair woman's shape; snowy, sandalled feet shone from under the long robe; hair of crisped gold crowned the Greek features. It was Hypatia. A little shiver crept through a white tea-rose beside the calla; its delicate leaves fluttered to the ground; a slight figure, a sweet, sad face, with melancholy blue eyes and fair brown hair, parted the petals. La Vallière! She gazed in my eyes.

"Poor little child!" said she. "Have you a treatise against love, Hypatia?"

The Greek of Egypt smiled and looked at me also. "I have discovered that the steps of the gods are upon wool," answered she; "if love had a beginning to sight, should not we also foresee its end?"

"And when one foresees the end, one dies," murmured La Vallière.

"Bah!" exclaimed Marguerite of Valois, from the heart of a rose-red camellia,—"not at all, my dear; one gets a new lover!"

"Or the new lover gets you," said a dulcet tone, tipped with satire, from the red lips of Mary of Scotland,—lips that were just now the petals of a crimson carnation.

"Philosophy hath a less troubled sea wherein to ride than the stormy fluctuance of mortal passion; Plato is diviner than Ovid," said a puritanic, piping voice from a coif that was fashioned out of the white camellia-blooms behind my chair, and circled the prim beauty of Lady Jane Grey.

"Are you a woman, or one of the Sphinx's children?" said a stormy, thrilling, imperious accent, from the wild purple and scarlet flower of the Strelitzia, that gradually shaped itself into gorgeous Oriental robes, rolled in waves of splendor from the lithe waist and slender arms of a dark woman, no more young,—sallow, thin, but more graceful than any bending bough of the desert acacia, and with eyes like midnight, deep, glowing, flashing, melting into dew, as she looked at the sedate lady of England.

"You do not know love!" resumed she. "It is one draught,—a jewel fused in nectar; drink the pearl and bring the asp!"

Her words brought beauty; the fallow face burnt with living scarlet on lip and cheek; the tiny pearl-grains of teeth flashed across the swarth shade above her curving, passionate mouth; the wide nostril expanded; the great eyes flamed under her low brow and glittering coils of black hair.

"Poor Octavia!" whispered La Vallière. Lady Jane Grey took up her breviary and read.

"After all, you died!" said Hypatia.

"I lived!" retorted Cleopatra.

"Lived and loved," said a dreamy tone from the hundred leaves of a spotless La Marque rose; and the steady, "unhasting, unresting" soul of Thekla looked out from that centreless flower, in true German guise of brown braided tresses, deep blue eyes like forget-me-nots, sedate lips, and a straight nose.

"I have lived, and loved, and cut bread and butter," solemnly pronounced a mountain-daisy, assuming the broad features of a fraulein.

Cleopatra used an Egyptian oath. Lady Jane Grey put down her breviary and took up Plato. Marguerite of Valois laughed outright. Hypatia put a green leaf over Charlotte, with the air of a high-priestess, and extinguished her.

"Who does not love cannot lose," mused La Vallière.

"Who does not love neither has nor gains," said Hypatia. "The dilemma

hath two sides, and both gain and loss are problematic. It is the ideal of love that enthalls us, not the real."

"Hush! you white-faced Greek! It was not an ideal; it was Mark Antony. By Isis! does a dream fight, and swear, and kiss?"

"The Navarrese did; and France dreamed he was my master,—not I!" laughed Marguerite.

"This is most weak stuff for goodly and noble women to foster," grimly uttered a flame-colored hawk's-bill tulip, that directly assumed a ruff and an aquiline nose.

Mary of Scotland passed her hand about her fair throat. "Where is Leicester's ring?" said she.

The Queen did not hear, but went on. "Truly, you make as if it was the intent of women to be trodden under foot of men. She that ruleth herself shall rule both princes and nobles, I wot. Yet I had done well to marry. Love or no love, I would the house of Hanover had waged war with one of mine own blood; I hate those fair, fat Guelphs!"

"Love hath sometimes the thorn alone, the rose being blasted in bud," uttered a sweet and sonorous voice with a little nasal accent, out of the myrtle-boughs that starred with bloom her hair, and swept the hem of her green dress.

"Sweet soul, wast thou not, then, sated upon sonnets?" said Mary of Scotland, in a stage aside.

"Do not the laurels overgrow the thorn?" said La Vallière, with a wistful, inquiring smile.

Laura looked away. "They are very green at Avignon," said she.

Out of two primroses, side by side, Stella and Vanessa put forth pale and anxious faces, with eyes tear-dimmed.

"Love does not feed on laurels," said Stella; "they are fruitless."

"That the clergy should be celibate is mine own desire," broke in Queen Elizabeth. "Shall every curly fool's-pate of a girl be turning after an anointed bishop? I will have this thing ended, certes! and that with speed."

Vanessa was too deep in a brown study to hear. Presently she spoke. "I believe that love is best founded upon a degree of respect and veneration which it is decent in youth to render unto age and learning."

"Ciel!" muttered Marguerite; "is it, then, that in this miserable England one cherishes a grand passion for one's grandfather?"

The heliotrope-clusters melted into a face of plastic contour, rich full lips, soft interfused outlines, intense purple eyes, and heavy waving hair, dark indeed, but harmonized curiously with the narrow gold fillet that bound it. "It is no pain to die for love," said the low, deep voice, with an echo of rolling gerunds in the tone.

"That depends on how sharp the dagger is," returned Mary of Scotland. "If the axe had been dull"——

From the heart of a red rose Juliet looked out; the golden centre crowned her head with yellow tresses; her tender hazel eyes were calm with intact passion; her mouth was scarlet with fresh kisses, and full of consciousness and repose. "Harder it is to live for love," said she; "hardest of all to have ever lived without it."

"How much do you all help the matter?" said a practical Yankee voice from a pink hollyhock. "If the infinite relations of life assert themselves in marriage, and the infinite I merges its individuality in the personality of another, the superincumbent need of a passional relation passes without question. What the soul of the seeker asks from itself and the universe is, whether the ultimate principle of existent life is passional or philosophic."

"Your dialectic is wanting in purity of expression," calmly said Hypatia; "the tongue of Olympus suits gods and their ministers only."

"Plato hath no question of the matter in hand," observed Lady Jane Grey, with a tone of finishing the subject.

"I know nothing of your questions and philosophies," scornfully stormed Cleopa-

tra. "Fire seeks fire, and clay clay. Isis send me Antony, and every philosopher in Alexandria may go drown in the Nile! Shall I blind my eyes with scrolls of papyrus when there is a goodly Roman to be looked upon?"

From the deep blue petals of a double English violet came a delicate face, pale, serene, sad, but exceeding tender. "Love liveth when the lover dies," said Lady Rachel Russell. "I have well loved my lord in the prison; shall I cease to affect him when he is become one of the court above?"

"You are cautious of speech, Mesdames," carelessly spoke Marguerite. "Women are the fools of men; you all know it. Every one of you has carried cap and bell."

They all turned toward the hawk's-bill tulip; it was not there.

"Gone to Kenilworth," demurely sneered Mary of Scotland.

A pond-lily, floating in a tiny tank, opened its clasped petals; and with one bare pearly foot upon the green island of leaves, and the other touching the edge of the marble basin, clothed with a rippling, lustrous, golden garment of hair, that rolled downward in glittering masses to her slight ankles, and half hid the wide, innocent, blue eyes and infantile, smiling lips, Eve said, "I was made for Adam," and slipped silently again into the closing flower.

"But we have changed all that!" answered Marguerite, tossing her jewel-clasped curls.

"They whom the saints call upon to do battle for king and country have their nature after the manner of their deeds," came a clear voice from the fleur-de-lis, that clothed itself in armor, and flashed from under a helmet the keen, dark eyes and firm, beardless lips of a woman.

"There have been cloistered nuns," timidly breathed La Vallière.

"There is a monk's-hood in that parterre without," said Marguerite.

The white clematis shivered. It was a veiled shape in long robes, that hid face

and figure, who clung to the wall and whispered, "Paraclete!"

"There are tales of saints in my breviary," soliloquized Mary of Scotland; and in the streaming moonlight, as she spoke, a faint outline gathered, lips and eyes of solemn peace, a crown of blood-red roses pressing thorns into the wan temples that dripped sanguine streams, and in the halo above the wreath a legend, partially obscured, that ran, "Utque talis Rosa nulli alteri plantæ adhaereret"——

"But the girl there is no saint; I think, rather, she is of mine own land," said a purple passion-flower, that hid itself under a black mantilla, and glowed with dark beauty. The Spanish face bent over me with ardent eyes and lips of sympathetic passion, and murmured, "Do not fear! Pedro was faithful unto and after death; there are some men"——

Pan growled! I rubbed my eyes! Where was I? Mrs. Reading stood by me in very extempore costume, holding a night-lamp:—

"Goodness me, Miss Clara!" said she, "I never was more scared. I happened to wake up, and I thought I see your west window open across the corner; so I roused up to go and see if you was sick; and you wasn't in bed, nor your frock anywhere. I was frightened to pieces; but when I come down and found the greenhouse door open, I went in just for a chance, and, lo and behold! here you are, sound asleep in the chair, and Pan a-lying close onto that beautiful black lace frock! Do get up, Miss Clara! you'll be sick to-morrow, sure as the world!"

I looked round me. All the flowers were cool and still; the calla breathless and quiet; the pond-lily shut; the roses full of dew and perfume; the clematis languid and luxuriant.

"Delia," said I, "what do you think about matrimony?"

Mrs. Reading stared at me with her honest green eyes. I laughed.

"Well," said she, "marriage is a lottery, Miss Clara. Reading was a pretty

good feller; but seein' things was as they was, if I'd had means and knowed what I know now, I shouldn't never have married him."

"May-be you'd have married somebody else, though," suggested I.

"Like enough, Miss Clara; girls are unaccountable perverse when they get in love. But do get up and go to bed. A'n't you goin' to the Lake to-morrow?"

That put my speculation to flight. Up I rose and meekly followed Delia to my room; this time she staid to see me fairly disrobed. But I had had sleep enough. I was also quiet; I could think. The future lay at my feet, to be planned and patterned at my will; or so I thought. I had not permitted myself to think much about Harry Tempest, from an instinctive feeling of danger; I did not know then that

"En songeant qu'il faut oublier
On s'en souvient!"

I was young, rich, beautiful, independent; I came and went as I would, without question, and did my own pleasure. If I married, all this power must be given up; possibly I and my husband would tire of each other,—and then what remained but fixed and incurable disgust and pain? I thought over my strange dream. Cleopatra, the enchantress, and the scorn of men: that was not love, it was simple passion of the lowest grade.

Lady Jane Grey: she was only proper. Marguerite de Valois: profligate. Elizabeth: a shrewish, selfish old politician. Who of all these had loved? Arria: and Pætus dying, she could not love. Lady Russell: she lived and mourned. I looked but at one side of the argument, and drew my inferences from that, but they satisfied me. Soon I saw the dawn stretch its opal tints over the distant hills, and tinge the tree-tops with bloom. I heard the half-articulate music of birds, stirring in their nests; but before the sounds of higher life began to stir I had gone to sleep, firmly resolved to ride to the Lake, and to give Harry Tempest no opportunity to speak to me alone. But I slept too long; it was noon before I woke, and I had sent no message about my preference of the pony, as I promised, to Mr. Tempest. I had only time to breakfast and dress. At three o'clock he came,—with his carriage, of course. So I rode to the Lake!

It's all very well to make up one's mind to say a certain thing; it is better if you say it; but, somehow or other,—I really was ashamed afterward,—I forgot all my good reasons. I found I had taken a great deal of pains to no purpose. In short, after due time, I married Harry Tempest; and though it is some time since that happened, I am still much of Eve's opinion,—

"I WAS MADE FOR ADAM."

CRAWFORD AND SCULPTURE.

THERE is as absolute an instinct in the human mind for the definite, the palpable, and the emphatic, as there is for the mysterious, the versatile, and the elusive. With some, method is a law, and taste severe in affairs, costume, exercise, social intercourse, and faith. The simplicity, directness, uniformity, and pure emphasis or grace of Sculpture have anal-

ogies in literature and character: the terse despatch of a brave soldier, the concentrated dialogue of Alfieri, some proverbs, aphorisms, and poetic lines, that have become household words, puritanic consistency, silent fortitude, are but so many vigorous outlines, and impress us by virtue of the same colorless intensity as a masterpiece of the statuary. How

sculpturesque is Dante, even in metaphor, as when he writes,—

“Ella non ci diceva alcuna cosa;
Ma lasciavane gir, solo guardando,
A guisa di leon quando si posa.”

Nature, too, hints the art, when her landscape tints are covered with snow, and the forms of tree, rock, and mountain are clearly defined by the universal whiteness. Death, in its pale, still, fixed image,—always solemn, sometimes beautiful,—would have inspired primeval humanity to mould and chisel the lineaments of clay. Even New Zealanders elaborately carve their war-clubs; and from the “graven images” prohibited by the Decalogue as objects of worship, through the mysterious granite effigies of ancient Egypt, the brutal anomalies in Chinese porcelain, the gay and gilded figures on a ship’s prow,—whether emblems of rude ingenuity, tasteless caprice, retrospective sentiment, or embodiments of the highest physical and mental culture, as in the Greek statues,—there is no art whose origin is more instructive and progress more historically significant. The vases of Etruria are the best evidence of her degree of civilization; the designs of Flaxman on Wedgwood ware redeem the economical art of England; the Bears at Berne and the Wolf in the Roman Capitol are the most venerable local insignia; the carvings of Gibbons, in old English manor-houses, outrival all the luxurious charms of modern upholstery; Phidias is a more familiar element in Grecian history than Pericles; the moral energy of the old Italian republics is more impressively shadowed forth and conserved in the bold and vigorous creations of Michel Angelo than in the political annals of Macchiavelli; and it is the massive, uncouth sculptures, half-buried in sylvan vegetation, which mythically transmit the ancient people of Central America.

We confess a faith in, and a love for, the “testimony of the rocks,”—not only as interpreted by the sagacious Scotchman, as he excavated the “old red sandstone,” but as shaped into forms of

truth, beauty, and power by the hand of man through all generations. We love to catch a glimpse of these silent memorials of our race, whether as Nymphs half-shaded at noon-day with summer foliage in a garden, or as Heroes gleaming with startling distinctness in the moonlit city-square; as the similitudes of illustrious men gathered in the halls of nations and crowned with a benignant fame, or as prone effigies on sepulchres, forever proclaiming the calm without the respiration of slumber, so as to tempt us to exclaim, with the enamored gazer on the Egyptian queen, when the asp had done its work,—

“She looks like sleep,
As she would catch another Antony
In her *strong toil of grace*.”

Although Dr. Johnson undervalued sculpture,—partly because of an inadequate sense of the beautiful, and partly from ignorance of its greatest trophies, he expressed unqualified assent to its awe-inspiring influence in “the monumental caves of death,” as described by Congreve. Sir Joshua truly declares that “all arts address themselves to the sensibility and imagination”; and no one thus alive to the appeal of sculpture will marvel that the infuriated mob spared the statues of the Tuileries at the bloody climax of the French Revolution,—that a “love of the antique” knit in bonds of life-long friendship Winckelmann and Cardinal Albani,—that among the most salient of childhood’s memories should be Memnon’s image and the Colossus of Rhodes,—that an imaginative girl of exalted temperament died of love for the Apollo Belvidere,—and that Carrara should win many a pilgrimage because its quarries have peopled earth with grace.

To a sympathetic eye there are few more pleasing tableaux than a gifted sculptor engaged in his work. How absorbed he is!—standing erect by the mass of clay,—with graduated touch, moulding into delicate undulations or expressive lines the inert mass,—now stepping back to see the effect,—now bending forward, almost

lovingly, to add a master indentation or detach a thin layer,—and so, hour after hour, working on, every muscle in action, each perception active, oblivious of time, happy in the gradual approximation, under patient and thoughtful manipulation, of what was a dense heap of earth, to a form of vital expression or beauty. When such a man departs from the world, after having thus labored in love and with integrity so as to bequeath the memorable and cherished trophies of this beautiful art,—when he dies in his prime, his character as a man endeared by the ties of friendship, and his fame as an artist made precious by the bond of a common nativity, we feel that the art he loved and illustrated and the fame he won and honored demand a coincident discussion.

Thomas Crawford was born in New York, March 22, 1813, and died in London, October 16, 1857. His lineage, school education, and early facilities indicate no remarkable means or motive for artistic development; they were such as belong to the average positions of the American citizen; although a bit of romance, which highly amused the young sculptor, was the visit of a noble Irish lady to his studio, who ardently demonstrated their common descent from an ancient house. At first contented to experiment as a juvenile draughtsman, to gaze into the windows of print-shops, to collect what he could obtain in the shape of casts, to carve flowers, leaves, and monumental designs in the marble-yard of Launitz,—then adventuring in wood sculptures and portraits, until the encouragement of Thorwaldsen, the nude models of the French Academy at Rome, and copies from the Demosthenes and other antiques in the Vatican disciplined his eye and touch,—thus by a healthful, rigorous process attaining the manual skill and the mature judgment which equipped him to venture wisely in the realm of original conception,—there was a thoroughness and a progressive application in his whole initiatory course, prophetic, to those versed in the history of Art, of the ulti-

mate and secure success so legitimately earned.

If Rome yields the choicest test, in modern times, of individual endowment in sculpture, by virtue of her unequalled treasures and select proficient in Art,—Munich affords the second ordeal in Europe, because of the cultivated taste and superior foundries for which that capital is renowned; and it is remarkable that both the great statues there cast from Crawford's models by Müller inspired those impromptu festivals which give expression to German enthusiasm. The advent of the Beethoven statue was celebrated by the adequate performance, under the auspices of both court and artists, of that peerless composer's grandest music. When, on the evening of his arrival, Crawford went to see, for the first time, his Washington in bronze, he was surprised at the dusky precincts of the vast arena; suddenly torches flashed illumination on the magnificent horse and rider, and simultaneously burst forth from a hundred voices a song of triumph and jubilee: thus the delighted Germans congratulated their gifted brother, and hailed the sublime work,—to them typical at once of American freedom, patriotism, and genius. The king warmly recognized the original merits and consummate effect of the work; the artists would suffer no inferior hands to pack and despatch it to the sea-side; peasants greeted its triumphal progress;—the people of Richmond were emulous to share the task of conveying it from the quay to the Capitol hill; mute admiration, followed by ecstatic cheers, hailed its unveiling, and the most gracious native eloquence inaugurated its erection.

Descriptions of works of Art, especially of statues, are proverbially unsatisfactory; only a vague idea can be given in words, to the unprofessional reader; otherwise we might dwell upon the eager, intent attitude of Orpheus as he seems to glide by the dozing Cerberus, shading his eyes as they peer into the mysterious labyrinth he is about to enter in search of his ravished bride;—we might

expatiate on the graceful, dignified aspect of Beethoven, the concentration of his thoughtful brow, and the loving serenity of his expression,—a kind of embodied musical self-absorption, yet an accurate portrait of the man in his inspired mood; so might he have stood when gathering into his serene consciousness the pastoral melodies of Nature, on a summer evening, to be incorporated into immortal combinations of harmonious sound;—we might descant upon the union of majesty and spirit in the figure of Washington and the vital truth of action in the horse, the air of command and of rectitude, the martial vigor and grace, so instantly felt by the popular heart, and so critically praised by the adept in statuary cognizant of the difficulties to be overcome and the impression to be absolutely evolved from such a work, in order to make it at once true to Nature and to character;—we might repeat the declaration, that no figure, ancient or modern, so entirely illustrates the classic definition of oratory, as consisting in action, as the statue of Patrick Henry, which seems instinct with that memorable utterance, “Give me liberty or give me death!” The inventive felicity of the design for one of the pediments of the Capitol might be unfolded as a vivid historic poem; and it requires no imagination to show that Jefferson looks the author of the Declaration of Independence. The union of original expression and skill in statuary and of ingenious constructiveness in monumental designs, which Crawford exhibited, may be regarded as a peculiar excellence and a rare distinction.

Much has been said and written of the limits of sculpture; but it is the sphere, rather than the art itself, which is thus bounded; and one of its most glorious distinctions, like that of the human form and face, which are its highest subject, is the vast possible variety within what seems, at first thought, to be so narrow a field. That the same number and kind of limbs and features should, under the plastic touch of genius, have given birth to so many and totally diverse forms, memorable for ages and endeared to

humanity, is in itself an infinite marvel, which vindicates, as a beautiful wonder, the statuary's art from the more Protean rivalry of pictorial skill. If we call to mind even a few of the sculptured creations which are “a joy forever,” even to retrospection,—haunting by their pure individuality the temple of memory, permanently enshrined in heartfelt admiration as illustrations of what is noble in man and woman, significant in history, powerful in expression, or irresistible in grace,—we feel what a world of varied interest is hinted by the very name of Sculpture. Through it the most just and clear idea of Grecian culture is revealed to the many. The solemn mystery of Egyptian and the grand scale of Assyrian civilization are best attested by the same trophies. How a Sphinx typifies the land of the Pyramids and all its associations, mythological, scientific, natural, and sacred,—its reverence for the dead, and its dim and portentous traditions! and what a reflex of Nineveh's palmy days are the winged lions exhumed by Layard! What more authentic tokens of Mediæval piety and patience exist than the elaborate and grotesque carvings of Albert Dürer's day? The colossal Brahma in the temple of Elephanta, near Bombay, is the visible acme of Asiatic superstition. And can an illustration of the revival of Art, in the fifteenth century, so exuberant, aspiring, and sublime, be imagined, to surpass the Day and Night, the Moses, and other statues of Angelo?—But such general inferences are less impressive than the personal experience of every European traveller with the least passion for the beautiful or reverence for genius. Is there any sphere of observation and enjoyment to such a one, more prolific of individual suggestions than this so-called limited art? From the soulful glow of expression in the inspired countenance of the Apollo, to the womanly contours, so exquisite, in the armless figure of the Venus de Milo,—from the aerial posture of John of Bologna's Mercury, to the inimitable and firm dignity in the attitude of Aristides in the Museum of Naples,—from the delicate

lines which teach how grace can chasten nudity in the Goddess of the Tribune at Florence, to the embodied melancholy of Hamlet in the brooding Lorenzo of the Medici Chapel,—from the stone despair, the frozen tears, as it were, of all bereaved maternity, in the very bend of Niobe's body and yearning gesture, to the *abandon* gleaming from every muscle of the Dancing Faun,—from the stern brow of the Knife-grinder, and the bleeding frame of the Gladiator, whereon are written forever the inhumanities of ancient civilization, to the triumphant beauty and firm, light, enjoyable aspect of Dannecker's Ariadne, —from the unutterable joy of Cupid and Psyche's embrace, to the grand authority of Moses,—how many separate phases of human emotion "live in stone"! What greater contrast to eye or imagination, in our knowledge of facts and in our consciousness of sentiment, can be exemplified, than those so distinctly, memorably, and gracefully moulded in the apostolic figures of Thorwaldsen, the Hero and Leander of Steinhäuser, the lovely funereal monument, inspired by gratitude, which Rauch reared to Louise of Prussia, Chantrey's Sleeping Children, Canova's Lions in St. Peter's, the bas-reliefs of Ghiberti on the Baptistery doors at Florence, and Gibson's Horses of the Sun?

Have you ever strolled from the inn at Lucerne, on a pleasant afternoon, along the Zürich road, to the old Général's garden, where stands the colossal lion designed by Thorwaldsen, to keep fresh the brave renown of the Swiss guard who perished in defence of the royal family of France during the massacre of the Revolution? Carved from the massive sandstone, the majestic animal, with the fatal spear in his side, yet loyal in his vigil over the royal shield, is a grand image of fidelity unto death. The stillness, the isolation, the vivid creepers festooning the rocks, the clear mirror of the basin, into which trickle pellucid streams, reflecting the vast proportions of the enormous lion, the veteran Swiss, who acts as *cicerone*, the adjacent chapel with its al-

tar-cloth wrought by one of the fair descendants of the Bourbon king and queen for whom these victims perished, the hour, the memories, the admixture of Nature and Art, convey a unique impression, in absolute contrast with such white effigies, for instance, as in the dusky precincts of Santa Croce droop over the sepulchre of Alfieri, or with the famous bronze boar in the Mercato Nuovo of Florence, or the ethereal loveliness of that sweet scion of the English nobility, moulded by Chantrey in all the soft and lithe grace of childhood, holding a contented dove to her bosom.

Even as the subject of taste, independently of historical diversities, sculpture presents every degree of the meretricious, the grotesque, and the beautiful,—more emphatically, because more palpably, than is observable in painting. The inimitable Grecian standard is an immortal precedent; the Mediæval carvings embody the rude Teutonic truthfulness; where Canova provoked comparison with the antique, as in the Perseus and Venus, his more gross ideal is painfully evident. How artificial seems Bernini in contrast with Angelo! How minutely expressive are the terra-cotta images of Spain! What a climax of absurdity teases the eye in the monstrosities in stone which draw travellers in Sicily to the eccentric nobleman's villa, near Palermo! Who does not shrink from the French allegory and horrible melodrama of Roubillac's monument to Miss Nightingale, in Westminster Abbey? How like Horace Walpole to dote on Ann Conway's canine groups! We actually feel sleepy, as we examine the little black marble Somnus of the Florence Gallery, and electrified with the first sight of the Apollo, and won to sweet emotion in the presence of Nymphs, Graces, and the Goddess of Beauty, when, shaped by the hand of genius, they seem the ethereal types of that

— "common clay ta'en from the common
earth,
Moulded by God and tempered by the tears
Of angels to the perfect form of woman."

Yet the distinctive element in the pleasure afforded by sculpture is tranquillity,—a quiet, contemplative delight; somewhat of awe chastens admiration; a feeling of peace hallows sympathy; and we echo the poet's sentiment,—

"I do feel a mighty calmness creep
Over my heart, which can no longer borrow
Its hues from chance or change,—those children of to-morrow."

It is this fixedness and placidity, conveying the impression of fate, death, repose, or immortality, which render sculpture so congenial as commemorative of the departed. Even quaint wooden effigies, like those in St. Mary's Church at Chester, with the obsolete peaked beards, ruffs, and broadswords, accord with the venerable associations of a Mediaeval tomb; while marble figures, typifying Grief, Poetry, Fame, or Hope, brooding over the lineaments of the illustrious dead, seem, of all sepulchral decorations, the most apt and impressive. We remember, after exploring the plain of Ravenna on an autumn day, and rehearsing the famous battle in which the brave young Gaston de Foix fell, how the associations of the scene and story were defined and deepened as we gazed on the sculptured form of a recumbent knight in armor, preserved in the academy of the old city; it seemed to bring back and stamp with brave renown forever the gallant soldier who so long ago perished there in battle. In Cathedral and Parthenon, under the dome of the Invalides, in the sequestered parish church or the rural cemetery, what image so accords with the sad reality and the serene hope of humanity, as the adequate marble personification on sarcophagus and beneath shrine, in mausoleum or on turf-mound?

"His palms infolded on his breast,
There is no other thought express'd
But long disquiet merged in rest."

In truth, it is for want of comprehensive perception that we take so readily for granted the limited scope of this glorious art. There is in the Grecian

mythology alone a remarkable variety of character and expression, as perpetuated by the statuary; and when to her deities we add the athletes, charioteers, and marble portraits, a realm of diverse creations is opened. Indeed, to the average modern mind, it is the statues of Grecian divinities that constitute the poetic charm of her history; abstractly, we regard them with the poet:—

"Their gods? what were their gods?
There's Mars, all bloody-haired; and Hercules,
Whose soul was in his sinews; Pluto, blacker
Than his own hell; Vulcan, who shook his
horns
At every limp he took; great Bacchus rode
Upon a barrel; and in a cockle-shell
Neptune kept state; then Mercury was a
thief;
Juno a shrew; Pallas a prude, at best;
And Venus walked the clouds in search of
lovers;
Only great Jove, the lord and thunderer,
Sat in the circle of his starry power
And frowned 'I will!' to all."

Not in their marble beauty do they thus ignobly impress us,—but calm, fair, strong, and immortal. "They seem," wrote Hazlitt, "to have no sympathy with us, and not to want our admiration. In their faultless excellence they appear sufficient to themselves."

In the sculptor's art, more than on the historian's page, lives the most glorious memory of the classic past. A visit to the Vatican by torchlight endears even these poor traditional deities forever.

"On lofty ceilings vivid frescoes glow,
Auroras beam,
The steeds of Neptune through the waters
go,
Or Sibyls dream."

"As in the flickering torchlight shadows
waved
Illusions wild,
Methought Apollo's bosom slightly heaved
And Juno smiled."

"Ærial Mercuries in bronze upspring,
Dianas fly,
And marble Cupids to the Psyches cling
Without a sigh."

To this variety in unity, this wealth of antique genius, Crawford brought the keen relish of an observant and the aptitude of a creative mind. His taste in Art was eminently catholic; he loved the fables and the personages of Greece because of this very diversity of character,—the freedom to delineate human instincts and passions under a mythological guise,—just as Keats prized the same themes as giving broad range to his fanciful muse. A list of our prolific sculptor's works is found to include the entire circle of subjects and styles appropriate to his art—first, the usual classic themes, of which his first remarkable achievement was the Orpheus; then a series of Christian or religious illustrations, from Adam and Saul to Christ at the Well of Samaria; next, individual portraits; a series of domestic figures, such as the "Children in the Wood," or "Truant Boys"; and, finally, what may be termed national statuary, of which Beethoven and Washington are eminent exemplars. Like Thorwaldsen, Crawford excelled in *basso-relievo*, and was a remarkable pictorial sculptor. Having made early and intense studies of the antique, he as carefully observed Nature; few statuaries have more keenly noted the action of childhood or equestrian feats, so that the limbs and movement of the sweetest of human and the noblest of brute creatures were critically known to him. In sculpture, we believe that a great secret of the highest success lies in an intuitive eclecticism, whereby the faultless graces of the antique are combined with just observation of Nature. Without correct imitative facility, a sculptor wanders from the truth and the fact of visible things; without ideality, he makes but a mechanical transcript; without invention, he but repeats conventional traits. The desirable medium, the effective principle, has been well defined by the author of "Scenes and Thoughts in Europe":—"Art does not merely copy Nature; it *coöperates* with her, it makes palpable her finest essence, it reveals the spiritual source of the corporeal by the perfection of its in-

ternations." That Crawford invariably kept himself to "the height of this great argument" it were presumptuous to assert; but that he constantly approached such an ideal, and that he sometimes seized its vital principle, the varied and expressive forms yet conserved in his studio at Rome emphatically attest. He had obtained command of the vocabulary of his art; in expressing it, like all men who strive largely, he was unequal. Some of his creations are far more felicitous than others; he sometimes worked too fast, and sometimes undertook what did not greatly inspire him; but when we reflect on the limited period of his artist-life, on the intrepid advancement of its incipient stages under the pressure of narrow means and comparative solitude, on the extraordinary progress, the culminating force, the numerous trophies, and the acknowledged triumphs of a life of labors, so patiently achieved, and suddenly cut off in mid career,—we cannot but recognize a consummate artist and the grandest promise yet vouchsafed to the cause of national Art.

Shelley used to say that a Roman peasant is as good a judge of sculpture as the best academician or anatomist. It is this direct appeal, this elemental simplicity, which constitutes the great distinction and charm of the art. There is nothing evasive and mysterious; in dealing with form and expression through features and attitude, average observation is a reliable test. The same English poet was right in declaring that the Greek sculptors did not find their inspiration in the dissecting-room; yet upon no subject has criticism displayed greater insight on the one hand and pedantry on the other, than in the discussion of these very *chefs-d'œuvre* of antiquity. While Michel Angelo, who was at Rome when the Laocoön was discovered, hailed it as "the wonder of Art," and scholars identified the group with a famous one described by Pliny, Canova thought that the right arm of the father was not in its right position, and the other restorations in the work have all been objected to. Goethe recognized a pro-

found sagacity in the artist: "If," he wrote, "we try to place the bite in some different position, the whole action is changed, and we find it impossible to conceive one more fitting; the situation of the bite renders necessary the whole action of the limbs";—and another critic says, "In the group of the *Laocoön*, the breast is expanded and the throat contracted to show that the agonies that convulse the frame are borne in silence." In striking contrast with such testimonies to the scientific truth to Nature in Grecian Art was the objection I once heard an American back-woods mechanic make to this celebrated work; he asked why the figures were seated in a row on a dry-goods box, and declared that the serpent was not of a size to coil round so small an arm as the child's, without breaking its vertebrae. So disgusted was Titian with the critical pedantry elicited by this group, that, in ridicule thereof, he painted a caricature,—three monkeys writhing in the folds of a little snake.

Yet, despite the jargon of connoisseurship, against which Byron, while contemplating the *Venus de Medici*, utters so eloquent an invective, sculpture is a grand, serene, and intelligible art,—more so than architecture and painting,—and, as such, justly consecrated to the heroic and the beautiful in man and history. It is preëminently commemorative. How the old cities of Europe are peopled to the imagination, as well as the eye, by the statues of their traditional rulers or illustrious children, keeping, as it were, a warning sign, or a sublime vigil, silent, yet expressive, in the heart of busy life and through the lapse of ages! We could never pass Duke Cosmo's imposing effigy in the old square of Florence without the magnificent patronage and the despotic perfidy of the Medicean family being revived to memory with intense local association,—nor note the ugly mitred and cloaked papal figures, with hands extended, in the mockery of benediction, over the beggars in the piazzas of Romagna, without Ranke's frightful picture of Church abuses reappearing, as

if to crown these brazen forms with infamy. There was always a gleam of poetry,—however sad,—on the most foggy day, in the glimpse afforded from our window, in Trafalgar Square, of that patient horseman, Charles the Martyr. How alive old Neptune sometimes looked, by moonlight, in Rome, as we passed his plashing fountain! And those German poets,—Goethe, Schiller, and Jean Paul,—what to modern eyes were Frankfort, Stuttgart, and Baireuth, unconsecrated by their endeared forms? The most pleasant association Versailles yielded us of the Bourbon dynasty was that inspired by Jeanne d'Arc, graceful in her marble sleep, as sculptured by Marie d'Orléans; and the most impressive token of Napoleon's downfall we saw in Europe was his colossal image intended for the square of Leghorn, but thrown permanently on the sculptor's hands by the waning of his proud star. The statue of Heber, to Christian vision, hallows Calcutta. The Perseus of Cellini breathes of the months of artistic suspense, inspiration, and experiment, so graphically described in that clever egoist's memoirs. One feels like blessing the grief-bowed figures at the tomb of Princess Charlotte, so truly do their attitudes express our sympathy with the love and the sorrow her name excites. Would not Sterne have felt a thrill of complacency, had he beheld his tableau of the Widow Wadman and Uncle Toby so genially embodied by Ball Hughes? What more spirited symbol of prosperous conquest can be imagined than the gilded horses of St. Mark's? How natural was Michel Angelo's exclamation, "March!" as he gazed on Donatello's San Giorgio, in the Church of San Michele,—one mailed hand on a shield, bare head, complete armor, and the foot advanced,—like a sentinel who hears the challenge, or a knight listening for the charge! Tenerani's "Descent from the Cross," in the Torlonia Chapel, outlines in remembrance the brilliant assemblies of that financial house. The outlines of Flaxman, essentially statuesque, seem alone adequate to illustrate

to the eye the great Mediæval poet, whose verse seems often cut from stone in the quarries of infernal destiny. How grandly sleep the lions of Canova at Pope Clement's tomb!

It is to us a source of noble delight, that with these permanent trophies of the sculptor's art may now be mingled our national fame. Twenty years ago, the address in Murray's Guide-Book,—*Crawford, an American Sculptor, Piazza Barberini*,—would have been unique; now that name is enrolled on the list of the world's benefactors in the patrimony of Art. Greenough, by his pen, his presence, and his chisel, gave an impulse to taste and knowledge in sculpture and architecture not destined soon to pass away; no more eloquent and original advocate of the beautiful and the true in the higher social economies has blest our day; his Cherubs and Medora overflow with the poetry of form; his essays are a valuable legacy of philosophic thought. The Greek Slave of Powers was invariably surrounded by visitors at the London World's Fair and the Manchester Exhibition. Palmer has sent forth from his isolated studio at Albany a series of ideal busts, of a pure type of original and exquisite beauty. Others might be named who have honorably illustrated an American claim to distinction in an art eminently republican in its perpetuation of national worth and the identity of its highest achievements with social progress.

Facility of execution and prolific invention were the essential traits of Crawford's genius. For some years his studio has been one of the shrines of travellers at Rome, because of the number and variety as well as excellence of its trophies. The idea has been suggested, and it is one we hope to see realized, that this complete series of casts should be permanently conserved in such a temple as Copenhagen reared to the memory of her great sculptor. It was on account of this facility and fecundity that Crawford advocated plaster as an occasional substitute for bronze and marble, where elaborate compositions were

proposed. He felt capable of achieving so much, his mind teemed with so many panoramic and single conceptions,—historical, allegorical, ideal, and illustrative of standard literature or classical fable,—that only time and expense presented obstacles to unlimited invention. Perhaps no one can conceive this peculiar creativeness of his fancy and aptitude of hand, who has not had occasion to talk with Crawford of some projected monument or statue. No sooner was he possessed of the idea to be embodied, the person or occasion to be commemorated, than he instantly conceived a plan and drew a model, invariably possessing some felicitous thought or significant arrangement. His sketch-book was quite as suggestive of genius as his studio. The "Sketch of a Statue to crown the Dome of the United States Capitol"—a photograph of which is before us as we write, dated two years ago—is an instance in point. A more grand figure, original and symbolic, graceful and sublime, in attitude, aspect, drapery, accessories, and expression, or one more appropriate, cannot be imagined; and yet it is only one of hundreds of national designs, more or less mature, which that fertile brain, patriotic heart, and cunning hand devised. We are justified in regarding the appropriation by the State of Virginia, for a monument to Washington by such a man, as an epoch in the history of national Art. Crawford hailed it as would a confident explorer the ship destined to convey him to untracked regions, the ambitious soldier tidings of the coming foe, or any brave aspirant a long-sought opportunity. It is one of the drawbacks to elaborate achievement in sculpture, that the materials and the processes of the art require large pecuniary facilities. To plan and execute a great national monument, under a government commission, was precisely the occasion for which Crawford had long waited. Happening to read the proposals in a journal, while on a visit to this country, he repaired immediately to Richmond, submitted his views, and soon received the appointment.

The absence of complexity in the language and intent of sculpture is always obvious in the expositions of its votaries. In no class of men have we found such distinct and scientific views of Art. One lovely evening in spring, we stood with Bartolini beside the corpse of a beautiful child. Bereavement in a foreign land has a desolation of its own, and the afflicted mother desired to carry home a statue of her loved and lost. We conducted the sculptor to the chamber of death, that he might superintend the casts from the body. No sooner did his eyes fall upon it, than they glowed with admiration and filled with tears. He waved the assistants aside, clasped his hands, and gazed spell-bound upon the dead child. Its brow was ideal in contour, the hair of wavy gold, the cheeks of angelic outline. "How beautiful!" exclaimed Bartolini; and drawing us to the bedside, with a mingled awe and intelligence, he pointed out how the rigidity of death coincided, in this fair young creature, with the standard of Art;—the very hands, he declared, had stiffened into lines of beauty; and over the beautiful clay we thus learned from the lips of a venerable sculptor how intimate and minute is the cognizance this noble art takes of the language of the human form. Greenough would unfold by the hour the exquisite relation between function and beauty, organization and use,—tracing therein a profound law and an illimitable truth. No more genial spectacle greeted us in Rome than Thorwaldsen at his Sunday-noon receptions;—his white hair, kindly smile, urbane manners, and unpretending simplicity gave an added charm to the wise and liberal sentiments he expressed on Art,—reminding us, in his frank eclecticism, of the spirit in which Humboldt cultivates science, and Sismondi history. Nor less indicative of this clear apprehension was the thorough solution we have heard Powers give, over the mask taken from a dead face, of the problem, how its living aspect was to modify its sculptured reproduction; or the original views expressed by Palmer as to the treat-

ment of the eyes and hair in marble. During Crawford's last visit to America, we accompanied him to examine a portrait of Washington by Wright. It boasts no elegance of arrangement or refinement of execution; at a glance it was evident that the artist had but a limited sense of beauty and lacked imagination; but, on the other hand, he possessed what, for a sculptor's object,—namely, facts of form and feature,—is more important,—conscience. Crawford declared this was the only portrait of Washington which literally represented his costume; having recently examined the uniform, sword, etc., he was enabled to identify the strands of the epaulette, the number of buttons, and even the peculiar seal and watch-key. A man so faithful to details, so devoted to authenticity, Crawford argued, was reliable in more essential things. He remarked, that one of his own greatest difficulties in the equestrian statue had been to reconcile the shortness of the neck in Stuart's portrait and Houdon's statue (the body of which was not taken from life) with the stature of Washington,—there being an anatomical incongruity therein. "I had determined," he continued, "to follow what the laws of Nature and all precedent indicate as the right proportion,—otherwise it would be impossible to make a graceful and impressive statue; but in this picture, bearing such remarkable evidence of authenticity, I find the correct distance between chin and breast."

American travellers in Italy will sometimes be repelled by a certain narrowness in the critical estimate of modern sculptors; though of all arts sculpture demands and justifies the most liberal eclecticism. Thus, a broad line of demarcation has been arbitrarily drawn between high finish and prolific invention, originality and superficial skill; as if these merits could not be united, or were incompatible with each other,—and that, invariably, works of "outward skill elaborate" are "of inward less exact." A Boston critic denominates Powers "a sublime mechanic," as if there were only physical imitation in his busts,

and no expression in his figures. The insinuation is unjust. By exquisite finish and patient labor he makes of such subjects as the Fisher-boy, the Proserpine, and Il Penseroso charming creations,—in attitude and feature true to the moment and the mood delineated, and not less true in each detail; their popularity is justified by scientific and tasteful canons; and his portrait busts and statues are, in many instances, unrivalled for character as well as execution. A letter to one of his friends lies before us, in which he responds to an amicable remonstrance at his apparent slowness of achievement. The reasoning is so cogent, the principle asserted of such wide application, and the artistic conscience so nobly evident, that we venture to quote a passage.

"It is said, that works designed to adorn buildings need not be done with much care, being only architectural sculptures. This is quite a modern idea. The Greeks did not entertain it, as is proved by those gems which Lord Elgin sawed away from the walls of the Parthenon. I cannot admit that a noble art should ever be prostituted to purposes of mere show. They do not make rough columns, coarse and uneven friezes, jagged mouldings, etc., for buildings. These are always highly finished. Are figures in marble less important? But speed, speed, is the order of the day,—'quick and cheap' is the cry; and if I prefer to linger behind and take pains with the little I do, there are some now, and there will be more hereafter, to approve it. I cannot consent to model statues at the rate of three in six months, and a clear conscience will reward me for not having yielded to the temptation of making money at the sacrifice of my artistic reputation. Art is, or should be, poetry, in its various forms,—no matter what it is written upon,—parchment, paper, canvas, or marble. Milton employed his daughter to write his 'Paradise Lost,' not to compose it; her hand was moved by his soul; she was his modelling-tool,—nothing more. But to employ another to model for you, and go away from him, is

not analogous. He then composes for you; modelling is composition. And whom did Shakspeare get to do this for him? Whom did Gray employ to arrange in words that immortal wreath set with diamond thoughts which he has thrown upon a country churchyard? Whom did Michel Angelo get to model his Moses? How many young men did Ghiberti employ during the forty years he was engaged upon the Gates of Paradise? I cannot yield my convictions of what is proper in Art. I will do my work as well as I know how, and necessity compels me to demand ample payment for it."

We have sometimes wondered that some æsthetic philosopher has not analyzed the vital relation of the arts to each other and given a popular exposition of their mutual dependence. Drawing from the antique has long been an acknowledged initiation for the limner, and Campbell, in his terse description of the histrionic art, says that therein "verse ceases to be airy thought, and sculpture to be dumb." How much of their peculiar effects did Talma, Kemble, and Rachel owe to the attitudes, gestures, and drapery of the Grecian statues! Kean adopted the "dying fall" of General Abercrombie's figure in St. Paul's as the model of his own. Some of the memorable scenes and votaries of the drama are directly associated with the sculptor's art,—as, for instance, the last act of "Don Giovanni," wherein the expressive music of Mozart breathes a pleasing terror in connection with the spectral nod of the marble horseman; and Shakspeare has availed himself of this art, with beautiful wisdom, in that melting scene where remorseful love pleads with the motionless heroine of the "Winter's Tale,"—

"Her natural posture!

Chide me, dear stone, that I may say,
indeed,

Thou art Hermione; or rather, thou art she
In thy not chiding: for she was as tender
As infancy and grace."

Garrick imitated to the life, in "Abel

Drugger," a vacant stare peculiar to Nollekens, the sculptor; and Colley Cibber's father was a devotee of the chisel and adorned Chatsworth with free-stone Sea-Nymphs.

Crawford's interest in portrait-busts was secondary, owing to his inventive ardor; the study he bestowed upon the lineaments of Washington, however, gave a zest and a special insight to his endeavor to represent his head in marble, and, accordingly, this specimen of his ability, which arrived in this country after his decease, is remarkable for its expressive, original, and finished character. For ourselves, in view of the great historical value, comparative authenticity, and possible significance and beauty of this department of sculpture, it has a peculiar interest and charm. The most distinct idea we have of the Roman emperors, even in regard to their individual characters, is derived from their busts at the Vatican and elsewhere. The benignity of Trajan, the animal development of Nero, and the classic vigor of young Augustus are best apprehended through these memorable effigies which Time has spared and Art transmitted. And a similar permanence and distinctness of impression associate most of our illustrious moderns with their sculptured features: the ironical grimace of Voltaire is perpetuated by Houdon's bust; the sympathetic intellectuality of Schiller by Dannecker's; Handel's countenance is familiar through the elaborate chisel of Roubillac; Nollekens moulded Sterne's delicate and unimpassioned but keen physiognomy, and Chantrey the lofty cranium of Scott. Who has not blessed the rude but conscientious artist who carved the head of Shakspeare preserved at Stratford? How quaintly appropriate to the old house in Nuremberg is Albert Dürer's bust over the door! Our best knowledge of Alexander Hamilton's aspect is obtained from the expressive marble head of him by that ardent republican sculptor, Ceracchi. It was appropriate for Mrs. Damer, the daughter of a gallant field-marshal, to

portray in marble, as heroic idols, Fox, Nelson, and Napoleon. We were never more convinced of the intrinsic grace and solemnity of this form of "counterfeit presentment" than when exploring the Baciocchi *palazzo* at Bologna. In the centre of a circular room, lighted from above, and draped as well as carpeted with purple, stood on a simple pedestal the bust of Napoleon's sister, thus enshrined after death by her husband. The profound stillness, the relief of this isolated head against a mass of dark tints, and its consequent emphatic individuality, made the sequestered chamber seem a holy place, where communion with the departed, so spiritually represented by the exquisite image, appeared not only natural, but inevitable. Our countryman, Powers, has eminently illustrated the possible excellence of this branch of Art. In mathematical correctness of detail, unrivalled finish of texture, and with these, in many cases, the highest characterization, busts from his hand have an absolute artistic value, independent of likeness, like a portrait by Vandyck or Titian. When the subject is favorable, his achievements in this regard are memorable, and fill the eye and mind with ideas of beauty and meaning undreamed of by those who consider marble portraits as wholly imitative and mechanical. Was there ever a human face which so completely reflected inward experience and individual genius as the bust which haunts us throughout Italy, broods over the monument in Santa Croce, gazes pensively from library niche, seems to awe the more radiant images of boudoir and gallery, and sternly looks melancholy reproach from the Ravenna tomb?

"The lips, as Cumæ's cavern close,
The cheeks, with fast and sorrow thin,
The rigid front, almost morose,
But for the patient hope within,
Declare a life whose course hath been
Unstilled still, though still severe,
Which, through the wavering days of sin,
Kept itself icy chaste and clear."

National characters become, as it were,

household gods through the sculptor's portrait; the duplicates of Canova's head of Napoleon seem as appropriate in the *salons* and shops of France, as the heads of Washington and Franklin in America, or the antique images of Scipio Africanus and Ceres in Sicily, and Wellington and Byron in London.

There is no phase of modern life so legitimate in its enjoyment and so pleasing to contemplate as the life of the true artist. Endowed with a faculty and inspired by a love for creative beauty, work is to him at once a high vocation and a generous instinct. Imagine the peace and the progress of those years at Rome when Crawford toiled day after day in his studio,—at first without encouragement and for bread, then in a more confident spirit and with some definite triumph, and at last crowned with domestic happiness and artistic renown,—his mind filled with ideal tasks more and more grand in their scope, and the coming years devoted in prospect to the realization of his noblest aspirations. From early morning to twilight, with rare and brief interruptions, he thus designed, modelled, chiselled, superintended, every day adding something permanent to his trophies. This self-consecration was entire, and in his view indispensable. Few and simple were the recreative interludes: a reunion of brother-artists or fellow-countrymen and their families,—an occasional journey, almost invariably with a professional intent,—a summer holiday or a winter festival; but, methodical in pastime as in work, his family and his books were his cherished resources. Often so weary at night that he returned home only to recline on a couch, caress his children, or refresh his mind with some agreeable volume provided by his vigilant companion,—the best energies of his mind and the freshest hours of life were absolutely given to Art. This is the great lesson of his career: not by spasmodic effort, or dalliance with moods, or fitful resolution, did he accomplish so much; but by earnestness of purpose, consistency of aim, heroic decision of

character. There is nothing less vague, less casual in human experience, than true artist-life. Rome is the shrine of many a dreamer, the haunt of countless inefficient enthusiasts. But there, as elsewhere, will must intensify thought, action control imagination, or both are fruitless. Those melancholy ruins, those grand temples of religion, the immortal forms and hues that glorify palace and chapel, square, mausoleum, and Vatican, the dreamy murmur of fountains, the aroma of violets and pine-trees, the pensive relics of imperial sway, the sublime desolation of the Campagna, the mystery of Nature and Art, when both are hallowed by time, the social zest of an original brotherhood like the artists, the freedom and loveliness, the ravishment of spring and the soft radiance of sunset, all that there captivates soul and sense, must be resisted as well as enjoyed;—self-control, self-respect, self-dedication are as needful as susceptibility, or these peerless local charms will only enchant to betray the artist. Crawford carried to Rome the ardor of an Irish temperament and the vigor of an American character. Hundreds have passed through a like ordeal of privation, ungenial because conventional work, and slow approach to the goal of recognized power and remunerated sacrifice; but few have emerged from the shadow to the sunshine, by such manly steps and patient, cheerful trust. It was not the voice of complaint that first attracted towards him intelligent sympathy,—it was brave achievement; and from the day when a remittance from Boston enabled him to put his Orpheus in marble, to the day when, attended by his devoted sister, he paid the last visit to his crowded studio, and looked, with quivering eyelids, but firm heart, on the silent but eloquent offspring of his brain and hand, the Artist in him was coincident with the Man,—clear, unswerving, productive, the sphere extending, the significance multiplying, and the mastery becoming more and more complete through resolute practice, vivid intuition, and candid search for truth.

In the fifteenth century, and earlier, the lives of artists were adventurous; political relations gave scope to incident; and Michel Angelo, Salvator Rosa, and Benvenuto Cellini furnish almost as many anecdotes as memorials of genius. In modern times, however, vicissitude has chiefly diversified the uniform and tranquil existence of the artist; his struggles with fortune, and not his relations to public events, have given external interest to his biography. It is the mental rather than the outward life which is fraught with significance to the painter and sculptor; consciousness more than experience affords salient points in his career. How the executive are trained to embody the creative powers, through what struggles dexterity is attained, and by what reflection and earnest musing and observant patience and blest intuitions original achievements glimmer upon the fancy, grow mature by thought, correct through the study of Nature, and are finally realized in action,—these and such as these inward revelations constitute the actual life of the artist. The mere events of Crawford's existence are neither marvellous nor varied; his early love of imitative pastime, his fixed purpose, his resort to stone-cutting as the nearest available expedient for the gratification of that instinct to copy and create form which so decidedly marks an aptitude for sculpture, his visit to Rome, the self-denial and the lonely toil of his novitiate, his rapid advancement in both knowledge and skill, and his gradual recognition as a man of original mind and wise enthusiasm are but the normal characteristics of his fraternity. Circumstances, however, give a singular prominence and pathos to these usual facts of artist-life. When Crawford began his professional career, sculpture, as an American pursuit, was almost as rare as painting at the time of West's advent in Rome; to excel therein was a national distinction, having a freshness and personal interest such as the votaries of older countries did not share; as the American representative of his art at

Rome, even in the eyes of his comrades, and especially in the estimation of his countrymen, he long occupied an isolated position. The qualities of the man,—his patient industry,—the new and unexpected superiority in different branches of his art, so constantly exhibited,—the loyal, generous, and frank spirit of his domestic and social life,—the freedom, the faith, and the assiduity that endeared him to so large and distinguished a circle, were individual claims often noted by foreigners and natives in the Eternal City as honorable to his country. It was remembered there, when he died, that the hand now cold had warmly grasped in welcome his compatriots, shouldered a musket as one of the republican guard, and been extended with sympathy and aid to his less prosperous brothers. At the meeting of fellow-artists, convened to pay a tribute to his memory, every nation of Europe was represented, and the most illustrious of living English sculptors was the first to propose a substantial memorial to his name. What his nativity and his character thus so eminently contributed to signalize, the offspring of his genius, the manner of his death, solemnly confirmed. By no sudden fever, such as insidiously steals from the Roman marshes and poisons the blood of its victims,—by no violent epidemic, like those which have again and again devastated the cities of Europe,—by no illusive decline, whereby vital power is sapped unconsciously and with mild gradations, and which, in that soft clime, has peopled with the dust of strangers the cemetery which the pyramid of Cestius overshadows and the heart of Shelley consecrates,—by none of these familiar gates of death did Crawford pass on; but, in the meridian of his powers and his fame, in the climax of his artistic career, in the noon-tide of his most genial activity, a corrosive tumor on the inner side of the orbit of the eye encroached month by month, week by week, hour by hour, upon the sources of life. Medical skill freed the brain from its deadly pressure, but could not divert its organic affinity. The

mind's integrity was thus preserved intact; consciousness and self-possession lent their dignity to waning strength; but the alert muscles were relaxed; the busy hands folded in prayer; what Michel Angelo uttered in his eighty-sixth Crawford was called upon to echo in his forty-fifth year:—

"Wellnigh the voyage now is overpast,
And my frail bark, through troubled seas and
rude,
Draws nigh that common haven where at
last,
Of every action, be it evil or good,
Must due account be rendered. Well I know
How vain will then appear that favored art,
Sole idol long, and monarch of my heart;
For all is vain that man desires below."

The cheerful voice was often hushed by pain; but conjugal and sisterly love kept vigil, a long, a bitter year, by that couch of suffering in the heart of multitudinous Paris and London; hundreds of sympathizing friends, in both hemispheres, listened and prayed and hoped through a dreary twelvemonth. With the ripe autumn closed the quiet struggle; and "in the bleak December" the mortal remains were followed from the temple where his youth worshipped, to the snow-clad knoll at Greenwood; garlands and tears, the ritual and the requiem, eulogy and elegy, consecrated the final scene. By a singular coincidence, the news of his decease reached the United States simultaneously with the arrival of the ship in James River with the colossal bronze statue of Washington, his crowning achievement.

One would imagine, from the eagerness and intensity exhibited by Crawford, that he anticipated a brief career. Work seemed as essential to his comfort as rest is to less determined natures. He was a thorough believer in the moral necessity of absolute allegiance to his sphere; and differed from his brother-artists chiefly in the decisive manner in which he kept aloof from extrinsic and incidental in-

fluences. If Art ever made labor delectable, it was so with him. He seemed to go through with the ordinary processes of life with but a half consciousness thereof,—save where his personal affections were concerned. One of the first works for which he expressed a sympathetic admiration was Thorwaldsen's "Triumph of Alexander,"—one of the most elaborate and suggestive of modern friezes. He early contemplated an entire series of illustrations of Ovid. He alternated, with infinite relish, between the extreme phases of his art,—a delicate *Peri* and a majestic Colossus, an extensive array of basso rilievo figures, a sublime ideal of manhood and an exquisite image of infancy. His alacrity of temper was co-equal with his steadiness of purpose; and the cheerfulness of an active mind, sanguine temperament, and great nervous energy did not abandon him, even in the state of forced passivity so intolerable to such habitude; for hilarious words and, once or twice, the old ringing laugh startled the fond watchers of his declining hours. The events of his life are but a few expressive outlines; his works embody his most real experience; and the thoughts and feelings, the observation and the sentiment, not therein moulded or sketched, happily found adequate record in the ample and ingenuous letters he wrote to his beloved sister, from the time of his first arrival in Europe to that of his last arrival in America,—embracing a period of twenty-two years. Each work he conceived and executed, each process of study, the impressions he gained and the convictions at which he arrived in relation to ancient and modern art,—each journey, achievement, plan, opinion,—what he saw, and imagined, and hoped, and did,—was frankly and fondly noted; and the time may come when these epistles, inspired by love and dictated by intelligent sympathy and insight, will be compiled into a priceless memorial of artist-life.

ASIRVADAM THE BRAHMIN.

WHO put together the machinery of the great Indian revolt, and set it going? Who stirred up the sleeping tiger in the Sepoy's heart, and struck Christendom aghast with the dire devilries of Meerut and Cawnpore?

Asirvadam the Brahmin!

Asirvadam is nimble with mace or cue; at the billiard-table, it is hinted, he can distinguish a kiss from a carom; at the sideboard (and here, if I were Mr. Charles Reade, I would whisper, in small type) he confounds not cocktails with cobbles; when, being in trade, he would sell you saltpetre, he tries you with flaxseed; when he would buy indigo, he offers you indigo at a sacrifice. Yet, in Asirvadam, if any quality is more noticeable than the sleek respectability of the Baboo, it is the jealous orthodoxy of the Brahmin. If he knows in what presence to step out of his slippers, and when to pick them up again with his toes, in jaunty dandyisms of etiquette, he also makes the most of his insolent order and its patent of privilege, and wears the rue of his triple cord with a demure and dignified difference. High, low, or jack, it is always "the game" with him; and the game is—Asirvadam the Brahmin,—free tricks and Brahmins' rights,—Asirvadam for his caste, and everything for Asirvadam.

The natural history of our astute and accomplished friend is worth a page or two. And first, as to his color. Asirvadam comes from the northern provinces, and calls the snow-turbaned Himalayas cousin; consequently his complexion is the brightest among Brahmins. By some who are uninitiated in the chemical mysteries of our metropolitan milk-trade, it has been likened to chocolate and cream, with plenty of cream; but the comparison depends, for the idea it conveys, so much on the taste of the ethnological in-

quirer, as to the proportion of cream, and still so much more, as in the case of Mr. Weller's weal pies, on the reputation of "the lady as makes it," that it will hardly serve the requirements of a severe scientific statement. Copper-color has an excess of red, and sepia is too brown; the tarry tawnniness of an old boatswain's hand is nearer the mark, but even that is less among man-of-war's men than in the merchant-service, and is least in the revenue marine; it varies, also, with the habits of the individual, and the nature of his employment for the time being. The flipper of your legitimate shiver-my-timbery old salt, whose most amiable office is piping all hands to witness punishment, has long since acquired the hue of a seven-years' meerschaum; while the dandy cockswain of a forty-gun frigate lying off the navy-yard, who brings the third cutter ship-shapely alongside with a pretty girl in the stern-sheets, lends her—the pretty girl—a hand at the gangway, that has been softened by fastidious applications of solvent slush to the tint of a long envelope "on public service." "Law sheep," when we come to the binding of books, is too sallow for this simile; a little volume of "Familiar Quotations," in limp calf, (Bartlett, Cambridge, 1855,) might answer,—if the cover of the January number of the "Atlantic Monthly" were not exactly the thing.

Simplicity, convenience, decorum, and picturesqueness distinguish the costume of Asirvadam the Brahmin. Three yards of yard-wide fine cotton cloth envelope his loins, in such a manner, that, while one end hangs in graceful folds in front, the other falls in a fine distraction behind. Over this, a robe of muslin, or silk, or piña cloth—the latter in peculiar favor, by reason of its superior purity, for high-caste wear—covers his neck, breast, and arms, and descends nearly to his ankles. Asirvadam borrowed this garment from the Mussulman; but he fastens it

on the left side, which the follower of the Prophet never does, and surmounts it with an ample and elegant waistband, beside the broad Romanesque mantle that he tosses over his shoulder with such a senatorial air. His turban, also, is an innovation,—not proper to the Brahmin,—pure and simple, but, like the robe, adopted from the Moorish wardrobe, for a more imposing appearance in Sahib society. It is formed of a very narrow strip, fifteen or twenty yards long, of fine stuff, moulded to the orthodox shape and size by wrapping it, while wet, on a wooden block; having been hardened in the sun, it is worn like a hat. As for his feet, Asirvadam, uncompromising in externals, disdains to pollute them with the touch of leather. Shameless fellows, Brahmins though they be, of the sect of Vishnu, go about, without a blush, in thonged sandals, made of abominable skins; but Asirvadam, strict as a Gooroo when the eyes of his caste are on him, is immaculate in wooden clogs.

In ornaments, his taste, though somewhat grotesque, is by no means lavish. A sort of stud or button, composed of a solitary ruby, in the upper rim of the cartilage of either ear,—a chain of gold, curiously wrought, and intertwined with a string of small pearls, around his neck,—a massive bangle of plain gold on his arm,—a richly jewelled ring on his thumb, and others, broad and shield-like, on his toes,—complete his outfit in these vanities.

As often as Asirvadam honors us with his morning visit of business or ceremony, a slight yellow line, drawn horizontally between his eyebrows, with a paste composed of ground sandal-wood, denotes that he has purified himself externally and internally, by bathing and prayers. To omit this, even by the most unavoidable chance to appear in public without it, were to incur a grave public scandal; only excepting the season of mourning, when, by an expressive Oriental figure, the absence of the caste-mark is accepted for the token of a profound and absorbing sorrow, which takes no thought even

for the customary forms of decency. The disciple of Siva crossbars his forehead with ashes of cow-dung or ashes of the dead; the sectary of Vishnu adorns his with a sort of trident, composed of a central perpendicular line in red, and two oblique lines, white or yellow. But the true Brahmin knows no Siva or Vishnu, no sectarian distinctions or preferences; Indra has set no seal upon his brow, nor Krishna, nor Devendra. For, ignoring celestial personalities, it is the Trimurti that he grandly adores,—Creation, Preservation, Destruction triune,—one body with three heads; and the right line alone, or *pottu*, the mystic circle, describes the sublime simplicity of his soul's aspiration.

When Asirvadam was but seven years old, he was invested with the triple cord, by a grotesque, and in most respects absurd, extravagant, and expensive ceremony, called the *Upanayana*, or Introduction to the Sciences, because none but Brahmins are freely admitted to their mysteries. This triple cord consists of three thick strands of cotton, each composed of several finer threads; these three strands, representing Brahma, Vishnu, and Siva, are not twisted together, but hang separately, from the left shoulder to the right hip. The preparation of so sacred a badge is entrusted to none but the purest hands, and the process is attended with many imposing ceremonies. Only Brahmins may gather the fresh cotton; only Brahmins may card and spin and twist it; and its investiture is a matter of so great cost, that the poorer brothers must have recourse to contributions from the pious of their caste, to defray the exorbitant charges of priests and masters of ceremonies.

It is a noticeable fact in the natural history of the always insolent Asirvadam, that, unlike Shatriya, the warrior, Vaishya, the cultivator, or Soodra, the laborer, he is not born into the full enjoyment of his honors, but, on the contrary, is scarcely of more consideration than a Pariah, until by the *Upanayana* he has been admitted to his birthright.

Yet, once decorated with the ennobling badge of his order, our friend became from that moment something superior, something exclusive, something supercilious, arrogant, exacting,—Asirvadam, the high Brahmin,—a creature of wide strides without awkwardness, towering airs without bombast, Sanscrit quotations without pedantry, florid phraseology without hyperbole, allegorical illustrations and proverbial points without sententiousness, fanciful flights without affectation, and formal strains of compliment without offensive adulation.

When Asirvadam meets Asirvadam in the way, compliments pass : each touches his forehead with his right hand, and murmurs twice the auspicious name of Rama. But the passing Vaishya or Soodra elevates reverently his joined palms above his head, and, stepping out of his slippers, salutes the descendant of the Seven Holy Penitents with *namaskaram*, the pious obeisance. *Andam, aya!* "Hail, exalted Lord!" he cries; and the exalted lord, extending the pure lilies of his hands lordliwise, as one who condescends to accept an humble offering, mutters the mysterious benediction which only Gooroos and high Brahmins may bestow,—*Asirvadam!*

The low-caste slave who may be admitted to the distinguished presence of our friend, to implore indulgence, or to supplicate pardon for an offence, must thrice touch the ground, or the honored feet, with both his hands, which immediately he lays upon his forehead; and there are occasions of peculiar humiliation which require the profound prostration of the *sashtangam*, or abasement of the eight members, wherein the suppliant extends himself face downward on the earth, with palms joined above his head.

If Asirvadam—having concluded a visit in which he has deferentially reminded me of the peculiar privilege I enjoy in being admitted to social converse with so select a being—is about to withdraw the light of his presence, he retires backward, with many humbly gracious salaams. If, on the other hand, I

have had the honor to be his distinguished guest at his garden-house, and am in the act of taking my leave, he patronizes me to the gate with elaborate obsequiousness, that would be tedious, if it were not so graceful, so comfortable, so gallantly vain-glorious. He shows the way by following, and spares me the indignity of seeing his back by never taking his eyes from mine. He knows what is due to his accomplished friend, the Sahib, who is learned in the four Yankee Vedas; as to what is due to Asirvadam the Brahmin, no man knoweth the beginning or the end of that.

When Asirvadam crosses my threshold, he leaves his slippers at the door. I am flattered by the act into a self-appreciative complacency, until I discover that he thereby simply puts me on a level with his cow. When he converses with me, he keeps respectful distance, and gracefully averts from me the annoyance of his breath by holding his hand before his mouth. I inwardly applaud his refined breeding, forgetting that I am a Pariah of Pariahs, whose soul, if I have one, the incense of his holy lungs might save alive,—forgetting that he is one to whose very footprint the Soodra salaams, alighting from his palanquin,—to whose shadow poor Chakili, the cobbler, abandons the broad highway,—the feared of gods, hated of giants, mistrusted of men, and adored of himself,—Asirvadam the Brahmin.

"They, the Brahmin Asirvadam, to him, Phaldasana, who is obedient, who is true, who has every faithful quality, who knows how to serve with cheerfulness, to submit in silence, who by the excellent services he renders the Brahmins has become like unto the stone Chintamani, the bringer of good, who by the number and variety and acceptableness of his gifts shall attain, without further trials, to the paradise of Indra: *Asirvadam!*"

"The year Vikari, the tenth of the month Phalguna: we are at Benares in good health; bring us word of thine. It shall be thy privilege to make *sashtan-*

gam at the feet—which are the true lilies of Nilufar—of us the Lord Brahmin, who are endowed with all the virtues and all the sciences, who are great as Mount Meru, to whom belongs illustrious knowledge of the four Vedas, the splendor of whose beneficence is as the noon-flood of the sun, who are renowned throughout the fourteen worlds, whom the fourteen worlds admire.

“Having received with both hands that which we have abased ourself by writing to thee, and having kissed it and set it on thy head, thou wilt read with profound attention and execute with grateful alacrity the orders it contains, without swerving from the strict letter of them, the breadth of a grain of sesamum. Having hastened to us, as thou art blessed in being bidden, thou shalt wait in our presence, keeping thy distance, thy hands joined, thy mouth closed, thine eyes cast down,—thou who art as though thou wert not,—until we shall vouchsafe to perceive thee. And when thou hast obtained our leave, then, and not sooner, shalt thou make sashtangam at our blessed feet, which are the pure flowers of Nilufar, and with many lowly kisses shalt lay down before them thy unworthy offering,—ten rupees, as thou knowest,—more, if thou art wise,—less, if thou darest.

“This is all we have to say to thee. *Asirvadam!*”

In the epistolary style of *Asirvadam the Brahmin* we are at a loss which to admire most,—the flowers or the force, the modesty or the magnificence.

Among the cloistral cells of the women's quarter, which surround the inner court of *Asirvadam's* domestic establishment, is a dark and narrow chamber which is the domain of woman's rights. It is called “the Room of Anger,” because, when the wife of the bosom has been tempted by inveigling box-wallahs with a love of a pink coortee, or a pair of chased bangles, “such darlings, and so cheap,” and has conceived a longing for the same, her way is, without a word beforehand, to go shut herself up in the

Room of Anger, and pout and sulk till she gets them; and seeing that the wife of the bosom is also the pure concocter of the Brahminical curry and server of the Brahminical rice, that she is the goddess of the sacred kitchen and high-priestess of pots and pans, it is easy to see that her success is certain. Poor little brown fool! that twelve feet square of curious custom is all, of the world-wide realm of beauty and caprice, that she can call her own.

When the enamored young *Asirvadam* brought to her father's gate the lover's presents,—the ear-rings and the bangles, the veil and the loongee, the attar and the betel and the sandal, the flowers and the fruits,—the lizard that chirped the happy omen for her betrothal lied. When she sat by his side at the wedding-feast, and partook of his rice, prettily picking from the same leaf, ah! then she did not eat,—she dreamed; but ever since that time, waiting for his leavings, nor daring to approach the board till he has retired to his pipe, she does not dream,—she feeds.

Around her neck a strange ornament of gold, having engraved upon it the likeness of Lakshmee, is suspended by a consecrated string of one hundred and eight threads of extreme fineness, dyed yellow with saffron. This is the Tahli, the wife's badge,—“*Asirvadam the Brahmin*, his chattel.” They brought it to her on a silver salver garnished with flowers, she sitting with her, betrothed on a great cushion; and ten Brahmins, holding around the happy pair a screen of silk, invoked for them the favor of the three divine couples,—Brahma with Sarawastee, Vishnu with Lakshmee, Siva with Paravatee. Then they offered incense to the Tahli, and a sacrifice of fire, and they blessed it with many mantras, or holy texts; and as the bride turned her to the east, and fixed her inmost thought on the “Great Mountain of the North,” *Asirvadam the Brahmin* clasped his collar on her neck, never to be loosened till he, dying, shall leave her to be burned, or spurned.

No man, when he meets *Asirvadam the Brahmin*, presumes to ask, “How is

the little brown fool to-day?" No man, when he visits him, ventures to inquire if she is at home; it is not the etiquette. Should the little brown fool, having a mind of her own, and being resolved not to endure this any longer, suddenly make Asirvadam ridiculous some day, the etiquette is to hush it up among their friends.

As Raja, the warrior, sprang from the right arm of Brahma, and Vaishya, the cultivator, from his belly, and Soodra, the laborer, from his feet,—so Asirvadam the Brahmin was conceived in the head and brought forth from the mouth of the Creator; and he is above the others by so much as the head is above arms, belly, and feet; he is wiser than the others, inasmuch as he has lain among the thoughts of the god, has played with his inventions, and made excursions through the universe with his speech. Therefore, if it be true, as some say, that Asirvadam is an ant-hill of lies, he is also a snake's-nest of wisdom, and a beehive of ingenuity. Let him be respected, for his rights are plain.

It is his right to be taught the Vedas and the mantras, all the tongues of India, and the sciences; to marry a child-wife, no matter how old he may be,—or a score of wives, if he be a Koolen Brahmin, so that he may drive a lively business in the way of dowries; to peruse the books of magic, and perform the awful sacrifice of the Yajna; to receive presents without limit, levy taxes without law, and beg with insolence.

It is his duty to study diligently; to conform rigorously to the rules of his caste; to honor and obey his superiors without question or hesitation; to insult his inferiors, for the magnifying of his office; to get him a wife without loss of time, and a male child by all means. During his religious minority he is expected to bathe and sacrifice twice a day, to abstain from adorning his forehead or his breast with sandal, to wear no flowers in his hair, to chew no betel, to regard himself in no mirrors.

Under Hindoo law, which is his own law, Asirvadam the Brahmin pays no taxes, tolls, or duties; corporal punishment can in no case be inflicted upon him; if he is detected in defalcation or the taking of bribes, partial restitution is the worst penalty that can befall him. "For the belly," he says, "one will play many tricks." To smite his cheek with your leathern glove, or to kick him with your shoe, is an outrage at which the gods rave; to kill him would draw down a monstrous calamity upon the world. If he break faith with you, it is as nothing; if you fail him in the least promise, you take your portion with Karta, the Fox, as the good Abbé Dubois relates.

"Karta, Karta!" screamed an Ape, one day, when he saw a fox feeding on a rotten carcass, "thou must, in a former life, have committed some dreadful crime. to be doomed to a new state in which thou feedest on such garbage."

"Alas!" replied the Fox, "I am not punished more severely than I deserve. I was once a man, and then I promised something to a Brahmin, which I never gave him. That is the true cause of my being regenerated in this shape. Some good works, which I did have, won for me the indulgence of remembering what I was in my former state, and the cause for which I have been degraded into this."

Asirvadam has choice of a hundred callings, as various in dignity and profit as they are numerous. Under native rule he makes a good cooly, because the officers of the revenue are forbidden to search a Brahmin's baggage, or anything that he carries. He is an expeditious messenger, for no man may stop him; and he can travel cheaply for whom there is free entertainment on every road. "For the belly one will play many tricks"; and Asirvadam, in financial straits, may teach dancing to nautch-girls; or he may play the mountebank or the conjurer, and with a stock of mantras and charms proceed to the curing of murrain in cattle, pip in chickens, and short-windedness in old women,—at the

same time telling fortunes, calculating nativities, finding lost treasure, advising as to journeys and speculations, and crossing out crosses in love for any pretty dear who will cross the poor Brahmin's palm with a rupee. He may engage in commercial pursuits; and in that case, his bulling and bearing at the opium-sales will put Wall Street to the blush. He may turn his attention to the healing art; and allopathically, homœopathically, hydropathically, electropathically, or by any other path, run a muck through many heathen hospitals. The field of politics is full of charms for him, the church invites his taste and talents, and the army tempts him with opportunities for intrigue; but whether in the shape of Machiavelisms, miracles, or mutinies, he is forever making mischief. Whether as messenger, dancing-master, conjurer, fortune-teller, speculator, mountebank, politician, priest, or Sepoy, he is ever the same Asirvadam the Brahmin,—sleekest of lackeys, most servile of sycophants, expertest of tricksters, smoothest of hypocrites, coolest of liars, most insolent of beggars, most versatile of adventurers, most inventive of charlatans, most restless of schemers, most insidious of jesuits, most treacherous of confidants, falsest of friends, hardest of masters, most arrogant of patrons, cruelest of tyrants, most patient of haters, most insatiable of avengers, most gluttonous of ravishers, most infernal of devils,—pleasantest of fellows.

Superlatively dainty as to his fopperies of orthodoxy, Asirvadam is continually dying of Pariah roses in aromatic pains of caste. If in his goings and comings one of the "lilies of Nilufar" should chance to stumble upon a bit of bone or rag, a fragment of a dish, or a leaf from which some one has eaten,—should his sacred raiment be polluted by the touch of a dog or a Pariah,—he is ready to faint, and only a bath can revive him. He may not touch his sandals with his hand, nor repose in a strange seat, but is provided with a mat, a carpet, or an ante-lope's skin, to serve him for a cushion in

the houses of his friends. With a kid glove you may put his respectability in peril, and with your patent-leather pumps affright his soul within him. To him a pocket-handkerchief is a sore offence, and a tooth-pick monstrous. All the Vedas could not save the Giaour who "chews"; nor burnt brandy, though the Seven Penitents distilled it, purify the mouth that a tooth-brush has polluted. Beware how you offer him a wafered letter; and when you present him with a copy of your travels, let it be bound in cloth.

He has the Mantalini idiosyncrasy as to dem'd unpleasant bodies; and when he hears that his mother is dead, he straightway jumps into a bath with his clothes on. Many mantras and much holy-water, together with incense of sandal-wood, and other perfumery, regardless of expense, can alone relieve his premises of the deadness of his wife.

For a Soodra even to look upon the earthen vessels wherein his rice is boiled implies the necessity of a summary smash of the infected crockery; and his kitchen is his holy of holies. When he eats, the company keep silence; and when he is full, they return fervent thanks to the gods who have conducted him safely through a complexity of dangers;—a grain of rice, falling from his lips, might have poisoned his dinner; a stain on his plantain-leaf might have turned his cake to stone. His left hand, condemned to vulgar and impolite offices, is not admitted to the honor of assisting at his repasts to the right alone, consecrated by exemption from indecorous duties, belongs the distinction of conducting his happy grub to the heaven of his mouth. When he would quench his thirst, he disdains to apply the earth-born beaker to his lips, but lets the water fall into his solemn swallow from on high,—a pleasant feat to see, and one which, like a whirling dervish, diverts you by its agility, while it impresses you by its devotion.

It is easy to perceive, that, if our friend Asirvadam were not one of the "Young Bengal" lights who do not fash themselves with trifles, his orthodox sensibilities would

be subjected to so many and gross affronts from the indiscriminate contacts of a mixed community, that he would shortly be compelled to take refuge in one of those Arcadias of the triple cord, called *Agramas*, where pure Brahmins are met in all the exclusiveness of high caste, and where the more a man rubs against his neighbor the more he is sanctified. True, the Soodras have an irreverent saying, "An entire Brahmin at the *Agramama*, half a Brahmin when seen at a distance, and a Soodra when out of sight"; but then the Soodras, as everybody knows, are saucy, satirical rogues, and incorrigible jokers.

There was once a foolish Brahmin, to whom a rich and charitable merchant presented two pieces of cloth, the finest that had ever been seen in the *Agramama*. He showed them to the other Brahmins, who all congratulated him on so fortunate an acquisition; they told him it was the reward of some deed that he had done in a previous life. Before putting them on, he washed them, according to custom, in order to purify them from the pollution of the weaver's touch, and hung them up to dry, with the ends fastened to two branches of a tree. Presently a dog, happening to pass that way, ran under them, and the Brahmin could not decide whether the unclean beast was tall enough to touch the cloth, or not. He questioned his children, who were present; but they were not quite certain. How, then, was he to settle the all-important point? Ingenious Brahmin! an idea struck him. Getting down on all fours, so as to be of the same height as the dog, he crawled under the precious cloths.

"Did I touch it?"

"No!" cried all the children; and his soul was filled with joy.

But the next moment the terrible conviction took possession of his mind, that the dog had a turned-up tail; and that, if, in passing under the cloths, he had elevated and wagged it, their defilement must have been consummated. Ready-witted Brahmin! another idea. He called the cleverest of his children, and bade it affix to

his breech-cloth a plantain-leaf, dog's-tail-wise, and waggishly. Then resuming his all-fours-ness, he passed a second time under the cloth, and conscientiously, and anxiously, wagged.

"A touch! a touch!" cried all the children, and the Brahmin groaned, for he knew that his beautiful raiment was ruined. Thrice he wagged, and thrice the children cried, "A touch! a touch!"

So the strict Brahmin leaped to his feet, in a frightful rage, and, tearing the precious cloth from the tree, rent it in a hundred shreds, while he cursed the abominable dog and the master that owned him. And the children admired and were edified, and they whispered among themselves,—

"Now, surely, it behooveth us to take heed to our ways, for our father is particular."

Moral: And the Brahmin winked.

The Samaradana is an institution for which our friend Asirvadam entertains peculiar veneration. This is simply an abundant feast of Brahminical good things, to which the "fat and greasy citizens" of the caste are bidden by some zealous or manœuvring Soodra,—on occasion of the dedication of a temple, perhaps, or in a season of drought, or when a malign constellation is to be averted, or to celebrate the birth or marriage of some exalted personage. From all the country round about, the Brahmins flock to the feasting, singing Sanscrit hymns and obscene songs, and shouting, *Hara! hara! Govinda!* The low fellow who has the honor to entertain so select a company is not suffered to seat himself in the midst of his guests, much less to partake of the viands he has been permitted to provide; but in consideration of his "deed of exalted merit," and his expensive appreciation of the beauties and advantages of high-caste society, as expressed in all the delicacies of the season, he may come, when the last course has been discussed, and, prostrating himself in the *sashtangam* posture, receive the unanimous asirvadam of the company.

If, in taking leave of his august guests, he should also signify his sense of the honor they have done him, by presenting each with a piece of cloth or a sum of money, he is assured that he is altogether superior in mind and person to the gods, and that, if he is wise, he will not neglect to remind his friends of his munificence by another exhibition of it within a reasonable time.

In the creed of Asirvadam the Brahmin, the drinker of strong drink is a Pariah, and the eater of cow's flesh is damned already. If, then, he can tell a cocktail from a cobbler, and scientifically discriminate between a julep and a gin-sling, it must be because the Vedas are unclasped to him; for in the Vedas all things are taught. It is of Asirvadam's father that the story is told, how, when a fire broke out in his house once, and all the pious neighbors ran to rescue his effects, the first articles saved were a tub of pickled pork and a jar of arrack. But this, also, no doubt, is the malicious invention of some satirical rogue of a Soodra. Asirvadam, as is well known, recoils with horror from the abomination of eating aught that has once lived and moved and had a being; but if, remembering that, you should seek to fill his soul with consternation by inviting him to inspect a fig under a microscope, he would quietly advise you to break your nasty glass and "go it blind."

But there is one custom which Asirvadam the Brahmin observes in common with the Pariah, and that is the solemn ceremonial of Death. When his time comes, he dies, is burned, and presently forgotten; and it is a consolation for his ever having been at all, that some one is sure to be the richer and happier and freer for his ceasing to be. True, he may assume new earthly conditions, may pass into other vexatious shapes of life; but the change must ever be for the better in respect of the interests of those who have suffered by the powers and capabilities of the shape which he relinquishes. He may become a snake; but

then he is easily scotched, or fooled out of his fangs with a cunning charmer's tom-tom;—he may pass into the foul feathers of an indiscriminately gluttonous adjutant-bird; but some day a bone will choke him;—his soul may creep under the mangy skin of a Pariah dog, and be kicked out of compounds by scullions; he may be condemned to the abominable offices of a crow at the burning ghauts, a jackal by the wells of Thuggee, or a rat in sewers; but he can never again be such a nuisance, such a sore offence to the minds and hearts of men, as when he was Asirvadam the Brahmin.

Fortunate indeed will he be, if the low, deep curses of all whom he has oppressed, betrayed, insulted, shall not have availed against him in his last hour. "Mayest thou never have a friend to lay thee on the ground when thou diest!"—no imprecation so fierce, so fell, as that; even Asirvadam the Brahmin abates his cruel greed, when some poor Soodra client, bled of his last anna, thinks of his sick wife, and the darling cow that must be sold at last, and grows desperate. "Mayest thou have no wife to sprinkle the spot with cow-dung where thy corpse shall lie, and to spread the unspotted cloth; nor any cow, her horns tipped with rings of brass, and her neck garlanded with flowers, to lead thee, holding by her tail, through pleasant paths to the land of Yama! May no Purohita come to strew thy bier with the holy herb, nor any next of kin be near to whisper the last mantra!"

Horrid Soodra! But though thy words make the soul of Asirvadam shiver, they are but the voice of a dog, after all, and nothing can come of them. Asirvadam the Brahmin has raised up lusty boys to himself, as every good Brahmin should; and they shall bind together his thumbs and his great toes, and lay him on the ground, when his hour is come,—lest the bed or the mat cling to his ghost, withersoever it go, and torment it eternally. His wife shall spread beneath him a cloth that the hands of Koolen Brahmins have woven. Lilies of Nilufar shall

garland the neck of the happy cow that is to lead him safely beyond the fiery river, and the rings shall be golden where-with her horns are tipped. A mighty concourse of clients shall follow him to the place of burning,—to “Rudra, the place of tears,”—whither ten Kooleen Brahmins will bear him; and as often as they set down the bier to feed the dead with a morsel of moistened rice, other Brahmins shall sing his wisdom and his virtues, and celebrate his meritorious deeds. When his funeral pyre is lighted, his sons, and his sons’ sons, and his daughters’ husbands, and his nephews, shall beat their breasts and rend the air with lamentations; and when his body has been consumed, his ashes shall be given to the Ganges,—all save a certain portion, which shall be made into a paste with milk, and moulded into an image; and the image shall be set up in his house, that the Brahmins and all his people may offer sacrifices before it.

On the tenth day, his wife shall adorn her forehead with a scarlet emblem, blacken the edges of her eyelids with soorma, deck her hair with scarlet flowers, her neck and bosom with sandal, stain her face, arms, and legs with turmeric, and array her in her choicest robes and all her jewels, and follow her eldest son, in full procession, to the tank hard by the “land of Rudra.” And the heir shall take three little stones, that were planted there in a row by the Purohitas, and, going down into the water as deep as his neck, shall turn his face to the sun and say, “Until this day these three stones have stood for my father, that is dead. Henceforth let him cease to be a carcass; let him enter into the joys of Swarga, the paradise of Devendra, to be blessed with all conceivable blessings so long as the waters of Ganges shall continue to flow;—so shall the dead Brahmin not prowl through the universe, afflicting with evil tricks stars, men, and trees; so shall he be laid.”

But who shall lay the quick Asirvadam, than whom there walks not a sprite more cunning, more malign?

Ever since the Solitaries, odious by their black arts to princes and people, were slain or driven out,—fifteen centuries and more,—Asirvadam the Brahmin has been selfish, wicked, and mischievously busy,—corrupting the hearts, bewildering the minds, betraying the hopes, exhausting the moral and physical strength of the Hindoos. He has taught them the foolish tumult of the Hooly, the fanatical ferocities of the Yajna, the unwhisperable obscenities of the Saktis, the fierce and ruinous extravagances of the Doorga Pooja, the mutilating monstrosities of the Churruck, the enslaving sorceries of the Atharvana Veda, the raving mad revivals of Juggernath, the pious debaucheries of Nanjanagud, the strange and sorrowful delusions of Suttee, the impudent ravishments of Vengata Ramana,—all the fancies and frenzies, all the delusions and passions and moral epilepsies that go to make up a Meerut or a Cawnpore.

Of the outrageous insolence of the Seven Penitents he omits nothing but their sincerity; of the enlightened simplicity of the anchoret philosophers he retains nothing but their selfishness; of the intellectual influence of the Gooroo pontiffs he covets nothing but their dissimulation. He has taught his gaping disciples that a skilfully compounded and plausibly administered lie is a goodly thing,—except it be told against the cause of a Brahmin, in which case no oxyhydrogeneralities of earthly combustion can afford an idea of the particular hotness of the hell devised for such a liar. He has solemnly impressed them with the mysterious sacredness of the Ganges, and its manifold virtues of a supernatural order; to swear falsely by its waters, he says, is a crime for which Indra the Dreadful has provided an eternity of excruciations,—except the false oath be taken in the interest of a Brahmin, in which case the perjurer may confidently expect a posthumous good time. For the rich to extort money from the poor, says Asirvadam, is an affront to the Gooroo and the Gods, which must be pun-

ished by forfeiture to the Brahmins of the whole sum extorted, the poor client to pay an additional charge for the trouble his protectors have incurred; the same when fines are recovered; and in cases of enforced payment of debts, three-fourths of the sum collected are swallowed up in costs. Being a Brahmin, to pay a bribe is a foolish act; to receive one—a necessary circumstance, perhaps. Not being a Brahmin, to offer or accept a bribe is a disgraceful transaction, requiring that both parties shall be made an example of;—the bribe is forfeited to the Brahmins, and the poorer party fined; if the fine exceed his means, the richer party to pay the excess.

As the Brahminical interpretation of an oath is not always clear to prisoners and witnesses of other castes, it is usual to illustrate the definition to the obtuser or more scrupulous unfortunates by the old-fashioned machinery of ordeals: such as compelling the conscientious or obdurate inquirer to promenade without sandals over burning coals; or to grasp, and hold for a time, a bar of red-hot iron; or to plunge the hands into boiling oil, and keep them there for several minutes. The party receiving these illustrations and practical definitions of the Brahminical nature of an oath, without discomfort or scar, is frankly adjudged innocent and reasonable.

Another pretty trick of ordeal, which borrows its more striking features from the department of natural history, is that in which the prisoner or witness is required to grope about for a trinket or small coin in a basket or jar already occupied by a lively cobra. Should the proper not be bitten, our courtly friend, Asirvadam, is satisfied there has been some mistake here, and gallantly begs the gentleman's pardon. To force the subject to swallow water, cup by cup, until it burst from mouth and nose, is also a very neat ordeal, but requiring practice.

Formerly, Asirvadam the Brahmin "farmed" the offences of his district;—that is, he paid a certain sum to government for the right to try, and to punish,

all the high crimes and misdemeanors that should be committed in his "section" for a year. Of course, fines were his favorite penalties; and although most of the time, expenses for meddlers and perjurers being heavy, the office did not pay more than a fair living profit, there would now and then come a year when, rice being scarce and opium cheap, with the aid of a little extra exasperation, he cut it pretty fat. "Take it year in and year out," said Asirvadam the Brahmin, "a fellow couldn't complain."

Asirvadam the Brahmin is among the Sepoys. He sits by the well of Barrackpore, a comrade on either side, and talks, as only he can talk to whom no books are sealed. To one, a rigid statue of thrilled attention, he speaks of the time when Arab horsemen first made flashing forays down upon Mooltan; he tells of Mahmoud's mace, that clove the idol of Somnath, and of the gold and gems that burst from the treacherous wood, as water from the smitten rock in the wilderness; he tells of Timour, and Baber the Founder, and the long imperial procession of the Great Moguls,—of Humayoon, and Akbar, and Shah Jehan, and Aurengzebe,—of Hyder Ali and Tippoo Sultan,—of Moorish splendor and the Prophet's sway; and the swarthy Mussulman stiffens in lip-parted listening.

To the other, a fiery enthusiast, fretting for the acted moral of a tale he knows too well, he whispers of British blasphemy and insolence,—of Brahmins insulted, and gods derided,—of Vedas violated, and the sacred Sanscrit defiled by the tongues of Kaffirs,—of Pariahs taught and honored,—of high and low castes indiscriminately mingled, an obscene herd, in schools and regiments,—of glorious institutions, old as Mount Meru, boldly overthrown,—of suttee suppressed, and infanticide abated,—of widows re-married, and the dowries of the brides of Brahmins limited,—of high-caste students handling dead bodies, and Soodra beggars drinking from Brahminical wells,—of the triple cord broken in twain, and Brahmince bulls slain in the

streets, and cartridges greased with the fat of cows, and Christian converts indemnified, and property not confiscated for loss of caste,—and a frightful falling off in the benighting business generally; and the fierce Rajpoot grinds his white teeth, while Asirvadam the Brahmin plots, and plots, and plots.

Incline your ears, my brothers, and I will sing you softly, and low, a song to make Moor and Rajpoot bite, with their very hearts:—

“Bring Soma to the adorable Indra, the lord of all, the lord of wealth, the lord of heaven, the perpetual lord, the lord of men, the lord of earth, the lord of horses, the lord of cattle, the lord of water!

“Offer adoration to Indra, the overcomer, the destroyer, the munificent, the invincible, the all-endowing, the creator, the all-adorable, the sustainer, the unassailable, the ever-victorious!

“I proclaim the mighty exploits of that Indra who is ever victorious, the benefactor of man, the overthrower of man, the caster-down, the warrior, who is gratified by our libations, the granter of desires, the subduer of enemies, the refuge of the people!

“Unequaled in liberality, the showerer, the slayer of the malevolent, profound, mighty, of impenetrable sagacity, the dispenser of prosperity, the enfeebler, firm, vast, the performer of pious acts, Indra has given birth to the light of the morning!

“Indra, bestow upon us most excellent treasures, the reputation of ability, prosperity, increase of wealth, security of person, sweetness of speech, and auspiciousness of days!

“Offer worship quickly to Indra; recite hymns; let the outpoured drops exhilarate him; pay adoration to his superior strength!

“When, Indra, thou harnesses thy horses, there is no such charioteer as thou; none is equal to thee in strength; none, howsoever well horsed, has overtaken thee!

“He, who alone bestows wealth upon the man who offers him oblations, is the undisputed sovereign: Indra, ho!

“When will he trample with his foot upon the man who offers no oblations, as upon a coiled snake? When will Indra listen to our praises? Indra, ho!

“Indra grants formidable strength to him who worships him, having libations prepared: Indra, ho!”

The song that was chanted low by the well of Barrackpore to the maddened

Rajpoot, to the dreaming Moor, was fiercely shouted by the well of Cawnpore to a chorus of shrieking women, English wives and mothers, and spluttering of blood-choked babes, and clash of red knives, and drunken shouts of slayers, ruthless and obscene.

When Asirvadam the Brahmin conjured the wild demon of revolt to light the horrid torch and bare the greedy blade, he tore a chapter from the Book of Menu:—

“Let no man, engaged in combat, smite his foe with concealed weapons, nor with arrows mischievously barbed, nor with poisoned arrows, nor with darts blazing with fire.

“Nor let him strike his enemy alighted on the ground; nor an effeminate man, nor one who sues for life with closed palms, nor one whose hair is loose, nor one who sits down, nor one who says, ‘I am thy captive.’

“Nor one who sleeps, nor one who has lost his coat-of-mail, nor one who is naked, nor one who is dismayed, nor one who is a spectator, but no combatant, nor one who is fighting with another man.

“Calling to, mind the duty of honorable men, let him never slay one who has broken his weapon, nor one who is afflicted, nor one who has been grievously wounded, nor one who is terrified, nor one who turns his back.”

But Asirvadam the Brahmin, like the Thug of seven victims, has tasted the sugar of blood, sweeter upon his tongue than to the lips of an eager babe the pearl-tipped nipple of its mother. Henceforth he must slay, slay, slay, mutilate and ravish, burn and slay, in the name of the queen of horrors.—Karlee, ho!

Now what shall be done with our dangerous friend? Shall he be blown from the mouths of guns? or transported to the heart-breaking Andamans? or lashed to his own churruck-posts, and flayed with cats by stout drummers? or handcuffed with Pariahs in chain-gangs, to work on his knees in foul sewers? or choked to death with raw beef-steaks and the warm blood of cows? or swung by stout Irish wenches with bridle-ends? or smitten on the mouth with kid gloves by English ladies, his turban trampled under

foot by every Feringhee brat in Bengal?—Wanted, a poetical putter-down for Asirvadam the Brahmin.

"Devotion is not in the ragged garment, nor in the staff, nor in ashes, nor in the shaven head, nor in the sounding of horns.

"Numerous Mahomets there have been, and multitudes of Brahmas, Vishnus, and Sivas;

"Thousands of seers and prophets, and tens of thousands of saints and holy men:

"But the chief of lords is the one Lord, the true name of God!"

WHAT ARE WE GOING TO MAKE?

It would be easy to collect a library of lamentations over the mechanical tendency of our age. There are, in fact, a good many people who profess a profound contempt for matter, though they do nevertheless patronize the butcher and the baker to the manifest detriment of the sexton. Matter and material interests, they would have us believe, are beneath the dignity of the soul; and the degree to which these "earthly things" now absorb the attention of mankind, they think, argues degeneracy from the good old times of abstract philosophy and spiritual dogmatism. But what do we better know of the Infinite Spirit than that he is an infinite mechanic? Whence do we get worthier or sublimer conceptions of him than from the machinery with which he works? Are we ourselves less godlike building mills than sitting in pews?—less in the image of our Maker, endeavoring to subdue matter than endeavoring to ignore its existence? Without questioning that the moral nature within us is superior to the mechanical, we think it quite susceptible of proof that the moral condition of the world depends on the mechanical, and that it has advanced and will advance at equal pace with the progress of machinery. To prove this, or anything else, however, is by no means the purpose of this article, but only to take the general reader around a little among mechanical people and ideas, to see what lies ahead.

"Papa, what are you going to make?"

was doubtless the question of Tubal-Cain's little boy, when he saw his ingenious father hammering a red-hot iron, with a stone for a hammer, and another for an anvil. Little boys have often since asked the same question in blacksmiths' shops, and we now have shops in which the largest boys may well ask it. It might be answered in a general way, that the smiths or smelters, black and white, were and are going to make what our Maker left unmade in making the human race. The lower animals were all sent into the world in appropriate, finished, and well-fitting costume, provided with direct and effective means of subsistence and defence. The eagle had his imperial plumage, beak, and talons; the elephant his leathern roundabout and travelling trunk, with its convenient air-pump; and the beaver, at once a carpenter and a mason, had his mouth full of chisels and his tail a trowel. The *bipes implumis*, on the contrary, was hatched nude, without even the embryo of a pin-feather. There was nothing for him but the recondite capabilities of his two talented, but talonless hands, and a large brain almost without instinct. Nothing was ready-made, only the means of making. He was brought into the infinite world a finite deity, an infinitesimal creator,—the first being of that class, to our knowledge. His most urgent business as a creator was to make tools for himself, and especially for the purpose of supplying his own pitiful destitution of feathers. From the aprons of fig-leaves,

stitched hardly so so, to the last patent sewing-machine, he has made commendable progress. Without borrowing anything from other animals, he can now, if he chooses, rival in texture, tint, gloss, lightness, and expansiveness, the plumage of peacocks and birds-of-paradise; and it only remains that what can be done shall be done more extensively,—we do not mean for the individual, but for the masses. Man has created not only tools, but servants,—animals all but alive. We may soon say that he has created great bodies politic and bodies corporate, with heads, hands, feet, claws, tails, lungs, digestive organs, and perhaps other viscera. What is remarkable, having at first failed to furnish them with nerves, he has lately supplied that deficiency,—a token that he will supply some others.

Let not the reader shrink from our page as irreverent. It shall not preach the possibility of inventing perpetual motion or a machine with a soul in it, as was lately and vainly attempted in our good city of Lynn,—where, however, it may be said, they do succeed in making soles to what resemble machines. It is not for us to be either so enthusiastic, impious, or uncharitable as to prophesy that human ingenuity will ever endow its creations with anything more than the rudest semblance of that self-directing vitality which characterizes the most servile of God-created machinery. The human mechanic must be content, if he can approach as near to the creation of life as the painter and sculptor have done. The soul of the man-made horse-power is primarily the horse, and secondarily the small boy who stands by to “cut him up” occasionally. Maelzel created excellent chess-players, with the exception of intelligence, which he was obliged to borrow of the original Creator and conceal in a closet under the table.

But let us not undervalue ourselves—which would, in fact, be to undervalue our Creator—for such shortcomings. Though into our iron horse’s skull or cab we have to put one or two living men to supply its deficiency of under-

standing, it is nevertheless a recognizable animal, of a very grand and somewhat novel type. Its respiratory, digestive, and muscular systems are respectable; and in the nature and articulation of its organs of motion it is clearly original. The wheel, typical of eternity, is nowhere to be found among living organisms, unless we take the brilliant vision of Ezekiel in a literal sense. The idea of attributing life or spirit to wheels, organs by their nature detached or discontinuous from the living creatures of which they were parts, was worthy of a prophet or poet; but to no such prophetic vision were the first wheelwrights indebted for their conception of so great an improvement upon animal locomotion. For if they had not made chariots before Noah’s flood, they certainly had done it before Pharaoh’s smaller affair in the Red Sea. On that occasion, the chariot-wheels of the Egyptians were taken off; but this does not seem to have produced effects so decisive as would result from a similar disorganization in Broadway or Washington Street; for the charioteers still “drove them heavily.” Hence we may infer that the wheels were of rude workmanship, making the chariots little less liable to the infirmity of friction than those Western vehicles called mud-boats, used to navigate semi-fluid regions which pass on the map for *terra firma*.

Yet, notwithstanding the rudeness of the primitive chariot, made of two or three sticks and two rings cut from a hollow tree, it was the germ of human inventions, and embosomed the world’s destiny. It was the most original as well as the most godlike of human thoughts. The ship may have been copied from the nautilus, or from the embarked squirrel trimming his tail to the breeze; or it may have been blundered upon by the savage mounted on a drift-log, accidentally making a sail of his sheepskin cloak while extending his arms to keep his balance. But the cart cannot be regarded either as a plagiarism from Nature, or the fruit of accident. The inventor must have unlocked Na-

ture's private closet with the key of mathematical principle, and carried off the wheel and axle, the only mechanical power she had not used in her physical creation, as patent to our senses. Of course, she meant it should be stolen. She had, it is true, made a show of punishing her little Prometheus for running off with her match-box and setting things on fire, but she must have felt proud of the theft. In well-regulated families children are not allowed to play with fire, though the passion to do it is looked on as a favorable mental indication. When the good dame saw that her infant *chef-d'œuvre* had got hold of her reserved mechanical element, the wheel, she foresaw his use of the stolen fire would be something more than child's play. The cart, whether two-wheeled, or, as our Hibernian friends will have it, one-wheeled, was an infinite success, an invention of unlimited capabilities. Yet the inventor obtained no record. Neither his name nor his model is to be found in any patent-office.

The tool-making animal, having obtained this marvellous means of multiplying, or rather treasuring and applying, mechanical force, went on at least some thousands of years before waking up to its grand significance. Among the nations that first obtained excellence in textile fabrics, very little use has ever been made of the wheel. The spinning-girl of Dacca, who twists, and for ages has twisted, a pound of cotton into a thread two hundred and fifty miles long, beating Manchester by ninety miles, has no wheel, unless you so call a ball of clay, of the size of a pea, stuck fast on one end of her spindle, by means of which she twists it between her thumb and finger. But this wonderful mechanical feat costs her many months of labor, to say nothing of previous training; while the Manchester factory-girl, aided by the multiplying power of the wheel, easily makes as much yarn, though not quite so fine, in a day. If it were an object to rival the tenuity of the finest India muslin, machinery could easily accomplish it. But that

spider-web fabric is carried so nearly to transparency, that the Emperor Aurengzebe is said to have reproved his daughter for the indelicacy of her costume while she wore seven thicknesses of it. She might have worn twelve hundred yards without burdening herself with more than a pound weight; what she did wear did not, probably, weigh two ounces. The Chinese and Japanese have spinning-wheels hardly equal to those brought over by our pilgrim fathers in the Mayflower. But they have also, what Western civilization has not, praying-wheels. In Japan the praying-wheel is turned by hand; but in China, according to Huc, it is sometimes carried by water-power, and rises to the dignity of a mill. The Japanese, however, have mills for hulling rice, turned by very respectable water-wheels. The Egyptians and Greeks had water-wheels, and in fact understood all the mechanical powers. Archimedes, all the world knows, assailed the Romans by mechanical combinations which showered rocks on the besiegers of Syracuse, and boasted he could make a projectile of the world itself, if he could only find a standing-place outside of it.

The present civilization of Europe very properly began with the clock, a machine which a monk, afterwards Pope Sylvester II., was supposed to have borrowed from Satan, though he was probably indebted for it to the Saracens. For nearly nine hundred years after his day, the best ingenuity of Italian, German, Swiss, French, and English mechanics was devoted to perfecting this noble creation, and it became at last a part of the civilized man, a sort of additional or supplementary sense. The savage may well be excused for mistaking the watch for a living creature. It could not serve us better, if it were. True, it does not perform its function by its own force, but by a stock of extraneous force which is from time to time put into a little store-house called a spring. Neither does the living creature perform its functions by any other force than that which is developed

by the chemical action within it, or the *quasi* combustion of its food. Its will does but direct the application of its mechanical power. It creates none. You may weigh the animal and all the food it is to consume, and thence calculate the utmost ounce of work, of a given kind, which it can thereafter perform. It may do less, but cannot do more. Having consumed all of its food and part of itself, it dies. Its chemical organs have oxydated or burned up all the combustibles submitted to them, thus developing a definite amount of heat, a part of which, at the dictation of the will, by the mechanism of nerves and muscles, has been converted into mechanical motion. When the chemical function ceases, for the want of materials to act upon, the development of heat ceases. There is no more either to be converted into motion or to maintain the temperature of the body; and self-consumption having already taken the place of self-repair, there is no article left but the *articulus mortis*.

But of all the force or motion produced by, or rather passing through, a living animal, or any other organism, none is ever, so far as we know, annihilated. The motion which has apparently ceased or been destroyed has in reality passed into heat, light, electricity, magnetism, or other effect,—itself, perhaps, nothing but motion,—to keep on, in one form or another, indefinitely. The fuel which we put into the stomach of the horse, of iron or of flesh, first by its oxydation raises heat, a part of which it is the function of the individual to convert into motion, to be expended on friction and resistance, or, in other words, to be reconverted into heat. What becomes of this heat, then? If the fuel were to be replaced or deoxydated, the heat that originally came from the oxydation would be precisely reabsorbed. But this heat of itself cannot overcome the stronger affinity which now chains the fuel to the oxygen. It must go forward, not backward, about its business, forever and ever. It may pass, but not cease. The sharp-eyed Faraday has been following

far away this Proteus, with a strong suspicion that it changes at last into gravity, in which shape it returns straight to the sun, carrying down with it, probably, those flinty showers of meteors which, striking fire in the atmosphere of the prime luminary, replenish its overflowing fountain of life. But we are not aware that he has yet discovered the anastomosis of this conversion, or quite established the fact. We are therefore not yet quite ready to resolve the universe of physical forces into the similitude of the mythical mill-stream, which, flowing round a little hill, came back and fed its own pond. Nevertheless, we believe the physicists have pretty generally agreed to assume as a law of Nature what they call the conservation of force, the principle we have been endeavoring to explain.

Under the lead of this law, theory, or assumption, discoveries have been made that deeply and practically interest the most abject mortal who anywhere swings a hoe or shoulders a hod, as well as the lords of the land. For example, it has been ascertained that heat is converted into motion, or motion into heat, according to a fixed or constant ratio or equivalent. To be more particular, the heat which will raise the temperature of a pound of water one degree of Fahrenheit's scale, when converted into mechanical motion, is equivalent to the force which a weight of seven hundred and seventy-two pounds would exert by falling one foot. This is a wonderfully small quantity of heat to balance so heavy a blow, but the careful experiments of Mr. Joule of Manchester, the discoverer, confirmed by Regnault, Thomson, Rankine, Clausius, Mayer, Rennie, and others, have, we believe, satisfied scientific men that it is not far from the correct measure. Were the same, or a far less amount of heat, concentrated on a minute chip of steel struck off by collision with a flint, it would be visible to the eye as a spark, and show us how motion is converted into light as well as heat.

It is not our vocation to dive into the infinities, either upward or downward, in

search, on the one hand, of the ultimate atoms of the rarest ether, by whose vibrations the luminous waves run through space at the rate of more than ten millions of miles a minute, or, on the other, of the nebulous systems, worlds in the gristle, so far off that the light just now arriving from them tells only how they looked two hundred thousand years ago. All we have to say is, that, if we do not now absolutely know, we do reasonably suspect, that heat and light are mere mechanical motions, alike in nature and interconvertible in fact. The luminiference seems to behave itself, not like infinitely small bullets projected from Sharpe's rifles of proportionately small bore, as was once supposed, but rather after the manner of the sound-waves, which we know travel through the air from the sonorous body to the ear. They have also a resemblance, not so close, to the waves which run in all directions along the surface of a pond of water from the point where a stone falls into it. These three classes of waves, differing so immensely in magnitude and velocity, all agree in this,—that it is the wave that travels, and not the fluid or medium. The rapidity of the luminous wave is about nine hundred million times that of the sound-wave; hence we may suppose that the ether in which it moves is about as many times rarer or lighter than air, and the retina of the eye which it impresses as many times more delicate and sensitive than the drum of the ear. It can hardly be unreasonable to suppose that a fluid so rare as this luminiferous ether will readily interflow the particles of all other matter, gaseous, liquid, or solid, and that in such abundance that its vibrations or agitations may be propagated through them. Yet even the rarest gases must considerably obstruct and modify the vibratory waves, while liquids and solids, according to their density and structural arrangement of atoms, must do it far more. The luminiferous ether, in which all systems are immersed, kept hereabout in an incessant quiver through its complete and perhaps three-fold gamut of vibrations by the sun, strikes the aerial

ocean of the earth about an average of five hundred million millions of blows per second, for each of the seven colors, or luminous notes, not to speak of the achromatic vibrations, whose effects are other than vision or visionary. The aerial ocean is such open-work, that these infinitesimal billows are not much, though somewhat, broken by it; but when they reach the terraqueous globe itself, they dash into foam which goes whirling and eddying down into solids and liquids, among their wild caverns of ultra-microscopic littleness, and this foam or whirlstorm of ethereal substance is heat, if we are not much mistaken. According to its intensity, it expands by its own mere motion all grosser material.

The quantity of this ethereal foam, yeast, whirlwind, hubbub, or whatever else you please to call it, which is got up or given up by the combustion of three pounds of good bituminous coal, according to Mr. Joule's experiments, is more than equivalent to a day's labor of a powerful horse. With our best stationary steam-engines, at present, we get a day's horse-power from not less than twenty-four pounds of coal. At this rate, the whole supply of mineral coal in the world, as it may be roughly estimated, is equivalent only to the labor of one thousand millions of horses for fifteen hundred years. With the average performance of our present engines, it would support that amount of horse-power for only one thousand years. But could we obtain the full mechanical duty of the fuel by our engines, it would be equal to the work of a thousand millions of horses for sixteen thousand years, or of about fifteen times as many men for the same time. This would materially postpone the exhaustion of the coal, at which one so naturally shudders,—to say nothing of the saving of having to dig but one eighth as much of the mineral to produce the same effect. Hence some of the interest that attaches to this discovery of Mr. Joule, which has given a new impulse to the labor of inventors in pushing the steam-engine towards perfection.

But if the whole available mechanical

power, laid in store in the coal mines, in addition to all the unimproved wind and water power, should seem to any one insufficient to work out this world's manifest destiny, the doctrine of the essential unity or conservation of force is not exhausted of consolation. All the coal of which we have spoken is but the result of the action of sun-light in past ages, decomposing carbonic acid in the vegetative process. The combustion of the carbon reproduces a force exactly equivalent to that of the sun-light which was absorbed or consumed in its vegetative separation. Supposing the whole estimated stock of coal in the world to be consumed at once, it would cover the entire globe with a stratum of carbonic acid about seventy-two feet deep. And if all the energy of sun-light which this globe receives or encounters in a year were to be devoted to its decomposition, according to Pouillet's estimate of the strength of sunshine,—and he probably knows, if any one does,—deducting all that would be wasted on rock or water, there would be enough to complete the task in a year or two. A marvellous growth of forest, that would be! But the coal is not to be burned up at once. When we get our steam-engines in motion to the amount of two or three thousand millions of horse-power, and are running off the coal at the rate of one tenth of one per cent. per annum, the simple and inevitable consequence will be that the wood will be growing enough faster to keep good the general stock of fuel. Doubtless the forests are now limited in their growth and stunted from their ante-Saurian stature, not so much for want of soil, moisture, or sunshine as for want of carbonic acid in the air, to be decomposed by the foliage, the great deposition of coal in the primitive periods having exhausted the supply. Our present havoc of wood only changes the locality of woodlots, and our present consumption of coal, rapid enough to exhaust the entire supply in about seventy-seven thousand years, is sure to increase the aggregate cordage of the forests. By the time we

have brought our locomotive steam-cultivators to such perfection as to plough up and pulverize the great central deserts, we may see trees flourish where it would have been useless to plant the seed before we had converted so much of the earth's entrails into smoke.

There was a time, before we had harnessed the powers of Nature to found, forge, spin, weave, print, and drudge for us generally, that in every civilized country the strong-headed men used their strong-handed brethren as machines. Only he could be very knowing who owned many scribes, or he very rich who owned many hewers of wood and drawers of water. With our prodigious development of mechanical inventions, iron and coal, our mighty steam-driven machinery for making machines, the time for chattelizing men, or depending mainly on animal power of any sort for the production of wealth, has passed by. Abrogate the golden rule, if you will, and establish the creed of caste,—let the strongest of human races have full license to enslave the weakest, and let it have the pick of soil and staples,—still, if you do not abolish the ground rules of arithmetic, and the fact that a pound of carbon costs less than a pound of corn, and must cost less for at least a thousand years to come, chattelism of man will cease in another generation, and the next century will not dawn on a human slave. At present, a pound of carbon does not cost so much as a pound of corn in any part of the United States, and in no place visited by steam-transportation does it cost one fifth as much. We are already able to get as much work out of a pound of carbon as can be got from a pound of corn fed to the faithfulest slave in the world. Mr. Joule has shown us that there is really in a pound of carbon more than twice as much work as there is in a pound of corn. The human corn-consuming machine comes nearer getting the whole mechanical duty or equivalent out of his fuel than our present steam-engine does, but the former is all he ever will be, while the latter is an infant and growing.

We shall doubtless soon see engines that will get the work of two slaves out of the coal that just balances one slave's food in the scales. Our iron-boned, coal-eating slave, with the advantage of that peculiar and almost infinitely applicable mechanical element, the wheel, may be made to go anywhere and do any sort of work, and, as we have seen, he will do it for one tenth of the cost of any brute or human slave.

But will not our artificial slave be more liable to insurrection? Everybody admits that he already accomplishes incalculable drudgery in the huge mill, on the ocean, and on the iron highway. But almost everybody looks upon him as a sleeping volcano, which must sooner or later flare up into irresistible wrath and do frightful mischief. Underwriters shake their prudent heads at him. Coroners' inquests, sitting solemnly over his frequent desolations, find only that some of his ways are past finding out. Can such a creature be domesticated so as to serve profitably and comfortably on by-roads as well as high-roads, on farms, in gardens, in kitchens, in mines, in private workshops, in all sorts of places where steady, uncomplaining toil is wanted? Can we ever trust him as we trust ourselves, or our humble friends, the horse and the ox? The law of the conservation of force, now so nearly developed, will perhaps throw some light on this inquiry.

Boiler explosions have a sort of family resemblance to the freaks of lightning or the thunderbolt. Indeed, so striking is the similarity, that people have been prone to think, that, previously to an explosion, the steam in the boiler must have become in some inexplicable way charged with electricity like a thunder-cloud, and that the discharge must have occasioned the catastrophe. It is needless to say to those who understand a Leyden jar, that nothing of the sort takes place. The friction of the watery globules, carried along by the steam in blowing off, is found to disturb the electrical equilibrium, as any other friction does; but the circumstances in the case of a boiler are always

so favorable to its restoration, that an electrical thunderbolt cannot possibly be raised there that would damage a gnat. Yet a boiler explosion may, after all, depend on the same immediate cause as the mechanical effect which is frequently noticed after an electrical discharge in a thunder-storm. Let us hypothetically analyze what takes place in a thunder-storm. For the sake of illustration, and nothing more, we will suppose the existence, throughout all otherwise void space, of three interflowing ethers, the atoms of each of which are, in regard to each other, repellant, negative, or the reverse of ponderable, and that these ethers differ in a series by vast intervals as to size and distance of atoms, that each neither repels nor attracts the other, that only the rarest is everywhere, and that the denser ones, while self-repellant, have affinities, more or less, which draw them from the interplanetary spaces towards the ponderable masses. Let the rarest of these ethers be that whose vibrations cause the phenomena of light,—the next denser that which, either by vibration or translatory motion, causes the electrical phenomena,—and the most dense of the three that which by its motions, of whatever sort, causes the phenomena of heat. The solar impulse propagated through the luminiferous ether towards any mass encounters in its neighborhood the electrical and calorific ethers, and sets them into motions which may be communicated from one to the other, but which are communicated to ponderable matter, or result in mechanical action, only or chiefly by the impulse of the denser or calorific ether. When the sun shines on land and water, as we have already said, there is a violent ethereal commotion in the interstices of the superficial matter, which we will now suppose to be that of the calorific ether; and by virtue of this motion, together with whatever affinities this ether may be supposed to have for ponderable matter, we may account for evaporation, and the production of those vast aerial currents by which the evaporated water is diffused. In the production of aerial currents, heat is

converted into force, and hence vapor is converted into watery globules mechanically suspended on clouds, which, by their friction, sweep the electrical ether into excessive condensation in the great Leyden-jar arrangement of the sky. Whatever it may be that gives relief to this condensation, the relief itself consists in motion, either translatory or vibratory, of the electrical ether or ethers. As this motion, if it be such, often takes place through gases, liquids, and solids, without any sensible mechanical effect, and at other times is contemporary with phenomena of intense heat, we may, till otherwise informed, suppose, that, whenever it produces a mechanical effect, it is by so impinging on the calorific ether as to produce the motion of heat, which is instantly thereafter converted into mechanical force. It is not so much the greatness of the amount of this mechanical force which gives it its peculiar destructiveness, as the inequality of its strain; not so much the quantity of matter projected, as the velocity of the blow. One may have his brains blown out by a bullet of air as well as one of lead, if the air only blows hard enough and to one point. Whatever its material, the edge of the thunder-axe is almost infinitely sharp, and its blow is as destructive as it is timeless. But it is always heat, not electrical discharge, which only sometimes causes heat, that strikes the blow.

Now in the case of a steam-boiler, when the water, having been reduced too low, is allowed suddenly to foam up on the overheated crown-sheet of the furnace, there must be just that sudden or instantaneous conversion of heat into force which may take place when the current of the electrical discharge passes through the gnarled fibres of an oak. The boiler and the oak are blown to shivers in equally quick time. The only difference seems to be, that in one case electricity stood immediately, in point of time, behind the heat, and in the other it stood away back beyond the crocodiles, playing its rôle more genially in the growth of the monster forests whose re-

mains we are now digging from the bowels of the earth as coal. In the normal action of a steam-boiler, the steam-generating surfaces being all under water, however unequally the fire may act in different localities, the water, by its rapid circulation, if not by its heat-absorbing power, diffuses the heat and constantly equalizes the strain resulting from its conversion into mechanical force. The increase of pressure takes place gradually and evenly, and may easily be kept far within safe limits. It is quite otherwise when the conductivity of the boiler-plate is not aided and controlled by the distributiveness of the water, as it is not whenever the plate is in contact with the fire on one side without being also in contact with the water on the other. Everybody knows that boilers explode under such circumstances, but everybody does not know why.

A cylinder of plate-iron will withstand a gradually applied, evenly distributed, and constant pressure, one thousandth part of which, acting at one spot, as a blow, would rend its way through, or establish a crack. This slight rent, giving partial relief to the sudden but comparatively small force that causes it, would be nothing very serious in itself,—no more so than a rent produced by the hydraulic press,—if the whole force, equal, perhaps, to that of a thousand wild horses imprisoned within, did not take instant advantage of it to enlarge the breach and blow the whole structure to fragments, or, in other words, if it did not permit nearly the whole of the accumulated heat in the boiler to be at once converted into mechanical motion. For example, a boiler whose ordinary working pressure is one hundred pounds to the square inch, which may give an aggregate on the whole surface, of five millions of pounds, would not give way, perhaps, if that pressure were gradually and evenly increased to thirty millions. But if the water is allowed to get so low that some part of the plate exposed to the fire is no longer covered with it, that part will directly become far hotter than the water or

the mass of the steam,—dry steam having no more power to carry away the excess of heat than so much air. After that, when the water rises again, the first wave or wallop that strikes the overheated plate absorbs the excess of heat, and its conversion into steam of higher pressure than that already existing is so sudden that it may be regarded as instantaneous. It is to be remembered that for every pound of water raised one degree, or heat to that amount absorbed in generating steam, a force of seven hundred and seventy-two pounds is created. In this case a new or additional force is created, which, acting in all directions from one point, first takes effect on the line which joins that point with the nearest opposite point in the wall of the boiler. If it is not like smiting with the edge of a ponderous battle-axe, it is at least as dangerous as a cannon-ball shot along that line. If the local heat so suddenly absorbed be but enough to raise ten pounds of water ten degrees, it is equivalent to the force acquired by seventy-seven thousand two hundred pounds falling through a foot, or of a cannon-ball of one hundred pounds flying at the rate of more than a mile per second. If by any miracle the boiler should stand this shock or series of shocks, the pressure becomes equalized, and the overheated plate having parted with its excess of heat, safety is restored. But if cohesion is anywhere overcome by the sudden blow, the wild horses stampede in all directions. The boiler, minus the water and boiler-head perhaps, goes through ceiling, roof, and brick walls, as if they were cobwebs, and, surrounded with fragments of men and things, is seen descending like a comet through the neighboring air.

To get rid of this liability to have a Thor-hammer or thunderbolt generated in the stomach of a steam-engine, at any moment when the vigilance of the engineer happens to be at fault, something is going to be done. No safety-valve or fusible plug is adequate. The boiler cannot be all safety-valve. The trouble is, the hammer is not more likely to strike

the first of its terrible series of blows on the valve than anywhere else. A safety-valve, in good order, is a sovereign precaution against the excess of an equally distributed strain, but it is not an adequate protection against a shock or unequal strain. The old-fashioned gauge-cocks, which are by no means to be dispensed with, reveal the state of the water in the boiler to the watchful engineer about as surely as the stethoscope reveals to the doctor the condition of his patient's lungs. A surer and more convenient indication is the tubular glass gauge, on the fountain principle, which in its best form is both trustworthy and durable. No well-informed proprietor suffers his boiler to be without one; but it is not a cure for carelessness. It is only a window for the vigilant eye to look through, not the eye itself. Steam-boilers will have to be constructed so that when the subsidence of the water fails to check itself by enlarging the supply, it shall, before the point of danger is reached, infallibly check the combustion, let off the steam, and blow a whistle or ring a bell, which the proprietor may, if he pleases, regard as the official death-knell of the careless engineer. Human vigilance must not be superseded, but fortified,—as in the case of the watchman watched by the tell-tale clock. The steam-creature must be so constituted as to refuse to work itself down to the zone where alone unequal strains are possible; it must cry out in horror and strike work. Mechanically the solution of the problem is easy, and the enhancement in cost of construction will be nothing, compared to the risk of loss from these explosions. With this guard against the deficiency of water, steam-power will become the safest, as it is the most manageable, of all forces that have hitherto been subsidized by the civilized man.

But there is one more improvement worth mentioning. We do great injustice to our steam-slaves by the slovenly and unphilosophical way in which we feed them. We take no hints from animal economy or the laws of dietetics.

Our creature has no regular meals, especially if he is one of the fast kind; but a grimy nurse stands by, and, opening his mouth every few minutes, crams in a few spoonfuls of the black pudding. The natural consequence is more or less indigestion and inequality of strength. We have not yet taken full advantage of the laws of combustion, or adapted our apparatus to the peculiarities of the best and cheapest fuel. Nature manages more wisely in her machinery. Combustion, the union of fuel with oxygen, ceases for want of air as well as for want of fuel. In the case of fuels compounded of carbon and hydrogen, if the air be withheld when the mass is in rapid combustion, the heat will cause a portion of the fuel to pass off by distillation, unconsumed, and this portion will be lost. But from the best anthracite, which is nearly pure carbon concentrated, if oxygen be entirely excluded, not much can distil away with any degree of heat. The combustion of this fuel, therefore, admits of very easy and economical regulation, by simply regulating the supply of air. When the air is admitted at all, it should be admitted above as well as below the fuel, so that the carbonic oxide that is generated in the mass may be burned, or converted into carbonic acid, over the top. Why, then, should not the iron horse, before leaving his stable, take a meal of anthracite sufficient to last him fifty or one hundred miles? Let him swallow a ton at once, if he need it. Before starting, let the temperature of the mass in the furnace be got up to the point where the combustion will go on with sufficient rapidity for the required speed by simply supplying air, which should also be fed as hot as possible. This done, the engineer throughout the trip will have perfect control of his force by means of the steam-blast and air-openings. There will be no smoke nuisance, the combustion being complete so far as it takes place at all. There will be no need of loading the furnace with fire-brick to equalize the heat,—the mass of incandescent fuel serving that purpose;

and no waste or inequality will occur from opening the door to throw in a cold collation.

What are we going to make? First, we are going to finish up, and carry out into all desirable species, our great idea of an iron slave, the illustrious Mañ Friday of our modern civilization. Whether we put water, air, or ether into his aorta, as the medium of converting heat into force, we shall at last have a safe subject, available for all sorts of drudgery, that will do the work of a man without eating more than half as much weight of coal as a man eats of bread and meat. Next, carrying into all departments of human industry, in its perfect development, this new creature, which has already, as a mere infant, made so stupendous a change in some of them, we shall make the human millions all masters, from being nearly all slaves. We shall make both idleness and poverty nearly impossible. Human labor, as a general thing, is a positive pleasure only when the hand and brain work in concert. Hence, the more you increase well-devised and efficient machinery, which requires and rewards intelligent oversight and skilful direction, the more you increase the love of labor. We have already manufacturing communities so well supplied with tasks for brains and hands, that everybody works, or would do so but for Circe and her seductive hollow-ware. We are beginning to push machinery into agriculture, where it will have still greater scope. With the means we now have, in the enormously increased production of iron, our almost omnipresent and omnipotent machine-shops, our railroads leading everywhere, another century, or perhaps half of it, will see every arable rood of the earth and every rood that can be made arable, ploughed, sowed, and the crops harvested by iron horses, iron oxen, or iron men, under the free and intelligent supervision of people who know how to feed, drive, doctor, and make the most of them.

One island, which would hardly be missed from the map of the world, so small that its rivers all fall into the sea

mere brooks, with not more than one-thirteenth as much coal as we have in the United States, and perhaps not one-hundredth as much iron ore, by the use of steam-driven machinery produces as much iron and perhaps weaves as much cloth yearly as all the rest of the world. If it does not the latter, it would do it, if it could find enough of the raw material and paying customers. But agriculture, which supplies the raw material, though it is the first and most universal form of human labor, lags behind the world's present manufacturing power. One cause of the late, and perhaps of the previous commercial revulsion, was this disproportion. The more rapid enlargement of manufacturing industry, multiplied in power by its machinery, caused the raw material to rise in price and the manufactured article to fall, till the operations could not be supported from the profits at the same time that contracts were fulfilled with capitalists. Manufactures must pause till agriculture overtakes. Steam-machinery applied to agriculture is the only thing that can correct this disproportion, and this is what we are going to make. The world is not to be much longer dependent for its cotton on the compulsory labor of the Dark Ages, nor for its flax and corn on blistered free hands or overworked cattle. The laborer, in either section of our country, will be transformed into an ingenious gentleman or lady, comfortably mounted on a migratory steam-cultivator to direct its gigantic energies,—or, at least, occasionally so occupied. Under this system, it must be plain enough, to all persons prophetically inclined, that the Northern valleys will greatly multiply their products, while the Southern cotton-fields will whiten with heavier crops than human chattelism ever produced, and the mountains of both latitudes, now hardly notched with civilization, will roll down the wool of sheep in clouds.

Finally, with important and fruitful mechanical ideas which the world did not have twenty years ago, with machinery which no one could have be-

lieved possible one hundred years ago, and which has, since that time, quintupled the power of every free laborer in Christendom, we are going to make man what his Creator designed him to be,—always and everywhere a sub-creator. By the press we are making the knowledge of the past the knowledge of the present, the knowledge of one the knowledge of all. By the telegraph the senses of sight and hearing are to be extended around the globe. If we do not make ships to navigate the air, for ourselves, our wives, and our little ones, it will not be because we cannot, but because, being lords of land and sea, with power to traverse either with all desirable speed, we are too wise to waste force either in beating the air for buoyancy, battling with gravity like birds, on the one hand, or in paddling huge balloons against the wind, on the other. The steam-driven wheel leaves us no occasion to envy even that ubiquitous denizen of the universe, the flying-fish. We have in it the most economical means of self-transportation, as well as of mechanical production. It only remains to make the most of it. This, to be sure, will not be achieved without infinite labor and innumerable failures. The mechanical genius of the race is like the polypus anxiously stretching its tentacles in every direction, and though frustrated thousands of times, it grasps something at last.

One of the most significant structures in the world, by the way, is the United States Patent Office at Washington. No other building in that novel city means a hundredth part as much, or shows so clearly what the world's most cunning thoughts and hands are chiefly engaged with. Not that the Patent Office contains so many miracles of mechanical success; rather the contrary. Take a just appraisal of its treasures, and you will regard it rather as the chief tomb in the Père la Chaise of human hopes. What multitudes of long-nursed and dearly-cherished inventions there repose in a common grave, useful only as warnings to future inventors! One great moral of the

survey is, that inventive talent is shamefully wasted among us, for want of proper scientific direction and suitable encouragement. The mind that comprehends general principles in all their relations, and sees what needs to be done and what is possible and profitable to be done, is of necessity not the one to arrange in detail the means of doing. The man of science and the mechanical inventor are distinct persons, speaking of either in his best estate; and the maximum success of machinery depends on their acting together with a better understanding than they have hitherto had. It were less difficult than invidious to point to living examples of the want of coöperation and co-appreciation between our knowing and our doing men; but, for the sake of illustrating our idea, we will run the risk of quoting a minute from the proceedings of one of our scientific societies, premising that we know nothing more of the parties than we learn from the minute itself,—to wit, that one is, or was, an ingenious mechanic, and the other a promoter of science.

"Dr. Patterson gave an account of an automaton speaking-machine which Mr. Franklin Peale and himself had recently inspected. The machine was made to resemble as nearly as possible, in every respect, the human vocal organs; and was susceptible of varied movements by means of keys. Dr. Patterson was much struck by the distinctness with which the figure could enunciate various letters and words. The difficult combination *three* was well pronounced,—the *th* less per-

fectly, but astonishingly well. It also enumerated diphthongs, and numerous difficult combinations of sounds. Sixteen keys were sufficient to produce all the sounds. In enunciating the simple sounds, the movements of the mouth could be seen. The parts were made of gum elastic. The figure was made to say, with a peculiar intonation, but surprising distinctness, 'Mr. Patterson, I am glad to see you.' It sang, 'God save Victoria,' and 'Hail Columbia,'—the words and air combined. Dr. Patterson had determined to visit the maker of the machine, Mr. Faber, in private, in order to obtain further interesting information; but, on the following day, Dr. P. was distressed to learn, that, in a fit of excitement, he had destroyed every particle of a figure which had taken him seventeen years to construct."

It is quite probable that the world lost very little by the destruction of this curious figure, whatever the nature or cause of the "excitement" that led to it. All we have to say is, that it does lose much, when the genius that can create such things is not set upon the right tasks, and encouraged to success by the "high consideration" of scientific men, who alone of all the world can appreciate the difficulties it has to contend with. It is by setting the right mechanical problems before the men who can make dumb matter talk, that we are to bring about the resurrection of the black Titan who has lain buried under the mountains for thousands of millenniums, and constitute him the efficient sub-gardener of the world's Paradise Regained.

SHIPWRECK.

WE who by shipwreck only find the shores
Of divine wisdom can but kneel at first,
Can but exult to feel beneath our feet,
That long stretched vainly down the yielding deeps,
The shock and sustenance of solid earth:
Inland afar we see what temples gleam
Through immemorial stems of sacred groves,
And we conjecture shining shapes therein;
Yet for a space 'tis good to wonder here
Among the shells and seaweed of the beach.

THE AUTOCRAT OF THE BREAKFAST-TABLE.

EVERY MAN HIS OWN BOSWELL.

[SPRING has come. You will find some verses to that effect at the end of these notes. If you are an impatient reader, skip to them at once. In reading aloud, omit, if you please, the sixth and seventh verses. These are parenthetical and digressive, and, unless your audience is of superior intelligence, will confuse them. Many people can ride on horseback who find it hard to get on and to get off without assistance. One has to dismount from an idea, and get into the saddle again, at every parenthesis.]

—The old gentleman who sits opposite, finding that spring had fairly come, mounted a white hat one day, and walked into the street. It seems to have been a premature or otherwise exceptionable exhibition, not unlike that commemorated by the late Mr. Bayley. When the old gentleman came home, he looked very red in the face, and complained that he had been "made sport of." By sympathizing questions, I learned from him that a boy had called him "old daddy," and asked him when he had his hat white-washed.

This incident led me to make some observations at table the next morning, which I here repeat for the benefit of the readers of this record.

—The hat is the vulnerable point of the artificial integument. I learned this in early boyhood. I was once equipped in a hat of Leghorn straw, having a brim of much wider dimensions than were usual at that time, and sent to school in that portion of my native town which lies nearest to this metropolis. On my way I was met by a "Port-chuck," as we used to call the young gentlemen of that locality, and the following dialogue ensued.

The Port-chuck. Hullo, You-sir, did you know there was gōn-to be a race to-morra?

Myself. No. Who's gōn-to run, 'n' wher's't gōn-to be?

The Port-chuck. Squire Mico and Doctor Williams, round the brim o' your hat.

These two much-respected gentlemen being the oldest inhabitants at that time, and the alleged race-course being out of the question, the Port-chuck also winking and thrusting his tongue into his cheek, I perceived that I had been trifled with, and the effect has been to make me sensitive and observant respecting this article of dress ever since. Here is an axiom or two relating to it.

A hat which has been *popped*, or exploded by being sat down upon, is never itself again afterwards.

It is a favorite illusion of sanguine natures to believe the contrary.

Shabby gentility has nothing so characteristic as its hat. There is always an unnatural calmness about its nap, and an unwholesome gloss, suggestive of a wet brush.

The last effort of decayed fortune is expended in smoothing its dilapidated castor. The hat is the *ultimum moriens* of "respectability."

—The old gentleman took all these remarks and maxims very pleasantly, saying, however, that he had forgotten most of his French, except the word for potatoes,—*pummies de tare*.—*Ultimum moriens*, I told him, is old Italian, and signifies *last thing to die*. With this explanation he was well contented, and looked quite calm when I saw him afterwards in the entry with a black hat on his head and the white one in his hand.

—I think myself fortunate in having the Poet and the Professor for my intimates. We are so much together, that we no doubt think and talk a good deal alike; yet our points of view are in many

respects individual and peculiar. You know me well enough by this time. I have not talked with you so long for nothing, and therefore I don't think it necessary to draw my own portrait. But let me say a word or two about my friends.

The Professor considers himself, and I consider him, a very useful and worthy kind of drudge. I think he has a pride in his small technicalities. I know that he has a great idea of fidelity; and though I suspect he laughs a little inwardly at times at the grand airs "Science" puts on, as she stands marking time, but not getting on, while the trumpets are blowing and the big drums beating,—yet I am sure he has a liking for his specialty, and a respect for its cultivators.

But I'll tell you what the Professor said to the Poet the other day.—My boy, said he, I can work a great deal cheaper than you, because I keep all my goods in the lower story. You have to hoist yours into the upper chambers of the brain, and let them down again to your customers. I take mine in at the level of the ground, and send them off from my doorstep almost without lifting. I tell you, the higher a man has to carry the raw material of thought before he works it up, the more it costs him in blood, nerve, and muscle. Coleridge knew all this very well when he advised every literary man to have a profession.

—Sometimes I like to talk with one of them, and sometimes with the other. After a while I get tired of both. When a fit of intellectual disgust comes over me, I will tell you what I have found admirable as a diversion, in addition to boating and other amusements which I have spoken of,—that is, working at my carpenter's-bench. Some mechanical employment is the greatest possible relief, after the purely intellectual faculties begin to tire. When I was quarantined once at Marseilles, I got to work immediately at carving a wooden wonder of loose rings on a stick, and got so interested in it, that, when we were set loose, I

"regained my freedom with a sigh," because my toy was unfinished.

There are long seasons when I talk only with the Professor, and others when I give myself wholly up to the Poet. Now that my winter's work is over, and spring is with us, I feel naturally drawn to the Poet's company. I don't know anybody more alive to life than he is. The passion of poetry seizes on him every spring, he says,—yet oftentimes he complains, that, when he feels most, he can sing least.

Then a fit of despondency comes over him.—I feel ashamed, sometimes,—said he, the other day,—to think how far my worst songs fall below my best. It sometimes seems to me, as I know it does to others who have told me so, that they ought to be *all best*,—if not in actual execution, at least in plan and motive. I am grateful—he continued—for all such criticisms. A man is always pleased to have his most serious efforts praised, and the highest aspect of his nature get the most sunshine.

Yet I am sure, that, in the nature of things, many minds must change their key now and then, on penalty of getting out of tune or losing their voices. You know, I suppose,—he said,—what is meant by complementary colors? You know the effect, too, that the prolonged impression of any one color has on the retina. If you close your eyes after looking steadily at a *red* object, you see a *green* image.

It is so with many minds,—I will not say with all. After looking at one aspect of external nature, or of any form of beauty or truth, when they turn away, the *complementary* aspect of the same object stamps itself irresistibly and automatically upon the mind. Shall they give expression to this secondary mental state, or not?

When I contemplate—said my friend, the Poet—the infinite largeness of comprehension belonging to the Central Intelligence, how remote the creative conception is from all scholastic and ethical formulæ, I am led to think that a healthy mind ought to change its mood from time

to time, and come down from its noblest condition,—never, of course, to degrade itself by dwelling upon what is itself debasing, but to let its lower faculties have a chance to air and exercise themselves. After the first and second floor have been out in the bright street dressed in all their splendors, shall not our humble friends in the basement have their holiday, and the cotton velvet and the thin-skinned jewelry—simple adornments, but befitting the station of those who wear them—show themselves to the crowd, who think them beautiful, as they ought to, though the people up stairs know that they are cheap and perishable?

—I don't know that I may not bring the Poet here, some day or other, and let him speak for himself. Still I think I can tell you what he says quite as well as he could do it.—Oh,—he said to me, one day,—I am but a hand-organ man,—say rather, a hand-organ. Life turns the winch, and fancy or accident pulls out the stops. I come under your windows, some fine spring morning, and play you one of my *adagio* movements, and some of you say,—This is good,—play us so always. But, dear friends, if I did not change the stop sometimes, the machine would wear out in one part and rust in another. How easily this or that tune flows!—you say,—there must be no end of just such melodies in him.—I will open the poor machine for you one moment, and you shall look.—Ah! Every note marks where a spur of steel has been driven in. It is easy to grind out the song, but to plant these bristling points which make it was the painful task of time.

I don't like to say it,—he continued,—but poets commonly have no larger stock of tunes than hand-organs; and when you hear them piping up under your window, you know pretty well what to expect. The more stops, the better. Do let them all be pulled out in their turn!

So spoke my friend, the Poet, and read me one of his stateliest songs, and after it a gay *chanson*, and then a string of epigrams. All true,—he said,—all flowers of his soul; only one with the corolla

spread, and another with its disk half opened, and the third with the heart-leaves covered up and only a petal or two showing its tip through the calyx. The water-lily is the type of the poet's soul,—he told me.

—What do you think, Sir,—said the divinity-student,—opens the souls of poets most fully?

Why, there must be the internal force and the external stimulus. Neither is enough by itself. A rose will not flower in the dark, and a fern will not flower anywhere.

What do I think is the true sunshine that opens the poet's corolla?—I don't like to say. They spoil a good many, I am afraid; or at least they shine on a good many that never come to anything.

Who are *they*?—said the schoolmistress.

Women. Their love first inspires the poet, and their praise is his best reward.

The schoolmistress reddened a little, but looked pleased.—Did I really think so?—I do think so; I never feel safe until I have pleased them; I don't think they are the first to see one's defects, but they are the first to catch the color and fragrance of a true poem. Fit the same intellect to a man and it is a bow-string,—to a woman and it is a harp-string. She is vibratile and resonant all over, so she stirs with slighter musical tremblings of the air about her.—Ah, me!—said my friend, the Poet, to me, the other day,—what color would it not have given to my thoughts, and what thrice-washed whiteness to my words, had I been fed on women's praises! I should have grown like Marvell's fawn,—

“Lilies without; roses within!”

But then,—he added,—we all think, *if* so and so, we should have been this or that, as you were saying, the other day, in those rhymes of yours.

—I don't think there are many poets in the sense of creators; but of those sensitive natures which reflect themselves naturally in soft and melodious words, pleading for sympathy with their joys

and sorrows, every literature is full. Nature carves with her own hands the brain which holds the creative imagination, but she casts the over-sensitive creatures in scores from the same mould.

There are two kinds of poets, just as there are two kinds of blondes. [Movement of curiosity among our ladies at table.—Please to tell us about those blondes, said the schoolmistress.] Why, there are blondes who are such simply by deficiency of coloring matter,—*negative* or *washed* blondes, arrested by Nature on the way to become albinesses. There are others that are shot through with golden light, with tawny or fulvous tinges in various degree,—*positive* or *stained* blondes, dipped in yellow sunbeams, and as unlike in their mode of being to the others as an orange is unlike a snowball. The albino-style carries with it a wide pupil and a sensitive retina. The other, or the leonine blonde, has an opaline fire in her clear eye, which the brunette can hardly match with her quick, glittering glances.

Just so we have the great sun-kindled, constructive imaginations, and a far more numerous class of poets who have a certain kind of moonlight genius given them to compensate for their imperfection of nature. Their want of mental coloring-matter makes them sensitive to those impressions which stronger minds neglect or never feel at all. Many of them die young, and all of them are tinged with melancholy. There is no more beautiful illustration of the principle of compensation which marks the Divine benevolence than the fact that some of the holiest lives and some of the sweetest songs are the growth of the infirmity which unfits its subject for the rougher duties of life. When one reads the life of Cowper, or of Keats, or of Lucretia and Margaret Davidson,—of so many gentle, sweet natures, born to weakness, and mostly dying before their time,—one cannot help thinking that the human race dies out singing, like the swan in the old story. The French poet, Gilbert, who died at the Hôtel Dieu, at the age of

twenty-nine,—(killed by a key in his throat, which he had swallowed when delirious in consequence of a fall,)—this poor fellow was a very good example of the poet by excess of sensibility. I found, the other day, that some of my literary friends had never heard of him, though I suppose few educated Frenchmen do not know the lines which he wrote, a week before his death, upon a mean bed in the great hospital of Paris.

“Au banquet de la vie, infortuné convive,
J'apparus un jour, et je meurs;
Je meurs, et sur ma tombe, où lentement
j'arrive,
Nul ne viendra verser des pleurs.”

At life's gay banquet placed, a poor unhappy guest,

One day I pass, then disappear;
I die, and on the tomb where I at length shall rest

No friend shall come to shed a tear.

You remember the same thing in other words somewhere in Kirke White's poems. It is the burden of the plaintive songs of all these sweet albino-poets. “I shall die and be forgotten, and the world will go on just as if I had never been;—and yet how I have loved! how I have longed! how I have aspired!” And so singing, their eyes grow brighter and brighter, and their features thinner and thinner, until at last the veil of flesh is threadbare, and, still singing, they drop it and pass onward.

—Our brains are seventy-year clocks. The Angel of Life winds them up once for all, then closes the case, and gives the key into the hand of the Angel of the Resurrection.

Tic-tac! tic-tac! go the wheels of thought; our will cannot stop them; they cannot stop themselves; sleep cannot still them; madness only makes them go faster; death alone can break into the case, and, seizing the ever-swinging pendulum, which we call the heart, silence at last the clicking of the terrible escapement we have carried so long beneath our wrinkled foreheads.

If we could only get at them, as we

lie on our pillows and count the dead beats of thought after thought and image after image jarring through the overtired organ! Will nobody block those wheels, uncouple that pinion, cut the string that holds those weights, blow up the infernal machine with gunpowder? What a passion comes over us sometimes for silence and rest!—that this dreadful mechanism, unwinding the endless tapestry of time, embroidered with spectral figures of life and death, could have but one brief holiday! Who can wonder that men swing themselves off from beams in hempen lassos?—that they jump off from parapets into the swift and gurgling waters beneath?—that they take counsel of the grim friend who has but to utter his one peremptory monosyllable and the restless machine is shivered as a vase that is dashed upon a marble floor? Under that building which we pass every day there are strong dungeons, where neither hook, nor bar, nor bed-cord, nor drinking-vessel from which a sharp fragment may be shattered, shall by any chance be seen. There is nothing for it, when the brain is on fire with the whirling of its wheels, but to spring against the stone wall and silence them with one crash. Ah, they remembered that,—the kind city fathers,—and the walls are nicely padded, so that one can take such exercise as he likes without damaging himself on the very plain and serviceable upholstery. If anybody would only contrive some kind of a lever that one could thrust in among the works of this horrid automaton and check them, or alter their rate of going, what would the world give for the discovery?

—From half a dime to a dime, according to the style of the place and the quality of the liquor,—said the young fellow whom they call John.

You speak trivially, but not unwisely, —I said. Unless the will maintain a certain control over these movements, which it cannot stop, but can to some extent regulate, men are very apt to try to get at the machine by some indirect system of leverage or other. They clap on

the breaks by means of opium; they change the maddening monotony of the rhythm by means of fermented liquors. It is because the brain is locked up and we cannot touch its movement directly, that we thrust these coarse tools in through any crevice by which they may reach the interior, and so alter its rate of going for a while, and at last spoil the machine.

Men who exercise chiefly those faculties of the mind which work independently of the will,—poets and artists, for instance, who follow their imagination in their creative moments, instead of keeping it in hand as your logicians and practical men do with their reasoning faculty,—such men are too apt to call in the mechanical appliances to help them govern their intellects.

—He means they get drunk,—said the young fellow already alluded to by name.

Do you think men of true genius are apt to indulge in the use of inebriating fluids?—said the divinity-student.

If you think you are strong enough to bear what I am going to say,—I replied,—I will talk to you about this. But mind, now, these are the things that some foolish people call *dangerous* subjects,—as if these vices which burrow into people's souls, as the Guinea-worm burrows into the naked feet of West-Indian slaves, would be more mischievous when seen than out of sight. Now the true way to deal with those obstinate animals, which are a dozen feet long, some of them, and no bigger than a horse-hair, is to get a piece of silk round their *heads*, and pull them out very cautiously. If you only break them off, they grow worse than ever, and sometimes kill the person that has the misfortune of harboring one of them. Whence it is plain that the first thing to do is to find out where the head lies.

Just so of all the vices, and particularly of this vice of intemperance. What is the head of it, and where does it lie? For you may depend upon it, there is not one of these vices that has not a head of

its own,—an intelligence,—a meaning,—a certain virtue, I was going to say,—but that might, perhaps, sound paradoxical. I have heard an immense number of moral physicians lay down the treatment of moral Guineá-worms, and the vast majority of them would always insist that the creature had no head at all, but was all body and tail. So I have found a very common result of their method to be that the string slipped, or that a piece only of the creature was broken off, and the worm soon grew again, as bad as ever. The truth is, if the Devil could only appear in church by attorney, and make the best statement that the facts would bear him out in doing on behalf of his special virtues, (what we commonly call vices,) the influence of good teachers would be much greater than it is. For the arguments by which the Devil prevails are precisely the ones that the Devil-queller most rarely answers. The way to argue down a vice is not to tell lies about it,—to say that it has no attractions, when everybody knows that it has,—but rather to let it make out its case just as it certainly will in the moment of temptation, and then meet it with the weapons furnished by the Divine armory. Ithuriel did not spit the toad on his spear, you remember, but touched him with it, and the blasted angel took the sad glories of his true shape. If he had shown fight then, the fair spirits would have known how to deal with him.

That all spasmodic cerebral action is an evil is not perfectly clear. Men get fairly intoxicated with music, with poetry, with religious excitement,—oftenest with love. Ninon de l'Enclos said she was so easily excited that her soup intoxicated her, and convalescents have been made tipsy by a beef-steak.

There are forms and stages of alcoholic exaltation, which, in themselves, and without regard to their consequences, might be considered as positive improvements of the persons affected. When the sluggish intellect is roused, the slow speech quickened, the cold nature warmed, the latent sympathy developed, the flagging

spirit kindled,—before the trains of thought become confused, or the will perverted, or the muscles relaxed,—just at the moment when the whole human zoöphyte flowers out like a full-blown rose, and is ripe for the subscription-paper or the contribution-box,—it would be hard to say that a man was, at that very time, worse, or less to be loved, than when driving a hard bargain with all his meaner wits about him. The difficulty is, that the alcoholic virtues don't wash; but until the water takes their colors out, the tints are very much like those of the true celestial stuff.

[Here I was interrupted by a question which I am very unwilling to report, but have confidence enough in those friends who examine these records to commit to their candor.

A person at table asked me whether I “went in for rum as a steady drink?”—His manner made the question highly offensive, but I restrained myself, and answered thus:—]

Rum I take to be the name which unwashed moralists apply alike to the product distilled from molasses and the noblest juices of the vineyard. Burgundy “in all its sunset glow” is rum. Champagne, “the foaming wine of Eastern France,” is rum. Hock, which our friend, the Poet, speaks of as

“The Rhine's breastmilk, gushing cold and bright,
Pale as the moon, and maddening as her light,”

is rum. Sir, I repudiate the loathsome vulgarism as an insult to the first miracle wrought by the Founder of our religion! I address myself to the company.—I believe in temperance, nay, almost in abstinence, as a rule for healthy people. I trust that I practise both. But let me tell you, there are companies of men of genius into which I sometimes go, where the atmosphere of intellect and sentiment is so much more stimulating than alcohol, that, if I thought fit to take wine, it would be to keep me sober.

Among the gentlemen that I have

known, few, if any, were ruined by drinking. My few drunken acquaintances were generally ruined before they became drunkards. The habit of drinking is often a vice, no doubt,—sometimes a misfortune,—as when an almost irresistible hereditary propensity exists to indulge in it,—but oftenest of all a *punishment*.

Empty heads,—heads without ideas in wholesome variety and sufficient number to furnish food for the mental clockwork,—ill-regulated heads, where the faculties are not under the control of the will,—these are the ones that hold the brains which their owners are so apt to tamper with, by introducing the appliances we have been talking about. Now, when a gentleman's brain is empty or ill-regulated, it is, to a great extent, his own fault; and so it is simple retribution, that, while he lies slothfully sleeping or aimlessly dreaming, the fatal habit settles on him like a vampire, and sucks his blood, fanning him all the while with its hot wings into deeper slumber or idler dreams! I am not such a hard-souled being as to apply this to the neglected poor, who have had no chance to fill their heads with wholesome ideas, and to be taught the lesson of self-government. I trust the tariff of Heaven has an *ad valorem* scale for them,—and all of us.

But to come back to poets and artists;—if they really are more prone to the abuse of stimulants,—and I fear that this is true,—the reason of it is only too clear. A man abandons himself to a fine frenzy, and the power which flows through him, as I once explained to you, makes him the medium of a great poem or a great picture. The creative action is not voluntary at all, but automatic; we can only put the mind into the proper attitude, and wait for the wind, that blows where it listeth, to breathe over it. Thus the true state of creative genius is allied to *reverie*, or dreaming. If mind and body were both healthy, and had food enough and fair play, I doubt whether any men would be more temperate than the imaginative classes. But body and mind often flag,

—perhaps they are ill-made to begin with, underfed with bread or ideas, overworked, or abused in some way. The automatic action, by which genius wrought its wonders, fails. There is only one thing which can rouse the machine; not will,—that cannot reach it; nothing but a ruinous agent, which hurries the wheels awhile and soon eats out the heart of the mechanism. The dreaming faculties are always the dangerous ones, because their mode of action can be imitated by artificial excitement; the reasoning ones are safe, because they imply continued voluntary effort.

I think you will find it true, that, before any vice can fasten on a man, body, mind, or moral nature must be debilitated. The mosses and fungi gather on sickly trees, not thriving ones; and the odious parasites which fasten on the human frame choose that which is already enfeebled. Mr. Walker, the hygeian humorist, declared that he had such a healthy skin it was impossible for any impurity to stick to it, and maintained that it was an absurdity to wash a face which was of necessity always clean. I don't know how much fancy there was in this; but there is no fancy in saying that the lassitude of tired-out operatives, and the languor of imaginative natures in their periods of collapse, and the vacuity of minds untrained to labor and discipline, fit the soul and body for the germination of the seeds of intemperance.

Whenever the wandering demon of Drunkenness finds a ship adrift,—no steady wind in its sails, no thoughtful pilot directing its course,—he steps on board, takes the helm, and steers straight for the maelstrom.

—I wonder if you know the *terrible smile*? [The young fellow whom they call John winked very hard, and made a jocular remark, the sense of which seemed to depend on some double meaning of the word *smile*. The company was curious to know what I meant.]

There are persons—I said—who no sooner come within sight of you than they

begin to smile, with an uncertain movement of the mouth, which conveys the idea that they are thinking about themselves, and thinking, too, that you are thinking they are thinking about themselves,—and so look at you with a wretched mixture of self-consciousness, awkwardness, and attempts to carry off both, which are betrayed by the cowardly behavior of the eye and the tell-tale weakness of the lips that characterize these unfortunate beings.

—Why do you call them unfortunate, Sir?—asked the divinity-student.

Because it is evident that the consciousness of some imbecility or other is at the bottom of this extraordinary expression. I don't think, however, that these persons are commonly fools. I have known a number, and all of them were intelligent. I think nothing conveys the idea of *underbreeding* more than this self-betraying smile. Yet I think this peculiar habit, as well as that of *meaningless blushing*, may be fallen into by very good people who meet often, or sit opposite each other at table. A true gentleman's face is infinitely removed from all such paltriness,—calm-eyed, firm-mouthed. I think Titian understood the look of a gentleman as well as anybody that ever lived. The portrait of a young man holding a glove in his hand, in the Gallery of the Louvre, if any of you have seen that collection, will remind you of what I mean.

—Do I think these people know the peculiar look they have?—I cannot say; I hope not; I am afraid they would never forgive me, if they did. The worst of it is, the trick is catching; when one meets one of these fellows, he feels a tendency to the same manifestation. The Professor tells me there is a muscular slip, a dependence of the *platysma myoides*, which is called the *risorius Santorini*.

—Say that once more,—exclaimed the young fellow mentioned above.

The Professor says there is a little fleshy slip called Santorini's laughing-muscle. I would have it cut out of my face, if I were born with one of those con-

stitutional grins upon it. Perhaps I am uncharitable in my judgment of those sour-looking people I told you of the other day, and of these smiling folks. It may be that they are born with these looks, as other people are with more generally recognized deformities. Both are bad enough, but I had rather meet three of the scowlers than one of the smileers.

—There is another unfortunate way of looking, which is peculiar to that amiable sex we do not like to find fault with. There are some very pretty, but, unhappily, very ill-bred women, who don't understand the law of the road with regard to handsome faces. Nature and custom would, no doubt, agree in conceding to all males the right of at least two distinct looks at every comely female countenance, without any infraction of the rules of courtesy or the sentiment of respect. The first look is necessary to define the person of the individual one meets so as to avoid it in passing. Any unusual attraction detected in a first glance is a sufficient apology for a second,—not a prolonged and impertinent stare, but an appreciating homage of the eyes, such as a stranger may inoffensively yield to a passing image. It is astonishing how morbidly sensitive some vulgar beauties are to the slightest demonstration of this kind. When a *lady* walks the streets, she leaves her virtuous-indignation countenance at home; she knows well enough that the street is a picture-gallery, where pretty faces framed in pretty bonnets are meant to be seen, and everybody has a right to see them.

—When we observe how the same features and style of person and character descend from generation to generation, we can believe that some inherited weakness may account for these peculiarities. Little snapping-turtles snap—so the great naturalist tells us—before they are out of the egg-shell. I am satisfied, that, much higher up in the scale of life, character is distinctly shown at the age of —2 or —3 months.

—My friend, the Professor, has been full of eggs lately. [This remark excited

a burst of hilarity, which I did not allow to interrupt the course of my observations.] He has been reading the great book where he found the fact about the little snapping-turtles mentioned above. Some of the things he has told me have suggested several odd analogies enough.

There are half a dozen men, or so, who carry in their brains the *ovarian eggs* of the next generation's or century's civilization. These eggs are not ready to be laid in the form of books as yet; some of them are hardly ready to be put into the form of talk. But as rudimentary ideas or inchoate tendencies, there they are; and these are what must form the future. A man's general notions are not good for much, unless he has a crop of these intellectual ovarian eggs in his own brain, or knows them as they exist in the minds of others. One must be in the *habit* of talking with such persons to get at these rudimentary germs of thought; for their development is necessarily imperfect, and they are moulded on new patterns, which must be long and closely studied. But these are the men to talk with. No fresh truth ever gets into a book.

—A good many fresh lies get in, anyhow,—said one of the company.

I proceeded in spite of the interruption. —All uttered thought, my friend, the Professor, says, is of the nature of an excretion. Its materials have been taken in, and have acted upon the system, and been reacted on by it; it has circulated and done its office in one mind before it is given out for the benefit of others. It may be milk or venom to other minds; but, in either case, it is something which the producer has had the use of and can part with. A man instinctively tries to get rid of his thought in conversation or in print so soon as it is matured; but it is hard to get at it as it lies imbedded, a mere potentiality, the germ of a germ, in his intellect.

—Where are the brains that are fullest of these ovarian eggs of thought?—I decline mentioning individuals. The producers of thought, who are few, the “jobbers” of thought, who are many, and the

retailers of thought, who are numberless, are so mixed up in the popular apprehension, that it would be hopeless to try to separate them before opinion has had time to settle. Follow the course of opinion on the great subjects of human interest for a few generations or centuries, get its parallax, map out a small arc of its movement, see where it tends, and then see who is in advance of it or even with it; the world calls him hard names, probably; but if you would find the *aura* of the future, you must look into the folds of his cerebral convolutions.

[The divinity-student looked a little puzzled at this suggestion, as if he did not see exactly where he was to come out, if he computed his arc too nicely. I think it possible it might cut off a few corners of his present belief, as it has cut off martyr-burning and witch-hanging;—but time will show,—time will show, as the old gentleman opposite says.]

—Oh,—here is that copy of verses I told you about.

SPRING HAS COME.

Intra Muros.

The sunbeams, lost for half a year,
Slant through my pane their morning rays;
For dry Northwesters cold and clear,
The East blows in its thin blue haze.

And first the snowdrop's bells are seen,
Then close against the sheltering wall
The tulip's horn of dusky green,
The peony's dark unfolding ball.

The golden-chaliced crocus burns;
The long narcissus-blades appear;
The cone-beaked hyacinth returns,
And lights her blue-flamed chandelier.

The willow's whistling lashes, wrung
By the wild winds of gusty March,
With sallow leaflets lightly strung,
Are swaying by the tufted larch.

The elms have robbed their slender spray
With full-blown flower and embryo leaf;
Wide o'er the clasping arch of day
Soars like a cloud their hoary chief.

—[See the proud tulip's flaunting cup,
That flames in glory for an hour,—
Behold it withering,—then look up,—
How meek the forest-monarch's flower!—

When wake the violets, Winter dies;
 When sprout the elm-buds, Spring is near;
 When lilacs blossom, Summer cries,
 "Bud, little roses! Spring is here!"]

The windows blush with fresh bouquets,
 Out with the May-dew on their lips;
 The radish all its bloom displays,
 Pink as Aurora's finger-tips.

Nor less the flood of light that showers
 On beauty's changed corolla-shades,—
 The walks are gay as bridal bowers
 With rows of many-petalled maids.

The scarlet shell-fish click and clash
 In the blue barrow where they slide;
 The horseman, proud of streak and splash,
 Creeps homeward from his morning ride.

Here comes the dealer's awkward string,
 With neck in rope and tail in knot,—
 Rough colts, with careless country-swing,
 In lazy walk or slouching trot.

—Wild filly from the mountain-side,
 Doomed to the close and chafing thills,
 Lend me thy long, untiring stride
 To seek with thee thy western hills!

I hear the whispering voice of Spring,
 The thrush's trill, the cat-bird's cry,
 Like some poor bird with prisoned wing
 That sits and sings, but longs to fly.

Oh for one spot of living green,—
 One little spot where leaves can grow,—
 To love unblamed, to walk unseen,
 To dream above, to sleep below!

THE PRESIDENT'S PROPHECY OF PEACE.

THERE was joy in the national palace on the eve of May-day. The heart of the Chief of Thirty Millions was full of gladness. It was a high holiday at the capital of the nation. Jubilant processions crowded the streets. The boom of cannon told to the heavens that some great event, full of glory and of blessing, was just happily born into the history of the world. Strains of triumphant music at once expressed and stirred afresh the rapture which the new fruition of a deferred and doubting hope had kindled in myriad breasts. Rejoicing multitudes swarmed before the palace gate, and with congratulatory shouts compelled the presence of the Nation's Head. He stood before them proud and happy, and answered to the transports of their joy with a responsive sympathy. He rejoiced in the prospect of the peace and prosperity with which the occasion of this jubilee was to cheer and bless the land in all its borders. His chosen friends and counsellors surrounded him and echoed his prophecies of good. A kindred homage was next paid to the virtuous artificers of the new-wrought blessing, without whose

shaping hands it would have perished before the sight, or taken some dreadful form of mischief and of horror. Their words of cheer and exultation, too, swelled the surging tide of patriotic emotion till it overflowed again. Thus with the thunder of artillery, with the animating sound of drum and trumpet, with the more persuasive music of impassioned words, with shoutings and with revelry, these jocund compeers, from the highest to the lowest, mingled into one by the alchemy of a common joy, chased the hours of that memorable night and gave strange welcome to the morn of May.

What great happiness had just befallen, which should thus transport with joy the chief magistrate of a mighty nation, and send an answering pulse of rapture through all the veins of his capital? The armies of the Republic had surely just returned in triumph from some dubious battle joined with a barbarian invader who threatened to trample all her cherished rights, and the institutions which are their safeguard, under his iron heel. Perhaps the Angel of Mercy had at length set again the seals upon some

wide-wasting pestilence which had long been walking in darkness, with Terror going before, her and Death following after. Or was it the desolating course of Famine that had been stayed, as it swept, gaunt and hungry, over the land, and consumed its inhabitants from off its face? Peradventure, the prayers of holy men had prevailed, and the heavens which had been as brass were melted, and the earth which had been but ashes revived again, a living altar, crowned afresh with flowers, and prophetic of the thank-offerings of harvests. Or it might be that a great discoverer had added a new world to the domain of human happiness, by some invention which should lighten the toils and multiply the innocent satisfactions of mankind. Or had virtue and intelligence won some signal victory over barbarism and ignorance, and blessed with liberty and knowledge regions long abandoned to despotism and to darkness? These had been, indeed, occasions on which the chief ruler of a great people might fitly lead the anthem of a nation's thanksgiving.

But the joy which thus overflowed the hearts of President and people at the metropolis of our politics, and which has sprinkled with its cordial drops kindred spirits scattered far and wide over the land, welled up from no wholesome sources such as these. It was no deliverance from barbarous enemies, from pestilential disease, from meagre famine, that moved those raptures,—no joy at ignorance dissipated, barbarism dispelled, or tyranny put down. The “peace” and the “prosperity,” the prophecy of which was so sweet to the souls that took sweet counsel together on that night, were of a kind which only souls tuned to such unison and so subtly trained could fully comprehend and rightly estimate. This gentle peace, thus joyfully presaged, is to be won by the submission of an inchoate State to a form of government subjecting its inhabitants to institutions abhorrent to their souls and fatal to their prosperity, forced upon them at the point of the bowie-knife and the muzzle of the revol-

er by hordes of sordid barbarians from a hostile soil, their natural and necessary enemies. And the sweet harbinger of this blessed peace, the halcyon which broods over the stormy waves and tells of the calm at hand, is a bribe so cunningly devised that its contrivers firmly believe it will buy up the souls of these much-injured men, and reconcile them to the shame and infamy of trading away their rights and their honor as the boot of a dirty bargain in the land-market. And the “prosperity” which is to wait upon this happy “peace” glows with a like golden promise. It is a prosperity that shall bless Kansas into a Virginia or a North Carolina by virtue of the same means which has crowned the Slave-country with the wealth, the civilization, and the intelligence it has to brag of. It is such a prosperity as ever follows after the footsteps of Slavery,—a prosperity which is to blight the soil, degrade the minds, debauch the morals, impoverish the substance, and subvert the independence of a loathing population, if the joy of the President and his directors is to be made full. Such is the message of peace and good-will which thrilled with prophetic raptures the hearts which flowed together on that happy night, and such the blessed prospects which made the air of Washington vocal with the ecstasies of triumph.

The history of the world is full enough of illustrations of “the Art of making a Great Kingdom a Small One.” The art of degrading the imperial idea of a true republic from its just preëminence among the politics of mankind, of quenching the principles of eternal right which are the star-points of its divine crown, of trailing the shining whiteness of its robes in the dust, and making it an object of contempt rather than of adoration, has never been taught more emphatically than in the examples furnished by our own later annals. If Mr. Buchanan and his predecessor had set themselves to work, of good set purpose, to bring republican institutions into derision, and to prove that the American experiment was a dead failure,

they could not have proceeded more cunningly with their task. Their aim has been, as it has seemed, to give the lie to all the principles on which it has been assumed that these institutions rest, and to show that their real object is to subject the many to the government of the few, as the manner is of the nations round about. The thin veil of decent falsehood, under which the caution of earlier time had decorously hid this fact, has been torn aside by the rude intrepidity of assurance which long-continued success had fostered. The problem to be solved being to prove the chief axiom of our political science, that the people have a right to self-government and to the choice of their own institutions, to be a lie, it is worked out in the presence of an admiring world, after this fashion.

The old Ordinance which set limits to Slavery, and which, as it preceded the Constitution, should in honor and equity be taken as a condition precedent to it, and the later pledge of the South, that this contract should be sacredly kept on the other side of a certain parallel of latitude, having both been infamously violated for the sake of extending the domain of Slavery into regions solemnly dedicated to Liberty, the entire energies of the General Government and of the political party it represented were put forth to crystallize this double lie into the institutions of Kansas, and thus take it out of the category of theory and reduce it into that of fact. The reluctance of the inhabitants of the young Territory went for nothing, and provision was soon effectually made to overcome their resistance. Every form of terrorism, to which tyrants all alike instinctively resort to disarm resistance to their will, was launched at the property, the lives, and the happiness of the defenceless settlers. Hordes of barbarians, as we have said before, from every part of the Southern hive, but especially from the savage tribes of the bordering Missouri, poured themselves over the devoted land. Murder, arson, robbery, every outrage that could be offered to man or woman, waited on their

footsteps and stalked abroad with them in their forays against Freedom. When the first steps were to be taken towards the organization of a government, they precipitated themselves upon the Territory in fiercer numbers. They made themselves masters of the polling-places; they drove away by violence and threats the peaceable inhabitants and lawful voters, and by open force and unblushing fraud elected themselves or their creatures the lawgivers of the commonwealth about to be created. So outrageous were the crimes of these miscreants at this and subsequent periods, that even the very creatures of Pierce and Buchanan, chosen especially for their supposed fitness to assist in these villainies, turned away, one after another, sickened at the sight of them, and forfeited forever the favor of their masters by shrinking from an unqualified and unhesitating obedience.

The Constitution, contrived by the wretches thus nefariously clothed in the stolen sovereignty of the true inhabitants of Kansas, of course made Slavery an integral part of the institutions of the State. A code of laws was enacted absolutely without parallel in the history of the world for insolent trampling down of rights and for bloody cruelty of penalties,—laws so abominable as even to call down upon them, from his place in the Senate, the emphatic condemnation of so veteran a soldier in the service of Slavery as General Cass, now Mr. Buchanan's Secretary of State. These Territorial laws, thus infamously vile, thus made in defiance of the well-known will of the great majority of the people of Kansas, Mr. Pierce hastened to recognize as the authentic expression of the mind of the people there, and exerted all the moral and all the physical force of the government to maintain them in their authority. Since that magistrate was kicked aside as no longer available for the uses of Slavery, because of the very infamy he had won in its service, Mr. Buchanan, unlessoned by his fate, has adopted his views and carried out his policy.

We do not propose to follow this march of shameful events step by step, nor to speak of them in their exact chronological order, nor yet to specify to which of these magistrates the credit of any one of them belongs, inasmuch as the philosophy and method of the policy of the one and the other are absolutely identical. We have space only to glance at unquestionable facts, and to trace them to their necessary motives. To maintain the supremacy of this usurpation, and the Draconic laws made under it, Mr. Pierce poured in the squadrons of the Republic, to dragoon the rebellious freemen into obedience to what their souls abhorred, and what their reason told them was of no more just binding force upon them than an edict of the Emperor of China. When the actual inhabitants of the Territory had met in Convention and framed a Constitution excluding Slavery, and had adopted it, and the legislature authorized by it met, its members were dispersed by national soldiers, detailed to compel submission to the behests of the Slavemastery of the Government and of the nation. These troops have been kept on foot ever since, to intimidate the people, to assist as special police in the arrest and detention of political prisoners charged with crimes against the Usurpation, and to sustain the Federal governors and judges in carrying out their instructions for the subjugation of the majority by legal chicanery or by military violence.

Such was the genesis of the Lecompton Constitution, and such the nursing it had received at the hands of the paternal government at Washington. In due course of time it was presented to Congress as the charter under which the people of Kansas asked to receive the concession of their right of State government; and the scene of war was forthwith transferred from those distant fields to the chambers of national legislation, under the immediate eye of the chief of the state. This high officer soon dispelled any delusive doubts which, for the purpose of securing his election,

he had permitted to be ventilated during the late Presidential campaign, that he would at least see fair play in the struggle between Slavery and Freedom in Kansas. With indecent zeal and unscrupulous partisanship, he concentrated all the energies of his administration, and employed the whole force of the influence and the patronage of the nation, to obtain the indorsement by Congress of the Lecompton Constitution, and thus to compel the people of Kansas to pass under the yoke of their Slaveholding invaders. The true origin and character of that vile fabrication had been made plain to every eye that was willing to see, and the abhorrence in which it was held by nearly the entire population of the Territory put beyond question by more than one trial vote. Yet it was embraced as the test measure of the Administration to prove the unbroken fealty of the President to the Power which is mightier than he. Victory was reckoned upon in advance, as certain and easy. A servile, or rather a commanding majority in the Senate,—nearly half of that body being of the class that rules the rulers,—was ready to do whatever dirty and detestable work was demanded of them. A majority of more than thirty in the House, elected as supporters of the Administration, seemed to make success there also an inevitable necessity. But by reason of the vastly larger proportion of members from the Free States in that body, and their greater nearness to their constituents, these reasonable expectations were disappointed. Men who had taken service in the Democratic ranks, and had been faithful unto that day, refused to obey the word of command when it took this tone and was informed with this purpose. And for a season the plague was stayed, and sanguine hearts trusted that it was stayed forever.

We are willing to believe that the bulk of the Democrats in both Houses of Congress, who had the virtue to defy the threats and cajolements of their party-leaders, when this great public crime

was demanded at their hands, were sincere in the resistance they opposed to this subversion of all the principles in which they had been bred, and of which their party had always professed to be the special defence and guard. But the mantle of our charity is not wide enough to cover up the base treachery of those men who, acknowledging and demonstrating the right, devised or consented to the villany which was to crush or to cripple it. That the final shape which the Lecompton juggle took was an invention of the enemy, cunningly contrived to win by indirection what was too dangerous to be attempted by open violence, is a conclusion from which no candid mind can escape, after a full consideration of the case. The defection of so large a body of Northern Democrats from the side of the Slaveholding Directory was doubtless a significant and startling fact, suggestive of dangerous insubordination on the part of allies who had ever been found sure and steadfast in every jeopardy of Slavery. And it made a resort to guile necessary to carry the point which it was not prudent to press to the extremity of force. The Slaveholders are not fastidious as to the means by which they reach their end. Though they might have preferred to hew their way to their design with a high hand, and to put down all opposition by bought or bullied majorities, backed by the strong arm of the nation, yet they never refuse to compromise and palter when the path to success lies through stratagems or frauds. The skill in this instance, as in all others, by which they propose to win everything under the show of yielding somewhat, is worthy of Machiavel or of Lucifer, and is far above the capacity of the paltry Northern tool who is permitted to enjoy the infamy of the invention which he was employed to utter. The Slaveholders, like other despots, do their dirty work by proxy, and scorn the wretched instruments they use, and then fling from them in disgust.

The Lecompton cheat having been de-

feated in the House after it had received the indorsement of the Senate, the two coördinates were at issue, and it seemed for a brief time to have met with the fate it merited. But cunning and treachery combined to put it into the hands of a Committee of Conference to be manipulated afresh, and, if possible, moulded into a shape that might give Democratic recusants an excuse for treason to the North and submission to the Power that demanded it. And the invention was worthy of the diabolical sagacity and ingenuity which have always marked the politics of Slavery. The maxim, that every man has his price, was assumed to apply as well to men when collected into bodies corporate as to individuals; and the hook, with which the souls of the men of Kansas are to be fished for, was baited with a bribe the most tempting to their hungry needs. And to make their capture the more sure, an answering menace threatens them on the other hand, to force them to swallow the barbed treachery. They are offered no opportunity of expressing their assent or dissent as to the Constitution held over their heads. Their enemies know too well what its fate would be, if offered, pure and simple, to their acceptance or refusal. They are only to say whether or not they will accept five million acres of land that Congress munificently offers them for the construction of their railways. If they say, "Yes, thank you," to this simple question, the Chief Conjuror of the nation, the great Medicine Man of our tribe, the Head Magician of our Egypt, will only have to say, "Presto pass," and they will find themselves a Slave State in the glorious Union, under a solemn contract, struck by this same act, to endure Slavery for six years to come. If they say, "No, we won't," the door of the Union is shut in their faces, and they are told to wait without in all the bleakness of Territorial dependency, subject to the laws now afflicting them, with a satrap sent down from Washington to rule over them, and with Lecomptes and Catos to decree justice for them, until swindling

tools of the Administration shall be instructed to allow the presence of a sufficient population to entitle a State to a Representative.

If they consent to be erected into a Slave State by accepting the bribe, they will come into the Union by a puff of Presidential breath, though having only forty thousand inhabitants, with two Senators and a Representative, and all the advantages incident to Federal connection and patronage. Should they reject it, they will be left, it may be, to years of Territorial annoyance, and the annoyance of a Slave Territory, too, till Government officials shall discover their numbers to amount to near a hundred thousand, and possibly to much more, after the next census has newly apportioned the House. With Slavery, they have proffered to them broad lands to help cover their wide expanse with an iron reticulation of railways, developing their resources and multiplying their material prosperity, at the slight cost of their consistency and their honor. Without it, they may have to stand shivering at the gate of the Union, blasted by the "cold shade" of our American aristocracy, and far removed from the genial sunshine of national favor and bounty. Truly did Senator Wilson say that Congress approached Kansas at once with a bribe and a threat. Never was the devilish cunning of Slaveholding politics more strikingly illustrated than by the insidious vileness of this proposition. It had been bad enough, surely, had we been called upon to rejoice, as over a great triumph of the right, at the concession to Kansas of the sovereignty of settling her own institutions in her own way, had such been granted. Nothing could be more simple and natural, in a case of conflicting assertions and opposite beliefs as to the state of opinion there, than to remit the decision of the doubt to a fresh vote. Had any other interest than that in human beings been involved, such a disposition of the whole matter would have excited neither remark nor opposition. Nothing, perhaps, could exemplify the control Slavery has obtained

over the affairs of the country more strongly than the power it has had to hinder this simple remedy of an alleged wrong or error,—and this, by procuring the defection of sordid Northern Representatives from what they confessed to be the right, to this corrupt evasion,—an evasion designed to fit the people of Kansas for servitude by tempting them to sacrifice their self-respect and their honor. Let these miscreants make haste to seize the price of their perfidy before popular contempt and loathing shall sweep them forever out of sight into the abyss of infamy and forgetfulness which is appointed for the traitors to Liberty. If the question of the real will of the people of Kansas had been referred back to them for settlement, it would have been humiliating enough to have had to exult over it as a victory of Freedom. With what depth of shame, then, should we contemplate the compassing of their end by the Slavocrats, through the venal surrender of the rights so long and so manfully asserted, for so paltry a temptation!

But we do not apprehend a consummation so devoutly to be deprecated. We believe that the people of Kansas will spurn the bribe and refuse to eat the dirt that is set before them for a banquet. They will reject the insulting proffer with contempt, and fall back upon their reserved right of resistance, passive or active, as their circumstances may advise. They will not be so base as to desert the post of honor they have sought in the great fight for freedom and maintained so long and so well, disappointing and throwing into confusion the distant allies who have stood behind them in their most evil hours, for all the lands that President and Congress have to give. It is, indeed, a momentous crisis for them, and we have faith to believe that they will not be wanting to its demands. The eyes of the lovers of liberty everywhere are earnestly watching to see how they will come out from the ordeal by fire and by gold to which they are subjected. What Boston was in 1775, and Paris in 1789, is Kansas

now,—the field on which a great battle for the right is to be fought. Honor or infamy attends the issue of her action in the dilemma in which the crafty malice of her enemies has placed her. If she agree to take the dirty acres which are proffered to her as the price of her integrity, she consents to take the yoke of Slavery upon her neck and not even to attempt to shake herself free from it for six years to come. We know that shuffling Democrats, and even temporizing Republicans, represent that the people, after accepting the Lecompton Constitution, can forthwith summon a Convention and substitute another scheme of government in its stead. But this could be initiated only by a breach of the promise they would have just pledged, and could be carried through only by a revolution. Such a course would be a direct violation of the philosophy of Constitutional Government, which assumes as its fundamental axiom, that Constitutions can be altered only in the way and according to the conditions prescribed in themselves. Such a proceeding would be a *coup d'état*, not as flagitious certainly as that of Bonaparte, but to the full as revolutionary and illegal. And we may be sure that the arm of the United States Government would not be shortened so that it should not interpose and hinder such a defiance of itself and the Power whose instrument it is. With servile and corrupt judges at its beck and a majority in Congress within its purchase, the occasion and means of such an interference would be readily devised and supplied.

We believe that this line of policy would lead to an armed collision with the General Government. It is for the oppressed inhabitants of any country to say when their wrongs have reached the height which justifies the drawing of the civil sword. We have neither the right nor the disposition to advise the people of Kansas in a matter so emphatically their own. But there is another way of coming to this arbitrament,—inevitable, if they deviate a hair's-breadth from the

strict line of law,—should they deem there is no other remedy for their wrongs. The admirable Constitution just framed at Leavenworth, one well worthy of a free people that has been tried as with fire, will be adopted before these lines are before the public eye. Let them reject the Buchanan-English swindle, put their heel on the Lecompton fraud, set up the Leavenworth Constitution, and erect a State government under it in defiance of the Territorial Usurpation, and they will soon find themselves face to face with the tyranny at Washington. But is there not reason to hope that firmness and patience may yet win the battle for freedom without resorting to so serious an alternative? Is it indeed inevitable that Kansas must remain out of the pale of the Union, under the oppression of the Territorial laws, until the hirelings of the Government shall have determined that slaves enough have been poured in to decide the complexion of the new State, and shall authorize her to ask for admission? We are told that the joy at Washington and elsewhere over this "settlement" of the Kansas difficulty was because it was taken out of Congress, and "Agitation" at an end. But what is to hinder its being brought into Congress again?—and whose fault will it be, if Agitation do not survive and grow mightier unto the victory? If the present Congress can shut its doors against this intruder, its power dies with itself, and it greatly lies with the people of Kansas to make the next Congress one that shall rehabilitate them in their rights. Their conduct at this pregnant moment may settle the proximate destiny of the Republic, and decide whether the Slave Power is to rule us by its underlings for four years more, or whether its pride is to have a fall and its insolence a rebuke in 1860.

We all remember how often the Agitation of the Slavery question has been done to death in Congress, and how sure it was to appear again to startle its murderers from their propriety. Like "the blood-boltered Banquo," it would confront again the eyes that had hoped to

look upon it no more. It would come back

"With twenty mortal murders on its head,
To push them from their stools!"

And this dreaded spectre, though a beneficent angel with healing on his wings in truth, will push yet many traitorous or cowardly sycophants from the stools they disgrace, and substitute in their stead men who will quiet Agitation by Justice. Let the men of Kansas remember that a yet greater trust than that of providing for their own interests and rights is in their hands. The battle they are to fight in this quarrel is for the whole North, for the whole country, for the world. Let them address themselves unto it with calmness, with prudence, with watchfulness, with courage. They are beset on every side by crafty and desperate enemies. Greedy land-jobbers, in haste to be rich, will try to persuade them, that not to be innocent is to be wise. Timid timeservers will urge a submission which promises peace, though it be but a solitude that is called so. Rampant Pro-slavery will exalt its horn against Righteousness and try again the virtue of ruffianism to prevail against civilization. The barbarians will hang anew upon the borders, ready to complete the conquest they began so well. And above all, a majority of the men who are to pass upon the votes are the creatures of the Administration, who know, by the example of their predecessors, that the suspicion of honesty will be fatal to all their hopes of preferment,

and that they can purchase reward only by procuring *quocunque modo*, the acceptance of the proposition of Congress. But still the power is in the hands of the Free-State men, if they choose to put it forth. Let them organize such a scrutiny everywhere, that fraud and violence cannot escape detection and exposure. Let them observe most rigidly all the technical rules imposed upon the electors, that no vote may be lost. Let them come to the polls by thousands, and trample under their feet the shabby bribe for which they are asked to trade away their independence and their virtue. Let them be thus faithful, and never be weary of maintaining the Agitation, which is proved, by the very dread their enemies have of it, to be the way to their victory. Thus they will be sure to triumph, conquering their right to create their own government, and erect a free commonwealth on the ruins of the tyranny they have overthrown. And Kansas, at no distant period, will be welcomed by her Free Sisters to her place among them, with no stain of bribes in her hands, and with no soil of meanness upon her garments. And then the "peace" and "prosperity," which President Buchanan saw in vision on the eve of May-day, will indeed prevail and be established, while the blackness of infamy will brood forever over the memory of the magistrate who used the highest office of the Republic to perpetuate the wrongs of the Slave by the sacrifice of the rights of the Citizen.

LITERARY NOTICES.

Library of Old Authors.—Works of John Webster. London: John Russell Smith. 1856-57.

WE turn now to Mr. Hazlitt's edition of Webster. We wish he had chosen Chapman; for Mr. Dyce's Webster is hardly out of print, and, we believe, has just gone through a second and revised edition. Webster was a far more considerable man than Marston, and infinitely above him in genius. Without the poetic nature of Marlowe, or Chapman's somewhat unwieldy vigor of thought, he had that inflammability of mind which, untempered by a solid understanding, made his plays a strange mixture of vivid expression, incoherent declamation, dramatic intensity, and extravagant conception of character. He was not, in the highest sense of the word, a great dramatist. Shakspeare is the only one of that age. Marlowe had a rare imagination, a delicacy of sense that made him the teacher of Shakspeare and Milton in versification, and was, perhaps, as purely a poet as any that England has produced; but his mind had no balance-wheel. Chapman abounds in splendid enthusiasms of diction, and now and then dilates our imaginations with suggestions of profound poetic depth. Ben Jonson was a conscientious and intelligent workman, whose plays glow, here and there, with the golden pollen of that poetic feeling with which his age impregnated all thought and expression; but his leading characteristic, like that of his great namesake, Samuel, was a hearty common sense, which fitted him rather to be a great critic than a great poet. He had a keen and ready sense of the comic in situation, but no humor. Fletcher was as much a poet as fancy and sentiment can make any man. Only Shakspeare wrote comedy and tragedy with truly ideal elevation and breadth. Only Shakspeare had that true sense of humor which, like the universal solvent sought by the alchemists, so fuses together all the elements of a character, (as in *Falstaff*;) that any question of good or evil, of dignified or ridiculous, is silenced by the apprehension of its thorough humanity. Rabelais shows gleams of it in

Panurge; but, in our opinion, no man ever possessed it in an equal degree with Shakspeare, except Cervantes; no man has since shown anything like an approach to it, (for Molière's quality was comic power rather than humor,) except Sterne, Fielding, and Richter. Only Shakspeare was endowed with that healthy equilibrium of nature whose point of rest was midway between the imagination and the understanding,—that perfectly unruffled brain which reflected all objects with almost inhuman impartiality,—that outlook whose range was ecliptical, dominating all zones of human thought and action,—that power of verisimilar conception which could take away *Richard III.* from History, and *Ulysses* from Homer,—and that creative faculty whose equal touch is alike vivifying in *Shallow* and in *Lear*. He alone never seeks in abnormal and monstrous characters to evade the risks and responsibilities of absolute truthfulness, nor to stimulate a jaded imagination by Caligulan horrors of plot. He is never, like many of his fellow-dramatists, confronted with unnatural Frankensteins of his own making, whom he must get off his hands as best he may. Given a human foible, he can incarnate it in the nothingness of *Slender*, or make it loom gigantic through the tragic twilight of *Hamlet*. We are tired of the vagueness which classed all the Elizabethan playwrights together as "great dramatists,"—as if Shakspeare did not differ from them in kind as well as in degree. Fine poets some of them were; but though imagination and the power of poetic expression are, singly, not uncommon gifts, and even in combination not without secular examples, yet it is the rarest of earthly phenomena to find them joined with those faculties of perception, arrangement, and plastic instinct in the loving union which alone makes a great dramatic poet possible. We suspect that Shakspeare will long continue the only specimen of the genus. His contemporaries, in their comedies, either force what they call "a humor" till it becomes fantastical, or hunt for jokes, like rat-catchers, in the sewers of human nature and of language. In their tragedies they become heavy without grandeur, like Jonson, or

mistake the stilts for the cothurnus, as Chappan and Webster too often do. Every new edition of an Elizabethan dramatist is but the putting of another witness into the box to prove the inaccessibility of Shakspeare's stand-point as poet and artist.

Webster's most famous works are "The Duchess of Malfy" and "Vittoria Corombona," but we are strongly inclined to call "The Devil's Law-Case" his best play. The two former are in a great measure answerable for the "spasmodic" school of poets, since the extravagances of a man of genius are as sure of imitation as the equitable self-possession of his higher moments is incapable of it. Webster had, no doubt, the primal requisite of a poet, imagination, but in him it was truly untamed, and Aristotle's admirable distinction between the *Horrible* and the *Terrible* in tragedy was never better illustrated and confirmed than in the "Duchess" and "Vittoria." His nature had something of the sleuth-hound quality in it, and a plot, to keep his mind eager on the trail, must be sprinkled with fresh blood at every turn. We do not forget all the fine things that Lamb has said of Webster, but, when Lamb wrote, the Elizabethan drama was an *El Dorado*, whose micacious sand, even, was treasured as auriferous,—and no wonder, in a generation which admired the "Botanic Garden." Webster is the Gherardo della Notte of his day, and himself calls his "Vittoria Corombona" a "night-piece." Though he had no conception of Nature in its large sense, as something pervading a whole character and making it consistent with itself, nor of Art, as that which dominates an entire tragedy and makes all the characters foils to each other and tributaries to the catastrophe, yet there are flashes of Nature in his plays, struck out by the collisions of passion, and dramatic intensities of phrase for which it would be hard to find the match. The "prithce, undo this button" of *Lear*, by which Shakspeare makes us feel the swelling of the old king's heart, and that the bodily results of mental anguish have gone so far as to deaden for the moment all intellectual consciousness and forbid all expression of grief, is hardly finer than the broken verse which Webster puts into the mouth of *Ferdinand* when he sees the body of his sister, murdered by his own procurement,—

"Cover her face: mine eyes dazzle: she died young."

He has not the condensing power of Shakspeare, who squeezed meaning into a phrase with an hydraulic press, but he could carve a cherry-stone with any of the *concettisti*, and abounds in imaginative quaintnesses that are worthy of Donne, and epigrammatic tersenesses that remind us of Fuller. Nor is he wanting in poetic phrases of the purest crystallization. Here are a few examples:—

"Oh, if there be another world i' th' moon,
As some fantastics dream, I could wish all
men,
The whole race of them, for their inconstancy,
Sent thither to people that!"

(Old Chaucer was yet slier. After saying that Lamech was the first faithless lover, he adds,—

"And he invented tents, unless men lie,"—

implying that he was the prototype of nomadic men.)

"Virtue is ever sowing of her seeds:
In the trenches, for the soldier; in the wakeful study,
For the scholar; in the furrows of the sea,
For men of our profession [merchants]; all
of which
Arise and spring up honor."

("Of all which," Mr. Hazlitt prints it.)

"Poor Jolenta! should she hear of this,
She would not after the report keep fresh
So long as flowers on graves."

"For sin and shame are ever tied together
With Gordian knots of such a strong thread
spun,
They cannot without violence be undone."

"One whose mind
Appears more like a ceremonious chapel
Full of sweet music, than a thronging presence."

"Gentry? 'tis nought else
But a superstitious relic of time past;
And, sifted to the true worth, it is nothing
But ancient riches."

"What is death?
The safest trench i' th' world to keep man free
From Fortune's gunshot."

"It has ever been my opinion

That there are none love perfectly indeed,
But those that hang or drown themselves for
love,"

says *Julio*, anticipating Butler's

"But he that drowns, or blows out 's brains,
The Devil's in him, if he feigns."

He also anticipated La Rochefoucauld
and Byron in their apophthegm concern-
ing woman's last love. In "The Devil's
Law-Case," *Leonora* says,—

"For, as we love our youngest children best,
So the last fruit of our affection,
Wherever we bestow it, is most strong,
Most violent, most irresistible;
Since 'tis, indeed, our latest harvest-home,
Last merriment 'fore winter."

In editing Webster, Mr. Hazlitt had the
advantage (except in a single doubtful
play) of a predecessor in the Rev. Alex-
ander Dyce, beyond all question the best
living scholar of the literature of the times
of Elizabeth and James I. If he give no
proof of remarkable fitness for his task, he
seems, at least, to have been diligent and
painstaking. His notes are short and to
the point, and—which we consider a great
merit—at the foot of the page. If he had
added a glossarial index, we should have
been still better pleased. Mr. Hazlitt
seems to have read over the text with
some care, and he has had the good sense
to modernize the orthography, or, as he
says, has "observed the existing standard
of spelling throughout." Yet—for what
reason we cannot imagine—he prints "I"
for "ay," taking the pains to explain it
every time in a note, and retains "ban-
querout" and "coram" apparently for
the sake of telling us that they mean
"bankrupt" and "quorum." He does
not seem to have a quick ear for scansion,
which would sometimes have assisted him
to the true reading. We give an example
or two:—

"The obligation wherein we all stood bound
Cannot be concealed [*cancelled*] without great
reproach."

"The realm, not they,
Must be regarded. Be [we] strong and bold,
We are the people's factors."

"Shall not be o'erburdened [*overburdened*] in
our reign."

"A merry heart
And a good stomach to [a] feast are all."

"Have her meat serv'd up by bawds and
ruffians." [*dele* "up."]

"Brother or father
In [a] dishonest suit, shall be to me."

"What's she in Rome your greatness cannot
awe,
Or your rich purse purchase? Promises and
threats." [*dele* the second "your."]

"Through clouds of envy and disast [*rous*]
change."

"The Devil drives; 'tis [it is] full time to
go."

He has overlooked some strange blunders.
What is the meaning of

"Laugh at your misery, as foredeeming you
An idle meteor, which drawn forth, the earth
Would soon be lost i' the air"?

We hardly need say that it should be

"An idle meteor, which, drawn forth the earth,
Would," &c.

"Forwardness" for "*frowardness*," (Vol.
II. p. 87,) "tennis-balls struck and banded"
for "*banded*," (Ib. p. 275,) may be errors
of the press; but

"Come, I'll love you wisely:

That's jealousy,"

has crept in by editorial oversight for
"wisely, that's jealousy." So have

"Ay, the great emperor of [*or*] the mighty
Cham";

and

"This wit [*with*] taking long journeys";

and

"Virginius, thou dost but supply my place,
I thine: Fortune hath lift me [*thee*] to my
chair,
And thrown me headlong to thy pleading
bar";

and

"I'll pour my soul into my daughter's belly,
[*body*,]
And with my soldier's tears embalm her
wounds."

We suggest that the change of an *a* to an
r would make sense of the following:—
"Come, my little punk, with thy two com-
positors, to this unlawful painting-house,"
[printing-house,] which Mr. Hazlitt awk-
wardly endeavors to explain by this note
on the word *compositors*:—"i. e. (conjec-
turally), making up the composition of the

picture"! Our readers can decide for themselves;—the passage occurs Vol. I. p. 214.

We think Mr. Hazlitt's notes are, in the main, good; but we should like to know his authority for saying that *pench* means "the hole in a bench by which it was taken up,"—that "descant" means "look askant on,"—and that "I wis" is equivalent to "I surmise, imagine," which it surely is not in the passage to which his note is appended. On page 9, Vol. I., we read in the text,

"To whom, my lord, bends thus your awe,"

and in the note, "i. e. submission. The original has *awe*, which, if it mean *ave*, is unmeaning here." Did Mr. Hazlitt never see a picture of the Annunciation with *ave* written on the scroll proceeding from the bending angel's mouth? We find the same word in Vol. III. p. 217,—

"Whose station's built on *avees* and applause."

Vol. III. pp. 47-48 :—

"And then rest, gentle bones; yet pray
That when by the precise you are view'd,
A supersedeas be not sued
To remove you to a place more airy,
That in your stead they may keep chary
Stockfish or seacoal, for the abuses
Of sacrilege have turned graves to viler uses."

To the last verse Mr. Hazlitt appends this note, "Than that of burning men's bones for fuel." There is no allusion here to burning men's bones, but simply to the desecration of graveyards by building warehouses upon them, in digging the foundations for which the bones would be thrown out. The allusion is, perhaps, to the "Churchyard of the Holy Trinity";—see Stow's *Survey*, ed. 1603, p. 126. Elsewhere in the same play, Webster alludes bitterly to "begging church-land."

Vol. I. p. 73, "And if he walk through the street, he ducks at the penthouses, like an ancient that dares not flourish at the oath-taking of the prætor for fear of the signposts." Mr. Hazlitt's note is, "*Ancient* was a standard or flag; also an *ensign*, of which Skinner says it is a corruption. What the meaning of the simile is the present editor cannot suggest." We confess we find no difficulty. The meaning plainly is, that he ducks for fear of hitting the penthouses, as an *ensign* on the Lord

Mayor's day dares not flourish his standard for fear of hitting the signposts. We suggest the query, whether *ancient*, in this sense, be not a corruption of the Italian word *anziano*.

Want of space compels us to leave many other passages, which we had marked for comment, unnoticed. We are surprised that Mr. Hazlitt, (see his Introduction to "*Vittoria Corombona*,") in undertaking to give us some information concerning the Duke and Castle of Bracciano, should uniformly spell it *Brachiano*. Shakspeare's *Petruchio* might have put him on his guard. We should be glad also to know in what part of Italy he places *Malfi*.

Mr. Hazlitt's General Introduction supplies us with no new information, but this was hardly to be expected where Mr. Dyce had already gone over the field. We wish that he had been able to give us better means of distinguishing the three almost contemporary John Websters one from the other, for we think the internal evidence is enough to show that all the plays attributed to the author of the "*Duchess*" and "*Vittoria*" could not have been written by the same author. On the whole, he has given us a very respectable, and certainly a very pretty, edition of an eminent poet.

In leaving the subject, we cannot but express our satisfaction in comparing with these examples of English editorship the four volumes of *Ballads* recently published by Mr. Child. They are an honor to American scholarship and fidelity. Taste, learning, and modesty, the three graces of editorship, seem to have presided over the whole work. We hope soon, also, to be able to chronicle another creditable achievement in Mr. White's *Shakspeare*, which we look for with great interest.

History of the Inductive Sciences, from the Earliest to the Present Time. By WILLIAM WHEWELL, D. D., Master of Trinity College, Cambridge. Third Edition, with Additions. New York: D. Appleton & Co. 1858. 2 vols. 8vo. pp. 566, 648.

WE are heartily glad to welcome this reprint of the "*History of the Inductive Sciences*," from an improved edition. From an intimate acquaintance with the first edition,

we should cordially recommend these volumes to those who wish to take a general survey of this department of human learning. The various subjects are, for the most part, treated in a manner intelligible and agreeable to the unlearned reader. As an authority, Whewell is generally trustworthy, and as a critic usually fair. But in a work going over so much ground it would be unreasonable to expect perfect accuracy, and uniformly just estimates of the labors of all scientific men. Dr. Whewell's scientific philosophy naturally affects his ability as an historian and critic. In his *Bridgewater Treatise*, he indulged in a fling at mathematics, for which we have never wholly forgiven him; and in the present volume we see repeated evidence of his underestimate of the value of the sciences of Space and Time. He says, Vol. I. p. 500, that it was an "erroneous assumption" in Plato to hold mathematical truths as "Realities more real than the Phenomena." But to us it seems impossible to understand any work of Nature aright, except by taking this view of Plato. The study of natural science is deserving of the contempt which Samuel Johnson bestowed upon it, if it be not a study of the thoughts of the Divine Mind. And as phenomena are subject to laws of space and time as their essential condition, they are primarily a revelation of the mathematical thoughts of the Creator. Those mathematical ideas are, in Erigena's phrase, the created creators of all that can appear.

This false view of the mathematics lies at the foundation of Whewell's view of a type in organized nature. He conceives a genus to consist of those species which resemble the typical species of the genus more than they resemble the typical species of any other genus. It follows from this view that a species might be created that would not belong to any genus, but resemble equally the types of two or three genera. Thus, our little rue-leaved anemone might belong to the meadow rues or to the wind-flowers, at the pleasure of the botanist. We believe that classification is vastly more real than this, real as geometry itself. Another instance of a similar want of idealism in Dr. Whewell may be found in Vol. II. p. 643:—"Nothing is added to the evidence of design by the perception of a

unity of plan which in no way tends to promote the design." Now to one who believes, with us, that a thought is as real as the execution of the thought, the perception of a unity of plan is the highest evidence of design. No more convincing evidence of the existence of an Intelligent Designer is to be found than in the unity of plan,—and his design, thus proved, is the completion of the plan. For what purpose he would complete it, is a secondary question.

In this third edition many valuable additions have been made; and no tales of Oriental fancy could be more wonderful than some of these records of the discoveries in exact science made by our contemporaries. What more magical than the miracles performed every day in our telegraphic offices?—unless it be the transmission of human speech in that manner under the waves of the Mediterranean from Africa to Europe. What more like the dreams of alchemy than taking metallic casts, in cold metal, with infinitely more delicacy and accuracy than by melted metals,—taking them, too, from the most fragile and perishable moulds? What sounds more purely fanciful than to assert a connection between variations in the direction of the compass-needle and spots on the surface of the sun? or what is more improbable than that the period of solar spots should be ten years? What would seem to be more completely beyond the reach of human measurement than the relative velocities of light in air and in water, since the velocity in each is probably not less than a hundred thousand miles a second? Yet two different experimenters arrived, according to Whewell, in the same year, 1850, at the same result,—that the motion is slower in water; thus supplying the last link of experimental proof to establish the undulatory theory of light. While the records of science are strewn on every page with accounts of such triumphs of human skill and intellect, we see no need of resorting to fiction or to necromancy for the gratification of a natural taste for the marvellous.

It is true, Dr. Whewell does not give these discoveries, in the spirit of an alchemist, as marvels,—but in the spirit of a philosopher, as intellectual triumphs. Few men of our times have shown a more active and powerful mind, a more earnest

love of truth for truth's sake, than the author of this History,—and few men have had a wider or more thorough knowledge of the achievements of other scientific men. Yet we are surprised, in reading this improved edition, written scarce a twelvemonth ago, to find how ignorant Dr. Whewell appears to have been of the existence or value of the contributions to knowledge made on this side the Atlantic. The chapter on Electro-Magnetism does not allude to the discoveries of Joseph Henry, in regard to induced currents, and the adaptation of varying batteries to varying circuits,—discoveries second in importance only to those of Faraday,—and which were among the direct means of leading Morse to the invention of the telegraph. The chapters on Geology do not mention Professor Hall, and only allude in a patronizing way to the labors of American geologists, and to the ease of “reducing their classification to its synonymes and equivalents in the Old World,” as though the historian were not aware that Hall's nomenclature is adopted on the continent of Europe by the most eminent men in that department of science. In Geological Dynamics Dr. Whewell speaks slightly of glacial action, and approves of Forbes's semifluid theory, in utter ignorance, it would seem, of the labors of the Swiss geologists who now honor America with their presence. The chapters on Zoölogy, and on Classifications of Animals, make no allusion to Agassiz's introduction of Embryology as an element in classification, which was published several years before the “close of 1856.” The history of Neptune gives no hint of the fact, that its orbit was first determined through the labors of American astronomers, with all the accuracy that fifty years of observation might otherwise have been required to secure. Nor does Dr. Whewell allude to the fact, that Peirce alone has demonstrated the accuracy of Le Verrier's and Adams's computations, and shown that a planet in the place which they erroneously assigned to Neptune would produce the same perturbations of Uranus as those which Neptune produced. Much less does he allude to that wonderful demonstration by Peirce of the younger Bond's hypothesis, that the rings of Saturn are fluid; or to Peirce's remark, that the belt of the asteroids lies in the region in which the sun

could most nearly sustain a ring. Yet all these points are more important than many of those which he introduces, and more to the purpose of his chapters.

Notwithstanding these deficiencies in Whewell's scholarship and in his philosophy, his History is a valuable addition to our modern literature, and gives a better sketch of the whole ground than can be found in any other single work. It is particularly valuable to those whose ordinary pursuits lead them into other fields than those of science, and we have known such to acknowledge their great obligations to these clearly written and most suggestive volumes.

The Life of George Stephenson, Railway Engineer. By SAMUEL SMILES. From the Fourth London Edition. Boston: Ticknor & Fields.

THERE is something sublime about railway engineers. But what shall we say of the pioneer of this almost superhuman profession? The world would give much to know what Vulcan, Hercules, Theseus, and other celebrities of that sort, really did in their mortal lives to win the places they now occupy in our classical dictionaries, and what sort of people they really were. But whatever they did, manifestly somebody, within a generation or two, has done something quite as memorable. Whether the world is quite awake to the fact or not, it has lately entered on a new order of ages. Formerly it hovered about shores, and built its Tyres, Venices, Amsterdams, and London only near navigable waters, because it was easier to traverse a thousand miles of fluid than a hundred miles of solid surface. Now the case is nearly reversed. The iron rail is making the continent all coast, anywhere near neighbor to everywhere, and central cities as populous as seaports. Not only is all the fertility of the earth made available, but fertility itself can be made by our new power of transportation.

Who more than other man or men has done this? Is there any chance for a new mythology? Can we make a Saturn of Solomon de Caus, who caught a prophetic glimpse of the locomotive two hundred years ago, and went to a mad-house, without going mad, because a cardinal had the

instinct to see that the hierarchy would get into hot water by allowing the French monarch to encourage steam? Can we make a Jupiter of Mr. Hudson, one bull having been plainly sacrificed to him? and shall Robert Schuyler serve us for Pluto? Shall we find Neptune, with his sleeves rolled up, on the North River, commanding the first practical steamboat, under the name of Robert Fulton? However this may be, we think Mr. Smiles has made out a quite available demigod in his well-sketched Railway Engineer. George Stephenson did not invent the railway or the locomotive, but he did first put the breath of its life into the latter. He built the first locomotive that could work more economically than a horse, and by so doing became the actual father of the railroad system. In 1814, he found out and applied the steam-blast, whereby the waste steam from the cylinders is used to increase the combustion, so that the harder the machine works, the greater is its power to work. From that moment he foresaw what has since happened, and fought like a Titan against the world—the men of land, the men of science, and the men of law—to bring it about.

But before we go farther, who was this George Stephenson? A collier-boy,—his father fireman to an old pumping-engine which drained a Northumbrian coal-mine,—his highest ambition of boyhood to be “taken on” to have something to do about the mine. And he was taken on to pick over the coal, and finally to groom the engine, which he did with the utmost care and veneration, learning how to keep it well and doctor it when ill. He took wonderfully to steam-engines, and finally, for their sake, to his letters, at the age of seventeen! He became steam-engineer to large mines. Of his own genius and humanity, he studied the nature of fire-damp explosions, and, what is not more wonderful than well proven, invented a miner’s safety-lamp, on the same principle as Sir Humphrey Davy’s, and tested it at the risk of his life, a month or two before Sir Humphrey invented his, or published a syllable about it to the world! He engineered the Stockton and Darlington Railway. He was thereupon appointed engineer of the Liverpool and Manchester Railway. Though the means of transportation between those cities, some thirty

miles, were so inadequate that it took longer to get cotton conveyed from Liverpool to Manchester than from New York to Liverpool, yet it was with the utmost difficulty that a grant of the right to build a railway could be obtained from Parliament. There was little faith in such roads, and still less in steam-traction. The land-owners were opposed to its passage through their domains, and obliged Mr. Stephenson to survey by stealth or at the risk of a broken head. So great was this opposition, that the projectors were fain to lay out their road for four miles across a remarkable Slough of Despond, called Chat Moss, where a scientific civil-engineer testified before Parliament that he did not think it practicable to make a railway, or, if practicable, at not less cost than £270,000 for cutting and embankment. George Stephenson, after being almost hooted out of the witness-box for testifying that it could be done, and that locomotives could draw trains over it and elsewhere at the rate of *twelve* miles an hour,—for which last extravagance his own friends rebuked him,—carried the road over Chat Moss for £28,000, and his friends over that at the rate of thirty miles an hour. Thus he broke the back of the war, and lived to fill England with railroads as the fruits of his victory; all which, and a great deal more of the same sort, the reader will find admirably told by Mr. Smiles,—albeit we cannot but smile too, that, when addressing the universal English people, he expects them to understand such provincialisms as *wage* for wages, *leading coals* for carrying coal, and the like. But, nevertheless, his freedom from literary pretence is really refreshing, and his thoroughness in matters of fact is worthy of almost unlimited commendation. On the important question, Who invented the locomotive steam-blast? had Mr. Smiles made in his book as good use of his materials as he has since elsewhere, he would have saved some engineers and one or two mechanical editors from putting their feet into unpleasant places. Our Railroad Manuals, that have adopted the error of attributing this great invention to “Timothy Hackworth, in 1827,” should be made to read, “George Stephenson, in 1814.” Their authors, and all others, should read Samuel Smiles, the uppermost, by a whole sky, of all railway biographers.

A Volume of Vocabularies, illustrating the Condition and Manners of our Forefathers, as well as the History of the Forms of Elementary Education and of the Languages spoken in this Island, from the Tenth Century to the Fifteenth. Edited, from MSS. in Public and Private Collections, by THOMAS WRIGHT, Esq., etc. Privately printed. [London.] 1857. 8vo. pp. 291.

MR. WRIGHT, in editing this handsome volume, has done another service to the lovers and students of English glossology. Their thanks are also due to Mr. Joseph Mayer, who generously bore the expense of printing the book.

A great deal that is interesting to the student of general history lies imbedded in language, and Mr. Wright, in a very agreeable Introduction, has summarized the chief matters of value in the collection before us, which comprises the printed copies of sixteen ancient MSS. of various dates. As far as we have had time to examine it, the book seems to have been edited with care and discretion, and Mr. Wright has added much to its value by timely and judicious notes.

Most of the vocabularies here printed (many of them for the first time) were intended for the use of schoolmasters, and throw great light on the means and methods of teaching during the periods at which they were compiled. Mr. Wright tells us that there exist very few MSS. of educational treatises of the fourteenth century, (during which teaching would accordingly seem to have been neglected,) in comparison with the thirteenth and fifteenth, when such works were abundant. To all who would trace the history of education in England and follow up our common-school system to its source, the editor's Introduction will afford valuable hints.

The following extracts from Mr. Wright's Introduction will give some notion of the archaeological and philological value of the volume.

"It is this circumstance of grouping the words under different heads which gives these vocabularies their value as illustrations of the conditions and manners of society. It is evident that the compiler gave, in each case, the names of all such things as habitually presented themselves to his view, or, in other words, that he presents us with an exact list

and description of all the objects which were in use at the time he wrote, and no more. We have, therefore, in each a sort of measure of the fashions and comforts and utilities of contemporary life, as well as, in some cases, of its sentiments. Thus, to begin with a man's habitation, his house,—the words which describe the parts of the Anglo-Saxon house are few in number, a *heal* or hall, a *bur* or bedroom, and in some cases a *cicen* or kitchen, and the materials are chiefly beams of wood, laths, and plaster. But when we come to the vocabularies of the Anglo-Norman period, we soon find traces of that ostentation in domestic buildings which William of Malmesbury assures us that the Normans introduced into this island; the house becomes more massive, and the rooms more numerous, and more diversified in their purposes. When we look at the furniture of the house, the difference is still more apparent. The description given by Alexander Neckam of the hall, the chambers, the kitchen, and the other departments of the ordinary domestic establishment, in the twelfth century, and the furniture of each, almost brings them before our eyes, and nothing could be more curious than the account which the same writer gives us of the process of building and storing a castle."

p. xv.

"The philologist will appreciate the tracts printed in the following pages as a continuous series of very valuable monuments of the languages spoken in our island during the Middle Ages. It is these vocabularies alone which have preserved from oblivion a very considerable and interesting portion of the Anglo-Saxon tongue, and without their assistance our Anglo-Saxon dictionaries would be far more imperfect than they are. I have endeavored to collect together in the present volume all the Anglo-Saxon vocabularies that are known to exist, not only on account of their diversity, but because I believe that their individual utility will be increased by thus presenting them in a collective form. They represent the Anglo-Saxon language as it existed in the tenth and eleventh centuries; and, as written no doubt in different places, they may possibly present some traces of the local dialects of that period. The curious semi-Saxon vocabulary is chiefly interesting as representing the Anglo-Saxon in its period of transition, when it was in a state of rapid decadence. The interlinear gloss to Alexander Neckam, and the commentary on John de Garlande, are most important monuments of the language which for a while usurped among our forefathers the place of the Anglo-Saxon, and which we know by the name of the Anglo-Norman. In the partial vocabulary

of the names of plants, which follows them, we have the two languages in juxtaposition, the Anglo-Saxon having then emerged from that state which has been termed semi-Saxon, and become early English. We are again introduced to the English language more generally by Walter de Bibbesworth, the inter-linear gloss to whose treatise represents, no doubt, the English of the beginning of the fourteenth century. All the subsequent vocabularies given here belong, as far as the language is concerned, to the fifteenth century. As written in different parts of the country, they bear evident marks of dialect; one of them—the vocabulary in Latin verse—is a very curious relic of the dialect of the West of England at a period of which such remains are extremely rare.”—p. xix.

Sermons, preached at Trinity Chapel, Brighton. By the late REV. FREDERICK W. ROBERTSON, M. A., the Incumbent. Second Series. From the Fourth London Edition. Boston: Ticknor & Fields. 12mo.

THE biography of Robertson, prefixed to this volume, will gratify the curiosity which every sympathetic reader of the first series of his sermons must have felt regarding the incidents of his career. It was evident to a close observer that the peculiar charm and power of the preacher came from peculiarities of character and individual experience, as well as from peculiarities of mind. There was something so close and searching in his pathos, so natural in his statements of doctrine, so winning in his appeals,—his simplest words of consolation or rebuke touched with such subtle certainty the feelings they addressed,—and his faith in heavenly things was so clear, deep, intense, and calm,—that the reader could hardly fail to feel that the earnestness of the preacher had its source in the experience of the man, and that his belief in the facts of the spiritual world came from insight, and not from hearsay. His biography confirms this impression. We now learn that he was tried in many ways, and built up a noble character through intense inward struggle with suffering and calamity,—a character sensitive, tender, magnanimous, brave, and self-sacrificing, though not thoroughly cheerful. The heroism evinced in his life

and in his sermons is a sad heroism, a heroism that has on it the trace of tears. Always at work, and dying in harness, the spur of duty made him insensible to the decay of strength and the need of repose. He had no time to be happy.

The most striking mental characteristic of his sermons is the originality of his perceptions of religious truth. He takes up the themes and doctrines of the Church, the discussion of which has filled libraries with books of divinity which stand as an almost impregnable wall around the simple facts and teachings of the Scriptures, protecting them from attack by shutting them from sight, and in a few brief and direct statements cuts into the substance and heart of the subjects. This felicity comes partly from his being a man gifted with spiritual discernment as well as spiritual feeling, and partly from the instinct of his nature to look at doctrines in their connection with life. He excels equally in interpreting the truth which may be hidden in a dogma, and in overturning dogmas in which no truth is to be found. In a single sermon, he often tells us more of the essentials of a subject, and exhibits more clearly the religious significance of a doctrine, than other writers have done in labored volumes of exposition and controversy. This power of simplifying spiritual truth without parting with any of its depth accounts for the interest with which his sermons are read by persons of all degrees of age and culture. His method of arrangement is also admirable; his thoughts are not only separately excellent, but are all in their right places, so that each is an efficient agent in deepening the general impression left by the whole. The singular refinement and beauty of his mind lend a peculiar charm to its boldness; we have the soul of courage without the rough outside which so often accompanies it; and his dietion, being on a level with his themes, never offends that fine detecting spiritual taste which instinctively takes offence when spiritual things are viewed through unspiritual moods and clothed in words which smack of the senses. Combine all his characteristics, his intrepidity of disposition and intellect, his deep experience of religious truth, the sad earnestness of his faith, his penetration of thought, his direct, executive expression, and the beauty which pervades and harmonizes all,—

and it is hazarding little to say, that his volumes will take the rank of classics in the department of theology to which they belong.

The Church and the Congregation. A Plea for their Unity. By C. A. BARTOL. Boston: Ticknor & Fields. 16mo.

As church-membership is in some respects the aristocracy of Congregationalism, and as it is considered by many minds to be as necessary for the safety of theology as the old distinction of *esoteric* and *exoteric* was for the safety of philosophy, the publication by a clergyman of such a volume as this, with its purpose clearly indicated by its title, will excite some surprise, and certainly should excite discussion. Mr. Bartol contends for open communion, as most consonant with Scripture, with the spirit of Christianity, with the practice of the early Church, with the meaning and purpose of the rite. He denies that the ordinance of the Lord's Supper has any sacredness above prayer, or any of the other ordinances of religion; and while he appreciates and perhaps exaggerates its importance, he thinks that its most beneficent effects will be seen when it is the symbol of unity, and not of division. The usual distinction between Church and Congregation he considers invidious and mischievous, as not indicating a corresponding distinction in religious character, and as separating the body of Christian worshippers into two parts by a mechanical rather than spiritual process. Though he meets objections with abundant controversial ability, the strength of his position is due not so much to his negative arguments as to his affirmative statements; for his statements have in them the peculiar vitality of that mood of meditation in which spiritual things are

directly beheld rather than logically inferred, and, being thus the expression of spiritual perceptions, they feel their way at once to the spiritual perceptions of the reader, to be judged by the common sense of the soul instead of the common sense of the understanding. This is the highest quality of the book, and indicates not only that the author has religion, but religious genius; but there is also much homely sagacity evinced in viewing what may be called the practical aspects of the subject, and answering from experience the objections which experience may raise. The writer is, so deeply in earnest, has meditated so intensely on the subject, and is so free from the repellant qualities which are apt to embitter theological controversies, that even when his ideas come into conflict with the most obstinate prejudices and rooted convictions, there is nothing in his mode of stating or enforcing them to give offence. The book will win its way by the natural force of what truth there is in it, and the most that an opponent can say is, that the author is in error; it cannot be said that he is arrogant, contemptuous, self-asserting, or that he needlessly shocks the opinions he aims to change.

Mr. Bartol's style is bold, fervid, and figurative, exhibiting a wide command of language and illustration, and at times rising into passages of singular beauty and eloquence. The fertility of his mind in analogies enables him to strengthen his leading conception with a large number of related thoughts, and the whole subject of vital Christianity is thus continually in view, and connected with the special theme he discusses. This characteristic will make his volume interesting and attractive to many readers who are either opposed to his views of the Lord's Supper, or are unable to agree with him in regard to the importance of the change he proposes.

THE ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. II.—JULY, 1858.—NO. IX.

THE CATACOMBS OF ROME

[Concluded.]

— fessoque sacrandum
Supponam capiti lapidem, Christoque quiescam.
PAULINUS OF NOLA.

Et factus est in pace locus ejus et habitatio ejus in Sion.
Ps. LXXV. 2.

V.

ROME is preëminently the city of monuments and inscriptions, and the lapidary style is the one most familiar to her. The Republic, the Empire, the Papacy, the Heathens, and the Christians have written their record upon marble. But gravestones are proverbially dull reading, and inscriptions are often as cold as the stone upon which they are engraved.

The long gallery of the Vatican, through which one passes to enter the famous library, and which leads to the collection of statues, is lined on one side with heathen inscriptions, of miscellaneous character, on the other with Christian inscriptions, derived chiefly from the catacombs, but arranged with little order. The comparison thus exhibited to the eye is an impressive one. The contrast of one class with the other is visible even in external characteristics. The old Roman lines are cut with precision and evenness; the letters are well formed, the words

are rightly spelt, the construction of the sentences is grammatical. But the Christian inscriptions bear for the most part the marks of ignorance, poverty, and want of skill. Their lines are uneven, the letters of various sizes, the words ill-spelt, the syntax often incorrect. Not seldom a mixture of Greek and Latin in the same sentence betrays the corrupt speech of the lower classes, and the Latin itself is that of the common people. But defects of style and faults of engraving are insufficient to hide the feeling that underlies them.

Besides this great collection of the Vatican, there is another collection now being formed in the *loggia* of the Lateran Palace, in immediate connection with the Christian Museum. Arranged as the inscriptions will here be in historic sequence and with careful classification, it will be chiefly to this collection that the student of Christian antiquity will hereafter resort. It is in the charge of the Cavaliere de Rossi,

who is engaged in editing the Christian inscriptions of the first six centuries, and whose extraordinary learning and marvellous sagacity in deciphering and determining the slightest remains of ancient stone-cutting give him unexampled fitness for the work. Of these inscriptions, about eleven thousand are now known, and of late some forty or fifty have been added each year to the number previously recorded. But a very small proportion of the eleven thousand remain *in situ* in the catacombs, and besides the great collections of the Vatican and the Lateran, there are many smaller ones in Rome and in other Italian cities, and many inscriptions originally found in the subterranean cemeteries are now scattered in the porticos or on the pavements of churches in Rome, Ravenna, Milan, and elsewhere. From the first period of the desecration of the catacombs, the engraved tablets that had closed the graves were almost as much an object of the greed of pious or superstitious marauders as the more immediate relics of the saints. Hence came their dispersion through Italy, and hence, too, it has happened that many very important and interesting inscriptions belonging to Rome are now found scattered through the Continent.

It has been, indeed, sometimes the custom of the Roman Church to enhance the value of a gift of relics by adding to it the gift of the inscription on the grave from which they were taken. A curious instance of this kind, connected with the making of a very popular saint, occurred not many years since. In the year 1802 a grave was found in the Cemetery of St. Priscilla, by which were the remains of a glass vase that had held blood, the indication of the burial-place of a martyr. The grave was closed by three tiles, on which were the following words painted in red letters: *LVMENA PAXTE CVMFI*. There were also rudely painted on the tiles two anchors, three darts, a torch, and a palm-branch. The bones found within the grave, together with the tiles bearing the inscription, were placed in the Treasury of Relics at the Lateran.

On the return of Pius VII., one of the deputation of Neapolitan clergy sent to congratulate him sought and received from the Pope these relics and the tiles as a gift for his church. The inscription had been read by placing the first tile after the two others, thus,—*PAX TECUM FILUMENA*, *Peace be with thee, Filumena*; and Filumena was adopted as a new saint in the long list of those to whom the Roman Church has given this title. It was supposed, that, in the haste of closing the grave, the tiles had been thus misplaced.

Very soon after the gift, a priest, who desired not to be named *on account of his great humility*, had a vision at noon-day, in which the beautiful virgin with the beautiful name appeared to him and revealed to him that she had suffered death rather than yield her chastity to the will of the Emperor, who desired to make her his wife. Thereupon a young artist, whose name is also suppressed, likewise had a vision of St. Filomena, who told him that the emperor was Diocletian; but as history stands somewhat opposed to this statement, it has been suggested that the artist mistook the name, and that the Saint said Maximian. However this may be, the day of her martyrdom was fixed on the 10th of August, 303. Her relics were carried to Naples with great reverence; they were inclosed, after the Neapolitan fashion, in a wooden doll of the size of life, dressed in a white satin skirt and a red tunic, with a garland of flowers on its head, and a lily and a dart in its hand. This doll, with the red-lettered tiles, was soon transferred to its place in the church of Mugnano, a small town not far from Naples. Many miracles were wrought on the way, and many have since been wrought in the church itself. The fame of the virgin spread through Italy, and chapels were dedicated to her honor in many distant churches; from Italy it reached Germany and France, and it has even crossed the Atlantic to America. Thus a new saint, a new story, and a new exhibition of credulity had their rise not long ago from a grave and three words in the catacombs.

One of the first differences which are obvious, in comparing the Christian with the heathen mortuary inscriptions, is the introduction in the former of some new words, expressive of the new ideas that prevailed among them. Thus, in place of the old formula which had been in most common use upon gravestones, D. M., or, in Greek, Θ. Κ., standing for *Dis Manibus*, or Θεοῖς καταχθονίοις, a dedication of the stone to the gods of death, we find constantly the words *In pace*. The exact meaning of these words varies on different inscriptions, but their general significance is simple and clear. When standing alone, they seem to mean that the dead rests in the peace of God; sometimes they are preceded by *Requiescat*, "May he rest in peace"; sometimes there is the affirmation, *Dormit in pace*, "He sleeps in peace"; sometimes a person is said *recessisse in pace*, "to have departed in peace." Still other forms are found, as, for instance, *Vivas in pace*, "Live in peace," or *Suscipiat in pace*, "May he be received into peace,"—all being only variations of the expression of the Psalmist's trust, "I will lay me down in peace and sleep, for thou, Lord, only makest me dwell in safety." It is a curious fact, however, that on some of the Christian tablets the same letters which were used by the heathens have been found. One inscription exists beginning with the words *Dis Manibus*, and ending with the words *in pace*. But there is no need of finding a difficulty in this fact, or of seeking far for an explanation of it. As we have before remarked, in speaking of works of Art, the presence of some heathen imagery and ideas in the multitude of the paintings and inscriptions in the catacombs is not so strange as the comparatively entire absence of them. Many professing Christians must have had during the early ages but an imperfect conception of the truth, and can have separated themselves only partially from their previous opinions, and from the conceptions that prevailed around them in the world. To some the letters of the hea-

then gravestones, and the words which they stood for, probably appeared little more than a form expressive of the fact of death, and, with the imperfect understanding natural to uneducated minds, they used them with little thought of their absolute significance.*

Another difference in words which is very noticeable, running through the inscriptions, is that of *depositus*, used by the Christians to signify the *laying away* in the grave, in place of the heathen words *situs*, *positus*, *sepultus*, *conditus*. The very name of *cæmeterium*, adopted by the Christians for their burial-places, a name unknown to the ancient Romans, bore a reference to the great doctrine of the Resurrection. Their burial-ground was a *cemetery*, that is, a *sleeping-place*; they regarded the dead as put there to await the awakening; the body was *depositus*, that is, *intrusted* to the grave, while the heathen was *situs* or *sepultus*, *interred* or *buried*,—the words implying a final and definitive position. And as the Christian *dormit* or *quiescit*, *sleeps* or *rests* in death, so the heathen is described as *abreptus*, or *defunctus*, *snatched away* or *departed* from life.

Again, the contrast between the inscriptions is marked, and in a sadder way, by the difference of the expressions of mourning and grief. No one who has read many of the ancient gravestones but remembers the bitter words that are often found on them,—words of indignation against the gods, of weariness of life, of despair and unconsolated melancholy. Here is one out of many:—

PROCOPE MANVS LEOB CONTRA
DEVV QVI ME INNOCENTEM SVS
TVLIT QVAE VIXI ANNOS XX.
POS. PROCLVS.

* It is probable that most of the gravestones upon which this heathen formula is found are not of an earlier date than the middle of the fourth century. At this time Christianity became the formal religion of many who were still heathen in character and thought, and cared little about the expression of a faith which they had adopted more from the influence of external motives than from principle or conviction.

I, Procope, who lived twenty years, lift up my hands against God, who took me away innocent. Proclus set up this.

But among the Christian inscriptions of the first centuries there is not one of this sort. Most of them contain no reference to grief; they are the very short and simple words of love, remembrance, and faith,—as in the following from the Lateran :—

ADEODATE DIGNAE ET MERITAE VIRGINI
ET QUIESCE HIC IN PACE IVBENTE XPO EJVS

To Adeodata, a worthy and deserving Virgin, and rests here in peace, her Christ commanding.

On a few the word *dolens* is found, simply telling of grief. On one to the memory of a sweetest daughter the word *irreparable* is used, *Filiæ dulcissimæ irreparabili*. Another is, "To Dalmatius, sweetest son, whom his *unhappy* father was not permitted to enjoy for even seven years." Another inscription, in which something of the feeling that was unchecked among the heathens finds expression in Christian words, is this: "Sweet soul. To the incomparable child, who lived seventeen years, and *undeserving* [of death] gave up life in the peace of the Lord." Neither the name of the child nor of the parents is on the stone, and the word *immaritus*, which is used here, and which is common in heathen use, is found, we believe, on only one other Christian grave. One inscription, which has been interpreted as being an expression of unresigned sorrow, is open to a very different signification. It is this :—

INNOCENTISSIMÆ ETATIS
DVLCISSIMO FILIO
JOVLANO QVI VIXIT ANN. VII
ET MENSES VI NON MERENTES
THEOCTISTVS ET THALLVSA PARENTES

To their sweetest boy Jovian, of the most innocent age, who lived seven years and six months, his *undeserving* [or *unlamenting*] parents Theoctistus and Thallusa.

Here, without forcing the meaning, *non merentes* might be supposed to refer to the parents' not esteeming themselves worthy to be left in possession of such a treasure; but the probability is that *merentes* is only

a misspelling of *mœrentes*, for otherwise *immarentes* would have been the natural word.

But it is thus that the Christian inscriptions must be sifted, to find expressions at variance with their usual tenor, their general composure and trust. The simplicity and brevity of the greater number of them are, indeed, striking evidence of the condition of feeling among those who set them upon the graves. Their recollections of the dead feared no fading, and Christ, whose coming was so near at hand, would know and reunite his own. Continually we read only a name with *in pace*, without date, age, or title, but often with some symbol of love or faith hastily carved or painted on the stone or tiles. Such inscriptions as the following are common :—

FELICISSIMVS DVLGIS,—GAVDENTIA IN PACE,
—SEVERA IN DEO VIVAS,—

or, with a little more fulness of expression,—

DVLCISSIMO FILIO ENDELECIO
BENEMERENTI QVI VIXIT
ANNOS II MENSE VNV
DIES XX IN PACE

To the sweetest son Endelechius, the well-deserving, who lived two years, one month, twenty days. In peace.

The word *benemerenti* is of constant recurrence. It is used both of the young and the old; and it seems to have been employed, with comprehensive meaning, as an expression of affectionate and grateful remembrance.

Here is another short and beautiful epitaph. The two words with which it begins are often found.

ANIMA DVLGIS AVFENIA VIRGO
BENEDICTA QVE VIXIT ANN: XXX
DORMIT IN PACE

Sweet Soul. The Blessed Virgin Aufenia, who lived thirty years. She sleeps in peace.

But the force and tenderness of such epitaphs as these is hardly to be recognized in single examples. There is a cumulative pathos in them, as one reads, one after another, such as these that follow :—

ANGELICE BENE IN PACE.

To Angelica well in peace.

CYRRENTIO SERVO DEI DEP. D. XVI. KAL.
NOVEM.

To Currentius, the servant of God, laid in the grave on the sixteenth of the Kalends of November.

MAXIMINVS QVI VIXIT ANNOS XXIII
AMICVS OMNIVM

Maximin, who lived twenty-three years, the friend of all.

SEPTIMVS MARCIANE
IN PACE QUE BICISIT MECV
ANNOS XVII. DORMIT IN PACE

Septimus to Marciana in peace. Who lived with me seventeen years. She sleeps in peace.

GAUDENTIA
PAVSAT DVLCIS
SPIRITVS ANNORVM II
MENSORVM TRES.

Gaudentia rests. Sweet spirit of two years and three months.

Here is a gravestone with the single word VIATOR; here one that tells only that Mary placed it for her daughter; here one that tells of the light of the house,—Τὸ φῶς τῆς Οἰκίας.

Nor is it only in these domestic and intimate inscriptions that the habitual temper and feeling of the Christians is shown, but even still more in those that were placed over the graves of such members of the household of faith as had made public profession of their belief, and shared in the sufferings of their Lord. There is no parade of words on the gravestones of the martyrs. Their death needed no other record than the little jar of blood placed in the mortar, and the fewest words were enough where this was present. Here is an inscription in the rudest letters from a martyr's grave:—

SABATIVS BENEMERENTI QVI VIXIT ANNOS XL

To the well-deserving Sabatius, who lived forty years.

And here another:—

PROSPERO INNOCENTI ANIMÆ IN PACE.

To Prosperus, innocent soul, in peace.

And here a third, to a child who had died as one of the Innocents:—

MIRÆ INNOCENTIE ANIMA DVLCIS ÆMILIANVS.

QVI VIXIT ANNO VNO, MENS. VIII. D. XXVIII
DORMIT IN PACE

Æmilian, sweet soul of marvellous innocence, who lived one year, eight months, twenty-eight days. He sleeps in peace.

At this grave was found the vase of blood, and on the gravestone was the figure of a dove.

Another inscription, which preserves the name of one of those who suffered in the most severe persecution to which the ancient Church was exposed, and which, if genuine, is, so far as known, the only monument of the kind, is marked by the same simplicity of style:—

LANNVS XPI. MA
RTIR HC REQVIESC

IT. SVB

DIOCLITIANO
PASSVS

Lannus Martyr of Christ here rests. He suffered under Diocletian.

The three letters E P S have been interpreted as standing for the words *et posteris suis*, and as meaning that the grave was also for his successors. Not yet, then, had future saints begun to sanctify their graves, and to claim the exclusive possession of them.

But there is another point of contrast between the inscriptions of the un-Christianized and the Christian Romans, which illustrates forcibly the difference in the regard which they paid to the dead. To the one the dead were still of this world, and the greatness of life, the distinctions of class, the titles of honor still clung to them; to the other the past life was as nothing to that which had now begun. The heathen epitaphs are loaded with titles of honor, and with the names of the offices which the dead had borne, and, like the modern Christian (?) epitaphs whose style has been borrowed from them, the vanity of this world holds its place above the grave. But among the early Christian inscriptions of Rome nothing of this kind is known. Scarcely a title of rank or a name of office is to

be found among them. A military title, or the name of priest or deacon, or of some other officer in the Church, now and then is met with; but even these, for the most part, would seem to belong to the fourth century, and never contain any expression of boastfulness or flattery.

FL. OLIVS PATERNVS
CENTVRIO CHOR. X VRB.

QVI VIXIT AN XXVII
IN PACE

Flavius Olius Paternus, Centurion of the Tenth Urban Cohort, who lived twenty-seven years. In peace.

It is true, no doubt, that among the first Christians there were very few of the rich and great. The words of St. Paul to the Corinthians were as true of the Romans as of those to whom they were specially addressed: "For ye see your calling, brethren, how that not many wise men after the flesh, not many mighty, not many noble are called." Still there is evidence enough that even in the first two centuries some of the mighty and some of the noble at Rome were among those called, but that evidence is not to be gathered from the gravestones of the catacombs. We have seen, in a former article, that even the grave of one of the early bishops,—the highest officer of the Church,—and one who had borne witness to the truth in his death, was marked by the words,

CORNELIVS MARTYR
EP.

The Martyr Cornelius, Bishop.

Compare this with the epitaphs of the later popes, as they are found on their monuments in St. Peter's,—“flattering, false insculptions on a tomb, and in men's hearts reproach,”—epitaphs overweighted with superlatives, ridiculous, were it not for their impiety, and full of the lies and vanities of man in the very house of God.

With this absence of boastfulness and of titles of rank on the early Christian graves two other characteristics of the inscriptions are closely connected, which bear even yet more intimate and expres-

sive relation to the change wrought by Christianity in the very centre of the heathen world.

“One cannot study a dozen monuments of pagan Rome,” says Mr. Northcote, in his little volume on the catacombs, “without reading something of *servus* or *libertus*, *libertis* *libertibusque* *posterisque eorum*; and I believe the proportion in which they are found is about three out of every four. Yet, in a number of Christian inscriptions exceeding eleven thousand, and all belonging to the first six centuries of our era, scarcely six have been found containing any allusion whatever—and even two or three of these are doubtful—to this fundamental division of ancient Roman society.

“No one, we think, will be rash enough to maintain, either that this omission is the result of mere accident, or that no individual slave or freedman was ever buried in the catacombs. Rather, these two cognate facts, the absence from ancient Christian epitaphs of all titles of rank and honor on the one hand, or of disgrace and servitude on the other, can only be adequately explained by an appeal to the religion of those who made them. The children of the primitive Church did not record upon their monuments titles of earthly dignity, because they knew that with the God whom they served ‘there was no respect of persons’; neither did they care to mention the fact of their bondage, or of their deliverance from bondage, to some earthly master, because they thought only of that higher and more perfect liberty wherewith Christ had set them free; remembering that ‘he that was called, being a bondman, was yet the freeman of the Lord, and likewise he that was called, being free, was still the bondman of Christ.’

“And this conclusion is still further confirmed by another remarkable fact which should be mentioned, namely, that there are not wanting in the catacombs numerous examples of another class of persons, sometimes ranked among slaves, but the mention of whose servitude, such as it was, served rather to record an act of

Christian charity than any social degradation; I allude to the *alumni*, or foundlings, as they may be called. The laws of pagan Rome assigned these victims of their parents' crimes or poverty to be the absolute property of any one who would take charge of them. As nothing, however, but compassion could move a man to do this, children thus acquired were not called *servi*, as though they were slaves who had been bought with money, nor *vernæ*, as though they had been the children of slaves born in the house, but *alumni*, a name simply implying that they had been brought up (*ab alendo*) by their owners. Now it is a very singular fact, that there are actually more instances of *alumni* among the sepulchral inscriptions of Christians than among the infinitely more numerous inscriptions of pagans, showing clearly that this was an act of charity to which the early Christians were much addicted; and the *alumni*, when their foster-parents died, very properly and naturally recorded upon their tombs this act of charity, to which they were themselves so deeply indebted."

So far Mr. Northcote. It is still further to be noted, as an expression of the Christian temper, as displayed in this kind of charity, that it never appears in the inscriptions as furnishing a claim for praise, or as being regarded as a peculiar merit. There is no departure from the usual simplicity of the gravestones in those of this class.

ΠΕΤΡΟΣ
ΘΕΟΠΤΟΣ
ΓΑΥΚΤΤΑ
ΤΟC ΕΝ ΘΕΩ

Peter, sweetest foster-child, in God.

And a dove is engraved at either side of this short epitaph.

VITALIANO ALVMNO KARO
EVTROPIVS FECIT.

Eutropius made this for the dear foster-child Vitalian.

ANTONIVS DISCOLIVS FILIVS ET BIBIVS
FELLICISSIMVS ALVMNVS VALERIE CRESTENI
MATRI BIDVE ANORVM XVIII INTER SANCTOS

Antonius Discolius her son, and Bibius Fellicissimus her foster-child, to Valeria Crestina their mother, a widow for eighteen years. [Her grave is] among the holy.*

These inscriptions lead us by a natural transition to such as contain some reference to the habits of life or to the domestic occupations and feelings of the early Christians. Unfortunately for the gratification of the desire to learn of these things, this class of inscriptions is far from numerous,—and the common conciseness is rarely, in the first centuries, amplified by details. But here is one that tells a little story in itself:—

DOMINAE
INNOCENTISSIMAE ET DVLCISSIMAE COIVGI
QVAE VIXIT ANN XVI M· IIII ET FVIT
IMARITATA ANN· DVOBVS M· IIII D· VIII
CVM QVA NON LICVIT FVISSE PROPTER
CAVSAS PEREGRINATIONIS
NISI MENSIB VI
QVO TEMPORE VT EGO SENSI ET EXHBVI
AMOREM MEVM
NVLLI SV ALII SIC DILEXERVNT
DEPOSIT XV KAL· IVN.

To Domnina, my most innocent and sweetest wife; who lived sixteen years and four months, and was married two years, four months, and nine days; with whom, on account of my journeys, I was permitted to be only six months; in which time, as I felt, so I showed my love. No others have so loved one another. Placed in the grave the 15th of the Kalends of June.

Who was this husband whose far-off journeys had so separated him from his lately married wife? Who were they who so loved as no others had loved? The tombstone gives only the name of Domnina. But in naming her, and in the expression of her husband's love, it gives evidence, which is confirmed by many other tokens in the catacombs, of the change introduced by Christianity in the position of women, and in the regard paid to them. Marriage was invested with a sanctity which redeemed it from

* This inscription is not of earlier date than the fourth century, as is shown by the words, *Inter sanctos*,—referring, as we heretofore stated, to the grave being made near that of some person esteemed a saint.

sensuality, and Christianity became the means of uniting man and woman in the bonds of an immortal love.

Here is an inscription which, spite of the rudeness of its style, preserves the pleasant memory of a Roman child:—

ISPIRITO SANTO BONO
FLORENTIO QVI VIXIT ANIS XIII
CORITVS MAGITER QVI PLVS AMAVIT
QVAM SI FILIVM SVVM ET COTDEVS
MATER FILIO BENEMERETI FECERVNT.

To the good and holy spirit Florentius, who lived thirteen years, Coritus, his master, who loved him more than if he were his own son, and Cotdeus, his mother, have made this for her well-deserving son.*

And Coritus, his master, and Cotdeus, his mother, might have rejoiced in knowing that their poor, rough tablet would keep the memory of her boy alive for so many centuries; and that long after they had gone to the grave, the good spirit of Florentius should still, through these few words, remain to work good upon the earth.—Note in this inscription (as in many others) the Italianizing of the old Latin,—the *ispirito*, and the *santo*; note also the mother's strange name, reminding one of Puritan appellations,—Cotdeus being the abbreviation of *Quod vult Deus*, "What God wills."†

Here is an inscription set up by a hus-

* Compare an inscription from a heathen tomb:—

C. JULIVS MAXIMVS
ANN. II. M. V.

ATROX O FORTVNA TRVCI QVÆ FVNERE
GAVDVS

QVID MIHI TAM SVBITO MAXIMVS ERIPITVR
QVI MODO JVCVNDVS GREMIO SVPERESSE
SOLEBAT

HIC LAPIS IN TVMVLO NVNC JACET ECCE
MATER

C. Julius Maximus,
Two years, five months old.

Harsh Fortune, that in cruel death finds't joy,
Why is my Maximus thus sudden reft,
So late the pleasant burden of my breast?
Now in the grave this stone lies: lo, his
mother!

† Other names of this kind were *Deogratias*,
Habeteum, and *Adeodatus*.

band to his wife, Dignitas, who was a woman of great goodness and entire purity of life:—

QUE SINE LESIONE ANIMI MEI VIXI MECVM
ANNOS XV FILIOS AVTEM PROCREAVIT VII
EX QVIBVS SECV ABET AD DOMINVM IIII

Who, without ever wounding my soul, lived with me for fifteen years, and bore seven children, four of whom she has with her in the Lord.

We have already referred to the inscriptions which bear the name of some officer of the early Church; but there is still another class, which exhibits in clear letters others of the designations and customs familiar to the first Christians. Thus, those who had not yet been baptized and received into the fold, but were being instructed in Christian doctrine for that end, were called *catechumens*; those who were recently baptized were called *neophytes*; and baptism itself appears sometimes to have been designated by the word *illuminatio*. Of the use of these names the inscriptions give not infrequent examples. It was the custom also among the Christians to afford support to the poor and to the widows of their body. Thus we read such inscriptions as the following:—

RIGINE VENEMERENTI FILIA SVA FECIT
VENERIGINE MATRI VIDVÆ QVE SE
DIT VIDVA ANNOS LX ET ECLESA
NVNQVA GRAVAVIT VNIBYRA QVE
VIXIT ANNOS LXXX MESIS V
DIES XXVI

Her daughter Beneregina made this for her well-deserving mother Regina, a widow, who sat a widow sixty years, and never burdened the church, the wife of one husband, who lived eighty years, five months, twenty-six days.

The words of this inscription recall to mind those of St. Paul, in his First Epistle to Timothy, (v. 3–16,) and especially the verse, "If any man or woman that believeth have widows, let them relieve them, and let not the church be charged."

Some of the inscriptions preserve a record of the occupation or trade of the dead; sometimes in words, more often by the representation of the implements of

labor! Here, for instance, is one which seems like the advertisement of a surviving partner:—

DE BIANOBA
POLLECLA QVE ORDEV BENDET DE
BIANOBA

From New Street. Pollecla, who sold barley on New Street.

Others often bear a figure which refers to the name of the deceased, an *armoire parlante* as it were, which might be read by those too ignorant to read the letters on the stone. Thus, a lion is scratched on the grave of a man named Leo; a little pig on the grave of the little child Porcella, who had lived not quite four years; on the tomb of Dracontius is a dragon; and by the side of the following charming inscription is found the figure of a ship:—

NABIRA IN PACE ANIMA DVLCIS
QVI BIXIT ANOS XVI M V
ANIMA MELEIEA
TITVLV FACTV
APARENTES SIGNVM NABE

Navira in peace. Sweet soul, who lived sixteen years, five months. Soul honey-sweet. This inscription made by her parents. The sign a ship.

The figures that are most frequent upon the sepulchral slabs are, however, not such as bear relation to a name or profession, but the commonly adopted symbols of the faith, similar in design and character to those exhibited in the paintings of the catacombs. The Good Shepherd is thus often rudely represented; the figure of Jonah is naturally, from its reference to the Resurrection, also frequently found; and the figure of a man or woman with arms outstretched, in the attitude of prayer, occurs on many of the sepulchral slabs. The anchor, the palm, the crown, and the dove, as being simpler in character and more easily represented, are still more frequently found. The varying use of symbols at different periods has been one of the means which have assisted in determining approximate dates for the inscriptions upon which they are met with. It is a matter of importance, in many instances, to fix a date

to an inscription. Historical and theological controversies hang on such trifles! Most of the early gravestones bear no date; and it was not till the fourth century, that, with many other changes, the custom of carving a date upon them became general. The century to which an inscription belongs may generally be determined with some confidence, either by the style of expression and the nature of the language, or by the engraved character, or some other external indications. Among these latter are the symbols. It has, for instance, been recently satisfactorily proved by the Cavaliere de Rossi that the use of the emblem of the fish in the catacombs extended only to the fourth century, so that the monuments upon which it is found may, with scarcely an exception, be referred to the preceding period. As this emblem went out of use, owing perhaps to the fact that the Christians were no longer forced to seek concealment for their name and profession, the famous monogram of Christ, $\chi\rho$ the hieroglyphic, not only of his name, but of his cross, succeeded to it, and came, indeed, into far more general use than that which the fish had ever attained. The monogram is hardly to be found before the time of Constantine, and, as it is very frequently met with in the inscriptions from the catacombs, it affords an easy means, in the absence of a more specific date, for determining a period earlier than which any special inscription bearing it cannot have originated. Its use spread rapidly during the fourth century. It "became," says Gibbon, with one of his amusing sneers, "extremely fashionable in the Christian world." The story of the vision of Constantine was connected with it, and the Labarum displayed its form in the front of the imperial army. It was thus not merely the emblem of Christ, but that also of the conversion of the Emperor and of the fatal victory of the Church.

It is a remarkable fact, and one which none of the recent Romanist authorities attempt to controvert, that the undoubted earlier inscriptions afford no evidence

of any of the peculiar doctrines of the Roman Church. There is no reference to the doctrine of the Trinity to be found among them; nothing is to be derived from them in support of the worship of the Virgin; her name even is not met with on any monument of the first three centuries; and none of the inscriptions of this period give any sign of the prevalence of the worship of saints. There is no support of the claim of the Roman Church to supremacy, and no reference to the claim of the Popes to be the Vicars of Christ. As the third century advances to its close, we find the simple and crude beginning of that change in Christian faith which developed afterward into the broad idea of the intercessory power of the saints. Among the earlier inscriptions prayers to God or to Christ are sometimes met with, generally in short exclamatory expressions concerning the dead. Thus we find at first such words as these:—

AMERIMNVS
RVFINAE COIV
GI CARISSIME
BENEMEREN
TI SPIRITVM
TVVM DEVS
REFRIGERET

Amerimnus to his dearest wife Rufina well-deserving. May God refresh thy spirit!

And, in still further development,—

ΑΥΡ. ΑΙΛΙΑΝΟC ΠΑΦΛΑΓΩΝ ΘΕΟΥ
ΔΟΥΛΟC ΠΙCΤΟC
ΕΚΟΙΜΗΘΗ ΕΝ ΕΙΡΗΝΗ ΜΗCΘΗ
ΑΥΤΟΥ
Ο ΘΕΟC ΕΙC ΤΟΥC ΑΙΩΝΑC

Aurelius Ælianus, a Paphlagonian, faithful servant of God. He sleeps in peace. Remember him, O God, forever!

Again, two sons ask for their mother,—

DOMINE NE QVANDO
ADVMBRETVR SPIRITVS
VENERES

O Lord, let not the spirit of Venus be shadowed at any time!

From such petitions as these we come by a natural transition to such as are ad-

dressed to the dead themselves, as being members of the same communion with the living, and uniting in prayers with those they had left on earth and for their sake.

VIBAS IN PACE ET PETE PRO NOBIS

Mayst thou live in peace and ask for us!

Or, as in another instance,—

PETE PRO PARENTES TVOS
MATRONATA MATRONA
QVE VIXIT AN. I. DI. LII.

Pray for thy parents, Matronata Matrona! Who lived one year, fifty-two days.

And as we have seen how in the fourth century the desire arose of being buried near the graves of those reputed holy, so by a similar process we find this simple and affectionate petition to the dead passing into a prayer for the dead to those under whose protection it was hoped that they might be. In the multitude of epitaphs, however, these form but a small number. Here is one that begins with a heathen formula:—

SOMNO HETERNALI
AVRELIVS GEMELLVS QVI BIXIT AN—
ET MESES VIII DIES XVIII MATER FILIO
CARISSIMO BENAEMERENTI FECIT IN PA—
[C]ONMANDO BASSILA INNOCENTIA GEMELLI

In Eternal Sleep. Aurelius Gemellus, who lived — years, and eight months, eighteen days. His mother made this for her dearest well-deserving son in peace. I commend to Basilla the innocence of Gemellus.

Basilla was one of the famous martyrs of the time of Valerian and Gallienus.

Here again is another inscription of a curious character, as interposing a saint between the dead and his Saviour. The monogram marks its date.

RVTA OMNIBVS SVBDITA ET ATFABI
LIS BIBET IN NOMINE PETRI
IN PACE

Ruta, subject and affable to all, shall live in the name of Peter, in the peace of Christ.

But it would seem from other inscriptions as if the new practice of calling upon the saints were not adopted without pro-

test. Thus we read, in contrast to the last epitaph, this simple one:—

ZOSIME VIVAS IN NOMINE X̄TI

O Zosimus, mayst thou live in the name of Christ!

And again, in the strongest and most direct words:—

SOLVS DEVS ANIMAM TVAM
DEFENDAD ALEXANDRE

May God alone protect thy spirit, Alexander!

One more inscription and we have done; it well closes the long list:—

QVI LEGERIT VIVAT IN CHRISTO

Whoever shall read this, may he live in Christ!

As the fourth century advanced, the character of the inscriptions underwent great change. They become less simple; they exhibit less faith, and more worldliness; superlatives abound in them; and the want of feeling displays itself in the abundance of words.

We end here our examinations of the testimony of the catacombs regarding the doctrine, the faith, and the lives of the Christians of Rome in the first three centuries. The evidence is harmonious and complete. It leaves no room for skepticism or doubt. There are no contradictions in it. From every point of view, theologic, historic, artistic, the results coincide and afford mutual support. The construction of the catacombs, the works of painting found within them, the inscriptions on the graves, all unite in bearing witness to the simplicity of the faith, the purity of the doctrine, the strength of the feeling, the change in the lives of the vast mass of the members of the early church of Christ. A light had come into the world, and the dark passages of the underground cemeteries were illuminated by it, and manifest its brightness. Wherever it reached, the world was humanized and purified. To the merely outward eye it might at first have seemed faint and dim, but "the kingdom of God cometh not with observation."

THREE OF US.

SUCH a spring day as it was!—the sky all one mild blue, hazy on the hills, warm with sunshine overhead; a soft south-wind, expressive, and full of new impulses, blowing up from the sea, and spreading the news of life all over our brown pastures and leaf-strewn woods. The crocuses in Friend Allis's garden-bed shot up cups of gold and sapphire from the dark mould; slight long buds nestled under the yellow-green leafage of the violet-patch; white and sturdy points bristled on the corner that in May was thick with lilies-of-the-valley, crisp, cool, and fragrant; and in a knotty old apricot-tree two bluebirds and a robin did heralds' duty, singing of summer's procession to come; and we made ready to receive it both in our hearts and garments.

Josephine Boyle, Letty Allis, and I, Sarah Anderson, three cousins as we were, sat at the long window of Friend Allis's parlor, pretending to sew, really talking. Mr. Stepel, a German artist, had just left us; and a little trait of Miss Josephine's, that had occurred during his call, brought out this observation from Cousin Letty:—

"Jo, how could thee let down thy hair so before that man?"

Jo laughed. "Thee is a little innocent, Letty, with your pretty dialect! Why did I let my hair down? For Mr. Stepel to see it, of course."

"That is very evident," interposed I; "but Letty is not so innocent or so wise as to have done wondering at your caprices, Jo; expound, if you please, for her edification."

"I do not pretend to be wise or simple, Sarah; but I didn't think Cousin Josephine had so much vanity."

"You certainly shall have a preacher-bonnet, Letty. How do you know it was vanity, my dear? I saw you show Mr. Stepel your embroidery with the serenest satisfaction; now you made your crewel cherries, and I didn't make my hair; which was vain?"

Letty was astounded. "Thee has a gift of speech, certainly, Jo."

"I have a gift of honesty, you mean. My hair is very handsome, and I knew Mr. Stepel would admire it with real pleasure, for it is a rare color. I took down those curls with quite as simple an intention as you brought him that little picture of Cole's to see."

Josephine was right,—partly, at least. Her hair was perfect; its tint the exact hue of a new chestnut-skin, with golden lights, and shadows of deep brown; not a tinge of red labelled it as auburn; and the light broke on its glittering waves as it does on the sea, tipping the undulations with sunshine, and scattering rays of gold through the long, loose curls, and across the curve of the massive coil, that seemed almost too heavy for her proud and delicate head to bear. Mr. Stepel was excusably enthusiastic about its beauty, and Jo as cool as if it had been a wig. Sometimes I thought this peculiar hair was an expression of her own peculiar character.

Letty said truly that Jo had a gift of speech; and she, having said her say about the hair, dismissed the matter, with no uneasy recurring to it, and took up a book from the table, declaring she was tired of her seam;—she always was tired of sewing! Presently she laughed.

"What is it, Jo?" said I.

"Why, it is 'Jane Eyre,' with Letty Allis's name on the blank leaf. That is what I call an anachronism, spiritually. What do you think about the book, Letty?" said she, turning her lithe figure round in the great chair toward the little Quakeress, whose pretty red head and apple-blossom of a face bloomed out of

her gray attire and prim collar with a certain fascinating contrast.

"I think it has a very good moral tendency, Cousin Jo."

The clear, hazel eyes flashed a most amused comment at me.

"Well, what do you call the moral, Letty?"

"Why,—I should think,—I do not quite know that the moral is stated, Josephine,—but I think thee will allow it was a great triumph of principle for Jane Eyre to leave Mr. Rochester when she discovered that he was married."

Jo flung herself back impatiently in the chair, and began an harangue.

"That is a true world's judgment! And you, you innocent little Quaker girl! think it is the height of virtue not to elope with a married man, who has entirely and deliberately deceived you, and adds to the wrong of deceit the insult of proposing an elopement! Triumph of principle! I should call it the result of common decency, rather,—a thing that the instinct of any woman would compel her to do. My only wonder is how Jane Eyre could continue to love him."

"My dear young friend," said I, rather grimly, "when a woman loves a man, it is apt, I regret to say, to become a fact, not a theory; and facts are stubborn things, you know. It is not easy to set aside a real affection."

"I know that, ma'am," retorted Jo, in a slightly sarcastic tone; "it is a painful truth; still, I do think a deliberate deceit practised on me by any man would decapitate any love I had for him, quite inevitably."

"So it might, in your case," replied I; "for you never will love a man, only your idea of one. You will go on enjoying your mighty theories and dreams till suddenly the juice of that 'little western flower' drips on your eyelids, and then I shall have the pleasure of seeing you caress 'the fair large ears' of some donkey, and hang rapturously upon its bray, till you perhaps discover that he has pretended, on your account solely, to

like roses. when he has a natural proclivity to thistles; and then, pitiable child! you will discover what you have been caressing, and—I spare you conclusions; only, for my part, I pity the animal! Now Jane Eyre was a highly practical person; she knew the man she loved was only a man, and rather a bad specimen at that; she was properly indignant at this further development of his nature, but reflecting in cool blood, afterward, that it was only his nature, and finding it proper and legal to marry him, she did so, to the great satisfaction of herself and the public. You would have made a new ideal of St. John Rivers, who was infinitely the best material of the two, and possibly gone on to your dying day in the belief that his cold and hard soul was only the adamant of the seraph, encouraged in that belief by his real and high principle,—a thing that went for sounding brass with that worldly-wise little philosopher, Jane, because it did not act more practically on his in-born traits.”

“Bah!” said Josephine, “when did you turn gypsy, Sally? You ought to sell *dukkeripen*, and make your fortune. Why don’t you unfold Letty’s fate?”

“No,” said I, laughing. “Don’t you know that the afflatus always exhausts the priestess? You may tell Letty’s fortune, or mine, if you will; but my power is gone.”

“I can tell yours easily, O Sibyl!” replied she. “You will never marry, neither for real nor ideal. You should have fallen in love in the orthodox way, when you were seventeen. You are adaptive enough to have moulded yourself into any nature that you loved, and constant enough to have clung to it through good and evil. You would have been a model wife, and a blessed mother. But now—you are too old, my dear; you have seen too much; you have not hardened yourself, but you have learned to see too keenly into other people. You don’t respect men, ‘except exceptions’; and you have seen so much matrimony that is harsh and unlovable, that you

dread it; and yet—Don’t look at me that way, Sarah! I shall cry!—My dear! my darling! I did not mean to hurt you.—I am a perfect fool!—Do please look at me with your old sweet eyes again!—How could I!”

“Look at Letty,” said I, succeeding at last in a laugh. And really Letty was comical to look at; she was regarding Josephine and me with her eyes wide open like two blue larkspur flowers, her little red lips apart, and her whole pretty surface face quite full of astonishment.

“Wasn’t that a nice little tableau, Letty?” said Josephine, with preternatural coolness. “You looked so sleepy, I thought I’d wake you up with a bit of a scene from ‘Lara Aboukir, the Pirate Chief’; you know we have a great deal of private theatricals at Baltimore; you should see me in that play as Flashmoria, the Bandit’s Bride.”

Letty rubbed her left eye a little, as if to see whether she was sleepy or not, and looked grave; for me, the laugh came easily enough now. Jo saw she had not quite succeeded, so she turned the current another way.

“Shall I tell your fortune now, Letty? Are you quite waked up?” said she.

“No, thee needn’t, Cousin Jo; thee don’t tell very good ones, I think.”

“No, Letty, she shall not vex your head with nonsense. I think your fate is patent; you will grow on a little longer like a pink china-aster, safe in the garden, and in due time marry some good Friend,—Thomas Dugdale, very possibly, —and live a tranquil life here in Slepington till you arrive at a preacher-bonnet, and speak in meeting, as dear Aunt Allis did before you.”

Letty turned pale with rage. I did not think her blonde temperament held such passion.

“I won’t! I won’t! I never will!” she cried out. “I hate Thomas Dugdale, Sarah! Thee ought to know better about me! thee knows I cannot endure him, the old thing!”

This climax was too much for Jo.

With raised brows and a round mouth, she had been on the point of whistling ever since Letty began; it was an old, naughty trick of hers; but now she laughed outright.

"No sort of inspiration left, Sally! I must patch up Letty's fate myself. Flatter not yourself that she is going to be a good girl and marry in meeting; not she! If there's a wild, scatter-brained, handsome, dissipated, godless youth in all Slepington, it is on him that testy little heart will fix,—and think him not only a hero, but a prodigy of genius. Friend Allis will break her heart over Letty; but I'd bet you a pack of gloves, that in three years you'll see that juvenile Quakeress in a scarlet satin hat and feather, with a blue shawl, and green dress, on the arm of a fast young man with black hair, and a cigar in his mouth."

"Why! where *did* thee ever see him, Josey?" exclaimed Letty, now rosy with quick blushes.

The question was irresistible. Jo and I burst into a peal of laughter that woke Friend Allis from her nap, and, bringing her into the parlor, forced us to recover our gravity; and presently Jo and I took leave.

Letty was an orphan, and lived with her cousin, Friend Allis. I, too, was alone; but I kept a tiny house in Slepington, part of which I rented, and Jo was visiting me.

As we walked home, along the quiet street overhung with willows and sycamores, I said to her, "Jo, how came you to know Letty's secret?"

"My dear, I did not know it any more than you; but I drew the inference of her tastes from her character. She is excitable,—even passionate; but her formal training has allowed no scope for either trait, and suppression has but concentrated them. She really pines for some excitement; what, then, could be more natural than that her fancy should light upon some person utterly diverse from what she is used to see? That is simple enough. I hit upon the black hair on the same principle, 'like in difference.' The

cigar seemed wonderful to the half-frightened, all-amazed child; but who ever sees a fast young man without a cigar?"

"I am afraid it is Henry Malden," said I, meditatively; "he is all you describe, but he is also radically bad; besides, having been in the Mexican war, he will have the prestige of a hero to Letty. How can the poor girl be undeceived before it is quite too late?"

"What do you want to undeceive her for, Sally? Do you suppose that will prevent her marrying Mr. Malden?"

"I should think so, most certainly!"

"Not in the least. If you want Letty to marry him, just judiciously oppose it. Go to her, and say you come as a friend to tell her Mr. Malden's faults, and the result will be, she will hate you, and be deeper in love with him than ever."

"You don't give her credit for common sense, Jo."

"Just as much as any girl of her age has in love. Did you ever know a woman who gave up a man she loved because she was warned against him?—or even if she knew his character well, herself? I don't know but there are women who could do it, from sheer religious principle. I believe you might, Sarah. It would be a hard struggle, and wear you to a shadow in mind and body; but you have a conscience, and, for a woman with a heart as soft as pudding, the most thoroughly rigid streak of duty in you; none of which Letty has to depend on. No; if you want to save her, take her away from Slepington; take her to Saratoga, to Newport, to Washington; turn her small head with gayety: she is pretty enough to have a dozen lovers at any watering-place; it is only propinquity that favors Mr. Malden here."

"I can't do that, Josephine. I have not the means, and Miss Allis would not have the will, even if she believed in your prescription."

"Then Letty must stay here and bide her time. You believe in a special Providence, Sarah, don't you?"

"Yes, of course I do."

"Then cannot you leave her to that

care? Circumstances do not work for you. Perhaps it is best that she should marry him, suffer, live, love, and be refined by fire."

My heart sunk at the prospect of these possibilities. Josephine put her arm round me. "Sally," said she, in her softest tone, "I grieved you, dear, this afternoon. I did not mean to. I grieved myself most. Please forgive me!"

"I haven't anything to forgive, Jo," said I. "What you said to me was true, painfully true,—and, being so, for a moment pained me. I should have been much happier to be married, I know; but now I daren't think of it. I have lost a great deal. I have

——'lost my place,

*My sweet, safe corner by the household fire,
Behind the heads of children';*

and yet I do not know that I have not gained a little. It is something, Jo, to know that I am not in the power of a bad, or even an ill-tempered man. I can sit by my fire and know that no one will come home to fret at me,—that I shall encounter no cold looks, no sneers, no bursts of anger, no snarl of stinginess, no contempt of my opinion and advice. I know that now men treat me with respect and attention, such as their wives rarely, if ever, receive from them. Sensitive and fastidious as I am, I do not know whether my gain is not, to me, greater than my loss. I know it ought not to be so,—that it argues a vicious, an unchristian, almost an uncivilized state of society; but that does not affect the facts."

"You frighten me, Sarah. I cannot believe this is always true of men and their wives."

"Neither is it. Some men are good and kind and gentle, gentle-men, even in their families; and every woman believes the man she is to marry is that exception. Jo,—bend your ear down closer,—I thought once I knew such a man,—and,—dear,—I loved him."

"My darling!—but, Sarah, why?"

"Because, as you said, Josey, I was too old; I had seer too much; I would not

give way to an impulse. I bent my soul to know him; I rang the metal on more than one stone, and every time it rang false. I knew, if I married him, I should live and die a wretched woman. Was it not better to live alone?"

"But, Sarah,—if he loved you?"

"He did not,—not enough to hurt himself; he could not love anything so much better than his ease as to suffer, Josey: he was safe. He thought, or said, he loved me; but he was mistaken."

"Safe, indeed! He ought to have been shot!"

"Hush, dear!"

There was a long pause. It was as when you lift a wreck from the tranquil sea and let it fall again to the depths, useless to wave or shore; the black and ghastly hulk is covered; it is seen no more; but the water palpitates with circling rings, trembles above the grave, dashes quick and apprehensive billows upon the sand, and is long in regaining its quiet surface.

"I wonder if there ever was a perfect man," said Jo, at length, drawing a deep sigh.

"You an American girl, Jo, and don't think at once of Washington?"

"My dear, I am bored to death with Washington à l'Américain. A man!—how dare you call him a man?—don't you know he is a myth, an abstraction, a plaster-of-Paris cast? Did you ever hear any human trait of his noticed? Weren't you brought up to regard him as a species of special seraph, a sublime and stainless figure, inseparable from a grand manner and a scroll? Did you ever dare suppose he ate, or drank, or kissed his wife? You started then at the idea: I saw you!"

"You are absurd, Jo. It is true that he is exactly, among us, what demigods were to the Greeks,—only less human than they. But when I once get my neck out of the school-yoke, I do not start at such suggestions as yours; I believe he did comport himself as a man of like passions with others, and was as far from being a hero to his *valet-de-chambre* as anybody."

By this time we were at home, and Jo flung her parasol on the bench in the porch, and sat down beside it with a gesture of weariness and disgust mingled.

"Why will you, of all people, Sarah, quote that tinkling, superficial trash of a proverb, so palpably French, when the true reason why a man is not a hero to his lackey is only because he is seen with a lackey's eyes,—the sight of a low, convention-ridden, narrow, uneducated mind, unable to take a broad enough view to see that a man is a hero because he is a man, because he overleaps the level of his life, and is greater than his race, being one of them? If he were of the heroic race, what virtue in being heroic? it is the assertion of his trivial life that makes his speciality evident,—the shadow that throws out the bas-relief. We chatter endlessly about the immense good of Washington's example: I believe its good would be more than doubled, could we be made, nationally, to see him as a human being, living on 'human nature's daily food,' having mortal and natural wants, tastes, and infirmities, but building with and over all, by the help of God and a good will, the noble and lofty edifice of a patriot manhood, a pure life of duty and devotion, sublime for its very strength and simpleness, heroic because manly and human."

The day had waned, and the sunset lit Josephine's excited eyes with fire: she was not beautiful, but now, if ever, beauty visited her with a transient caress. She looked up and met my eyes fixed on her.

"What is it, Sally?—what do I look like?"

"Very pretty, just now, Jo; your eyes are bright and your cheek flushed: the sunshine suits you. I admire you to-night."

"I am glad," said she, naively. "I often wish to be pretty."

"A waste wish, Jo!—and yet I have entertained it myself."

"It's not so much matter for you, Sarah; for people love you. And besides, you have a certain kind of beauty: your eyes

are beautiful,—rather too sad, perhaps, but fine in shape and tint; and you have a good head, and a delicately outlined face. Moreover, you are picturesque: people look at you, and then look again,—and, any way, love you, don't they?"

"People are very good to me, Jo."

"Oh, yes! we all know that people as a mass are kindly, considerate, and unselfish; that they are given to loving and admiring disagreeable and ugly people; in short, that the millennium has come. Sally, my dear, you are a small hypocrite,—or else—But I think we won't establish a mutual-admiration society to-night, as there are only two of us; besides, I am hungry: let us have tea."

The next day, Josephine left me. As we walked together toward the landing of the steamer, Letty Allis emerged from a green lane to say good-bye, and down its vista I discerned the handsome, lazy person of Henry Malden, but I did not inform Letty of my discovery.

A year passed away,—to me with the old monotonous routine; full of work, not wanting in solace; barren, indeed, of household enjoyments and vicissitudes; solitary, sometimes desolate, yet peaceful even in monotony. But this new spring had not come with such serene neglect to the other two of us three. Against advice, remonstrance, and entreaty from her good friends, Letty Allis had married Henry Malden, and, in attire more tasteful, but quite as far from Quakerism as Josephine had predicted, beamed upon the inhabitants of Slepington from the bow-window, or open door, of a cottage very *ornée* indeed; while the odor of a tolerable cigar served as Mr. Malden's exponent, wherever he abode. And to Josephine had come a loss no annual resurrection should repair: her mother was dead; she, too, was orphaned,—for she had never known her father; her only sister was married far away; and I kept an old promise in going to her for a year's stay at least.

Aunt Boyle's property had consisted chiefly in large cotton mills owned by herself and her twin brother, who, dy-

ing before her, left her all his own share in them. These mills were on a noisy little river in the western part of Massachusetts,—in a valley, narrow, but picturesque, and so far above the level of the sea that the air was keen and pure as among mountains. Mrs. Boyle had removed here from Baltimore, a few years before her own death, that she might be with her brother through his long and fatal illness; and, finding her health improved by change of air, had occupied his house ever since, until one of those typhoid fevers that infest such river-gorges at certain seasons of the year entered the village about the mills, when, in visiting the sick, she took the epidemic herself and died. Josephine still retained the house endeared to her by sad and glad recollections; and it was there I found her, when, after renting the whole of my little tenement at Slepington, I betook myself to Valley Mills at her request.

The cottage where she lived was capacious enough for her wants, and though plain, even to an air of superciliousness, without, was most luxurious within,—made to use and live in; for Mr. Brown, her uncle, was an Englishman, and had never arrived at that height of Transatlantic *ton* which consists in shrouding and darkening all the pleasant rooms in the house, and skulking through life in the basement and attic. Sunshine, cushions, and flowers were Mr. Brown's personal tastes; and plenty of these characterized the cottage. A green terrace between hill and river spread out before the door for lawn and garden, and a tiny conservatory abutted upon the brink of the terrace slope, from a bay-window in the library, that opened sidewise into this winter-garden.

I found Jo more changed than I had expected: this last year of country life had given strength and elasticity to the tall and slender figure; a steady rose of health burned on either cheek; and sorrow had subdued and calmed her quick spirits.

I was at home directly, and a sweet-
VOL. II.

er summer never glowed and blushed over earth than that which installed me in the Nook Cottage. Out of doors the whole country was beautiful, and attainable; within, I had continual resources in my usual work and in Jo's society: for she was one of those persons who never are uninteresting, never fatiguing; a certain salient charm pervaded her conversation, and a simplicity quite original startled you continually in her manner and ways. I liked to watch her about the house; dainty and fastidious in the extreme about some things, utterly careless about others, you never knew where or when either trait would show itself next. She was scrupulous as to the serving of meals, for instance,—almost to a fault; no carelessness, no slight neglect, was admitted here, and always on the spotless damask laid with quaint china stood a tapered vase of white Venice glass, with one, or two, or three blossoms, sometimes a cluster of leaves, the spray of a wild vine, or the tasselled branch of a larch-tree jewelled with rose-red cones, arranged therein with an artist's taste and skill: but perhaps, while she sharply rebuked the maid for a dim spot on her chocolate-pitcher or a grain of sugar spilt on the salver, her white India shawl lay trailed over the divan half upon the floor, and her gloves fluttered on the doorstep till the wind carried them off to find her parasol hanging in the honeysuckle boughs.

But, happily, it is not one's duty to make other people uncomfortable by perpetually tinkering at that trait in them which most offends our own nature; and I thought it more for my good and hers to learn patience myself than undertake to beat her into order; the result of which was peace and good-will that vindicated my wisdom to myself; and I found her, faults and all, sufficiently fascinating and lovable.

A year passed away serenely; and when spring came again, Josephine refused to let me leave her. Our life was quiet enough, but, with such beautiful Nature, and plenty to do, we were not

lonely,—less so because Jo's hands were as open as her heart, and to her all the sick and poor looked, not only for help, but for the rarer consolations of living sympathy and counsel. Her shrewd common sense, her practical capacity, her kindly, cheerful face, her power of appreciating a position of want and perplexity and seeing the best way out of it, and, above all, her deep and fervent religious feeling, made her an invaluable friend to just that class who most needed her.

In the course of this spring we gained an addition to our society, in the person of Mr. Waring, the son of the gentleman who had bought the mills at Mrs. Boyle's death, but who had hitherto conducted them by an overseer. He had recently bought a little island in the middle of the river, just below the dam, and proposed erecting a new mill upon it; but as the Tunxis (the Indian name of our river) was liable to rapid and destructive freshets, the mill required a deep and secure foundation and a lower story of stone.

This implied some skilful engineering, and Mr. Arthur Waring, having studied this subject fully abroad, came on from Boston, and took up his abode in Valley Mills village. Of course, we being his only hope of society in the place, he made our acquaintance early. I rather liked him; his manner was good, his perceptions acute, his tastes refined, and he had a certain strength of will that gave force to a character otherwise common-place. Josephine liked him at once; she laid his shyness and *brusquerie*, which were only the expression of a dominant self-consciousness, to genuine modesty. He was depressed and moody, because he was bored for want of acquaintance, and missed the adulation and caresses that he received at home as an only child; but Jo's swift imagination painted this as the trait of a reflective and melancholy nature disgusted with the world, and pitied him accordingly; a mild way of misanthropic speech, that is apt to infect young men, added to this delusion;

and, with all the energy of her sweet, earnest disposition, Josephine undertook his education,—undertook to teach him faith and hope and charity, to set right his wayward soul, to renovate his bitter opinions, to make him a better and a happier man.

It is a well-known fact in the philosophy of the human mind, that it is apt to gain more by imparting than by receiving; and since philosophy, where it becomes fact, does not mercifully adjust its results to circumstance, but rushes on in implacable grooves, and clears its own track of whatever lies thereon by the summary process of crushing it to dust, it did not pause now for the pure intentions and tender heart which, in teaching another love to men, taught herself love to a man, and learnt far better than her pupil.

Mr. Waring was but a man; he did not love Josephine,—he admired her; he loved nothing but himself, his quiet, his pleasure; and while she ministered to either, he regarded her with a species of affection that put on the mask of a diviner passion and used its language. A thousand little things showed the man fully to me, a cool spectator; but she who needed most the discerning eye regarded this gay bubble as if it had been a jewel.

Perhaps I blame him too severely, for it was against the very heart of my heart that he sinned; possibly I do not allow for the temptation it was to a young man, quite alone in a country village, without resources, and accustomed to the flattery and caresses of a devoted mother, to find himself agreeable in the eyes of a noble and lovable woman. Possibly, in his place, a better man might have sought her society, drawn her out of her reserve for his own delectation, confided in her, worked upon her pity, claimed her care, played on her simplicity and ignorance of the world, crept into her heart and won its strength of emotion and its generous affection,—in short, made love to her, without saying so, honestly and openly. Yet there are some men who would not have done it; and even yet,

while I try to regard Arthur Waring with Christian charity, I feel that I cannot trust him, that I do not respect him,—that, if I dared despise anything God has made, my first contempt would light on him.

In the autumn, while all this was going on, I received a painful and wretched letter from Letty Malden, begging me to come to her. I could not resist such an appeal; and one of Josephine's little nieces having come to spend the winter with her, I hurried to Slepington,—not, I am sure, in the least regretted by Mr. Waring, who had begun to look at me with uneasy and sometimes defiant eyes.

I found a miserable household here. Mr. Malden had in no way reformed. When did marriage ever reform a bad man? On the contrary, he was more dissipated than ever; and whenever he came home, the welcome that waited for him was one little calculated to make home pleasant; for Letty's quick temper blazed up in reproach and reviling that drew out worse recrimination; and even the little, wailing, feeble baby, that filled Letty's arms and consoled her in his absence, was only further cause of strife between her and her husband. Often, as I came down the street and saw the pretty outside of the cottage, waving with creepers, and hedged about with thorns, whose gay berries decked it as if for a festival, I thought of what a good old preacher among the Friends once said to me: "Sarah, thee will live to find shows are often seems; thee sees many a quiet house, with gay windows, that is hell inside."

I soon found that I must stay all winter at Slepington. I had a hard task before me,—to try and teach Letty that she had no right to neglect her own duties because her husband ignored his. But six months of continual dropping seemed to wear a tiny channel of perception; and my presence, as well as the efforts we made together to preserve order, if not serenity, in the house, restored a certain dim hope to Letty's mind, and I began to

see that the "purification by fire" was doing its work, in slow pain, but to a sure end.

Selfish as it was, I cannot say that I felt sorry to return to Jo, who wrote for me in April, urging me to come as soon as I could, for Mr. Waring had fallen from the mill-wall and broken his leg, and the workmen, in their confusion, had carried him to her house, and she wanted me to help her. I learned, on reaching Valley Mills, that the new building on the island had not been completed far enough to resist a heavy freshet, that had swept away part of the first story, where the mortar was not yet hardened; and it was in traversing these wet stones to ascertain the extent of the damage that Mr. Waring had slipped, and, unable to recover his footing, fallen on a heap of stones and received his injury.

My first question to Josephine was, "Where is Mr. Waring's mother?"

"He would not send for her, Sally," said she, "because she is not well, and he feared to startle her."

"H'm!" said I, very curtly.

Josephine looked at me with innocent, grave eyes,—dear, simple child!—and yet, for anybody but herself she would have been sufficiently discerning. This love seemed to have remodelled her nature, to have taken from her all the serpent's wisdom, to have destroyed her common sense, and distorted her view of everything in which Arthur Waring was concerned. She had certainly got on very fast in my absence. I had returned too late.

I had little to do with the care of the invalid; that devolved on Jo; my offers of service were kindly received, but always declined. Nobody could read to him so well as Miss Boyle. Nobody else understood his moods, his humors, his whims; she knew his tastes with ominous exactness. It was she who arranged his meals on the salver with such care and grace, nay, even cooked them at times; for Jo believed, like a rational woman, that intellect and cultivation in-

crease one's capacity for every office,—that a woman of intelligence should be able to excel an ignorant servant in every household duty, by just so much as she excels her in mind. In fact, this was a pleasant life to two persons, but harassing enough for me. Had I been confident of Arthur Waring's integrity, I should have regarded him with friendly and cordial interest; but I had every reason to distrust him. I perceived he had so far insinuated himself into Jo's confidence, that his whole artillery of expressive looks, broken sentences, even caresses, were received by her with entire good faith; but when I asked her seriously if I was to regard Mr. Waring as her lover, she burst into indignant denial, colored scarlet, and was half inclined to be angry with me,—though a certain tremulous key, into which her usually sweet and steady voice broke while she declared he had never spoken to her of love, it was only friendship, witnessed against her that she was apprehensive, sad, perhaps visited with a tinge of that causeless shame which even in a pure and good woman conventionalty constrains, when she has loved a man before he says in plain English, "I love you," though every act and look and tone of his may have carried that significance unmistakably for years. Thank God, there is a day of sure judgment coming, when conventions and shields of usage will save no man from the due vengeance of truth upon falsehood, justice upon smooth and plausible duplicity!

In due time Mr. Waring recovered. If there was any change in his manner to Jo, it was too slight to be seen, though it was felt, and was, after all, the carelessness of a person certain of his foothold in her good graces, rather than the evident withdrawal of attention,—which I could have pardoned even then, had it been the result of honest regret for past carelessness, and stern resolution to repair that past. Whatever it was, Jo perceived that her ideal man was become a real man; but, with a tenacity of nature, for which in my fate-telling I had not

given her credit, she was as constant to the substance as she had been to the dream; and while she lost both health and spirits in the contemplation of Arthur Waring's fitful and heedless manner toward her, and was evidently pained by the discovery of his selfish and politic traits,—to call them by no harsher name,—it was inexpressibly touching to hear the excuses she made for him, to see the all-shielding love with which she veiled his faults, and kept him as a mother would keep her graceless, yet dearest child from animadversion and reproach.

In the mean time I heard often from Letty,—no good news of her husband, but that her child grew more and more a comfort, that her friends were very kind, and always in a tiny postscript some such phrase as this: "I try to be patient, Sarah," or "I don't scold Harry so much as I did, dear." I hoped for Letty, for she persevered.

That summer we saw less than ever of Mr. Waring; he was very busy at the mill in order that it might be far enough advanced to resist the inevitable spring freshets; and besides, we were absent from the Valley some weeks, endeavoring to recruit Jo's failing health at the sea-side. But this was a vain endeavor; that which sapped the springs of her life was past outward cure. She inherited her father's delicate and unreliable constitution, and a nervous organization, whose worst disease is ever the preying of doubt, anxiety, or regret. As winter drew on, she grew no better; a dim, dreamy abstraction brooded over her. She said to me often, with a vague alarm, "Sally, how far off you seem! Do come nearer!" She ceased to talk when we were alone, her step grew languid, her eye deeper,—and its bright expression, when you roused her, was longer in shooting back into the clouded sphere than ever before. She sat for hours by the window, her lovely head resting on its casement, looking out, always out and away, beyond the hills, into the deep spaces of blue air, past cloud and vapor, to the stars. Sudden noises startled her to an extreme degree;

a quick step flushed her cheek with fire and fluttered her breath. How I longed for spring! I hoped all from the delicate ministrations of Nature; though the physician we called gave me no hope of her final recovery. Mr. Waring himself seemed struck with her aspect, and many little signs of friendly interest came from him. As often as he could, he returned to his old haunts; and while the pleasure of his presence and the excitement of his undisguised anxiety wrought on her, Jo became almost her old self for the moment, gay, cheerful, blooming,—alas! with the bloom of feverishness and vain hope.

So spring drew near. The mill was nearly finished. One day in March a warm south-wind “quieted the earth” after a long rain, the river began to stir, its mail of ice to crack and heave under the sun’s rays. I persuaded Jo to take a little drive, and once in the carriage the air reanimated her; she rested against me and talked more than I had known her for weeks.

“What a lovely day!” said she; “how balmy the air is! there is such an expression of rest without despair, such calm expectation! I always think of heaven such days, Sally!—they are like the long sob with which a child finishes weeping. Only to think of never more knowing tears!—that is life indeed!”

A keen pang pierced me at the vibration of her voice as she spoke. I thought to soothe her a little, and said, “Heaven can be no more than love, Jo, and we have a great deal of that on earth.”

“Do we?” answered she, in a tone of grief just tipped with irony,—and then went on: “I believe you love me, Sally. I would trust you with—my heart, if need were. I think you love me better than any one on earth does.”

“I love you enough, dear,” said I; more words would have choked me in the utterance.

Soon we turned homeward.

“Tell John to drive down by the river,” said Josephine,—“I want to see the new mill.”

“But you cannot see it from the road, Jo; the hemlocks stand between.”

“Never mind, Sally; I shall just walk through them; don’t deny me! I want to see it all again; and perhaps the arbutus is in bloom.”

“Not yet, Jo.”

“I can get some buds, then; I want to have some just once.”

We left the carriage, and on my arm Jo strolled through the little thicket of hemlock-trees, green and fragrant. She seemed unusually strong. I began to hope. After much searching, we found the budded flowers; she loved most of all wild blossoms;—no scent breathed from the closed petals; they were not yet kissed by the odor-giving south-wind into life and expression; but Jo looked at them with sad, far-reaching eyes. I think she silently said good-bye to them.

Presently we came out on the steep bank of the river, directly opposite the mill. A heavy timber was thrown across from the shore to the island, on which the workmen from the west side had passed and repassed; it was firm enough for its purpose, but now, wet with the morning’s rain, and high above the grinding ice, it seemed a hazardous bridge. As we stood looking over at the new mill, listening to the slight stir within it, apparently the setting to rights by some lingering workman of such odds and ends as remain after finishing the great whole of such a building, suddenly the cool wind, which had shifted to the north, brought on its waft a most portentous roar. We stood still to listen. Nearer and nearer it swelled, crashing and hissing as it approached. Josephine grasped my arm with convulsive energy, and at that instant we perceived Mr. Waring’s plaid cap pass an open casement. She turned upon me like a wild creature driven to bay. I looked up-stream;—the ice had gathered in one high barrier mixed with flood-wood and timber, and, bearing above all the uprooted trunk of a huge sycamore, was coming down upon the dam like a battering-ram. Jo gasped. “The river is broken up and Arthur is on the

island," said she, in a fearfully suppressed tone, and, swifter than I could think or guess her meaning, she had reached the timber, she was on it,—and with light, untrembling steps half across, when both she and I simultaneously caught sight of Mr. Waring running for dear life to the other and stronger bridge. Jo turned to come back; but the excitement was past that had sustained her; she trembled, she tottered. I ran to meet and aid her. Just then the roots of the great sycamore thundered against the dam; the already heavily pressed structure gave way; with the freed roar of a hurricane, the barrier, the dam, the foot-bridge swept down toward us. She had all but reached the end of the timber,—I stood there to grasp her hand,—when the old tree, whirled down by the torrent, struck the other end of the beam and threw Josephine forward to the bank, dashing her throbbing, panting breast, with all the force of her fall, against the hard ground. I lifted her in my arms. She was white with pain. Presently she opened her eyes and looked up, a flush of rapture glowed all over her face, and then the awful mist of death, gray and rigid, veiled it. Her head dropped on my shoulder; a sharp cry and a rush of scarlet blood passed her lips together; the head lay more heavily,—she was dead. But Arthur Waring never knew how or for what she died!

Five years have passed since that day. Still I live at Nook Cottage; but not alone. Of us three, Josephine is in heaven. Letty is still troubled upon earth; her husband tests her patience and her temper every hour, but both temper and patience are in good training; and if ever Henry Malden is reclaimed, as I begin to see reasons to hope he will be, he will owe it to the continual example and gentle goodness of his wife, who has grown from a petulant, thoughtless girl into a lovely, unselfish, religious woman,

a devoted mother and wife, "refined by fire." For me, the last,—whenever now I say, as I used to say, "Three of us," I mean a new three,—Paul, baby, and me; for Jo was not a prophet. Four years ago, while my heart-ache for her was fresh and torturing, a new pastor came to the little village church of Valley Mills. Mr. Lyman was very good; I have seen other men with as fine natural traits, but I have never seen a man or woman so entirely good. He came to me to console me; for he, too, had just lost a sister, and in listening to his story I for a moment forgot my own, as he meant I should. But I did not love him,—no, not till I discovered, months afterward, that he suffered incessantly from ill-health, and was all alone in the world. I was too much a woman to resist such a plea. I pitied him; I tried to take care of him; and when he asked me if I liked the office of sick-nurse, I told him I liked it well enough to wish it were for life; and now, when he wants to light my eyes out of that dreamy expression that tells him I am re-living the past, and thinking of the dead, he tells me, for the sake of the flash that follows, that I offered myself to him! Perhaps I did. But he is well now; the air of the Tunxis hills, and the rest of a quiet life, partly, I hope, good care also, have restored to him his lost health. And I am what Jo said I should have been,—a blessed mother, as well as a happy wife. The baby that lies across my lap has traits that endear her to me doubly,—traits of each of us three cousins: Josephine's hair on her little nestling head, Letty's apple-blossom complexion, and my eyes, except that they are serene when they are not smiling. I ask only of the love that has given me all this unexpected joy, that my little Jo may have one better trait,—her father's heart; a stronger, tenderer, and purer heart than belonged to any one among "Three of us!"

WHAT A WRETCHED WOMAN SAID TO ME.

ALL the broad East was laced with tender rings
Of widening light ; the Daybreak shone afar ;
Deep in the hollow, 'twixt her fiery wings,
Fluttered the morning star.

A cloud, that through the time of darkness went
With wanton winds, now, heavy-hearted, came
And fell upon the sunshine, penitent,
And burning up with shame.

The grass was wet with dew ; the sheep-fields lay
Lapping together far as eye could see ;
And the great harvest hung the golden way
Of Nature's charity.

My house was full of comfort ; I was propped
With life's delights, all sweet as they could be,
When at my door a wretched woman stopped,
And, weeping, said to me,—

"Its rose-root in youth's seasonable hours
Love in thy bosom set, so blest wert thou ;
Hence all the pretty little red-mouthed flowers
That climb and kiss thee now !

"I loved, but I must stifle Nature's cries
With old dry blood, else perish, I was told ;
Hence the young light shrunk up within my eyes,
And left them blank and bold.

"I take my deeds, all, bad as they have been,—
The way was dark, the awful pitfall bare ;—
In my weak hands, up through the fires of sin,
I hold them for my prayer."

"The thick, tough husk of evil grows about
Each soul that lives," I mused, "but doth it kill ?
When the tree rots, the imprisoned wedge falls out,
Rusted, but iron still.

Shall He who to the daisy has access,
Reaching it down its little lamp of dew
To light it up through earth, do any less,
Last and best work, for you ?"

SONGS OF THE SEA.

NOT Dibdin's; not Barry Cornwall's; not Tom Campbell's; not any of the "Pirate's Serenades" and "I'm afloats!" which appear in the music-shop-windows, illustrated by lithographic vignettes of impossible ships in impracticable positions. These are sung by landsmen yachting in still waters and in sight of green fields, by romantic young ladies in comfortable and unmoving drawing-rooms to the tinkling of Chickering's pianos. What are the songs the sailor sings to the accompaniment of the thrilling shrouds, the booming double-bass of the hollow topsails, and the multitudinous chorus of Ocean? What does the coaster, in his brief walk "three steps and overboard," hum to himself, as he tramps up and down his little deck through the swathing mists of a Bank fog? What sings the cook at the galley-fire in doleful unison with the bubble of his coppers? Surely not songs that exult in the life of the sea. Certainly not, my amateur friend, anything that breathes of mastery over the elements. The sea is a real thing to him. He never is familiar with it, or thinks of it or speaks of it as his slave. It is "a steed that knows his rider," and, like many another steed which the men of the fore-castle have mounted, knows that it can throw its rider at pleasure, and the riders know it too. Now and then a sailor will utter some fierce imprecation upon wind or sea, but it is in the impotence of despair, and not in the conscious, boastful mastery which the land-songs attribute to him. What, then, does the sailor sing?—and does he sing at all?

Certainly the sailor sings. Did you ever walk through Ann Street, Boston, or haunt the purlieus of the Fulton Market? and when there did you never espy a huckster's board covered with little slips of printed paper of the size and shape of the bills-of-fare at the Commonwealth Hotel? They are printed on much coarser paper, and are by no means as

typographically exact as the aforesaid *carte*, or as this page of the "Atlantic Monthly," but they are what the sailor sings. I know they are there, for I once spent a long summer's day in the former place, searching those files for a copy of the delightful ballad sung (or attempted to be sung) by Dick Fletcher in Scott's "Pirate,"—the ballad beginning

"It was a ship, and a ship of fame,
Launched off the stocks, bound for the
main."

I did not find my ballad, and to this day remain in ignorance of what fate befell the "hundred and fifty brisk young men" therein commemorated. But I found what the sailor does sing. It was a miscellaneous collection of sentimental songs, the worn-out rags of the stage and the parlor, or ditties of highwaymen, or ballad narratives of young women who ran away from a rich "parient" with "silver and gold" to follow the sea. The truth of the story was generally established by the expedient of putting the damsel's name in the last verse,—delicately suppressing all but the initial and final letters. The only sea-songs that I remember were other ballads descriptive of piracies, of murders by cruel captains, and of mutinies, with a sprinkling of sea-fights dating from the last war with England.

The point of remark is, that all of these depend for their interest upon a human association. Not one of them professes any concern with the sea or ships for their own sake. The sea is a sad, solemn reality, the theatre upon which the seaman acts his life's tragedy. It has no more of enchantment to him than the "magic fairy palace" of the ballet has to a scene-shifter.

But other songs the sailor sings. The Mediterranean sailor is popularly supposed to chant snatches of opera over his fishing-nets; but, after all, his is only a larger sort of lake, with water of a ques-

tionable saltness. It can furnish dangerous enough storms upon occasion, and, far worse than storms, the terrible white-squall which lies ambushed under sunny skies, and leaps unawares upon the doomed vessel. But the Mediterranean is not the deep sea, nor has it produced the best and boldest navigators. Therefore, although we still seek the sources of our maritime law amid the rock-poised huts (once palaces) of Amalfi, we must go elsewhere for our true sea-songs.

The sailor does not lack for singing. He sings at certain parts of his work;—indeed, he must sing, if he would work. On vessels of war, the drum and fife or boatswain's whistle furnish the necessary movement-regulator. There, where the strength of one or two hundred men can be applied to one and the same effort, the labor is not intermittent, but continuous. The men form on either side of the rope to be hauled, and walk away with it like firemen marching with their engine. When the headmost pair bring up at the stern or bow, they part, and the two streams flow back to the starting-point, outside the following files. Thus in this perpetual "follow-my-leader" way the work is done, with more precision and steadiness than in the merchant-service. Merchantmen are invariably manned with the least possible number, and often go to sea short-handed, even according to the parsimonious calculations of their owners. The only way the heavier work can be done at all is by each man doing his utmost at the same moment. This is regulated by the song. And here is the true singing of the deep sea. It is not recreation; it is an essential part of the work. It mastsheads the topsail-yards, on making sail; it starts the anchor from the domestic or foreign mud; it "rides down the main tack with a will"; it breaks out and takes on board cargo; it keeps the pumps (the ship's,—not the sailor's) going. A good voice and a new and stirring chorus are worth an extra man. And there is plenty of need of both.

I remember well one black night in the mid-Atlantic, when we were beating up

against a stiff breeze, coming on deck near midnight, just as the ship was put about. When a ship is tacking, the tacks and sheets (ropes which confine the clews or lower corners of the sails) are let run, in order that the yards may be swung round to meet the altered position of the ship. They must then be hauled taut again, and belayed, or secured, in order to keep the sails in their place and to prevent them from shaking. When the ship's head comes up in the wind, the sail is for a moment or two edgewise to it, and then is the nice moment, as soon as the head-sails fairly fill, when the main-yard and the yards above it can be swung readily, and the tacks and sheets hauled in. If the crew are too few in number, or too slow at their work, and the sails get fairly filled on the new tack, it is a fatiguing piece of work enough to "board" the tacks and sheets, as it is called. You are pulling at one end of the rope,—but the gale is tugging at the other. The advantages of lungs are all against you, and perhaps the only thing to be done is to put the helm down a little, and set the sails shaking again before they can be trimmed properly.—It was just at such a time that I came on deck, as above mentioned. Being near eight bells, the watch on deck had been not over spry; and the consequence was that our big main-course was slatting and flying out overhead with a might that shook the ship from stem to stern. The flaps of the mad canvas were like successive thumps of a giant's fist upon a mighty drum. The sheets were jerking at the belaying-pins, the blocks rattling in sharp snappings like castanets. You could hear the hiss and seething of the sea alongside, and see it flash by in sudden white patches of phosphorescent foam, while all overhead was black with the flying scud. The English second-mate was stamping with vexation, and, with all his Hs misplaced, storming at the men:—"An'somely the weather main-brace,—'an'somely, I tell you!—'Alf a dozen of you clap on to the main sheet here,—down with 'im!—D'y see 'ere's hall like a midshipman's bag,—heverythink hup-

permost and nothing 'andy.—'Aul 'im in, Hi say!"—But the sail wouldn't come, though. All the most forcible expressions of the Commination-Service were liberally bestowed on the watch. "Give us the song, men!" sang out the mate, at last,— "pull with a will!—together, men!—hal-together now!"—And then a cracked, melancholy voice struck up this chant:

"Oh, the bowline, bully bully bowline,
Oh, the bowline, bowline, HAUL!"

At the last word every man threw his whole strength into the pull,—all singing it in chorus, with a quick, explosive sound. And so, jump by jump, the sheet was at last hauled taut.—I dare say this will seem very much spun out to a seafarer, but landsmen like to hear of the sea and its ways; and as more landsmen than seamen, probably, read the "Atlantic Monthly," I have told them of one genuine sea-song, and its time and place.

Then there are pumping-songs. "The dismal sound of the pumps is heard," says Mr. Webster's Plymouth-Rock Oration; but being a part of the daily morning duty of a well-disciplined merchant-vessel,—just a few minutes' spell to keep the vessel free and cargo unharmed by bilge-water,—it is not a dismal sound at all, but rather a lively one. It was a favorite amusement with us passengers on board the ——— to go forward about pumping-time to the break of the deck and listen. Any quick tune to which you might work a fire-engine will serve for the music, and the words were varied with every fancy. "Pay me the money down," was one favorite chorus, and the verse ran thus:—

Solo. "Your money, young man, is no object to me.

Chorus. Pay me the money down!

Solo. Half a crown's no great amount.

Chorus. Pay me the money down!

Solo and Chorus. (Bis.) Money down, money down, pay me the money down!"

Not much sense in all this, but it served to man and move the brakes merrily. Then there were other choruses, which were heard from time to time,— "And the young gals goes a-

weepin',"—"O long storm, storm along stormy"; but the favorite tune was "Money down," at least with our crew. They were not an avaricious set, either; for their parting ceremony, on embarking, was to pitch the last half-dollars of their advance on to the wharf, to be scrambled for by the land-sharks. But "Money down" was the standing chorus. I once heard, though not on board that ship, the lively chorus of "Off she goes, and off she must go,"—

"Highland day and off she goes,
Off she goes with a flying fore-topsail,
Highland day and off she goes."

It is one of the most spirited things imaginable, when well sung, and, when applied to the topsail-halyards, brings the yards up in grand style.

These are some of the working-songs of the sea. They are not chosen for their sense, but for their sound. They must contain good mouth-filling words, with the vowels in the right place, and the rhythmic ictus at proper distances for chest and hand to keep true time. And this is why the seaman beats the wind in a trial of strength. The wind may whistle, but it cannot sing. The sailor does not whistle, on shipboard at least, but does sing.

Besides the working-day songs, there are others for the fore-castle and dog-watches, which have been already described. But they are seldom of the parlor pattern. I remember one lovely moonlight evening, off the Irish coast, when our ship was slipping along before a light westerly air,—just enough of it for everything to draw, and the ship as steady as Ailsa Crag, so that everybody got on deck, even the chronically sea-sick passengers of the steerage. There was a boy on board, a steerage passenger, who had been back and forth several times on this Liverpool line of packets. He was set to singing, and his sweet, clear voice rang out with song after song,—almost all of them sad ones. At last one of the crew called on him for a song which he made some demur at singing. I re-

member the refrain well (for he *did* sing it at last) ; it ran thus :—

“ My crew are tried, my bark’s my pride,
I’m the Pirate of the Isles.”

It was no rose-water piracy that the boy sang of; it was the genuine pirate of the Isle of Pines,—the gentleman who before the days of California and steamers was the terror of the Spanish Main. He was depicted as falling in deadly combat with a naval cruiser, after many desperate deeds. What was most striking to us of the cabin was, that the sympathy of the song, and evidently of the hearers, was all on the side of the defier of law and order. There was no nonsense in it about “islands on the face of the deep where the winds never blow and the skies never weep,” which to the parlor pirate are the indications of a capital station for wood and water, and for spending his honeymoon. It was downright cutting of throats and scuttling of ships that our youngster sang of, and the grim faces looked and listened approvingly, as you might fancy Ulysses’s veterans hearkening to a tale of Troy.

There is another class of songs, half of the sea, half of the shore, which the fishermen and coasters croon in their lonely watches. Such is the rhyme of “Uncle Peleg,” or “Pillick,” as it is pronounced,—probably an historical ballad concerning some departed worthy of the Folger family of Nantucket. It begins—

“ Old Uncle Pillick he built him a boat
On the ba-a-ck side of Nantucket P’int;
He rolled up his trowsers and set her afloat
From the ba-a-ck side of Nantucket P’int.”

Like “Christabel,” this remains a fragment. Not so the legend of “Captain Cottington,” (or Coddington,) which perhaps is still traditionally known to the young gentlemen at Harvard. It is marked by a bold and ingenious metrical novelty.

“ Captain Cottington he went to sea,
Captain Cottington he went to sea,
Captain Cottington he went to sea-e-e,
Captain Cottington he went to sea.”

The third verse of the next stanza announces that he didn’t go to sea in a

schoo-oo-ooner,—of the next that he went to sea in a bri-i-g,—and so on. We learn that he got wrecked on the “Ba-ha-ha-hamys,” that he swam ashore with the papers in his hat, and, I believe, entered his protest at the nearest “Counsel’s” (*Anglicé*, Consul’s) dwelling.

For the amateur of genuine ballad verse, here is a field quite as fertile as that which was reaped by Scott and Ritson amid the border peels and farm-houses of Liddesdale. It is not unlikely that some treasures may thus be brought to light. The genuine expression of popular feeling is always forcible, not seldom poetic. And at any rate, these wild bits of verse are redolent of the freshness of the sea-breeze, the damps of the clinging fog, the strange odors of the caboose-cookery, of the curing of cod, and of many another “ancient and fish-like smell.” Who will tell us of these songs, not indeed of the deep sea, but of soundings? What were the stanzas which Luckie Mucklebackit sang along the Portanferry Sands? What is the dredging-song which the oyster “come of a gentle kind” is said to love?

These random thoughts may serve to indicate to the true seeker new and unworked mines of rhythmic ore. We are crying continually, that we have no national literature, that we are a nation of imitators and plagiarists. Why will not some one take the trouble to learn what we have? This does not mean that amateurs should endeavor to write such ballad fragments and popular songs,—because that cannot be done; such things grow,—they are not made. If the sea wants songs, it will have them. It is only suggested here that we look about us and ascertain of what lyric blessings we may now be the unconscious possessors. Can it be that oars have risen and fallen, sails flapped, waves broken in thunder upon our shores in vain? that no whistle of the winds, or moan of the storm-foreboding seas has waked a responsive chord in the heart of pilot or fisherman? If we are so poor, let us know our poverty.

And now to bring these desultory remarks to a practical conclusion. I have written these seemingly trifling fragments with a serious purpose. It is to show that the seaman has little or no art or part in the poetry of the seas. I have put down facts, have given what experience I have had of some of the idiosyncrasies of the fore-castle. The poetry of the sea has been written on shore and by landmen. Falconer's "Shipwreck" is a clever nautical tract, written in verse,—or if it be anything more, it is but the solitary exception which proves and enforces the rule. Midshipmen have written ambitious verses about the sea; but by the time the young gentlemen were promoted to the ward-room they have dropped the habit or found other themes for their stanzas. In truth, the stern manliness of his calling forbids the seaman to write poetry. He acts it. His is a profession which leaves no room for any assumed feeling or for any reflective tendencies. His instincts are developed, rather than his reason. He has no time to speculate. He must be prepared to lay his hand on the right rope, let the night be the darkest that ever came down upon the waves. He obeys orders, heedless of consequences; he issues commands amid the uproar and tumult of pressing emergencies. There is no chance for quackery in his work. The wind and the wave are infallible tests of all his knots and splices. He cannot cheat them. The gale and the lee-shore are not pictures, but fierce

realities, with which he has to grapple for life or death. The soldier and the fireman may pass for heroes upon an assumed stock of courage; but the seaman must be a brave man in his calling, or Nature steps in and brands him coward. Therefore he cares little about the romance of his duties. If you would win his interest and regard, it must be on the side of his personal and human sensibilities. Cut off during his whole active life from any but the most partial sympathy with his kind, he yearns for the life of the shore, its social pleasures and its friendly greetings. Captains, whose vessels have been made hells-afloat by their tyranny, have found abundant testimony in the courts of law to their gentle and humane deportment on land. Therefore, when you would address seamen effectively, either in acts or words, let it be by no shallow mimicry of what you fancy to be their life afloat. It will be at best but "shop" to them, and we all know how distasteful that is in the mouth of a stranger to our pursuits. They laugh at your clumsy imitations, or are puzzled by your strange misconceptions. It is painful to see the forlorn attempts which are made to raise the condition of this noble race of men, to read the sad nonsense that is perpetrated for their benefit. If you wish really to benefit them, it must be by raising their characters as men; and to do this, you must address them as such, irrespectively of the technicalities of their calling.

THE KINLOCH ESTATE, AND HOW IT WAS SETTLED.

CHAPTER I.

"MILDRED, my daughter, I am faint. Run and get me a glass of cordial from the buffet."

The girl looked at her father as he sat in his bamboo chair on the piazza, his pipe just let fall on the floor, and his face covered with a deadly pallor. She ran

for the cordial, and poured it out with a trembling hand.

"Shan't I go for the doctor, father?" she asked.

"No, my dear, the spasm will pass off presently." But his face grew more ashy pale, and his jaw drooped.

"Dear father," said the frightened girl

"what shall I do for you? Oh, dear, if mother were only at home, or Hugh, to run for the doctor!"

"Mildred, my daughter," he gasped with difficulty, "the blacksmith,—send for Ralph Hardwick,—quick! In the ebony cabinet, middle drawer, you will find—Oh! oh!—God bless you, my daughter!—God bless!"—

The angels, only, heard the conclusion of the sentence; for the speaker, Walter Kinloch, was dead, summoned to the invisible world without a warning and with hardly a struggle.

But Mildred thought he had fainted, and, raising the window, called loudly for Lucy Ransom, the only female domestic then in the house.

Lucy, frightened out of her wits at the sudden call, came rushing to the piazza, flat-iron in hand, and stood riveted to the spot where she first saw the features on which the awful shadow of death had settled.

"Rub his hands, Lucy!" said Mildred. "Run for some water! Get me the smelling-salts!"

Lucy attempted to obey all three orders at once, and therefore did nothing.

Mildred held the unresisting hand. "It is warm," she said. "But the pulse,—I can't find it."

"Deary, no," said Lucy, "you won't find it."

"Why, you don't mean?"—

"Yes, Mildred, he's dead!" And she let fall her flat-iron, and covered her face with her apron.

But Mildred kept chafing her father's temples and hands,—calling piteously, in hopes to get an answer from the motionless lips. Then she sank down at his feet, and clasped his knees in an agony of grief.

A carriage stopped at the door, and a hasty step came up the walk.

"Lucy Ransom," said Mrs. Kinloch, (for it was she, just returned from her drive,) "Lucy Ransom, what are you blubbering about? Here on the piazza, and with your flat-iron! What is the matter?"

"Matter enough!" said Lucy. "See!—see Mr."— But the sobs were too frequent. She became choked, and fell into an hysterical paroxysm.

By this time Mrs. Kinloch had stepped upon the piazza, and saw the drooping head, the dangling arms, and the changed face of her husband. "Dead! dead!" she exclaimed. "My God! what has happened? Mildred, who was with him? Was the doctor sent for? or Squire Clamp? or Mr. Rook? What did he say to you, dear?" And she tried to lift up the sobbing child, who still clung to the stiffening knees where she had so often climbed for a kiss.

"Oh, mother! *is* he dead?—no life left?"

"Calm yourself, my dear child," said Mrs. Kinloch. "Tell me, did he say anything?"

Mildred replied, "He was faint, and before I could give him the cordial he asked for he was almost gone. 'The blacksmith,' he said, 'send for Ralph Hardwick'; then he said something of the ebony cabinet, but could not speak the words which were on his lips." She could say no more, but gave way to uncontrollable tears and sobs.

By this time, Mrs. Kinloch's son, Hugh Branning, who had been to the stable with the horse and carriage, came whistling through the yard, and cutting off weeds or twigs along the path with sharp cuts of his whip.

"Which way is the wind now?" said he, as he approached; "the governor asleep, Mildred crying, and you scolding, mother?" In a moment, however, the sight of the ghastly face transfixed the thoughtless youth, as it had done his mother; and, dropping his whip, he stood silent, awe-struck, in the presence of the dead.

"Hugh," said Mrs. Kinloch, speaking in a very quiet tone, "go and tell Squire Clamp to come over here."

In a few minutes the dead body was carried into the house by George, the Asiatic servant, aided by a villager who happened to pass by. Squire Clamp, the lawyer of the town, came and had a con-

ference with Mrs. Kinloch respecting the funeral. Neighbors came to offer sympathy, and aid, if need should be. Then the house was put in order, and crape hung on the door-handle. The family were alone with their dead.

On the village green the boys were playing a grand game of "round ball," for it was a half-holiday. The clear, silvery tones of the bell were heard, and we stopped to listen. Was it a fire? No, the ringing was not vehement enough. A meeting of the church? In a moment we should know. As the bell ceased, we looked up to the white taper spire to catch the next sound. One stroke. It was a death, then,—and of a man. We listened for the age tolled from the belfry. Fifty-five. Who had departed? The sexton crossed the green on his way to the shop to make the coffin, and informed us. Our bats and balls had lost their interest for us; we did not even ask our tally-man, who cut notches for us on a stick, how the game stood. For Squire Walter Kinloch was the most considerable man in our village of Innisfield. Without being highly educated, he was a man of reading and intelligence. In early life he had amassed a fortune in the China trade, and with it he had brought back a deeply bronzed complexion, a scar from the creese of a Malay pirate, and the easy manners which travel always gives to observant and sensible men. But his rather stately carriage produced no envy or ill-will among his humbler neighbors, for his superiority was never questioned. Men bowed to him with honest goodwill, and boys, who had been flogged at school for confounding Congo and Coromandel, and putting Borneo in the Bight of Benin, made an awkward obeisance and stared wonderingly, as they met the man who had actually sailed round the world, and had, in his own person, illustrated the experiment of walking with his head downwards among the antipodes. His house had no rival in the country round, and his garden was considered a miracle of art, having, in popular belief, all the fruits, flowers, and shrubs that had

been known from the days of Solomon to those of Linnæus. Prodigious stories were told of his hoard of gold, and some of the less enlightened thought that even the outlandish ornaments of the balustrade over the portico were carven silver. Curious vases adorned the hall and side-board; and numberless quaint trinkets, whose use the villagers could not even imagine; gave to the richly-furnished rooms an air of Oriental magnificence. Tropical birds sang or chattered in cages, and a learned but lawless parrot talked, swore, or made mischief, as he chose. The tawny servant George, brought by Mr. Kinloch from one of the islands of the Pacific, completed his claims upon the admiration of the untravelled.

He was just ready to enjoy the evening of life, when the night of death closed upon him with tropic suddenness. He left one child only, his daughter Mildred, then just turned of eighteen; and as Mrs. Kinloch had only one son to claim her affection, the motherless girl would seem to be well provided for. Mildred was sweet-tempered, and her step-mother had hitherto been discreet and kind.

The funeral was over, and the townspeople recovered from the shock which the sudden death had caused. Administration was granted to the widow conjointly with Squire Clamp, the lawyer, and the latter was appointed guardian for Mildred during her minority.

Squire Clamp was an ill-favored man, heavy-browed and bald, and with a look which, in a person of less consequence, would have been called "hang-dog,"—owing partly, no doubt, to the tribulation he had suffered from his vixen spouse, whose tongue was now happily silenced. He was the town's only lawyer, (a fortunate circumstance,) so that he could frequently manage to receive fees for advice from both parties in a controversy. He made all the wills, deeds, and contracts, and settled all the estates he could get hold of. But no such prize as the Kinloch property had ever before come into his hands.

If Squire Clamp's reputation for

shrewdness had belonged to an irreligious man, it would have been of questionable character; but as he was a zealous member of the church, he was protected from assaults upon his integrity. If there were suspicions, they were kept close, not bruited abroad.

He was now an almost daily visitor at the widow Kinloch's. What was the intricate business that required the constant attention of a legal adviser? The settlement of the estate, so far as the world knew, was an easy matter. The property consisted of the dwelling-house, a small tract of land near the village, a manufactory at the dam, by the side of Ralph Hardwick's blacksmith's shop, and money, plate, furniture, and stocks. There were no debts. There was but one child, and, after the assignment of the widow's dower, the estate was Mildred's. Nothing, therefore, could be simpler for the administrators. The girl trusted to the good faith of her step-mother and the justice of the lawyer, who now stood to her in the place of a father. She was an orphan, and her innocence and childlike dependence would doubtless be a sufficient spur to the consciences of her protectors. So the girl thought, if she thought at all,—and so all charitable people were bound to think.

How wearily the days passed during the month after the funeral! The shadow of death seemed to darken everything. Doors creaked dismally when they were opened. The room where the body had been laid seemed to have grown a century older than the other parts of the once bright and cheerful house,—its atmosphere was so stagnant and full of mould. The family spoke only in suppressed tones; their countenances were as sad as their garments. All this was terrible to the impressible, imaginative, and naturally buoyant temper of Mildred. It was like dwelling in a tomb, and her heart cried out for very loneliness. She must do something to take her mind out of the sunless vault,—she must resume her relations with the dwellers in the upper air. All at once she thought of her

father's last words,—of Ralph Hardwick, and the ebony cabinet. It was in the next room. She opened the door, half expecting to see some bodiless presence in the silent space. She could hear her own heart beat between the tickings of the great Dutch clock, as she stepped across the floor. How still was everything! The air tingled in her ears as though now disturbed for the first time.

She opened the cabinet, which was not locked, and pulled out the middle drawer. She found nothing but a dried rose-bud and a lock of sunny hair wrapped in a piece of yellowed paper. Was it her mother's hair? As Mildred remembered her mother, the color of her hair was dark, not golden. Still it might have been cut in youth, before its hue had deepened. And what a world of mystery, of feeling, of associations there was in that scentless and withered rose-bud! What fair hand had first plucked it? What pledge did it carry? Was the subtle aroma of love ever blended with its fragrance? Had her father borne it with him in his wanderings? The secret was in his coffin. The struggling lips could not utter it before they were stiffened into marble. Yet she could not believe that these relics were the sole things to which he had referred. There must have been something that more nearly concerned her,—something in which the blacksmith or his nephew was interested.

CHAPTER II.

IN order to show the position of Mrs. Kinloch and her son in our story, it will be necessary to make the reader acquainted with some previous occurrences.

Six years before this date, Mrs. Kinloch was the Widow Branning. Her husband's small estate had melted like a snow-bank in the liquidation of his debts. She had only one child, Hugh, to support; but in a country town there is generally little that a woman can do to earn a livelihood; and she might often have suffered from want, if the neighbors had not relieved her. If she left her house for

any errand, (locks were but seldom used in Innisfield,) she would often on her return find a leg of mutton, a basket of apples or potatoes, or a sack of flour, conveyed there by some unknown hands. In winter nights she would hear the voices of Ralph Hardwick, the village blacksmith, and his boys, as they drew sled-loads of wood, ready cut and split, to keep up her kitchen fire. Other friends ploughed and planted her garden, and performed numberless kind offices. But, though aided in this way by charity, Mrs. Branning never lost her self-respect nor her standing in the neighborhood.

Everybody knew that she was poor, and she knew that everybody knew it; yet so long as she was not in absolute want, and the poor-house, that bugbear of honest poverty, was yet far distant, she managed to keep a cheerful heart, and visited her neighbors on terms of entire equality.

At this period Walter Kinloch's wife died, leaving an only child. During her sickness, Mrs. Branning had been sent for to act as nurse and temporary housekeeper, and, at the urgent request of the widower, remained for a time after the funeral. Weeks passed, and her house was still tenantless. Mildred had become so much attached to the motherly widow and her son, that she would not allow the servants to do anything for her. So, without any definite agreement, their relations continued. By-and-by the village gossips began to query and surmise. At the sewing-society the matter was fully discussed.

Mrs. Greenfield, the doctor's wife, admitted that it would be an excellent match, "jest a child apiece, both on 'em well brought up, used to good company, and all that; but, land's sakes! he, with his mint o' money, a'n't a-goin' to marry a poor widdier that ha'n't got nothin' but her husband's pictur' and her boy,—not he!"

Others insinuated that Mrs. Branning knew what she was about when she went to Squire Kinloch's, and his wife was 'most gone with consumption. "'Twasn't a mite strange that little Mildred took to

her so kindly; plenty of women could find ways to please a child, if so be they could have such a chance to please themselves."

The general opinion seemed to be that Mrs. Branning would marry the Squire, if she could get him; but that as to his intentions, the matter was quite doubtful. Nevertheless, after being talked about for a year, the parties were duly published, married, and settled down into the quiet routine of country life.

Doubtless the accident of daily contact was the secret of the match. Had Mrs. Branning been living in her own poorly-furnished house, Mr. Kinloch would hardly have thought of going to seek her. But as mistress of his establishment she had an opportunity to display her housewifely qualities, as well as to practise those nameless arts by which almost any clever woman knows how to render herself agreeable.

The first favorable impression deepened, until the widower came to believe that the whole parish did not contain so proper a person to be the successor of Mrs. Kinloch, as his housekeeper. Their union, though childless, was as happy as common; there was nothing of the romance of a first attachment,—little of the tenderness that springs from fresh sensibilities, for she at least was of a matter-of-fact turn. But there was a constant and hearty good feeling, resulting from mutual kindness and deference.

If the step-mother made any difference in her treatment of the two children, it was in favor of the gentle Mildred. And though the Squire naturally felt more affection for his motherless daughter, yet he was proud of his step-son, gave him the advantages of the best schools, and afterwards sent him for a year to college. But the lad's spirits were too buoyant for the sober notions of the Faculty. He was king in the gymnasium, and was minutely learned in the natural history and botany of the neighborhood; at least, he knew all the haunts of birds, rabbits, and squirrels, as well as the choicest orchards of fruit.

After repeated admonitions without ef-

fect, a letter was addressed to his step-father by vote at a Faculty-meeting. A damsel at service in the President's house overheard the discussion, and found means to warn the young delinquent of his danger; for she, as well as most people who came within the sphere of his attraction, felt kindly toward him.

The stage-coach that conveyed the next morning's mail to Innisfield carried Hugh Branning as a passenger. Alighting at the post-office, he took out the letter superscribed in the well-known hand of the President, pocketed it, and returned by the next stage to college. This prank only moved the Squire to mirth, when he heard of it. He knew that Hugh was a lad of spirit,—that in scholarship he was by no means a dunce; and as long as there was no positive tendency to vice, he thought but lightly of his boyish peccadilloes. But it was impossible for such irregularities to continue, and after a while Mr. Kinloch yielded to his stepson's request and took him home.

Next year it was thought best that the young man should go to sea, and a midshipman's commission was procured for him. Now, for the second time, after an absence of three years, Hugh was at home in all the dignity of navy blue, anchor buttons, glazed cap, and sword.

CHAPTER III.

"I HAVE brought you the statement of the property, Mrs. Kinloch," said Mr. Clamp. "It is merely a legal form, embracing the items which you gave to me; it must be returned at the next Probate term."

Mrs. Kinloch took the paper and glanced over it.

"This statement must be sworn to, Mrs. Kinloch."

"By you?"

"We are joined in the administration, and both must swear to it."

There was a pause. Mrs. Kinloch, resting her hands on her knee, tossed the hem of her dress with her foot, as though meditating.

"I shall of course readily make oath to the schedule," he continued,—“at least, after you have done so; for I have no personal knowledge of the effects of the deceased.”

His manner was decorous, but he regarded her keenly. She changed the subject.

"People seem to think I have a mint in the house; and *such* bills as come in! Sawin, the cabinet-maker, has sent his to-day, as soon as my husband is fairly under ground: forty dollars for a cherry coffin, which he made in one day. Cleaver, the butcher, too, has sent a bill running back for five years or more. Now I *know* that Mr. Kinloch never had an ounce of meat from him that he didn't pay for. If they all go on in this way, I sha'n't have a cent left. Everybody tries to cheat the widow"——

"And orphan," interposed Mr. Clamp.

She looked at him quietly; but he was imperturbable.

"We must begin to collect what is due," she continued.

"Did you refer to the notes from Ploughman?" asked Mr. Clamp. "He is perfectly good; and he will pay the interest till we want to use the money."

"I wasn't thinking of Ploughman," she replied, "but of Mark Davenport, Uncle Ralph Hardwick's nephew. They say he is a teacher in one of the fashionable schools in New York,—and he must be able to pay, if he's ever going to."

"Well, when he comes on here, I will present the notes."

"But I don't intend to wait till he comes; can't you send the demands to a lawyer where he is?"

"Certainly, if you wish it; but that course will necessarily be attended with some expense."

"I choose to have it done," said Mrs. Kinloch, decisively. "Mildred, who has always been foolishly partial to the young upstart, insists that her father intended to give up the notes to Mark, and she thinks that was what he wanted to send for Uncle Ralph about, just before he died. I don't believe it, and I don't

intend to fling away *my* money upon such folks."

"You are quite right, ma'am," said the lawyer. "The inconsiderate generosity of school-children would be a poor basis for the transactions of business."

"And besides," continued Mrs. Kinloch, "I want the young man to remember the blacksmith's shop that he came from, and get over his ridiculous notion of looking up to our family."

"Oh ho!" said Mr. Clamp, "that is it? Well, you are a sagacious woman,"—looking at her with unfeigned admiration.

"I can see through a millstone, when there is a hole in it," said Mrs. Kinloch. "And I mean to stop this nonsense."

"To be sure,—it would be a very unequal match in every way. Besides, I'm told that he isn't well-grounded in doctrine. He even goes to Brooklyn to hear Torchlight preach." And Mr. Clamp rolled up his eyes, interlocking his fingers, as he was wont when at church-meeting he rose to exhort.

"I don't pretend to be a judge of doctrine, further than the catechism goes," said the widow; "but Mr. Rook says that Torchlight is a dangerous man, and will lead the churches off into infidelity."

"Yes, Mrs. Kinloch, the free-thinking of this age is the fruitful parent of all evil,—of Mormonism, Unitarianism, Spiritualism, and of all those forms of error which seek to overthrow"—

There was a crash in the china-closet. Mrs. Kinloch went to the door, and leading out Lucy Ransom, the maid, by the ear, exclaimed, "You hussy, what were you there for? I'll teach you to be listening about in closets," (giving the ear a fresh tweak,) "you eavesdropper!"

"Quit!" cried Lucy. "I didn't mean to listen. I was there rubbin' the silver 'fore you come. Then I didn't wanter come out, for I was afeard."

"What made the smash, then?" demanded Mrs. Kinloch.

"I was settin' things on the top shelf, and the chair tipped over."

"Don't make it worse by fibbing! If

that was so, how came the chair to tip the way it did? You were trying to peep over the door. Go to the kitchen!"

Lucy went out with fallen plumes. Mr. Clamp took his hat to go also.

"Don't go till I get you the notes," said Mrs. Kinloch.

As she brought them, he said, "I will send these by the next mail, with instructions to collect."

While his hand was on the latch, she spoke again:—

"Mr. Clamp, did you ever look over the deed of the land we own about the dam where the mill stands?"

"No, ma'am, I have never seen it."

"I wish you would have the land surveyed according to this title," she said. "Quite privately, you know. Just have the line run, and let me know about it. Perhaps it will be as well to send over to Riverbank and get Gunter to do it; he will keep quiet about it."

Mr. Clamp stood still a moment. Here was a woman whom he was expecting to lead like a child, but who on the other hand had fairly bridled and saddled *him*, so that he was driven he knew not whither.

"Why do you propose this, may I ask, Mrs. Kinloch?"

"Oh, I have heard," she replied, carelessly, "that there was some error in the surveys. Mr. Kinloch often talked of having it corrected, but, like most men, put it off. Now, as we may sell the property, we shall want to know what we have got."

"Certainly, Mrs. Kinloch, I will follow your prudent suggestions,"—adding to himself, as he walked away, "I shall have to be tolerably shrewd to get ahead of that woman. I wonder what she is driving at."

CHAPTER IV.

RALPH HARDWICK was the village blacksmith. His shop stood on the bank of the river, not far from the dam. The great wheel below the flume rolled all day, throwing over its burden of diamond

drops, and tilting the ponderous hammer with a monotonous clatter. What a palace of wonders to the boys was that grim and sooty shop!—the roar of the fires, as they were fed by the laboring bellows; the sound of water, rushing, gurgling, or musically dropping, heard in the pauses; the fiery shower of sparkles that flew when the trip-hammer fell; and the soft and glowing mass held by the smith's tongs with firm grasp, and turning to some form of use under his practised eye! How proud were the young amateur blacksmiths when the kind-hearted owner of the shop gave them liberty to heat and pound a bit of nail-rod, to mend a skate or a sled-runner, or sharpen a pronged fish-spear! Still happier were they, when, at night, with his sons and nephew, they were allowed to huddle on the forge, sitting on the bottoms of old buckets or boxes, and watching the fire, from the paly blue border of flame in the edge of the damp charcoal, to the reddening, glowing column that shot with an arrowy stream of sparks up the wide-throated chimney. How the dark rafters and nail-pierced roof grew ruddy as the white-hot ploughshare or iron bar was drawn from the fire!—what alternations of light and shadow! No painter ever drew figure in such relief as the blacksmith presented in that wonderful light, with his glistening face, his tense muscles, and his upraised arm.

Alas! the hammer is still; the wheel dashes no more the glittering spray; the fire has died out in the forge; the blacksmith's long day's work is done!

He settled in Innisfield when it was but a district attached to a neighboring town. There were but three or four houses in the now somewhat populous village. He came on foot, driving his cow; his wife following in the wagon, with their little stock of household goods,—not forgetting his hammer, more potent than Prospero's wand. The minister, the doctor, and Squire Kinloch, who constituted the aristocracy, yielded precedence in date to Ralph Hardwick, Knight of the Ancient Order of the Anvil.

So he toiled, faithful to his calling. By day the din of his hammer rarely ceased, and by night the flame and sparks from his chimney were a Pharos to all travellers approaching the town. Children were born to him, for which he blessed God, and worked the harder. He attained a moderate prosperity, secure from want, but still dependent upon labor for bread. At length his wife died; he wept like a true and faithful husband as he was, and thenceforth was both mother and father to his babes.

During all his life he kept Sunday with religious scrupulousness, and with his family went to the house of worship in all weathers. From the very first he had been leader of the choir, and had given the pitch with a fork hammered and tuned by his own hands. With a clear and sympathetic voice, he had such an instinctive taste and power of expression, that his song of penitence or praise was far more devotional than the labored efforts of many more highly cultivated singers. Music and poetry flowed smoothly and naturally from his lips, but in uttering the common prose of daily life his organs were rebellious. The truth must be spoken,—he stammered badly, incurably. Whether it was owing to the attempt to overcome his impediment by making his speech musical, or to the cadences of his hammer beating time while his brain was shaping its airy fancies, his thoughts ran naturally in verse.

Do not smile at the thought of Vulcan's callused fingers touching the chords of the lyre to delicate music. The sun shone as lovingly upon the swart face of the blacksmith in his shop-door, as upon the scholar at his library-window. "Poetry was an angel in his breast," making his heart glad with her heavenly presence; he did not "make her his drudge, his maid-of-all-work," as professional verse-makers do.

Mr. Hardwick's younger sister was married to a hard-working, stern, puritanical man named Davenport, (not her first love,) who removed to a Western

State when it was almost a wilderness, cleared for himself a farm, and built a log-house. The toil and privations of frontier life soon wrought their natural effects upon Mrs. Davenport's delicate constitution. She fell into a rapid decline and died. Her husband was seized with a fever the summer after, and died also, leaving two children, Mark and Anna. The blacksmith had six motherless children of his own; but he set out for the West, and brought the orphans home with him. He thenceforth treated them like his own offspring, manifesting a woman's tenderness as well as a father's care for them.

Mark was a comely lad, with the yellow curling hair, the clear blue eyes, and the marked symmetry of features that belonged to his uncle. He had an inborn love of reading and study; he was first in his class at every winter's school, and had devoured all the books within his reach. Then he borrowed an old copy of Adam's Latin Grammar from Dr. Greenfield, and committed the rules to memory without a teacher. That was his introduction to the classics.

But Mr. Hardwick believed in the duty and excellence of work, and Mark, as well as his cousins, was trained to make himself useful. So the Grammar was studied and Virgil read at chance intervals, when a storm interrupted out-door work, or while waiting at the upper mill for a grist, or of nights at the shop by the light of the forge fire. The paradigms were committed to memory with an anvil accompaniment; and long after, he never could scan a line of Homer, especially the oft-repeated

Τὸν δ' αὖ Τηλέμαχος πεπνυμένος ἀντίον ἦν δα,

without hearing the ringing blows of his uncle's hammer keeping time to the verse.

At sixteen years of age he was ready to enter college, though he had received little aid in his studies, except when some schoolmaster who was versed in the humanities chanced to be hired for the winter. But his uncle was not able to sup-

port him at any respectable university, and the lad's prospects for such an education as he desired seemed to be none of the best.

At this point an incident occurred which changed the course of our hero's life, and as it will serve to explain how he came to give his notes to Mr. Kinloch, on which the administrators are about to bring suit, it should properly be related here.

Mark Davenport was at work on a farm a short distance from the village. He hoped to enter college the following autumn, and he knew no means to obtain money for a portion of his outfit except by the labor of his hands. He could get twenty dollars a month for the summer season. Sixty, or possibly seventy dollars!—what ideas of opulence were suggested by the sound of those words!

It was a damp, drizzly day; there was not a settled rain, yet it was too wet to work in the corn. Mark was therefore busy in picking loose stones from the surface of a field cultivated the year before, and now "seeded down" for grass. A portion of the field bordered on a pond, and the alders upon its margin formed a dense green palisade, over which might be seen the gray surface of the water freckled by the tiny drops of rain. Low clouds trailed their gauzy robes over the top of Mount Quobbin, and flecks of mist swept across the blue sides of the loftier Mount Elizabeth.

"What a perfect day for fishing!" thought Mark. "If I had my tackle here, and a frog's leg or a shiner, I would soon have a pickerel out from under those lily-pads."

But he kept at work, and, having his basket full of stones, carried them to the pond and plumped them in. A growl of anger came up from behind the bushes.

"What the Devil do you mean, you lubber, throwing stones over here to scare away the fish?"

The bushes parted at the same time, showing Hugh Branning sitting in the end of his boat, and apparently just ready to fling out his line.

"If I had known you were there fishing," said Mark, "I shouldn't have thrown the stones into the water. But," he continued, while every fibre tingled with indignation, "I will have you to know that I am not to be talked to in that way by you or anybody else."

"I would like to know how you are going to help yourself," said Hugh, stepping ashore and advancing.

"You will find out, Mr. Insolence, if you don't leave this field. You a'n't on the quarter-deck yet, bullying a tar with his hat off."

"Bless me! how the young Vulcan talks!"

"I have talked all I am going to. Now get into your boat and be off!"

"I don't propose to be in a hurry," said Hugh, with provoking coolness, standing with his arms a-kimbo.

The remembrance of Hugh's usual patronizing airs, together with his insulting language, was too much for Mark's impetuous temper. He was in a delirium of rage, and he rushed upon his antagonist. Hugh stood warily upon the defensive, and parried Mark's blows with admirable skill; he had not the muscle nor the endurance of the young blacksmith, but he had considerable skill in boxing, and was perfectly cool; and though Mark finally succeeded in grappling and hurling to the ground his lithe and resolute foe, it was not until he had been pretty severely pommelled himself, especially in his face. Mark set his knee on the breast of his adversary and waited to hear "Enough." Hugh ground his teeth, but there was no escape; no feint nor sudden movement could reverse their positions; and, out of breath, he gave up in sullen despair.

"Let me up," he said, at length. Mark arose, and being by this time thoroughly sobered, he walked off without a word and picked up his basket.

Hugh, on the other hand, was more and more angry every minute. The indignity he had suffered was not to be tamely submitted to. He got into the boat and took his oar; he looked back

and saw Mark commencing work again; the temptation was too strong. He picked up one of the largest of the stones that Mark had emptied into the shallow margin of the pond; he threw it with all his force, and hurriedly pushed off from shore without stopping to ascertain the extent of the mischief he had done. He knew that the stone did not miss, for he saw Mark fall heavily to the ground, and that was enough. The injury was serious. Mark was carried to the farm-house and was confined to his bed for six weeks with a brain fever, being delirious for the greater part of the time. Hugh Branning found the town quite uncomfortable; the eyes of all the people he met seemed to scorch him. He was bold and self-reliant; but no man can stand up singly against the indignation of a whole community. He went on a visit to Boston, and not long after, to the exceeding grief of his mother, entered the navy.

When Mark was recovering, Mr. Rook, the clergyman, called and offered to aid him in his college course, if he would agree to study for the ministry. But the young man declined the proposal, because he thought himself unfitted for the sacred calling.

"No," he added, with a smile, "I'm not made for an evangelist; not much like the beloved disciple at all events, but rather like peppery Peter,—ready, if provoked, to whisk off an ignoble ear."

Mr. Rook returned home sorrowful; and at the next meeting of the sewing-circle the unfortunate Mark received a full share of attention; for the offer of aid came partly from this society. When this matter had been the talk of the village for a day or two, Squire Kinloch made some errand to the house where Mark was. What passed between them the young man did not choose to relate, but he showed his Uncle Hardwick the Squire's check for two hundred and fifty dollars, and told him he should receive a similar sum each year until he finished his collegiate course.

The promise was kept; the yearly supply was furnished; and Mark gradu-

ated with honor, having given notes amounting to a thousand dollars. With cheerful alacrity he commenced teaching in a popular seminary, intending to pay his debts before studying a profession.

CHAPTER V.

It was Saturday night, and Mr. Hardwick was closing his shop. A customer was just leaving, his horse's feet newly rasped and white, and a sack of harrow-teeth thrown across his back. The boys, James and Milton, had been putting a load of charcoal under cover, for the wind was southerly and there were signs of rain. Of course they had become black enough with coal-dust,—not a streak of light was visible, except around their eyes. They were capering about and contemplating each other's face with uproarious delight, while the blacksmith, though internally chuckling at their antics, preserved a decent gravity, and prepared to go to his house. He drew a bucket of water, and bared his muscular arms, then, after washing them, soused his curly hair and begrimed face, and came out wonderfully brightened by the operation. The boys continued their sports, racing, wrestling, and putting on grotesque grimaces.

Charlotte, the youngest child, now came to the shop to say that supper was ready.

"C-come, boys, you've ha-had play enough," said Mr. Hardwick. "J-James, put Ch-Charlotte down. M-M-Milton, it's close on to S-Sabbaday. Now w-wash yourselves."

Just as the merriment was highest, Charlotte standing on James's shoulders, and Milton chasing them, while the blacksmith was looking on,—his honest face glistening with soap and good-humor,—Mildred Kinloch passed by on her way home from a walk by the river. She looked towards the shop-door and bowed to Mr. Hardwick.

"G-good evenin', M-Miss Mildred," said he; "I'm g-glad to see you lookin' so ch-cheerful."

The tone was hearty, and with a dash of chivalrous sentiment rarely heard in a smithy. His look of half-parental, half-admiring fondness was touching to see.

"Oh, Uncle Ralph," she replied, "I am never melancholy when I see you. You have all the cheerfulness of this spring day in your face."

"Y-yes, I hev to stay here in the old shop; b-but I hear the b-birds in the mornin', and all day I f-feel as ef I was out under the b-blue sky, an' rejoicin with all livin' creaturs in the sun and the s-sweet air of heaven."

"I envy you your happy frame; everything has some form or hue of beauty for you. I must have you read to me again. I never take up Milton without thinking of you."

"I c-couldn't wish to be remembered in any p-pleasanter way."

"Well, good evening. I must hurry home, for it grows damp here by the mill-race. Tell Lizzy and Anna to come and see me. We are quite lonesome now."

"P-p'raps Mark'll come with 'em."

"Mark? Is he here? When did he come?"

"H-he'll be here t-to-night."

"You surprise me!"

"Tis rather s-sudden. He wrote y-yesterday 't he'd g-got to come on urgent b-business."

"Urgent business?" she repeated, thoughtfully. "I wonder if Squire Clamp"—

The blacksmith nodded, with a gesture towards his children, as though he would not have them hear.

"Yes," he added, in a low tone, "I g-guess that is it."

"I must go home," said Mildred, hurriedly.

"Well, G-God bless you, my daughter! D-don't forget your old sooty friend. And ef ever y-you want the help of a s-stout hand, or of an old gray head, don't fail to come to the ber-blacksmith's shop."

"Thank you, Uncle Ralph! thank you with all my heart! Good-night!"

She walked lightly up the hill towards

the principal street. But she had not gone half a dozen yards before a hand grasped her arm. She turned with a start.

"Mark Davenport!" she exclaimed, "Is it you? How you frightened me!"

"Yes, Mildred, it is Mark, your old friend" (with a meaning emphasis). "I couldn't resist the temptation of giving you a little surprise."

"But when did you come to town?"

"I have just reached here from the station at Riverbank. I went to the house first, and was just going to see Uncle at the shop, when I caught sight of you."

Mark drew her arm within his own, and noticed, not without pleasure, how she yet trembled with agitation.

"I am very glad to see you," said Mildred; "but isn't your coming sudden?"

"Yes, I had some news from home yesterday which determined me to come, and I started this morning."

"Quick and impetuous as ever!"

"Yes, I don't deliberate long."

There was a pause.

"I wish you had only been here to see father before he died."

"I wish I might have seen him."

"I am sure *he* would never have desired to put you to any trouble."

"I suppose he would not have *troubled* me, though I never expected to do less than repay him the money he was so good as to lend me; but I don't think he would have been so abrupt and peremptory as Squire Clamp."

"Why, what has he done?"

"This is what he has done. A lawyer's clerk, as I supposed him to be, called upon me yesterday morning with a statement of the debt and interest, and made a formal demand of payment. I had only about half the amount in bank, and therefore could not meet it. Then the clerk appeared in his true character as a sheriff's officer, drew out his papers, and served a writ upon me, besides a trustee process on the principal of the school, so as to attach whatever might be due to me."

"Oh, Mark, were you treated so?"

"Just so,—entrapped like a wild animal. To be sure, it was a legal process, but one designed only for extreme cases, and which no gentleman ever puts in force against another."

"I don't know what this can mean. Squire Clamp is cruel enough, I know; but mother, surely, would never approve such conduct."

"After all, the mortification is the principal thing; for, with what I have, and what Uncle can raise for me, I can pay the debt. I have said too much already, Mildred. I don't want to put any of my burdens on your little shoulders. In fact, I am quite ashamed of having spoken on the subject at all; but I have so little concealment, that it popped out before I thought twice."

They were approaching the house, both silent, neither seeming to be bold enough to touch the tenderer chords that thrilled in unison.

"Mildred," said Mark, "I don't know how much is meant by this suit. I don't know that I shall be able to see you again, unless it be casually, in the street, as to-night, (blessed accident!)—but remember, that, whatever may happen, I am always the same that I have been to you."

Here his voice failed him. With such a crowd of memories,—of hopes and desires yet unsatisfied,—with the crushing burden of debt and poverty,—he could not command himself to say what his heart, nevertheless, ached in retaining. Here he was, with the opportunity for which during all his boyhood he had scarcely dared to hope, and yet he was dumb. They were at the gate, under the dense shade of the maples.

"Good-night, dear Mildred!" said Mark.

He took her hand, which was fluttering as by electrical influence, and raised it tenderly to his lips.

"Good-night," he said again.

She did not speak, but grasped his hand with fervor. He walked away slowly towards his uncle's house, but often stopped and looked back at the slender figure

whose outlines he could barely see in the gateway under the trees. Then, as he lost sight of her, he remembered with shame the selfish prominence he had given to his own troubles. He was ashamed, too, of the cowardice which had kept him from uttering the words which had trembled on his lips. But in a moment the thought of the future checked that regret. Gloomy as his own lot might be, he could bear it; but he had no right to involve another's happiness. Thus he alternated between pride and abasement, hope and dejection, as many a lover has done before and since.

CHAPTER VI.

SUNDAY was a great day in Innisfield; for there, as in all Puritan communities, religion was the central and engrossing idea. As the bell rang for service, every ear in town heard it, and all who were not sick or kept at home by the care of young children turned their steps towards the house of God. The idea that there could be any choice between going to hear preaching and remaining at home was so preposterous, that it never entered into the minds of any but the openly wicked. Whatever might be their inclinations, few had the hardihood to absent themselves from meeting, still less to ride out for pleasure, or to stroll through the woods or upon the bank of the river. A steady succession of vehicles—"thorough-braced" wagons, a few more stylish carriages with elliptic springs, and here and there an ancient chaise—tended from all quarters to the meeting-house. The horses, from the veteran of twenty years' service down to the untrimmed and half-trained colt, knew what the proprieties of the day required. They trotted soberly, with faces as sedate as their drivers', and never stopped to look in the fence-corners as they passed along, to see what they could find to be frightened at. Nor would they often disturb worship by neighing, unless they became impatient at the length of the sermon.

Mr. Hardwick and his family, as we

have before mentioned, went regularly to meeting; Lizzy and Mark sat with him in the singers' seats, the others in a pew below. The only guardian of the house on Sundays was a large ungainly cur, named Cæsar. The habits of this dog deserve a brief mention. On all ordinary occasions he followed his master or others of the family, seeming to take a human delight in their company. Whenever it was desirable to have him remain at home, nothing short of tying him would answer the purpose. After a time he came to know the signs of preparation, and would skulk. Upon setting out, Mr. Hardwick would tell one of the boys to catch Cæsar so that he should not follow, but he was not to be found; and in the course of ten minutes he would be trotting after his master as composedly as if nothing had ever happened to interrupt their friendly relations. It was impossible to resist such persevering affection, and at length Mr. Hardwick gave up the contest, and allowed Cæsar to travel when and where he chose. But on Sunday he sat on the front-door step, erect upon his haunches, with one ear dropping forward, and the other upright like the point of a starched shirt-collar; and though on weekdays he was fond of paying the usual courtesies to his canine acquaintances, and (if the truth must be told) of barking at strange horses occasionally, yet nothing could induce him either to follow any of the family, or accost a dog, or chase after foreign vehicles, on the day of rest. Once only he forgot what was due to his character, and gave a few yelps in holy time. But James, with a glance at his father, who was stoutly orthodox, averred that Cæsar's conduct was justifiable, inasmuch as the man he barked at was one of a band of new-light fanatics who worshipped in the school-house, and the horse, moreover, was not shod at a respectable place, but at a tinker's shop in the verge of the township. A dog with such powers of discrimination certainly merits a place in this true history.

The services of Sunday were finished.

Those who, with dill and caraway, had vainly struggled against drowsiness, had waked up with a jerk at the benediction, and moved with their neighbors along the aisles, a slow and sluggish stream. The nearest friends passed out side by side with meekly composed faces, and without greeting each other until they reached the vestibule. So slow and solemn was the progress out of church, that merry James Hardwick averred that he saw Deacon Stone, a short fat man, actually dozing, his eyes softly shutting and opening like a hen's, as he was borne along by the crowd. The Deacon had been known to sleep while he stood up in his pew during prayer, but perhaps James's story was rather apocryphal.

Mark Davenport, of course, had been the object of considerable attention during the day, and at the meeting-house-door numbers of his old acquaintances gathered round him. No one was more cordial in manner than Squire Clamp. His face was wrinkled into what were meant for smiles, and his voice was even smoother and more insinuating than usual. It was only by a strong effort that Mark gulped down his rising indignation, and replied civilly.

Sunday in Innisfield ended at sunset, though labor was not resumed until the next day; but neighbors called upon each other in the twilight, and talked over the sermons of the day, and the affairs of the church and parish. That evening, while Mr. Hardwick's family were sitting around the table reading, a long growl was heard from Caesar at the door, followed by an emphatic "Get out!" The growls grew fiercer, and James went to the door to see what was the matter. Squire Clamp was the luckless man. The dog had seized his coat-tail, and had pulled it forward, so that he stood face to face with the Squire, who was vainly trying to free himself by poking at his adversary with a great baggy umbrella. James sent away the dog with a reprimand, but laughed as he followed the angry man into the house. He always cited this afterwards as a new proof of

the sagacity of the grim and uncompromising Caesar.

"S-sorry you've had such a t-time with the dog," said Mr. Hardwick; "he don't g-generally bark at pup-people."

"Oh, no matter," said the Squire, contemplating the measure of damage in the skirt of his coat. "A good, sound sermon Mr. Rook gave us to-day. The doctrines of the decrees and sovereignty, and the eternal destruction of the impenitent, were strongly set forth."

"Y-yes, I s-spouse so. I d-don't profit so m-much by that inst-struction, however. I th-think more of the e-every-day religion he u-usually preaches."—Mr. Hardwick trotted one foot with a leg crossed and with an air which showed to his children and to Mark plainly enough how impatient he was of the Squire's beginning so far away from what he came to say.

"Why, you don't doubt these fundamental points?" asked Mr. Clamp.

"No, I don't d-doubt, n-nor I don't th-think much about 'em; they're t-too deep for me, and I ler-let 'em alone. We shall all un-know about these things in God's goo-good time. I th-think more about keepin' peace among n-neighbors, bein' kuh-kindly to the poor, h-helpin' on the cause of eddication, and d-doin' generally as I would be done by."—Mr. Hardwick's emphasis could not be mistaken, and Squire Clamp was a little uneasy.

"Oh, yes, Mr. Hardwick," he replied, "all the town knows of your practical religion." Then turning to Mark, he said, blandly, "So you came home yesterday. How long do you propose to stay?"

The young man never had the best control of his temper, and it was now rapidly coming up to the boiling-point. "Mr. Clamp," said he, "if you had asked a pickerel the same question, he would probably tell you that you knew best how and when he came on shore, and that for himself he expected to get back into water as soon as he got the hook out of his jaws."

"I am sorry to see this warmth," said

Mr. Clamp; "I trust you have not been put to any trouble."

"Really," said Mark, bitterly, "you have done your best to ruin me in the place where I earn my living, but 'trust I have not been put to any trouble!' Your sympathy is as deep as your sincerity."

"Mark," said Mr. Hardwick, "you're sa-sayin' more than is necess-sary."

"Indeed, he is quite unjust," rejoined the lawyer. "I saw an alteration in his manner to-day, and for that reason I came here. I prefer to keep the friendship of all men, especially of those of my townsmen and brethren in the church whose piety and talents I so highly respect."

"S-sartinly, th-that's right. I don't like to look around, wh-when I take the ker-cup at the Sacrament, and see any man that I've wronged; an' I don't f-feel comf'table nuther to see anybody der-drinkin' from the same cup that I think has tried to w-wrong me or mine."

"You can save yourself that anxiety about Mr. Clamp, Uncle," said Mark. "He is not so much concerned about our Christian fellowship as he is about his fees. He couldn't live here, if he didn't manage to keep on both sides of every little quarrel in town. Having done me what mischief he could, he wants now to salve the wound over."

"My young friend, what is the reason of this heat?" asked Mr. Clamp, mildly.

"I don't care to talk further," Mark retorted. "I might as well explain the pathology of flesh bruises to a donkey who had maliciously kicked me."

Mr. Clamp wiped his bald head, on which the perspiration was beginning to gather. His stock of pious common-places was exhausted, and he saw no prospect of calming Mark's rage, or of making any deep impression on the blacksmith. He therefore rose to depart. "Good evening," said he. "I pray you may become more reasonable, and less disposed to judge harshly of your friend and brother."

Mark turned his back on him. Mr. Hardwick civilly bade him good-night. Lizzy and Anna, who had retreated during the war of words, came back, and the circle round the table was renewed.

"Yer-you'll see one thing," said Mr. Hardwick. "He'll b-bring you, and p'r'aps me, too, afore the church for this talk."

"The sooner, the better," said Mark.

"I d'no," said Mr. Hardwick. "Ef we must live in f-fellowship, a der-difficulty in church isn't per-plesant. But 'tis uncomf'table for straight wood to be ker-corded up with such ker-crooked sticks as him."

[To be continued.]

A PERILOUS BIVOUAC.

It is a pleasant June morning out on the Beauport slopes; the breeze comes laden with perfume from shady Mount Lilac; and it is good to bask here in the meadows and look out upon the grand panorama of Quebec, with its beautiful bay sweeping in bold segments of shoreline to the mouth of the River St. Charles. The king-bird, too lazy to give

chase to his proper quarry, the wavering butterfly, sways to and fro upon a tall weed; and there, at the bend of the brook, sits an old kingfisher on a dead branch, gorged with his morning meal, and regardless of his reflected image in the still pool beneath. The *goguelu* *

* This name is given by the French Canadians to the bobolink or rice bunting. It is

rises suddenly up from his tuft of grass, and, having sung a few staves of his gurgling song, drops down again like a cricket-ball and is no more seen. Smooth-plumaged wax-wings are pruning their feathers in the tamarac-trees; and high up over the waters of the bay sails a long-winged fish-hawk, taking an extended and generally liberal view of sundry important matters connected with the fishery question.

Many a year has gone by since I last looked upon this picture, and then it was a winter scene; for it was near the end of March, which is winter enough in this region, and the blue water of the bay there was flagged over with a rough white pavement of crisp snow. I think I see it now, faintly ruled with two lines of *sapins*, or young fir saplings,—one marking out the winter road to the Island of Orleans, and the other that from Quebec to Montmorency; and this memory recalls to me how it fell upon a certain day, the incidents of which are expanding upon my mind like those dissolving views that come up out of the dark, I set up a camp-fire just where that wood-barge nods drowsily at anchor, about a mile this side of the town. It was a sort of bivouac a man is not likely to forget in a hurry; not that it makes much of a story, after all,—but a trifling scratch will sometimes leave its mark on a man for life. I was quartered in Quebec then; didn't go much into society, though, because I devoted much of my young energies to shooting and fishing, which were worth any expenditure of energy in those days. And so I restricted my evening rounds of duty to one or two houses which were conducted on the always-at-home principle, walking in and hanging up my wide-awake when it suited me, and staying away when it didn't,—which was about the oftener.

In the winter of eighteen hundred and no matter what, I got three months' leave of absence, with the intention of devoting a great portion of it to a long—an old, I believe an obsolete, French word, and means "braggart."

planned expedition, an invasion of the wild mountain-region lying north of Quebec, towards the head-waters of the Saguenay,—a district seldom disturbed by the presence of civilized man, but abandoned to the semi-barbarous hunter and trapper, and frequented much by that prince of roving bucks, the shy but stately caribou. I need not go into the details of my two-months' hunt. It was like any other expedition of the sort, about which so much information has already been given to the world in the pleasant narratives of the wandering family of MacNimrod. I succeeded in procuring many hairy and horned trophies of trap and rifle, as well as in converting myself from some semblance of respectability into the veriest looking cannibal that ever breakfasted on an underdone enemy. The return from the chase furnished the little adventure I have alluded to,—a very small adventure, but deeply impressed upon a memory now a good deal cut up with tracks and traces of strange beasts of accidents, quaint "vestiges of creation," ineffaceably stamped upon what poor Andrew Romer used to call the "old red sandstone," in playful allusion to what his friends well knew was a heart of hearts.

The snow lay heavy in the woods, wet and heavy with the breath of coming spring, as I tramped out of them one March morning, and found myself on the queen's highway, within short rifle-shot of the rushing Montmorency, whose roar had reached us through the forest an hour or two before. In the early days of our hunt I had been so lucky as to run down and kill a large moose, whose antlered head was a valuable trophy; and so I confided it to the especial charge of my faithful follower, Zachary Hiver, a *brulé* or half-breed of the Chippewa nation, who had hunted buffaloes with me on the plains of the Saskatchewan and gaffed my salmon in the swift waters of the Mingan and Escoumains. I had promised him powder and lead enough to maintain his rifle for the probable remainder of his earthly hunting-career, if

he succeeded in safely conveying to Quebec the hide and horns of the mammoth stag of the forest. These he had concealed, accordingly, in a safe hiding-place, or *cache*, to be touched at on our return; and now as he emerged from the dark pine copse, with his ropy locks tasselling his flat skull, and a tattered blanket-coat fluttering in ribbons from his brown and brawny chest, his interest in the venture appeared in the careful manner in which he drew after him a long, slender *tobaugan*, heavily packed with the hard-won proceeds of trap and gun. Foremost among these were displayed the broad antlers of the moose of my affections, whose skin served as a tarpaulin for the remainder of the baggage, round which it was snugly tucked in with thongs of kindred material.

We halted on a broad ledge of rock by the western verge of the bay of the Falls, glad of an opportunity of enjoying my independence to the last, unfettered by the conventionalities for which I was beginning to be imbued with a savage contempt. Here we set up a primitive kitchen-range, and, having feasted upon cutlets of the caribou, scientifically treated by a skewer process with which Zach was familiar, we lounged like "lazy shepherds" in the sun, and the eye of the Indian flashed as I produced from the folds of my sash a leather-covered flask which did not look as if it was meant to contain water. During the weeks of the chase I had been very careful to conceal this treasure from Zach, knowing how helpless an Indian becomes under the influence of the "fire-water"; and as I had had a pull at it myself only two or three times, under circumstances of unusual adversity and hardship, there still remained in it a very respectable allowance for two, from which I subtracted a liberal measure, handing over the balance to Zach, who gulped down the *skittiwau-boh* with a fiendish grin and a subsequent inhuman grunt. As I lit my pipe after this satisfactory arrangement, the roar of the mighty Montmorency, whirling down its turbulent perpendicular flood behind

a half-drawn curtain of green and azure ice, sounded like exquisite music to my ears, and I looked towards Quebec and blinked at its fire-flashing tin spires and house-tops burning through the coppery morning fog, until my mind's eye became telescopic, and my thoughts, unsentimental though I be, reverted to civilized society and its *agréments*, and particularly to a certain steep-roofed cottage situated on a suburban road, in the boudoirs of which I liked to imagine one pined for my return. If memory has its pleasures, has it not also its glimpses of regret?—and who can say that the former compensate for the latter? Even now I see her as she used to step out on the veranda,—the lithe Indian girl, rivaling the choicest "desert-flower" of Arabia in the rich darkness of her eyes and hair, and in the warm mantling of her golden-ripe complexion,—unutterably graceful in the thorough-bred ease of her elastic movements,—Zosime Mac-Gillivray, perfect type and model of the style and beauty of the *brulée*. She was the only child of a retired trader of the old North-West Fur Company and his Indian wife; had been partly educated in England; possessed rather more than the then average Colonial allowance of accomplishments; and was, altogether, so much in harmony with my roving forest-inclinations, that I sometimes thought, half seriously, how pleasant and respectable it would be to have one such at the head of one's camp-equipage, and how much nicer a companion she would be on a hunt than that disreputable old scoundrel, Zach Hiver.

"Pack the *tobaugan*, Zach! The sun will come out strong by and by, and the longer we tarry here, the heavier the snow will be for our stretch to the Citadel. Up, there! *lève-toi, cochon!*" shouted I, in the elegant terms of address which experience had taught me were the only ones that had any effect upon the stolid sensibilities of the half-breed,—at the same time administering to him a kick that produced a *thud* and a grunt, as if actually bestowed on the unclean quadruped to

which I had just likened him. The ragamuffin was very slow this time in getting the traps together on the *tobaogan*, and, if I had not attended to the matter myself, the moose trophy, at least, would in all probability have been left to perish, and would never have pointed a moral and adorned a tale, as it now does, in its exalted position among the reminiscences of things past. At length we got under way, and, as a walk over the open plain offered a pleasing variety to a man who had been feeling his way so long through the dim old woods, I determined to descend from the ridge of Beauport, and proceed over the snow-covered surface of the bay, in a bird's-eye line, to our point of destination. Winding down the almost perpendicular declivity, sometimes sliding down on our snow-shoes, with the *tobaogan* running before us, "on its own hook," at a fearful pace, and sometimes obliged to descend, hand under hand, by the tangled roots and shrubs, we soon found ourselves on the great white winter-prairie of the grand St. Lawrence, upon which I strode forward with renewed energy, steering my course, like the primitive steeple-chasers of my boyhood's home, upon the highest church-tower looming up from the heterogeneous huddle of motley houses that just showed their gable-tops over the low ring of mist which mingled with the smoke of the Lower Town.

After a progress of about five miles, I found I had very materially widened the distance between myself and Zach, who, encumbered by the baggage, and by the spring snow which each moment accumulated in wet heavy cakes upon his snow-shoes, was now a good mile in my rear. This I was surprised at, as he generally outwalked me, even when carrying on his back a heavy load, with perhaps a canoe on his head, cocked-hat fashion, as he was often obliged to do in our fishing-excursions to the northern lakes. It now occurred to me, however, that I had incautiously left the brandy-flask in his charge, and when he came up with me I gathered from his fishy eye,

and the thick dribblings of his macaronic gibberish,—which was compounded of sundry Indian dialects and French-Canadian *patois*, coarsely ground up with bits of broken English,—that the modern Circe, who changes men into beasts, had wrought her spells upon him; a circumstance at which I was terribly annoyed, as foreboding an ignominious entry into the city by back-lane and sally-port, instead of my long-anticipated triumphal progress up St. Louis Street, bearded in splendor, bristling with knife and rifle, and followed by my wild Indian *coureur-des-bois*, drawing my antlered trophies after him upon the *tobaogan* as upon a festival car.

"Kaween nishishin! kaw-ween!" howled the big monster, in his mixed-pickle macaronic,—"*je me sens saisi du mal-aux-raquettes, je ne pouvons plus*. Why you go so dam fast, when hot sun he make snow for tire, eh? *Sacr-ré raquettes! il me semble qu'ils se grossissent de plus en plus à chaque démarche*. Stop for smoke, eh?—*v'là! good place for camp* away there, *kitchee hoguemaus endaut*, big chief's house may-be!" grinned he, as he indicated with Indian instinct and a wavering finger a structure of some kind that peered through the fog at a short distance on our left.

We were now within about a mile of Quebec. The Indian's intoxication had increased to a ludicrous extent, so that to have ventured into the town with him must have resulted in a reckless exposure of myself to the just obloquy and derision of the public; while, on the other hand, if I left him alone upon the wide world of ice, and dragged the *tobaogan* to town myself, the unfortunate *brulé* must inevitably have stepped into some treacherous snow-drift or air-hole, and thus miserably perished. So I made up my mind for a camp on the ice; and, diverging from our course in the direction pointed out by the Indian, we soon arrived at the object indicated by him, which proved to be a stout framework about twelve feet square, constructed of good heavy timber solidly covered with

deal boarding, and conveying indubitable evidence, to my thinking, of the remains of one of the *cabanes* or shanties commonly erected on the ice by those engaged in the "tommy-cod" fishery,—portable structures, so fitted together as to admit of being put up and removed piecemeal, to suit the convenience of their proprietors. I blessed mentally the careless individual who had thus unconsciously provided for our especial shelter; and as the wind had now suddenly arisen sharp from the west, driving the fog before it with clouds of fine drifting snow, I was glad to get under the lee of the providential wall, in the hospitable shelter of which, before two minutes had elapsed, "Stephano, my drunken butler," was snoring away like a phalanx of bullfrogs, with his head bolstered up somehow between the great moose-horns, and his brawny limbs rolled carelessly in the warm but somewhat unsavory skin of the dead monarch of the forest. I gloried in his calm repose; for the day was yet young, and I flattered myself that a three-hours' snooze would restore his muddled intellects to their normal mediocrity of useful instinct, and that I might still achieve my triumphal entry into the city,—a procession I had been so much in the habit of picturing to myself over the nocturnal camp-fire, that it had become a sort of nightmare with me. Indeed, I had idealized it roughly in my pocket-book, intending to transfer the sketches, for elaboration on canvas, to Tankerville, the regimental Landseer, whose menagerie of living models, consisting of two bears, one calf-moose, one *loup-cervier*, three bloated raccoons, and a bald eagle, formed at once the terror and delight of the rising generation of the barracks.

Having got up a small fire with the assistance of the chips and scraps of wood that were plentifully scattered around, I placed my snow-shoes one on top of the other, and sat down on them,—a sort of preparatory step in my transition to civilization, for they had somewhat the effect of a cane-bottomed chair minus the

legs and without a back. Then I filled my short black pipe from the seal-skin tobacco-pouch, the contents of which had so often assuaged my troubled spirit when I brooded over griefs which *then* were immature, if not imaginary. It was a very pleasant smoke, I recollect,—so pleasant, that I rather congratulated myself upon my position; the only drawback to it being that I was shut out from a view of the town, as the wind and drift rendered it indispensable for comfort in smoking that I should keep strictly to leeward of my bulwark. Tobacco is notoriously a promoter of reflection; there must be something essentially retrospective in the nature of the weed. I retired upon the days of my boyhood, my legs and feet becoming clairvoyant of the corduroys and highlows of that happy period of my existence, as the revolving curls of pale smoke exhibited to me, with marvellous fidelity, many quaint successive *tableaux* of the old familiar scenes of home,—sentimental, some of them,—comic, others,—like the domestic incidents revealed with exaggerations on the hazy field of a magic-lantern. I thought of my poor mother, and of the excellent parting advice she gave me,—but more particularly of the night-caps with strings, which she extracted such a solemn promise from me to wear carefully every night in all climates, and which, on the second evening of my sojourn in barracks, were so unceremoniously reduced to ashes in a noisy *auto-da-fé*. These retrospective pictures were succeeded by others of more modern date, coming round in a progressive series, until I had painted myself up to within a few weeks of my present position, the foreground of my existence. Then I remembered promises made by me of contributions to a certain album,—further contributions,—for I had already furnished several pages of it with food for mind and eye in the form of melancholy verses and "funny" sketches, with brief dramatic dialogues beneath the latter, to elucidate the "story." I particularly recollected having volunteered a translation or imitation of

a pretty song in Ruy Blas; and as the fit was upon me, I produced my pocket-book, to commit to paper a version of it which I had mentally devised. The leaves of my book were all filled, however; some with memoranda,—a sort of savage diary it was,—some with sketches of scenes in the wilderness: there was not a corner vacant. Turning towards the planking of my bulwark, I perceived that it was smoothly planed and clean, and to work on it I went, pencil in hand. First I wrote “Zosime MacGillivray,” in several different styles of chirography, flourished and plain, and even in old text. Then I sketched out a rough design for an ornamental heading, with a wreath of flowers encircling the words “To Zozzy,” and beneath this work of Art I inscribed the effort of my muse, which ran thus:—

Fields and forests rejoice
In their silver-toned throng;
I hear but the voice
Of the bird in thy song!

In April's glad shower
Flash petals and leaves,
Less bright than the flower
Round thy heart that weaves!

Stars waken, stars slumber,
Stars wink in the sky,
Bright numberless number;
But none like thine eye!

For bird-song and flower
And star from above
Combine in thy bower;
Their union is love!

My mind being considerably relieved by this gush of sentiment, I felt myself entitled to unbend a little, and, turning my attention to artistic pursuits, principally of a humorous character, I developed successively many long-pent-up imaginings in the way of severe studies of sundry garrison notables. There was “Bendigo” Phillips, with boxing-gloves fearfully brandished, appearing in the attitude in which he polished off young Thurlow of the R. A., under the pretence of giving him a lesson in the noble art of self-defence, but in reality to revenge

himself upon him for an ill-timed interference in a certain *affaire du cœur*. The agony of young Thurlow, pretending to look pleased, was depicted by a very successful stroke of Art. To the extreme right you might have beheld Vegetable Warren, the staff-surgeon, slightly exaggerated in the semblance of a South-Down wether nibbling at a gigantic Swedish turnip. Written lampoons of the fiercest character accompanied the illustrations. But my boldest effort was an atrocious and libellous cartoon of the commandant of the garrison, popularly known as “Old Wabbles,”—I believe from the preternatural manner in which his wide Esquimaux boots vacillated about his long, lean shanks. This *chef d'œuvre* was executed upon a rather large scale, and I imparted considerable force and breadth to the design by “coaling in” the shadows with a charred stick. Then calling color to my aid, as far as my limited means admitted, I scraped from the edges of the moose-hide a portion of the red-streaked fat, and, having impasted therewith the bacchanalian nose of my subject, I stepped back a few paces to contemplate the effect. So ludicrous was the resemblance, that I laughed outright in the pride of my success,—a transient hilarity, nipped suddenly in the bud by the loud boom of a cannon, accompanied rather than followed by a rushing sound a few feet above my head, and a thundering bump and splutter upon the ice some thirty or forty yards beyond me, as the heavy shot skipped and ricocheted away with receding bounds to its vanishing-point somewhere in the neighborhood of the Island of Orleans. Two strides to the front, and a glance at the broad, black ring emblazoned on the hitherto disregarded face of my bulwark, and the truth flashed upon my staggering senses.

I was encamped in the lee of the brand-new artillery target, and they were just commencing practice, on this fine bright afternoon, by pitching thirty-two-pound shot into and about it, at intervals—as I pretty well knew—of distressingly uncertain duration. With frantic strength I

grasped the Indian by the neck, and, plunging madly through the snow, dragged him after me a few paces in the direction of our former track; but, hampered as he was by the moose-trappings, the weight was too much for me, and I dropped him, instinctively continuing to run with breathless speed, until, having gained a considerable distance away from any probable line of fire, I flung myself down upon the snow, and was somewhat startled at finding Zach very close upon my tracks, tearing along on all fours with a vague sense of danger of some kind, and looking, in his strange envelope, like an infuriated bull-moose in the act of charging a hunter. A shot struck the corner of the target just as we got away from it, slightly splintering it, so as to give the bewildered Indian a pleasant practical lesson in the science of gunnery and fortification.

Two minutes elapsed,—three minutes,—five minutes,—not another shot; but it might commence again at any moment, and I stood at a respectful distance from the danger, uncertain what course to pursue for the recovery of my traps, all of which, rifle, snow-shoes, and *tobaogan* loaded with spoils, lay in pledge with the two-faced friend whose treacherous shelter had no longer any charm for me, when I beheld several sleighs approaching us from the town at a fearful pace, in the foremost of which, when within range of rifle, I recognized Old Wabbles, the commandant.

"Who the Devil are you?" shouted he, as he drove right at us. "Two Indians, ha!—somebody said it was *one* Indian with a moose after him, a man and a moose. Where's Thurlow?—*he* had the telescope, and asserted there was a man running round the target and a moose after him. I don't see the moose." Zach had dropped the hide and horns from his "recreant limbs," and was seated solemnly upon the snow, in all the majesty of his native dirt.

"By Jove, it's Kennedy!" cried Tankerville, whose artistic eye detected me through my hirsute and fluttering disguise. "What a picturesque object!—I

congratulate you, old fellow!—easiest and pleasantest way in the world of making a living!—lose no time about it, but send in your papers at once!—continue assiduously to neglect your person, and you're worth a guinea an hour for the rest of your prime, as a living model on the full pay of the Academies!"

I was soon bewildered by a torrent of inquiries from all sides: as to how I came behind the target,—what success I had had in the woods,—how many miles I had come to-day,—whether I had got the martin-skin I had promised to this one, and the silver fox I undertook to trap for that,—when, suddenly, a diversion was created by a roar from Phillips, who had proceeded to inspect my spoils behind the target, and now stood looking at my portrait-gallery of living celebrities, his great chest heaving with laughter; and before I could satisfy my inquiring friends, the whole crowd had rushed pell-mell to the exhibition.

"Caught, by all that's lovely!" shouted Phillips, repeating my verses at the top of his voice,—

"The bird-song and flower
And star from above
Combine in thy bower;
Their union is love!"

"Ritoorala loorala loorala loo, ritoorala loorala loorala loo!" chorused everybody, as he sang the last verse to the vulgar melody of 'Tatter Jack Welch,' knocking the poetry out of my constitution at once and forever, like the ashes out of a pipe. "Hooray for Miss Mac! Who should have thought it, Darby?"—That was *my* pet name in the regiment.

"How like!—how very like!—That's Warren there, nibbling the turnip. And there's Thurlow,—ha! ha! ha! how good! And that—that—that's *me*, by Jingo!—he! he! he!—not so good *that*, somehow,—neck too long by half a foot. But the Colonel!—only look at his boots!—He must'n't see this, though, by Jove!—Choke the Colonel off, boys!—take him round to the front!—do something!" whispered good-natured Symonds, anxious to keep me clear of the scrape.

But it was too late. The last objects that met my view were the ghastly legs of the Commandant, as he strode through the circle in front of my Art-exhibition. I saw no more. A soldier is but a mortal man. Rushing to the nearest cariole, —it was the Commandant's,—I leaped into it, and, lashing the horse furiously towards the town, never pulled rein until I got up to my long-deserted quarters in the Citadel. There I barricaded myself into my own room, directing my servant to proceed to the target for my scattered

property. I had still a month's leave of absence before me, availing myself of which, I started next morning for New York, subsequently obtained an extension of leave, sailed for England, and there negotiating an exchange from a regiment whose facings no longer suited my taste for colors, I soon found myself gazetted into a less objectionable one lying at Corfu.

I have never seen Tankerville's famous picture of my triumphal entry into Quebec.

I.—NOVEMBER.

THE dead leaves their rich mosaics,
Of olive and gold and brown,
Had laid on the rain-wet pavements,
Through all the embowered town.

They were washed by the Autumn tempest,
They were trod by hurrying feet,
And the maids came out with their besoms
And swept them into the street,

To be crushed and lost forever
'Neath the wheels, in the black mire lost,—
The Summer's precious darlings,
She nurtured at such cost!

O words that have fallen from me!
O golden thoughts and true!
Must I see in the leaves a symbol
Of the fate which awaiteth you?

II.—APRIL.

AGAIN has come the Spring-time,
With the crocus's golden bloom,
With the smell of the fresh-turned earth-mould,
And the violet's perfume.

O gardener! tell me the secret
Of thy flowers so rare and sweet!—
—“I have only enriched my garden
With the black mire from the street.”

THE GAUCHO.

WHAT is a Gaucho?

That is precisely what I am going to tell you.

Take my hand, if you please. Shod with the shoes of swiftness, we have annihilated space and time. We are standing in the centre of a boundless plain. Look north and south and east and west: for five hundred miles beyond the limit of your vision, the scarcely undulating level stretches on either hand. Miles, leagues, away from us, the green of the torrid grass is melting into a misty dun; still further miles, and the misty dun has faded to a shadowy blue; more miles, it rounds at last away into the sky. A hundred miles behind us lies the nearest village; two hundred in another direction will bring you to the nearest town. The swiftest horse may gallop for a day and night unswervingly, and still not reach a dwelling-place of man. We are placed in the midst of a vast, unpeopled circle, whose radii measure a thousand miles.

But see! a cloud arises in the South. Swiftly it rolls towards us; behind it there is tumult and alarm. The ground trembles at its approach; the air is shaken by the bellowing that it covers. Quick! let us stand aside! for, as the haze is lifted, we can see the hurrying forms of a thousand cattle, speeding with lowered horns and fiery eyes across the plain. Fortunately, they do not observe our presence; were it otherwise, we should be trampled or gored to death in the twinkling of an eye. Onward they rush; at last the hindmost animals have passed; and see, behind them all there scours a man!

He glances at us, as he rushes by, and determines to give us a specimen of his only art. Shaking his long, wild locks, as he rises in the stirrup and presses his horse to its maddest gallop, he snatches from his saddle-bow the loop of a coil of rope, whirls it in his right hand for an in-

stant, then hurls it, singing through the air, a distance of fifty paces. A jerk and a strain,—a bellow and a convulsive leap,—his lasso is fast around the horns of a bull in the galloping herd. The horseman flashes a murderous knife from his belt, winds himself up to the plunging beast, severs at one swoop the tendon of its hind leg, and buries the point of his weapon in the victim's spinal marrow. It falls dead. The man, my friend, is a Gaucho; and we are standing on the Pampas of the Argentine Republic.

Let us examine this dexterous wielder of the knife and cord. *He, Juan de Dios!* Come hither, O Centaur of the boundless cattle-plains! We will not ask you to dismount,—for that you never do, we know, except to eat and sleep, or when your horse falls dead, or tumbles into a *bizcachero*; but we want to have a look at your savage self, and the appurtenances thereunto belonging.

And first, you say, the meaning of his name. The title, Gaucho, is applied to the descendants of the early Spanish colonists, whose homes are on the Pampa, instead of in the town,—to the rich *estanciero*, or owner of square leagues of cattle, in common with the savage herdsman whom he employs,—to Generals and Dictators, as well as to the most ragged Pampa-Cossack in their pay. Our language is incapable of expressing the idea conveyed by this term; and the Western qualification "backwoodsman" is perhaps the nearest approach to a synonyme that we can attain.

The head of our swarthy friend is covered with a species of Neapolitan cap, (let me confess, in a parenthesis, that my ideas of such head-coverings are derived from the costume of graceful Signor Brignoli in "*Masaniello*,") which was once, in all probability, of scarlet hue, but now almost rivals in color the jet-black locks which it confines. His face—well, we will pass that over, and, on our return to civil-

ized life, will refer the curious inquirer for a fac-simile to the first best painting of Salvador, there to select at pleasure the most ferocious bandit countenance that he can find. And now the remainder of his person. He wears an open jacket of dirt-crust-ed serge, covered in front with a gorgeous eruption of plated buttons, and a waistcoat of the same material, adorned with equal profuseness, and showing at the neck a substratum of dubious crimson, supposed to be a flannel shirt. So far, you may say, there is nothing suspicious or very outlandish about his rig; but *turpiter desinit formosus superne*,—there is something highly remarkable *à continuation*. Do you see that blanket which is drawn tightly up, fore and aft, toward his waist, and, there confined by means of a belt which his *querida* has richly ornamented for him, falls over in uneven folds like an abbreviated kilt? That is the famous *chiripá*, or Gaucho petticoat, which, like the *bracæ* of the Northern barbarians some nineteen hundred years ago, distinguishes him from the inhabitants of civilized communities. Below the *chiripá*, his limbs are cased in *calzoncillos*, stout cotton drawers or pantallets, which terminate in a fringe (you should see the elaborate worsted-work that adorns the hem of his gala-pair) an inch or two above the ankle. His feet are thrust into a pair of *botas de potro*, or colt's-foot boots, manufactured from the hide of a colt's fore-leg, which he strips off whole, chafes in his hand until it becomes pliable and soft, sews up at the lower extremity,—and puts on, the best riding-boot that the habitable world can show. Add a monstrous spur to each heel of this *chaussure*, and you will have fully equipped the worthy Juan de Dios for active service.—But stay! his accoutrements! We must not forget that Birmingham-made butcher-knife, which, for a dozen years, has never been for a moment beyond his reach; nor the coiling lasso, and the *bolas*, or balls of iron, fastened at each end of a thong of hide, which he can hurl a distance of sixty feet, and inextricably entangle around the legs

of beast or man; nor the *recado*, or saddle, his only seat by day, and his pillow when he throws himself upon the ground to sleep under the canopy of heaven. Neither must we omit the *mate* gourd which dangles at his waist, in readiness to receive its infusion of *yerba*, or Paraguay tea, which he sucks through that tin tube, called *bombilla*, and looking for all the world like the broken spout of an oil-can with a couple of pieces of nutmeg-grater soldered on, as strainers, at the lower end; nor the string of sapless *charque* beef, nor the pouchful of villanous tobacco, nor the paper for manufacturing it into *cigarritos*, nor the cow's-horn filled with tinder, and the flint and steel attached. Thus mounted, clothed, and equipped, he is ready for a gallop of a thousand leagues.

He is a strange individual, this Gaucho Juan. Born in a hut built of mud and maize-stalks somewhere on the superficies of these limitless plains, he differs little, in the first two years of his existence, from peasant babies all the world over; but so soon as he can walk, he becomes an equestrian. By the time he is four years old there is scarcely a colt in all the Argentine that he will not fearlessly mount; at six, he whirls a miniature lasso around the horns of every goat or ram he meets. In those important years when our American youth are shyly beginning to claim the title of young men, and are spending anxious hours before the mirror in contemplation of the slowly-coming down upon their lip, young Juan (who never saw a dozen printed books, and perhaps has only *heard* of looking-glasses) is galloping, like a portion of the beast he rides, over a thousand miles of prairie, lassoing cattle, ostriches, and guanacos, fighting single-handed with the jaguar, or lying stiff and stark behind the heels of some plunging colt that he has too carelessly bestrid.

At twenty-one he is in his glory. Then we must look for him in the *pulperías*, the bar-rooms of the Pampas, whither he repairs on Sundays and *fiestas*, to get drunk on *aguardiente* or on Paraguay

rum. There you may see him seated, listening open-mouthed to the *cantor*, or Gaucho troubadour, as he sings the marvellous deeds of some desert hero, persecuted, unfortunately, by the myrmidons of justice for the numerous *misfortunes* (*Anglicé*, murders) upon his head,—or narrates in impassioned strain, to the accompaniment of his guitar, the circumstances of one in which he has borne a part himself,—or chants the frightful end of the Gaucho Attila, Quiroga, and the punishment that overtook his murderer, the daring Santos Perez. When the song is over, the cards are dealt. Seated upon a dried bull's-hide, each man with his unsheathed knife placed ostentatiously at his side, the jolly Gauchos commence their game. Suddenly Manuel exclaims, that Pedro or Estanislao or Antonio is playing false. Down fly the cards; up flash the blades; a ring is formed. Manuel, to tell the truth, has accused his friend Pedro only for the sake of a little sport; he has never *marked* a man yet, and thinks it high time that that honor were attained. So the sparks fly from the flashing blades, and Pedro's nose has got another gash in it, and Manuel is bleeding in a dozen places, but he will not give in just yet. Unfortunate Gaucho! Pedro the next moment slips in a sticky pool of his own blood, and Manuel's knife is buried in his heart! "He is killed! Manuel has had a misfortune!" exclaim the ring; "fly, Manuel, fly!" In another minute, and just as the *vigilantes* are throwing themselves upon their horses to pursue him, he has galloped out of sight.

Twenty miles from the *pulperia* he draws rein, dismounts, wipes his bloody knife on the grass, and slices off a collop of *charque*, which he munches composedly for his supper. Very likely this *misfortune* will make him a *Gaucho malo*. The *Gaucho malo* is an outlaw, at home only in the desert, intangible as the wind, sanguinary, remorseless, swift. His brethren of the *estancia* pronounce his name occasionally, but in lowered tones, and with a mixture of terror and respect;

he is looked up to by them as a sort of higher being. His home is a movable point upon an area of twenty thousand square miles; his horse, the finest steed that he can find upon the Pampas between Buenos Ayres and the Andes, between the Gran Chaco and Cape Horn; his food, the first beef that he captures with his lasso; his dainties, the tongues of cows which he kills, and abandons, when he has stripped them of his favorite tit-bit, to the birds of prey. Sometimes he dashes into a village, drinks a gourdful of *aguardiente* with the admiring guests at the *pulperia*, and spurs away again into obscurity, until at length the increasing number of his *desgracias* tempts the mounted emissaries of justice to pursue him, in the hope of extra reward. If suddenly beset by seven or eight of these desert police, the *Gaucho malo* slashes right and left with his redoubted knife,—kills one, maims another, wounds them all. Perhaps he reaches his horse and is off and away amid a shower of harmless balls;—or he is taken; in which case, all that remains, the day after, of the *Gaucho malo*, is a lump of soulless clay.

Then there is the guide, or *vaqueano*. This man, as one who knows him well informs us, is a grave and reserved Gaucho, who knows by heart the peculiarities of twenty thousand leagues of mountain, wood, and plain! He is the only *map* that an Argentinian general takes with him in a campaign; and the *vaqueano* is never absent from his side. No plan is formed without his concurrence. The army's fate, the success of a battle, the conquest of a province, is entirely dependent upon his integrity and skill; and, strange to say, there is scarcely an instance on record of treachery on the part of a *vaqueano*. He meets a pathway which crosses the road upon which he is travelling, and he can tell you the exact distance of the remote watering-place to which it leads; if he meet with a thousand similar pathways in a journey of five hundred miles, it will still be the same. He can point out the fords of a hundred rivers; he can guide you in

safety through a hundred trackless woods. Stand with him at midnight on the Pampa,—let the track be lost,—no moon or stars;—the *vaqueano* quietly dismounts, examines the foliage of the trees, if any are near, and if there are none, plucks from the ground a handful of roots, chews them, smells and tastes the soil, and tells you that so many hours' travel due north or south will bring you to your destination. Do not doubt him; he is infallible.

A mere *vaqueano* was General Rivera of Uruguay,—but he knew every tree, every hillock, every dell, in a region extending over more than 70,000 square miles! Without his aid, Brazil would have been powerless in the Banda Oriental; without his aid, the Argentinians would never have triumphed over Brazil. As a smuggler in 1804, as a custom-house officer a few years later, as a patriot, a freebooter, a Brazilian general, an Argentinian commander, as President of Uruguay against Lavalleja, as an outlaw against General Oribe, and finally against Rosas, allied with Oribe, as champion of the Banda Oriental del Uruguay, Rivera had certainly ample opportunities for perfecting himself in that study of which he was the ardent devotee.

Cooper has told us how and by what signs, in years that have forever faded, the Huron tracked his flying foe through the forests of the North; we read of Cuban bloodhounds, and of their frightful baying on the scent of the wretched maroon; we know how the Bedouin follows his tribe over pathless sands;—and yet all these are bunglers, in comparison with the *Gaucho rastreador*!

In the interior of the Argentine every Gaucho is a trailer or *rastreador*. On those vast feeding-grounds of a million cattle, whose tracks intersect each other in every direction, the herdsman can distinguish with unerring accuracy the footprints of his own peculiar charge. When an animal is missing from the herd, he throws himself upon his horse, gallops to the spot where he remembers having seen it last, gazes for a moment

upon the trampled soil, and then shoots off for miles across the waste. Every now and then he halts, surveys the trail, and again speeds onward in pursuit. At last he reaches the limits of another *estancia*, and the pasturage of a stranger herd. His eagle eye singles out at a glance the estray; rising in his stirrup, he whirls the lasso for a moment above his head, launches it through the air, and coolly drags the recalcitrant beast away on the homeward trail. He is nothing but a common, comparatively unskilled, *rastreador*.

The official trailer is of another stamp. Like his kinsman, the *vaqueano*, he is a personage well convinced of his own importance; grave, reserved, taciturn, whose word is law. Such a one was the famous Calébar, the dreaded thief-taker of the Pampas, the Vidocq of Buenos Ayres. This man during more than forty years exercised his profession in the Republic and a few years since was living, at an advanced age, not far from Buenos Ayres. There appeared to be concentrated in him the acuteness and keen perceptions of all the brethren of his craft; it was impossible to deceive him; no one whose trail he had once beheld could hope to escape discovery. An adventurous vagabond once entered his house, during his temporary absence on a journey to Buenos Ayres, and purloined his best saddle. When the robbery was discovered, his wife covered the robber's trail with a kneading-trough. Two months later Calébar returned, and was shown the almost obliterated footprint. Months rolled by; the saddle was apparently forgotten; but a year and a half later, as the *rastreador* was again at Buenos Ayres, a footprint in the street attracted his notice. He followed the trail; passed from street to street and from *plaza* to *plaza*, and finally entering a house in the suburbs, laid his hand upon the begrimed and worn-out saddle which had once been his own *montura de fiesta*!

In 1830, a prisoner, awaiting the death-penalty, effected his escape from jail. Calébar, with a detachment of soldiers, was

put upon the scent. Expecting this, and knowing that the gallows lay behind him, the fugitive had adopted every expedient for baffling his pursuers: he had walked long distances upon tiptoe; had scrambled along walls; had walked backwards, crawled, doubled, leaped; but all in vain! Calébar's blood was up; his reputation was at stake; to fail now would be an indelible disgrace. If now and then he found himself at fault, he as often recovered the trail, until the bank of a water-course was reached, to which the flying criminal had taken. The trail was lost; the soldiers would have turned back; but Calébar had no such thought. He patiently followed the course of the *acequia* for a few rods, and suddenly halting, said to his companions, "Here is the spot at which he left the canal; there is no trail,—not a footprint,—but do you see those drops of water upon the grass?" With this slight clue they were led towards a vineyard. Calébar examined it at every side, and bade the soldiers enter, saying, "He is there!" The men obeyed him, but shortly reported that no living being was within the walls. "He is there!" quietly reiterated Calébar; and, in fact, a second more thorough examination resulted in the capture of the trembling fugitive, who was executed on the following day.—There can be no doubt regarding the literal exactness of this anecdote.

At another time, we are told, a party of political prisoners, incarcerated by General Rosas, had contrived a plan of escape, in which they were to be aided by friends outside. When all was ready, one of the party suddenly exclaimed,—

"But Calébar! you forget him!"

"Calébar!" echoed his friends; "true, it is useless to escape while he can pursue us!"

Nor was any flight attempted until the dreaded trailer had been bribed to fall ill for a few days, when the prisoners succeeded in making good their escape.

He who would learn more of Calébar and his brother-trailers, let him procure a copy of the little work that now lies be-

fore us,* in the shape of a tattered duodecimo, which has come to us across the Andes and around Cape Horn, from the most secluded corner of the Argentine Confederation. Badly printed and barbarously bound, this "*Life of Juan Facundo Quiroga*" is nevertheless replete with the evidence of genius, and bears the stamp of a generously-cultivated mind. Its author, indeed, the poet-patriot-philosopher, Don Domingo F. Sarmiento, may be called the Lamartine of South America, whose eventful career may some day invite us to an examination. Suffice it now to say, that he was expelled by Rosas in 1840 from Buenos Ayres, and that he took his way to Chile, with the intention in that hospitable republic of devoting his pen to the service of his oppressed country. At the baths of Zonda he wrote with charcoal, under a delineation of the national arms: *On ne tue point les idées!* which inscription, having been reported to the Gaucho chieftain, a committee was appointed to decipher and translate it. When the wording of the significant hint was conveyed to Rosas, he exclaimed,— "Well, what does it mean?" The answer was conveyed to him in 1852; and the sentence serves as epigraph to the present life of his associate and victim, Facundo Quiroga.

In this extraordinary character we see the quintessence of that desert-life some types of which we have endeavored to delineate. As one who, rising from the lowest station to heights of uncontrolled power, as a representative of a class of rulers unfortunately too common in the republics that descend from Spain, and as a remarkable instance of brutal force and barbaric stubbornness triumphing over reason, science, education, and, in a word, civilization, he is admirably portrayed by Sr. Sarmiento. Ours be the task to condense into a few pages the story of his life and death.

The Argentine province of La Rioja embraces vast tracts of sandy desert. Destitute of rivers, bare of trees, it is

* *Vida de Juan Facundo Quiroga*, etc., por Domingo F. Sarmiento. Santiago, 1845.

only by means of artificial and scanty irrigation that the peasant can cultivate a narrow strip of land. Inclosed by these arid wastes lies, nevertheless, a fertile region entitled the Plains, which, in despite of its name, is broken by ridges of hills, and supports a luxuriant vegetation with pastures trodden by unnumbered herds. The character of the people is Oriental; their appearance actually recalls, as we are told, that of the ancient dwellers about Jerusalem; their very customs have rather an Arabic than a Spanish tinge.

Somewhere upon these *Llanos*, and toward the close of the eighteenth century, Don Prudencio Quiroga, as a well-to-do *estanciero* or grazier, was gladdened (doubtless) by the birth of a lusty son. He called him Juan Facundo. For the first few years of his existence, we may safely believe, the future general was scarcely distinguishable from a common baby. Obstinate he doubtless was, and fierce and cruel in his tiny way; were his mother still alive, the good woman could doubtless tell us of many a bitter moment spent in lamenting her infant's waywardness; but we hear nothing of him until the year 1799, when he was sent to San Juan, a town then celebrated for its schools and learning, to acquire the rudiments of knowledge. At the age of eleven the boy already manifested the character of the future man. Solitary, disdainful, rebellious, his intercourse with his schoolfellows was limited to the interchange of blows, his only amusement lay in the annoyance of those with whom he was brought in contact. He is already a perfect Gaucho; can wield the lasso, and the *bolas*, and the knife; is a fearless *ginete*, a consummate horseman. One day at school, the master, irritated beyond endurance, exhibits a new rod, bought expressly, so he says, "for flogging Facundo." When the boy is called up to recite, he blunders, stammers, hesitates, on purpose. Down comes the rod, with a vigorous kick Facundo upsets the pedagogue's rickety throne, and takes to his heels. After a three-days' search, he is

discovered secreted in a vineyard outside the town.

This little incident, of so trifling import at the time, was remembered in after years as an early indication of the ferocious and uncontrollable *caudillo's* character. But it was soon eclipsed by the reckless deeds that followed each other in quick succession between his fifteenth and twentieth years. He speedily became notorious in the little town for his wild moroseness, for his savage ferocity when excited, for his inordinate love of cards. Gaming, a passion with many, was a necessary of life to him; it was the only pursuit to which he was ever constant; it gave rise to the quarrel in which, while yet a schoolboy, he for the first time spilt blood.

By and by we lose sight of the student of San Juan. He has absolutely sunk out of sight. Yet, if we peer into filthy *pulperías* here and there between San Luis and San Juan, we may catch a glimpse of a shaggy, swarthy savage, gambling, gambling as if for life; and we may also hear of more than one affray in which his dagger has "come home richer than it went." A little later, the son of wealthy Don Prudencio has become—not a common laborer—but a comrade of common laborers. He chooses the most toilsome, the most unintellectual, but, at the same time, the most remunerative handicraft,—that of the *tapiador*, or builder of mud walls. At San Juan, in the orchard of the Godoys,—at Fiambalá, in La Rioja, in the city of Mendoza,—they will show you walls which the hands of General Facundo Quiroga, *Comandante de Campaña*, etc., etc., put together. Wherever he works, he is noted for the ascendancy which he maintains over the other peons. They are entirely subject to his will; they do nothing without his advice; he is worth, say his employers, a dozen overseers. Ah, he is yet to rule on a larger scale!

Did these people ever think,—as they watched the sombre, stubborn Gaucho, sweating over a *tapia*, subjecting a drove of peons to his authority, or, stretched

upon a hide, growing ferocious as the luck went against him at cards,—that here was one of those forces which mould or overturn the world? Could it ever have occurred to the Godoys of San Juan, to the worthy municipality of Mendoza, that this scowling savage was yet to place his heel upon their prostrate forms, and most thoroughly to exhibit, through weary, sanguinary years, the reality of that tremendous saying,—“The State? I am the State!”?

Doubtless no. Little as the comrades of Maximin imagined that the truculent Goth was yet to wear the blood-stained purple, little as the clients of Robespierre dreamed of the vortex toward which he was being insensibly hurried by the stream of years, did the men, whose names are thrown out from their obscurity by the glare of his misdeeds, conceive that their fortunes, their lives, all things but their souls, were shortly to depend upon the capricious breath of this servant who so quietly pounds away upon their mud inclosures.

He does not long, however, remain the companion of peons. Eighteen hundred and ten has come, bringing with it liberty, and bloodshed, and universal discord. The sun of May beams down upon a desolated land. For the mild, although repressive viceregal sway is substituted that of a swarm of military chieftains, who, fighting as patriots against Liniers and his ill-fated troops, as rivals with each other, or as *montanero*-freebooters against all combined, swept the plains with their harrying lancers from the seacoast to the base of the Cordillera.

In this period of anarchy we catch another glimpse of Juan Facundo. He has worked his way down to Buenos Ayres, nine hundred miles from home, and enlists in the regiment of *Arribeños*, raised by his countryman, General Ocampo, to take part in the liberation of Chile. But even the infinitesimal degree of discipline to which his fellow-soldiers had been reduced was too much for his wild spirit; already he feels that command, and not obedience, is his birthright; there is soon a vacancy in the ranks.

With three companions Quiroga took to the desert. He was followed and overtaken by an armed detachment, or *partida*; summoned to surrender; the odds are overpowering. But this man bids defiance to the world; he is yet, in this very region, to rout well-appointed and disciplined armies with a handful of men; and he engages the *partida*. A sanguinary conflict is the result, in which Quiroga, slaying four or five of his assailants, comes off victorious, and pursues his journey in the teeth of other bands which are ordered to arrest him. He reaches his native plains, and, after a flying visit to his parents, we again lose sight of the *Gaucho malo*. Blurred rumors of his actions have, indeed, been preserved; accounts of brutality toward his gray-haired father, of burnings of the dwelling in which he first saw the light, of endless gaming, and plentiful shedding of blood; but we hear nothing positive concerning him until the year 1818. Somewhere in that year he determines to join the band of freebooters under Ramirez, which was then devastating the eastern provinces. And here—O deep designs of Fate!—the very means intended to check his mad career serve only to accelerate its development. Dupuis, governor of San Luis, through which province he is passing on his way to join Ramirez, arrests the *Gaucho malo*, and throws him into the common jail, there to rot or starve as Fortune may direct.

But she had other things in store for him. A number of Spanish officers, captured by San Martin in Chile, were confined within the same walls. Goaded to the energy of despair by their sufferings, and convinced that after all they could die no more than once, the Spaniards rose one day, broke open the doors of their prison, and proceeded to that part of the building where the common malefactors, and among them Juan Facundo, were confined. No sooner was Facundo set at liberty, than he snatched the bolt of the prison-gate from the very hand which had just withdrawn it to set him free, crushed the Spaniard's skull with the

heavy iron, and swung it right and left, until, according to his own statement, made at a later date, no less than fourteen corpses were stiffening on the ground. His example incited his companions to aid him in subduing the revolt of their fellow-prisoners; and, as a reward for "loyal and heroic conduct," he was restored to his privileges as a citizen.

Thus, in the energetic language of his biographer, was his name ennobled, and cleansed, but with *blood*, from the stains that defiled it. Persecuted no longer, nay, even caressed by the government, he returned to his native plains, to stalk with added haughtiness and new titles to esteem among his brother Gauchos of La Rioja.

Having in this manner taken a rapid survey of the most salient points in his private career up to the year 1820, we may pause for a moment, before studying his public life, to glance at the condition of his native country in the first decade of its independence. The partial separation from Spain, which was effected on the 25th May, 1810, was followed by a long and bloody struggle, in all the southern provinces, between the royal forces and the adherents of the Provisional Junta. Such framework of government as had been in existence was practically annihilated, and the various provinces of the late Viceroyalty of Buenos Ayres fell a prey to the military chieftains who could attract around them the largest number of Gaucho cavalry, while civilization, commerce, and every peaceful art, declined at a rapid rate. No alteration in this state of affairs was effected by the final Declaration of Independence, made at Tucuman, July 9, 1816; and in 1820, Buenos Ayres, the seat of the government which claimed to be supreme, was seized by a confederacy of the provincial chiefs, who secured, by the destruction of the Directorial Government, complete and unchallenged independence for themselves. During this anarchical period, the famous Artigas was harrying the Banda Oriental; Rosas and Lopez were

preparing for their blood-stained careers; Bustos, Ibarra, and a host of other *caudillos*, ruled the interior provinces; and Juan Facundo Quiroga was raised to irresponsible power.

In his native province of La Rioja the mastery had for many years been disputed by two powerful houses, the Ocampos and the Dávilas, both descended from noble families in Spain. In the year 1820 the former were triumphant, and possessed all the authority then wielded in the province. From them Facundo received the appointment of Sergeant-Major of Militia, with the powers of *Comandante de Campaña*, or District Commandant.

In any other country the nomination to such a post of a man rendered notorious by his contempt for authority, who already boasted of no less than thirty murders, and who had voluntarily placed himself in the lowest ranks of society, would be a thing absolutely incredible; but the Ocampos probably felt the insecurity of their authority, and were sufficiently sagacious to attempt, at least, to render that man a useful adherent or ally, who might, if allured by their foes, prove a terrible weapon against them. But they found in Quiroga no submissive servant. So openly did he disregard the injunctions of his superiors, that a corps of the principal officers in the army entreated their general, Ocampo, to seize upon and execute the rebellious Gaucho, but failed in inducing him to adopt their advice. It was not long before he had occasion to repent his leniency, or his weakness.

A mutiny having occurred among some troops at San Juan, a detachment was sent against them, and with it Quiroga and his horsemen. The mutineers proved victorious, and, headed by their ringleaders, Aldao and Corro, continued their line of march towards the North. While Ocampo with his beaten troops fell back to wait for reinforcements, Quiroga pursued the retreating victors, harassed their rear, clogged their every movement, and proved so formidable to the enemy, that

Aldao, abandoning his companion, made an arrangement with the government of La Rioja, by which he was to be allowed free passage into San Luis, whither Quiroga was ordered to conduct him. He joined Aldao.

And here, close upon the summit of the steep he has so easily ascended, we cannot help pausing for an instant to reflect upon the singular manifestation of *destiny* in his life. History acquaints us with no similar character who displayed so little forethought with such astonishing results. He premeditated nothing, unless now and then a murder. He took no trouble to form a plan of government, yet his authority was unquestioned during many years in Mendoza, Córdoba, and San Juan. Even his most monstrous acts of perfidy appear to have been committed on the spur of the moment, with less calculation than he gave to a game at cards. Thrown upon the world with brutal passions scarcely controlled by a particle of reason, whirled hither and thither in a general and fearful cataclysm, he shows us preëminently the wonderful designs of Providence carried into effect, as it were, by a succession of blind and sudden impulses. In a community of established order the gallows would have put a speedy check upon his misdeeds; in the Argentine Confederation of 1820 he was gradually lifted, by an ever-rising tide of blood, to the eminence of lawless power.

Only for a while, however; for the stream did not cease to rise. The flood that had elevated him alone disregarded his commands. For a few moments he might maintain his footing upon the fearful peak; and then —

But as yet he is only *Comandante de Campaña*, escorting the rebel Aldao into San Luis. He took no pains to conceal his discontent with the government of Ocampo, nor was Aldao slow in noticing or availing himself of his disaffection. He offered Quiroga a hundred men, if he chose to overturn the government and seize upon La Rioja. Quiroga eagerly accepted, marched upon the city, took it by surprise, threw the Ocampos

and their subordinates into prison, and sent them confessors, with the order to prepare for death. The remainder of Aldao's force was subsequently induced to join his cause, and, on the intercession of some of its leaders, the incarcerated Ocampos were suffered to escape with their lives.

Their banished enemy, Don Nicolas Dávila, was called from Tucuman to the nominal governorship of La Rioja, while Quiroga retained, with his old title, the actual rule of the province. But Dávila was not long content with this mere semblance of authority. During the temporary absence of Quiroga, he concerted with Araya, one of the men of Aldao, a plan for the capture of their master. Quiroga heard of it,—he heard of everything,—and his answer was the assassination of Captain Araya! Summoned by the government which he himself had created to answer the accusation of instigated murder, he advanced upon the Dávilas with his Llanista horsemen. Miguel and Nicolas Dávila hastily assembled a body of troops, and prepared for a final struggle. While the two armies were in presence of each other, a commissioner from Mendoza endeavored to effect a peaceable arrangement between their chiefs. Passing from one camp to the other with propositions and conditions, he inspired the soldiers of the Dávilas with a fatal security. Quiroga, falling suddenly upon them in the midst of the negotiations, routed them with ease, and slew their general, who, with a small body of devoted followers, made a fierce onslaught upon him personally, and succeeded in inflicting upon him a severe wound before he was shot down. Thenceforth,—from the year 1823,—Quiroga was despot of La Rioja.

His government was simple enough. His two engrossing objects—if objects, indeed, he may be said to have possessed—were extortion and the uprooting of the last vestiges of civilization and law; his instruments, the dagger and the lash; his amusement, the torture of unwitting offenders; his serious occupation, the

shuffling of cards. For gambling the man had an insatiable thirst; he played once for forty hours without intermission; it was death to refuse a game with him; no one might cease playing without his express commands; no one durst win the stakes; and as a consequence, he accumulated at cards in a few years almost all the coined money then existing in the province.* Not content with this source of revenue, he became a farmer of the *diezmo* or tithes, appropriated to himself the *mostrenco* or unbranded cattle, by which means he speedily became proprietor of many thousand head, even established a monopoly of beef in his own favor,—and woe to the luckless fool who should dare to infringe upon the terrible barbarian's prerogative!

What was the state of society, it will undoubtedly be inquired, in which the defeat of a handful of men could result in such a despotism? We have already glanced at the people of La Rioja,—at their dreamy, Oriental character, at their pastoral pursuits. A community of herdsmen, scattered over an extensive territory, and deprived at one blow of the two great families to whom they had been accustomed to look up, with infantine submission, as their God-appointed chiefs,—these were not the men to stand up, unprompted by a single master-mind, to rid themselves of one whose oppression was, after all, only a new form of the treatment to which, for an entire generation, they had been subjected. La Rioja and San Juan were the only two provinces in which Quiroga's heavy hand was felt continuously; in the others he ruled rather by influence than in person; and the Gauchos, as a matter of course, were enthusiastic for a man who exalted the peasant at the expense of the citizen, whose exactions were actually burdensome only to the wealthy, and who permitted every license to his fol-

lowers, with the single exception of disobedience to himself.

He was not without—it is impossible that he should have lacked—some of those instinctive and personal attributes with which almost every savage chieftain who has maintained so extraordinary an ascendancy over his fellows has been endowed. Sarmiento tells us that he was tall, immensely powerful, a famous *ginete* or horseman, a more adroit wielder of the lasso and the *bolas* than even his rival, Rosas, capable of great endurance, and abstinent from intoxicating drinks.

His eye and voice were dreaded more by his soldiers than the lances of their antagonists. He could wring a Gaucho's secret from his breast; it was useless to attempt a subterfuge before him. Some article, we are told, was once stolen from a company of his troops, and every effort for its recovery proved fruitless. It was reported to Quiroga. He paraded the men, and, having procured a number of sticks, exactly equal in length, gave to each man one, proclaiming that the soldier whose stick should be found longer than the others next morning had been the thief. Next morning he again drew up his troops. The sticks were mustered by Quiroga himself. Not one had grown since the previous day; but there was one which was *shorter* than the rest. With a terrible roar, Quiroga seized the trembling Gaucho to whom the stick belonged. "Thou art the thief!" he exclaimed. It was so; the fellow had cut off a portion of the wood, hoping thus to escape detection by its growth! *—

* Since the above was written, we have heard of the adoption of an expedient identical with that of Quiroga, under similar circumstances, and with the same result. The detector was, however, an English seaman, now captain of a well-known steam-vessel, who, forming part of a crew one of whom had lost a sum of money, broke off ten twigs of equal length from a broom, and distributed them among his shipmates, with the same observation as was used by the Argentine chief. Two hours later he examined them, and found that the negro steward had *shortened* his allotted twig. The money was restored.—The coincidence is instructive.

* Thus the Monagas, the late rulers of Venezuela, are accused of denuding their country of specie in order to accumulate a vast treasure abroad in expectation of a rainy day.

Another time, one of his soldiers had been robbed of some trappings, and no trace of the thief could be discovered. Quiroga ordered the detachment to file past him, one by one. He stood, himself, with folded arms and terrible eyes, perusing each man as he passed. At length he darted forward, pounced upon one of the soldiers, and shouted, "Where is the *montura*?" "In yonder thicket!" stammered out the self-convicted thief. "Four musketeers this way!" and the commander was not out of sight before the wretched Gaucho was a corpse. In these instinctive qualities, so awful to untutored minds, lay the secret of the power of Quiroga,—and of how many others of the world's most famous names!

Already in 1825 he was recognized as a lawful authority by the government of Buenos Ayres, and invited to take part in a Congress of Generals at that city. At the same time, however, he received a military errand. The Province of Tucuman having been seized by a young Buenos Ayrean officer, Colonel Madrid, Quiroga was requested to march against the successful upstart, and to restore the cause of law and order,—an undertaking scarcely congruous with his own antecedents. The chief of La Rioja, however, eagerly accepted the mission, marched with a small force into Tucuman, routed Madrid, (and this literally, for his army ran away, leaving the Colonel to charge Quiroga's force alone, which he did, escaping by a miracle with his life,) and returned to La Rioja and San Juan. Into the latter town he made a triumphal entry, through streets lined on both sides with the principal inhabitants, whom he passed by in disdainful silence, and who humbly followed the Gaucho tyrant to his quarters in a clover-field, where he allowed them to stand in anxious humiliation while he conversed at length with an old negress whom he seated by his side. Not ten years had elapsed since these very men might have beheld him pounding *tapias* on this spot!

We do not propose following the blood-stained career of Juan Facundo through

all its windings and episodes of cruelty and blood. Suffice it to say, that, with the title of *Comandante de Campaña*, he retained in La Rioja every fraction of actual power,—nominating, nevertheless, a shadowy governor, who, if he attempted any independent action, was instantly deposed. His influence gradually extended over the neighboring provinces; thrice he encountered and defeated Madrid; while at home he gambled, levied contributions, bastinadoed, and added largely to his army. He excelled his contemporary, Francia, in the art of inspiring terror; he only fell short of Rosas in the results. A wry look might at any time call down upon a luckless child a hundred lashes. He once split the skull of his own illegitimate son for some trifling act of disobedience. A lady, who once said to him, while he was in a bad humor, *Adios, mi General*, was publicly flogged. A young girl, who would not yield to his wishes, he threw down upon the floor, and kicked her with his heavy boots until she lay in a pool of blood. Truly, a ruler after the Russian sort!

Dorrego, meanwhile, was at the head of affairs at Buenos Ayres. Opposed to the "Unitarianism" of Lavalle and Paz, who would have made of their country, not a republic "one and indivisible," but a confederation after the model in the North, Dorrego was chiefly anxious to consolidate his power in the maritime state of Buenos Ayres, leaving the interior provinces to their own devices, and to the tender mercies of Lopez, Quiroga, Bustos, with a dozen other Gaucho chiefs. Rosas, the incarnation of the spirit which was then distracting the entire Confederation, was made Commandant General by Dorrego, who, however, frequently threatened to shoot "the insolent boor," but who, unfortunately for his country, never fulfilled the threat. As for himself, he, indeed, met with that fate at the hands of Lavalle, who landed with an army from the opposite coast of Uruguay, defeated Dorrego and Rosas in a pitched battle at the gates of Buenos Ayres, and

entered the city in triumph a few hours later.

With the ascendancy of Lavalle came the inauguration—and, alas! only the inauguration—of a new system. Paz, one of the few Argentinians who really deserved the name of General that they bore, was sent to Córdoba, with eight hundred veterans of his old command. He defeated Bustos, the tyrant of Córdoba, took possession of the city, (one of the most important strategic points upon the Pampas,) and restored that confidence and security to which its inhabitants had so long been strangers. This action was at the same time a challenge to Quiroga in his neighboring domain. It was a warning that right was beginning to assert its supremacy over might; nor was the hero of La Rioja slow to understand it. Collecting a band of four thousand Gaucho lancers, he marched upon Córdoba with the assurance of an easy victory. The *boleado* General! The idea of his opposing the Tiger of the Plains!

What followed this movement is a matter of general history. The battle of the Tablada has had European, and therefore American, celebrity. It is known to those who think of Chacabuco and Maipú, of Navarro and Monte Caseros, only as of spots upon the map; let it, therefore, suffice to say that Quiroga was beaten decisively, unmistakably, terribly. The serried veterans of Paz, schooled in the Brazilian wars, stood grimly to the death before the fiery onslaught of Quiroga; in vain did his horsemen shatter themselves against the Unitarian General's scanty squares; the tactics of civilized warfare proved for the first time successful on these plains against wild ferocity and a larger force; Quiroga was driven back at length with fearful slaughter, with the loss of arms, ammunition, reputation, and of seventeen hundred men. He returned to La Rioja, with the disorganized remnant of his band, marking his path with blood and the infliction of atrocious chastisements. Even in adversity he is terrible and is obeyed.

For nearly two years he divided his time between the provinces of San Juan, Tucuman, and La Rioja, engaged in the prosecution of his designs, chief among which was the destruction of Paz, who remained at Córdoba, intending to act only on the defensive. At length, in 1830, he considered himself sufficiently strong for an attack on his recent conqueror. Paz was unwilling to shed blood a second time; he offered advantageous terms to Quiroga; but the boastful Gaucho, full of confidence in his savage lancers, refused to negotiate, and marched against his skilful but unassuming antagonist. Paz secretly evacuated Córdoba, and, moving westward, hazarded a feat which is alone sufficient to establish his character as the best tactician of the New World,—San Martín alone, perhaps, excepted. Splitting his little army into a dozen brigades, he occupied the entire mountain-range behind the town, operated, with scarce five thousand men, upon a front of two hundred miles in extent, held in his own unwavering grasp the reins which controlled the movements of every division, and gradually inclosed, as in a net, the forces of Quiroga and Villafañe. In vain they struggled and blindly sought an exit; every door was closed; until, finally, after a campaign of fifteen days, the narrowing battalions of Paz surrounded, engaged, and utterly defeated at Oncativo the bewildered army on whose success Quiroga had staked his all.

The Gaucho himself again escaped. After seven years of dictatorial power, he is once more reduced to the level upon which we saw him standing in 1818, a vagabond at Buenos Ayres, although from that level he may raise his head a trifle higher.

And here we might conclude, having seen his rocket-like ascent, and the swiftly-falling night of his career,—having seen him a laborer, a deserter, a General, a Dictator, a fugitive; but much remains to be narrated. Passing over, with the barest mention, his temporary return to power, which he accomplished by one of

those lightning-like expeditions that even among Gaucho horsemen rendered him conspicuous, let us hasten on to the great dramatic crisis of his history; and taking no notice of the five years of marching and countermarching, scheming, fighting, and negotiating, that intervened between his defeat at the Laguna Larga and 1835, draw to a close our hasty sketch.

In that year, after taking part in a disorderly and fruitless expedition planned by Rosas to secure the southern frontier against Indian attacks, he suddenly made his appearance at Buenos Ayres, with a body of armed satellites, who inspired the newly-seated Dictator—the famous Juan Manuel de Rosas, who has been already so often mentioned in these pages—with vivid apprehensions. Rosas, Quiroga, Lopez—the Triumvirate of La Plata—were bound together, it is true, by a potent tie,—by the strongest, indeed,—that of self-interest; but as each of the three, and especially Rosas, was in continual dread lest that consideration in his colleagues should clash with his own intentions, the presence of Quiroga at Buenos Ayres was far from satisfactory to the remaining two. His influence over half a dozen of the despotic governors in the interior was still immense; the Pampa was his own, after all his defeats; and it was shrewdly suspected that his indifference to power in La Rioja, and his mysterious visit to the maritime capital, were indications of a design to seize upon the government of Buenos Ayres itself. Nor were the actions of Quiroga suited to remove these apprehensions. The sanguinary despot of the interior bloomed in the Buenos Ayrean *cafés* into a profound admirer of Rivadavia, Lavalle, and Paz, his ancient Unitarian enemies; Buenos Ayres, the Confederation, he loudly proclaimed, must have a Constitution; conciliation must supplant the iron-heeled tyranny under which the people had groaned so long; the very jaguar of the Pampa, said the Porteño wits,—not yet wholly muzzled by the dread *Mazorca*, or Club, of Rosas,—was to be stripped of his claws, and made to live on *mata-gusano*

twigs and thistles! *Redeunt Saturnia regna!* The reign of blood, according to Quiroga, its chief evangelist, was approaching its termination.

In order to form a conception of the effect produced by these transactions, we must imagine Pelissier or Walewski entertaining, twenty-three years later, the *cercles* at Paris with discourses from the beauty of the last *régime*, with eulogies of Lamartine, and apotheoses of Louis Blanc; sneering at Espinasse, and eulogizing Cavaignac; vowing that France can be governed only under a liberal constitution, and paying a visit to his Majesty, the Elect of December, with a rough-and-tumble suite of Republican bravos. Assuredly, were such a thing possible in Paris, the gentlemen in question would very shortly be reviling English hospitality under its protecting ægis, if not dying of fever at Cayenne. Nor could Rosas, who was at that time far less firmly seated on his throne than is at present the man who wields the destinies of France, endure so powerful a rival in his vicinity. But how to get rid of him? Assassination, by which a minor offender was so speedily put out of the way, could not safely be attempted with a man who yet retained a singular mastery over the minds of thousands of brutal and strong-armed horsemen; a false step would result in inevitable destruction; and many anxious days were spent by the gloomy tyrant ere he could decide upon a plan for disposing of his inconvenient friend.

In the midst of this perplexity intelligence was received of a disagreement between the governments of Salta, Tucuman, and Santiago, provinces of the interior, which threatened to expand into warlike proceedings. Rosas sent for Quiroga. No one but the hero of La Rioja, he insinuated, had sufficient influence to bring about a settlement of these disputes; no one but he had power to prevent a war; would he not, therefore, hasten to Tucuman, and obviate so dire a calamity? Quiroga hesitated, refused, consented, wavered, and again declined

the task. With a vacillation to which he had hitherto been a stranger, he remained for many days undecided; a suspicion of deceit appears to have presented itself to his mind; but at length he resolved to accept the commission. His hesitation, meanwhile, had completed his ruin; it had given time for the maturing of deadly plans.

In midsummer, 1835, (December 18th,) the Gaucho chieftain commenced his fateful journey. As he entered the carriage which was to be his home for many days, and bade farewell to the adherents who were assembled to witness his departure, he turned toward the city with a wild expression and words that were remembered afterwards. *Si salgo bien*, he said, *te volveré á ver*; *si no, adios para siempre!* "If I succeed, I shall see thee again; if not, farewell forever!" Was it a presentiment of the truth which came upon him, like that which clouded the great mind of the first Napoleon as he left the Tuileries when the Hundred Days were running out?

One hour before his departure, a mounted messenger had been dispatched from Buenos Ayres in the same direction as that he was about to follow; and the city was scarcely out of sight when Quiroga manifested the most feverish anxiety to overtake this man. His travelling companions were his secretary, Dr. Ortiz, and a young man of his acquaintance, bound for Córdoba, to whom he had given a seat in his vehicle. The postilions were incessantly admonished to make haste. At a shallow stream which they forded, in the mud of which the wheels became imbedded, resisting every effort for their release, Quiroga actually hooked the postmaster of the district, who had hastened to the spot, to the carriage, and made him join his exertions to those of the horses until the vehicle was extricated, when he sped onward with fearful velocity, asking at every post-station, "When did the *chasquí* from Buenos Ayres pass? An hour ago! Forward, then!" and the carriage swept onward, on unceasingly, across the lonely Pampa,—racing, as it afterwards proved, with Death

At last, Córdoba, nearly six hundred miles from his starting-point, was reached, just one hour after the arrival of the hunted courier. Quiroga was besought by the cringing magistracy to spend the night in their city. His only answer was, "Give me horses!" and two hours before midnight he rolled out of Córdoba, having beaten in the grisly race.

Beaten, inasmuch as he was yet alive. For Córdoba was ringing with the details of his intended assassination. Such and such men were to have done the deed; at such a shop the pistol had been bought; at such a spot it was to have been fired;—but the marvellous swiftness of the intended victim had ruined all.

Meanwhile, Quiroga sped onward more at ease toward Tucuman. Arrived there, he speedily arranged the matters in dispute, and was entreated by the governors of that province and of Santiago to accept of an escort on his return; he was besought to avoid Córdoba, to avoid Buenos Ayres; he was counselled to throw off the mask of subservience, and to rally his numerous adherents in La Rioja and San Juan;—but remonstrance and advice were alike thrown away upon him. In vain was the most circumstantial account of the preparations for his murder sent by friends from Córdoba; he appeared as foolhardy now in February as in December he had been panic-stricken. "To Córdoba!" he shouted, as he entered his *galera*; and for Córdoba the postilions steered.

At the little post-hut of Ojos del Agua, in the State of Córdoba, Quiroga, with his secretary, Ortiz, halted one night on the homeward journey. Shortly before reaching the place, a young man had mysteriously stopped the carriage, and had warned its hurrying inmates that at a spot called Barranca Yaco a *partida*, headed by one Santos Perez, was awaiting the arrival of Quiroga. There the massacre was to take place. The youth, who had formerly experienced kindness at the hands of Ortiz, begged him to avoid the danger. The unhappy secretary was rendered almost insane with terror, but his master sternly rebuked his fears.

—"The man is not yet born," he said, "who shall slay Facundo Quiroga! At a word from me these fellows will put themselves at my command, and form my escort into Córdoba!"

The night at Ojos del Agua was passed sleeplessly enough by the unhappy Ortiz, but Quiroga was not to be persuaded into ordinary precautions. Confident in his mastery over the minds of men, he set out unguarded, on the 18th of February, at break of day. The party consisted of the chieftain and his trembling secretary, a negro servant on horseback, two postillions,—one of them a mere lad,—and a couple of couriers who were travelling in the same direction.

Who that has been on the Pampas but can picture to himself this party as it left the little mud-hut on the plain? The cumbersome, oscillating *galera*, with its shaggy, straggling four-in-hand,—the caracoling Gaucho couriers,—the negro pricking on behind,—the tall grass rolling out on every side,—the muddy pool that forms the watering-place for beasts and men scattered over a hundred miles of brookless plain,—the great sun streaming up from the herbage just in front, awakening the voices of a million insects and the carols of unnumbered birds in the thickets here and there! Look long, Quiroga, on that rising sun! listen to the well-known melody that welcomes his approach! gaze once more upon the rolling Pampa! look again upon those flying hills! Thou who hast said, "There is no life but this life," who didst "believe in nothing," shalt know these things no more! five minutes hence thy statecraft will be over, thy long apprenticeship will have expired! thou shalt be standing—where thou mayst learn the secret that the wisest man of all the bookworms thou despisest will never know alive!

Barranca Yaco is reached. The warning was well founded. A crack is heard,

—there is a puff of smoke,—and two musket-balls pass each other in the carriage, yet without inflicting injury on its occupants. From either side the road, however, the *partida* dashes forth. In a moment the horses are disabled, the postillions, the negro, and the couriers cut down. Ortiz trembles more violently than ever; Quiroga rises above himself. Looking from the carriage while the butchery is going on, he addresses the murderers with a few unflinching words. There is glamour in his speech; the ensanguined assassins hesitate,—another instant, only one moment more, and they will be on their knees before him; but Santos Perez, who was at one side, comes up, raises his piece,—and the body of Juan Fecundo Quiroga falls in a soulless heap with a bullet in the brain! Ortiz was immediately hacked to pieces; and the tragedy of Córdoba is at an end.

Such were the life, misdeeds, and death of the Terror of the Pampas. Having in the most rapid and imperfect manner sketched the career of this extraordinary Fortune's-child, his rise from the most abject condition to unbridled power, his ferocious rule, and his almost heroic end, we may surely exclaim, that "nothing in his life became him like the leaving of it," and, presenting this bare *résumé* of facts as a mere outline, a mere pen-and-ink sketch of the terrible chieftain, refer the curious student to the impassioned narrative whence our facts are mainly derived.

It may be well to add, that Santos Perez, who was actively pursued by the government of Buenos Ayres, which itself had instigated him to the commission of the crime, was finally, after many hairbreadth escapes, betrayed by his mistress to the agents of Rosas, and suffered death at Buenos Ayres with savage fortitude. The Lord have mercy on his soul!

MADEMOISELLE'S CAMPAIGNS.

THE SCENE AND THE ACTORS.

THE heroine of our tale is one so famous in history that her proper name never appears in it. The seeming paradox is the soberest fact. To us Americans, glory lies in the abundant display of one's personal appellation in the newspapers. Our heroine lived in the most gossiping of all ages, herself its greatest gossip; yet her own name, patronymic or baptismal, never was talked about. It was not that she sank that name beneath high-sounding titles; she only elevated the most commonplace of all titles till she monopolized it, and it monopolized her. Anne Marie Louise d'Orléans, Souveraine de Dombes, Princesse Dauphine d'Auvergne, Duchesse de Montpensier, is forgotten, or rather was never remembered; but the great name of MADEMOISELLE, *La Grande Mademoiselle*, gleams like a golden thread shot through and through that gorgeous tapestry of crimson and purple which records for us the age of Louis Quatorze.

In May of the year 1627, while the Queen and Princess of England lived in weary exile at Paris,—while the slow tide of events was drawing their husband and father to his scaffold,—while Sir John Eliot was awaiting in the Tower of London the summoning of the Third Parliament,—while the troops of Buckingham lay dying, without an enemy, upon the Isle of Rhé,—while the Council of Plymouth were selling their title to the lands of Massachusetts Bay,—at the very crisis of the terrible siege of Rochelle, and perhaps during the very hour when the Three Guardsmen of Dumas held that famous bastion against an army, the heroine of our story was born. And she, like the Three Guardsmen, waited till twenty years after for a career.

The twenty years are over. Richelieu is dead. The strongest will that ever

ruled France has passed away; and the poor, broken King has hunted his last badger at St. Germain, and meekly followed his master to the grave, as he had always followed him. Louis XIII., called Louis Le Juste, not from the predominance of that particular virtue (or any other) in his character, but simply because he happened to be born under the constellation of the Scales, has died like a Frenchman, in peace with all the world except his wife. That beautiful and queenly wife, Anne of Austria, (Spaniard though she was,)—no longer the wild and passionate girl who fascinated Buckingham and embroiled two kingdoms,—has hastened within four days to defy all the dying imprecations of her husband, by reversing every plan and every appointment he has made. The little prince has already shown all the Grand Monarque in his childish “Je suis Louis Quatorze,” and has been carried in his bib to hold his first parliament. That parliament, heroic as its English contemporary, though less successful, has reached the point of revolution at last. Civil war is impending. Condé, at twenty-one the greatest general in Europe, after changing sides a hundred times in a week, is fixed at last. Turenne is arrayed against him. The young, the brave, the beautiful cluster around them. The performers are drawn up in line,—the curtain rises,—the play is “The Wars of the Fronde,”—and into that brilliant arena, like some fair circus equestrian, gay, spangled, and daring, rides Mademoiselle.

Almost all French historians, from Voltaire to Cousin, (St. Anlaire being the chief exception,) speak lightly of the Wars of the Fronde. “*La Fronde n'est pas sérieuse.*” Of course it was not. If it had been serious, it would not have been French. Of course, French insurrections, like French despotisms, have always been tempered by epigrams; of

course, the people went out to the conflicts in ribbons and feathers; of course, over every battle there pelted down a shower of satire, like the rain at the Eglington tournament. More than two hundred pamphlets rattled on the head of Condé alone, and the collection of *Mazarinades*, preserved by the Cardinal himself, fills sixty-nine volumes in quarto. From every field the first crop was glory, the second a *bon-mot*. When the dagger of De Retz fell from his breast-pocket, it was "our good archbishop's breviary"; and when his famous Corinthian troop was defeated in battle, it was "the First Epistle to the Corinthians." While, across the Channel, Charles Stuart was listening to his doom, Paris was gay in the midst of dangers, Madame de Longueville was receiving her gallants in mimic court at the Hôtel de Ville, De Retz was wearing his sword-belt over his archbishop's gown, the little hunchback Conti was generalissimo, and the starving people were pillaging Mazarin's library, in joke, "to find something to gnaw upon." Outside the walls, the maids-of-honor were quarrelling over the straw beds which annihilated all the romance of martyrdom, and Condé, with five thousand men, was besieging five hundred thousand. No matter, they all laughed through it, and through every succeeding turn of the kaleidoscope; and the "Anything may happen in France," with which La Rochefoucauld jumped amicably into the carriage of his mortal enemy, was not only the first and best of his maxims, but the key-note of French history for all coming time.

But behind all this sport, as in all the annals of the nation, were mysteries and terrors and crimes. It was the age of cabalistic ciphers, like that of De Retz, of which Guy Joli dreamed the solution; of inexplicable secrets, like the Man in the Iron Mask, whereof no solution was ever dreamed; of poisons, like that diamond-dust which in six hours transformed the fresh beauty of the Princess Royal into foul decay; of dungeons, like that cell at Vincennes which Madame de

Rambouillet pronounced to be "worth its weight in arsenic." War or peace hung on the color of a ball-dress, and Madame de Chevreuse knew which party was coming uppermost, by observing whether the binding of Madame de Hautefort's prayer-book was red or green. Perhaps it was all a little theatrical, but the performers were all Rachels.

And behind the crimes and the frivolities stood the Parliaments, calm and undaunted, with leaders, like Molé and Talon, who needed nothing but success to make their names as grand in history as those of Pym and Hampden. Among the Brienne Papers in the British Museum there is a collection of the manifestoes and proclamations of that time, and they are earnest, eloquent, and powerful, from beginning to end. Lord Mahon alone among historians, so far as our knowledge goes, has done fit and full justice to the French parliaments, those assemblies which refused admission to the foreign armies which the nobles would gladly have summoned in,—but fed and protected the banished princesses of England, when the court party had left those descendants of the Bourbons to die of cold and hunger in the palace of their ancestors. And we have the testimony of Henrietta Maria herself, the only person who had seen both revolutions near at hand, that "the troubles in England never appeared so formidable in their early days, nor were the leaders of the revolutionary party so ardent or so united." The character of the agitation was no more to be judged by its jokes and epigrams, than the gloomy glory of the English Puritans by the grotesque names of their saints, or the stern resolution of the Dutch burghers by their guilds of rhetoric and symbolical melodrama.

But popular power was not yet developed in France, as it was in England; all social order was unsettled and changing, and well Mazarin knew it. He knew the pieces with which he played his game of chess: the king powerless, the queen mighty, the bishops unable to take a single straightforward move, and the

knight going naturally zigzag; but a host of plebeian pawns, every one fit for a possible royalty, and therefore to be used shrewdly, or else annihilated as soon as practicable. True, the game would not last forever; but after him the deluge.

Our age has forgotten even the meaning of the word Fronde; but here also the French and Flemish histories run parallel, and the Frondeurs, like the Gueux, were children of a sarcasm. The Counsellor Bachaumont one day ridiculed insurrectionists, as resembling the boys who played with slings (*frondes*) about the streets of Paris, but scattered at the first glimpse of a policeman. The phrase organized the party. Next morning all fashions were *à la fronde*,—hats, gloves, fans, bread, and ballads; and it cost six years of civil war to pay for the Counsellor's facetiousness.

That which was, after all, the most remarkable characteristic of these wars might be guessed from this fact about the fashions. The Fronde was preëminently "the War of the Ladies." Educated far beyond the Englishwomen of their time, they took a controlling share, sometimes ignoble, as often noble, always powerful, in the affairs of the time. It was not merely a courtly gallantry which flattered them with a hollow importance. De Retz, in his Memoirs, compares the women of his age with Elizabeth of England. A Spanish ambassador once congratulated Mazarin on obtaining temporary repose. "You are mistaken," he replied, "there is no repose in France, for I have always women to contend with. In Spain, women have only love-affairs to employ them; but here we have three who are capable of governing or overthrowing great kingdoms: the Duchess de Longueville, the Princess Palatine, and the Duchess de Chevreuse." And there were others as great as these; and the women who for years outwitted Mazarin and outgeneralled Condé are deserving of a stronger praise than they have yet obtained, even from the classic and courtly Cousin.

What men of that age eclipsed or equalled the address and daring of those delicate and highborn women? What a romance was their ordinary existence! The Princess Palatine gave refuge to Mme. de Longueville when that alone saved her from sharing the imprisonment of her brothers Condé and Conti,—then fled for her own life, by night, with Rochefoucauld. Mme. de Longueville herself, pursued afterwards by the royal troops, wished to embark in a little boat, on a dangerous shore, during a midnight storm so wild that not a fisherman could at first be found to venture forth; the beautiful fugitive threatened and implored till they consented; the sailor who bore her in his arms to the boat let her fall amid the furious surges; she was dragged senseless to the shore again, and, on the instant of reviving, demanded to repeat the experiment; but as they utterly refused, she rode inland beneath the tempest, and travelled for fourteen nights before she could find another place of embarkation.

Madame de Chevreuse rode with one attendant from Paris to Madrid, fleeing from Richelieu, remaining day and night on her horse, attracting perilous admiration by the womanly loveliness which no male attire could obscure. From Spain she went to England, organizing there the French exiles into a strength which frightened Richelieu; thence to Holland, to conspire nearer home; back to Paris, on the minister's death, to form the faction of the Importants; and when the Duke of Beaufort was imprisoned, Mazarin said, "Of what use to cut off the arms while the head remains?" Ten years from her first perilous escape, she made a second, dashed through La Vendée, embarked at St. Malo for Dunkirk, was captured by the fleet of the Parliament, was released by the Governor of the Isle of Wight, unable to imprison so beautiful a butterfly, reached her port at last, and in a few weeks was intriguing at Liège again.

The Duchess de Bouillon, Turenne's sister, purer than those we have named,

but not less daring or determined, after charming the whole population of Paris by her rebel beauty at the Hôtel de Ville, escaped from her sudden incarceration by walking through the midst of her guards at dusk, crouching in the shadow of her little daughter, and afterwards allowed herself to be recaptured, rather than desert that child's sick-bed.

Then there was Clémence de Maille, purest and noblest of all, niece of Richelieu and hapless wife of the cruel ingrate Condé, his equal in daring and his superior in every other high quality. Married a child still playing with her dolls, and sent at once to a convent to learn to read and write, she became a woman the instant her husband became a captive; while he watered his pinks in the garden at Vincennes, she went through France and raised an army for his relief. Her means were as noble as her ends. She would not surrender the humblest of her friends to an enemy, or suffer the massacre of her worst enemy by a friend. She threw herself between the fire of two hostile parties at Bordeaux, and, while men were falling each side of her, compelled them to peace. Her deeds rang through Europe. When she sailed from Bordeaux for Paris at last, thirty thousand people assembled to bid her farewell. She was loved and admired by all the world, except that husband for whom she dared so much,—and the Archbishop of Taen. The respectable Archbishop complained, that "this lady did not prove that she had been authorized by her husband, an essential provision, without which no woman can act in law." And Condé himself, whose heart, physically twice as large as other men's, was spiritually imperceptible, repaid this stainless nobleness by years of persecution, and bequeathed her, as a life-long prisoner, to his dastard son.

Then, on the royal side, there was Anne of Austria, sufficient unto herself, Queen Regent, and every inch a queen, (before all but Mazarin,)—from the moment when the mob of Paris filed through the chamber of the boy-king, in his pre-

tended sleep, and the motionless and state-ly mother held back the crimson draperies, with the same lovely arm which had waved perilous farewells to Buckingham,—to the day when the news of the fatal battle of Gien came to her in her dressing-room, and "she remained undisturbed before the mirror, not neglecting the arrangement of a single curl."

In short, every woman who took part in the Ladies' War became heroic,—from Marguerite of Lorraine, who snatched the pen from her weak husband's hand and gave De Retz the order for the first insurrection, down to the wife of the commandant of the Porte St. Roche, who, springing from her bed to obey that order, made the drums beat to arms and secured the barrier; and fitly, amid adventurous days like these, opened the career of Mademoiselle.

II.

THE FIRST CAMPAIGN.

GRANDCHILD of Henri Quatre, niece of Louis XIII., cousin of Louis XIV., first princess of the blood, and with the largest income in the nation, (500,000 livres,) to support these dignities, Mademoiselle was certainly born in the purple. Her autobiography admits us to very gorgeous company; the stream of her personal recollections is a perfect Pactolus. There is almost a surfeit of royalty in it; every card is a court-card, and all her counters' are counts. "I wore at this festival all the crown-jewels of France, and also those of the Queen of England." "A far greater establishment was assigned to me than any *filles de France* had ever had, not excepting any of my aunts, the Queens of England and of Spain, and the Duchess of Savoy." "The Queen, my grandmother, gave me as a governess the same lady who had been governess to the late King." Pageant or funeral, it is the same thing. "In the midst of these festivities we heard of the death of the King of Spain; whereat the Queens were greatly afflicted, and we all went into mourning." Thus,

throughout, her Memoirs glitter like the coat with which the splendid Buckingham astonished the cheaper chivalry of France: they drop diamonds.

But for any personal career Mademoiselle found at first no opportunity, in the earlier years of the Fronde. A gay, fearless, flattered girl, she simply shared the fortunes of the court; laughed at the festivals in the palace, laughed at the ominous insurrections in the streets; laughed when the people cheered her, their pet princess; and when the royal party fled from Paris, she adroitly secured for herself the best straw-bed at St. Germain, and laughed louder than ever. She despised the courtiers who flattered her; secretly admired her young cousin Condé, whom she affected to despise; danced when the court danced, and ran away when it mourned. She made all manner of fun of her English lover, the future Charles II., whom she alone of all the world found bashful; and in general she wasted the golden hours with much excellent fooling. Nor would she, perhaps, ever have found herself a heroine, but that her respectable father was a poltroon.

Lord Mahon ventures to assert, that Gaston, Duke of Orléans, was "the most cowardly prince of whom history makes mention." A strong expression, but perhaps safe. Holding the most powerful position in the nation, he never came upon the scene but to commit some new act of ingenious pusillanimity; while, by some extraordinary chance, every woman of his immediate kindred was a natural heroine, and became more heroic through disgust at him. His wife was Marguerite of Lorraine, who originated the first Fronde insurrection; his daughter turned the scale of the second. But, personally, he not only had not the courage to act, but he had not the courage to abstain from acting; he could no more keep out of parties than in them; but was always busy, waging war in spite of Mars, and negotiating in spite of Minerva.

And when the second war of the Fronde broke out, it was in spite of him-

self that he gave his name and his daughter to the popular cause. When the fate of the two nations hung trembling in the balance, the royal army under Turenne advancing on Paris, and almost arrived at the city of Orléans, and that city likely to take the side of the strongest,—then Mademoiselle's hour had come. All her sympathies were more and more inclining to the side of Condé and the people. Orléans was her own hereditary city. Her father, as was his custom in great emergencies, declared that he was very ill and must go to bed immediately; but it was as easy for her to be strong as it was for him to be weak; so she wrung from him a reluctant plenipotentiary power; she might go herself and try what her influence could do. And so she rode forth from Paris, one fine morning, March 27, 1652,—rode with a few attendants, half in enthusiasm, half in levity, aiming to become a second Joan of Arc, secure the city, and save the nation. "I felt perfectly delighted," says the young girl, "at having to play so extraordinary a part."

The people of Paris had heard of her mission, and cheered her as she went. The officers of the army, with an escort of five hundred men, met her half way from Paris. Most of them evidently knew her calibre, were delighted to see her, and installed her at once over a regular council of war. She entered into the position with her natural promptness. A certain grave M. de Rohan undertook to tutor her privately, and met his match. In the public deliberation, there were some differences of opinion. All agreed that the army should not pass beyond the Loire: this was Gaston's suggestion, and nevertheless a good one. Beyond this all was left to Mademoiselle. Mademoiselle intended to go straight to Orléans. "But the royal army had reached there already." Mademoiselle did not believe it. "The citizens would not admit her." Mademoiselle would see about that. Presently the city government of Orléans sent her a letter, in great dismay, particularly requesting her to keep her dis-

tance. Mademoiselle immediately ordered her coach, and set out for the city. "I was naturally resolute," she naïvely remarks.

Her siege of Orléans is perhaps the most remarkable on record. She was right in one thing; the royal army had not arrived: but it might appear at any moment; so the magistrates quietly shut all their gates, and waited to see what would happen.

Mademoiselle happened. It was eleven in the morning when she reached the *Porte Bannière*, and she sat three hours in her state carriage without seeing a person. With amusing politeness, the governor of the city at last sent her some confectionery,—agreeing with John Keats, who held that young women were beings fitter to be presented with sugar-plums than with one's time. But he took care to explain that the bonbons were not official, and did not recognize her authority. So she quietly ate them, and then decided to take a walk outside the walls. Her council of war opposed this step, as they did every other; but she coolly said (as the event proved) that the enthusiasm of the populace would carry the city for her, if she could only get at them.

So she set out on her walk. Her two beautiful ladies-of-honor, the Countesses de Fiesque and de Frontenac, went with her; a few attendants behind. She came to a gate. The people were all gathered inside the ramparts. "Let me in," demanded the imperious young lady. The astonished citizens looked at each other and said nothing. She walked on,—the crowd inside keeping pace with her. She reached another gate. The enthusiasm was increased. The captain of the guard formed his troops in line and saluted her. "Open the gate," she again insisted. The poor captain made signs that he had not the keys. "Break it down, then," coolly suggested the daughter of the House of Orléans; to which his only reply was a profusion of profound bows, and the lady walked on.

Those were the days of astrology, and at this moment it occurred to our Made-

moiselle, that the chief astrologer of Paris had predicted success to all her undertakings, from the noon of this very day until the noon following. She had never had the slightest faith in the mystic science, but she turned to her attendant ladies, and remarked that the matter was settled; she should get in. On went the three, until they reached the bank of the river, and saw, opposite, the gates which opened on the quay. The Orléans boatmen came flocking round her, a hardy race, who feared neither queen nor Mazarin. They would break down any gate she chose. She selected one, got into a boat, and sending back her terrified male attendants, that they might have no responsibility in the case, she was rowed to the other side. Her new allies were already at work, and she climbed from the boat upon the quay by a high ladder, of which several rounds were broken away. They worked more and more enthusiastically, though the gate was built to stand a siege, and stoutly resisted this one. Courage is magnetic; every moment increased the popular enthusiasm, as these highborn ladies stood alone among the boatmen; the crowd inside joined in the attack upon the gate; the guard looked on; the city government remained irresolute at the *Hôtel de Ville*, fairly beleaguered and stormed by one princess and two maids-of-honor.

A crash, and the mighty timbers of the *Porte Brûlée* yield in the centre. Aided by the strong and exceedingly soiled hands of her new friends, our elegant Mademoiselle is lifted, pulled, pushed, and tugged between the vast iron bars which fortify the gate; and in this fashion, torn, splashed, and dishevelled generally, she makes entrance into her city. The guard, promptly adhering to the winning side, present arms to the heroine. The people fill the air with their applause; they place her in a large, wooden chair, and bear her in triumph through the streets. "Everybody came to kiss my hands, while I was dying with laughter to find myself in so odd a situation."

Presently our volatile lady told them

that she had learned how to walk, and begged to be put down; then she waited for her countesses, who arrived bespattered with mud. The drums beat before her, as she set forth again, and the city government, yielding to the feminine conqueror, came to do her homage. She carelessly assured them of her clemency. She "had no doubt that they would soon have opened the gates, but she was naturally of a very impatient disposition, and could not wait." Moreover, she kindly suggested, neither party could now find fault with them; and as for the future, she would save them all trouble, and govern the city herself,—which she accordingly did.

By confession of all historians, she alone saved the city for the Fronde, and, for the moment, secured that party the ascendancy in the nation. Next day the advance-guard of the royal forces appeared,—a day too late. Mademoiselle made a speech (the first in her life) to the city government; then went forth to her own small army, by this time drawn near, and held another council. The next day she received a letter from her father, (whose health was now decidedly restored,) declaring that she had "saved Orléans and secured Paris, and shown yet more judgment than courage." The next day Condé came up with his forces, compared his fair cousin to Gustavus Adolphus, and wrote to her that "her exploit was such as she only could have performed, and was of the greatest importance."

Mademoiselle staid a little longer at Orléans, while the armies lay watching each other, or fighting the battle of Bléneau, of which Condé wrote her an official bulletin, as being generalissimo. She amused herself easily, went to mass, played at bowls, received the magistrates, stopped couriers to laugh over their letters, reviewed the troops, signed passports, held councils, and did many things "for which she should have thought herself quite unfitted, if she had not found she did them very well." The enthusiasm she had inspired kept itself unabated, for

she really deserved it. She was everywhere recognized as head of affairs; the officers of the army drank her health on their knees, when she dined with them, while the trumpets sounded and the canons roared; Condé, when absent, left instructions to his officers, "Obey the commands of Mademoiselle, as my own"; and her father addressed a despatch from Paris to her ladies of honor, as Field-Marshal in her army: "*À Mesdames les Comtesses Maréchaux de Camp dans l'Armée de ma Fille contre le Mazarin.*"

III.

CAMPAIGN THE SECOND.

MADemoisELLE went back to Paris. Half the population met her outside the walls; she kept up the heroine, by compulsion, and for a few weeks held her court as Queen of France. If the Fronde had held its position, she might very probably have held hers. Condé, being unable to marry her himself, on account of the continued existence of his invalid wife, (which he sincerely regretted,) had a fixed design of marrying her to the young King. Queen Henrietta Maria cordially greeted her, lamented more than ever her rejection of the "bashful" Charles II., and compared her to the original Maid of Orléans,—an ominous compliment from an English source.

The royal army drew near; on July 1, 1652, Mademoiselle heard their drums beating outside. "I shall not stay at home to-day," she said to her attendants, at two in the morning; "I feel convinced that I shall be called to do some unforeseen act, as I was at Orléans." And she was not far wrong. The battle of the Porte St. Antoine was at hand.

Condé and Turenne! The two greatest names in the history of European wars, until a greater eclipsed them both. Condé, a prophecy of Napoleon, a general by instinct, incapable of defeat, insatiable of glory, throwing his marshal's bâton within the lines of the enemy, and following it; passionate, false, unscrupulous, mean. Turenne, the precursor of

Wellington rather, simple, honest, truthful, humble, eating off his iron camp-equipage to the end of life. If it be true, as the ancients said, that an army of stags led by a lion is more formidable than an army of lions led by a stag, then the presence of two such heroes would have given lustre to the most trivial conflict. But that fight was not trivial upon which hung the possession of Paris and the fate of France; and between these two great soldiers it was our Mademoiselle who was again to hold the balance, and to decide the day.

The battle raged furiously outside the city. Frenchman fought against Frenchman, and nothing distinguished the two armies except a wisp of straw in the hat, on the one side, and a piece of paper on the other. The people of the metropolis, fearing equally the Prince and the King, had shut the gates against all but the wounded and the dying. The Parliament was awaiting the result of the battle, before taking sides. The Queen was on her knees in the Carmelite Chapel. De Retz was shut up in his palace, and Gaston of Orléans in his,—the latter, as usual, slightly indisposed; and Mademoiselle, passing anxiously through the streets, met nobleman after nobleman, of her acquaintance, borne with ghastly wounds to his residence. She knew that the numbers were unequal; she knew that her friends must be losing ground. She rushed back to her father, and implored him to go forth in person, rally the citizens, and relieve Condé. It was quite impossible; he was so exceedingly feeble; he could not walk a hundred yards. "Then, Sir," said the indignant Princess, "I advise you to go immediately to bed. The world had better believe that you cannot do your duty, than that you will not."

Time passed on, each moment registered in blood. Mademoiselle went and came; still the same sad procession of dead and dying; still the same mad conflict, Frenchman against Frenchman, in the three great avenues of the Faubourg St. Antoine. She watched it from the

city walls till she could bear it no longer. One final, desperate appeal, and her dastard father consented, not to act himself, but again to appoint her his substitute. Armed with the highest authority, she hastened to the Hôtel de Ville, where the Parliament was in irresolute session. The citizens thronged round her, as she went, imploring her to become their leader. She reached the scene, exhibited her credentials, and breathlessly issued demands which would have made Gaston's hair stand on end.

"I desire three things," announced Mademoiselle: "first, that the citizens shall be called to arms."

"It is done," answered the obsequious officials.

"Next," she resolutely went on, "that two thousand men shall be sent to relieve the troops of the Prince."

They pledged themselves to this also.

"Finally," said the daring lady, conscious of the mine she was springing, and reserving the one essential point till the last, "that the army of Condé shall be allowed free passage into the city."

The officials, headed by the Maréchal de l'Hôpital, at once exhibited the most extreme courtesy of demeanor, and begged leave to assure her Highness that under no conceivable circumstances could this request be granted.

She let loose upon them all the royal anger of the House of Bourbon. She remembered the sights she had just seen; she thought of Rochefoucauld, with his eye shot out and his white garments stained with blood,—of Guitant shot through the body,—of Roche-Giffard, whom she pitied, "though a Protestant." Condé might, at that moment, be sharing their fate; all depended on her; and so Conrart declares, in his *Memoirs*, that "Mademoiselle said some strange things to these gentlemen": as, for instance, that her attendants should throw them out of the window; that she would pluck off the Marshal's beard; that he should die by no hand but her's, and the like. When it came to this, the Maréchal de l'Hôpital stroked his chin with a sense of

insecurity, and called the council away to deliberate; "during which time," says the softened Princess, "leaning on a window which looked on the St. Esprit, where they were saying mass, I offered up my prayers to God." At last they came back, and assented to every one of her propositions.

In a moment she was in the streets again. The first person she met was Vallon, terribly wounded. "We are lost!" he said. "You are saved!" she cried, proudly. "I command to-day in Paris, as I commanded in Orléans." "Vous me rendez la vie," said the re-animated soldier, who had been with her in her first campaign. On she went, meeting at every step men wounded in the head, in the body, in the limbs,—on horseback, on foot, on planks, on barrows,—besides the bodies of the slain. She reached the windows beside the Porte St. Antoine, and Condé met her there; he rode up, covered with blood and dust, his scabbard lost, his sword in hand. Before she could speak, that soul of fire uttered, for the only recorded time in his career, the word *Despair*: "Ma cousine, vous voyez un homme au désespoir,"—and burst into tears. But her news instantly revived him, and his army with him. "Mademoiselle is at the gate," the soldiers cried; and, with this certainty of a place of refuge, they could do all things. In this famous fight, five thousand men defended themselves against twelve thousand, for eight hours. "Did you see Condé himself?" they asked Turenne, after it was over. "I saw not one, but a dozen Condés," was the answer; "he was in every place at once."

But there was one danger more for Condé, one opportunity more for Mademoiselle, that day. Climbing the neighboring towers of the Bastille, she watched the royal party on the heights of Charonne, and saw fresh cavalry and artillery detached to aid the army of Turenne. The odds were already enormous, and there was but one course left for her. She was mistress of Paris, and therefore mistress of the Bastille. She sent for the

governor of the fortress, and showed him the advancing troops. "Turn the cannon under your charge, Sir, upon the royal army." Without waiting to heed the consternation she left behind her, Mademoiselle returned to the gate. The troops had heard of the advancing reinforcements, and were drooping again; when, suddenly, the cannon of the Bastille, those Spanish cannon, flamed out their powerful succor, the royal army halted and retreated, and the day was won.

The Queen and the Cardinal, watching from Charonne, saw their victims escape them. But the cannon-shots bewildered them all. "It was probably a salute to Mademoiselle," suggested some comforting adviser. "No," said the experienced Maréchal de Villeroi, "if Mademoiselle had a hand in it, the salute was for us." At this, Mazarin comprehended the whole proceeding, and coldly consoled himself with a *bon-mot* that became historic. "Elle a tué son mari," he said,—meaning that her dreams of matrimony with the young king must now be ended. No matter; the battle of the Porte St. Antoine was ended also.

There have been many narratives of that battle, including Napoleon's; they are hard to reconcile, and our heroine's own is by no means the clearest; but all essentially agree in the part they ascribe to her. One brief appendix to the campaign, and her short career of heroism fades into the light of common day.

Yet a third time did Fortune, showering upon one maiden so many opportunities at once, summon her to arm herself with her father's authority, that she might go in his stead into that terrible riot which, two days after, tarnished the glories of Condé, and by its reaction overthrew the party of the Fronde ere long. None but Mademoiselle dared to take the part of that doomed minority in the city government, which, for resisting her own demands, were to be terribly punished on that fourth-of-July night. "A conspiracy so base," said the generous Talon, "never stained the soil of France." By delib-

erate premeditation, an assault was made by five hundred disguised soldiers on the Parliament assembled in the Hôtel de Ville; the tumult spread; the night rang with a civil conflict more terrible than that of the day. Condé and Gaston were vainly summoned; the one cared not, the other dared not. Mademoiselle again took her place in her carriage and drove forth amid the terrors of the night. The sudden conflict had passed its cruel climax, but she rode through streets slippery with blood; she was stopped at every corner. Once a man laid his arm on the window, and asked if Condé was within the carriage. She answered "No," and he retreated, the flambeaux gleaming on a weapon beneath his cloak. Through these interruptions, she did not reach the half-burned and smoking Hôtel de Ville till most of its inmates had left it; the few remaining she aided to conceal, and emerged again amid the lingering, yawning crowd, who cheered her with, "God bless Mademoiselle! all she does is well done."

At four o'clock that morning she went to rest, weary with these days and nights of responsibility. Sleep soundly, Mademoiselle, you will be troubled with such no longer. An ignominious peace is at hand; and though peace, too, has her victories, yours is not a nature grand enough to grasp them. Last to yield, last to be forgiven, there will yet be little in your future career to justify the distrust of despots, or to recall the young heroine of Orléans and St. Antoine.

IV.

THE CONCLUSION.

LIKE a river which loses itself, by infinite subdivision, in the sands, so the wars of the Fronde disappeared in petty intrigues at last. As the fighting ended and manœuvring became the game, of course Mazarin came uppermost,—Mazarin, that super-Italian, finessing and fascinating, so deadly sweet, *l'homme plus agréable du monde*, as Madame de Motteville and Bussy-Rabutin call him,—flattering that

he might win, avaricious that he might be magnificent, winning kings by jewelry and princesses by lapdogs,—too cowardly for any avoidable collision,—too cool and economical in his hatred to waste an antagonist by killing him, but always luring and cajoling him into an unwilling tool,—too serenely careless of popular emotion even to hate the mob of Paris, any more than a surgeon hates his own lancet when it cuts him; he only changes his grasp and holds it more cautiously. Mazarin ruled. And the King was soon joking over the fight at the Porte St. Antoine, with Condé and Mademoiselle; the Queen at the same time affectionately assuring our heroine, that, if she could have got at her on that day, she would certainly have strangled her, but that, since it was past, she would love her as ever,—as ever; while Mademoiselle, not to be outdone, lies like a Frenchwoman, and assures the Queen that really she did not mean to be so naughty, but "she was with those who induced her to act against her sense of duty!"

The day of civil war was over. The daring heroines and voluptuous blonde beauties of the Frondeur party must seek excitement elsewhere. Some looked for it in literature; for the female education of France in that age was far higher than England could show. The intellectual glory of the reign of the Grand Monarque began in its women. Marie de Médicis had imported the Italian grace and wit,—Anne of Austria the Spanish courtesy and romance; the Hôtel de Rambouillet had united the two, and introduced the *genre précieux*, or stately style, which was superb in its origin, and dwindled to absurdity in the hands of Mlle. de Scudéry and her valets, before Molière smiled it away forever. And now that the wars were done, literary society came up again. Madame de Sablé exhausted the wit and the cookery of the age in her fascinating entertainments,—*pâtés* and Pascal, Rochefoucauld* and *ragoûts*,—Mme. de Brégy's Epictetus, Mme. de Choisy's salads,—confectionery, marmalade, elixirs, Des Cartes, Arnould,

Calvinism, and the barometer. Mme. de Sablé had a sentimental theory that no woman should eat at the same table with a lover, but she liked to see her lovers eat, and Mademoiselle, in her obsolete novel of the "*Princesse de Paphlagonie*," gently satirizes this passion of her friend. And Mademoiselle herself finally eclipsed the Sablé by her own entertainments at her palace of the Luxembourg, where she offered no dish but one of gossip, serving up herself and friends in a course of "Portraits" so appetizing that it became the fashion for ten years, and reached perfection at last in the famous "Characters" of La Bruyère.

Other heroines went into convents, joined the Carmelites, or those nuns of Port-Royal of whom the Archbishop of Paris said that they lived in the purity of angels and the pride of devils. Thither went Madame de Sablé herself, finally, — "the late Madame," as the dashing young abbés called her when she renounced the world. Thither she drew the beautiful Longueville also, and Heaven smiled on one repentance that seemed sincere. There they found peace in the home of Angélique Arnould and Jacqueline Pascal. And thence those heroic women came forth again, when religious war threatened to take the place of civil: again they put to shame their more timid male companions, and by their labors Jesuit and Jansenist found peace.

But not such was to be the career of our Mademoiselle, who, at twenty, had tried the part of devotee for one week and renounced it forever. No doubt, at thirty-five, she "began to understand that it is part of the duty of a Christian to attend High Mass on Sundays and holy days"; and her description of the death-bed of Anne of Austria is a most extraordinary jumble of the next world and this. But thus much of devotion was to her only a part of the proprieties of life, and before the altar of those proprieties she served, for the rest of her existence, with exemplary zeal. At forty, she was still the wealthiest unmarried princess in Europe; fastidious in toilette, stainless in

reputation, not lovely in temper, rigid in etiquette, learned in precedence, an oracle in court traditions, a terror to the young maids-of-honor, and always quarrelling with her own sisters, younger, fairer, poorer than herself. Her mind and will were as active as in her girlhood, but they ground chaff instead of wheat. Whether her sisters should dine at the Queen's table, when she never had; who should be her trainbearer at the royal marriage; whether the royal Spanish father-in-law, on the same occasion, should or should not salute the Queen-mother; who, on any given occasion, should have a *tabouret*, who a *pliant*, who a chair, who an arm-chair; who should enter the King's *ruelle*, or her own, or pass out by the private stairway; how she should arrange the duchesses at state-funerals: these were the things which tried Mademoiselle's soul, and these fill the later volumes of that autobiography whose earlier record was all a battle and a march. From Condé's "Obey Mademoiselle's orders as my own," we come down to this: "For my part, I had been worrying myself all day; having been told that the new Queen would not salute me on the lips, and that the King had decided to sustain her in this position. I therefore spoke to Monsieur the Cardinal on the subject, bringing forward as an important precedent in my favor, that the Queen-mother had always kissed the princesses of the blood"; and so on through many pages. Thus lapsed her youth of frolics into an old age of cards.

It is a slight compensation, that this very pettiness makes her chronicles of the age very vivid in details. How she revels in the silver brocades, the violet-colored velvet robes, the crimson velvet carpets, the purple damask curtains fringed with gold and silver, the embroidered *fleurs de lis*, the wedding-caskets, the cordons of diamonds, the clusters of emeralds *en poires* with diamonds, and the Isabelle-colored linen, whereby hangs a tale! She still kept up her youthful habit of avoiding the sick-rooms of her kindred,

but how magnificently she mourned them when they died! Her brief, genuine, but quite unexpected sorrow for her father was speedily assuaged by the opportunity it gave her to introduce the fashion of gray mourning, instead of black; it had previously, it seems, been worn by widows only. Servants and horses were all put in deep black, however, and "the court observed that I was very *magnifique* in all my arrangements." On the other hand, be it recorded, that our Mademoiselle, chivalrous royalist to the last, was the only person at the French court who refused to wear mourning for the usurper Cromwell!

But, if thus addicted to funeral pageants, it is needless to say that weddings occupied their full proportion of her thoughts. Her schemes for matrimony fill the larger portion of her history, and are, like all the rest, a diamond necklace of great names. In the boudoir, as in the field, her campaigns were superb, but she was cheated of the results. Her picture should have been painted, like that of Justice, with sword and scales,—the one for foes, the other for lovers. She spent her life in weighing them,—monarch against monarch, a king in hand against an emperor in the bush. We have it on her own authority, which, in such matters, was unsurpassable, that she was "the best match in Europe, except the Infanta of Spain." Not a marriageable prince in Christendom, therefore, can hover near the French court, but this middle-aged sensitive-plant prepares to close her leaves and be coy. The procession of her wooers files before our wondering eyes, and each the likeness of a kingly crown has on: Louis himself, her bright possibility of twenty years, till he takes her at her own estimate and prefers the Infanta,—Monsieur, his younger brother, Philip IV. of Spain, Charles II. of England, the Emperor of Germany, the Archduke Leopold of Austria,—prospective king of Holland,—the King of Portugal, the Prince of Denmark, the Elector of Bavaria, the Duke of Savoy, Condé's son, and Condé himself. For the last

of these alone she seems to have felt any real affection. Their tie was more than cousinly; the same heroic blood of the early Bourbons was in them, they were trained by the same precocious successes, only six years apart in age, and beginning with that hearty mutual aversion which is so often the parent of love, in impulsive natures like theirs. Their flirtation was platonic, but chronic; and whenever poor, heroic, desolate Clémence de Maille was sicker than usual, these cousins were walking side by side in the Tuileries gardens, and dreaming, almost in silence, of what might be, while Mazarin shuddered at the thought of mating two such eagles together.—So passed her life, and at last, like many a match-making lady, she baffled all the gossips, and left them all in laughter when her choice was made.

The tale stands embalmed forever in the famous letter of Madame de Sévigné to her cousin, M. de Coulanges, written on Monday, December 15, 1670. It can never be translated too often, so we will risk it again.

"I have now to announce to you the most astonishing circumstance, the most surprising, most marvellous, most triumphant, most bewildering, most unheard-of, most singular, most extraordinary, most incredible, most unexpected, most grand, most trivial, most rare, most common, most notorious, most secret, (till to-day,) most brilliant, most desirable; indeed, a thing to which past ages afford but one parallel, and that a poor one; a thing which we can scarcely believe at Paris; how can it be believed at Lyons? a thing which excites the compassion of all the world, and the delight of Madame de Rohan and Madame de Hauterive; a thing which is to be done on Sunday, when those who see it will hardly believe their eyes; a thing which will be done on Sunday, and which might perhaps be impossible on Monday: I cannot possibly announce it; guess it; I give you three guesses; try now. If you will not, I must tell you. M. de Lauzun marries on Sunday, at the Louvre,—whom now? I

give you three guesses,—six,—a hundred. Madame de Coulanges says, 'It is not hard to guess; it is Madame de la Vallière.' Not at all, Madame! 'Mlle. de Retz?' Not a bit; you are a mere provincial. 'How absurd!' you say; 'it is Mlle. Colbert.' Not that, either. 'Then, of course, it is Mlle. de Créqui.' Not right yet. Must I tell you, then? Listen! he marries on Sunday, at the Louvre, by his Majesty's permission, Mademoiselle,—Mademoiselle de,—Mademoiselle (will you guess again?)—he marries MADEMOISELLE,—La Grande Mademoiselle,—Mademoiselle, daughter of the late Monsieur,—Mademoiselle, grand-daughter of Henri Quatre,—Mademoiselle d'Eu,—Mademoiselle de Dombes,—Mademoiselle de Montpensier,—Mademoiselle d'Orléans,—Mademoiselle, the King's own cousin,—Mademoiselle, destined for the throne,—Mademoiselle, the only fit match in France for Monsieur [the King's brother];—there's a piece of information for you! If you shriek,—if you are beside yourself,—if you say it is a hoax, false, mere gossip, stuff, and nonsense,—if, finally, you say hard things about us, we do not complain; we took the news in the same way. Adieu; the letters by this post will show you whether we have told the truth."

Poor Mademoiselle! Madame de Sévigné was right in one thing,—if it were not done promptly, it might prove impracticable. Like Ralph Roister Doister, she should ha' been married o' Sunday. Duly the contract was signed, by which Lauzun took the name of M. de Montpensier and the largest fortune in the kingdom, surrendered without reservation, all, all to him; but Mazarin had bribed the notary to four hours' delay, and during that time the King was brought to change his mind, to revoke his consent, and to contradict the letters he had written to foreign courts, formally announcing the nuptials of the first princess of the blood. In reading the *Memoirs of Mademoiselle*, one forgets all the absurdity of all her long amatory angling for the handsome young guardsman, in pity for her deep despair. When she went to

remonstrate with the King, the two royal cousins fell on their knees, embraced, "and thus we remained for near three quarters of an hour, not a word being spoken during the whole time, but both drowned in tears." Reviving, she told the King, with her usual frankness, that he was "like apes who caress children and suffocate them"; and this high-minded monarch soon proceeded to justify her remark by ordering her lover to the Castle of Pignerol, to prevent a private marriage,—which had probably taken place already. Ten years passed, before the labors and wealth of this constant and untiring wife could obtain her husband's release; and when he was discharged at last, he came out a changed, soured, selfish, ungrateful man. "Just Heaven," she had exclaimed in her youth, "would not bestow such a woman as myself upon a man who was unworthy of her." But perhaps Heaven was juster than she thought. They soon parted again forever, and he went to England, there to atone for these inglorious earlier days by one deed of heroic loyalty which it is not ours to tell.

And then unrolled the gorgeous tapestry of the maturer reign of the Grand Monarque,—that sovereign whom his priests in their liturgy styled "the chief work of the Divine hands," and of whom Mazarin said, more honestly, that there was material enough in him for four kings and one honest man. The "Moi-même" of his boyish resolution became the "L'état, c'est moi" of his maturer egotism; Spain yielded to France the mastery of the land, as she had already yielded to Holland and England the sea; Turenne fell at Sassbach, Condé sheathed his sword at Chantilly; Bossuet and Bourdaloue, preaching the funeral sermons of these heroes, praised their glories, and forgot, as preachers will, their sins; Vatel committed suicide because his Majesty had not fish enough for breakfast; the Princess Palatine died in a convent, and the Princess Condé in a prison; the fair Sévigné chose the better part, and the fairer Montespan the

worse; the lovely La Vallière walked through sin to saintliness, and poor Marie de Mancini through saintliness to sin; Voiture and Benserade and Corneille passed away, and Racine and Molière reigned in their stead; and Mademoiselle, who had won the first campaigns of her life and lost all the rest, died a weary old woman at sixty-seven.

Thus wrecked and wasted, her opportunity past, her career a disappointment, she leaves us only the passing glimpse of what she was, and the hazy possibility of what she might have been. Perhaps the defect was, after all, in herself; perhaps the soil was not deep enough to produce anything but a few stray heroisms, bright and transitory;—perhaps otherwise. What fascinates us in her is simply her daring, that inborn fire of the blood to which danger is its own exceeding great reward; a quality which always kindles enthusiasm, and justly,—but which is a thing of temperament, not necessarily joined with any other great qualities, and worthless when it stands alone. But she had other resources,—weapons, at least, if not qualities; she had birth, wealth, ambition, decision, pride, perseverance, ingenuity; beauty not slight, though not equalling the superb Longuevilles and Chevreuses of the age; great personal magnetism, more than average cultivation for that period, and unsullied chastity. Who can say what these things might have ended in, under other circumstances? We have seen how Mazarin, who read all hearts but the saintly, dreaded the conjunction of herself and Condé; it is scarcely possible to doubt that it would have placed a new line of Bourbons on the throne. Had she married Louis XIV., she might not have controlled that steadier will, but there would have been two Grand Monarques instead of one; had she accepted Charles II. of England, she might have only increased his despotic tendencies, but she would easily have disposed of the Duchess of Portsmouth; had she won Ferdinand III., Germany might have suffered less by the Peace of Westphalia;

had she chosen Alphonso Henry, the House of Braganza would again have been upheld by a woman's hand. But she did none of these things, and her only epitaph is that dreary might-have-been.

Nay, not the only one,—for one visible record of her, at least, the soil of France cherishes among its chiefest treasures. When the Paris butterflies flutter for a summer day to the decaying watering-place of Dieppe, some American wanderer, who flutters with them, may cast perchance a longing eye to where the hamlet of Eu stands amid its verdant meadows, two miles away, still lovely as when the Archbishop Laurent chose it out of all the world for his "place of eternal rest," six centuries ago. But it is not for its memories of priestly tombs and miracles that the summer visitor seeks it now, nor because the *savant* loves its ancient sea-margin or its Roman remains; nor is it because the little Bresle winds gracefully through its soft bed, beneath forests green in the sunshine, glorious in the gloom; it is not for the memories of Rollo and William the Conqueror, which fill with visionary shapes, grander than the living, the corridors of its half-desolate château. It is because these storied walls, often ruined, often rebuilt, still shelter a gallery of historic portraits such as the world cannot equal; there is not a Bourbon king, nor a Bourbon battle, nor one great name among the courtier contemporaries of Bourbons, that is not represented there; the "Hall of the Guises" contains kindred faces, from all the realms of Christendom; the "Salon des Rois" holds Joan of Arc, sculptured in marble by the hand of a princess; in the drawing-room, Père la Chaise and Marion de l'Orme are side by side, and the angelic beauty of Agnes Sorel floods the great hall with light, like a sunbeam; and in this priceless treasure-house, worth more to France than almost fair Normandy itself, this gallery of glory, first arranged at Choisy, then transferred hither to console the solitude of a weeping woman, the wanderer finds the only remaining memorial of La Grande Mademoiselle.

THE SWAN-SONG OF PARSON AVERY.

1635.

WHEN the reaper's task was ended, and the summer wearing late,
Parson Avery sailed from Newbury with his wife and children eight,
Dropping down the river harbor in the shallop Watch and Wait.

Pleasantly lay the clearings in the mellow summer-morn,
And the newly-planted orchards dropping their fruits first-born,
And the homesteads like brown islands amidst a sea of corn.

Broad meadows reaching seaward the tided creeks between,
And hills rolled, wave-like, inland, with oaks and walnuts green:
A fairer home, a goodlier land, his eye had never seen.

Yet away sailed Parson Avery, away where duty led,
And the voice of God seemed calling, to break the living bread
To the souls of fishers starving on the rocks of Marblehead!

All day they sailed: at nightfall the pleasant land-breeze died,
The blackening sky at midnight its starry lights denied,
And, far and low, the thunder of tempest prophesied.

Blotted out was all the coast-line, gone were rock and wood and sand;
Grimly anxious stood the helmsman with the tiller in his hand,
And questioned of the darkness what was sea and what was land.

And the preacher heard his dear ones, nestled round him, weeping sore:
"Never heed, my little children! Christ is walking on before
To the pleasant land of Heaven, where the sea shall be no more!"

All at once the great cloud parted, like a curtain drawn aside,
To let down the torch of lightning on the terror far and wide;
And the thunder and the whirlwind together smote the tide.

There was wailing in the shallop, woman's wail and man's despair,
A crash of breaking timbers on the rocks so sharp and bare,
And through it all the murmur of Father Avery's prayer.

From the struggle in the darkness with the wild waves and the blast,
On a rock, where every billow broke above him as it passed,
Alone of all his household the man of God was cast.

There a comrade heard him praying in the pause of wave and wind:
"All my own have gone before me, and I linger just behind;
Not for life I ask, but only for the rest thy ransomed find!"

"In this night of death I challenge the promise of thy Word!
Let me see the great salvation of which mine ears have heard!
Let me pass from hence forgiven, through the grace of Christ, our Lord!"

"In the baptism of these waters wash white my every sin,
And let me follow up to Thee my household and my kin!
Open the sea-gate of thy Heaven and let me enter in!"

The ear of God was open to his servant's last request;
As the strong wave swept him downward the sweet prayer upward pressed,
And the soul of Father Avery went with it to his rest.

There was wailing on the mainland from the rocks of Marblehead,
In the stricken church of Newbury the notes for prayer were read,
And long by board and hearthstone the living mourned the dead.

And still the fishers out-bound, or scudding from the squall,
With grave and reverent faces the ancient tale recall,
When they see the white waves breaking on the "Rock of Avery's Fall!"

THE DENSLow PALACE.

It is the privilege of authors and artists to see and to describe; to "see clearly and describe vividly" gives the pass on all state occasions. It is the "cap of darkness" and the *talaria*, and wafts them whither they will. The doors of boudoirs and senate-chambers open quickly, and close after them,—excluding the talentless and staring rabble. I, who am one of the humblest of the seers,—a universal admirer of all things beautiful and great,—from the commonwealths of Plato and Solon, severally, expulsed, as poet without music or politic, and a follower of the great,—I, from my dormitory, or nest, of twelve feet square, can, at an hour's notice, or less, enter palaces, and bear away, unchecked and unquestioned, those *imagines* of Des Cartes which emanate or are thrown off from all forms,—and this, not in imagination, but in the flesh.

Whether it was the "tone of society" which pervaded my "Florentine letters," or my noted description of the boudoir of Egeria Mentale, I could not just now determine; but these, and other humble efforts of mine, made me known in palaces as a painter of beauty and magnificence; and I have been in demand, to do for wealth what wealth cannot do for

itself,—namely, make it live a little, or, at least, spread as far, in fame, as the rings of a stone-plash on a great pond.

I enjoy friendships and regards which would satisfy the most fastidious. Are not the Denslows enormously rich? Is not Dalton a sovereign of elegance? It was I who gave the fame of these qualities to the world, in true colors, not flattered. And *they* know it, and love me. Honoria Denslow is the most beautiful and truly charming woman of society. It was I who first said it; and she is my friend, and loves me. I defy poverty; the wealth of all the senses is mine, without effort. I desire not to be one of those who mingle as principals and sufferers; for they are less causes than effects. As the Florentine in the Inferno saw the souls of unfortunate lovers borne upon a whirlwind, so have I seen all things fair and precious,—outpourings of wealth,—all the talents,—all the offerings of duty and devotion,—angelic graces of person and of soul,—borne and swept violently around on the circular gale. Wealth is only an enlargement of the material boundary, and leaves the spirit free to dash to and fro, and exhaust itself in vain efforts.—But I am philoso-

phizing,—oddly enough,—when I should describe.

An exquisite little note from Honoria, sent at the last moment, asking me to be present that evening at a "select" party, which was to open the "new house,"—the little palace of the Denslows,—lay beside me on the table. It was within thirty minutes of nine o'clock, the hour I had fixed for going. A howling winter out of doors, a clear fire glowing in my little grate. My arm-chair, a magnificent present from Honoria, shaming the wooden fixtures of the poor room, invited to meditation, and perhaps the composition of some delicate periods. They formed slowly. Time, it is said, devours all things; but imagination, in turn, devours time,—and, indeed, swallowed my half-hour at a gulp. The neighboring church-clock tolled nine. I was belated, and hurried away.

It was a *réunion* of only three hundred invitations, selected by my friend Dalton, the intimate and adviser of Honoria. So happy were their combinations, scarce a dozen were absent or declined.

At eleven, the guests began to assemble. Introductions were almost needless. Each person was a recognized member of "society." One-half of the number were women,—many of them young, beautiful, accomplished,—heiresses, "charming widows," poetesses of real celebrity, and, rarer still, of good repute,—wives of millionnaires, flashing in satin and diamonds. The men, on their side, were of all professions and arts, and of every grade of celebrity, from senator to merchant,—each distinguished by some personal attribute or talent; and in all was the gift, so rare, of manners and conversation. It was a company of undoubted gentlemen, as truly entitled to respect and admiration as if they stood about a throne. They were the untitled nobility of Nature, wealth, and genius.

As I stood looking, with placid admiration, from a recess, upon a brilliant *tableau* of beautiful women and celebrated men that had accidentally arranged itself before me, Dalton touched my arm.

"I have seen," said he, "aristocratic and republican *réunions* of the purest mode in Paris, the court and the banker's circle of London, *conversazioni* at Rome and Florence. Every face in this room is intelligent, and nearly all either beautiful, remarkable, or commanding. Observe those five women standing with Denslow and Adonais,—grandeur, sweetness, grace, form, purity; each has an attribute. It is a rare assemblage of superior human beings. The world cannot surpass it. And, by the by, the rooms are superb."

They were, indeed, magnificent: two grand suites, on either side a central hall of Gothic structure, in white marble, with light, aerial staircases and gilded balconies. Each suite was a separate miracle: the height, the breadth, the columnal divisions; the wonderful delicacy of the arches, upon which rested ceilings frescoed with incomparable art. In one compartment the arches and caryatides were of black marble; in another, of snowy Parian; in a third, of wood, exquisitely carved, and joined like one piece, as if it were a natural growth; vines rising at the bases of the walls, and spreading under the roof. There was no forced consistency. Forms suitable only for the support of heavy masses of masonry, or for the solemn effects of church interiors, were not here introduced. From straight window-cornices of dark wood, slenderly gilt, but richly carved, fell cata-racts of gleaming satin, softened in effect with laces of rare appreciation.

The frescoes and panel-work were a study by themselves, uniting the classic and modern styles in allegorical subjects. The paintings, selected by the taste of Dalton, to overpower the darkness of the rooms by intensity of color, were incorporated with the walls. There were but few mirrors. At the end of each suite, one, of fabulous size, without frame, made to appear, by a cunning arrangement of dark draperies, like a transparent portion of the wall itself, extended the magnificence of the apartments.

Not a flame nor a jet was anywhere

visible. Tinted vases, pendent, or resting upon pedestals, distributed harmonies and thoughts of light rather than light itself; and yet all was visible, effulgent. The columns which separated the apartments seemed to be composed of masses of richly-colored flames, compelled, by some ingenious alchemy, to assume the form and office of columns.

In New York, *par excellence* the city of private gorgeousness and *petite* magnificence, nothing had yet been seen equal to the rooms of the glorious Denslow Palace. Even Dalton, the most capricious and critical of men, whose nice vision had absorbed the elegancies of European taste, pronounced them superb. The upholstery and ornamentation were composed under the direction of celebrated artists. Palmer was consulted on the marbles. Page (at Rome) advised the cartoons for the frescoes, and gave laws for the colors and disposition of the draperies. The paintings, panelled in the walls, were modern, triumphs of the art and genius of the New World.

Until the hour for dancing, prolonged melodies of themes modulated in the happiest moments of the great composers floated in the perfumed air from a company of unseen musicians, while the guests moved through the vast apartments, charmed or exalted by their splendor, or conversed in groups, every voice subdued and intelligent.

At midnight began the modish music of the dance, and groups of beautiful girls moved like the atoms of Chladni on the vibrating crystal, with their partners, to the sound of harps and violins, in pleasing figures or inebriating spirals.

When supper was served, the ivory fronts of a cabinet of gems divided itself in the centre,—the two halves revolving upon silver hinges,—and discovered a hall of great height and dimensions, walled with crimson damask, supporting pictures of all the masters of modern art. The dome-like roof of this hall was of marble variously colored, and the floor tessellated and mosaicked in gro-

tesque and graceful figures of Vesuvian lavas and painted porcelain.

The tables, couches, chairs, and *vis-à-vis* in this hall were of plain pattern and neutral dead colors, not to overpower or fade the pictures on the walls, or the gold and Parian service of the cedar tables.

But the chief beauty of this unequalled supper-room was an immense bronze candelabrum, which rose in the centre from a column of black marble. It was the figure of an Italian elm, slender and of thin foliage, embraced, almost enveloped, in a vine, which reached out and supported itself in hanging from all the branches; the twigs bearing fruit, not of grapes, but of a hundred little spheres of crimson, violet, and golden light, whose combination produced a soft atmosphere of no certain color.

Neither Honoria, Dalton, nor myself remained long in the gallery. We retired with a select few, and were served in an antechamber, separated from the grand reception-room by an arch, through which, by putting aside a silk curtain, Honoria could see, at a distance, any that entered, as they passed in from the hall.

My own position was such that I could look over her shoulder and see as she saw. *Vis-à-vis* with her, and consequently with myself, was Adonais, a celebrated author, and person of the *beau monde*. On his left, Dalton, always mysteriously elegant and dangerously witty. Denslow and Jeffrey Lethal, the critic, completed our circle. The conversation was easy, animated, personal.

"You are fortunate in having a woman of taste to manage your entertainments," said Lethal, in answer to a remark of Denslow's,—“but in bringing these people together she has made a sad blunder.”

"And what may that be?" inquired Dalton, mildly.

"Your guests are too well behaved, too fine, and on their guard; there are no butts, no palpable fools or vulgarians; and, worse, there are many distinguished, but no one great man,—no social or intellectual sovereign of the occasion."

Honorio looked inquiringly at Lethal. "Pray, Mr. Lethal, tell me who he is? I thought there was no such person in America," she added, with a look of reproachful inquiry at Dalton and myself, as if we should have found this sovereign and suggested him.

"You are right, my dear queen; Lethal is joking," responded Dalton; "we are a democracy, and have only a queen of"—

"Water ices," interrupted Lethal; "but, as for the king you seek, as democracies finally come to that,"—

"Good Heavens!" exclaimed Honorio, raising the curtain, "it must be he that is coming in."

Honorio frowned slightly, rose, and advanced to meet a new-comer, who had entered unannounced, and was advancing alone. Dalton followed to support her. I observed their movements,—Lethal and Adonais using my face as a mirror of what was passing beyond the curtain.

The masses of level light from the columns on the left seemed to envelope the stranger, who came toward us from the entrance, as if he had divined the presence of Honorio in the alcove.

He was about the middle height, Napoleonic in form and bearing, with features of marble paleness, firm, and sharply defined. His hair and magnificent Asiatic beard were jetty black, curling, and naturally disposed. Under his dark and solid brows gleamed large eyes of abysmal blackness and intensity.

"Is it Lord N——?" whispered Lethal, moved from his habitual coldness by the astonishment which he read in my face.

"Senator D——, perhaps," suggested Denslow, whose ideas, like his person, aspired to the senatorial.

"Dumas," hinted Adonais, an admirer of French literature. "I heard he was expected."

"No," I answered, "but certainly in appearance the most noticeable man living. Let us go out and be introduced."

"Perhaps," said Lethal, "it is the d——."

All rose instantly at the idea, and we went forward, urged by irresistible curiosity.

As we drew near the stranger, who was conversing with Honorio and Dalton, a shudder went through me. It was a thrill of the universal Boswell; I seemed to feel the presence of "the most aristocratic man of the age."

Honorio introduced me. "My Lord Duke, allow me to present my friend, Mr. De Vere; Mr. De Vere, the Duke of Rosecouleur."

Was I, then, face to face with, nay, touching the hand of a highness,—and that highness the monarch of the *ton*? And is this a ducal hand, white as the albescent down of the eider-duck, which presses mine with a tender touch, so haughty and so delicately graduated to my standing as "friend" of the exquisite Honorio? It was too much; I could have wept; my senses rather failed.

Dalton fell short of himself; for, though his head stooped to none, unless conventionally, the sudden and unaccountable presence of the Duke of Rosecouleur annoyed and perplexed him. His own sovereignty was threatened.

Lethal stiffened himself to the ordeal of an introduction; the affair seemed to exasperate him. Denslow alone, of the men, was in his element. Pompous and soft, he "cottoned" to the grandeur with the instinct of a born satellite, and his eyes grew brighter, his body more shining and rotund, his back more concave. His *bon-vivant* tones, jolly and conventional, sounded a pure barytone to the clear soprano of Honorio, in the harmony of an obsequious welcome.

The Duke of Rosecouleur glanced around him approvingly upon the apartments. I believed that he had never seen anything more beautiful than the *petite* palace of Honorio, or more ravishing than herself. He said little, in a low voice, and always to one person at a time. His answers and remarks were simple and well-turned.

Dalton allowed the others to move on, and by a slight sign drew me to him.

"It is unexpected," he said, in a thoughtful manner, looking me full in the eyes.

"You knew the Duke of Rosecouleur in Europe?"

"At Paris, yes,—and in Italy he was a travel friend; but we heard lately that he had retired upon his estates in England; and certainly, he is the last person we looked for here."

"Unannounced."

"That is a part of the singularity."

"His name was not in the published list of arrivals; but he may have left England incognito. Is a mistake possible?"

"No! there is but one such man in Europe;—a handsomer or a richer does not live."

"An eye of wonderful depth."

"Hands exquisite."

"Feet, ditto."

"And his dress and manner."

"Unapproachable!"

"Not a shadow of pretence;—the essence of good-breeding founded upon extensive knowledge, and a thorough sense of position and its advantages;—in fact, the Napoleon of the parlor."

"But, Dalton," said I, nervously, "no one attends him."

"No,—I thought so at first; but do you see that Mephistophelean figure, in black, who follows the Duke a few paces behind, and is introduced to no one?"

"Yes. A singular creature, truly!—how thin he is!"

"That shadow that follows his Highness is, in fact, the famous valet, *Rêve de Noir*,—the prince of servants. The Duke goes nowhere without this man as a shadow. He asserts that *Rêve de Noir* has no soul; and I believe him. The face is that of a demon. It is a separate creation, equally wonderful with the master, but not human. He was condensed out of the atmosphere of the great world."

As we were speaking, we observed a crowd of distinguished persons gathered about and following his Highness, as he moved. He spoke now to one, now to another. Honoria, fascinated, her beauty

every instant becoming more radiant, just leaned, with the lightest pressure, upon the Duke's arm. They were promenading through the rooms. The music, soft and low, continued, but the groups of dancers broke up, the loiterers in the gallery came in, and as the sun draws his fifty, perhaps his hundreds of planets, circling around and near him, this noble luminary centred in himself the attention of all. If they could not speak with him, they could at least speak of him. If they could not touch his hand, they could pass before him and give one glance at his eyes. The less aristocratic were even satisfied for the moment with watching the singular being, *Rêve de Noir*,—who caught no one's eye, seemed to see no one but his master,—and yet was not here nor there, nor in any place,—never in the way, a thing of air, and not tangible, but only black.

At a signal, he would advance and present to his master a perfume, a laced handkerchief, a rose of rubies, a diamond clasp; of many with whom he spoke the liberal Duke begged the acceptance of some little token, as an earnest of his esteem. After interchanging a few words with Jeffrey Lethal,—who dared not utter a sarcasm, though he chafed visibly under the restraint,—the Duke's tasteful generosity suggested a seal ring, with an intaglio head of Swift cut in opal, the mineral emblem of wit, which dulls in the sunlight of fortune, and recovers its fiery points in the shade of adversity;—*Rêve de Noir*, with a movement so slight, 'twas like the flitting of a bat, placed the seal in the hand of the Duke, who, with a charming and irresistible grace, compelled Lethal to receive it.

To Denslow, Honoria, Dalton, and myself he offered nothing.—Strange?—Not at all. Was he not the guest, and had not I been presented to him by Honoria as her "friend?"—a word of pregnant meaning to a Duke of Rosecouleur!

To Adonais he gave a *lock of hair* of the great novelist, Dumas, in a locket of yellow tourmaline,—a stone usually black. Lethal smiled at this. He felt relieved.

"The Duke," thought he, "must be a humorist."

From my coarse way of describing this, you would suppose that it was a farcical exhibition of vulgar extravagance, and the Duke a madman or an impostor; but the effect was different. It was done with grace, and, in the midst of so much else, it attracted only that side regard, at intervals, which is sure to surprise and excite awe.

Honorina had almost ceased to converse with us. It was painful to her to talk with any person. She followed the Duke with her eyes. When, by some delicate allusion or attention, he let her perceive that she was in his thoughts, a mantling color overspread her features, and then gave way to paleness, and a manner which attracted universal remark. It was then Honorina abdicated that throne of conventional purity which hitherto she had held undisputed. Women who were plain in her presence outshone Honorina, by meeting this ducal apparition, that called itself Rosecouleur,—and which might have been, for aught they knew, a fume of the Infernal, shaped to deceive us all,—with calm and haughty propriety.

The sensation did not subside. The music of the waltz invited a renewal of that intoxicating whirl which isolates friends and lovers, in whispering and sighing pairs, in the midst of a great assemblage. All the world looked on, when Honorina Denslow placed her hand upon the shoulder of the Duke of Rosecouleur, and the noble and beautiful forms began silently and smoothly turning, with a dream-like motion. Soon she lifted her lovely eyes and steadied their rays upon his. She leaned wholly upon his arm, and the gloved hands completed the magnetic circle. At the close of the first waltz, she rested a moment, leaning upon his shoulder, and his hand still held hers,—a liberty often assumed and permitted, but not to the nobles and the monarchs of society. She fell farther, and her ideal beauty faded into a sensuous.

Honorina was lost. Dalton saw it. We retired together to a room apart. He

was dispirited; called for and drank rapidly a bottle of Champagne;—it was insufficient.

"De Vere," said he, "affairs go badly."

"Explain."

"This cursed thing that people call a duke—it kills me."

"I saw."

"Of course you did;—the world saw; the servants saw. Honorina has fallen to-night. I shall transfer my allegiance."

"And Denslow?"

"A born sycophant;—he thinks it natural that his wife should love a duke, and a duke love his wife."

"So would you, if you were any other than you are."

"Faugh! it is human nature."

"Not so; would you not as soon strangle this Rosecouleur for making love to your wife in public, as you would another man?"

"Rather."

"Pooh! I give you up. If you had simply said, 'Yes,' it would have satisfied me."

Dalton seemed perplexed. He called a servant and sent him with an order for Nalson, the usher, to come instantly to him.

Nalson appeared, with his white gloves and mahogany face.

"Nalson, you were a servant of the Duke in England?"

"Yes, Sir."

"Is the person now in the rooms the Duke of Rosecouleur?"

"I have not seen him, Sir."

"Go immediately, study the man well,—do you hear?—and come to me. Let no one know your purpose."

Nalson disappeared.

I was alarmed. If "the Duke" should prove to be an impostor, we were indeed ruined.

In five minutes,—an hour, it seemed,—Nalson stood before us.

"Is it he?" said Dalton, looking fixedly upon the face of the usher.

No reply.

"Speak the truth; you need not be afraid."

"I cannot tell, Sir."

"Nonsense! go and look again."

"It is of no use, Mr. Dalton; you, who are as well acquainted with the personal appearance of his Highness as I am, you have been deceived,—if I have."

"Nelson, do you believe that this person is an impostor?" said Dalton, pointing at myself.

"Who? Mr. De Vere, Sir?"

"If, then, you know at sight that this gentleman is my friend Mr. De Vere, why do you hesitate about the other?"

"But the imitation is perfect. And there is *Rêve de Noir*."

"Yes, did *Rêve de Noir* recognize you?"

"I have not caught his eye. You know, Sir, that this *Rêve* is not, and never was, like other men; he is a devil. One knows, and one does not know him."

"Were you at the door when the Duke entered?"

"I think not; at least—I cannot tell. When I first saw him, he was in the room, speaking with Madam Denslow."

"Nelson, you have done wrong; no one should have entered unannounced. Send the doorkeeper to me."

The doorkeeper came; a gigantic negro, magnificently attired."

"Jupiter, you were at the door when the Duke of Rosecouleur entered?"

"Yes, Sir."

"Did the Duke and his man come in a carriage?"

"Yes, Sir,—a hack."

"You may go. They are not devils," said Dalton, musingly, "or they would not have come in a carriage."

"You seem to have studied the spiritual mode of locomotion," said I.

Dalton frowned. "This is serious, De Vere."

"What mean you?"

"I mean that Denslow is a bankrupt."

"Explain yourself."

"You know what an influence he carries in political circles. The G——rs, the S——es, and their kind, have more talent, but Denslow enjoys the secret of popularity."

"Well, I know it."

"In the middle counties, where he owns vast estates, and has been liberal to debtors and tenants, he carries great favor; both parties respect him for his ignorance and pomposity, which they mistake for simplicity and power, as usual. The estates are mortgaged three deep, and will not hold out a year. The shares of the Millionnaire's Hotel and the Poor Man's Bank in the B——y are worthless. Denslow's railroad schemes have absorbed the capital of those concerns."

"But he had three millions."

"Nominally. This palace has actually sunk his income."

"Madness!"

"Wisdom, if you will listen."

"I am all attention."

"The use of money is to create and hold power. Denslow was certain of the popular and county votes; he needed only the aristocratic support, and the A—— people would have made him Senator."

"Fool, why was he not satisfied with his money?"

"Do you call the farmer fool, because he is not satisfied with the soil, but wishes to grow wheat thereon? Money is the soil of power. For much less than a million one may gratify the senses; great fortunes are not for sensual luxuries, but for those of the soul. To the facts, then. The advent of this mysterious duke,—whom I doubt,—hailed by Denslow and Honoria as a piece of wonderful good-fortune, has already shaken him and ruined the *prestige* of his wife. They are mad and blind."

"Tell me, in plain prose, the *how* and the *why*."

"De Vere, you are dull. There are three hundred people in the rooms of the Denslow Palace; these people are the 'aristocracy.' They control the sentiments of the 'better class.' Opinion, like dress, descends from them. They no longer respect Denslow, and their women have seen the weakness of Honoria."

"Yes, but Denslow still has 'the people.'"

"That is not enough. I have calculated the chances, and mustered all our available force. We shall have no support among the 'better class,' since we are disgraced with the 'millionnaires.'"

At this moment Denslow came in.

"Ah! Dalton,—like you! I have been looking for you to show the pictures. Devil a thing I know about them. The Duke wondered at your absence."

"Where is Honoria?"

"Ill, ill;—fainted. The house is new; smell of new wood and mortar; deused disagreeable in Honoria. If it had not been for the Duke, she would have fallen. That's a monstrous clever fellow, that Rosecouleur. Admires Honoria vastly. Come,—the pictures."

"Mr. John Vanbrugen Denslow, you are an ass!"

The large, smooth, florid millionaire, dreaming only of senatorial honors, the shouts of the multitude, and the adoration of a party press, cowered like a dog under the lash of the "man of society."

"Rather rough,—ha, De Vere? What have I done? Am I an ass because I know nothing of pictures. Come, Dalton, you are harsh with your old friend."

"Denslow, I have told you a thousand times never to concede position."

"Yes, but this is a duke, man,—a prince!"

"This from you? By Jove, De Vere, I wish you and I could live a hundred years, to see a republican aristocrat. We are still mere provincials," added Dalton, with a sigh.

Denslow perspired with mortification.

"You use me badly,—I tell you, Dalton, this Rosecouleur is a devil. Condescend to him! be haughty and—what do you call it?—urbane to him! I defy you to do it, with all your impudence. Why, his valet, that shadow that glides after him, is too much for me. Try him yourself, man."

"Who, the valet?"

"No, the master,—though I might have said the valet."

"Did I yield in Paris?"

"No, but you were of the embassy,

and—and—no one really knew us, you know."

Dalton pressed his lips hard together.

"Come," said he, "De Vere, let us try a fall with this Titan of the carpet."

Denslow hastened back to the Duke. I followed Dalton; but as for me, bah! I am a cipher.

The room in which we were adjoined Honoria's boudoir, from which a secret passage led down by a spiral to a panel behind hangings; raising these, one could enter the drawing-room unobserved. Dalton paused midway in the secret passage, and through a loop or narrow window concealed by architectural ornaments, and which overlooked the great drawing-rooms, made a *reconnaissance* of the field.

Nights of Venice! what a scene was there! The vine-branch chandeliers, crystal-fruited, which depended from the slender ribs of the ceiling, cast a rosy dawn of light, deepening the green and crimson of draperies and carpets, making an air like sunrise in the bowers of a forest. Form and order were everywhere visible, though unobtrusive. Arch beyond arch, to fourth apartments, lessening in dimension, with increase of wealth;—groups of beautiful women, on either hand, seated or half reclined; the pure or rich hues of their robes blending imperceptibly, or in gorgeous contrasts, with the soft outlines and colors of their supports; a banquet for the eyes and the mind; the perfect work of art and culture;—gliding about and among these, or, with others, springing and revolving in that monarch of all measures, which blends luxury and purity, until it is either the one or the other, moved the men.

"That is my work," exclaimed Dalton, unconsciously.

"Not *all*, I think."

"I mean the combinations,—the effect. But see! Honoria will again accept the Duke's invitation. He is coming to her. Let us prevent it."

He slipped away; and I, remaining at my post of observation, saw him, an instant later, passing quickly across the

floor among the dancers, toward Honoria. The Duke of Rosecouleur arrived at the same instant before her. She smiled sorrowfully upon Dalton, and held out her hand in a languid manner toward the Duke, and again they floated away upon the eddies of the music. I followed them with eyes fixed in admiration. It was a vision of the orgies of Olympus,—Zeus and Aphrodite circling to a theme of Chronos.

Had Honoria tasted of the Indian drug, the weed of paradise? Her eyes, fixed upon the Duke's, shone like molten sapphires. A tress of chestnut hair, escaping from the diamond coronet, sprang lovingly forward and twined itself over her white shoulder and still fairer bosom. Tints like flitting clouds, Titianic, the mystery and despair of art, disclosed to the intelligent eye the feeling that mastered her spirit and her sense. Admirable beauty! Unrivalled, unhappy! The Phidian idol of gold and ivory, into which a demon had entered, overthrown, and the worshippers gazing on it with a scorn unminged with pity!

The sullen animal rage of battle is nothing to the livor, the burning hatred of the drawing-room. Dalton, defeated, cast a glance of deadly hostility on the Duke. Nor was it lost. While the waltz continued, for ten minutes, he stood motionless. Fearing some untoward event, I came down and took my place near him.

The Duke led Honoria to a sofa. But for his arm she would again have fallen. Dalton had recovered his courage and natural haughtiness. The tone of his voice, rich, tender, and delicately expressive, did not change.

"Honoria, you sent for *me*; and the Duke wishes to see the pictures. The air of the gallery will relieve your faintness."

He offered his arm, which she, rising mechanically, accepted. A deep blush crimsoned her features, at the allusion to her weakness. Several of the guests moved after us, as we passed into the gallery. The Duke's shadow, *Rêve de Noir*, following last, closed the ivory

doors. We passed through the gallery, —where pyramids of sunny fruits, in baskets of fine porcelain, stood relieved by gold and silver services for wine and coffee, disposed on the tables, — and thence entered another and smaller room, devoid of ornament, but the crimson tapestried walls were covered with works or copies of the great masters of Italy.

Opposite the entrance there was a picture of a woman seated on a throne, behind which stood a demon whispering in her ear and pointing to a handsome youth in the circle of the courtiers. The design and color were in the style of Correggio. Denslow stood close behind me. In advance were Honoria, Dalton, and the Duke, whose conversation was addressed alternately to her and Dalton. The lights of the gallery burst forth in their full refulgence as we approached the picture.

The glorious harmony of its colors,—the force of the shadows, which seemed to be converging in the rays of a single unseen source of light,—the unity of sentiment, which drew all the groups together, in the idea;—I had seen all this before, but with the eyes of supercilious criticism. Now the picture smote us with awe.

"I have the original of this excellent work," said the Duke, "in my house at A——, but your copy is nearly as good."

The remark, intended for Honoria, reached the pride of her companion, who blandly replied,—

"Your Highness's exquisite judgment is for once at fault. The piece is original. It was purchased from a well-known collection in Italy, where there are none others of the school."

Honoria was gazing upon the picture, as I was, in silent astonishment.

"If this," said she, "is a copy, what must have been the genuine work? Did you never before notice the likeness between the queen, in that picture, and myself?" she asked, addressing Dalton.

The remark excited general attention. Every one murmured, "The likeness is perfect."

"And the demon behind the queen," said Denslow, insipidly, "resembles your Highness's valet."

There was another exclamation. No sooner was it observed, than the likeness to *Rêve de Noir* seemed to be even more perfect.

The Duke made a sign.

Rêve de Noir placed himself near the canvas. His profile was the counterpart of that in the painting. He seemed to have stepped out of it.

"It was I," said the Duke, in a gentle voice, and with a smile which just disclosed the ivory line under the black moustache, "who caused this picture to be copied and altered. The beauty of the Hon. Mrs. Denslow, whom it was my highest pleasure to know, seemed to me to surpass that of the queen of my original. I first, with great secrecy, unknown to your wife," continued the Duke, turning to Denslow, "procured a portrait from the life by memory, which was afterwards transferred to this canvas. The resemblance to my attendant is, I confess, remarkable and inexplicable."

"But will you tell us by what accident this copy happened to be in Italy?" asked Dalton.

"You will remember," replied the Duke, coldly, "that at Paris, noticing your expressions of admiration for the picture, which you had seen in my English gallery, I gave you a history of its purchase at Bologna by myself. I sent my artist to Bologna, with orders to place the copy in the gallery and to introduce the portrait of the lady; it was a freak of fancy; I meant it for a surprise; as I felt sure, that, if you saw the picture, you would secure it.

"It seems to me," replied Dalton, "that the *onus* of proof rests with your Highness."

The Duke made a signal to *Rêve de Noir*, who again stepped up to the canvas, and, with a short knife or stiletto, removed a small portion of the outer layer of paint, disclosing a very ancient ground of some other and inferior work, over which the copy seemed to have

been painted. The proof was unanswerable.

"Good copies," remarked the Duke, "are often better than originals."

He offered his arm to Honoria, and they walked through the gallery,—he entertaining her, and those near him, with comments upon other works. The crowd followed them, as they moved on or returned, as a cloud of gnats follow up and down, and to and fro, a branch tossing in the wind.

"Beaten at every point," I said, mentally, looking on the pale features of the defeated Dalton.

"Yes," he replied, seeing the remark in my face; "but there is yet time. I am satisfied this is the man with whom we travelled; none other could have devised such a plan, or carried it out. He must have fallen in love with Honoria at that time; and simply to see her is the object of his visit to America. He is a connoisseur in pictures as in women; but he must not be allowed to ruin us by his arrogant assumptions."

"Excepting his manner and extraordinary personal advantages, I find nothing in him to awe or astonish."

"His wealth is incalculable; he is used to victories; and that manner which you affect to slight,—that is everything. 'Tis power, success, victory. This man of millions, this prince, does not talk; he has but little use for words. It is manner, and not words, that achieves social and amatory conquests."

"Bah! You are like the politicians, who mistake accidents for principles. But even you are talking, while this pernicious foreigner is acting. See! they have left the gallery, and the crowd of fools is following them. You cannot stem such a tide of folly."

"I deny that they are fools. Why does that sallow wretch, Lethal, follow them? or that enamelled person, Adonaïs? They are at a serpent-charming, and Honoria is the bird-of-paradise. They watch with delight, and sketch as they observe, the struggles of the poor bird. The others are indifferent or curious, en-

vious or amused. It is only Denslow who is capped and antlered, and the shafts aimed at his foolish brow glance and wound us."

We were left alone in the gallery. Dalton paced back and forth, in his slow, erect, and graceful manner; there was no hurry or agitation.

"How quickly," said he, as his moist eyes met mine, "how like a dream, this glorious vision, this beautiful work, will fade and be forgotten! Nevertheless, I made it," he added, musingly. "It was I who moulded and expanded the sluggish millions."

"You will still be what you are, Dalton,—an artist, more than a man of society. You work with a soft and perishable material."

"A distinction without a difference. Every *man* is a politician, but only every artist is a gentleman."

"Denslow, then, is ruined."

"Yes and no;—there is nothing in him to ruin. It is I who am the sufferer."

"And Honoria?"

"It was I who formed her manners, and guided her perceptions of the beautiful. It was I who married her to a mass of money, De Vere."

"Did you never love Honoria?"

He laughed.

"Loved? Yes; as Praxiteles may have loved the clay he moulded,—for its smoothness and ductility under the hand."

"The day has not come for such men as you, Dalton."

"Come, and gone, and coming. It has come in dream-land. Let us follow your fools."

The larger gallery was crowded. The pyramids of glowing fruit had disappeared; there was a confused murmur of pairs and parties, chatting and taking wine. The master of the house, his wife, and guest were nowhere to be seen. Lethal and Adonaïs stood apart, conversing. As we approached them unobserved, Dalton checked me. "Hear what these people are saying," said he.

"My opinion is," said Lethal, holding

out his crooked forefinger like a claw, "that this *soi-disant* duke—what the deuse is his name?"

"Rosecouleur," interposed Adonaïs, in a tone of society.

"Right,—Couleur de Rose is an impostor,—an impostor, a sharper. Everything tends that way. What an utter sell it would be!"

"You were with us at the picture scene?" murmured Adonaïs.

"Yes. Dalton looked wretchedly cut up, when that devil of a valet, who must be an accomplice, scraped the new paint off. The picture must have been got up in New York by Dalton and the Denslows."

"Perhaps the Duke, too, was got up in New York, on the same principle," suggested Adonaïs. "Such things are possible. Society is intrinsically rotten, you know, and Dalton"—

"Is a fellow of considerable talent," sneered Lethal,— "but has enemies, who may have planned a duke."

Adonaïs coughed in his cravat, and hinted,— "How would it do to call him 'Barnum Dalton'?"

Adonaïs appeared shocked at himself, and swallowed a minim of wine to cleanse his vocal apparatus from the stain of so coarse an illustration.

"Do you hear those creatures?" whispered Dalton. "They are arranging scandalous paragraphs for the 'Illustration.'"

A moment after, he was gone. I spoke to Lethal and Adonaïs.

"Gentlemen, you are in error about the picture and the Duke; they are as they now appear;—the one, an excellent copy, purchased as an original,—no uncommon mistake; the other, a genuine highness. How does he strike you?"

Lethal cast his eyes around to see who listened.

"The person," said he, "who is announced here to-night as an English duke seemed to me, of all men I could select, least like one."

"Pray, what is your ideal of an English duke, Mr. Lethal?" asked Adonaïs,

with the air of a connoisseur, sure of himself, but hating to offend.

"A plain, solid person, well dressed, but simple; mutton-chop whiskers; and the manners of a—a——"

"Bear!" said a soft female voice.

"Precisely,—the manners of a bear; a kind of gentlemanly bear, perhaps,—but still, ursine and heavy; while this person, who seems to have walked out of —— or a novel, affects me, by his ways and appearance, like a—a——h'm"——

"Gambler!" said the same female voice, in a conclusive tone.

There was a general soft laugh. Everybody was pleased. All admired, hated, and envied the Duke. It was settled beyond a doubt that he was an impostor,—and that the Denslows were either grossly taken in, or were "selling" their friends. In either case, it was shocking and delightful.

"The fun of the thing," continued Lethal, raising his voice a little, "is, that the painter who got up the old picture must have been as much an admirer of the Hon. Mrs. Denslow as—his—Highness; for, in touching in the queen, he has unconsciously made it a portrait."

The blow was final. I moved away, grieved and mortified to the soul, cursing the intrusion of the mysterious personage whose insolent superiority had overthrown the hopes of my friends.

At the door of the gallery I met G——, the painter, just returned from London. I drew him with me into the inner gallery, to make a thorough examination of the picture. I called his attention to the wonderful resemblance of the queen to Honoria. He did not see it; we looked together, and I began to think that it might have been a delusion. I told the Duke's story of the picture to G——. He examined the canvas, tested the layers of color, and pronounced the work genuine and of immense value. We looked again and again at the queen's head, viewing it in every light. The resemblance to Honoria had disappeared; nor

was the demon any longer a figure of the Duke's valet.

"One would think," said G——, laughing, "that you had been mesmerized. If you have been so deceived in a picture, may you not be equally cheated in a man? I am loath to offend; but, indeed, the person whom you call Rosecouleur cannot be the Duke of that title, whom I saw in England. I had leave to copy a picture in his gallery. He was often present. His manners were mild and unassuming,—not at all like those of this man, to whom, I acknowledge, the personal resemblance is surprising. I am afraid our good friends, the Denslows, and Mr. Dalton,—whom I esteem for their patronage of art,—have been taken in by an adventurer."

"But the valet, *Rêve de Noir*?"

"The Duke had a valet of that name who attended him, and who may, for aught I know, have resembled this one; but probability is against concurrent resemblances. There is also an original of the picture in the Duke's gallery; in fact, the artist, as was not unusual in those days, painted two pictures of the same subject. Both, then, are genuine."

Returning my cordial thanks to the good painter for his timely explanation, I hastened to find Dalton. Drawing him from the midst of a group whom he was entertaining, I communicated G——'s account of the two pictures, and his suspicions in regard to the Duke.

His perplexity was great. "Worse and worse, *De Vere*! To be ruined by a common adventurer is more disgraceful even than the other misfortune. Besides, our guests are leaving us. At least a hundred of them have gone away with the first impression, and the whole city will have it. The journal reporters have been here. Denslow's principal creditors were among the guests to-night; they went away soon, just after the affair with the picture; to-morrow will be our dark day. If it had not been for this demon of a duke and his familiar, whoever they are, all would have gone well. Now we are distrusted, and they will crush us. Let us

fall facing the enemy. Within an hour I will have the truth about the Duke. Did I ever tell you what a price Denslow paid for that picture?"

"No, I do not wish to hear."

"You are right. Come with me."

The novel disrespect excited by the scandal of Honoria and the picture seemed to have inspired the two hundred people who remained with a cheerful ease. Eating, drinking excessively of Denslow's costly wines, dancing to music which grew livelier and more boisterous as the musicians imbibed more of the inspiring juice, and, catching scraps of the scandal, threw out significant airs, the company of young persons, deserted by their scandalized seniors, had converted the magnificent suite of drawing-rooms into a carnival theatre. Parties of three and four were junketing in corners; laughing servants rushed to and fro as in a *café*; the lounges were occupied by reclining beauties or languid fops overpowered with wine, about whom lovely young women, flushed with Champagne and mischief, were coquetting and frolicking.

"I warrant you, these people know it is our last night," said Dalton; "and see what a use they make of us! Denslow's rich wines poured away like water; everything soiled, smeared, and overturned; our entertainment, at first stately and gracious as a queen's drawing-room, ending, with the loss of *prestige*, in the riot of a *bal masqué*. So fades ambition! But to this duke."

Denslow, who had passed into the polite stage of inebriation, evident to close observers, had arranged a little exclusive circle, which included three women of fashionable reputation, his wife, the Duke, Jeffrey Lethal, and Adonais. *Rêve de Noir* officiated as attendant. The *fauteuils* and couches were disposed around a pearl table, on which were liquors, coffee, wines, and a few delicacies for Honoria, who had not supped. They were in the purple recess adjoining the third drawing-room. Adonais talked with the Duke about Italy. Lethal criticized; while Ho-

norina, in the full splendor of her beauty, outshining and overpowering, dropped here and there a few musical words, like service-notes, to harmonize.

There is no beauty like the newly-enamored. Dalton seemed to forget himself, as he contemplated her, for a moment. Spaces had been left for us; the valet placed chairs.

"Dalton," cried Lethal, "you are in time to decide a question of deep interest;—your friend, De Vere, will assist you. His Highness has given preference to the women of America over those of Italy. Adonais, the exquisite and mild, settles his neck-tie against the Duke, and objects in that bland but firm manner which is his. I am the Duke's bottle-holder; Denslow and wife accept that function for the chivalrous Adonais."

"I am of the Duke's party," replied Dalton, in his most agreeable manner. "To be in the daily converse and view of the most beautiful women in America, as I have been for years, is a privilege in the cultivation of a pure taste. I saw nothing in Italy, except on canvas, comparable with what I see at this moment. The Duke is right; but in commending his judgment, I attribute to him also sagacity. Beauty is like language; its use is to conceal. One may, under rose-colored commendations, a fine manner, and a flowing style, conceal, as Nature does with personal advantages in men, the gross tastes and vulgar cunning of a charlatan."

Dalton, in saying this, with a manner free from suspicion or excitement, fixed his eyes upon the Duke's.

"You seem to have no faith in either men or women," responded the rich barytone voice of his Highness, the dark upper lip disclosing, as before, the row of square, sharp, ivory teeth.

"Little, very little," responded Dalton, with a sigh. "Your Highness will understand me,—or if not now, presently."

Lethal trod upon Adonais's foot; I saw him do it. Adonais exchanged glances with a brilliant hawk-faced lady who sat opposite. The lady smiled and

touched her companion. Honoria, who saw everything, opened her magnificent eyes to their full extent. Denslow was oblivious.

"In fact," continued Dalton, perceiving the electric flash he had excited, "skepticism is a disease of my intellect. Perhaps the most noticeable and palpable fact of the moment is the presence and identity of the Duke who is opposite to me; and yet, doubting as I sometimes do my own existence, is it not natural, that, philosophically speaking, the presence and identity of your Highness are at moments a subject of philosophical doubt?"

"In cases of this kind," replied the Duke, "we rest upon circumstantial evidence."

So saying, he drew from his finger a ring and handed it to Dalton, who went to the light and examined it closely, and passed it to me. It was a minute cameo, no larger than a grain of wheat, in a ring of plain gold; a rare and beautiful work of microscopic art.

"I seem to remember presenting the Duke of Rosecouleur with a similar ring, in Italy," said Dalton, resuming his seat; "but the coincidence does not resolve my philosophic doubt, excited by the affair of the picture. We all supposed that we saw a portrait of the Hon. Mrs. Denslow in yon picture; and we seemed to discover, under the management of your valet, that Denslow's picture, a genuine duplicate of the original by the author, was a modern copy. Since your Highness quitted the gallery, those delusions have ceased. The picture appears now to be genuine. The likeness to Mrs. Denslow has vanished."

An exclamation of surprise from all present, except the Duke, followed this announcement.

"And so," continued Dalton, "it may be with this ring, which now seems to be the one I gave the Duke at Rome, but to-morrow may be different."

As he spoke, Dalton gave back the ring to the Duke, who received it with his usual grace.

"Who knows," said Lethal, with a de-

ceptive innocence of manner, "whether aristocracy itself be not founded in mesmeric deceptions?"

"I think, Lethal," observed Adonais, "you push the matter. It would be impossible, for instance, even for his Highness, to make Honoria Denslow appear ugly."

We all looked at Honoria, to whom the Duke leaned over and said,—

"Would you be willing for a moment to lose that exquisite beauty?"

"For my sake, Honoria," said Dalton, "refuse him."

The request, so simply made, was rewarded by a ravishing smile.

"Edward, do you know that you have not spoken a kind word to me to-night, until now?"

Their eyes met, and I saw that Dalton trembled with a deep emotion. "I will save you yet," he murmured.

A tall, black hound, of the slender breed, rose up near Honoria, and, placing his fore-paws upon the edge of the pearl table, turned and licked her face and eyes.

It was the vision of a moment. The dog sprang upon the sofa by the Duke's side, growling and snapping.

"Rêve de Noir," cried Lethal and Adonais, "drive the dog away!"

The valet had disappeared.

"I have no fear of him, gentlemen," said the Duke, patting the head of the hound; "he is a faithful servant, and has a faculty of reading thoughts. Go bring my servant, Demon," said the Duke.

The hound sprang away with a great bound, and in an instant Rêve de Noir was standing behind us. The dog did not appear again.

Honoria looked bewildered. "Of what dog were you speaking, Edward?"

"The hound that licked your face."

"You are joking. I saw no hound."

"See, gentlemen," exclaimed Lethal, "his Highness shows us tricks. He is a wizard."

The three women gave little shrieks,—half pleasure, half terror.

Denslow, who had fallen back in his chair asleep, awoke and rubbed his eyes.

"What is all this, Honoria?"

"That his Highness is a wizard," she said, with a forced laugh, glancing at Dalton.

"Will his Highness do us the honor to lay aside the mask, and appear in his true colors?" said Dalton, returning Honoria's glance with an encouraging look.

"Gentlemen," said the Duke, haughtily, "I am your guest, and by hospitality protected from insult."

"Insult, most noble Duke!" exclaimed Lethal, with a sneer,—"impossible, under the roof of our friend, the Honorable Walter Denslow, in the small hours of the night, and in the presence of the finest women in the world. Dalton, pray, reassure his Highness!"

"Edward! Edward!" murmured Honoria, "have a care,—even if it be as you think."

Dalton remained bland and collected.

"Pardon, my Lord, the effect of a little wine, and of those wonderful fantasies you have shown us. Your dog, your servant, and yourself interest us equally; the picture, the ring,—all are wonderful. In supposing that you had assumed a mask, and one so noble, I was led into an error by these miracles, expecting no less than a translation of yourself into the person of some famous wonder-worker. It is, you know, a day of miracles, and even kings have their salaried seers, and take counsel of the spiritual world. More!—let us have more!"

The circle were amazed; the spirit of superstitious curiosity seized upon them.

"Rêve de Noir," said the Duke, "a *carafe*, and less light."

The candelabra became dim. The Duke took the *carafe* of water from the valet, and, standing up, poured it upon the air; it broke into flames, which mounted and floated away, singly or in little crowds. Still the Duke poured, and dashing up the water with his hand, by and by the ceiling was illuminated with a thousand miniature tongues of violet-colored fire. We clapped our hands, and applauded,—*"Beautiful! marvellous!*

wonderful, Duke!—your Highness is the only magician,"—when, on a sudden, the flames disappeared and the lights rose again.

"The world is weary of skepticism," remarked Lethal; "there is no chemistry for that. It is the true magic, doubtless,—recovered from antiquity by his Highness. Are the wonders exhausted?"

The Duke smiled again. He stretched out his hand toward Honoria, and she slept. It was the work of an instant.

"I have seen that before," said Dalton.

"Not as *we* see it," responded his Highness. "Rêve de Noir, less light!"

The room was dark in a moment. Over the head of Honoria appeared a cloud, at first black, and soon in this a nucleus of light, which expanded and shaped itself into an image and took the form of the sleeper, nude and spiritual, a belt of rosy mist enveloping and concealing all but a head and bust of ravishing beauty. The vision gazed with languid and beseeching eyes upon Dalton, and a sigh seemed to heave the bosom. In scarce a breathing-time, it was gone. Honoria waked, unconscious of what had passed.

Deep terror and amazement fell upon us all.

"I have seen enough," said Dalton, rising slowly, and drawing a small riding-whip, "to know now that this person is no duke, but either a charlatan or a devil. In either case, since he has intruded here, to desecrate and degrade, I find it proper to apply a magic more material."

At the word, all rose exclaiming,—*"For God's sake, Dalton!"* He pressed forward and laid his hand upon the Duke. A cry burst from Rêve de Noir which rent our very souls; and a flash followed, unspeakably bright, which revealed the demoniacal features of the Duke, who sat motionless, regarding Dalton's uplifted arm. A darkness followed, profound and palpable. I listened in terror. There was no sound. Were

we transformed? Silence, darkness, still. I closed my eyes, and opened them again. A pale, cold light became slowly perceptible, stealing through a crevice, and revealing the walls and ceiling of my narrow room. The dream still oppressed me. I went to the window, and let in reality with the morning light. Yet, for

days after, the images of the real Honoria and Dalton, my friends, remained separated from the creatures of the vision; and the Denslow Palace of dream-land, the pictures, the revelry, and the magic of the Demon Duke haunted my memory, and kept with them all their visionary splendors and regrets.

MYRTLE FLOWERS.

SINCE Love within my heart made nest,
With the fond trust of brooding bird,
I find no all-embracing word
To say how deeply I am blest.

Though wintry clouds are in the air
And the dead leaves unburied lie,
Nor open is the violet's eye,
I see new beauty everywhere.

I walk beneath the naked trees,
Where wild streams shiver as they pass,
Yet in the sere and sighing grass
I hear a murmur as of bees,—

The bees that in love's morning rise
From tender eyes and lips to drain,
In ecstasies of blissful pain,
The sweets that bloomed in Paradise.

There twines a joy with every care
That springs within this sacred ground;
But, oh! to give what I have found
Doth thrill me with divine despair.

If distant, thou dost rise a star
Whose beams are with my being wrought
And curvest all my teeming thought
With sweet attractions from afar.

As a winged ship, in calmest hour,
Still moves upon the mighty sea
To some deep ocean melody,
I feel thy spirit and thy power.

CHESUNCOOK.

[Continued.]

How far men go for the material of their houses ! The inhabitants of the most civilized cities, in all ages, send into far, primitive forests, beyond the bounds of their civilization, where the moose and bear and savage dwell, for their pine-boards for ordinary use. And, on the other hand, the savage soon receives from cities iron arrow-points, hatchets, and guns to point his savageness with.

The solid and well-defined fir-tops, like sharp and regular spear-heads, black against the sky, gave a peculiar, dark, and sombre look to the forest. The spruce-tops have a similar, but more ragged outline,—their shafts also merely feathered below. The firs were somewhat oftener regular and dense pyramids. I was struck by this universal spiring upward of the forest evergreens. The tendency is to slender, spiring tops, while they are narrower below. Not only the spruce and fir, but even the arbor-vitæ and white pine, unlike the soft, spreading second-growth, of which I saw none, all spire upwards, lifting a dense spear-head of cones to the light and air, at any rate, while their branches straggle after as they may; as Indians lift the ball over the heads of the crowd in their desperate game. In this they resemble grasses, as also palms somewhat. The hemlock is commonly a tent-like pyramid from the ground to its summit.

After passing through some long rips and by a large island, we reached an interesting part of the river called the Pine-Stream Dead-Water, about six miles below Ragmuff, where the river expanded to thirty-rods in width and had many islands in it, with elms and canoe-birches, now yellowing, along the shore, and we got our first sight of Katadn.

Here, about two o'clock, we turned up a small branch three or four rods wide, which comes in on the right from the

south, called Pine Stream, to look for moose signs. We had gone but a few rods before we saw very recent signs along the water's edge, the mud lifted up by their feet being quite fresh, and Joe declared that they had gone along there but a short time before. We soon reached a small meadow on the east side, at an angle in the stream, which was for the most part densely covered with alders. As we were advancing along the edge of this, rather more quietly than usual, perhaps, on account of the freshness of the signs,—the design being to camp up this stream, if it promised well,—I heard a slight crackling of twigs deep in the alders, and turned Joe's attention to it; whereupon he began to push the canoe back rapidly; and we had receded thus half a dozen rods, when we suddenly spied two moose standing just on the edge of the open part of the meadow which we had passed, not more than six or seven rods distant, looking round the alders at us. They made me think of great frightened rabbits, with their long ears and half-inquisitive, half-frightened looks; the true denizens of the forest, (I saw at once,) filling a vacuum which now first I discovered had not been filled for me,—moosemen, wood-eaters, the word is said to mean,—clad in a sort of Vermont gray, or homespun. Our Nimrod, owing to the retrograde movement, was now the farthest from the game; but being warned of its neighborhood, he hastily stood up, and, while we ducked, fired over our heads one barrel at the foremost, which alone he saw, though he did not know what kind of creature it was; whereupon this one dashed across the meadow and up a high bank on the north-east, so rapidly as to leave but an indistinct impression of its outlines on my mind. At the same instant, the other, a young one, but as tall as a horse, leaped out into the

stream, in full sight, and there stood cowering for a moment, or rather its disproportionate lowness behind gave it that appearance, and uttering two or three trumpeting squeaks. I have an indistinct recollection of seeing the old one pause an instant on the top of the bank in the woods, look toward its shivering young, and then dash away again. The second barrel was levelled at the calf, and when we expected to see it drop in the water, after a little hesitation, it, too, got out of the water, and dashed up the hill, though in a somewhat different direction. All this was the work of a few seconds, and our hunter, having never seen a moose before, did not know but they were deer, for they stood partly in the water, nor whether he had fired at the same one twice or not. From the style in which they went off, and the fact that he was not used to standing up and firing from a canoe, I judged that we should not see anything more of them. The Indian said that they were a cow and her calf,—a yearling, or perhaps two years old, for they accompany their dams so long; but, for my part, I had not noticed much difference in their size. It was but two or three rods across the meadow to the foot of the bank, which, like all the world thereabouts, was densely wooded; but I was surprised to notice, that, as soon as the moose had passed behind the veil of the woods, there was no sound of footsteps to be heard from the soft, damp moss which carpets that forest, and long before we landed, perfect silence reigned. Joe said, "If you wound 'em moose, me sure get 'em."

We all landed at once. My companion reloaded; the Indian fastened his birch, threw off his hat, adjusted his waistband, seized the hatchet, and set out. He told me afterward, casually, that before we landed he had seen a drop of blood on the bank, when it was two or three rods off. He proceeded rapidly up the bank and through the woods, with a peculiar, elastic, noiseless, and stealthy tread, looking to right and left on the ground, and stepping in the

faint tracks of the wounded moose, now and then pointing in silence to a single drop of blood on the handsome, shining leaves of the *Clintonia Borealis*, which, on every side, covered the ground, or to a dry fern-stem freshly broken, all the while chewing some leaf or else the spruce gum. I followed, watching his motions more than the trail of the moose. After following the trail about forty rods in a pretty direct course, stepping over fallen trees and winding between standing ones, he at length lost it, for there were many other moose-tracks there, and, returning once more to the last blood-stain, traced it a little way and lost it again, and, too soon, I thought, for a good hunter, gave it up entirely. He traced a few steps, also, the tracks of the calf; but, seeing no blood, soon relinquished the search.

I observed, while he was tracking the moose, a certain reticence or moderation in him. He did not communicate several observations of interest which he made, as a white man would have done, though they may have leaked out afterward. At another time, when we heard a slight crackling of twigs and he landed to reconnoitre, he stepped lightly and gracefully, stealing through the bushes with the least possible noise, in a way in which no white man does,—as it were, finding a place for his foot each time.

About half an hour after seeing the moose, we pursued our voyage up Pine Stream, and soon, coming to a part which was very shoal and also rapid, we took out the baggage, and proceeded to carry it round, while Joe got up with the canoe alone. We were just completing our portage and I was absorbed in the plants, admiring the leaves of the *aster macrophyllus*, ten inches wide, and plucking the seeds of the great round-leaved orchis, when Joe exclaimed from the stream that he had killed a moose. He had found the cow-moose lying dead, but quite warm, in the middle of the stream, which was so shallow that it rested on the bottom, with hardly a third of its body above water. It was about an hour after it was

shot, and it was swollen with water. It had run about a hundred rods and sought the stream again, cutting off a slight bend. No doubt, a better hunter would have tracked it to this spot at once. I was surprised at its great size, horse-like, but Joe said it was not a large cow-moose. My companion went in search of the calf again. I took hold of the ears of the moose, while Joe pushed his canoe down stream toward a favorable shore, and so we made out, though with some difficulty, its long nose frequently sticking in the bottom, to drag it into still shallower water. It was a brownish black, or perhaps a dark iron-gray, on the back and sides, but lighter beneath and in front. I took the cord which served for the canoe's painter, and with Joe's assistance measured it carefully, the greatest distances first, making a knot each time. The painter being wanted, I reduced these measures that night with equal care to lengths and fractions of my umbrella, beginning with the smallest measures, and untying the knots as I proceeded; and when we arrived at Chesuncook the next day, finding a two-foot rule there, I reduced the last to feet and inches; and, moreover, I made myself a two-foot rule of a thin and narrow strip of black ash which would fold up conveniently to six inches. All this pains I took because I did not wish to be obliged to say merely that the moose was very large. Of the various dimensions which I obtained I will mention only two. The distance from the tips of the hoofs of the fore-feet, stretched out, to the top of the back between the shoulders, was seven feet and five inches. I can hardly believe my own measure, for this is about two feet greater than the height of a tall horse. The extreme length was eight feet and two inches. Another cow-moose, which I have since measured in those woods with a tape, was just six feet from the tip of the hoof to the shoulders, and eight feet long as she lay.

When afterward I asked an Indian at the carry how much taller the male was, he answered, "Eighteen inches," and

made me observe the height of a cross-stake over the fire, more than four feet from the ground, to give me some idea of the depth of his chest. Another Indian, at Oldtown, told me that they were nine feet high to the top of the back, and that one which he tried weighed eight hundred pounds. The length of the spinal projections between the shoulders is very great. A white hunter, who was the best authority among hunters that I could have, told me that the male was *not* eighteen inches taller than the female; yet he agreed that he was sometimes nine feet high to the top of the back, and weighed a thousand pounds. Only the male has horns, and they rise two feet or more above the shoulders,—spreading three or four, and sometimes six feet,—which would make him in all, sometimes, eleven feet high! According to this calculation, the moose is as tall, though it may not be as large, as the great Irish elk, *Megaceros Hibernicus*, of a former period, of which Mantell says that it "very far exceeded in magnitude any living species, the skeleton" being "upward of ten feet high from the ground to the highest point of the antlers." Joe said, that, though the moose shed the whole horn annually, each new horn has an additional prong; but I have noticed that they sometimes have more prongs on one side than on the other. I was struck with the delicacy and tenderness of the hoofs, which divide very far up, and the one half could be pressed very much behind the other, thus probably making the animal surer-footed on the uneven ground and slippery moss-covered logs of the primitive forest. They were very unlike the stiff and battered feet of our horses and oxen. The bare, horny part of the fore-foot was just six inches long, and the two portions could be separated four inches at the extremities.

The moose is singularly grotesque and awkward to look at. Why should it stand so high at the shoulders? Why have so long a head? Why have no tail to speak of? for in my examination I overlooked it entirely. Naturalists say

it is an inch and a half long. It reminded me at once of the camelopard, high before and low behind,—and no wonder, for, like it, it is fitted to browse on trees. The upper lip projected two inches beyond the lower for this purpose. This was the kind of man that was at home there; for, as near as I can learn, that has never been the residence, but rather the hunting-ground of the Indian. The moose will perhaps one day become extinct; but how naturally then, when it exists only as a fossil relic, and unseen as that, may the poet or sculptor invent a fabulous animal with similar branching and leafy horns,—a sort of fucus or lichen in bone,—to be the inhabitant of such a forest as this!

Here, just at the head of the murmuring rapids, Joe now proceeded to skin the moose with a pocket-knife, while I looked on; and a tragical business it was,—to see that still warm and palpitating body pierced with a knife, to see the warm milk stream from the rent udder, and the ghastly naked red carcass appearing from within its seemly robe, which was made to hide it. The ball had passed through the shoulder-blade diagonally and lodged under the skin on the opposite side, and was partially flattened. My companion keeps it to show to his grandchildren. He has the shanks of another moose which he has since shot, skinned and stuffed, ready to be made into boots by putting in a thick leather sole. Joe said, if a moose stood fronting you, you must not fire, but advance toward him, for he will turn slowly and give you a fair shot. In the bed of this narrow, wild, and rocky stream, between two lofty walls of spruce and firs, a mere cleft in the forest which the stream had made, this work went on. At length Joe had stripped off the hide and dragged it trailing to the shore, declaring that it weighed a hundred pounds, though probably fifty would have been nearer the truth. He cut off a large mass of the meat to carry along, and another, together with the tongue and nose, he put with the hide on the shore to lie there

all night, or till we returned. I was surprised that he thought of leaving this meat thus exposed by the side of the carcass, as the simplest course, not fearing that any creature would touch it; but nothing did. This could hardly have happened on the bank of one of our rivers in the eastern part of Massachusetts; but I suspect that fewer small wild animals are prowling there than with us. Twice, however, in this excursion I had a glimpse of a species of large mouse.

This stream was so withdrawn, and the moose-tracks were so fresh, that my companions, still bent on hunting, concluded to go farther up it and camp, and then hunt up or down at night. Half a mile above this, at a place where I saw the aster puniceus and the beaked hazel, as we paddled along, Joe, hearing a slight rustling amid the alders, and seeing something black about two rods off, jumped up and whispered, "Bear!" but before the hunter had discharged his piece, he corrected himself to "Beaver!"—"Hedgehog!" The bullet killed a large hedgehog, more than two feet and eight inches long. The quills were rayed out and flattened on the hinder part of its back, even as if it had lain on that part, but were erect and long between this and the tail. Their points, closely examined, were seen to be finely bearded or barbed, and shaped like an awl, that is, a little concave, to give the barbs effect. After about a mile of still water, we prepared our camp on the right side, just at the foot of a considerable fall. Little chopping was done that night, for fear of scaring the moose. We had moose-meat fried for supper. It tasted like tender beef, with perhaps more flavor,—sometimes like veal.

After supper, the moon having risen, we proceeded to hunt a mile up this stream, first "carrying" about the falls. We made a picturesque sight, wending single-file along the shore, climbing over rocks and logs,—Joe, who brought up the rear, twirling his canoe in his hands as if it were a feather, in places where it was difficult to get along without a burden.

We launched the canoe again from the ledge over which the stream fell, but after half a mile of still water, suitable for hunting, it became rapid again, and we were compelled to make our way along the shore, while Joe endeavored to get up in the birch alone, though it was still very difficult for him to pick his way amid the rocks in the night. We on the shore found the worst of walking, a perfect chaos of fallen and drifted trees, and of bushes projecting far over the water, and now and then we made our way across the mouth of a small tributary on a kind of net-work of alders. So we went tumbling on in the dark, being on the shady side, effectually scaring all the moose and bears that might be thereabouts. At length we came to a standstill, and Joe went forward to reconnoitre, but he reported that it was still a continuous rapid as far as he went, or half a mile, with no prospect of improvement, as if it were coming down from a mountain. So we turned about, hunting back to the camp through the still water. It was a splendid moonlight night, and I, getting sleepy as it grew late,—for I had nothing to do,—found it difficult to realize where I was. This stream was much more unfrequented than the main one, lumbering operations being no longer carried on in this quarter. It was only three or four rods wide, but the firs and spruce through which it trickled seemed yet taller by contrast. Being in this dreamy state, which the moonlight enhanced, I did not clearly discern the shore, but seemed, most of the time, to be floating through ornamental grounds,—for I associated the fir-tops with such scenes;—very high up some Broadway, and beneath or between their tops, I thought I saw an endless succession of porticos and columns, cornices and façades, verandas and churches. I did not merely fancy this, but in my drowsy state such was the illusion. I fairly lost myself in sleep several times, still dreaming of that architecture and the nobility that dwelt behind—and might issue from it; but all at once I would be aroused and brought

back to a sense of my actual position by the sound of Joe's birch horn in the midst of all this silence calling the moose, *ugh, ugh, oo-oo-oo-oo-oo-oo*, and I prepared to hear a furious moose come rushing and crashing through the forest, and see him burst out on to the little strip of meadow by our side.

But, on more accounts than one, I had had enough of moose-hunting. I had not come to the woods for this purpose, nor had I foreseen it, though I had been willing to learn how the Indian manœuvred; but one moose killed was as good, if not as bad, as a dozen. The afternoon's tragedy, and my share in it, as it affected the innocence, destroyed the pleasure of my adventure. It is true, I came as near as is possible to come to being a hunter and miss it, myself; and as it is, I think that I could spend a year in the woods, fishing and hunting, just enough to sustain myself with satisfaction. This would be next to living like a philosopher on the fruits of the earth which you had raised, which also attracts me. But this hunting of the moose merely for the satisfaction of killing him,—not even for the sake of his hide,—without making any extraordinary exertion or running any risk yourself, is too much like going out by night to some wood-side pasture and shooting your neighbor's horses. These are God's own horses, poor, timid creatures, that will run fast enough as soon as they smell you, though they are nine feet high. Joe told us of some hunters who a year or two before had shot down several oxen by night, somewhere in the Maine woods, mistaking them for moose. And so might any of the hunters; and what is the difference in the sport, but the name? In the former case, having killed one of God's and *your own* oxen, you strip off its hide,—because that is the common trophy, and, moreover, you have heard that it may be sold for moccasins,—cut a steak from its haunches, and leave the huge carcass to smell to heaven for you. It is no better, at least, than to assist at a slaughter-house.

This afternoon's experience suggested to me how base or coarse are the motives

which commonly carry men into the wilderness. The explorers and lumberers generally are all hirelings, paid so much a day for their labor, and as such they have no more love for wild nature than wood-sawyers have for forests. Other white men and Indians who come here are for the most part hunters, whose object is to slay as many moose and other wild animals as possible. But, pray, could not one spend some weeks or years in the solitude of this vast wilderness with other employments than these,—employments perfectly sweet and innocent and ennobling? For one that comes with a pencil to sketch or sing, a thousand come with an axe or rifle. What a coarse and imperfect use Indians and hunters make of Nature! No wonder that their race is so soon exterminated. I already, and for weeks afterward, felt my nature the coarser for this part of my woodland experience, and was reminded that our life should be lived as tenderly and daintily as one would pluck a flower.

With these thoughts, when we reached our camping-ground, I decided to leave my companions to continue moose-hunting down the stream, while I prepared the camp, though they requested me not to chop much nor make a large fire, for fear I should scare their game. In the midst of the damp fir-wood, high on the mossy bank, about nine o'clock of this bright moonlight night, I kindled a fire, when they were gone, and, sitting on the fir-twigs, within sound of the falls, examined by its light the botanical specimens which I had collected that afternoon, and wrote down some of the reflections which I have here expanded; or I walked along the shore and gazed up the stream, where the whole space above the falls was filled with mellow light. As I sat before the fire on my fir-twigg seat, without walls above or around me, I remembered how far on every hand that wilderness stretched, before you came to cleared or cultivated fields, and wondered if any bear or moose was watching the light of my fire; for Nature looked sternly upon me on account of the murder of the moose.

Strange that so few ever come to the woods to see how the pine lives and grows and spires, lifting its evergreen arms to the light,—to see its perfect success; but most are content to behold it in the shape of many broad boards brought to market, and deem *that* its true success! But the pine is no more lumber than man is, and to be made into boards and houses is no more its true and highest use than the truest use of a man is to be cut down and made into manure. There is a higher law affecting our relation to pines as well as to men. A pine cut down, a dead pine, is no more a pine than a dead human carcass is a man. Can he who has discovered only some of the values of whalebone and whale oil be said to have discovered the true use of the whale? Can he who slays the elephant for his ivory be said to have "seen the elephant"? These are petty and accidental uses; just as if a stronger race were to kill us in order to make buttons and flageolets of our bones; for everything may serve a lower as well as a higher use. Every creature is better alive than dead, men and moose and pine-trees, and he who understands it aright will rather preserve its life than destroy it.

Is it the lumberman, then, who is the friend and lover of the pine, stands nearest to it, and understands its nature best? Is it the tanner who has barked it, or he who has boxed it for turpentine, whom posterity will fable to have been changed into a pine at last? No! no! it is the poet; he it is who makes the truest use of the pine,—who does not fondle it with an axe, nor tickle it with a saw, nor stroke it with a plane,—who knows whether its heart is false without cutting into it,—who has not bought the stumpage of the township on which it stands. All the pines shudder and heave a sigh when *that* man steps on the forest floor. No, it is the poet, who loves them as his own shadow in the air, and lets them stand. I have been into the lumber-yard, and the carpenter's shop, and the tannery, and the lampblack-factory, and the turpentine

clearing; but when at length I saw the tops of the pines waving and reflecting the light at a distance high over all the rest of the forest, I realized that the former were not the highest use of the pine. It is not their bones or hide or tallow that I love most. It is the living spirit of the tree, not its spirit of turpentine, with which I sympathize, and which heals my cuts.

Ere long, the hunters returned, not having seen a moose, but, in consequence of my suggestions, bringing a quarter of the dead one, which, with ourselves, made quite a load for the canoe.

After breakfasting on moose-meat, we returned down Pine Stream on our way to Chesuncook Lake, which was about five miles distant. We could see the red carcass of the moose lying in Pine Stream when nearly half a mile off. Just below the mouth of this stream were the most considerable rapids between the two lakes, called Pine-Stream Falls, where were large flat rocks washed smooth, and at this time you could easily wade across above them. Joe ran down alone while we walked over the portage, my companion collecting spruce gum for his friends at home, and I looking for flowers. Near the lake, which we were approaching with as much expectation as if it had been a university,—for it is not often that the stream of our life opens into such expansions,—were islands, and a low and meadowy shore with scattered trees, birches, white and yellow, slanted over the water, and maples,—many of the white birches killed, apparently by inundations. There was considerable native grass; and even a few cattle—whose movements we heard, though we did not see them, mistaking them at first for moose—were pastured there.

On entering the lake, where the stream runs southeasterly, and for some time before, we had a view of the mountains about Katadn, (*Katahdinauquoh* one says they are called,) like a cluster of blue fungi of rank growth, apparently twenty-five or thirty miles distant, in a southeast direction, their summits con-

cealed by clouds. Joe called some of them the *Souadneunk* mountains. This is the name of a stream there, which another Indian told us meant "Running between mountains." Though some lower summits were afterward uncovered, we got no more complete view of Katadn while we were in the woods. The clearing to which we were bound was on the right of the mouth of the river, and was reached by going round a low point, where the water was shallow to a great distance from the shore. Chesuncook Lake extends northwest and southeast, and is called eighteen miles long and three wide, without an island. We had entered the northwest corner of it, and when near the shore could see only part way down it. The principal mountains visible from the land here were those already mentioned, between southeast and east, and a few summits a little west of north, but generally the north and northwest horizon about the St. John and the British boundary was comparatively level.

Ansell Smith's, the oldest and principal clearing about this lake, appeared to be quite a harbor for *bateaux* and canoes; seven or eight of the former were lying about, and there was a small scow for hay, and a capstan on a platform, now high and dry, ready to be floated and anchored to tow rafts with. It was a very primitive kind of harbor, where boats were drawn up amid the stumps,—such a one, methought, as the *Argo* might have been launched in. There were five other huts with small clearings on the opposite side of the lake, all at this end and visible from this point. One of the Smiths told me that it was so far cleared that they came here to live and built the present house four years before, though the family had been here but a few months.

I was interested to see how a pioneer lived on this side of the country. His life is in some respects more adventurous than that of his brother in the West; for he contends with winter as well as the wilderness, and there is a greater interval of

time at least between him and the army which is to follow. Here immigration is a tide, which may ebb when it has swept away the pines; there it is not a tide, but an inundation, and roads and other improvements come steadily rushing after.

As we approached the log-house, a dozen rods from the lake, and considerably elevated above it, the projecting ends of the logs lapping over each other irregularly several feet at the corners gave it a very rich and picturesque look, far removed from the meanness of weather-boards. It was a very spacious, low building, about eighty feet long, with many large apartments. The walls were well clayed between the logs, which were large and round, except on the upper and under sides, and as visible inside as out, successive bulging cheeks gradually lessening upwards and tuned to each other with the axe, like Pandean pipes. Probably the musical forest-gods had not yet cast them aside; they never do till they are split or the bark is gone. It was a style of architecture not described by Vitruvius, I suspect, though possibly hinted at in the biography of Orpheus; none of your frilled or fluted columns, which have cut such a false swell, and support nothing but a gable end and their builder's pretensions,—that is, with the multitude; and as for “ornamentation,” one of those words with a dead tail which architects very properly use to describe their flourishes, there were the lichens and mosses and fringes of bark, which nobody troubled himself about. We certainly leave the handsomest paint and clapboards behind in the woods, when we strip off the bark and poison ourselves with white-lead in the towns. We get but half the spoils of the forest. For beauty, give me trees with the fur on. This house was designed and constructed with the freedom of stroke of a forester's axe, without other compass and square than Nature uses. Wherever the logs were cut off by a window or door, that is, were not kept in place by alternate overlapping, they were held one upon another by very large pins driven in diagonally on

each side, where branches might have been, and then cut off so close up and down as not to project beyond the bulge of the log, as if the logs clasped each other in their arms. These logs were posts, studs, boards, clapboards, laths, plaster, and nails, all in one. Where the citizen uses a mere sliver or board, the pioneer uses the whole trunk of a tree. The house had large stone chimneys, and was roofed with spruce-bark. The windows were imported, all but the casings. One end was a regular logger's camp, for the boarders, with the usual fir floor and log benches. Thus this house was but a slight departure from the hollow tree, which the bear still inhabits,—being a hollow made with trees piled up, with a coating of bark like its original.

The cellar was a separate building, like an ice-house, and it answered for a refrigerator at this season, our moose-meat being kept there. It was a potato-hole with a permanent roof. Each structure and institution here was so primitive that you could at once refer it to its source; but our buildings commonly suggest neither their origin nor their purpose. There was a large, and what farmers would call handsome, barn, part of whose boards had been sawed by a whip-saw; and the saw-pit, with its great pile of dust, remained before the house. The long split shingles on a portion of the barn were laid a foot to the weather, suggesting what kind of weather they have there. Grant's barn at Caribou Lake was said to be still larger, the biggest ox-nest in the woods, fifty feet by a hundred. Think of a monster barn in that primitive forest lifting its gray back above the tree-tops! Man makes very much such a nest for his domestic animals, of withered grass and fodder, as the squirrels and many other wild creatures do for themselves.

There was also a blacksmith's shop, where plainly a good deal of work was done. The oxen and horses used in lumbering operations were shod, and all the iron-work of sleds, etc., was repaired or made here. I saw them load a *bateau* at the Moosehead carry, the next Tuesday,

with about thirteen hundred weight of bar iron for this shop. This reminded me how primitive and honorable a trade was Vulcan's. I do not hear that there was any carpenter or tailor among the gods. The smith seems to have preceded these and every other mechanic at Chesuncook as well as on Olympus, and his family is the most widely dispersed, whether he be christened John or Ansell.

Smith owned two miles down the lake by half a mile in width. There were about one hundred acres cleared here. He cut seventy tons of English hay this year on this ground, and twenty more on another clearing, and he uses it all himself in lumbering operations. The barn was crowded with pressed hay and a machine to press it. There was a large garden full of roots, turnips, beets, carrots, potatoes, etc., all of great size. They said that they were worth as much here as in New York. I suggested some currants for sauce, especially as they had no apple-trees set out, and showed how easily they could be obtained.

There was the usual long-handled axe of the primitive woods by the door, three and a half feet long,—for my new black-ash rule was in constant use,—and a large, shaggy dog, whose nose, report said, was full of porcupine quills. I can testify that he looked very sober. This is the usual fortune of pioneer dogs, for they have to face the brunt of the battle for their race, and act the part of Arnold Winkelried without intending it. If he should invite one of his town friends up this way, suggesting moose-meat and unlimited freedom, the latter might pertinently inquire, "What is that sticking in your nose?" When a generation or two have used up all the enemies' darts, their successors lead a comparatively easy life. We owe to our fathers analogous blessings. Many old people receive pensions for no other reason, it seems to me, but as a compensation for having lived a long time ago. No doubt, our town dogs still talk, in a snuffing way, about the days that tried dogs' noses. How they got a

cat up there I do not know, for they are as shy as my aunt about entering a canoe. I wondered that she did not run up a tree on the way; but perhaps she was bewildered by the very crowd of opportunities.

Twenty or thirty lumberers, Yankee and Canadian, were coming and going,—Aleck among the rest,—and from time to time an Indian touched here. In the winter there are sometimes a hundred men lodged here at once. The most interesting piece of news that circulated among them appeared to be, that four horses belonging to Smith, worth seven hundred dollars, had passed by further into the woods a week before.

The white-pine-tree was at the bottom or further end of all this. It is a war against the pines, the only real Aroostook or Penobscot war. I have no doubt that they lived pretty much the same sort of life in the Homeric age, for men have always thought more of eating than of fighting; then, as now, their minds ran chiefly on the "hot bread and sweet cakes"; and the fur and lumber trade is an old story to Asia and Europe. I doubt if men ever made a trade of heroism. In the days of Achilles, even, they delighted in big barns, and perchance in pressed hay, and he who possessed the most valuable team was the best fellow.

We had designed to go on at evening up the Caucomgomoc, whose mouth was a mile or two distant, to the lake of the same name, about ten miles off; but some Indians of Joe's acquaintance, who were making canoes on the Caucomgomoc, came over from that side, and gave so poor an account of the moose-hunting, so many had been killed there lately, that my companions concluded not to go there. Joe spent this Sunday and the night with his acquaintances. The lumberers told me that there were many moose hereabouts, but no caribou or deer. A man from Oldtown had killed ten or twelve moose, within a year, so near the house that they heard all his guns. His name may have been Hercules, for aught

I know, though I should rather have expected to hear the rattling of his club; but, no doubt, he keeps pace with the improvements of the age, and uses a Sharpe's rifle now; probably he gets all his armor made and repaired at Smith's shop. One moose had been killed and another shot at within sight of the house within two years. I do not know whether Smith has yet got a poet to look after the cattle, which, on account of the early breaking up of the ice, are compelled to summer in the woods, but I would suggest this office to such of my acquaintances as love to write verses and go a-gunning.

After a dinner, at which apple-sauce was the greatest luxury to me, but our moose-meat was oftenest called for by the lumberers, I walked across the clearing into the forest, southward, returning along the shore. For my dessert, I helped myself to a large slice of the Chesuncook woods, and took a hearty draught of its waters with all my senses. The woods were as fresh and full of vegetable life as a lichen in wet weather, and contained many interesting plants; but unless they are of white pine, they are treated with as little respect here as a mildew, and in the other case they are only the more quickly cut down. The shore was of coarse, flat, slate rocks, often in slabs, with the surf beating on it. The rocks and bleached drift-logs, extending some way into the shaggy woods, showed a rise and fall of six or eight feet, caused partly by the dam at the outlet. They said that in winter the snow was three feet deep on a level here, and sometimes four or five,—that the ice on the lake was two feet thick, clear, and four feet, including the snow-ice. Ice had already formed in vessels.

We lodged here this Sunday night in a comfortable bed-room, apparently the

best one; and all that I noticed unusual in the night—for I still kept taking notes, like a spy in the camp—was the creaking of the thin split boards, when any of our neighbors stirred.

Such were the first rude beginnings of a town. They spoke of the practicability of a winter-road to the Moosehead carry, which would not cost much, and would connect them with steam and staging and all the busy world. I almost doubted if the lake would be there,—the self-same lake,—preserve its form and identity, when the shores should be cleared and settled; as if these lakes and streams which explorers report never awaited the advent of the citizen.

The sight of one of these frontier-houses, built of these great logs, whose inhabitants have unflinchingly maintained their ground many summers and winters in the wilderness, reminds me of famous forts, like Ticonderoga, or Crown Point, which have sustained memorable sieges. They are especially winter-quarters, and at this season this one had a partially deserted look, as if the siege were raised a little, the snow-banks being melted from before it, and its garrison accordingly reduced. I think of their daily food as rations,—it is called "supplies"; a Bible and a great coat are munitions of war, and a single man seen about the premises is a sentinel on duty. You expect that he will require the countersign, and will perchance take you for Ethan Allen, come to demand the surrender of his fort in the name of the Continental Congress. It is a sort of ranger service. Arnold's expedition is a daily experience with these settlers. They can prove that they were out at almost any time; and I think that all the first generation of them deserve a pension more than any that went to the Mexican war.

THE AUTOCRAT OF THE BREAKFAST-TABLE.

EVERY MAN HIS OWN BOSWELL.

[*Aquí está encerrada el alma del licenciado Pedro Garcias.*

If I should ever make a little book out of these papers, which I hope you are not getting tired of, I suppose I ought to save the above sentence for a motto on the title-page. But I want it now, and must use it. I need not say to you that the words are Spanish, nor that they are to be found in the short Introduction to "Gil Blas," nor that they mean, "Here lies buried the soul of the licentiate Pedro Garcias."

I warned all young people off the premises when I began my notes referring to old age. I must be equally fair with old people now. They are earnestly requested to leave this paper to young persons from the age of twelve to that of four-score years and ten, at which latter period of life I am sure that I shall have at least one youthful reader. You know well enough what I mean by youth and age;—something in the soul, which has no more to do with the color of the hair than the vein of gold in a rock has to do with the grass a thousand feet above it.

I am growing bolder as I write. I think it requires not only youth, but genius, to read this paper. I don't mean to imply that it required any whatsoever to talk what I have here written down. It did demand a certain amount of memory, and such command of the English tongue as is given by a common school education. So much I do claim. But here I have related, at length, a string of trivialities. You must have the imagination of a poet to transfigure them. These little colored patches are stains upon the windows of a human soul; stand on the outside, they are but dull and meaningless spots of color; seen from within, they are glorified shapes with empurpled wings and sunbright aureoles.

My hand trembles when I offer you this. Many times I have come bearing flowers such as my garden grew; but now I offer you this poor, brown, homely growth, you may cast it away as worthless. And yet—and yet—it is something better than flowers; it is a *seed-capsule*. Many a gardener will cut you a bouquet of his choicest blossoms for small fee, but he does not love to let the seeds of his rarest varieties go out of his own hands.

It is by little things that we know ourselves; a soul would very probably mistake itself for another, when once disembodied, were it not for individual experiences that differed from those of others only in details seemingly trifling. All of us have been thirsty thousands of times, and felt, with Pindar, that water was the best of things. I alone, as I think, of all mankind, remember one particular painful of water, flavored with the white-pine of which the pail was made, and the brown mug out of which one Edmund, a red-faced and curly-haired boy, was averred to have bitten a fragment in his haste to drink; it being then high summer, and little full-blooded boys feeling very warm and porous in the low—"studded" school-room where Dame Prentiss, dead and gone, ruled over young children, many of whom are old ghosts now, and have known Abraham for twenty or thirty years of our mortal time.

Thirst belongs to humanity, everywhere, in all ages; but that white-pine pail and that brown mug belong to me in particular; and just so of my special relationships with other things and with my race. One could never remember himself in eternity by the mere fact of having loved or hated any more than by that of having thirsted; love and hate have no

more individuality in them than single waves in the ocean;—but the accidents or trivial marks which distinguished those whom we loved or hated make their memory our own forever, and with it that of our own personality also.

Therefore, my aged friend of five-and-twenty, or thereabouts, pause at the threshold of this particular record, and ask yourself seriously whether you are fit to read such revelations as are to follow. For observe, you have here no splendid array of petals such as poets offer you,—nothing but a dry shell, containing, if you will get out what is in it, a few small seeds of poems. You may laugh at them, if you like. I shall never tell you what I think of you for so doing. But if you can read into the heart of these things, in the light of other memories as slight, yet as dear to your soul, then you are neither more nor less than a POET, and can afford to write no more verses during the rest of your natural life,—which abstinence I take to be one of the surest marks of your meriting the divine name I have just bestowed upon you.

May I beg of you who have begun this paper, nobly trusting to your own imagination and sensibilities to give it the significance which it does not lay claim to without your kind assistance,—may I beg of you, I say, to pay particular attention to the *brackets* which enclose certain paragraphs? I want my “asides,” you see, to whisper loud to you who read my notes, and sometimes I talk a page or two to you without pretending that I said a word of it to our boarders. You will find a very long “aside” to you almost as soon as you begin to read. And so, dear young friend, fall to at once, taking such things as I have provided for you; and if you turn them, by the aid of your powerful imagination, into a fair banquet, why, then, peace be with you, and a summer by the still waters of some quiet river, or by some yellow beach, where, as my friend, the Professor, says, you can sit with Nature’s wrist in your hand and count her ocean-pulses.]

I should like to make a few intimate revelations relating especially to my early life, if I thought you would like to hear them.

[The schoolmistress turned a little in her chair, and sat with her face directed partly towards me.—Half-mourning now;—purple ribbon. That breastpin she wears has *gray* hair in it; her mother’s, no doubt;—I remember our landlady’s daughter telling me, soon after the schoolmistress came to board with us, that she had lately “buried a payrent.” That’s what made her look so pale,—kept the poor sick thing alive with her own blood. Ah! long illness is the real vampyrism; think of living a year or two after one is dead, by sucking the life-blood out of a frail young creature at one’s bedside!—Well, souls grow white, as well as cheeks, in these holy duties; one that goes in a nurse may come out an angel.—God bless all good women!—to their soft hands and pitying hearts we must all come at last!—The schoolmistress has a better color than when she came. — Too late! — “It might have been.” — Amen!

—How many thoughts go to a dozen heart-beats, sometimes! There was no long pause after my remark addressed to the company, but in that time I had the train of ideas and feelings I have just given flash through my consciousness sudden and sharp as the crooked red streak that springs out of its black sheath like the creese of a Malay in his death-race, and stabs the earth right and left in its blind rage.

I don’t deny that there was a pang in it,—yes, a stab; but there was a prayer, too,—the “Amen” belonged to that.—Also, a vision of a four-story brick house, nicely furnished,—I actually saw many specific articles,—curtains, sofas, tables, and others, and could draw the patterns of them at this moment,—a brick house, I say, looking out on the water, with a fair parlor, and books and busts and pots of flowers and bird-cages, all complete; and at the window, looking on the water, two of us.—“Male and female created

He them."—These two were standing at the window, when a little boy that was playing near them looked up at me with such a look that I ——— poured out a glass of water, drank it all down, and then continued.]

I said I should like to tell you some things, such as people commonly never tell, about my early recollections. Should you like to hear them?

Should we *like* to hear them?—said the schoolmistress;—no, but we should *love* to.

[The voice was a sweet one, naturally, and had something very pleasant in its tone, just then.—The four-story brick house, which had gone out like a transparency when the light behind it is quenched, glimmered again for a moment; parlor, books, busts, flower-pots, bird-cages, all complete,—and the figures as before.]

We are waiting with eagerness, Sir,—said the divinity-student.

[The transparency went out as if a flash of black lightning had struck it.]

If you want to hear my confessions, the next thing—I said—is to know whether I can trust you with them. It is only fair to say that there are a great many people in the world that laugh at such things. I think they are fools, but perhaps you don't all agree with me.

Here are children of tender age talked to as if they were capable of understanding Calvin's "Institutes," and nobody has honesty or sense enough to tell the plain truth about the little wretches: that they are as superstitious as naked savages, and such miserable spiritual cowards—that is, if they have any imagination—that they will believe anything which is taught them, and a great deal more which they teach themselves.

I was born and bred, as I have told you twenty times, among books and those who knew what was in books. I was carefully instructed in things temporal and spiritual. But up to a considerable maturity of childhood I believed Raphael and Michel Angelo to have been superhuman beings. The central doctrine of

the prevalent religious faith of Christendom was utterly confused and neutralized in my mind for years by one of those too common stories of actual life, which I overheard repeated in a whisper.—Why did I not ask? you will say.—You don't remember the rosy pudency of sensitive children. The first instinctive movement of the little creatures is to make a *cache*, and bury in it beliefs, doubts, dreams, hopes, and terrors. I am uncovering one of these *caches*. Do you think I was necessarily a greater fool and coward than another?

I was afraid of ships. Why, I could never tell. The masts looked frightfully tall,—but they were not so tall as the steeple of our old yellow meeting-house. At any rate, I used to hide my eyes from the sloops and schooners that were wont to lie at the end of the bridge, and I confess that traces of this undefined terror lasted very long.—One other source of alarm had a still more fearful significance. There was a great wooden HAND, —a glove-maker's sign, which used to swing and creak in the blast, as it hung from a pillar before a certain shop a mile or two outside of the city. Oh, the dreadful hand! Always hanging there ready to catch up a little boy, who would come home to supper no more, nor yet to bed, —whose porringer would be laid away empty thenceforth, and his half-worn shoes wait until his small brother grew to fit them.

As for all manner of superstitious observances, I used once to think I must have been peculiar in having such a list of them, but I now believe that half the children of the same age go through the same experiences. No Roman soothsayer ever had such a catalogue of *omens* as I found in the Sibylline leaves of my childhood. That trick of throwing a stone at a tree and attaching some mighty issue to hitting or missing, which you will find mentioned in one or more biographies, I well remember. Stepping on or over certain particular things or spots —Dr. Johnson's especial weakness—I got the habit of at a very early age.—I

won't swear that I have not some tendency to these not wise practices even at this present date. [How many of you that read these notes can say the same thing!]

With these follies mingled sweet delusions, which I loved so well I would not outgrow them, even when it required a voluntary effort to put a momentary trust in them. Here is one which I cannot help telling you.

The firing of the great guns at the Navy-yard is easily heard at the place where I was born and lived. "There is a ship of war come in," they used to say, when they heard them. Of course, I supposed that such vessels came in unexpectedly, after indefinite years of absence,—suddenly as falling stones; and that the great guns roared in their astonishment and delight at the sight of the old warship splitting the bay with her cutwater. Now, the sloop-of-war the *Wasp*, Captain Blakely, after gloriously capturing the *Reindeer* and the *Avon*, had disappeared from the face of the ocean, and was supposed to be lost. But there was no proof of it, and, of course, for a time, hopes were entertained that she might be heard from. Long after the last real chance had utterly vanished, I pleased myself with the fond illusion that somewhere on the waste of waters she was still floating, and there were *years* during which I never heard the sound of the great guns booming inland from the Navy-yard without saying to myself, "*The Wasp has come!*" and almost thinking I could see her, as she rolled in, crumpling the water before her, weather-beaten, barnacled, with shattered spars and threadbare canvas, welcomed by the shouts and tears of thousands. This was one of those dreams that I nursed and never told. Let me make a clean breast of it now, and say, that, so late as to have outgrown childhood, perhaps to have got far on towards manhood, when the roar of the cannon has struck suddenly on my ear, I have started with a thrill of vague expectation and tremulous delight, and the long-unspoken words have articulated

themselves in the mind's dumb whisper, *The Wasp has come!*

—Yes, children believe plenty of queer things. I suppose all of you have had the pocket-book fever when you were little?—What do I mean? Why, ripping up old pocket-books in the firm belief that bank-bills to an immense amount were hidden in them.—So, too, you must all remember some splendid unfulfilled promise of somebody or other, which fed you with hopes perhaps for years, and which left a blank in your life which nothing has ever filled up.—O. T. quitted our household carrying with him the passionate regrets of the more youthful members. He was an ingenious youngster; wrote wonderful copies, and carved the two initials given above with great skill on all available surfaces. I thought, by the way, they were all gone; but the other day I found them on a certain door which I will show you some time. How it surprised me to find them so near the ground! I had thought the boy of no trivial dimensions. Well, O. T., when he went, made a solemn promise to two of us. I was to have a ship, and the other a *martin-house* (last syllable pronounced as in the word *tin*). Neither ever came; but, oh, how many and many a time I have stolen to the corner,—the cars pass close by it at this time,—and looked up that long avenue, thinking that he must be coming now, almost sure, as I turned to look northward, that there he would be, trudging toward me, the ship in one hand and the *martin-house* in the other!

[You must not suppose that all I am going to say, as well as all I have said, was told to the whole company. The young fellow whom they call John was in the yard, sitting on a barrel and smoking a cheroot, the fumes of which came in, not ungrateful, through the open window. The divinity-student disappeared in the midst of our talk. The poor relation in black bombazine, who looked and moved as if all her articulations were elbow-joints, had gone off to her chamber, after waiting with a look of soul-subduing decorum at the foot of the

stairs until one of the male sort had passed her and ascended into the upper regions. This is a famous point of etiquette in our boarding-house; in fact, between ourselves, they make such an awful fuss about it, that I, for one, had a great deal rather have them simple enough not to think of such matters at all. Our landlady's daughter said, the other evening, that she was going to "retire"; whereupon the young fellow called John took up a lamp and insisted on lighting her to the foot of the staircase. Nothing would induce her to pass by him, until the schoolmistress, saying in good plain English that it was her bed-time, walked straight by them both, not seeming to trouble herself about either of them.

I have been led away from what I meant the portion included in these brackets to inform my readers about. I say, then, most of the boarders had left the table about the time when I began telling some of these secrets of mine,—all of them, in fact, but the old gentleman opposite and the schoolmistress. I understand why a young woman should like to hear these homely but genuine experiences of early life, which are, as I have said, the little brown seeds of what may yet grow to be poems with leaves of azure and gold; but when the old gentleman pushed up his chair nearer to me, and slanted round his best ear, and once, when I was speaking of some trifling, tender reminiscence, drew a long breath, with such a tremor in it that a little more and it would have been a sob, why, then I felt there must be something of nature in them which redeemed their seeming insignificance. Tell me, man or woman with whom I am whispering, have you not a small store of recollections, such as these I am uncovering, buried beneath the dead leaves of many summers, perhaps under the unmelting snows of fast-returning winters,—a few such recollections, which, if you should write them all out, would be swept into some careless editor's drawer, and might cost a scanty half-hour's lazy reading to his subscribers,—and yet, if Death

should cheat you of them, you would not know yourself in eternity?]

—I made three acquaintances at a very early period of life, my introduction to whom was never forgotten. The first unequivocal act of wrong that has left its trace in my memory was this: it was refusing a small favor asked of me,—nothing more than telling what had happened at school one morning. No matter who asked it; but there were circumstances which saddened and awed me. I had no heart to speak;—I faltered some miserable, perhaps petulant excuse, stole away, and the first battle of life was lost. What remorse followed! need not tell. Then and there, to the best of my knowledge, I first consciously took Sin by the hand and turned my back on Duty. Time has led me to look upon my offence more leniently; I do not believe it or any other childish wrong is infinite, as some have pretended, but infinitely finite. Yet, oh if I had but won that battle!

The great Destroyer, whose awful shadow it was that had silenced me, came near me,—but never, so as to be distinctly seen and remembered, during my tender years. There flits dimly before me the image of a little girl, whose name even I have forgotten, a schoolmate, whom we missed one day, and were told that she had died. But what death was I never had any very distinct idea, until one day I climbed the low stone wall of the old burial-ground and mingled with a group that were looking into a very deep, long, narrow hole, dug down through the green sod, down through the brown loam, down through the yellow gravel, and there at the bottom was an oblong red box, and a still, sharp, white face of a young man seen through an opening at one end of it. When the lid was closed, and the gravel and stones rattled down pell-mell, and the woman in black, who was crying and wringing her hands, went off with the other mourners, and left him, then I felt that I had seen Death, and should never forget him.

One other acquaintance I made at an

earlier period of life than the habit of romancers authorizes.—Love, of course.—She was a famous beauty afterwards.—I am satisfied that many children rehearse their parts in the drama of life before they have shed all their milk-teeth.—I think I won't tell the story of the golden blonde.—I suppose everybody has had his childish fancies; but sometimes they are passionate impulses, which anticipate all the tremulous emotions belonging to a later period. Most children remember seeing and adoring an angel before they were a dozen years old.

[The old gentleman had left his chair opposite and taken a seat by the schoolmistress and myself, a little way from the table.—It's true, it's true,—said the old gentleman.—He took hold of a steel watch-chain, which carried a large, square gold key at one end and was supposed to have some kind of timekeeper at the other. With some trouble he dragged up an ancient-looking, thick, silver, bull's-eye watch. He looked at it for a moment,—hesitated,—touched the inner corner of his right eye with the pulp of his middle finger,—looked at the face of the watch,—said it was getting into the forenoon,—then opened the watch and handed me the loose outside case without a word.—The watch-paper had been pink once, and had a faint tinge still, as if all its tender life had not yet quite faded out. Two little birds, a flower, and, in small school-girl letters, a date,—17 . .—no matter.—Before I was thirteen years old,—said the old gentleman.—I don't know what was in that young schoolmistress's head, nor why she should have done it; but she took out the watch-paper and put it softly to her lips, as if she were kissing the poor thing that made it so long ago. The old gentleman took the watch-paper carefully from her, replaced it, turned away and walked out, holding the watch in his hand. I saw him pass the window a moment after with that foolish white hat on his head; he couldn't have been thinking what he was about when he put it on. So the schoolmistress and I were left alone. I

drew my chair a shade nearer to her, and continued.]

And since I am talking of early recollections, I don't know why I shouldn't mention some others that still cling to me,—not that you will attach any very particular meaning to these same images so full of significance to me, but that you will find something parallel to them in your own memory. You remember, perhaps, what I said one day about smells. There were certain *sounds* also which had a mysterious suggestiveness to me,—not so intense, perhaps, as that connected with the other sense, but yet peculiar, and never to be forgotten.

The first was the creaking of the wood-sleds, bringing their loads of oak and walnut from the country, as the slow-swinging oxen trailed them along over the complaining snow, in the cold, brown light of early morning: Lying in bed and listening to their dreary music had a pleasure in it akin to that which Lucretius describes in witnessing a ship toiling through the waves while we sit at ease on shore, or that which Byron speaks of as to be enjoyed in looking on at a battle by one "who hath no friend, no brother there."

There was another sound, in itself so sweet, and so connected with one of those simple, and curious superstitions of childhood of which I have spoken, that I can never cease to cherish a sad sort of love for it.—Let me tell the superstitious fancy first. The Puritan "Sabbath," as everybody knows, began at "sundown" on Saturday evening. To such observance of it I was born and bred. As the large, round disk of day declined, a stillness, a solemnity, a somewhat melancholy hush came over us all. It was time for work to cease, and for playthings to be put away. The world of active life passed into the shadow of an eclipse, not to emerge until the sun should sink again beneath the horizon.

It was in this stillness of the world without and of the soul within that the pulsating lullaby of the evening crickets used to make itself most distinctly heard,—so that I well remember I used to think

that the purring of these little creatures, which mingled with the batrachian hymns from the neighboring swamp, *was peculiar to Saturday evenings*. I don't know that anything could give a clearer idea of the quieting and subduing effect of the old habit of observance of what was considered holy time, than this strange, childish fancy.

Yes, and there was still another sound which mingled its solemn cadences, with the waking and sleeping dreams of my boyhood. It was heard only at times,—a deep, muffled roar, which rose and fell, not loud, but vast,—a whistling boy would have drowned it for his next neighbor, but it must have been heard over the space of a hundred square miles. I used to wonder what this might be. Could it be the roar of the thousand wheels and the ten thousand footsteps jarring and tramping along the stones of the neighboring city? That would be continuous; but this, as I have said, rose and fell in regular rhythm. I remember being told, and I suppose this to have been the true solution, that it was the sound of the waves, after a high wind, breaking on the long beaches many miles distant. I should really like to know whether any observing people living ten miles, more or less, inland from long beaches,—in such a town, for instance, as Cantabridge, in the eastern part of the Territory of the Massachusetts,—have ever observed any such sound, and whether it was rightly accounted for as above.

Mingling with these inarticulate sounds in the low murmur of memory, are the echoes of certain voices I have heard at rare intervals. I grieve to say it, but our people, I think, have not generally agreeable voices. The marrowy organisms, with skins that shed water like the backs of ducks, with smooth surfaces neatly padded beneath, and velvet linings to their singing-pipes, are not so common among us as that other pattern of humanity with angular outlines and plane surfaces, arid integuments, hair like the fibrous covering of a cocoa-nut in gloss and suppleness as well as color,

and voices at once thin and strenuous,—acidulous enough to produce effervescence with alkalis, and stridulous enough to sing duets with the katydid. I think our conversational soprano, as sometimes overheard in the cars, arising from a group of young persons, who may have taken the train at one of our great industrial centres, for instance,—young persons of the female sex, we will say, who have hustled in full-dressed, engaged in loud strident speech, and who, after free discussion, have fixed on two or more double seats, which having secured, they proceed to eat apples and hand round daguerreotypes,—I say, I think the conversational soprano, heard under these circumstances, would not be among the allurements the old Enemy would put in requisition, were he getting up a new temptation of St. Anthony.

There are sweet voices among us, we all know, and voices not musical, it may be, to those who hear them for the first time, yet sweeter to us than any we shall hear until we listen to some warbling angel in the overture to that eternity of blissful harmonies we hope to enjoy.—But why should I tell lies? If my friends love me, it is because I try to tell the truth. I never heard but two voices in my life that frightened me by their sweetness.

—Frightened you?—said the school-mistress.—Yes, frightened me. They made me feel as if there might be constituted a creature with such a chord in her voice to some string in another's soul, that, if she but spoke, he would leave all and follow her, though it were into the jaws of Erebus. Our only chance to keep our wits is, that there are so few natural chords between others' voices and this string in our souls, and that those which at first may have jarred a little by and by come into harmony with it.—But I tell you this is no fiction. You may call the story of Ulysses and the Sirens a fable, but what will you say to Mario and the poor lady who followed him?

—Whose were those two voices that

bewitched me so?—They both belonged to German women. One was a chambermaid, not otherwise fascinating. The key of my room at a certain great hotel was missing, and this Teutonic maiden was summoned to give information respecting it. The simple soul was evidently not long from her mother-land, and spoke with sweet uncertainty of dialect. But to hear her wonder and lament and suggest, with soft, liquid inflexions, and low, sad murmurs, in tones as full of serious tenderness for the fate of the lost key as if it had been a child that had strayed from its mother, was so winning, that, had her features and figure been as delicious as her accents,—if she had looked like the marble Clytie, for instance,—why, all I can say is —

[The schoolmistress opened her eyes so wide, that I stopped short.]

I was only going to say that I should have drowned myself. For Lake Erie was close by, and it is so much better to accept asphyxia, which takes only three minutes by the watch, than a *mésalliance*, that lasts fifty years to begin with, and then passes along down the line of descent, (breaking out in all manner of boorish manifestations of feature and manner, which, if men were only as short-lived as horses, could be readily traced back through the square-roots and the cube-roots of the family stem, on which you have hung the armorial bearings of the De Champignons or the De la Morues, until one came to beings that ate with knives and said “Haow?”) that no person of right feeling could have hesitated for a single moment.

The second of the ravishing voices I have heard was, as I have said, that of another German woman.—I suppose I shall ruin myself by saying that such a voice could not have come from any Americanized human being.

—What was there in it?—said the schoolmistress,—and, upon my word, her tones were so very musical, that I almost wished I had said three voices instead of two, and not made the unpatriotic remark above reported.—Oh, I said, it had so

much woman in it,—*muliebrity*, as well as *femininity*;—no self-assertion, such as free suffrage introduces into every word and movement; large, vigorous nature, running back to those huge-limbed Germans of Tacitus, but subdued by the reverential training and tuned by the kindly culture of fifty generations. Sharp business habits, a lean soil, independence, enterprise, and east winds, are not the best things for the larynx. Still, you hear noble voices among us,—I have known families famous for them,—but ask the first person you meet a question, and ten to one there is a hard, sharp, metallic, matter-of-business clink in the accents of the answer, that produces the effect of one of those bells which small trades-people connect with their shop-doors, and which spring upon your ear with such vivacity, as you enter, that your first impulse is to retire at once from the precincts.

—Ah, but I must not forget that dear little child I saw and heard in a French hospital. Between two and three years old. Fell out of her chair and snapped both thigh-bones. Lying in bed, patient, gentle. Rough students round her, some in white aprons, looking fearfully business-like; but the child placid, perfectly still. I spoke to her, and the blessed little creature answered me in a voice of such heavenly sweetness, with that reedy thrill in it which you have heard in the thrush’s even-song, that I hear it at this moment, while I am writing, so many, many years afterwards.—*C’est tout comme un serin*, said the French student at my side.

These are the voices which struck the key-note of my conceptions as to what the sounds we are to hear in heaven will be, if we shall enter through one of the twelve gates of pearl. There must be other things besides *aérolites* that wander from their own spheres to ours; and when we speak of celestial sweetness or beauty, we may be nearer the literal truth than we dream. If mankind generally are the shipwrecked survivors of some pre-Adamitic cataclysm, set adrift in these little open boats of humanity to make one

more trial to reach the shore,—as some grave theologians have maintained,—if, in plain English, men are the ghosts of dead devils who have “died into life,” (to borrow an expression from Keats,) and walk the earth in a suit of living rags that lasts three or four score summers,—why, there must have been a few good spirits sent to keep them company, and these sweet voices I speak of must belong to them.

—I wish you could once hear my sister's voice,—said the schoolmistress.

If it is like yours, it must be a pleasant one,—said I.

I never thought mine was anything,—said the schoolmistress.

How should you know?—said I.—People never hear their own voices,—any more than they see their own faces. There is not even a looking-glass for the voice. Of course, there is something audible to us when we speak; but that something is not our own voice as it is known to all our acquaintances. I think, if an image spoke to us in our own tones, we should not know them in the least.—How pleasant it would be, if in another state of being we could have shapes like our former selves for playthings,—we standing outside or inside of them, as we liked, and they being to us just what we used to be to others!

—I wonder if there will be nothing like what we call “play,” after our earthly toys are broken,—said the schoolmistress.

Hush,—said I,—what will the divinity-student say?

[I thought she was hit, that time;—but the shot must have gone over her, or on one side of her; she did not flinch.]

Oh,—said the schoolmistress,—he must look out for my sister's heresies; I am afraid he will be too busy with them to take care of mine.

Do you mean to say,—said I,—that it is *your sister* whom that student —

[The young fellow commonly known as John, who had been sitting on the barrel, smoking, jumped off just then, kicked over the barrel, gave it a push with

his foot that set it rolling, and stuck his saucy-looking face in at the window so as to cut my question off in the middle; and the schoolmistress leaving the room a few minutes afterwards, I did not have a chance to finish it.

The young fellow came in and sat down in a chair, putting his heels on the top of another.

Pooty girl,—said he.

A fine young lady,—I replied.

Keeps a fast-rate school, according to accounts,—said he,—teaches all sorts of things,—Latin and Italian and music. Folks rich once,—smashed up. She went right ahead as smart as if she'd been born to work. That's the kind o' girl I go for. I'd marry her, only two or three other girls would drown themselves, if I did.

I think the above is the longest speech of this young fellow's which I have put on record. I do not like to change his peculiar expressions, for this is one of those cases in which the style is the man, as M. de Buffon says. The fact is, the young fellow is a good-hearted creature enough, only too fond of his jokes,—and if it were not for those heat-lightning winks on one side of his face, I should not mind his fun much.]

[Some days after this, when the company were together again, I talked a little.]

—I don't think I have a genuine hatred for anybody. I am well aware that I differ herein from the sturdy English moralist and the stout American tragedian. I don't deny that I hate *the sight* of certain people; but the qualities which make me tend to hate the man himself are such as I am so much disposed to pity, that, except under immediate aggravation, I feel kindly enough to the worst of them. It is such a sad thing to be born a sneaking fellow, so much worse than to inherit a hump-back or a couple of club-feet, that I sometimes feel as if we ought to love the crippled souls, if I may use this expression, with a certain tenderness which we need not waste on noble na-

tures. One who is born with such congenital incapacity that nothing can make a gentleman of him is entitled, not to our wrath, but to our profoundest sympathy. But as we cannot help hating the sight of these people, just as we do that of physical deformities, we gradually eliminate them from our society,—we love them, but open the window and let them go. By the time decent people reach middle age they have weeded their circle pretty well of these unfortunates, unless they have a taste for such animals; in which case, no matter what their position may be, there is something, you may be sure, in their natures akin to that of their wretched parasites.

—The divinity-student wished to know what I thought of affinities, as well as of antipathies; did I believe in love at first sight?

Sir,—said I,—all men love all women. That is the *prima-facie* aspect of the case. The Court of Nature assumes the law to be, that all men do so; and the individual man is bound to show cause why he does not love any particular woman. A man, says one of my old black-letter law-books, may show divers good reasons, as thus: He hath not seen the person named in the indictment; she is of tender age, or the reverse of that; she hath certain personal disqualifications,—as, for instance, she is a blackamoor, or hath an ill-favored countenance; or, his capacity of loving being limited, his affections are engrossed by a previous comer; and so of other conditions. Not the less is it true that he is bound by duty and inclined by nature to love each and every woman. Therefore it is that each woman virtually summons every man to show cause why he doth not love her. This is not by written document, or direct speech, for the most part, but by certain signs of silk, gold, and other materials, which say to all men,—Look on me and love, as in duty bound. Then the man pleadeth his special incapacity, whatsoever that may be,—as, for instance, impecuniosity, or that he hath one or many wives in his household, or that he is of mean figure, or

small capacity; of which reasons it may be noted, that the first is, according to late decisions, of chiefest authority.—So far the old law-book. But there is a note from an older authority, saying that every woman doth also love each and every man, except there be some good reason to the contrary; and a very observing friend of mine, a young unmarried clergyman, tells me, that, so far as his experience goes, he has reason to think the ancient author had fact to justify his statement.

I'll tell you how it is with the pictures of women we fall in love with at first sight.

—We a'n't talking about pictures,—said the landlady's daughter,—we're talking about women.

I understood that we were speaking of love at sight,—I remarked, mildly.—Now, as all a man knows about a woman whom he looks at is just what a picture as big as a copper, or a “nickel,” rather, at the bottom of his eye can teach him, I think I am right in saying we are talking about the pictures of women.—Well, now, the reason why a man is not desperately in love with ten thousand women at once is just that which prevents all our portraits being distinctly seen upon that wall. They all *are* painted there by reflection from our faces, but because *all* of them are painted on each spot, and each on the same surface, and many other objects at the same time, no one is seen as a picture. But darken a chamber and let a single pencil of rays in through a key-hole, then you have a picture on the wall. We never fall in love with a woman in distinction from women, until we can get an image of her through a pin-hole; and then we can see nothing else, and nobody but ourselves can see the image in our mental camera-obscura.

—My friend, the Poet, tells me he has to leave town whenever the anniversaries come round.

What's the difficulty?—Why; they all want him to get up and make speeches, or songs, or toasts; which is just the very thing he doesn't want to do. He is an old story, he says, and hates to show

on these occasions. But they tease him, and coax him, and can't do without him, and feel all over his poor weak head until they get their fingers on the *fontanelle*, (the Professor will tell you what this means,—he says the one at the top of the head always remains open in poets,) until, by gentle pressure on that soft pulsating spot, they stupefy him to the point of acquiescence.

There are times, though, he says, when it is a pleasure, before going to some agreeable meeting, to rush out into one's garden and clutch up a handful of what grows there,—weeds and violets together,—not cutting them off, but pulling them up by the roots with the brown earth they grow in sticking to them. That's his idea of a post-prandial performance. Look here, now. These verses I am going to read you, he tells me, were pulled up by the roots just in that way, the other day.—Beautiful entertainment,—names there on the plates that flow from all English-speaking tongues as familiarly as *and or the*; entertainers known wherever good poetry and fair title-pages are held in esteem; guest a kind-hearted, modest, genial, hopeful poet, who sings to the hearts of his countrymen, the British people, the songs of good cheer which the better days to come, as all honest souls trust and believe, will turn into the prose of common life. My friend, the Poet, says you must not read such a string of verses too literally. If he trimmed it nicely below, you wouldn't see the roots, he says, and he likes to keep them, and a little of the soil clinging to them.

This is the farewell my friend, the Poet, read to his and our friend, the Poet:—

A GOOD TIME GOING!

Brave singer of the coming time,
Sweet minstrel of the joyous present,
Crowned with the noblest wreath of rhyme,
The holly-leaf of Ayrshire's peasant,
Good-bye! Good-bye!—Our hearts and hands,
Our lips in honest Saxon phrases,
Cry, God be with him, till he stands
His feet among the English daisies!

'Tis here we part;—for other eyes
The busy deck, the fluttering streamer,
The dripping arms that plunge and rise,
The waves in foam, the ship in tremor,
The kerchiefs waving from the pier,
The cloudy pillar gliding o'er him,
The deep blue desert, lone and drear,
With heaven above and home before him!

His home!—the Western giant smiles,
And twirls the spotty globe to find it;—
This little speck the British Isles?
'Tis but a freckle,—never mind it!—
He laughs, and all his prairies roll,
Each gurgling cataract roars and chuckles,
And ridges stretched from pole to pole
Heave till they crack their iron knuckles!

But Memory blushes at the sneer,
And Honor turns with frown defiant,
And Freedom, leaning on her spear,
Laughs louder than the laughing giant:—
"An islet is a world," she said,
"When glory with its dust has blended,
And Britain keeps her noble dead
Till earth and seas and skies are rended!"

Beneath each swinging forest-bough
Some arm as stout in death repose,—
From wave-washed foot to heaven-kissed brow
Her valor's life-blood runs in roses;
Nay, let our brothers of the West
Write smiling in their florid pages,
One-half her soil has walked the rest
In poets, heroes, martyrs, sages!

Hugged in the clinging billow's clasp,
From sea-weed fringe to mountain heather,
The British oak with rooted grasp
Her slender handful holds together;—
With cliffs of white and bowers of green,
And Ocean narrowing to caress her,
And hills and threaded streams between,—
Our little mother isle, God bless her!

In earth's broad temple where we stand,
Fanned by the eastern gales that brought
us,
We hold the missal in our hand,
Bright with the lines our Mother taught us;
Where'er its blazoned page betrays
The glistening links of gilded fetters,
Behold, the half-turned leaf displays
Her rubric stained in crimson letters!

Enough! To speed a parting friend
'Tis vain alike to speak and listen;—
Yet stay,—these feeble accents blend
With rays of light from eyes that glisten.

Good-bye! once more,—and kindly tell
 In words of peace the young world's
 story,—
 And say, besides,—we love too well
 Our mother's soil, our fathers' glory!

When my friend, the Professor, found
 that my friend, the Poet, had been coming
 out in this full-blown style, he got a little
 excited, as you may have seen a cana-
 ry, sometimes, when another strikes up.
 The Professor says he knows he can
 lecture, and thinks he can write verses.
 At any rate, he has often tried, and now
 he was determined to try again. So
 when some professional friends of his
 called him up, one day, after a feast of
 reason and a regular "fresket" of soul
 which had lasted two or three hours, he
 read them these verses. He introduced
 them with a few remarks, he told me, of
 which the only one he remembered was
 this: that he had rather write a single
 line which one among them should think
 worth remembering than set them all
 laughing with a string of epigrams. It
 was all right, I don't doubt; at any rate,
 that was his fancy then, and perhaps
 another time he may be obstinately hila-
 rious; however, it may be that he is
 growing graver, for time is a fact so long
 as clocks and watches continue to go,
 and a cat can't be a kitten always, as the
 old gentleman opposite said the other
 day.

You must listen to this seriously, for I
 think the Professor was very much in
 earnest when he wrote it.

THE TWO ARMIES.

As Life's unending column pours,
 Two marshalled hosts are seen,—
 Two armies on the trampled shores
 That Death flows black between.

One marches to the drum-beat's roll,
 The wide-mouthed clarion's bray,
 And bears upon a crimson scroll,
 "Our glory is to slay."

One moves in silence by the stream,
 With sad, yet watchful eyes,
 Calm as the patient planet's gleam
 That walks the clouded skies.

Along its front no sabres shine,
 No blood-red pennons wave;
 Its banner bears the single line,
 "Our duty is to save."

For those no death-bed's lingering shade;
 At Honor's trumpet-call,
 With knitted brow and lifted blade
 In Glory's arms they fall.

For these no clashing falchions bright,
 No stirring battle-cry;
 The bloodless stabber calls by night,—
 Each answers, "Here am I!"

For those the sculptor's laurelled bust,
 The builder's marble piles,
 The anthems pealing o'er their dust
 Through long cathedral aisles.

For these the blossom-sprinkled turf
 That floods the lonely graves,
 When Spring rolls in her sea-green surf
 In flowery-foaming waves.

Two paths lead upward from below,
 And angels wait above,
 Who count each burning life-drop's flow,
 Each falling tear of Love.

Though from the Hero's bleeding breast
 Her pulses Freedom drew,
 Though the white lilies in her crest
 Sprang from that scarlet dew,—

While Valor's haughty champions wait
 Till all their scars are shown,
 Love walks unchallenged through the gate,
 To sit beside the Throne!

THE AMERICAN TRACT SOCIETY.

THERE was no apologue more popular in the Middle Ages than that of the hermit, who, musing on the wickedness and tyranny of those whom the inscrutable wisdom of Providence had intrusted with the government of the world, fell asleep and awoke to find himself the very monarch whose abject life and capricious violence had furnished the subject of his moralizing. Endowed with irresponsible power, tempted by passions whose existence in himself he had never suspected, and betrayed by the political necessities of his position, he became gradually guilty of all the crimes and the luxury which had seemed so hideous to him in his hermitage over a dish of water-cresses.

The American Tract Society from small beginnings has risen to be the dispenser of a yearly revenue of nearly half a million. It has become a great establishment, with a traditional policy, with the distrust of change and the dislike of disturbing questions (especially of such as would lessen its revenues) natural to great establishments. It had been poor and weak; it has become rich and powerful. The hermit has become king.

If the pious men who founded the American Tract Society had been told that within forty years they would be watchful of their publications, lest, by inadvertence, anything disrespectful might be spoken of the African Slave-trade,—that they would consider it an ample equivalent for compulsory dumbness on the vices of Slavery, that their colporteurs could awaken the minds of Southern brethren to the horrors of St. Bartholomew,—that they would hold their peace about the body of Cuffee dancing to the music of the cart-whip, provided only they could save the soul of Sambo alive by presenting him a pamphlet, which he could not read, on the depravity of the double-shuffle,—that they would consent to be fellow-members in the Tract Society with him who sold their fellow-

members in Christ on the auction-block, if he agreed with them in condemning Transubstantiation, (and it would not be difficult for a gentleman who ignored the real presence of God in his brother man to deny it in the sacramental wafer.)—if those excellent men had been told this, they would have shrunk in horror, and exclaimed, “Are thy servants dogs, that they should do these things?”

Yet this is precisely the present position of the Society.

There are two ways of evading the responsibility of such inconsistency. The first is by an appeal to the Society's Constitution, and by claiming to interpret it strictly in accordance with the rules of law as applied to contracts, whether between individuals or States. The second is by denying that Slavery is opposed to the genius of Christianity, and that any moral wrongs are the necessary results of it. We will not be so unjust to the Society as to suppose that any of its members would rely on this latter plea, and shall therefore confine ourselves to a brief consideration of the other.

In order that the same rules of interpretation should be considered applicable to the Constitution of the Society and to that of the United States, we must attribute to the former a solemnity and importance which involve a palpable absurdity. To claim for it the verbal accuracy and the legal wariness of a mere contract is equally at war with common sense and the facts of the case; and even were it not so, the party to a bond who should attempt to escape its ethical obligation by a legal quibble of construction would be put in Coventry by all honest men. In point of fact, the Constitution was simply the minutes of an agreement among certain gentlemen, to define the limits within which they would accept trust-funds, and the objects for which they should expend them.

But if we accept the alternative of-

ferred by the advocates of strict construction, we shall not find that their case is strengthened. Claiming that where the meaning of an instrument is doubtful, it should be interpreted according to the contemporary understanding of its framers, they argue that it would be absurd to suppose that gentlemen from the Southern States would have united to form a society that included in its objects any discussion of the moral duties arising from the institution of Slavery. Admitting the first part of their proposition, we deny the conclusion they seek to draw from it. They are guilty of a glaring anachronism in assuming the same opinions and prejudices to have existed in 1825 which are undoubtedly influential in 1858. The Antislavery agitation did not begin until 1831, and the debates in the Virginia Convention prove conclusively that six years after the foundation of the Tract Society, the leading men in that State, men whose minds had been trained and whose characters had been tempered in that school of action and experience which was open to all during the heroic period of our history, had not yet suffered such distortion of the intellect through passion, and such deadening of the conscience through interest, as would have prevented their discussing either the moral or the political aspects of Slavery, and precluded them from uniting in any effort to make the relation between master and slave less demoralizing to the one and less imbruting to the other.

Again, it is claimed that the words of the Constitution are conclusive, and that the declaration that the publications of the Society shall be such as are "satisfactory to all Evangelical Christians" forbids by implication the issuing of any tract which could possibly offend the brethren in Slave States. The Society, it is argued, can publish only on topics about which all Evangelical Christians are agreed, and must, therefore, avoid everything in which the question of politics is involved. But what are the facts about matters other than Slavery?

Tracts have been issued and circulated in which Dancing is condemned as sinful; are all Evangelical Christians agreed about this? On the Temperance question; against Catholicism;—have these topics never entered into our politics? The simple truth is, that Slavery is the only subject about which the Publishing Committee have felt Constitutional scruples. Till this question arose, they were like men in perfect health, never suspecting that they had any constitution at all; but now, like hypochondriacs, they feel it in every pore, at the least breath from the eastward.

If a strict construction of the words "all Evangelical Christians" be insisted on, we are at a loss to see where the Committee could draw the dividing line between what might be offensive and what allowable. The Society publish tracts in which the study of the Scriptures is enforced and their denial to the laity by Romanists assailed. But throughout the South it is criminal to teach a slave to read; throughout the South, no book could be distributed among the servile population more incendiary than the Bible, if they could only read it. Will not our Southern brethren take alarm? The Society is reduced to the dilemma of either denying that the African has a soul to be saved, or of consenting to the terrible mockery of assuring him that the way of life is to be found only by searching a book which he is forbidden to open.

If we carry out this doctrine of strict construction to its legitimate results, we shall find that it involves a logical absurdity. What is the number of men whose outraged sensibilities may claim the suppression of a tract? Is the *taboo* of a thousand valid? Of a hundred? Of ten? Or are tracts to be distributed only to those who will find their doctrine agreeable, and are the Society's colporteurs to be instructed that a Temperance essay is the proper thing for a total-abstinent infidel, and a sermon on the Atonement for a distilling deacon? If the aim of the Society be only to con-

vert men from sins they have no mind to. and to convince them of errors to which they have no temptation, they might as well be spending their money to persuade schoolmasters that two and two make four, or mathematicians that there cannot be two obtuse angles in a triangle. If this be their notion of the way in which the gospel is to be preached, we do not wonder that they have found it necessary to print a tract upon the impropriety of sleeping in church.

But the Society are concluded by their own action; for in 1857 they unanimously adopted the following resolution: "That those moral duties which grow out of the existence of Slavery, as well as those moral evils and vices which it is known to promote, and which are condemned in Scripture, and so much deplored by Evangelical Christians, undoubtedly do fall within the province of this Society, and can and ought to be discussed in a fraternal and Christian spirit." The Society saw clearly that it was impossible to draw a Mason and Dixon's line in the world of ethics, to divide Duty by a parallel of latitude. The only line which Christ drew is that which parts the sheep from the goats, that great horizon-line of the moral nature of man which is the boundary between light and darkness. The Society, by yielding (as they have done in 1858) to what are pleasantly called the "objections" of the South, (objections of so forcible a nature that we are told the colporteurs were "forced to flee,") virtually exclude the black man, if born to the southward of a certain arbitrary line, from the operation of God's providence, and thereby do as great a wrong to the Creator as the Episcopal Church did to the artist when they published Ary Scheffer's *Christus Consolator* with the figure of the slave left out.

The Society is not asked to disseminate antislavery doctrines, but simply to be even-handed between master and slave, and, since they have recommended Sambo and Toney to be obedient to Mr. Legree, to remind him in turn that he

also has duties toward the bodies and souls of his bondmen. But we are told that the time has not yet arrived, that at present the ears of our Southern brethren are closed against all appeals, that God in his good time will turn their hearts, and that then, and not till then, will be the fitting occasion, to do something in the premises. But if the Society is to await this golden opportunity with such exemplary patience in one case, why not in all? If it is to decline any attempt at converting the sinner till after God has converted him, will there be any special necessity for a tract society at all? Will it not be a little presumptuous, as well as superfluous, to undertake the doing over again of what He has already done? We fear that the studies of Blackstone, upon which the gentlemen who argue thus have entered in order to fit themselves for the legal and constitutional argument of the question, have confused their minds, and that they are misled by some fancied analogy between a tract and an action of trover, and conceive that the one, like the other, cannot be employed till after an actual conversion has taken place.

The resolutions reported by the Special Committee at the annual meeting of 1857, drawn up with great caution and with a sincere desire to make whole the breach in the Society, have had the usual fate of all attempts to reconcile incompatibilities by compromise. They express confidence in the Publishing Committee, and at the same time impliedly condemn them by recommending them to do precisely what they had all along scrupulously avoided doing. The result was just what might have been expected. Both parties among the Northern members of the Society, those who approved the former action of the Publishing Committee, and those who approved the new policy recommended in the resolutions, those who favored silence and those who favored speech on the subject of Slavery, claimed the victory, while the Southern brethren, as usual, refused to be satisfied with anything short of uncon-

ditional submission. The word *Compromise*, as far as Slavery is concerned, has always been of fatal augury. The concessions of the South have been like the "With all my worldly goods I thee endow" of a bankrupt bridegroom, who thereby generously bestows all his debts upon his wife, and as a small return for his magnanimity consents to accept all her personal and a life estate in all her real property. The South is willing that the Tract Society should expend its money to convince the slave that he has a soul to be saved so far as he is obedient to his master, but not to persuade the master that he has a soul to undergo a very different process so far as he is unmerciful to his slave.

We Americans are very fond of this glue of compromise. Like so many quack cements, it is advertised to make the mended parts of the vessel stronger than those which have never been broken, but, like them, it will not stand hot water,—and as the question of Slavery is sure to plunge all who approach it, even with the best intentions, into that fatal element, the patched-up brotherhood, which but yesterday was warranted to be better than new, falls once more into a heap of incoherent fragments. The last trial of the virtues of the Patent Reintegrator by the Special Committee of the Tract Society has ended like all the rest, and as all attempts to buy peace at too dear a rate must end. Peace is an excellent thing, but principle and pluck are better; and the man who sacrifices them to gain it finds at last that he has crouched under the Caudine yoke to purchase only a contemptuous toleration that leaves him at war with his own self-respect and the invincible forces of his higher nature.

But the peace which Christ promised to his followers was not of this world; the good gift he brought them was not peace, but a sword. It was no sword of territorial conquest, but that flaming blade of conscience and self-conviction which lightened between our first parents and their lost Eden,—that sword of the

Spirit that searcheth all things,—which severs one by one the ties of passion, of interest, of self-pride, that bind the soul to earth,—whose implacable edge may divide a man from family, from friends, from whatever is nearest and dearest,—and which hovers before him like the air-drawn dagger of Macbeth, beckoning him, not to crime, but to the legitimate royalties of self-denial and self-sacrifice, to the freedom which is won only by surrender of the will. Christianity has never been concession, never peace; it is continual aggression; one province of wrong conquered, its pioneers are already in the heart of another. The mile-stones of its onward march down the ages have not been monuments of material power, but the blackened stakes of martyrs, trophies of individual fidelity to conviction. For it is the only religion which is superior to all endowment, to all authority,—which has a bishopric and a cathedral wherever a single human soul has surrendered itself to God. That very spirit of doubt, inquiry, and fanaticism for private judgment, with which Romanists reproach Protestantism, is its stamp and token of authenticity,—the seal of Christ, and not of the Fisherman.

We do not wonder at the division which has taken place in the Tract Society, nor do we regret it. The ideal life of a Christian is possible to very few, but we naturally look for a nearer approach to it in those who associate together to disseminate the doctrines which they believe to be its formative essentials, and there is nothing which the enemies of religion seize on so gladly as any inconsistency between the conduct and the professions of such persons. Though utterly indifferent to the wrongs of the slave, the scoffer would not fail to remark upon the hollowness of a Christianity which was horror-stricken at a dance or a Sunday-drive, while it was blandly silent about the separation of families, the putting asunder whom God had joined, the selling Christian girls for Christian harems, and the thousand horrors of a system which can lessen

the agonies it inflicts only by debasing the minds and souls of the race on whom it inflicts them. Is your Christianity, then, he would say, a respecter of persons, and does it condone the sin because the sinner can contribute to your coffers? Was there ever a Simony like this,—that does not sell, but withholds, the gift of God for a price?

The world naturally holds the Society to a stricter accountability than it would insist upon in ordinary cases. Were they only a club of gentlemen associated for their own amusement, it would be very natural and proper that they should exclude all questions which would introduce controversy, and that, however individually interested in certain reforms, they should not force them upon others who would consider them a bore. But a society of professing Christians, united for the express purpose of carrying both the theory and the practice of the New Testament into every household in the land, has voluntarily subjected itself to a graver responsibility, and renounced all title to fall back upon any reserved right of personal comfort or convenience.

We say, then, that we are glad to see this division in the Tract Society,—not glad because of the division, but because it has sprung from an earnest effort to relieve the Society of a reproach which was not only impairing its usefulness, but doing an injury to the cause of truth and sincerity everywhere. We have no desire to impugn the motives of those who consider themselves conservative members of the Society; we believe them to be honest in their convictions, or their want of them; but we think they have mistaken notions as to what conservatism is, and that they are wrong in supposing it to consist in refusing to wipe away the film on their spectacle-glasses which prevents their seeing the handwriting on the wall, or in conserving reverently the barnacles on their ship's bottom and the dry-rot in its knees. We yield to none of them in reverence for the Past; it is there only that the imagination can find repose and seclusion; there dwells that

silent majority whose experience guides our action and whose wisdom shapes our thought in spite of ourselves;—but it is not length of days that can make evil reverend, nor persistence in inconsistency that can give it the power or the claim of orderly precedent. Wrong, though its title-deeds go back to the days of Sodom, is by nature a thing of yesterday,—while the right, of which we became conscious but an hour ago, is more ancient than the stars, and of the essence of Heaven. If it were proposed to establish Slavery to-morrow, should we have more patience with its patriarchal argument than with the parallel claim of Mormonism? That Slavery is old is but its greater condemnation; that we have tolerated it so long, the strongest plea for our doing so no longer. There is one institution to which we owe our first allegiance, one that is more sacred and venerable than any other,—the soul and conscience of Man.

What claim has Slavery to immunity from discussion? We are told that discussion is dangerous. Dangerous to what? Truth invites it, courts the point of the Ithuriel-spear, whose touch can but reveal more clearly the grace and grandeur of her angelic proportions. The advocates of Slavery have taken refuge in the last covert of desperate sophism, and affirm that their institution is of Divine ordination, that its bases are laid in the nature of man. Is anything, then, of God's contriving endangered by inquiry? Was it the system of the universe, or the monks, that trembled at the telescope of Galileo? Did the circulation of the firmament stop in terror because Newton laid his daring finger on its pulse? But it is idle to discuss a proposition so monstrous. There is no right of sanctuary for a crime against humanity, and they who drag an unclean thing to the horns of the altar bring it to vengeance and not, to safety.

Even granting that Slavery were all that its apologists assume it to be, and that the relation of master and slave were of God's appointing, would not its abuses be just the thing which it was the duty

of Christian men to protest against, and, as far as might be, to root out? Would our courts feel themselves debarred from interfering to rescue a daughter from a parent who wished to make merchandise of her purity, or a wife from a husband who was brutal to her, by the plea that parental authority and marriage were of Divine ordinance? Would a police-justice discharge a drunkard who pleaded the patriarchal precedent of Noah? or would he not rather give him another month in the House of Correction for his impudence?

The Antislavery question is not one which the Tract Society can exclude by triumphant majorities, nor put to shame by a comparison of respectabilities. Mixed though it has been with politics, it is in no sense political, and springing naturally from the principles of that religion which traces its human pedigree to a manger, and whose first apostles were twelve poor men against the whole world, it can dispense with numbers and earthly respect. The clergyman may ignore it in the pulpit, but it confronts him in his study; the church-member, who has suppressed it in parish-meeting, opens it with the pages of his Testament; the merchant, who has shut it out of his house and his heart, finds it lying in wait for him, a gaunt fugitive, in the hold of his ship; the lawyer, who has declared that it is no concern of his, finds it thrust upon him in the brief of the slave-hunter; the historian, who had cautiously evaded it, stumbles over it at Bunker Hill. And why? Because it is not political, but moral,—because it is not local, but national,—because it is not a test of party, but of individual honesty and honor. The wrong which we allow our nation to perpetrate we cannot localize, if we would; we cannot hem it within the limits of Washington or Kansas;

sooner or later, it will force itself into the conscience and sit by the hearthstone of every citizen.

It is not partisanship, it is not fanaticism, that has forced this matter of Antislavery upon the American people; it is the spirit of Christianity, which appeals from prejudices and predilections to the moral consciousness of the individual man; that spirit elastic as air, penetrative as heat, invulnerable as sunshine, against which creed after creed and institution after institution have measured their strength and been confounded; that restless spirit which refuses to crystallize in any sect or form, but persists, a Divinely-commissioned radical and reconstructor, in trying every generation with a new dilemma between ease and interest on the one hand, and duty on the other. Shall it be said that its kingdom is not of this world? In one sense, and that the highest, it certainly is not; but just as certainly Christ never intended those words to be used as a subterfuge by which to escape our responsibilities in the life of business and politics. Let the cross, the sword, and the arena answer, whether the world, that then was, so understood its first preachers and apostles. Cæsar and Flamen both instinctively dreaded it, not because it aimed at riches or power, but because it strove to conquer that other world in the moral nature of mankind, where it could establish a throne against which wealth and force would be weak and contemptible. No human device has ever prevailed against it, no array of majorities or respectabilities; but neither Cæsar nor Flamen ever conceived a scheme so cunningly adapted to neutralize its power as that graceful compromise which accepts it with the lip and denies it in the life, which marries it at the altar and divorces it at the church-door.

NOTE TO THE CATACOMBS OF ROME.

In our first article on the Roman Catacombs we expressed the belief that "a year was now hardly likely to pass without the discovery" of new burial-places of the early Christians,—the fresh interest in Christian archæology leading to fresh explorations in the hollow soil of the Campagna. A letter to us from Rome, of the 21st of April, confirms the justness of this expectation. We quote from it the following interesting passage:—

"The excavations on the Via Appia Nuova, which I mentioned in a former letter, prove very interesting, and have already resulted in most important discoveries. The spot is at the second milestone outside of the gate of St. John Lateran. The field is on the left of the road going towards Albano, and in it are several brick tombs of beautiful fine work, now or formerly used as dwellings or barns. You and I crossed the very field on a certain New Year's Day, and lingered to admire the almost unrivalled view of the Campagna, the mountains, and Rome, which it affords.

"The first discovery was an ancient basilica, satisfactorily ascertained to be the one dedicated to St. Stephen, built by Santa Demetria,—the first nun,—at the instigation of the pope, St. Leo the Great. [A. D. 440–461.] Sig. Fortunati, who made the discovery and directs the excavations, told me at great length how he was led to the investigation; but as he has published this and much more in a pamphlet, which I shall send to you, I will not repeat it here.

"Twenty-two columns have been found, many of rare and beautiful marble, one of *verde antico*, most superb, others of *breccia* and of *cipollino marino*, said to be rare, and certainly very beautiful. Forty bases and over thirty capitals of various styles have also been found, as well as architectural ornaments without number, many of them carved with Greek or Roman crosses. The rare and superb fragments of marble show that there must have been costly and beautiful linings and finish. There are also numerous inscriptions of great interest, which connect this

church with illustrious families and famous martyrs.

"Subsequently, portions of villas were found, with ruined baths, and mosaics and frescoes, with various pieces of sculpture, some perfect and of most excellent style. There is also a sarcophagus with bas-relief of a Bacchic procession, remarkably fine. The government has bought all for the Museum, and intends spending a large sum in building a basilica over the remains of the old one, in honor of St. Stephen.

"But the most remarkable discovery is an old Roman tomb, by far the finest I have seen in its preservation and perfection. It is about eighteen feet square, has been lined and paved with white marble, some of which still remains. The lofty ceiling is covered with bas-reliefs in stucco, of charming grace and spirit, representing various mythological subjects, in square compartments united by light and elegant arabesques. They are really of wonderful merit, and so perfectly preserved, so fresh, that they seem as if done last year. A massive marble doorway, beautifully corniced, gives entrance to this superb chamber, in which were found three huge sarcophagi, containing the bones of nine bodies;—which bones are left to lie exposed, because the bones of pagans! These sarcophagi are of splendid workmanship, but, unhappily, broken by former barbarians. Present barbarians (said to be Inglesi and Americani) have stolen two skulls, and pick up everything not closely watched. Opposite to this chamber is another, smaller and more modest in adornment, and by the side of this descend two flights of steps in perfect repair. Many vases of colored glass and two very handsome rings were found at the foot of these steps. This tomb is supposed to be of about 160 of our era.

"These stairways descend from the ancient Via Latina, which has been excavated for some distance, and is found with wide sidewalks of stone (lava) similar to the sidewalks in Pompeii. The narrow carriage-way is deeply rutted, which makes one think that the old Romans had hard bumps to contend with.

"Another tomb with perfect stairway has been discovered, but it is much more plain. Foundations of villas, and baths with leaden pipes in great quantity, have been exposed. I hear to-day that the government has ordered the excavation of a mile and a half of the old Via Latina in this neighborhood, and much interesting discovery is anticipated."

We will only add to our correspondent's account the fact that the Basilica of St. Stephen had been sought for in vain previously to this discovery by Signor Fortunati. The great explorer, Bosio, failed to find it, and Aringhi, writing just two hundred years ago, says, "Formerly upon the Via Latina stood the church erected with great pains in honor of the most blessed Stephen, the first martyr, by Demetria, a woman of pristine piety; of which the Bibliothecarius, in his account of Pope Leo the First, thus makes mention: 'In these days, Demetria, the handmaid of God, made the Basilica of St. Stephen on the Latin Way, at the third mile-stone, on her estate: . . . which afterward, being decayed and near

to ruin through the long course of years, was restored by Pope Leo the Third.' Of this most noble church, which was one of the chief monuments of the Christian religion, as well as an ornament of the city of Rome, no vestige at this day remains."

It is remarkable that a church restored so late as the time of Leo III. [A. D. 795-816] should have been so lost without being utterly destroyed, and so buried under the slowly-accumulating soil of the Campagna, that the very tradition of the existence of its remains should have disappeared, and its discovery have been the result of scientific archaeological investigation.

The disappearance and the forgetting of the Church of St. Alexander were less remarkable, because of its far greater distance from the city, and its comparative inconspicuousness and poverty. Scarcely a more striking proof exists of the misery and lowness of Rome during many generations in the Dark Ages than that she should thus have forgotten the very sites of the churches which had stood around her walls, the outpost citadels of her faith

LITERARY NOTICES.

The Aquarium: An Unveiling of the Wonders of the Deep Sea. By P. H. Gosse. Second Edition, revised and enlarged. With Illustrations. London: 1856.

The Common Objects of the Seashore; including Hints for an Aquarium. By the Rev. J. G. Wood. With Illustrations. London: Routledge & Co. 1857.

WE trust that many of our readers, stimulated by the account of an Aquarium which was given in our number for February, are proposing to set one up for themselves.

Let no one who has been to Barnum's Museum, to look at what the flaming advertisement elegantly and grammatically terms "an aquaria," fancy that he has seen the beauty of the real aquarium. The sea will not show its treasures in a quarter of an hour, or be made a sight of for a quarter of a dollar. An aquarium is not to be exhausted in a day, but, if favorably placed where it may have sufficient direct sunshine, and well stocked with various

creatures, day after day develops within it new beauties and unexpected sights. It becomes like a secret cave in the ocean, where the processes of Nature go on in wonderful and silent progression, and the coy sea displays its rarer beauties of life, of color, and of form before the watching eyes. Look at it on some clear day, when the sun is bright, and see the broad leaves of ulva, their vivid green sparkling with the brilliant bubbles of oxygen which float up to the surface like the bubbles of Champagne; see the glades of the pink coralline, or the purple Iceland-moss covered with its plum-like down, in the midst of which the transparent bodies of the shrimps or the yellow or banded shells of the sea-snails are lying half hid. See on the brown rock, whose surface is covered with the softest growth, the white anemone stretching its crown of delicate tentacles to the light; or the long winding case of the serpula, from the end of which appear the purple, brown, or yellow feathers that decorate the head of its timid oc-

cupant. Or watch the scallop with his turquoise eyes; or the comic crabs, or the minnows playing through the water, in and out of the recesses of the rocks or the thickets of the seaweed. There is no end of the pleasant sights. And day after day the creatures will grow more tame, the *serpula* will not dart back into his case when you approach, nor the *pecten* close his beautiful shell as your shadow passes over it. Moreover, the habits of the creatures grow more entertaining as you become familiar with them, and even the dull oyster begins at last to show some signs of individual character.

And it is easy to have all this away from the seashore. The best tanks, so far as we know, that are made in this country, are those of Mr. C. E. Hammett, of Newport, Rhode Island. But the tank is of little importance, if one cannot get the water, the seaweed, and the stock; and therefore Mr. Hammett undertakes to supply these also. He will send, not the water itself, but the salts obtained by evaporation from the quantity of water necessary for each aquarium. These are to be dissolved in clear spring-water, (previously boiled, to insure its containing no injurious living matter,) and then the aquarium, having first had a bed of cleanly-washed sand put upon its bottom for about an inch or an inch and a half in depth, and this in turn covered with a thin layer of small pebbles,—though these last are not essential,—is to be filled with it. Then the seaweed, which is sent so packed as to preserve its freshness, is to be put in. It will be attached to small bits of rock, and these should be supported by or laid upon other pieces of stone, so raised as to secure a free passage for the water about them, and so afford places of retreat for the animals. The stock will be sent, if it is to go to any distance, in jars, and anemones, crabs, shell-fish of various kinds, and many other creatures, will be found among it. The seaweed should be a day or two in the tank before the creatures are put into it.

And now, having got the aquarium in order, comes the point how to keep it in order,—how to keep the creatures alive, and how to prevent the water from growing cloudy and thick. The main rule is to secure sunlight,—hot enough to raise the water to a temperature above that of

the outer air,—to remove all dirt and floating scum, and to furnish the tank on every cloudy day with a supply of air and with motion by means of a syringe. The creatures should never be fed in warm weather with any animal substance, its decay being certain to corrupt the water. A little meal or a few crumbs of bread may now and then be given; but even this is not necessary; for Nature furnishes all the food that is needed, in the spores thrown off by the seaweed, in the seaweed itself, whose growth is generally sufficiently rapid to make up for the ravages committed upon it, and in the host of infusoria constantly produced in the water. If any of the creatures die, their bodies should be immediately removed,—though sometimes the omnivorous crabs will do this work rapidly enough. As the water evaporates, it should be filled up to its original level with fresh spring-water,—the salts in it undergoing no diminution by evaporation. If, suddenly, the water should grow thick, it should be taken from the tank, a portion at a time, and filtered back into it slowly through pounded charcoal, the process being repeated till the purity seems to be returning, and at the same time the rocks and seaweed should be removed and carefully washed in fresh water. If, however, the water should by any ill chance grow tainted and emit a bad odor, nothing can be done to restore it, and, unless it is at once changed, the creatures will die. To meet such an emergency, which is of rare occurrence, it is well to have a double quantity of the salts sent with the tank to secure a new supply of water. But we have known aquariums that have kept in order for more than a year with no change of the water, a supply of spring-water being put in from time to time as we have directed; and at this moment, as we write, there is an aquarium at our side which has been in active operation for six months, and the water is as clear as it was the day it was put in. If, spite of everything, the seawater fail, then try a fresh-water aquarium. Use your tank for the pond instead of the ocean; and in the spotted newt, the tortoise, the tadpole, the caddis-worm, and the thousand other inhabitants of our inland ponds and brooks, with the weeds among which they live, you will find as much entertainment as in watching the wonders of the great sea

A camel's-hair brush, a bent spoon on a long handle, a sponge tied to a stick, and one or two other instruments which use will suggest, are all that are needed for keeping the sides of the tank free from growth or removing obnoxious substances from its bottom.

If, on receiving the animals, any of them should appear exhausted by the journey, they may sometimes be revived by aerating the water in which they are by means of a syringe. It should always be remembered, that, though living in the water, they need a constant supply of air. And it would be well, in getting an aquarium, to have the tank and the seaweeds sent a few days in advance of the stock, so that on the arrival of the créatures they may be at once transferred to their new abode.

There are no American books upon the subject, and, in the present want of them, the two whose names are given above are the best that can be obtained. Mr. Gosse's is expensive, costing between four and five dollars. "The Common Objects of the Seashore," to be got for a quarter of a dollar, contains much accurate, unpretending, and pleasant information.

The American Drawing-Book: a Manual for the Amateur, and a Basis of Study for the Professional Artist. Especially adapted to the Use of Public and Private Schools, as well as Home Instruction. By J. G. CHAPMAN, N. A. New York: J. S. Redfield. 4to. pp. 304.

DRAWING-BOOKS, in general, deserve to be put into the same category with the numerous languages "without a master" which have deluded so many impatient aspirants to knowledge by royal (and cheap) roads. A drawing-book, at its very best, is only a partial and lame substitute for a teacher, giving instruction empirically; so that, be it ever so correct in principle, it must lack adaptation to the momentary and most pressing wants of the pupil and to his particular frame of mind; it is too Procrustean to be of any ultimate use to anybody, except in comparatively unimportant matters. It is well enough for those who need only amusement in their drawing, and whose highest idea of Art is copying prints and pictures; but for those who want assistance from

Art in order to the better understanding of Nature, no man, be he ever so wise, can, by the drawing-book plan, do much to smooth the way of study.

All that another mind could do for us by way of teaching Art would be to save us time,—first, by its experience, in anticipating our failures; second, by its trained accuracy, to correct our errors of expression more promptly than our afterthought would do it,—and to systematize our perceptions for us by showing us the relative and comparative importance of truths in Nature. In the first two respects, which are merely practical, the drawing-book, if judiciously prepared, might do somewhat to assist us; but in the last and most important, only the experienced and thoughtful artist, standing with us before Nature, can give us further insight into her system of expression. A good picture may do a little, but it is Nature's own face we need to study, and that neither book nor picture can very deeply interpret for our proper and peculiar perception.

In the practical part, again, the drawing-book can give us no real assistance in regard to color. And thus the efficacy of it is reduced to the communication of methods of drawing in white and black. This Chapman's book does to the best purpose possible under the circumstances, in what is technically termed the right-line system of drawing,—that is, the reduction of all forms to their approximate geometrical figures in order to facilitate the measurements of the eye. Thus, it is easier by far to determine the proportion which exists between the sides of a triangle formed by the lines connecting the three principal points in any figure than any curvilinear connections whatever. The application of the rectilinear system consists in the use, as a basis of the drawing, of such a series of triangles as shall at once show the exact relation of the points of definition or expression to each other; but the successful application of this depends much on the assistance of the trained eye and hand of a master watching every step we make.

When we leave this section of the "American Drawing-Book," we leave all that is of practical value to the young artist. The prescription of any particular mode of execution is always injurious, (if in any degree effective,) for the reason that the student must not think of execution at

all, but simply what the form is which he wants to draw, and how he can draw it most plainly and promptly. Decision of execution should always be the result of complete knowledge of the thing to be drawn; if from any other source, it will assuredly be only heedless scrawling, bad in proportion as it is energetic and decided.

The chapter on Perspective is full and well illustrated, and useful to architectural or mechanical draughtsmen, may-be, but little so to artists. There are, indeed, no laws of perspective which the careful draughtsman from Nature need ever apply, for his eye will show him the tendency of lines and the relative magnitude of bodies quicker than he can find them by the application of the rules of perspective,—and with much better result, since all application of science *directly* to artistic work endangers its poetic character, and almost invariably gives rise to a hardness and formalism the reverse of artistic, leading the artist to depend on what he knows ought to be rather than on what he really sees, a tendency more to be deprecated than any want of correctness in drawing.

The book contains chapters on artistic processes and technical matters generally, making it a useful hand-book to amateurs; but all that is really valuable to a young student of Art might be compressed into a very few pages of this ponderous book. To follow its prescriptions *seriatim* would be to him a serious loss of time and heart.

The New American Cyclopædia. A Popular Dictionary of General Knowledge. Edited by GEORGE RIPLEY and CHAS. A. DANA. Vol. II. New York: D. Appleton & Co. 8vo.

WE have spoken so fully of the purpose and general character of this work, in noticing the first volume, that it is hardly necessary for us to speak at length of the second. In a rapid glance at its contents, it appears fully to bear out the promise of the first. We have noticed a few omissions, and some mistakes of judgment. It is, perhaps, impossible to preserve the gradation of reputations in such a work; but a zoölogist must be puzzled when he sees Von Baer, the great embryologist, who made a classification of animals, founded on their development, which substantially agrees with that of Cuvier,

founded on their structure, occupy about one tenth of the space devoted to Peter T. Barnum; however, we suppose, that, as Barnum created new animals, he is a more wonderful personage than Von Baer, who simply classified old ones. These occasional omissions and disturbances of the scale of reputations are, however, more than offset by the new information the editors have been able to incorporate into most of their biographies of the living, and not a few of those of the dead. Many persons who were mere names to the majority of the public are here, for the first time, recognized as men engaged in living lives as well as in writing books. Some of these biographies must have been obtained at the expense of much time and correspondence. Samuel Bayley, the author of "Essays on the Formation of Opinions," is one of these well-known names but unknown men; but in the present volume he has been compelled to come out of his mysterious seclusion, and present to the public those credentials of dates and incidents which prove him to be a positive existence on the planet.

The papers on Arboriculture, Architecture, Arctic Discovery, Armor, Army, Asia, Atlantic Ocean, Australia, Balance of Power, Bank, and Barometer, are excellent examples of compact and connected statement of facts and principles. The biographies of Aristotle, Aristophanes, Augustine, Ariosto, and Arnold, and the long article on Athens, are among the most striking and admirable papers in the volume. As the purpose of the work is to supply a Cyclopædia for popular use, it is inevitable that students of special sciences or subjects should be occasionally disappointed at the comparatively meagre treatment of their respective departments of knowledge. In regard to the articles in the present volume, it may be said that such subjects as Astronomy and the Association of Ideas should have occupied more space, even if the wants of the ordinary reader were alone consulted. But still, when we consider the vast range and variety of topics included in this volume, and the fact that it comprehends a dozen subjects which a dozen octavos devoted to each would not exhaust, we are compelled to award praise to the editors for contriving to compress into so small a space an amount of information so great.

THE
ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. II.—AUGUST, 1858.—NO. X.

DAPHNAÏDES:

OR THE ENGLISH LAUREL, FROM CHAUCER TO TENNYSON.

They in their time did many a noble dede,
And for their worthines full oft have bore
The crown of laurer leaves on their hede,
As ye may in your oldé bookés rede;
And how that he that was a conquerour
Had by laurer alway his most honour.

DAN CHAUCER: *The Flowre and the Leaf.*

It is to be lamented that antiquarian zeal is so often diverted from subjects of real to those of merely fanciful interest. The mercurial young gentlemen who addict themselves to that exciting department of letters are open to censure as being too fitful, too prone to flit, bee-like, from flower to flower, now lighting momentarily upon an indecipherable tombstone, now perching upon a rusty morion, here dipping into crumbling palimpsests, there turning up a tattered reputation from heaps of musty biography, or discovering that the brightest names have had sad blots and blemishes scoured off by the attrition of Time's ceaseless current. We can expect little from investigators so volatile and capricious; else should we expect the topic we approach in this paper to have been long ago flooded with light as of Maedler's sun, its dust dissipated, and sundry curves and angles which still baffle scrutiny and provoke

curiosity exposed even to Gallio-like wayfarers. It is, in fact, a neglected topic. Its derivatives are obscure, its facts doubtful. Questions spring from it, sucker-like, numberless, which none may answer. Why, for instance, in apportioning his gifts among his posterity, did Phœbus assign the laurel to his step-progeny, the sons of song, and pour the rest of the vegetable world into the pharmacopœia of the favored Æsculapius? Why was even this wretched legacy divided in aftertimes with the children of Mars? Was its efficacy as a non-conductor of lightning as reliable as was held by Tiberius, of guileless memory, Emperor of Rome? Were its leaves really found green as ever in the tomb of St. Humbert, a century and a half after the interment of that holy confessor? In what reign was the first bay-leaf, rewarding the first poet of English song, authoritatively conferred? These and other

like questions are of so material concern to the matter we have in hand, that we may fairly stand amazed that they have thus far escaped the exploration of archæologists. It is not for us to busy ourselves with other men's affairs. Time and patience shall develop profounder mysteries than these. Let us only succeed in delineating in brief monograph the outlines of a natural history of the British Laurel,—*Laurea nobilis, sempervirens, florida*,—and in posting here and there, as we go, a few landmarks that shall facilitate the surveys of investigators yet unborn, and this our modest enterprise shall be happily fulfilled.

One portion of it presents no serious difficulty. There is an uninterrupted canon of the Laureates running as far back as the reign of James I. Anterior, however, to that epoch, the catalogue fades away in undistinguishable darkness. Names are there of undoubted splendor,—a splendor, indeed, far more glowing than that of any subsequent monarch of the bays; but the legal title to the garland falls so far short of satisfactory demonstration, as to oblige us to dismiss the first seven Laureates with a dash of that ruthless criticism with which Niebuhr, the regicide, dispatched the seven kings of Rome. To mark clearly the bounds between the mythical and the indubitable, a glance at the following brief of the Laureate *fasti* will greatly assist us, speeding us forward at once to the substance of our story.

I. The MYTHICAL PERIOD, extending from the supposititious coronation of Laureate CHAUCER, *in temp. Edw. III.*, 1367, to that of Laureate JONSON, *in temp. Caroli I.* To this period belong,

GEOFFREY CHAUCER,	1367-1400
JOHN SCOGAN,	1400-1418
JOHN KAY,	1465-
ANDREW BERNARD,	1486-
JOHN SKELTON,	1509-1529
EDMUND SPENSER,	1590-1599
SAMUEL DANIEL,	} 1600-1630
MICHAEL DRAYTON,	
BEN JONSON,	

II. The DRAMATIC, extending from the latter event to the demise of Laureate SHADWELL, *in temp. Gulielmi III.*, 1692. Here we have

BEN JONSON,	1630-1637
WILL DAVENANT,	1637-1668
JOHN DRYDEN,	1670-1689
THOMAS SHADWELL,	1689-1692

III. The LYRIC, from the reign of Laureate TATE, 1693, to the demise of Laureate PYE, 1813:—

NAHUM TATE,	1693-1714
NICHOLAS ROWE,	1714-1718
LAURENCE EUSDEN,	1719-1730
COLLEY CIBBER,	1730-1757
WILLIAM WHITEHEAD,	1758-1785
THOMAS WARTON,	1785-1790
HENRY JAMES PYE,	1790-1813

IV. The VOLUNTARY, from the accession of Laureate SOUTHEY, 1813, to the present day:—

ROBERT SOUTHEY,	1813-1843
WILLIAM WORDSWORTH,	1843-1850
ALFRED TENNYSON,	1850-

Have no faith in those followers of vain traditions who assert the existence of the Laureate office as early as the thirteenth century, attached to the court of Henry III. Poets there were before Chaucer,—*vixere fortes ante Agamemnona*,—but search Rymer from cord to clasp and you shall find no documentary evidence of any one of them wearing the leaf or receiving the stipend distinctive of the place. Morbid credulity can go no farther back than to the "Father of English Poetry":—

"That renowned Poet,
Dan Chaucer, well of English undefyled,
On Fame's eternal beadroll worthie to be
fyled":*

"Him that left half-told
The story of Cambuscan bold;
Of Camball, and of Algarsife,
And who had Canace to wife":†

"That noble Chaucer, in those former times,
Who first enriched our English with his
rhymes,

* SPENSER: *Færy Queen*. See also the
Two Cantos of Mutability, Cant. VII.:—

"That old Dan Geffrey, in whose gentle spright
The pure well-head of poesie did dwell."

† MILTON: *Il Penseroso*.

Dr. Andrew Bore, who, early in the sixteenth century, published a volume of his platitudes.* There is nothing to prove that he was either poet or Laureate; while, on the other hand, it must be owned, one person might at the same time fill the offices of Court Poet and Court Fool. It is but fair to say that Tyrwhitt, who had all the learning and more than the accuracy of Warton, inclines to Jonson's estimate of Scogan's character and employment.

One John Kay, of whom we are singularly deficient in information, held the post of Court Poet under the amorous Edward IV. What were his functions and appointments we cannot discover.

Andrew Bernard held the office under Henry VII. and Henry VIII. He was a churchman, royal historiographer, and tutor to Prince Arthur. His official poems were in Latin. He was living as late as 1522.

John Skelton obtained the distinction of Poet-Laureate at Oxford, a title afterward confirmed to him by the University of Cambridge: mere university degrees, however, without royal indorsement. Henry VIII. made him his "Royal Orator," whatever that may have been, and otherwise treated him with favor; but we hear nothing of sack or salary, find nothing among his poems to intimate that his performances as Orator ever ran into verse, or that his "laurer" was of the regal sort.

A long stride carries us to the latter years of Queen Elizabeth, where, and in the ensuing reign of James, we find the names of Edmund Spenser, Samuel Daniel, and Michael Drayton interwoven with the bays. Spenser's possession of the laurel rests upon no better evidence than that, when he presented the earlier books of the "Faëry Queen" to Elizabeth, a pension of fifty pounds a year was conferred upon him, and that the praises of *Gloriana* ring through his realm of Faëry in unceasing panegyric. But guineas are not laurels, though for sundry practical

uses they are, perhaps, vastly better; nor are the really earnest and ardent eulogia of the bard of Mulla the same in kind with the harmonious twaddle of Tate, or the classical quiddities of Pye. He was of another sphere, the highest heaven of song, who

"Waked his lofty lay
To grace Eliza's golden sway;
And called to life old Uther's elfin-tale,
And roved through many a necromantic vale,
Portraying chiefs who knew to tame
The goblin's ire, the dragon's flame,
To pierce the dark, enchanted hall
Where Virtue sat in lonely thrall.
From fabling Fancy's inmost store
A rich, romantic robe he bore,
A veil with visionary trappings hung,
And o'er his Virgin Queen the fairy-texture flung."*

Samuel Daniel was not only a favorite of Queen Elizabeth, but more decidedly so of her successor in the queendom, Anne of Denmark. In the household of the latter he held the position of Groom of the Chamber, a sinecure of handsome endowment,—so handsome, indeed, as to warrant an occasional draft upon his talents for the entertainment of her Majesty's immediate circle, which held itself as far as possible aloof from the court, and was disposed to be self-reliant for its amusements. Daniel had entered upon the vocation of courtier with flattering auspices. His precocity while at Oxford has found him a place in the "*Bibliotheca Eruditorum Præcocium*." Anthony Wood bears witness to his thorough accomplishments in all kinds, especially in history and poetry, specimens of which, the antiquary tells us, were still, in his time, treasured among the archives of Magdalen. He deported himself so amiably in society, and so inoffensively among his fellow-bards, and versified his way so tranquilly into the good graces of his royal mistresses, distending the thread, and diluting the sense, and sparing the ornaments, of his passionless poetry,—if poetry, which, by the definition of its highest authority, is "simple, sensuous, passionate," can ever be unimpassioned,—that

* *History of English Poetry*, Vol. II. pp. 335–336, ed. 1840.

* WARTON: *Birthday Ode*, 1787.

he was the oracle of feminine taste while he lived, and at his death bequeathed a fame yet dear to the school of Southey and Wordsworth. "Daniel was no otherwise Laureate than his position in the queen's household may authorize that title. If ever so entitled by contemporaries, it was quite in a Pickwickian and complimentary sense. His retreat from the busy vanity of court life, an event which happened several years before his decease in 1619, was hastened by the consciousness of a waning reputation, and of the propriety of seeking better shelter than that of his laurels. His eloquent "Defense of Rhyme" still asserts for him a place in the hearts of all lovers of stately English prose.

Old Michael Drayton, whose portrait has descended to us, surmounted with an exuberant twig of bays, is vulgarly classed with the legitimate Laureates. Southey, pardonably anxious to magnify an office belittled by some of its occupants, does not scruple to rank Spenser, Daniel, and Drayton among the Laureelled:—

"That wreath, which, in Eliza's golden days,
My master dear, divinest Spenser, wore,
That which rewarded Drayton's learned
lays,
Which thoughtful Ben and gentle Daniel
bore," etc.

But in sober prose Southey knew, and later in life taught, that not one of the three named ever wore the authentic laurel.* That Drayton deserved it, even as a successor of the divinest Spenser, who shall deny? With enough of patience and pedantry to prompt the composition of that most laborious, and, upon the whole, most humdrum and wearisome poem of modern times, the "Polyolbion," he nevertheless possessed an abounding exuberance of delicate fancy and sound poetical judgment, traces of which flash not unfrequently even athwart the dullness of his *magnum opus*, and through

* See his *British Poets, from Chaucer to Jonson*, Art. *Daniel*. Southey contemplated a continuation of Warton's *History*, and, in preparing for that labor, learned many things he had never known of the earlier writers.

the mock-heroism of "England's Heroical Epistles," while they have full play in his "Court of Faëry." Drayton's great defect was the entire absence of that dramatic talent so marvellously developed among his contemporaries,—a defect, as we shall presently see, sufficient of itself to disqualify him for the duties of Court Poet. But, what was still worse, his mind was not gifted with facility and versatility of invention, two equally essential requisites; and to install him in a position where such faculties were hourly called into play would have been to put the wrong man in the worst possible place. Drayton was accordingly a court-pensioner, but not a court-poet. His laurel was the honorary tribute of admiring friends, in an age when royal pedantry rendered learning fashionable and a topic of exaggerated regard. Southey's admission is to this purpose. "He was," he says, "one of the poets to whom the title of Laureate was given in that age,—not as holding the office, but as a mark of honor, to which they were entitled." And with the poetical topographer such honors abounded. Not only was he gratified with the zealous labors of Selden in illustration of the "Polyolbion," but his death was lamented in verse of Jonson, upon marble supplied by the Countess of Dorset:—

"Do, pious marble, let thy readers know
What they and what their children owe
To Drayton's name, whose sacred dust
We recommend unto thy trust.
Protect his memory, and preserve his story;
Remain a lasting monument of his glory:
And when thy ruins shall disclaim
To be the treasurer of his name,
His name, that cannot fade, shall be
An everlasting monument to thee."

The Laureateship, we thus discover, had not, down to the days of James, become an institution. Our mythical series shrink from close scrutiny. But in the gayeties of the court of the Stuarts arose occasion for the continuous and profitable employment of a court-poet, and there was enough thrift in the king to see the advantage of securing the service for a certain small annuity, rather than by

the payment of large sums as presents for occasional labors. The masque, a form of dramatic representation, borrowed from the Italian, had been introduced into England during the reign of Elizabeth. The interest depended upon the development of an allegorical subject apposite to the event which the performance proposed to celebrate, such as a royal marriage, or birthday, or visit, or progress, or a marriage or other notable event among the nobility and gentry attached to the court, or an entertainment in honor of some distinguished personage. To produce startling and telling stage effects, machinery of the most ingenious contrivance was devised; scenery, as yet unknown in ordinary exhibitions of the stage, was painted with elaborate finish; goddesses in the most attenuated Cyprus lawn, bespangled with jewels, had to slide down upon invisible wires from a visible Olympus; Tritons had to rise from the halls of Neptune through waters whose undulations the nicer resources of recent art could not render more genuinely marine; fountains disclosed the most bewitching of Naiads; and Druidical oaks, expanding, surrendered the imprisoned Hamadryad to the air of heaven. Fairies and Elves, Satyrs and Forsters, Centaurs and Lapithæ, played their parts in these gaudy spectacles with every conventional requirement of shape, costume, and behavior *point-de-vice*, and were supplied by the poet, to whom the letterpress of the show had been confided, with language and a plot, both pregnant with more than Platonic morality. Some idea of the magnificence of these displays, which beggared the royal privy-purse, drove household-treasurers mad, and often left poet and machinist whistling for pay, may be gathered from the fact that a masque sometimes cost as much as two thousand pounds in the mechanical getting-up, a sum far more formidable in the days of exclusively hard money than in these of paper currency. Scott has described, for the benefit of the general reader, one such pageant among the

"princely pleasures of Kenilworth"; while Milton, in his "Masque performed at Ludlow Castle," presents the libretto of another, of the simpler and less expensive sort. During the reign of James, the passion for masques kindled into a mania. The days and nights of Inigo Jones were spent in inventing machinery and contriving stage-effects. Daniel, Middleton, Fletcher, and Jonson were busied with the composition of the text; and the court ladies and cavaliers were all from morning till night in the hands of their dancing and music masters, or at private study, or at rehearsal, preparing for the pageant, the representation of which fell to their share and won them enviable applause. Of course the burden of original invention fell upon the poets; and of the poets, Daniel and Jonson were the most heavily taxed. In 1616, James I., by patent, granted to Jonson an annuity for life of one hundred marks, to him in hand not often well and truly paid. He was not distinctly named as Laureate, but seems to have been considered such; for Daniel, on his appointment, "withdrew himself," according to Gifford, "entirely from court." The strong-boxes of James and Charles seldom overflowed. Sir Robert Pye, an ancestor of that Laureate Pye whom we shall discuss by-and-by, was the paymaster, and often and again was the overwrought poet obliged to raise

"A woful cry

To Sir Robert Pye,"

before some small instalment of long arrearages could be procured. And when, rarely, very rarely, his Majesty condescended to remember the necessities of "his and the Muses' servant," and send a present to the Laureate's lodgings, its proportions were always so small as to excite the ire of the insulted Ben, who would growl forth to the messenger, "He would not have sent me this, (*scil.* wretched pittance,) did I not live in an alley."

We now arrive at the true era of the Laureateship. Charles, in 1630, became ambitious to signalize his reign by some fitting tribute to literature. A petition

from Ben Jonson pointed out the way. The Laureate office was made a patentable one, in the gift of the Lord Chamberlain, as purveyor of the royal amusements. Ben was confirmed in the office. The salary was raised from one hundred marks to one hundred pounds, an advance of fifty per cent., to which was added yearly a tierce of Canary wine,—an appendage appropriate to the poet's convivial habits, and doubtless suggested by the mistaken precedent of Chaucer's daily flagon of wine. Ben Jonson was certainly, of all men living in 1630, the right person to receive this honor, which then implied, what it afterward ceased to do, the primacy of the diocese of letters. His learning supplied ballast enough to keep the lighter bulk of the poet in good trim, while it won that measure of respect which mere poetical gifts and graces would not have secured. He was the dean of that group of "poets, poetaccios, poetasters, and poetillos,"* who beset the court. If a display of erudition were demanded, Ben was ready with the heavy artillery of the unities, and all the laws of Aristotle and Horace, Quintilian and Priscian, exemplified in tragedies of canonical structure, and comedies whose prim regularity could not extinguish the most delightful and original humor—Robert Burton's excepted—that illustrated that brilliant period. But if the graceful lyric or glittering masque were called for, the boundless wealth of Ben's genius was most strikingly displayed. It has been the fashion, set by such presumptuous blunderers as Warburton and such formal prigs as Gifford, to deny our Laureate the possession of those ethereal attributes of invention and fancy which play about the creations of Shakspeare, and constitute their exquisite charm. This arbitrary comparison of Jonson and Shakspeare has, in fact, been the bane of the former's reputation. Those who have never read the masques argue, that, as "very little Latin and less Greek," in truth no learning of any traceable description, went to the creation of *Ariel*

* Jonson's classification. See his *Poetaster*.

and *Caliban*, *Oberon* and *Puck*, the possession of Latin, Greek, and learning generally, incapacitates the proprietor for the same happy exercise of the finer and more gracious faculties of wit and fancy. Of this nonsense Jonson's masques are the best refutation. Marvels of ingenuity in plot and construction, they abound in "dainty invention," animated dialogue, and some of the finest lyric passages to be found in dramatic literature. They are the Laureate's true laurels. Had he left nothing else, the "rare arch-poet" would have held, by virtue of these alone, the elevated rank which his contemporaries, and our own, freely assign him. Lamb, whose appreciation of the old dramatists was extremely acute, remarks,—“A thousand beautiful passages from his ‘New Inn,’ and from those numerous court masques and entertainments which he was in the daily habit of furnishing, might be adduced to show the poetical fancy and elegance of mind of the supposed rugged old bard.”* And in excess of admiration at one of the Laureate's most successful pageants, Herrick breaks forth,—

“Thou hadst the wreath before, now take the tree,
That henceforth none be laurel-crowned but thee.”†

An aspiration fortunately unrealized.

It was not long before the death of Ben, that John Suckling, one of his boon companions

“At those lyric feasts,
Made at ‘The Sun,’
‘The Dog,’ ‘The Triple Tun,’
Where they such clusters had
As made them nobly wild, not mad,”‡

handed about among the courtiers his

† *Hesperides, Encomiastic Verses*.

‡ Herrick, *ubi supra*.—To the haunts here named must be added the celebrated *Mermoid*, of which Shakspeare was the *Magnus Apollo*, and *The Devil*, where Pope imagines Ben to have gathered peculiar inspiration:—

“And each true Briton is to Ben so civil,
He swears the Muses met him at *The Devil*.”
Imitation of Horace, Bk. ii. Epist. i.

"Session of the Poets," where an imaginary contest for the laurel presented an opportunity for characterizing the wits of the day in a series of capital strokes, as remarkable for justice as shrewd wit. Jonson is thus introduced:—

"The first that broke silence was good old Ben,
Prepared with Canary wine,
And he told them plainly he deserved the bays,
For his were called works, while others' were but plays;

"And bid them remember how he had purged the stage
Of errors that had lasted many an age;
And he hoped they did not think 'The Silent Woman,'
'The Fox,' and 'The Alchymist' outdone by no man.

"Apollo stopt him there, and bid him not go on;
'Twas merit, he said, and not presumption,
Must carry it; at which Ben turned about,
And in great choler offered to go out;

"But those who were there thought it not fit
To discontent so ancient a wit,
And therefore Apollo called him back again,
And made him mine host of his own 'New Inn.'"

This *jeu d'esprit* of Suckling, if of no value otherwise, would be respectable as an original which the Duke of Buckinghamshire,* Leigh Hunt,† and our own Lowell‡ have successfully and happily imitated.

In due course, Laureate Jonson shared the fate of all potentates, and was gathered to the laured of Elysium. The fatality occurred in 1637. When his remains were deposited in the Poet's Corner, with the eloquent laconism above them, "O Rare Ben Jonson!" all the wits of the day stood by the graveside, and cast in their tribute of bays. The rite over, all the wits of the day hurried from the aisles of Westminster to the galleries of Whitehall to urge their several claims to the succession. There

were, of the elder time, Massinger, drawing to the close of a successful career,—Ford, with his growing fame,—Marmion, Heywood, Carlell, Wither. There was Sandys, especially endeared to the king by his orthodox piety, so becoming the son of an archbishop, and by his versions of the "Divine Poems," which were next year given to the press, and which found a place among the half-dozen volumes which a decade later solaced the last hours of his royal master. There were the names, in the junior class, of Tom Carew, noted for his amatory songs and his one brilliant masque,—Tom Kilgrew, of pleasant humor, and no mean writer of tragedy,—Suckling, the wittiest of courtiers, and the most courtly of wits, —Cartwright, Crashaw, Davenant, and May. But of all these, the contest soon narrowed down to the two latter. William Davenant was in all likelihood the son of an innkeeper at Oxford; he was certainly the son of the innkeeper's wife. A rumor, which Davenant always countenanced, alleged that William Shakespeare, a poet of some considerable repute in those times, being in the habit of passing between Stratford-on-the-Avon and London, was wont to bait and often lodge at this Oxford hostelry. At one of these calls the landlady had proved more than ordinarily frail or the poet more than ordinarily seductive,—who can wonder at even virtue stooping to folly when the wooer was the Swan of Avon, beside whom the bird that captivated Leda was as a featherless gosling?—and the consequence had been Will Davenant, born in the year of our Lord 1605, Shakespeare standing as godfather at the baptism. A boy of lively parts was Will, and good-fortune brought those parts to the notice of the grave and philosophic Greville, Lord Brooke, whose dearest boast was the friendship in early life of Sir Philip Sidney. The result of this notice was a highly creditable education at school and university, and an ultimate introduction into the foremost society of the capital. Davenant, finding the drama supreme in fashionable regard, devoted himself to

* *Election of a Poet-Laureate, 1719*, Works, Vol. II.

† *Feast of the Poets, 1814*.

‡ *Fable for Critics, 1850*.

the drama. He also devoted himself to the cultivation of Ben Jonson, then at the summit of renown, assisting in an amateur way in the preparation of the court pageants, and otherwise mitigating the Laureate's labors. From 1632 to 1637, these aids were frequent, and established a very plausible claim to the succession. Thomas May, who shortly became his sole competitor, was a man of elevated pretensions. As a writer of English historical poems and as a translator of Lucan he had earned a prominent position in British literature; as a continuator of the "*Pharsalia*" in Latin verse of exemplary elegance, written in the happiest imitation of the martyred Stoic's unimpassioned mannerism, he secured for British scholarship that higher respect among Continental scholars which Milton's Latin poems and "*Defensio pro Populo Anglicano*" presently after confirmed. Of the several English writers of Latin verse, May stands unquestionably in the front rank, alongside of Milton and Bourne, — taking precedence easily of Owen, Cowley, and Gray. His dramatic productions were of a higher order than Davenant's. They have found a place in Dodsley's and the several subsequent collections of early dramas, not conceded to the plays of the latter. Masque-making, however, was not in his line. His invention was not sufficiently alert, his dialogue not sufficiently lively, for a species of poetry which it was the principal duty of the Laureate to furnish. Besides, it is highly probable, his sympathies with rebellious Puritanism were already so far developed as to make him an object of aversion to the king. Davenant triumphed. The defeated candidate lived to see the court dispersed, king and Laureate alike fugitive, and to receive from the Long Parliament the place of Historiographer, as a compensation for the lost bays. When, in 1650, he died, Cromwell and his newly-inaugurated court did honor to his obsequies. The body was deposited in Westminster Abbey; but the posthumous honor was in reserve for it, of being torn from the grave after

the Restoration, and flung into a ditch along with the remains of three or four other republican leaders.

Davenant's career in office was unfortunate. There is reason to doubt whether, even before the rebellion broke out, his salary was regularly paid him. During the Civil War he exchanged the laurel for a casque, winning knighthood by his gallant carriage at the siege of Gloucester. Afterward, he was so far in the confidence of Queen Henrietta Maria, as to be sent as her envoy to the captive king, beseeching him to save his head by conceding the demands of Parliament. When, the errand proving abortive, the royal head was lost, Davenant returned to Paris, consoled himself by finishing the first two books of his "*Gondibert*," and then, despairing of a restoration, embarked (in 1650) from France for Virginia, where monarchy and the rights of Charles II. were unimpaired. Fate, however, had not destined him for a colonist and backwoodsman. His ship, tempest-tossed, was driven into an English port, and the poet was seized and carried close prisoner to London. There the intervention of Milton, the Latin Secretary of the Council, is said to have saved his life. He was kept in the Tower for at least two years longer, however. The date of his release is uncertain, but, once at liberty, Davenant returned ardently to his former pursuits. A license was procured for musical exhibitions, and the phrase "musical exhibitions" was interpreted, with official connivance, as including all manner of dramatic performances. To the Laureate and to this period belongs the credit of introducing scenery, hitherto restricted to court masques, into the machinery of the ordinary drama. The substitution of female for male actors, in feminine characters, was also an innovation of this period. And as an incident of the Laureateship there is still another novelty to be noted. There is no crown without its thorns. The laurel renders the pillow of the wearer as knotty, uneasy, and comfortless as does a coronal of gold and jewels. Among the

receipts of the office have been the jokes, good and bad, the sneers, the satire of contemporary wits,—such being the paper currency in which the turbulent subjects of the laurel crown think proper to pay homage to their sovereign. From the days of Will Davenant to these of ours, the custom has been faithfully observed. Davenant's earliest assailants were of his own political party, followers of the exiled Charles, the men whom Milton describes as “*perditissimus ille peregrinantium aulicorum grex*.” These—among them a son of the memorable Donne, Sir John Denham, and Alan Broderick—united in a volume of mean motive and insignificant merit, entitled, “Verses written by Several of the Author's Friends, to be reprinted with the Second Edition of *Gondibert*.” This was published in 1653. The effect of the onslaught has not been recorded. We know only that Davenant, surviving it, continued to prosper in his theatrical business, writing most of the pieces produced on his stage until the Restoration, when he drew forth from its hiding-place his wreath of laurel-ever-green, and resumed it with honor.

A fair retrospect of Davenant's career enables us to select without difficulty that one of his labors which is most deserving of applause. Not his “*Gondibert*,” notwithstanding it abounds in fine passages,—notwithstanding Gay thought it worth continuation and completion, and added several cantos,—notwithstanding Lamb eulogized it with enthusiasm, Southey warmly praised, and Campbell and Hazlitt coolly commended it. Nor his comedies, which are deservedly forgotten; nor his improvements in the production of plays, serviceable as they were to the acting drama. But to his exertions Milton owed impunity from the vengeance otherwise destined for the apologist of regicide, and so owed the life and leisure requisite to the composition of “*Paradise Lost*.” Davenant, grateful for the old kindness of the ex-secretary, used his influence successfully with Charles to let the offender escape.* This is certainly the greenest

* This story rests on the authority of Thom-

of Davenant's laurels. Without it, the world might not have heard one of the sublimest expressions of human genius.

Davenant died in 1668. The laurel was hung up unclaimed until 1670, when John Dryden received it, with patent dated back to the summer succeeding Davenant's death. Dryden assures us that it was Sir Thomas Clifford, whose name a year later lent the initial letter to the “*Cabal*,” who presented him to the king, and procured his appointment.* *Masques* had now ceased to be the mode. What the dramatist could do to amuse the *blasé* court of Charles II. he was obliged to do within the limits of legitimate dramatic representation, due care being taken to follow French models, and substitute the idiom of Corneille and Molière for that of Shakspeare. Dryden, whose plays are now read only by the curious, was, in 1670, the greatest of living dramatists. He had expiated his Cromwellian backslidings by the “*Astræa Redux*,” and the “*Annus Mirabilis*.” He had risen to high favor with the king. His tragedies in rhyming couplets were all the vogue. Already his fellow-playwrights deemed their success as fearfully uncertain, unless they had secured, price three guineas, a prologue or epilogue from the Laureate. So fertile was his own invention, that he stood ready to furnish by contract five plays a year,—a challenge fortunately declined by the managers of the day. Thus, if the Laureate stipend were not punctually paid, as was often the case, seeing the necessitous state of the royal finances and the bevy of fair ladies, whose demands, extravagant as they were, took precedence of all others, his revenues were adequate to the maintenance of a family, the matron of which was a Howard, educated, as a daughter of nobility, to the enjoyment of every indulgence. These were the Laureate's brightest days. His popularity was at its height, a fact evinced as Betterton, the actor, who received it from Davenant.

* Dedication of the *Pastorals* of Virgil, to Hugh, Lord Clifford, the son of Sir Thomas.

by the powerful coalitions deemed necessary to diminish it. Indeed, the laurel had hardly rested upon Dryden's temples before he experienced the assaults of an organized literary opposition. The Duke of Buckingham, then the admitted leader of fashionable profligacy, borrowed the aid of Samuel Butler, at whose "Hudibras" the world was still laughing,—of Thomas Sprat, then on the high-road to those preferments which have given him an important place in history,—of Martin Clifford, a familiar of the green-room and coffee-house,—and concocted a farce ridiculing the person and office of the Laureate. "The Rehearsal" was acted in 1671. The hero, *Mr. Bayes*, imitated all the personal peculiarities of Dryden, used his cant phrases, burlesqued his style, and exposed, while pretending to defend, his ridiculous points, until the laugh of the town was fairly turned upon the "premier-poet of the realm." The wit was undoubtedly of the broadest, and the humor at the coffee-room level; but it was so much the more effective. Dryden affected to be indifferent to the satire. He jested at the time taken* and the number of hands employed upon the composition. Twenty years later he was at pains to declare his perfect freedom from rancor in consequence of the at-

* There were some indications that portions of the farce had been written while Davenant was living and had been intended for him. *Mr. Bayes* appears in one place with a plaster on his nose, an evident allusion to Davenant's loss of that feature. In a lively satire of the time, by Richard Duke, it is asserted that Villiers was occupied with the composition of *The Rehearsal* from the Restoration down to the day of its production on the stage:—

"But with playhouses, wars, immortal wars,
He waged, and ten years' rage produced a
farce.

As many rolling years he did employ,
And hands almost as many, to destroy
Heroic rhyme, as Greece to ruin Troy.
Once more, says Fame, for battle he pre-
pares,

And threatens rhymers with a second farce:
But, if as long for this as that we stay,
He'll finish Clevedon sooner than his play."

The Review.

tack. There is much reason to suspect, however, that "The Rehearsal" was not forgotten, when the "Absalom and Achitophel" was written, and that the character of *Zimri* gathered much of its intense vigor and depth of shadow from recollections of the ludicrous *Mr. Bayes*. The portrait has the look of being designed as a quittance in full of old scores. "The Rehearsal," though now and then recast and reenacted to suit other times, is now no otherwise remembered than as the suggester of Sheridan's "Critic."

Upon the heels of this onslaught others followed rapidly. Rochester, disposed to singularity of opinion, set up Elkanah Settle, a young author of some talent, as a rival to the Laureate. Anonymous bards lampooned him. *Mr. Bayes* was a broad target for every shaft, so that the complaint so feelingly uttered in his latter days, that "no man living had ever been so severely libelled" as he, had a wide foundation of fact. Sometimes, it must be owned, the thrusts were the natural result of controversies into which the Laureate indiscreetly precipitated himself; sometimes they came of generous partisanship in behalf of friends, such friends, for example, as Sir Robert Howard, his brother-in-law, an interminable spinner of intolerable verse, who afflicted the world in his day with plays worse than plagues, and poems as worthless as his plays. It was to a quarrel for and a quarrel against this gentleman that we are indebted for the most trenchant satire in the language. Sir Robert had fallen out with Dryden about rhyming tragedies, of which he disapproved; and while it lasted, the contest was waged with prodigious acrimony. Among the partisans of the former was Richard Flecknoe, a Triton among the smaller scribbling fry. Flecknoe—blunderingly classed among the Laureates by the compiler of "Cibber's Lives of the Poets"—was an Irish priest, who had cast his cassock, or, as he euphuistically expressed it, "laid aside the mechanic part of priesthood," in order to fulfil the loftier mission of literary garreteer in London. He had written

poems and plays without number; of the latter, but one, entitled "Love's Dominion," had been brought upon the stage, and was summarily hissed off. Jealousy of Dryden's splendid success brought him to the side of Dryden's opponent, and a pamphlet, printed in 1668, attacked the future Laureate so bitterly, and at points so susceptible, as to make a more than ordinary draft upon the poet's patience, and to leave venom that rankled fourteen years without finding vent.* About the same time, Thomas Shadwell, who is represented in the satire as likewise an Irishman, brought Sir Robert on the stage in his "Sullen Lovers," in the character of *Sir Positive At-all*, a caricature replete with absurd self-conceit and impudent dogmatism. Shadwell was of "Norfolcian" family, well-born, well-educated, and fitted for the bar, but drawn away from serious pursuits by the prevalent rage for the drama. The offence of laughing at the poet's brother-in-law Shadwell had aggravated by accepting the capricious patronage of Lord Rochester, by subsequently siding with the Whigs, and by aiding the ambitious designs of Shaftesbury in play and pamphlet,—labors the value of which is not to be measured by the contemptuous estimate of the satirist. The first outburst of the retributive storm fell upon the head of Shadwell. The second part of "Absalom and Achitophel," which appeared in the autumn of 1682, contains the portrait of *Og*, cut in outlines so sharp as to remind us of an unrounded alto-rilievo:—

"Now stop your noses, readers, all and come,
For here's a tun of midnight work to come,
Og, from a treason-tavern rolling home;
Round as a globe, and liquored every chink,
Goodly and great he sails behind his link.
With all his bulk, there's nothing lost in *Og*,
For every inch that is not fool is rogue. . . .
The midwife laid her hand on his thick
skull

With this prophetic blessing, Be thou dull!

* It is little to the credit of Dryden, that, having saved up his wrath against Flecknoe so long, he had not reserved it altogether. Flecknoe had been dead at least four years when the satire appeared.

Drink, swear, and roar, forbear no lewd delight

Fit for thy bulk; do anything but write.

Eat opium, mingle arsenic in thy drink,

Still thou mayst live, avoiding pen and ink.

I see, I see, 'tis counsel given in vain;

For treason botched in rhyme will be thy
bane. . . .

A double noose thou on thy neck dost pull,

For writing treason, and for writing dull. . .

I will not rake the dunghill of thy crimes,

For who would read thy life who reads thy
rhymes?

But of King David's foes be this the doom,

May all be like the young man Absalom!

And for my foes, may this their blessing
be,

To talk like Doeg, and to write like thee!"

Of the multitudinous rejoinders and counterblasts provoked by this thunder, Dryden, it is supposed, ascribed the authorship of one of the keenest to Shadwell. We are to conceive some new and immediate provocation as added to the old grudge, to call for a second attack so soon; for it was only a month later that the "MacFlecknoe" appeared; not in 1689, as Dr. Johnson states, who, mistaking the date, also errs in assuming the cause of Dryden's wrath to have been the transfer of the laurel from his own to the brows of Shadwell. "MacFlecknoe" is by common consent the most perfect and perfectly acrid satire in English literature. The topics selected, the foibles attacked, the ingenious and remorseless ridicule with which they are overwhelmed, the comprehensive vindictiveness which converted every personal characteristic into an instrument for the more refined torment of the unhappy victim, conjoin to constitute a masterpiece of this lower form of poetical composition;—poetry it is not. While Flecknoe's pretensions as a dramatist were fairly a subject of derision, Shadwell was eminently popular. He was a pretender to learning, and, entertaining with Dryden strong convictions of the reality of a literary metempsychosis, believed himself the heir of Jonson's genius and erudition. The title of the satire was, therefore, of itself a biting sarcasm. His claims to sonship were transferred

from Jonson, then held the first of dramatic writers, to Flecknoe, the last and meanest; and to aggravate the insult, the "Mac" was inserted as an irritating allusion to the alleged Irish origin of both, — an allusion, however harmless and senseless now, vastly significant at that era of Irish degradation. Of the immediate effect of this scarification upon Shadwell we have no information; how it ultimately affected his fortunes we shall see presently.

During the closing years of Charles, and through the reign of James, Dryden added to the duties of Court Poet those of political pamphleteer and theological controversialist. The strength of his attachment to the office, his sense of the honor it conferred, and his appreciation of the salary we may infer from the potent influence such considerations exercised upon his conversion to Romanism. In the admirable portrait, too, by Lely, he chose to be represented with the laurel in his hand. After his dethronement, he sought every occasion to deplore the loss of the bays, and of the stipend, which in the increasing infirmity and poverty of his latter days had become important. The fall of James necessarily involved the fall of his Laureate and Historiographer. Lord Dorset, the generous but sadly indiscriminating patron of letters, having become Lord Chamberlain, it was his duty to remove the reluctant Dryden from the two places, — a duty not to be postponed, and scarcely to be mitigated, so violent was the public outcry against the renegade bard. The entire Protestant feeling of the nation, then at white heat, was especially ardent against the author of the "Hind and Panther," who, it was said, had treated the Church of England as the persecutors had treated the primitive martyr, dressed her in the skin of a wild beast, and exposed her to the torments of her adversaries. It was not enough to eject him from office, — his inability to subscribe the test oaths would have done so much, — but he was to be replaced by that one of his political and literary antagonists whom he most sin-

cerely disliked, and who still writhed under his lash. Dorset appears to have executed the disagreeable task with real kindness. He is said to have settled upon the poet, out of his own fortune, an annuity equal to the lost pension, — a statement which Dr. Johnson and Macaulay have repeated upon the authority of Prior. What Prior said on the subject may be found in the Dedication of Tonsen's noble edition of his works to the second Earl of Dorset: — "When, as Lord Chamberlain, he was obliged to take the king's pension from Mr. Dryden, (who had long before put himself out of a possibility of receiving any favor from the court,) my Lord allowed him an equivalent out of his own estate. However displeased with the conduct of his old acquaintance, he relieved his necessities; and while he gave him his assistance in private, in public he extenuated and pitied his error." But there is some reason for thinking this equivalent was only the equivalent of one year's salary, and this assistance casual, not stated; else we are at a loss to understand the continual complaints of utter penury which the poet uttered ever after. Some of these complaints were addressed to his benefactor himself, as in the Dedication to Juvenal and Persius, 1692: — "Age has overtaken me, and *want*, a more insufferable evil, through the change of the times, *has wholly disabled me*. Though I must ever acknowledge, to the honor of your Lordship, and the eternal memory of your charity, that, since this revolution, wherein I have patiently suffered the ruin of my small fortune, and the loss of that poor subsistence I had from two kings, whom I served more faithfully than profitably to myself, — then your Lordship was pleased, out of no other motive than your own nobleness, without any desert of mine, or the least solicitation from me, to make me a most bountiful *present*, which, in that time when I was most in want of it, came most seasonably and unexpectedly to my relief." This passage was the sole authority, we suspect, Prior had for a story which was nevertheless suffi-

ciently true to figure in an adulatory dedication; and, indeed, Prior may have used the word "equivalent" loosely, and had Dorset's gift been more than a year's income, Dryden would hardly have called it a "present,"—a phrase scarcely applicable to the grant of a pension.*

Dismissed from office and restored to labors more congenial than the dull polemics which had recently engaged his mind, Dryden found himself obliged to work vigorously or starve. He fell into the hands of the booksellers. The poems, it deserves remark, upon which his fame with posterity must finally rest, were all produced within the period bounded by his deposition and his death. The translations from Juvenal, the versions of Persius and of Virgil, the Fables, and the "Ode upon St. Cecilia's Day," were the works of this period. He lived to see his office filled successively by a rival he despised and a friend who had deserted him, and in its apparently hopeless degradation perhaps found consolation for its loss.

Thomas Shadwell was the Poet-Laureate after Dryden, assuming the wreath in 1689. We have referred to his origin; Langbaine gives 1642 as the date of his birth; so that he must have set up as author early in life, and departed from life shortly past middle-age. Derrick assures us that he was lusty, ungainly, and coarse in person,—a description answer-

* Macaulay quotes Blackmore's *Prince Arthur*, to illustrate Dryden's dependence upon Dorset:—

"The poets' nation did obsequious wait

For the kind dole divided at his gate.

Laurus among the meagre crowd appeared,

An old, revolted, unbelieving bard,

Who thronged, and shoved, and pressed, and would be heard.

"Sakil's high roof, the Muse's palace, rung
With endless cries, and endless songs he sung.

To bless good Sakil Laurus would be first;
But Sakil's prince and Sakil's God he curst.
Sakil without distinction threw his bread,
Despised the flatterer, but the poet fed."

Laurus, of course, stands for Dryden, and *Sakil* for Dorset.

ing to the full-length of *Og*. The commentators upon "MacFlecknoe" have not made due use of one of Shadwell's habits, in illustration of the reason why a wreath of poppies was selected for the crown of its hero. The dramatist, Warburton informs us, was addicted to the use of opium, and, in fact, died of an overdose of that drug. Hence

"His temples, last, with poppies were o'er-spread,

That nodding seemed to consecrate his head."

A couplet which Pope echoes in the "Dunciad":—

"Shadwell nods, the poppy on his brows."

A similar allusion may be found in the character of *Og*:—

"Eat opium, mingle arsenic in thy drink," etc.

That the Laureate was heavy-gaited in composition, taking five years to finish one comedy,—that he was, on the other hand, too swift, trusting Nature rather than elaborate Art,—that he was dull and unimaginative,—that he was keen and remarkably sharp-witted,—that he affected a profundity of learning of which he gave no evidences,—that his plays were only less numerous than Dryden's, are other particulars we gather from conflicting witnesses of the period. Certainly, no one of the Laureates, Cibber excepted, was so mercilessly lampooned. What Cibber suffered from the "Dunciad" Shadwell suffered from "MacFlecknoe." Incited by Dryden's example, the poets showered their missiles at him, and so perseveringly as to render him a traditional butt of satire for two or three generations. Thus Prior:—

"Thus, without much delight or grief,
I fool away an idle life,
Till Shadwell from the town retires,
Choked up with fame and sea-coal fires,
To bless the wood with peaceful lyric:
Then hey for praise and panegyric;
Justice restored, and nations freed,
And wreaths round William's glorious head."

And Parnell:—

"But hold! before I close the scene,
The sacred altar should be clean.

Oh, had I Shadwell's second bays,
Or, Tate! thy pert and humble lays,—
Ye pair, forgive me, when I vow
I never missed your works till now,—
I'd tear the leaves to wipe the shrine,
That only way you please the Nine;
But since I chance to want these two,
I'll make the songs of Durfey do."

And in a far more venomous and violent style, the noteless mob of contemporary writers.

Shadwell, after all, was very far from being the blockhead these references imply. His "Third Nights" were probably far more profitable than Dryden's.* By his friends he was classed with the liveliest wits of a brilliant court. Rochester so classed him:—

"I loathe the rabble: 'tis enough for me,
If Sedley, Shadwell, Shephard, Wycherley,
Godolphin, Butler, Buckhurst, Buckingham,
And some few more, whom I omit to name,
Approve my sense: I count their censure
fame."†

And compares him elsewhere with Wycherley:—

"Of all our modern wits, none seem to me
Once to have touched upon true comedy,
But hasty Shadwell and slow Wycherley.
Shadwell's unfinished works do yet impart
Great proofs of force of nature, none of art;
With just, bold strokes, he dashes here and
there,
Showing great mastery with little care,
Scorning to varnish his good touches o'er
To make the fools and women praise them
more.
But Wycherley earns hard whate'er he gains;
He wants no judgment, and he spares no
pains," etc.

* *The Squire of Alsatia* is said to have realized him £130.

† *An Allusion to the Tenth Satire of the First Book of Horace*.—The word "censure" will, of course, be understood to mean judgment, not condemnation.

And, not disrespectfully, Pope:—

"In all debates where critics bear a part,
Not one but nods, and talks of Jonson's art,
Of Shakspeare's nature, and of Cowley's wit;
How Beaumont's judgment checked what
Fletcher writ;
How Shadwell hasty, Wycherley was slow;
But for the passions, Southerne, sure, and
Rowe!

These, only these, support the crowded stage,
From eldest Heywood down to Cibber's
age."*

Sedley joined him in the composition of more than one comedy. Macaulay, in seeking illustrations of the times and occurrences of which he writes, cites Shadwell five times, where he mentions Etherege, Wycherley, and Congreve once.† From his last play, "The Stockjobbers," performed in November, 1692, while its author was on his death-bed, the historian introduces an entire scene into his text.‡ Any one, indeed, who can clear his mind from the unjust prejudice produced by Dryden's satire, and read the comedies of Shadwell with due consideration for the extemporaneous haste of their composition, as satires upon passing facts and follies, will find, that, so far from never deviating into sense, sound common-sense and fluent wit were the Laureate's staple qualities. If his comedies have not, like those of his contemporaries just named, enjoyed the good-fortune to be collected and preserved among the dramatic classics, the fact is primarily owing to the ephemeral interest of the hits and allusions, and secondarily to "MacFlecknoe."

[To be continued.]

THE ROMANCE OF A GLOVE.

"HALT!" cried my travelling companion. "Property overboard!"

The driver pulled up his horses; and, before I could prevent him, Westwood leaped down from the vehicle, and ran back for the article that had been dropped.

It was a glove,—my glove, which I had inadvertently thrown out, in taking my handkerchief from my pocket.

"Go on, driver!" and he tossed it into my hand as he resumed his seat in the open stage.

"Take your reward," I said, offering him a cigar; "but beware of rendering me another such service!"

"If it had been your hat or your handkerchief, be sure I should have let it lie where it fell. But a glove,—that is different. I once found a romance in a glove. Since then, gloves are sacred." And Westwood gravely bit off the end of his cigar.

"A romance? Tell me about that. I am tired of this endless stretch of sea-like country, these regular ground-swells; and it's a good two-hours' ride yet to yonder headland, which juts out into the prairie, between us and the setting sun. Meanwhile, your romance."

"Did I say romance? I fear you would hardly think it worthy of the name," said my companion. "Every life has its romantic episodes, or, at least, incidents which appear such to him who experiences them. But these tender little histories are usually insipid enough when told. I have a maiden aunt, who once came so near having an offer from a pale stripling, with dark hair, seven years her junior, that to this day she often alludes to the circumstance, with the remark, that she wishes she knew some competent novel-writer in whom she could confide, feeling sure that the story of that period of her life would make the groundwork of a magnificent work of fiction. Possibly I inherit my aunt's tendency to mag-

nify into extraordinary proportions trifles which I look at through the double convex lens of a personal interest. So don't expect too much of my romance, and you shall hear it.

"I said I found it in a glove. It was by no means a remarkable glove,—middle-sized, straw-colored, and a neat fit for this hand, in which I now hold your very excellent cigar. Of course, there was a young lady in the case;—let me see,—I don't believe I can tell you the story," said Westwood, "after all!"

I gently urged him to proceed.

"Pshaw!" said he, after kindling his cigar with a few vigorous whiffs, "what's the use of being foolish? My aunt was never diffident about telling her story, and why should I hesitate to tell mine? The young lady's name,—we'll call her simply Margaret. She was a blonde, with hazel eyes and dark hair. Perhaps you never heard of a blonde with hazel eyes and dark hair? She was the only one I ever saw; and there was the finest contrast imaginable between her fair, fresh complexion, and her superb tresses and delicately-traced eyebrows. She was certainly lovely, if not handsome; and—such eyes! It was an event in one's life, Sir, just to look through those luminous windows into her soul. That could not happen every day, be sure! Sometimes for weeks she kept them turned from me, the ivory shutters half-closed, or the mystic curtains of reserve drawn within; then, again, when I was tortured with unsatisfied yearnings, and almost ready to despair, she would suddenly turn them upon me, the shutters thrown wide, the curtains away, and a flood of radiance streaming forth, that filled me so full of light and gladness, that I had no shadowy nook left in me for a doubt to hide in. She must have been conscious of this power of expression. She used it so sparingly, and, it seemed to me, artfully! But I always forgave her when she did

use it, and cherished resentment only when she did not.

"Margaret was shy and proud; I could never completely win her confidence; but I knew, I knew well at last, that her heart was mine. And a deep, tender, woman's heart it was, too, despite her reserve. Without many words, we understood each other, and so — Pshaw!" said Westwood, "my cigar is out!"

"On with the story!"

"Well, we had our lovers' quarrels, of course. Singular, what foolish children love makes of us!—rendering us sensitive, jealous, exacting, in the superlative degree. I am sure, we were both amiable and forbearing towards all the world besides; but, for the powerful reason that we loved, we were bound to misinterpret words, looks, and actions, and wound each other on every convenient occasion. I was pained by her attentions to others, or perhaps by an apparent preference of a book or a bouquet to me. Retaliation on my part and quiet persistence on hers continued to estrange us, until I generally ended by conceding everything, and pleading for one word of kindness, to end my misery.

"I was wrong,—too quick to resent, too ready to concede. No doubt, it was to her a secret gratification to exercise her power over me; and at last I was convinced that she wounded me purposefully, in order to provoke a temporary estrangement, and enjoy a repetition of her triumph.

"It was at a party; the thing she did was to waltz with a man whom she knew I detested, whom *I* knew *she* could not respect, and whose half-embrace, as he whirled her in the dance, almost put murder into my thoughts.

"‘Margaret,’ I said, ‘one last word! If you care for me, beware!’

"That was a foolish speech, perhaps. It was certainly ineffectual. She persisted, looking so calm and composed, that a great weight fell upon my heart. I walked away; I wandered about the saloons; I tried to gossip and be gay; but the wound was too deep.

"I accompanied her home, late in the evening. We scarcely spoke by the way. At the door, she looked me sadly in the face,—she gave me her hand; I thought it trembled.

"‘Good-night!’ she said, in a low voice.

"‘Good-bye!’ I answered, coldly, and hurried from the house.

"It was some consolation to hear her close the door after I had reached the corner of the street, and to know that she had been listening to my footsteps. But I was very angry. I made stern resolutions; I vowed to myself, that I would wring her heart, and never swerve from my purpose until I had wrung out of it abundant drops of sorrow and contrition. How I succeeded you shall hear.

"I had previously engaged her to attend a series of concerts with me; an arrangement which I did not now regret, and for good reasons. Once a week, with famous punctuality, I called for her, escorted her to the concert-room, and carefully reconducted her home,—letting no opportunity pass to show her a true gentleman's deference and respect, conversing with her freely about music, books, anything, in short, except what we both knew to be deepest in each other's thoughts. Upon other occasions, I avoided her, and even refrained from going to places where she was expected,—especially where she knew that I knew she was expected.

"Well," continued Westwood, "my designs upon her heart, which I was going to wring so unmercifully, did not meet with very brilliant success. To confess the humiliating truth, I soon found that I was torturing myself a good deal more than I was torturing her. As a last and desperate resort, what do you think I did?"

"You probably asked her to ask your forgiveness."

"Not I! I have a will of adamant, as people find, who tear away the amiable flowers and light soil that cover it; and she had reached the impenetrable, firm

rock. I neither made any advances towards a reconciliation nor invited any. But I'll tell you what I did do, as a final trial of her heart. I had, for some time, been meditating a European tour, and my interest in her had alone kept me at home. Some friends of mine were to sail early in the spring, and I now resolved to accompany them. I don't know how much pride and spite there was in the resolution,—probably a good deal. I confess I wished to make her suffer,—to show her that she had calculated too much upon my weakness,—that I could be strong and happy without her. Yet, with all this bitter and vindictive feeling, I listened to a very sweet and tender whisper in my heart, which said, 'Now, if her love speaks out,—now, if she says to me one true, kind, womanly word,—she shall go with me, and nothing shall ever take her from me again!' The thought of what *might* be, if she would but say that word, and of what *must* be, irrevocably, if her pride held out, shook me mightily. But my resolution was taken: I would trust the rest to fate.

"On the day of the last concert, I imparted the secret of my intended journey to a person who, I felt tolerably sure, would rush at once to Margaret with the news. Then, in the evening, I went for her; I was conscious that my manner towards her was a little more tender, or rather, a little less coldly courteous, that night, than it had usually been of late; for my feelings were softened, and I had never seen her so lovely. I had never before known what a treasure I was about to lose. The subject of my voyage was not mentioned, and if she had heard of it, she accepted the fact without the least visible concern. Her quietness under the circumstances chilled me,—disheartened me quite. I am not one of those who can give much superfluous love, or cling with unreasonable, blind passion to an object that yields no affection in return. A quick and effectual method of curing a fancy in persons of my temperament is to teach them that it is not reciprocated. Then it ex-

pires like a flame cut off from the air, or a plant removed from the soil. The death-struggle, the uprooting, is the painful thing; but when the heart is thoroughly convinced that its love is misplaced, it gives up, with one last sigh as big as fate, sheds a few tears, says a prayer or two, thanks God for the experience, and becomes a wiser, calmer,—yes, and a happier heart than before."

"True," I said; "but our hearts are not thus easily convinced."

"Ay, there's the rub. It is for want of a true perception. There cannot be a true love without a true perception. Love is for the soul to know, from its own intuition,—not for the understanding to believe, from the testimony of those very unreliable witnesses, called eyes and ears. This seems to have been my case,—my soul was aware of *her* love, and all the evidence of my external senses could not altogether destroy that interior faith. But that evening I said,—'I believe you now, my senses! I doubt you now, my soul!—she never loved me!' So I was really very cold towards her—for about twenty minutes.

"I walked home with her;—we were both silent; but at the door she asked me to go in. Here my calmness deserted me, and I could hardly hold my heart, while I replied,—

"'If you particularly wish it.'"

"'If I did not, I should not ask you, she said; and I went in.

"I was ashamed and vexed at myself for trembling so,—for I was in a tremor from head to foot. There was company in the parlors,—some of Margaret's friends. I took my seat upon a sofa, and soon she came and sat by my side.

"'I suppose,' said one, 'Mr. Westwood has been telling Margaret all about it.'"

"'About what?' Margaret inquired,—and here the truth flashed upon me,—the news of my proposed voyage had not yet reached her! She looked at me with a troubled, questioning expression, and said,—

"'I felt that something was going to happen. Tell me what it is.'"

"I answered,—'Your friend can best explain what she means.'

"Then out came the secret. A shock of surprise sent the color from Margaret's face; and raising her eyes, she asked, quite calmly, but in a low and unnatural tone,—

"Is this so?"

"I said, 'I suppose I cannot deny it.'

"You are really going?"

"I am really going."

"She could not hide her agitation. Her white face betrayed her. Then I was glad, wickedly glad, in my heart,—and vain enough to be gratified that others should behold and know I held a power over her. Well,—but I suffered for that folly.

"I feel hurt,' she said, after a little while, 'because you have not told me this. You have no sister;' (this was spoken very quietly,) 'and it would have been a privilege for me to take a sister's place, and do for you those little things which sisters do for brothers who are going on long journeys.'

"I was choked;—it was a minute before I could speak. Then I said that I saw no reason why she should tax her time or thoughts to do anything for me.

"Oh, you know,' she said, 'you have been kind to me,—so much kinder than I have deserved!'

"It was unendurable,—the pathos of the words! I was blinded, stifled,—I almost groaned aloud. If we had been alone, there our trial would have ended. I should have snatched her to my soul. But the eyes of others were upon us, and I steeled myself.

"Besides,' I said, 'I know of nothing that you can do for me.'

"There must be many little things;—to begin with, there is your glove, which you are tearing to pieces.'

"True, I was tearing my glove,—she was calm enough to observe it! That made me angry.

"Give it to me; I will mend it for you. Haven't you other gloves that need mending?"

"I, who had triumphed, was humbled.

My heart was breaking,—and she talked of mending gloves! I did not omit to thank her. I coldly arose to go.

"Well, I felt now that it was all over. The next day I secured my passage in the steamer in which my friends were to sail. I took pains that Margaret should hear of that, too. Then came the preparations for travel,—arranging affairs, writing letters, providing myself with a compact and comfortable outfit. Europe was in prospect,—Paris, Switzerland, Italy, lands to which my dreams had long since gone before me, and to which I now turned my eyes with reawakening aspirations. A new glory arose upon my life, in the light of which Margaret became a fading star. It was so much easier than I had thought, to give her up, to part from her! I found that I could forget her, in the excitement of a fresh and novel experience; while she—could she forget me? When lovers part, happy is he who goes! alas for the one that is left behind!

"One day, when I was busy with the books which I was to take with me, a small package was handed in. I need not tell you that I experienced a thrill, when I saw Margaret's handwriting upon the wrapper. I tore it open,—and what think you I found? My glove! Nothing else. I smiled bitterly, to see how neatly she had mended it; then I sighed; then I said, 'It is finished!' and tossed the glove disdainfully into my trunk.

"On the day before that fixed for the sailing of the steamer, I made farewell calls upon many of my friends,—among others, upon Margaret. But, through the perversity of pride and will, I did not go alone,—I took with me Joseph, a mutual acquaintance, who was to be my *compagnon de voyage*. I felt some misgivings, to see how Margaret had changed; she was so softened, and so pale!

"The interview was a painful one, and I cut it short. As we were going out, she gently detained me, and said,—

"Did you receive—your glove?"

"Oh, yes,' I said, and thanked her for mending it.

"And is this all—all you have to say?" she asked.

"I have nothing more to say—except good-bye."

"She held my hand. 'Nothing else?'"

"No,—it is useless to talk of the past, Margaret; and the future—may you be happy!—Good-bye!"

"I thought she would speak; I could not believe she would let me go; but she did! I bore up well, until night. Then came a revulsion. I walked three times past the house, wofully tempted, my love and my will at cruel warfare; but I did not go in. At midnight I saw the light in her room extinguished; I knew she had retired, but whether to sleep, or weep, or pray—how could I tell? I went home. I did not close my eyes that night. I was glad to see the morning come, after *such* a night!"

"The steamer was to sail at ten. The bustle of embarkation; strange scenes and strange faces; parting from friends; the ringing of the bell; last adieus,—some, who were to go with us, hurrying aboard, others, who were to stay behind, as hastily going ashore; the withdrawal of the plank,—sad sight to many eyes! casting off the lines, the steamer swinging heavily around, the rushing, irregular motion of the great, slow paddles; the waving of handkerchiefs from the decks, and the responsive signals from the crowd lining the wharf; off at last,—the faces of friends, the crowd, the piers, and, lastly, the city itself, fading from sight; the dash of spray, the freshening breeze, the novel sight of our little world detaching itself and floating away; the feeling that America was past, and Europe was next;—all this filled my mind with animation and excitement, which shut out thoughts of Margaret. Could I have looked with clairvoyant vision, and beheld her then, locked in her chamber, should I have been so happy? Oh, what fools vanity and pride make of us! Even then, with my heart high-strung with hope and courage, had I known the truth, I should have abandoned my friends, the voyage, and Europe, and returned in the pilot's

boat, to find something more precious than all the continents and countries of the globe, in the love of that heart which I was carelessly flinging away."

Here Westwood took breath. The sun was now almost set. The prairie was still and cool; the heavy dews were beginning to fall; the shadows of the green and flowered undulations filled the hollows, like a rising tide; the headland, seen at first so far and small, was growing gradually large and near; and the horses moved at a quicker pace. Westwood lighted his cigar, drew a few whiffs, and proceeded.

"We had a voyage of eleven days. But to me an immense amount of experience was crowded into that brief period. The fine exhilaration of the start,—the breeze gradually increasing to a gale; then horrible sea-sickness, homesickness, love-sickness; after which, the weather which sailors love, games, gayety, and flirtation. There is no such social freedom to be enjoyed anywhere as on board an ocean steamer. The breaking-up of old associations, the opening of a fresh existence, the necessity of new relationships,—this fuses the crust of conventionality, quickens the springs of life, and renders character sympathetic and fluent. The past is easily put away; we become plastic to new influences; we are delighted at the discovery of unexpected affinities, and astonished to find in ourselves so much wit, eloquence, and fine susceptibility, which we did not before dream we possessed.

"This freedom is especially provocative of flirtation. We see each fair brow touched with a halo whose colors are the reflection of our own beautiful dreams. Loveliness is ten-fold more lovely, bathed in this atmosphere of romance; and manhood is invested with ideal graces. The love within us rushes, with swift, sweet heart-beats, to meet the love responsive in some other. Don't think I am now artfully preparing your mind to excuse what I am about to confess. Take these things into consideration, if you will; then think as you please of the weakness

and wild impulse with which I fell in love with ——

"We will call her *Flora*. The most superb, captivating creature that ever ensnared the hearts of the sons of Adam. A fine olive complexion; magnificent dark auburn hair; eyes full of fire and softness; lips that could pout or smile with incomparable fascination; a figure of surprising symmetry, just voluptuous enough. But, after all, her great power lay in her freedom from all affectation and conventionality,—in her spontaneity, her free, sparkling, and vivacious manners. She was the most daring and dazzling of women, without ever appearing immodest or repulsive. She walked with such proud, secure steps over the commonly accepted barriers of social intercourse, that even those who blamed her and pretended to be shocked were compelled to admire. She was the belle, the *Juno*, of the saloon, the supreme ornament of the upper deck. Just twenty, —not without wit and culture,—full of poetry and enthusiasm. Do you blame me?"

"Not a whit," I said; "but for Margaret"——

"Ah, Margaret!" said Westwood, with a sigh. "But, you see, I had given her up. And when one love is lost, there sink such awful chasms into the soul, that, though they cannot be filled, we must at least bridge them over with a new affection. The number of marriages built in this way, upon false foundations of holowness and despair, is incomputable. We talk of jilted lovers and disappointed girls marrying 'out of spite.' No doubt, such petty feeling hurries forward many premature matches. But it is the heart, left shaken, unsupported, wretchedly sinking, which reaches out its feelers for sympathy, catches at the first penetrable point, and clings like a helpless vine to the sunny-sided wall of the nearest consolation. If you wish to marry a girl and can't, and are weak enough to desire her still, this is what you should do: get some capable man to jilt her. Then seize your chance. All the affec-

tions which have gone out to him, unmet, ready to droop, quivering with the painful, hungry instinct to grasp some object, may possibly lay hold of you. Let the world sneer; but God pity such natures, which lack the faith and fortitude to live and die true to their best love!

"Out of my own mouth do I condemn myself? Very well, I condemn myself; *peccavi*! If I had ever loved Margaret, then I did not love *Flora*. The same heart cannot find its counterpart indifferently in two such opposites. What charmed me in one was her purity, softness, and depth of soul. What fascinated me in the other was her bloom, beauty, and passion. Which was the true sympathy?"

"I did not stop to ask that question when it was most important that it should be seriously considered. I rushed into the crowd of competitors for *Flora*'s smiles, and distanced them all. I was pleased and proud that she took no pains to conceal her preference for me. We played chess; we read poetry out of the same book; we ate at the same table; we sat and watched the sea together, for hours, in those clear, bright days; we promenaded the deck at sunset, her hand upon my arm, her lips forever turning up tenderly towards me, her eyes pouring their passion into me. Then those glorious nights, when the ocean was a vast, wild, fluctuating stream, flashing and sparkling about the ship, spanned by a quivering bridge of splendor on one side, and rolling off into awful darkness and mystery, on the other; when the moon seemed swinging among the shrouds like a ball of white fire; when the few ships went by like silent ghosts; and *Flora* and I, in a long trance of happiness, kept the deck, heedless of the throng of promenaders, forgetful of the past, reckless of the future, aware only of our own romance, and the richness of the present hour.

"Joseph, my travelling-companion, looked on, and wrote letters. He showed me one of these, addressed to a friend of Margaret's. In it he extolled *Flora*'s

beauty, piquancy, and supremacy; related how she made all the women jealous and all the men mad; and hinted at my triumph. I knew that that letter would meet Margaret's eyes, and was vain enough to be pleased.

"At last, one morning, at daybreak, I went on deck, and saw the shores of England. Only a few days before, we had left America behind us, brown and leafless, just emerging from the long gloom of winter; and now the slopes of another world arose green and inviting in the flush of spring. There was a bracing breeze; the dingy waters of the Mersey rolled up in wreaths of beauty; the fleets of ships, steamers, sloops, lighters, pilot-boats, bounding over the waves, meeting, tacking, plunging, swaying gracefully under the full-swelling canvas, presented a picture of wonderful animation; and the mingling hues of sunshine and mist hung over all. I paced the deck, solemnly joyful, swift thoughts pulsing through me of a dim far-off Margaret, of a near radiant Flora, of hope and happiness superior to fate. It was one of those times when the excited soul transfigures the world, and we marvel how we could ever succumb to a transient sorrow while the whole universe blooms, and an infinite future waits to open for us its doors of wonder and joy.

"In this state of mind I was joined by Flora. She laid her hand on my arm, and we walked up and down together. She was serious, almost sad, and she viewed the English hills with a pensiveness which became her better than mirth.

"So," she sighed, 'all our little romances come to an end!'

"Not so," I said; 'or if one romance ends, it is to give place to another, still truer and sweeter. Our lives may be all a succession of romances, if we will make them so. I think now I will never doubt the future; for I find, that, when I have given up my dearest hopes, my best-beloved friends, and accepted the gloomy belief that all life besides is barren,—then comes some new experience,

filling my empty cup with a still more delicious wine.'

"Don't vex me with your philosophy!" said Flora. 'I don't know anything about it. All I know is this present,—this sky, this earth, this sea, and the joy between, which I can't give up quite so easily as you can, with your beautiful theory, that something better awaits you.'

"I have told you," I replied,—for I had been quite frank with her,—'how I left America,—what a blank life was to me then; and did I not turn my back upon all that to meet face to face the greatest happiness which I have ever yet known? Ought not this to give me faith in the divinity that shapes our ends?'

"And so," she answered, 'when I have lost you, I shall have the satisfaction of thinking that you are enjoying some still more exquisite consolation for the slight pangs you may have felt at parting from me! Your philosophy will make it easy for you to say, "Good-bye! it was a pretty romance; I go to find prettier ones still"; and then forget me altogether!'

"And you," I said, 'will that be easy for you?'

"Yes," she cried, with spirit,—'anything is easy to a proud, impetuous woman, who finds that the brief romance of a ten-days' acquaintance has already become tiresome to the second party. I am glad I have enjoyed what I have; that is so much gain, of which you cannot rob me; and now I can say good-bye as coolly as you, or I can die of shame, or I can at once walk over this single rail into the water, and quench this little candle, and so an end!'

"She sprang upon a bench, and, I swear to you, I thought she was going down! I was so exalted by this passionate demonstration, that I should certainly have gone over with her, and felt perfectly content to die in her arms,—at least, until I began to realize what a very disagreeable bath we had chosen to drown in.

"I drew her away; I walked up and

down with that superb creature panting and palpitating almost upon my heart; I poured into her ear I know not what extravagant vows; and before the slow-handed sailors had fastened their cable to the buoy in the channel, we had knotted a more subtle and difficult noose, not to be so easily undone!

"Now see what strange, variable fools we are! Months of tender intercourse had failed to bring about anything like a positive engagement between Margaret and myself; and here behold me irrevocably pledged to Flora, after a brief ten-days' acquaintance!

"Six mortal hours were exhausted in making the steamer fast,—in sending off her Majesty's mails, of which the cockney speaks with a tone of reverence altogether disgusting to us free-minded Yankees,—and in entertaining the custom-house inspectors, who paid a long and tedious visit to the saloon and our luggage. Then we were suffered to land, and enter the noisy, solid streets of Liverpool, amid the donkeys and beggars and quaint scenes which strike the American so oddly upon a first visit. All this delay, the weariness and impatience, the contrast between the morning and the hard, grim reality of mid-day, brought me down from my elevation. I felt alarmed to think of what had passed. I seemed to have been doing some wild, unadvised act in a fit of intoxication. Margaret came up before me, sad, silent, reproachful; and as I gazed upon Flora's bedimmed face, I wondered how I had been so charmed.

"We took the first train for London, where we arrived at midnight. Two weeks in that vast Babel,—then, ho! for Paris! Twelve hours by rail and steamer carried us out of John Bull's dominions into the brilliant metropolis of his French neighbor. Joseph accompanied us, and wrote letters home, filled with gossip which I knew, or hoped, would make Margaret writhe. I had not found it so easy to forget her as I had supposed it would be. Flora's power over me was sovereign; but when I was weary of the

dazzle and whirl of the life she led me,—when I looked into the depths of my heart, and saw what the thin film of passion and pleasure concealed,—in those serious moments which would come, and my soul put stern questions to me,—then, Sir,—then—Margaret had her revenge.

"A month, crowded and glittering with novelty and incident, preceded our departure for Switzerland. I accompanied Flora's party; Joseph remained behind. We left Paris about the middle of June, and returned in September. I have no words to speak of that era in my life. I saw, enjoyed, suffered, learned so much! Flora was always glad, magnificent, irresistible. But, as I knew her longer, my moments of misgiving became more frequent and profound. If I had aspired to nothing higher than a life of sensuous delights, she would have been all I could wish. But——

"We were to spend the winter in Italy. Meanwhile, we had another month in Paris. Here I had found Joseph again, who troubled me a good deal with certain rumors he had received concerning Margaret. According to these, she had been in feeble health ever since we left, and her increasing delicacy was beginning to alarm her friends. 'But,' added another of Joseph's correspondents, 'don't let Westwood flatter himself that he is the cause, for she is cured of him; and there is talk of an engagement between her and a handsome young clergyman, who is both eloquent and fascinating.'

"This bit of gossip made me very bitter and angry. 'Forget me so soon? I said; 'and receive the attentions of another man?' You see how consistent I was, to condemn her for the very fault I had myself been so eager to commit!

"Well, the round of rides, excursions, soirées, visits to the opéras and theatres, walks on the Boulevards, and in the galleries of the Louvre, ended at last. The evening before we were to set out for the South of France, I was at my lodgings, unpacking and repacking the luggage

which I had left in Joseph's care during my absence among the Alps; I was melancholy, dissatisfied with the dissipations which had exhausted my time and energies, and thinking of Margaret. I had not preserved a single memento of her; and now I wished I had one,—if only a withered leaf, or a line of her writing. In this mood, I chanced to cast my eye upon a stray glove, in the bottom of my trunk. I snatched at it eagerly, and, in the impulse of the moment,—before I reflected that I was wronging Flora,—pressed it to my lips. Yes, I found the place where it had been mended, the spot Margaret's fingers had touched, and gave it a kiss for every stitch. Then, incensed at myself, I flung it from me, and hurried from the room. I walked towards the Place de la Concorde, where the brilliant lamps burned like a constellation. I strolled through the Elysian Fields, and watched the lights of the carriages swarming like fire-flies up the long avenue; stopped by the concert gardens, and listened to the glorified girls singing under rosy and golden pavilions the last songs of the season; wandered about the fountains,—by the gardens of the Tuileries, where the trees stood so shadowy and still, and the statues gleamed so pale,—along the quays of the Seine, where the waves rolled so dark below,—trying to settle my thoughts, to master myself, to put Margaret from me.

"Weary at length, I returned to my chamber, seated myself composedly, and looked down at the glove which lay where I had thrown it, upon the polished floor. Mechanically I stooped and took up a bit of folded paper. It was written upon,—I unrolled it, and read. It was as if I had opened the record of doom! Had the apparition of Margaret herself risen suddenly before me, I could not have been more astounded. It was a note from her,—and such a note!—full of love, suffering, and humility,—poured out of a heart so deep and tender and true, that the shallowness of my own seemed utterly contemptible, in comparison with it. I cannot tell you what was written, but it

was more than even my most cruel and exacting pride could have asked. It was what would once have made me wild with joy,—now it almost maddened me with despair. I, who had often talked fine philosophy to others, had not a grain of that article left to physic my own malady. But one course seemed plain before me, and that was, to go quietly and drown myself in the Seine, which I had seen flowing so swift and dark under the bridges, an hour ago, when I stood and mused upon the tragical corpses its solemn flood had swallowed.

"I am a little given to superstition, and the mystery of the note excited me. I have no doubt but there was some subtle connection between it and the near presence of Margaret's spirit, of which I had that night been conscious. But the note had reached me by no supernatural method, as I was at first half inclined to believe. It was, probably, the touch, the atmosphere, the ineffably fine influence which surrounded it, which had penetrated my unconscious perceptions, and brought her near. The paper, the glove, were full of Margaret,—full of something besides what we vaguely call mental associations,—full of emanations of the very love and suffering which she had breathed into the writing.

"How the note came there upon the floor was a riddle which I was too much bewildered to explain by any natural means. Joseph, who burst in upon me, in my extremity of pain and difficulty, solved it at once. It had fallen out of the glove, where it had lain folded, silent, unnoticed, during all this intervening period of folly and vexation of soul. Margaret had done her duty, in time; I had only myself to blame for the tangle in which I now found myself. I was thinking of Flora, upon the deck of the steamship, when, in a moment of chagrin, she had been so near throwing herself over; wondering to what fate her passion and impetuosity would hurry her now, if she knew; cursing myself for my weakness and perfidy; while Joseph kept asking me what I intended to do.

"'Do? do?' I said, furiously,—'I shall kill you, that is what I shall do, if you drive me mad with questions which neither angels nor fiends can answer!'

"'I know what you will do,' said Joseph; 'you will go home and marry Margaret.'

"You can have no conception of the effect of these words,—*Go home and marry Margaret*. I shook as I have seen men shake with the ague. All that might have been,—what might be still,—the happiness cast away, and perhaps yet within my reach,—the temptation of the Devil, who appealed to my cowardice, to fly from Flora, break my vows, risk my honor and her life, for Margaret,—all this rushed through me tumultuously. At length I said,—

"'No, Joseph; I shall do no such thing. I can never be worthy of Margaret; it will be only by fasting and prayer that I can make myself worthy of Flora.'

"'Will you start for Italy in the morning?' he asked, pitilessly.

"'For Italy in the morning?' I groaned. Meet Flora, travel with her, play the hypocrite, with smiles on my lips and hell in my heart,—or thunder-strike her at once with the truth;—what was I to do? To some men the question would, perhaps, have presented few difficulties. But for me, Sir, who am not quite devoid of conscience, whatever you may think,—let me tell you, I'd rather hang by sharp hooks over a roasting fire than be again suspended as I was betwixt two such alternatives, and feel the torture of both!

"Having driven Joseph away, I locked myself into my room, and suffered the torments of the damned in as quiet a manner as possible, until morning. Then Joseph returned, and looked at me with dismay.

"'For Heaven's sake!' he said, 'you ought not to let this thing kill you,—and it will, if you keep on.'

"'So much the better,' I said, 'if it kills nobody but me. But don't be alarmed. Keep perfectly cool, and at-

tend to the commission I am going to trust to you. I can't see Flora this morning; I must gain a little time. Go to the station of the Lyons railway, where I have engaged to meet her party; say to her that I am detained, but that I will join her on the journey. Give her no time to question you, and be sure that she does not stay behind.'

"'I'll manage it,—trust me!' said Joseph. And off he started. At the end of two hours, which seemed twenty, he burst into my room, crying,—

"'Good news! she is gone! I told her you had lost your passport, and would have to get another from our minister.'

"'What!' I exclaimed, 'you lied to her?'

"'Oh! there was no other way!' said Joseph, ingenuously,—'she is so sharp! They're to wait for you at Marseilles. But I'll manage that, too. On their arrival at the Hôtel d'Orient, they'll find a telegraphic dispatch from me. I wager a hat, they'll leave in the first steamer for Naples. Then you can follow at your leisure.'

"'Thank you, Joseph.'

"I felt relieved. Then came a reaction. The next day I was attacked by fever. I know not how long I struggled against it, but it mastered me. The last things I remember were the visits of friends, the strange talk of a French physician, whispers and consultations, which I knew were about me, yet took no interest in,—and at length Joseph rushing to my bedside, in a flutter of agitation, and gasping,—

"'Flora!'

"'What of Flora?' I demanded.

"'I telegraphed, but she wouldn't go; she has come back; she is here!'

"I was sinking back into the stupor from which I had been roused, when I heard a rustling which seemed afar off, yet was in my chamber; then a vision appeared to my sickened sight,—a face which I dimly thought I had seen before,—a flood of curls and a rain of kisses showering upon me,—sobs and devouring caresses,—Flora's voice calling me pas-

sionate names; and I lying so passive, faintly struggling to remember, until my soul sank whirling in darkness, and I knew no more.

"One morning, I cannot tell you how long after, I awoke and found myself in a strange-looking room, filled with strange objects, not the least strange of which was the thing that seemed myself. At first I looked with vague and motionless curiosity out of the Lethe from which my mind slowly emerged; painless, and at peace; listlessly questioning whether I was alive or dead,—whether the limp weight lying in bed there was my body,—the meaning of the silence and the closed curtains. Then, with a succession of painful flashes, as if the pole of an electrical battery had been applied to my brain, memory returned,—Margaret, Flora, Paris, delirium. I next remember hearing myself groan aloud,—then seeing Joseph at my side. I tried to speak, but could not. Upon my pillow was a glove, and he placed it against my cheek. An indescribable, excruciating thrill shot through me; still I could not speak. After that, came a relapse. Like Mrs. Browning's poet, I lay

'Twixt gloom and gleam,
With Death and Life at each extreme.'

"But one morning I was better. I could talk. Joseph bent over me, weeping for joy.

"The danger is past!" he said. "The doctors say you will get well!"

"Have I been so ill, then?"

"Ill?" echoed Joseph. "Nobody thought you could live. We all gave you up, except her,—and she!"

"She!" I said,—is she here?"

"From the moment of her arrival," replied Joseph, "she has never left you. Oh, if you don't thank God for her,—he lowered his voice,—and live all the rest of your life just to reward her, you are the most ungrateful wretch! You would certainly have died but for her. She has scarcely slept, till this morning, when they said you would recover."

"Joseph paused. Every word he

spoke went down like a weight of lead into my soul. I had, indeed, been conscious of a tender hand soothing my pillow, of a lovely form flitting through my dreams, of a breath and magnetic touch of love infusing warm, sweet life into me,—but it had always seemed Margaret, never Flora.

"The glove?" I asked.

"Here it is," said Joseph. "In your delirium you demanded it; you would not be without it; you caressed it, and addressed to it the tenderest apostrophes."

"And Flora,—she heard?"

"Flora?" repeated Joseph. "Don't you know—haven't you any idea—what has happened? It has been terrible!"

"Tell me at once!" I said. "Keep nothing back!"

"Immediately on her return from Marseilles,—you remember that?"

"Yes, yes! go on!"

"She established herself here. Nobody could come between her and you; and a brave, true girl she proved herself. Oh, but she was wild about you! She offered the doctors extravagant sums—she would have bribed Heaven itself, if she could—not to let you die. But there came a time,—one night, when you were raving about Margaret,—I tell you, it was terrible! She would have the truth, and so I told her,—everything, from the beginning. It makes me shudder now to think of it,—it struck her so like death!

"What did she say?—what did she do?"

"She didn't say much,—“Oh, my God! my God!”—something like that. The next morning she showed me a letter which she had written to Margaret."

"To Margaret?" I started up, but fell back again, helpless, with a groan.

"Yes," said Joseph,—and it was a letter worthy of the noblest woman. I wrote another, for I thought Margaret ought to know everything. It might save her life, and yours, too. In the mean time, I had got worse news from her still,—that her health continued to decline, and that her physician saw no hope for her except in a voyage to Italy.

But that she resolutely refused to undertake, until she got those letters. You know the rest.'

" 'The rest?' I said, as a horrible suspicion flashed upon me. 'You told me something terrible had happened.'

" 'Yes,—to Flora. But you have heard the worst. She is gone; she is by this time in Rome.'

" 'Flora gone? But you said she was here.'

" 'She? So *she* is! But did you think I meant Flora? I supposed you knew. Not Flora,—but Margaret! Margaret!'

" I shrieked out, 'Margaret?' That's the last I remember,—at least, the last I can tell. She was there,—I was in her arms;—she had crossed the sea, not to save her own life, but mine. And Flora had gone, and my dreams were true; and the breath and magnetic touch of love, which infused warm, sweet life into me, and seemed not Flora's, but Margaret's, were no illusion, and——what more can I tell?

" From the moment of receiving those letters, Margaret's energies were roused, and she had begun to regain her health. There is no such potent medicine as hope and love. It had saved her, and it saved me. My recovery was sure and speedy. The happiness which had seemed too great, too dear to be ever possible, was now mine. She was with me again, all my own! Only the convalescent, who feels the glow of love quicken the pure pulses of returning health, knows what perfect bliss is.

" As soon as I was strong enough to travel, we set out for Italy, the faithful Joseph accompanying us. We enjoyed Florence, its palaces and galleries of art, the quaint old churches, about which the religious sentiment of ages seems to hang like an atmosphere, the morning and evening clamor of musical bells, the Arno, and the olive-crowned Tuscan hills,—all so delightful to the senses and the soul. After Florence, Naples, with its beautiful, dangerous, volcanic environs, where the ancients aptly located their heaven and hell, and where a luxurious,

passionate people absorbs into its blood the spirit of the soil, and the fire and languor of the clime. From Naples to Rome, where we saw St. Peter's, that bubble on the surface of the globe, which the next earthquake may burst, the Vatican, with its marvels of statuary, the ruined temples of the old gods and heroes, the Campagna, the Pope, and—Flora. We had but a glimpse of her. It was one night, at the Colosseum. We had been musing about that vast and solemn pile by the moonlight, which silvered it over with indescribable beauty, and at last, accompanied by our guides, bearing torches, we ascended through dark and broken passages to the upper benches of the amphitheatre. As we were passing along one side, we saw picturesquely moving through the shadows of the opposite walls, with the immense arena between, the red-flaring torches and half-illuminated figures of another party of visitors. I don't know whether it was instinct, or acuteness of vision, that suggested Flora; but, with a sudden leap of the heart, I felt that she was there. We descended, and passed out under the dark arches of the stupendous ruin. The other visitors walked a little in advance of us,—two of the number lingering behind their companions; and certain words of tenderness and passion we heard, which strangely brought to my mind those nights on the ocean-steamer.

" 'What is the matter with you?' said Margaret, looking in my face.

" 'Hush!' I whispered,—'there—that woman—is Flora!'

" She clung to me,—I drew her closer, as we paused; and the happy couple went on, over the ancient Forum, by the silent columns of the ruined temples, and disappeared from sight upon the summit of the Capitoline Hill.

" A few months later, we heard of the marriage of Flora to an English baronet; she is now *my Lady*, and I must do her the justice to say that I never knew a woman better fitted to bear that title. As for Margaret,—if you will return with

me to my home on the Hudson, after we have finished our hunt after those Western lands, you shall see her, together with the loveliest pair of children that ever made two proud parents happy.

"And here," added Westwood, "we have arrived at the end of our day's journey; we have had the Romance of the Glove, and now—let's have some supper."

TO ———.

ON RECEIVING HIS "FEW VERSES FOR A FEW FRIENDS."

"(PRINTED, NOT PUBLISHED.)"

WELL thought! Who would not rather hear
The songs to Love and Friendship sung,
Than those which move the stranger's tongue
And feed his unselected ear?

Our social joys are more than fame;
Life withers in the public look:
Why mount the pillory of a book,
Or barter comfort for a name?

Who in a house of glass would dwell,
With curious eyes at every pane?
To ring him in and out again
Who wants the public crier's bell?

To see the angel in one's way,
Who wants to play the ass's part,
Bear on his back the wizard Art,
And in his service speak or bray?

And who his manly locks would shave
And quench the eyes of common sense,
To share the noisy recompense
That mocked the shorn and blinded slave?

The heart has needs beyond the head,
And, starving in the plenitude
Of strange gifts, craves its common food,
Our human nature's daily bread.

We are but men: no gods are we
To sit in mid-heaven, cold and bleak,
Each separate, on his painful peak,
Thin-cloaked in self-complacency!

Better his lot whose axe is swung
In Wartburg woods, or that poor girl's
Who by the Iln her spindle whirls
And sings the songs that Luther sung,

Than his, who, old and cold and vain,
 At Weimar sat, a demigod,
 And bowed with Jove's imperial nod
 His votaries in and out again!

Ply, Vanity, thy wingèd feet!
 Ambition, hew thy rocky stair!
 Who envies him who feeds on air
 The icy splendors of his seat?

I see your Alps above me cut
 The dark, cold sky,—and dim and lone
 I see ye sitting, stone on stone,
 With human senses dulled and shut.

I could not reach you, if I would,
 Nor sit among your cloudy shapes;
 And (spare the fable of the Grapes
 And Fox) I would not, if I could.

Keep to your lofty pedestals!
 The safer plain below I choose:
 Who never wins can rarely lose,
 Who never climbs as rarely falls

Let such as love the eagle's scream
 Divide with him his home of ice:
 For me shall gentler notes suffice,—
 The valley-song of bird and stream,

The pastoral bleat, the drone of bees,
 The flail-beat chiming far away,
 The cattle-low at shut of day,
 The voice of God in leaf and breeze!

Then lend thy hand, my wiser friend,
 And help me to the vales below,
 (In truth, I have not far to go,)
 Where sweet with flowers the fields extend.

THE SINGING-BIRDS AND THEIR SONGS.

THOSE persons enjoy the most happiness, if possessed of a benevolent heart and favored by ordinary circumstances of fortune, who have acquired by habit and education the power of deriving pleasure from objects that lie immediately around them. But these common sources of happiness are opened to those only who are endowed with genius, or who have received a certain kind of intellectual training. The more ordinary the mental and moral organization and

culture of the individual, the more far-fetched and dear-bought must be his enjoyments. Nature has given us in full development only those appetites which are necessary to our physical well-being. She has left our moral appetites and capacities in the germ, to be developed by education and circumstances. Hence those agreeable sensations that come chiefly from the exercise of the imagination, which may be called the pleasures of sentiment, are available only to persons of a peculiar refinement of mind. The ignorant and rude may be dazzled and delighted by physical beauty, and charmed by loud and stirring sounds; but those more simple melodies and less attractive colors and forms that appeal to the mind for their principal effect act more powerfully upon individuals of superior culture.

In proportion as we have been trained to be agreeably affected by the outward forms of Nature, and the sounds that proceed from the animate and inanimate world, are we capable of being made happy without resorting to expensive and vulgar recreations. It ought, therefore, to be one of the chief points in the education of youth, while teaching them the still more important offices of humanity, to cultivate and enliven their susceptibility to the charms of natural objects. Then would the aspects of Nature, continually changing with the progress of the seasons and the sounds that enliven their march, satisfy, in a great measure, that craving for agreeable sensations which leads mankind away from humble and healthful pursuits to those of a more artificial and exciting life. The value of such pleasures consists not so much in their cheapness as in their favorable moral influences, which improve the heart, while they lead the mind to observations that pleasantly exercise and develope, without tasking its powers. The quiet emotions, half musical and half poetical, which are awakened by listening to the songs of birds, belong to this class of refined enjoyments.

But the music of birds, though agreeable to all, conveys positive and durable pleasure only to those who have learned to associate with their notes, in connection with the scenes of Nature, a thousand interesting and romantic images. To many persons of this character it affords more delight than the most brilliant music of the opera or the concert. In vain, therefore, will it be said, as an objection, that the notes of birds have no charm, save that which is derived from association, and that, considered as music, they do not equal that of the most simple reed or flageolet. It is sufficient to remark, that the most delightful influences of Nature proceed from those sights and sounds that appeal to the imagination and affections through the medium of slight and almost insensible impressions made upon the eye and the ear. At the moment when these physical impressions exceed a certain mean, the spell is broken, and the enjoyment becomes sensual, not intellectual. How soon, indeed, would the songs of birds lose their effect, if they were loud and brilliant, like a band of instruments! It is their simplicity that gives them their charm.

As a further illustration of this point, it may be remarked that simple melodies have among all people exercised a greater power over the imagination than louder and more complicated music. Nature employs a very small amount of physical sensation to create an intellectual passion, and when an excess is used a diminished effect is produced. I am persuaded that the effect of a great part of our sacred music is lost by an excess of harmony and a too great volume of sound. On the same principle, a loud crash of thunder deafens and terrifies; but its low and distant rumbling produces an agreeable emotion of sublimity.

The songs of birds are as intimately allied with poetry as with music. The lark has been aptly denominated a "feathered lyric" by one of the English poets; and the analogy becomes apparent when we consider how much the song of a bird resembles a lyrical ballad in its influence

on the mind. Though it utters no words, how plainly it suggests a long train of agreeable images of love, beauty, friendship, and home! When a young person has suffered any severe wound of the affections, he seldom fails, if endowed with a sensitive mind, to listen to the birds as sharers in his affliction. Through them the deities of the groves seem to offer him their consolation. By indulging this habit of making companionship with the objects of Nature, all pleasing sights and sounds gradually become certain anodynes for his sorrow; and those who have this mental alembic for turning grief into a poetic melancholy can seldom be reduced to a state of absolute despondency. Poetry, or rather the poetic sentiment, exalts all our pleasures and soothes all our afflictions by some illusive charm, whether it be turned into the channel of religion or romance. Without this reflection of light from the imagination, what is the passion of love? and what is our love of beauty and of sweet sounds, but a mere gravitation?

The voice of every singing-bird has its associations in the minds of all susceptible persons who were born and nurtured within the precincts of its untutored minstrelsy. The music of birds is modulated in pleasant unison with all the chords of affection and imagination, filling the soul with a lively consciousness of happiness and beauty, and soothing it with romantic visions of memory,—of love, when it was an ethereal sentiment of adoration and not a passion, and of friendship, when it was a passion and not an expedience,—of dear and simple adventures, and of comrades who had part in them,—of dappled mornings, and serene and glowing sunsets,—of sequestered nooks and mossy seats in the old wood,—of paths by the riverside, and flowers that smiled a bright welcome to our rambling,—of lingering departures from home, and of old by-ways, overshadowed by trees and hedged with roses and viburnums, that spread their shade and their perfume around our path to gladden our return. By this pleasant instrumentality

has Nature provided for the happiness of those who have learned to be delighted with the survey of her works, and with the sound of those voices which she has appointed to communicate to the human soul the joys of her inferior creation.

The singing-birds, with reference to their songs, may be divided into four classes. First, the Rapid Singers, whose song is uninterrupted, of considerable length, and uttered with fervor, and in apparent ecstasy. Second, the Moderate Singers; whose notes are slowly modulated, but without pauses or rests between their different strains. Third, the Interrupted Singers, who seldom modulate their notes with rapidity, and make decided pauses between their several strains, of which there are in general from five to eight or nine. Fourth, the Warblers, whose notes consist of only one or two strains, not combined into a song.

The canary, among foreign birds, and the linnet and bobolink, among American birds, are familiar examples of the first class; the common robin and the veery of the second; the wood-thrush, the catbird, and the mocking-bird, of the third; and the blue-bird, the pewee, and the purple martin, of the fourth class. It may be added, that some birds are nearly periodical in their habits of singing, preferring the morning and evening, and occasional periods in other parts of the day, while others sing almost indifferently at all hours. The greater number of species, however, are more tuneful in the early morning than at any other hour.

June, in this part of the world, is the most vocal month of the year. Many of our principal songsters do not arrive until near the middle of May; and all, whether they come early or late, continue in song throughout the month of June. The bobolink, which is one of the first to become silent, continues vocal until the second week in July. So nearly simultaneous is the discontinuance of the songs of this species, that it might seem as if their silence were preconcerted, and that by a vote they had, on a certain day, adjourned over to another year. If an

unusually genial day occurs about the seventh of July, we may hear multitudes of them singing merrily on that occasion. Should this time be followed by two or three successive days of chilly and rainy weather, their tunefulness is so generally brought to a close during this period, that we may not hear another musical note from a single individual after the seventh. The songs of birds are discontinued as soon as their amorous dalliances and the care of their offspring have ceased. Hence those birds that raise but one brood of young during the season, like the bobolink, are the first to become silent.

No one of the New England birds is an autumnal warbler; though the song-sparrow often greets the fine mornings in October with his lays, and the shore-lark, after spending the summer in Labrador and about the shores of Hudson's Bay, is sometimes heard in autumn, soaring and singing at the dawn of day, while on his passage to the South. The bobolink, the veery, or Wilson's thrush, the red thrush, and the golden robin, are silent after the middle of July; the wood-thrush, the cat-bird, and the common robin, not until a month later; but the song-sparrow alone continues to sing throughout the summer. The tuneful season of the year, in New England, embraces a period of about four months, from the middle of April to the middle of August.

There are certain times of the day, as well as certain seasons of the year, when the birds are most musical. The grand concert of the feathered tribe takes place during the hour between dawn and sunrise. During the remainder of the day they sing less in concert, though many species are very musical at noonday, and seem, like the nocturnal birds, to prefer the hour when others are silent. At sunset there is an apparent attempt to unite once more in chorus, but this is far from being so loud or so general as in the morning. The little birds which I have classed in the fourth division are a very important accompaniment to the anthem of dawn, their notes, though short, serving agreeably to fill up the pauses made

by the other musicians. Thus, the hair-bird (*Fringilla Socialis*) has a sharp and trilling note, without any modulation, and not at all melodious, when heard alone; but in the morning it is the chief harmonizer of the whole chorus, and serves, more than any other voice, to give unity and symphony to the multitude of miscellaneous parts.

There are not many birds whose notes could be accurately described upon the gamut. The nearest approach we can make to accuracy is to give some general idea of their time and modulation. Their musical intervals can be distinguished but with difficulty, on account of the rapidity of their utterance. I have often attempted to transcribe some of their notes upon the musical scale, but I am persuaded that such sketches can be only approximations to literal correctness. As different individuals of the same species sing very differently, the notes, as transcribed from the song of one individual, will never exactly represent the song of another. If we listen attentively, however, to a number of songs, we shall detect in all of them a *theme*, as it is termed by musicians, of which the different individuals of the species warble their respective variations. Every song is, technically speaking, a *fantasia* constructed upon this theme, from which none of the species ever departs.

It is very generally believed that the singing-birds are confined to temperate latitudes, and that the tropical birds have not the gift of song. That this is an error is apparent from the testimony of travellers, who speak of the birds in the Sandwich Islands and New Zealand as singing delightfully, and some fine songsters are occasionally imported in cages from tropical climates. The origin of this notion may be explained in several ways. It is worthy of notice that within the tropics the singing season of different species of birds does not occur at the same time. One species may be musical in the spring, another in summer, and others in autumn and winter. When one species, therefore, has begun

to sing, another has ceased, so that, at whatever time of the year the traveller stops, he hears but few birds engaged in song.

In the temperate latitudes, on the contrary, as soon as the birds arrive, they commence building their nests, and become musical at the same time. If a stranger from a tropical climate should arrive in this country in the spring, and remain here during the months of May and June, he would hear more birds singing together than he ever heard at once in his own clime; but were he to arrive about the middle of July, when the greater number of our birds have discontinued their songs, he would probably, if he knew the reputation of the Northern birds, marvel a little at their silence. If there are as many birds singing at one time during the whole year, in the hot climates, as we hear in this country in the latter half of summer, the greater average would appear to be on the side of the former.

It may also be remarked, that the singing-birds of the tropics are not so well known as those of temperate latitudes which are inhabited by civilized men. The savages and barbarians, who are the principal inhabitants of hot countries, are seldom observant of the habits or the voices of the singing-birds. A musician of the feathered race, as well as a harpist or violinist, must have an appreciating audience, or his powers can never be made known to the world. But even with the same audience, the tropical singing-birds would probably be less esteemed than songsters of equal merit in the temperate latitudes; for, amid the stridulous and deafening sounds made by the insects in warm climates, the notes of birds would be scarcely audible.

We are still inclined to believe, however, that there is a larger proportion of musical birds in the temperate than in the torrid zone, because in the former region there are more of those species that build low and live among the grass and shrubbery, and it is well known that the singing-birds are mostly of the latter

description. In warm climates the vegetation consists chiefly of trees and tall vines, forming together an umbrageous canopy overhead, with but a scanty undergrowth. In temperate latitudes the shrubbery predominates, especially in the most northerly parts. Moreover, the grasses that furnish by their seeds a great proportion of the food of the smaller birds are almost entirely wanting in the torrid zone.

The birds that live in trees are remarkable for their brilliant plumage; those that live upon the ground and in the shrubbery are plainly dressed. This is a provision of Nature for their protection, as the ground-birds must have a predominance of tints that resemble the general hues of the surface of the earth. I do not know a single brightly-plumed bird that nestles upon the ground, unless the bobolink may be considered an exception. They are almost invariably colored like sparrows. The birds that inhabit the trees, on the other hand, need less of this protection, though the females are commonly of an olive or greenish yellow, which harmonizes with the general hue of the foliage, and screens them from observation, while sitting upon the nest. The male, on the contrary, who seldom sits upon the nest, requires a plumage that will render him conspicuous to the female and to the young, after they have left their nest. It is remarkable, that Nature, in all cases in which she has created a difference in the plumage of the male and female, has used the hues of their plumage only for the protection of the mother and the young, for whose advantage she has dressed the male parent in colors that must somewhat endanger his own safety.

The color of the plumage of birds seems to bear less relation to their powers of song than to their habitats; and as the birds that live in trees are commonly less tuneful, they are more brilliantly arrayed. The bird employs his song in wooing his mate, as well as in entertaining her after she is wedded; and it is not unlikely that Nature may have compensated

those which are deficient in song by giving them a superior beauty of plumage. As the offices of courtship devolve entirely upon the males, it is the more necessary that they should be possessed of conspicuous attractions; but as the task of sitting upon the nest devolves upon the female, she requires more of that protection which arises from the conformity of her plumage with the general hue of the objects that surround her nest. While she is sitting, the plain hues of her dress protect her from observation; but when she leaves her nest to seek her companion, she is enabled by his brilliant colors the more easily to discover him. The male is diligent in providing for the wants of the offspring, and hence it is important that his dress should render him conspicuous. When the young birds have left the nest, upon seeing the flash of his plumage, they immediately utter their call, and by this note, which might not otherwise be sounded at the right moment, he detects them and supplies them with food. Should a bird of prey suddenly come into their neighborhood, he overlooks the plainly-dressed mother and offspring, and gives chase to the male parent, who not only escapes, but at the same time diverts the attention of the foe from his defenceless progeny.

But the birds that build low, either upon the ground or among the shrubbery, are exposed to a greater number and variety of enemies. Hence it becomes necessary that the males as well as the females should have that protection which is afforded by sobriety of color. Not being made conspicuous by their plumage, they are endowed with the gift of song, that they may make known their presence to their mate and their young by their voice. I have often thought that the song of the bird was designed by Nature for the benefit of the young, no

less than for the entertainment of his mate. The sounds uttered by birds on account of their young always precede the period of incubation. The common hen begins to cluck several days before she begins to sit upon her eggs. In like manner the male singing-bird commences his song when the pair are making ready to build their nest. While his mate is sitting, his song reminds her of his presence, and inspires her with a feeling of security and content, during the period of her confinement. As soon as the young are hatched, they begin to learn his voice and grow accustomed to it, and when they fly from the nest they are prevented by the sound of it from wandering and getting bewildered. If they happen to fly beyond certain bounds, the song of the male parent warns them of their distance, and causes them to turn and draw near the place from which it seems to issue. Thus the song of the male bird, always uttered within a certain circumference, of which the nest is the centre, becomes a kind of sentinel voice, to keep the young birds within prudent limits.

It is not easy to explain why a larger proportion of the birds that occupy trees should be destitute of song, except on the supposition that in such elevated situations the young are more easily guided by sight than by hearing. Still there are many songsters which are dressed in brilliant plumage, and of these we have some examples among our native birds. These, however, are evident exceptions to the general fact, and we may trace a plain analogy in this respect between birds and insects. The musical insects are, we believe, invariably destitute of brilliant plumage. Butterflies and moths do not sing; the music of insects comes chiefly from the plainly-dressed locust and grasshopper tribes.

OUR TALKS WITH UNCLE JOHN.

TALK NUMBER ONE.

WE were happy children, Alice and I, when, on Alice's sixteenth birthday, we persuaded our father, the most indulgent parent in Cincinnati, that there was no need of our going to school any longer; not that our education was finished,—we did not even put up such a preposterous plea as that,—but because Mrs. C. did not intend to send Laura, and we did not believe any of our set of girls would go back after the holidays.

There is no being so facile as an American father, especially where his daughters are concerned; and our dear father was no exception to the general rule. So our school education was finished. For the rest, for the real education of our minds and hearts, we took care of ourselves.

How could it be otherwise? Our father, a leading merchant in Cincinnati, spent his days in his counting-room, and his evenings buried in his newspapers or in his business calculations, on the absorbing nature of which we had learned to build with such certainty, that, when his consent was necessary to some scheme of pleasure, we preferred our requests with such a nice adjustment of time, that the answer generally was, "January 3d, —two thousand bales,—yes, my dear,—and twelve are sixteen,—yes, Alice, don't bother me, child!" and, armed with that unconscious assent, we sought our mother.

"Papa says that we may go. Do you think, mamma, that Miss D. can have our dresses in time?"

Our dear mother, most faithful and indefatigable in her care for our bodily wants, what time had she for aught else? With feeble health, with poor servants, with a large house crowded with fine furniture, and with the claims of a numerous calling and party-giving acquaintance,—claims which both my father and

herself imagined his business and her social position made imperative,—what could she do more than to see that our innumerable white skirts were properly tucked, embroidered, washed, and starched, that our party dresses were equal to those which Mrs. C. and Mrs. D. provided for their girls, and that our bonnets were fashionable enough for Fourth Street? Could she find time for anything more? Yes,—on our bodily ailments she always found time to bestow motherly care, watchfulness, and sympathy; of our mental ills she knew nothing.

So we cared for ourselves, Alice and I, through those merry, thoughtless two years that followed,—merry (not happy) in our Fourth-Street promenades, our Saturday-afternoon assignations at the dancing-school rooms, our parties and picnics; and merry still, but thoughtless always, in our eager search for excitement in the novels, whose perusal was our only literary enjoyment.

Somehow we woke up,—somehow we groped our way out of our frivolity. First came weariness, then impatience, and last a passing-away of all things old and a putting-on of things new.

I remember well the day when Alice first spoke out her unrest. My pretty Alice! I see her now, as she flung herself across the foot of the bed, and, her chin on her hand, watched me combing and parting my hair. I see again those soft, dark brown eyes, so deep in their liquid beauty that you lost yourself gazing down into them; again I see falling around her that wealth of auburn hair of the true Titian color, the smooth, low forehead, and the ripe, red lips, whose mobility lent such varying expression to her face.

At that moment the eyes drooped and the lips trembled with weariness.

"Must we go to that tiresome party, Kate? We have been to three this week; they are all alike."

I looked at her. "Are you in earnest? will you stay at home? I know I shall be tired to death; but what will Laura C. say? what will all the girls think?"

Alice raised herself on her elbow. "Kate, I don't believe it is any matter what they think. Do we really care for any of them, except to wish them well? and we can wish them well without being with them all the time. Do you know, Kate, I have been tired to death of all this for these three months? It was very well at first, when we first left school; parties were pleasant enough then, but now"—and Alice sprang from the bed and seated herself in a low chair at my feet, as, glowing and eager, she went on, her face lighting with her rapid speech,—“Kate, I have thought it over and over again, this tiresome, useless life; it wears me out, and I mean to change it. You know we may do just as we please; neither papa nor mamma will care. I shall stay at home.”

"But what will people say?" I put in, feebly.

Alice's eyes flashed. "You know, Kate, I don't care for 'people,' as you call them. I only know that I am utterly weary of this petty visiting and gossiping, this round of parties, concerts, and lectures, where we meet the same faces. There is no harm in it that I know of, but it is simply so stupid. If we met new people, it would be something; but the same girls, the same beaux."

"And George W. and Henry B., what will they do for partners to-night? what will become of them?"

Alice put up her lip. "They will console themselves with Laura C. and those Kentucky girls from Louisville. For my part, I shall put on my walking-dress, and go over the river to spend the evening with Uncle John, and, what is more, I shall ask mamma to let me stay two or three days." And, suiting the action to the word, she began to dress hurriedly.

"You will surely never go without me, Alice?"

"You will never stay behind, if I do go, Kate," said she, looking back at me laughingly. "But make haste, I shall gain mamma over in five minutes; and we must be quick, if we are to reach Uncle John's before tea-time."

Uncle John,—even now that long years have passed, so long that it seems to me as if I had gone into another state of existence, as if I were not the same person as in those times,—even now the thought of him makes my heart beat quick and the blood thrill more rapidly through my veins. He was the delight of my childhood; far better, he was the comfort and support of my after years. Even as a child, I knew, knew by some intuitive perception, that Uncle John was not happy. How soon I learned that he was a disappointed man I cannot tell; but long before I grew up into womanhood I was conscious that he had made some mistake in life, that some cloud hung over him. I never asked, I never talked on the subject, even to Alice; there was always an understanding between us that we should be silent about that which each of us felt with all the certainty of knowledge.

But if Uncle John was unhappy himself, who was there that he did not make happy? No one who came near him,—from his nieces whom he petted and spoiled, down to the little negroes who rolled, unrebuked, over the grass before his window in summer, or woke him on a Christmas morning with their shrill "Christmas gift, Massa John!" Not that Uncle John was a busybody, troubling himself about many things, and seeking out occasions for obtruding his kindnesses. He lived so secluded a life in the old family-house on the outskirts of Newport, (we were a Kentucky family,) as to raise the gossiping curiosity of all new residents, and to call forth the explanatory remark from the old settlers, that the Delanos were all queer people, but John Delano was the queerest of them all.

So Uncle John spent his time between his library and his garden, while Old Aunt Molly took upon herself the cares

of the household, and kept the pantry always in a condition to welcome the guests, to whom, with Kentucky hospitality, Uncle John's house was always open. Courteous he was as the finest gentleman of olden times, and sincerely glad to see his friends, but I have thought sometimes that he was equally glad to have them go away. While they were with him he gave them the truest welcome, leaving garden and books to devote himself to their entertainment; but I have detected a look of relief on his face as he shut the gate upon them and sought the shelter of his own little study, that sanctum which even we children were not allowed to enter except on special occasions, on a quiet winter evening, or, perhaps, on as quiet a summer morning.

Uncle John had not always lived in the old house. We knew, that, after Grandpapa's death, it had been shut up,—for my father's business engagements would not allow my mother to reside in it, and Uncle John had been for years among the Indians in the far Northwest. We had heard of him sometimes, but we had never seen him, we hardly realized that he was a living person, till one day he suddenly appeared among us, rough-looking and uncouth in his hunter's dress, with his heavy beard and his long hair, bringing with him his multifarious assortment, so charming to our eyes, of buffalo-ropes and elk-horns, wolf-skins and Indian moccasins.

He staid with us that winter, and very merry and happy he seemed to us at first;—looking back upon it now, I should call it, not happiness, but excitement;—but as the winter passed on, even we children saw that all was not right with him. He gradually withdrew himself from the constant whirl of society in our house, and, by the spring, had settled himself in the old home at Newport, adding to his old furniture only his books, which he had been all winter collecting, and the primitive inconveniences of his own room, which his rough Western life had rendered indispensable to him. His study

presented a singular mixture of civilization and barbarism, and its very peculiarities made it a delight to Alice and me. There were a few rare engravings on the walls, hung between enormous antlers which supported rough-looking rifles and uncouth hunting-shirts,—cases of elegantly bound and valuable books, half hidden by heavy buffalo-ropes marked all over with strange-looking hieroglyphics which told the Indian *coups*,—study-chairs of the most elaborate manufacture, with levers and screws to incline them to any, the idlest, inclination, over the backs of which hung white wolf-skins, mounted, claws and all, with brilliant red cloth,—and in the corner, on the pretty Brussels carpet, the prettiest that mamma could find at Shellito's, lay the bag of Indian weed (Uncle John scorned tobacco) with which he filled his pipe every evening, and the moccasins which he always wore when at home.

In vain did Alice and I spend our eyesight in embroidering slippers for him; our Christmas gifts were received with a kiss or a stroke of the head, and then put into Aunt Molly's hands to be taken care of, while he still wore the rough moccasins, made far up among the Blackfoot Indians, which he laughingly declared were warmer, cooler, softer, and stronger than any slippers or boots that civilized shoemaker ever turned off his last.

Quiet as it was at the old house, it had always been a source of happiness to us to be allowed to make a visit to Uncle John. There, if that were possible, we did more as we pleased than even at home; there were not even the conventionalities of society to restrain us; we were in the country, comparatively. And who like Uncle John knew what real country pleasures were? who like him could provide for every contingency? who was so full of expedients in those happy gypsying expeditions which we would entice him into, and which sometimes lasted for days, nay, weeks? He would mount Alice and myself on two of his sure-footed little Indian ponies, with which his trader friends always kept him supplied;

and throwing a pair of saddle-bags, filled with what he called our woman's traps, over his own, he would start with us for a trip across the country for miles, stopping at the farm-houses at night, laughing us out of our conventional notions about the conveniences of lodging, and so forth,—and camping out during the day, making what we called a continuous picnic. And then the stories he would tell us of his adventures among the Blackfeet,—of his trading expeditions,—his being taken prisoner by the Sioux,—his life in the forts,—till Alice would creep nearer to him in her nervous excitement, as if to be sure that he was really with her, and then beg him to go on and tell us something more. Once I asked him how he happened to go out among the Indians. His face darkened,—“My little Kate, you must not ask questions,”—and as I turned to Alice, her eyes were full of tears. She had been looking at him while I spoke, and she told me afterwards that something about Uncle John's lips made her cry, they quivered so, and were set afterwards so tight. We never asked him that question again.

But the ferry-boat, “The Belle of Newport,” has neared the landing while I have been introducing Uncle John, and the soft summer twilight saw us wending our way through the town towards the Kentucky hills, whose rounded outlines were still bright with the evening red. Just on the rise of the nearest was the Old House,—for it went with us by no other name,—and at the garden-gate stood Uncle John, his face brightening as he saw us, while behind him a row of eager faces showed their wide-stretched mouths and white teeth.

“Come to spend two or three days, Alice?” said Uncle John, that evening, as we sat with shaded lamp in the study, his moccasined feet resting on the window-seat, while he sank into the depths of his leather-covered Spanish chair. “Why, what has become of the parties that Aunt Molly heard about in your kitchen on her way to market yesterday? Where are all our handsome young stu-

dents that were coming home for the holidays? Remember, I'll have none of them following you over here, and disarranging my books by way of showing off their knowledge.”

Alice laughed. “Not a soul knows where we are, Uncle John, except mamma, and she promised not to tell. Laura C. has a party to-night, and she will be provoked enough at our running away; but the truth is,—well, Uncle John, I am tired of parties; indeed, I am tired of our way of living, and—and Kate and I thought we would come and ask you what we ought to do about it.”

Uncle John puckered up his face with a comical expression, and then, looking out of the window, whistled the Indian buffalo-call.

Alice sprang up. “Don't whistle that provoking thing, Uncle John! Indeed, I am thoroughly in earnest,—parties are so tiresome,—all exactly alike; we always see the same people, or the same sort of people. There is nothing about them worth having, except the dancing; and even that is not as good as a scamper over the hills with you and the ponies. You know we have been going to parties for these two years; we have seen so much of society, no wonder we are tired of it.”

“Sit down, Alice,” said Uncle John; “you do look really in earnest, so I suppose you must not be whistled at. And you have come all the way over here this evening to get me to solve Life's problem for you? My dear, I cannot work it out for myself. You are ‘tired of society’? Why, little one, you have not seen society yet. Suppose I could put you down to-night in the midst of some European court,—could show you men whose courage, wit, or learning had made them world-famous,—women whose beauty, grace, and cultivation brought those world-famous men to their side, and who held them there by the fascination that high-breeding knows how to use. Should you talk of sameness then?”

Alice's eyes sparkled for a moment, then she said,—

"Yes, I should tire even of that, after a while, glorious as it would be at first."

"Have you reached such sublime heights of philosophy already? Then, perhaps, I shall not seem to be talking nonsense, when I tell you that there is nothing in the world of which you would not tire after the first joy of possession was over, no position which would not seem monotonous. You do not believe me? Of course not. We all buy our own experience in life; on one of two rocks we split: either we do not want a thing after we have got it, or we do not get it till we no longer want it. Some of us suffer shipwreck both ways. But, Alice, you must find that out for yourself."

"Can we not profit by each other's mistakes, Uncle?"

"No, child. To what purpose should I show you the breakers where my vessel struck? Do you suppose you will steer exactly in my path? But what soberness is this? you are not among breakers yet; you are simply 'tired of living';" and Uncle John's smile was too genial to be called satirical.

"Tired of not living, I think," replied Alice,—*"tired of doing nothing, of having nothing to do. The girls, Laura and the rest of them, find so much excitement in what seems to me so stupid!"*

"You are not exactly like 'Laura and the rest of them,' I fancy, my dear, and what suits them is rather too tame for you. But what do you propose to do with yourself now, that you are beginning to live?"

"Now you are laughing at me, Uncle, and you will laugh more when I tell you that I mean to study and to make Kate study with me."

"Poor Kate!—if you should fancy swimming, shooting, or any other unheard-of pursuit, Kate would be obliged to swim and shoot with you. But I will not laugh any more. Study, if you will, Alice; you will learn fast enough, and, in this age of fast-advancing civilization, when the chances of eligible matrimony for young ladies in your station are yearly becoming less and less,—oh, you need

not put up your lip and peep into my bachelor's shaving-glass!—let me tell you that a literary taste is a recourse not to be despised. Of course you will study now to astonish me, or to surprise your young friends, or for some other equally wise reason; but the time may come when literature will be its own exceeding great reward."

"Uncle, answer me one thing,—are you as happy here in your quiet study as you were in your exciting life among the Indians? Do you not tire of this everyday sameness?"

"Close questioning, Alice, but I will answer you truly. Other things being equal, I confess to you that the Indian life was the more monotonous of the two. I look back now on my twenty years of savage life and see nothing to vary its dreary sameness; the dangers were always alike, the excitements always the same, and the rest was a dead blank. The whole twenty years might be comprised in four words,—we fought, we hunted, we eat, we slept. No, there is no monotony like that,—no life so stupid as that of the savage, with his low wants and his narrow hopes and fears. My life here among my books, which seems to you so tame, is excitement itself compared with that. Your stupidest party is full of life, intelligence, wit, when put beside an Indian powwow. There is but one charm in that wandering life, Alice,—the free intercourse with Nature; *that* never tires; but then you must remember that to enjoy it you must be cultivated up to it. There needs all the teaching of civilization, nay, the education of life, to enjoy Nature truly. These quiet hills, those beech forests, are more to me now than Niagara was at eighteen; and Niagara itself, which raises the poet above the earth, falls tame on the mind of the savage. Believe one who knows,—the man of civilization who goes back to the savage state throws away his life his very mind becomes, like the dyer's hand, 'subdued to what it works in.'

"But I am going out of your depth again, girls," continued he, looking at our

wondering, half-puzzled faces. "Let it go, Alice; Life is a problem too hard for you to solve as yet; perhaps it will solve itself. Meantime, we will brighten ourselves up to-morrow by a good scamper over the hills, and, the next day, if your fancy for study still holds, we will plan out some hard work, and I will show you what real study is. Now go to bed; but see first that Aunt Molly has her sandwiches and gingerbread ready for the morning."

TALK NUMBER TWO.

UNCLE JOHN was well qualified to show us what real study was, for in his early youth he had read hard and long to fit himself for a literary life. What had changed his course and driven him to the far West we did not know, but since his return he had brought the perseverance and judgment of middle life to the studies of his youth, and in his last ten years of leisure had made himself that rarest of things among Americans, a scholar, one worthy of the name.

Under his guidance our studies took life, and Alice threw herself into them with all the energy of her nature. In vain papa pished and pshawed, and mamma grieved, and begged John not to spoil the girls by making bookworms of them; in vain "Laura C. and the rest of them" entreated us to join this picnic or show ourselves at that party; in vain the young men professed themselves afraid of us, and the girls tossed their heads and called us blue-stockings. Alice's answer to all was, "I like studying; it is a great deal more entertaining than going to parties; Uncle John's study is pleasanter than Mrs. C.'s parlor, and a ride on his little Winnebago better fun than dancing." And so the years went on. We were not out of society,—that could not be in our house,—but our associates changed; young men of a higher standing frequented the house; we knew intimately the cultivated women, to whom, before, we had simply bowed at parties; and mamma and papa grew quite satisfied.

Not so Alice; the spirit of unrest was on her again, but this time it was not because of the weariness of life, but that she was oppressed by the fulness of her own happiness. She had waked up to life in waking up to love, and had poured out on Herbert B. the whole wealth of her heart. There was everything in her engagement to satisfy her friends, everything to gratify papa and mamma; and if I sometimes thought Herbert's too feeble a nature to guide hers, or if Uncle John sometimes talked with or listened to him as if he were measuring his depth and then went away with an anxious expression of face, who shall say how much of selfishness influenced us both? for was he not to take from us the pet and pride of our lives?

They were to be married in a few weeks, on Alice's twentieth birthday, and then leave for New York, where Herbert was connected in business with his father.

It was on a gloomy December afternoon that Alice came running up to our room, where I was reading my Italian lesson, and exclaimed,—

"Quick, Kate! put away those stupid books, and let us go over to Uncle John's for the night."

"Where is Herbert?"

"Herbert? Nonsense! I have sent him off with orders not to look for me again till to-morrow, and to-night I mean to pretend that there is no Herbert in the world. Perhaps this will be my last talk with Uncle John."

We walked quickly through the streets, shrouded in the dark winter-afternoon atmosphere heavy with coal-smoke, the houses on each side dripping with the fog-drops and looking dirty and cheerless with the black streaks running from the corners of each window, like tears down the face of some chimney-sweep or coal-boy, till, reaching the foot of Ludlow Street, we stood ankle-deep in mud, waiting for the little steamer, which still ploughed its way through the dark, sullen-looking water thick with the red mud which the late rise had brought down,

and with here and there heavy pieces of ice floating by.

"Uncle John will never expect us to-night, Alice."

"I cannot help it,—I must go; for I shall never be satisfied without one good talk with him before I leave, and Herbert will never spare me another evening. Besides, Uncle John will be only too glad to see us in this suicidal weather, as he will call it." And she sprang upon the boat, laughing at my woe-begone face.

"You are glad to see us here, Uncle John,—glad we came in spite of the fog, and sleet, and ice, and Kate's long face. How anybody can have a long face because of the weather, I cannot understand,—or, indeed, why there should be long faces at all in the world, when everything is so gloriously full of life."

"How many years is it, Alice,—three, I think,—since you were tired of living, found life so wearisome?"

"Yes, just about three years since Kate and I ran away from Laura C.'s party and came over here to ask you to help us out of our stupidity. I remember it all,—how you puzzled me by telling me that every position in life had its sameness. Ah, Uncle John, you forgot one thing when you told me that nothing satisfied us in this world." And Alice looked up from her little stool, where she sat before the fire at Uncle John's feet, with the flush of deep feeling coloring her cheeks and the dewy light of happiness in her eyes.

"And that one thing, Alice?"

"You are lying in wait for my answer, to give it that smile that I hate,—it is so unbelieving and so sad; I will not have you wear it on your face to-night, Uncle John. You cannot, if I speak my whole heart out. And why should I not, before you and Kate,—Kate, who is like my other self, and you, dear Uncle John, who, ever since the time we were talking about, have been so much to me? Do you know, I never told anybody before? but all you said that night never left me. I thought of it so much! Was it true

that life was so dissatisfying? You who had tried so thoroughly, who had gone through such a life of adventure, had seemed to me really to live, was all as flat and unprofitable to you as one of our tiresome parties or morning calls? And something in my own heart told me it was true, something that haunted me all through my greatest enjoyments, through my studies that I took up then, and which have been to me, oh, Uncle John, so much more than ever I expected they would be! Yes, through all that I believed you, believed you till now, believed you till I knew Herbert."

"And has Herbert told you better?"

"Uncle John, you do not know how the whole of life is glorified for me,—glorified by his love. I do not deserve it; all I can do is to return it ten-fold; but this I know, that, while I keep it, there can be nothing tame or dull,—life, everything, is gilded by my own happiness."

"And if you lose it?"

The flush on her face fell. "I should be miserable!—I should not—no, I could not live any longer!"

"Alice," said Uncle John, his face losing its half-mocking smile with which he had been watching her eager countenance, "Alice, did you know that I had been married?"

We started. "Married? No. How was it, and when?"

"It is no matter now, my girls. Some time I may tell you about it. I should not have spoken of it now, but that I know my little Alice would not believe a word I am going to tell her, if she thought she was listening to an old bachelor's croakings. Now I can speak with authority. You think you could not live without Herbert's love? My dear, we can live without a great many things that we fancy indispensable. Nor is it so very easy to die. There comes many a time in life when it would seem quite according to the fitness of things, just the proper ending to the romance, to lie down and die; but, unfortunately, or rather fortunately, dying is a thing that we cannot do, so just in the nick of time; and in-

deed"—and Uncle John's face assumed its strange smile, which seemed to take you, as it were, suddenly behind the scenes, to show you the wrong side of the tapestry,—“and indeed,” he continued, “when I look back on the times in my life that I should have died, when it was fitting and proper to die, when I felt that dying would be such a trump card to play, if only I could manage it, I must say that I am glad now that it was beyond my power to arrange things according to the melodramatic rules. As it is, I am alive now. I shake my fist at all the ghosts of my departed tragedies and say, ‘I am worth two of you. I am alive. I have all the chances of the future in my favor.’”

Here he caught sight of Alice's wide-opened eyes, and his smile changed into his own genial laugh, as he kissed her forehead and went on.

“That was a little aside, Alice, made to my other self, my metaphysical man,—not meant at all for my audience. I was meditating a lecture on the causes of conjugal happiness, but I seem to have stumbled upon a knot in the very first unwinding of the thread of my discourse.”

“I'll listen to the lecture, Uncle, though I see but one simple and all-sufficient cause for my happiness.”

“That Herbert loves you, ha? Know, my pretty neophyte, that happiness, married happiness especially, does not come from being loved, but from loving. What says our Coleridge?

‘For still the source, not fountain, gives
The daily food on which Love lives.’

And he is right, although you shake your curls. In most marriages, in all that are not matters of convenience, one party has a stronger heart, will, character, than the other. And that one loves the most from the very necessity of his nature, and, loving most, is the happier. The other falls, after a while, into a passive state, becomes the mere recipient of love, and finds his or her happiness in something else, or perhaps does not find it at all.”

“Neither side would satisfy me, Uncle

John; I hardly know which fate would be the more terrible. Do you think I would accept such a compromise in exchange for all I am living and feeling now? I would rather be miserable at once than so half-happy.”

“But, my darling, Colin and Chloe cannot spend their whole lives singing madrigals and stringing daisies. It is not in human nature to support, for any length of time, such superhuman bliss. The time will come when Colin will find no more rhymes to ‘dove,’ and when Chloe will tire of hearing the same one. It is possible that Herbert will some time tire of reading Shelley to you,—nay, it is even possible that the time may come when you will tire of hearing him; it is of that time I would talk. The present is as perfectly satisfactory to me as to you and Herbert, though not exactly in the same degree.”

“Well, Uncle, what is your advice to Chloe disillusioned,—if you insist that such a thing must be?”

“Simply this, my own dear little child,” answered Uncle John, and his voice took almost a solemn tone in its deep tenderness,—“when that time comes, as come it must, do not worry your husband with idle regrets for the past; remember that the husband is not the lover; remember that your sex love through your imagination, and look always for that clothing and refining of passion with sentiment, which, with us, belong only to the poetry and chivalry of youthful ardor. We may love you as well afterward,—nay, we may love you a great deal better,—but we cannot take the trouble of telling you so every day; we expect you to believe it once for all; and you,—you like to hear it over and over again, and, not hearing it, you begin to fancy it no longer true, and fall to trying experiments on your happiness. A fatal error this, Alice. There is nothing that men so often enjoy as the simply being let alone; but not one woman in a hundred can be made to believe in such a strange enjoyment. Then the wife becomes *exigeante* and impatient, and the husband, after fruit-

less attempts to find out what he has done, never suspecting that the real trouble is what he has left undone, finds her unreasonable, and begins to harden himself to griefs which he classes, like Miss Edgeworth, under the head of 'Sorrows of my Lord Plumcake.'

"Miserable fate of the nobler sex, Uncle,—disturbed, even in the sublime heights of philosophical self-possession, by the follies and unreasonableness of the weaker vessel! I suppose you allow men to live out their natures unrebuked, while women must live down theirs?"

"Not I, Alice,—but I am by nature a special pleader, and, just now, I am engaged on Herbert's side of the case. Fee me well, my darling, by a kiss or a merry look, and bring Herbert up to judgment, and I will tell him home truths too."

"Let me hear your argument for the other side, most subtle of reasoners, and I may, perhaps, be able to repeat them at second-hand, when occasion calls for them."

"Don't think of it, my dear! Second-hand arguments are like second-hand coffee,—the aroma and the strength have disappeared, never to be brought back again. But if the husband were really here, and the wife had paid well for properly-administered advice, I should say to him, 'Do not fancy that you have done everything for your wife when you have given her house, servants, and clothes; she really wants a little attention now and then. Try to turn your thoughts away from your more important affairs long enough to notice the pretty morning-wrapper or the well-fitting evening-dress which has cost her some thought for your sake; do not let a change in the furniture or a new ornament in the parlor go unnoticed till the bill comes in. And while, of course, you claim from her the most ready sympathy in all your interests and enthusiasms, give her, once in a great while, say every year or so, a little genuine interest in the housekeeping trials or dressmaker grievances that meet her at every turn.

"Moreover, I would recommend to you, should your wife happen to have some literary or artistic tastes, not to ignore them entirely because they do not pay so well as your counting-room accounts do, and are not so entertaining to you as billiards. I would even indulge her by sacrificing a whole evening to her, once in a while, even to the detriment of your own business or pleasure. Depend upon it, it will pay in the end."

"Now, Uncle, like Rosalind, you have simply misused your whole sex in your special pleadings, both for and against. If Herbert were here, I would appeal to him to know if the time can ever come when what I do can be uninteresting to him. But I know, for myself, that such a thing cannot be. You are not talking from your own experience, Uncle?" added she, suddenly looking up in his face.

"My dear Alice, were it possible, should it ever seem likely, that my experience might benefit you, how readily I would lay it open before you! But those who have lived their lives are like the prophets of old,—their words are believed only when they are fulfilled. The meaning of life is never understood till it is past. Like Moses on the rock, our faces are covered when the Lord passes by, and we see only his back. But look behind you, my darling!"

Alice turned suddenly and her face lighted up into the full beauty of happiness as she saw Herbert standing in the doorway.

"I hope you have room for me, Mr. Delano," said he, advancing, "for here I am, weather-bound, as well as Miss Alice and Kate. There is a drizzling rain falling out-of-doors, and your Kentucky roads are fast growing impassable for walkers."

Uncle John put into words the question that Alice's eyes had been asking so eagerly.

"Where did you stumble from, my dear fellow,—and at this time of night, too?"

"Why, I could not find any one at home on Fourth Street, so I took the last ferry-boat and came over, on a venture, to try the Kentucky hospitality, of which we New-Yorkers hear so much; and my stumbling walk through the mud made me so unpresentable, that I found the way round the house to Aunt Molly's premises, and left the tracks of my muddy boots all over her white kitchen, till she, in despair, provided me with a pair of your moccasins, and, shod in these shoes of silence, I came quietly in upon you. I do hope you are all glad to see me," he added, sitting down on the low seat that Alice had left, and looking up in her face as she stood by her uncle.

Alice shook her head with a pretty assumption of displeasure, as she said, "I told you I did not want to see you till to-morrow." But hardly half an hour had elapsed before she and Herbert had wandered off into the parlor, and Uncle John and I were left to watch them through the open door.

"If he were not so impulsive," said Uncle John, abruptly,—*"if he were not so full of fancies! Kate, you are a wise and discreet little lady, and we understand each other. Did I say too much?"*

Just then Alice looked back.

"Chloe is the one who sings madrigals to-night, Uncle; she is going to read Colin a lesson"; and, sitting down at the piano, she let her hands run over the keys and burst out joyously into that variation of Raleigh's pretty pastoral song,—

"Shepherd, what's Love? I prithee tell."

"It is a fountain and a well,

Where pleasure and repentance dwell;

And this is Love, as I've heard tell:

Repentance, repentance, repentance!"

TALK NUMBER THREE.

FIVE years have passed since Alice sat at Uncle John's feet and listened to his words that gave lessons of wisdom while they seemed only to amuse; and now she sits again on the low stool, looking up in his face, while I stand behind

him and look down on her, marking the changes that those years have wrought. She has come back to us, our own Alice still,—but how different from the impetuous, impulsive girl who left us five years ago! Her face has lost its early freshness, though it seems to me lovelier than before, in its matured, womanly expression; but her eyes, which used to be lifted so eagerly, to glance so rapidly in their varying expression, are now hidden by their lashes even when she is talking earnestly; her lips have lost their mobility, and have even something stern in their fixedness; whilst her hair, brought down smoothly over her forehead and twisted firmly in the low knot behind, and her close-fitting widow's dress add to the sobriety and almost matronliness of her appearance.

For Alice is a widow now, and has come back to us in her bereavement. We have known but little of her real self for some years, so guarded have been her letters; and not until the whole terrible truth burst upon us, did we do more than suspect that her married life had not brought the happiness she anticipated. She is talking freely now she is at home again among her own people.

"I have sometimes thought, Uncle John, that all you said to me, the last night I spent here, had some meaning deeper than met the ear. Had you second sight? Did you foresee the future? Or was there that in the present which foreshadowed it to you?"

"I am no prophet, Alice. I spoke only from what I knew of life, and from my knowledge of your character and Herbert's. But I am yet to know how my words have been fulfilled."

"It makes no difference now," said she, slowly, and with a touching weariness. "And yet," she added, rousing herself, "it would make all the difference in the world to me, if I could see clearly where it was that I was to blame. Certainly I must have done wrong; such wretchedness could not have come otherwise."

Uncle John drew her hand within his,

while he answered calmly,—“It is very probable you have done wrong, my darling; who of us are wise and prudent, loving and forbearing, as we should be?”

“You think so? How glad I am to hear you say so! Yes, I can see it now; I can see how I did that very thing against which you warned me. First came the time when Herbert forgot to admire everything which I did and said, and I—I tried little pouting ways, that I did not feel. Then they were so successful, that I carried them too far, and Herbert did not pet me out of them. Then I grew anxious and began to guess at that truth which was only too clear to me at last, that he did not love me as I loved him. Next,—oh, Uncle John, how much I was to blame!—I watched every word and look, gave meanings to things that had none, asked explanations where Herbert had none to give, and fairly put him under such restraint that he could neither look nor act himself. He fretted under it,—who would not?—and then began the thousand excuses for being away from home, business engagements, club-meetings, some country-customers of the firm, who must be taken to the theatre, and, at last, no excuse at all but want of time. I knew then that his love for me had never been more than a passing fancy, and, woman-like, I grew proud, shut my heart up from him, buried myself in my books. I never studied before as I did then, Uncle John, for I studied to get away from myself, and, looking back, I wonder even now at what I accomplished. Yes, you were right, books are fast friends,—and mine would have brought me their own exceeding great reward, had not my spirit been so bitter.

“It was then that mamma was so sick and I came home. Did you think me wonderfully calm, Kate? I think somebody said I showed astonishing self-control; but, in truth, I was frightened at myself,—I had no feeling about anything. Mamma’s sickness seemed something entirely removed from me, something which

concerned me not in the least. I was calm because I felt nothing. I wondered then and wonder now that you did not find me out, for I knew how unlike I was to my former self. Then mamma got well, and I was not glad; I went back to New York, and felt no sorrow at parting with you all.

“But when I got back, oh, Uncle John, I was too late!—too late to do right, even had I wished it! I don’t know,—I made good resolutions on my way back: Heaven knows if I should have had strength to put them in practice. But it was all over; not only had I lost Herbert, but he had lost himself. The first time I saw him he was not himself,—I might as well say it,—he was drunk.

“There is no need of going through the rest, Uncle,—you will not ask it. I think I did everything I could;—I threw away my books; I devoted myself to making his home pleasant to him; never, no, never, in my girlish days, did I take half the pains to please him that I did now to win him from himself. I read to him, I sang to him, I filled the house with people that I knew were to his taste, I dressed for him, I let myself be admired by others that he might feel proud of me, might think me more worthy of admiration,—but all to no purpose. Sometimes I hoped, but more often I despaired; his fall seemed to me fearfully rapid, though now the three years seem to have been interminable. At last I had no hope but that of concealing the truth from you all. You thought me churlish, Kate, in my answer to your proposal to spend last winter with me? My darling, I dared not have you in my house. But it is over now. I knew how that last horrible attack would end when I sent for papa. He had gone through two before that, and the doctor told me the third would be fatal. Poor Herbert!—Uncle John, can I ever forgive myself?”

Alice looked up with dry and burning eyes into Uncle John’s face, over which the tears were streaming.

“My child, it is right that you should blame yourself. What sorrow do we

meet in life that we do not in part bring upon ourselves? Who is there of us who is not wise after time? which of us has not made some fatal mistake?"

I felt half indignant that Uncle John did not tell her how much more to blame, how weak, how reckless Herbert had been; but the calmer expression which came over Alice's countenance showed me that he was right, that he best knew her heart. She could not now be just to herself; she was happier in being unjust.

We were still and silent for a long time. The light wood-fire on the hearth crackled and burned to ashes, but it had done its office in tempering the chill of the autumn evening, and through the half-open door stole the 'sweet decaying smell' of the fallen leaves, while the hush of an Indian-summer night seemed to calm our very hearts with its stillness.

Uncle John spoke at last. His voice was very gentle and subdued as he said:

"I told you once, Alice, that my life should be opened to you, if ever its errors could be either warning or consolation to you. But who am I, to judge what beacon-lights we may hold out to each other? There is as much egotism, sometimes, in silence as in the free speech which asks for sympathy. Perhaps I have been too proud to lay open my follies before you and my little Kate."

Alice looked up, with a touch of her old eagerness, as Uncle John went on.

"It was long before you were born, my dear, that, for some college peccadilloes,—it is so long ago that I have almost forgotten now what they were,—I was suspended (rusted as we called it) for a term, and advised by the grave and dignified president to spend my time in repenting and in keeping up with my class. I had no mind to come home; I had no wish, by my presence, to keep the memory of my misdemeanors before my father's mind for six months; so I asked and gained leave to spend the summer in a little town in Western Massachusetts, where, as I said, I should have nothing to tempt me from my studies. I had heard from a classmate what famous

shooting and fishing were to be found there, and I knew something of the beauty of Berkshire scenery; but I honorably intended to study well and faithfully, taking only the moderate amount of recreation necessary for my health.

"I went, and soon established myself in a quiet farm-house with my books, gun, and fishing-rod, and had passed there a whole month with an approving conscience and tolerable success both in studies and sport, when the farmer announced one morning, that, as he had one boarder, he might as well take another, and that a New York lady had been inquiring of his neighbor Johnson, when he was in the city last week, for some farm-house where they would be willing to take her cheap for the summer. She could have the best room, and he didn't suppose she'd be in anybody's way, so he had told Johnson that she might come, if she would put up with their country fare.

"She came the next week. She was a widow, some thirty years old, ten years older than I was. I did not think her pretty,—perhaps *piquante*, but that was all. In my first fastidiousness, I thought her hardly lady-like, and laughed at her evident attempts to attract my notice,—at her little vanities and affectations. But I do not know; we were always together; I saw no other woman but the farmer's wife. There were the mountain walks, the trees, the flowers, the moonlight; she talked so well upon them all! In short, you do not know, no young girl can know, the influence which a woman in middle life, if she has anything in her, has over a young man; and she,—she had shrewdness and a certain talent, and, I think now, knew what she was doing,—at any rate, I fell madly in love. I knew my father would never consent to my marrying then; I knew I was ruining my prospects by doing so; but that very knowledge only made me more eager to secure her.

"She was entirely independent of control, being left a widow with some little property, and threw no obstacles in my

way. We were married there, in that little village, and for a few weeks I lived in a fool's paradise.

"I could not tell you—indeed, I would not tell you, if I could—how by degrees I found out what I had done,—that I had flung away my heart on a woman who married me simply to secure herself the position in society which her own imprudence had lost; how, when she found I had nothing to offer her but a home in my father's house, entirely dependent upon him, she accused me of having deceived her for the sake of her own miserable pittance; how she made herself the common talk of Newport by her dissipation, her extravagance, her affectations; how her love of excitement led her into such undisguised flirtations, under the name of friendships, with almost every man she met, that her imprudences, to call them by no harsher name, made my father insist, that, for my mother's sake, I should seek another home.

"I did so, but it was only to go through a repetition of similar scenes, of daring follies on her part, and reproaches on mine. At last, desperate, I induced my father to settle on her what would have been my share of his property on condition that she should return to New York, —while I, crushed down, mortified, and ashamed to look my friends in the face, and sick of the wrongs and follies of civilized life, grasped eagerly at an opportunity to join a fur-trading party, and buried myself alive in the wilds of the Northwest.

"I had no object in going there but to escape from my wife and from myself; but, once there, the charm of that free life took possession of me; adventure followed adventure; opportunities opened to me, and I grew to be an influential person, and made myself a home among the Indians. It is a wild life that the Indian traders live up in that far-away country, and many a reckless deed is done there which public opinion would frown upon here. I am afraid I was no better than my companions; I lived my life and drew from it whatever enjoy-

ment it would bring; but, at least, I did not brutalize myself as some of them did; for that I may thank the refining influence of my early education. Meantime, I was almost lost to my family, and, indeed, I hardly regretted it, for nothing would have brought me back while my wife lived, and, if I were not to be with my friends, why eat my heart out with longings for them? So, for nearly twenty years, I lived the life of adventure, danger, and privation, that draws its only charm from its independence.

"At last came a letter from your mother. It found its way to me from fort to fort, brought up part of the way with the letters to the troops stationed at our upper forts, then carried by the Indian runners to the trading-posts of the fur-companies till it reached me in the depths of the Rocky Mountains. My wife was dead,—she had died suddenly; my property, all that she had not squandered, (and it was so tied up by my father's forethought that she could only throw away a part of it,) was my own again; my sister longed to see me, and promised me a welcome to her house and heart. I grew restless from that moment, and, converting into money the not inconsiderable wealth with which I had surrounded myself in the shape of furs, horses, buffalo-robcs, and so forth, I came down to the States again to begin life anew, a man of forty-five, my head whitened, and my features marked before their time from the life of exposure which I had led. Alice, I, too, was too late. I had dropped out of the tide of life and progress in my twenty years' seclusion, and, struggle as I might, I could not retrieve the time lost. The present age knew not of me,—I had lost my place in it; the thoughts, feelings, habits, of all around were strange to me; I had been pushed out of the line of march, and never could I fall into step again. In society, in business, in domestic life, it was all the same. Trial after trial taught me, at last, the truth; and when I had learned not only to believe it, but to accept it, I came home to my father's house, now mine, and made

myself friends of my books,—those faithful ones who were as true to me as if I had never deserted them. They have brought me content, if not happiness; and you, Alice, you and Kate, you have filled fully an old man's heart."

Alice's tears were dropping fast on Uncle John's hand as she said,—

"I will be more to you henceforward than ever before. I have nothing else to give for now. Kate is the home child;

but I—I will stay with you, and you shall teach me, too, to be contented,—to find my happiness, as you do, in making the happiness of all around."

Uncle John passed his other hand over her hair,—

"You shall stay with me for the present, my darling,—perhaps as long as I live. But life is not over for you, Alice. You have youth,—you have years in store. For you it is not *too late*."

AN EVENING MELODY

Oh that yon pines which crown the steep
Their fires might ne'er surrender !
Oh that yon fervid knoll might keep,
While lasts the world, its splendor !

Pale poplars on the wind that lean,
And in the sunset shiver,
Oh that your golden stems might screen
For aye yon glassy river !

That yon white bird on homeward wing
Soft-sliding without motion,
And now in blue air vanishing
Like snow-flake lost in ocean,

Beyond our sight might never flee,
Yet onward still be flying ;
And all the dying day might be
Immortal in its dying !

Pellucid thus in golden trance,
Thus mute in expectation,
What waits the Earth ? Deliverance ?
Ah, no ! Transfiguration !

She dreams of that New Earth divine,
Conceived of seed immortal :
She sings, "Not mine the holier shrine,
But mine the cloudy portal !"

CHESUNCOOK.

[Concluded.]

EARLY the next morning we started on our return up the Penobscot, my companion wishing to go about twenty-five miles above the Moosehead carry to a camp near the junction of the two forks, and look for moose there. Our host allowed us something for the quarter of the moose which we had brought, and which he was glad to get. Two explorers from Chamberlain Lake started at the same time that we did. Red flannel shirts should be worn in the woods, if only for the fine contrast which this color makes with the evergreens and the water. Thus I thought when I saw the forms of the explorers in their birch, poling up the rapids before us, far off against the forest. It is the surveyor's color also, most distinctly seen under all circumstances. We stopped to dine at Ragmuff, as before. My companion it was who wandered up the stream to look for moose this time, while Joe went to sleep on the bank, so that we felt sure of him; and I improved the opportunity to botanize and bathe. Soon after starting again, while Joe was gone back in the canoe for the frying-pan, which had been left, we picked a couple of quarts of tree-cranberries for a sauce.

I was surprised by Joe's asking me how far it was to the Moosehorn. He was pretty well acquainted with this stream, but he had noticed that I was curious about distances, and had several maps. He, and Indians generally, with whom I have talked, are not able to describe dimensions or distances in our measures with any accuracy. He could tell, perhaps, at what time we should arrive, but not how far it was. We saw a few wood-ducks, sheldrakes, and black ducks, but they were not so numerous there at that season as on our river at home. We scared the same family of wood-ducks before us, going and return-

ing. We also heard the note of one fish-hawk, somewhat like that of a pigeon-woodpecker, and soon after saw him perched near the top of a dead white-pine against the island where we had first camped, while a company of peewees were twittering and teetering about over the carcass of a moose on a low sandy spit just beneath. We drove the fish-hawk from perch to perch, each time eliciting a scream or whistle, for many miles before us. Our course being up-stream, we were obliged to work much harder than before, and had frequent use for a pole. Sometimes all three of us paddled together, standing up, small and heavily laden as the canoe was. About six miles from Moosehead, we began to see the mountains east of the north end of the lake, and at four o'clock we reached the carry.

The Indians were still encamped here. There were three, including the St. Francis Indian who had come in the steamer with us. One of the others was called Sabattis. Joe and the St. Francis Indian were plainly clear Indian, the other two apparently mixed Indian and white; but the difference was confined to their features and complexions, for all that I could see. We here cooked the tongue of the moose for supper,—having left the nose, which is esteemed the choicest part, at Chesuncook, boiling, it being a good deal of trouble to prepare it. We also stewed our tree-cranberries, (*Viburnum opulus*.) sweetening them with sugar. The lumberers sometimes cook them with molasses. They were used in Arnold's expedition. This sauce was very grateful to us who had been confined to hard bread, pork, and moose-meat, and, notwithstanding their seeds, we all three pronounced them equal to the common cranberry; but perhaps some allowance is to be made for our forest appetites. It

would be worth the while to cultivate them, both for beauty and for food. I afterward saw them in a garden in Bangor. Joe said that they were called *ebemenar*.

While we were getting supper, Joe commenced curing the moose-hide, on which I had sat a good part of the voyage, he having already cut most of the hair off with his knife at the Caucomgomoc. He set up two stout forked poles on the bank, seven or eight feet high, and as much asunder east and west, and having cut slits eight or ten inches long, and the same distance apart, close to the edge, on the sides of the hide, he threaded poles through them, and then, placing one of the poles on the forked stakes, tied the other down tightly at the bottom. The two ends also were tied with cedar bark, their usual string, to the upright poles, through small holes at short intervals. The hide, thus stretched, and slanted a little to the north, to expose its flesh side to the sun, measured, in the extreme, eight feet long by six high. Where any flesh still adhered, Joe boldly scored it with his knife to lay it open to the sun. It now appeared somewhat spotted and injured by the duck shot. You may see the old frames on which hides have been stretched at many camping-places in these woods.

For some reason or other, the going to the forks of the Penobscot was given up, and we decided to stop here, my companion intending to hunt down the stream at night. The Indians invited us to lodge with them, but my companion inclined to go to the log-camp on the carry. This camp was close and dirty, and had an ill smell, and I preferred to accept the Indians' offer, if we did not make a camp for ourselves; for, though they were dirty, too, they were more in the open air, and were much more agreeable, and even refined company, than the lumberers. The most interesting question entertained at the lumberers' camp was, which man could "handle" any other on the carry; and, for the most part, they possessed no qualities which you could

not lay hands on. So we went to the Indians' camp or wigwam.

It was rather windy, and therefore Joe concluded to hunt after midnight, if the wind went down, which the other Indians thought it would not do, because it was from the south. The two mixed bloods, however, went off up the river for moose at dark, before we arrived at their camp. This Indian camp was a slight, patched-up affair, which had stood there several weeks, built shed-fashion, open to the fire on the west. If the wind changed, they could turn it round. It was formed by two forked stakes and a cross-bar, with rafters slanted from this to the ground. The covering was partly an old sail, partly birch-bark, quite imperfect, but securely tied on, and coming down to the ground on the sides. A large log was rolled up at the back side for a head-board, and two or three moose-hides were spread on the ground with the hair up. Various articles of their wardrobe were tucked around the sides and corners, or under the roof. They were smoking moose-meat on just such a crate as is represented by With in De Bry's "*Collectio Peregrinationum*," published in 1588, and which the natives of Brazil called *boucan*, (whence buccaneer,) on which were frequently shown pieces of human flesh drying along with the rest. It was erected in front of the camp over the usual large fire, in the form of an oblong square. Two stout forked stakes, four or five feet apart and five feet high, were driven into the ground at each end, and then two poles ten feet long were stretched across over the fire, and smaller ones laid transversely on these a foot apart. On the last hung large, thin slices of moose-meat smoking and drying, a space being left open over the centre of the fire. There was the whole heart, black as a thirty-two pound ball, hanging at one corner. They said, that it took three or four days to cure this meat, and it would keep a year or more. Refuse pieces lay about on the ground in different stages of decay; and some pieces also in the fire, half buried and sizzling in

the ashes, as black and dirty as an old shoe. These last I at first thought were thrown away, but afterwards found that they were being cooked. Also a tremendous rib-piece was roasting before the fire, being impaled on an upright stake forced in and out between the ribs. There was a moose-hide stretched and curing on poles like ours, and quite a pile of cured skins close by. They had killed twenty-two moose within two months, but, as they could use but very little of the meat, they left the carcasses on the ground. Altogether it was about as savage a sight as was ever witnessed, and I was carried back at once three hundred years. There were many torches of birch-bark, shaped like straight tin horns, lying ready for use on a stump outside.

For fear of dirt, we spread our blankets over their hides, so as not to touch them anywhere. The St. Francis Indian and Joe alone were there at first, and we lay on our backs talking with them till midnight. They were very sociable, and, when they did not talk with us, kept up a steady chatting in their own language. We heard a small bird just after dark, which, Joe said, sang at a certain hour in the night, — at ten o'clock, he believed. We also heard the hylodes and tree-toads, and the lumberers singing in their camp a quarter of a mile off. I told them that I had seen pictured in old books pieces of human flesh drying on these crates; whereupon they repeated some tradition about the Mohawks eating human flesh, what parts they preferred, etc., and also of a battle with the Mohawks near Moosehead, in which many of the latter were killed; but I found that they knew but little of the history of their race, and could be entertained by stories about their ancestors as readily as any way. At first I was nearly roasted out, for I lay against one side of the camp, and felt the heat reflected not only from the birch-bark above, but from the side; and again I remembered the sufferings of the Jesuit missionaries, and what extremes of heat and cold the Indians were said

to endure. I struggled long between my desire to remain and talk with them, and my impulse to rush out and stretch myself on the cool grass; and when I was about to take the last step, Joe, hearing my murmurs, or else being uncomfortable himself, got up and partially dispersed the fire. I suppose that that is Indian manners,—to defend yourself.

While lying there listening to the Indians, I amused myself with trying to guess at their subject by their gestures, or some proper name introduced. There can be no more startling evidence of their being a distinct and comparatively aboriginal race, than to hear this unaltered Indian language, which the white man cannot speak nor understand. We may suspect change and deterioration in almost every other particular, but the language which is so wholly unintelligible to us. It took me by surprise, though I had found so many arrow-heads, and convinced me that the Indian was not the invention of historians and poets. It was a purely wild and primitive American sound, as much as the barking of a *chickaree*, and I could not understand a syllable of it; but Pausanias, had he been there, would have understood it. These Abenakis gossiped, laughed, and jested, in the language in which Eliot's Indian Bible is written, the language which has been spoken in New England who shall say how long? These were the sounds that issued from the wigwams of this country before Columbus was born; they have not yet died away; and, with remarkably few exceptions, the language of their forefathers is still copious enough for them. I felt that I stood, or rather lay, as near to the primitive man of America, that night, as any of its discoverers ever did.

In the midst of their conversation, Joe suddenly appealed to me to know how long Moosehead Lake was.

Meanwhile, as we lay there, Joe was making and trying his horn, to be ready for hunting after midnight. The St. Francis Indian also amused himself with

sounding it, or rather calling through it; for the sound is made with the voice, and not by blowing through the horn. The latter appeared to be a speculator in moose-hides. He bought my companion's for two dollars and a quarter, green. Joe said that it was worth two and a half at Oldtown. Its chief use is for moccasins. One or two of these Indians wore them. I was told, that, by a recent law of Maine, foreigners are not allowed to kill moose there at any season; white Americans can kill them only at a particular season, but the Indians of Maine at all seasons. The St. Francis Indian accordingly asked my companion for a *wighiggin*, or bill, to show, since he was a foreigner. He lived near Sorel. I found that he could write his name very well, *Tahmunt Swasen*. One Ellis, an old white man of Guilford, a town through which we passed, not far from the south end of Mooshead, was the most celebrated moose-hunter of those parts. Indians and whites spoke with equal respect of him. Tahmunt said, that there were more moose here than in the Adirondack country in New York, where he had hunted; that three years before there were a great many about, and there were a great many now in the woods, but they did not come out to the water. It was of no use to hunt them at midnight,—they would not come out then. I asked Sabattis, after he came home, if the moose never attacked him. He answered, that you must not fire many times so as to mad him. "I fire once and hit him in the right place, and in the morning I find him. He won't go far. But if you keep firing, you mad him. I fired once five bullets, every one through the heart, and he did not mind 'em at all; it only made him more mad." I asked him if they did not hunt them with dogs. He said, that they did so in winter, but never in the summer, for then it was of no use; they would run right off straight and swiftly a hundred miles.

Another Indian said, that the moose, once scared, would run all day. A dog

will hang to their lips, and be carried along till he is swung against a tree and drops off. They cannot run on a "glaze," though they can run in snow four feet deep; but the caribou can run on ice. They commonly find two or three moose together. They cover themselves with water, all but their noses, to escape flies. He had the horns of what he called "the black moose that goes in low lands." These spread three or four feet. The "red moose" was another kind, "running on mountains," and had horns which spread six feet. Such were his distinctions. Both can move their horns. The broad flat blades are covered with hair, and are so soft, when the animal is alive, that you can run a knife through them. They regard it as a good or bad sign, if the horns turn this way or that. His caribou horns had been gnawed by mice in his wigwam, but he thought that the horns neither of the moose nor of the caribou were ever gnawed while the creature was alive, as some have asserted. An Indian, whom I met after this at Oldtown, who had carried about a bear and other animals of Maine to exhibit, told me that thirty years ago there were not so many moose in Maine as now; also, that the moose were very easily tamed, and would come back when once fed, and so would deer, but not caribou. The Indians of this neighborhood are about as familiar with the moose as we are with the ox, having associated with them for so many generations. Father Rasles, in his Dictionary of the Abenaki Language, gives not only a word for the male moose, (*aiambé*), and another for the female, (*hèrar*.) but for the bone which is in the middle of the heart of the moose (!), and for his left hind-leg.

There were none of the small deer up there; they are more common about the settlements. One ran into the city of Bangor two years before, and jumped through a window of costly plate glass, and then into a mirror, where it thought it recognized one of its kind, and out again, and so on, leaping over the heads

of the crowd, until it was captured. This the inhabitants speak of as the deer that went a-shopping. The last-mentioned Indian spoke of the *lunxus* or Indian devil, (which I take to be the cougar, and not the *Gulo luscus*.) as the only animal in Maine which man need fear; it would follow a man, and did not mind a fire. He also said, that beavers were getting to be pretty numerous again, where we went, but their skins brought so little now that it was not profitable to hunt them.

I had put the ears of our moose, which were ten inches long, to dry along with the moose-meat over the fire, wishing to preserve them; but Sabattis told me that I must skin and cure them, else the hair would all come off. He observed, that they made tobacco-pouches of the skins of their ears, putting the two together inside to inside. I asked him how he got fire; and he produced a little cylindrical box of friction-matches. He also had flints and steel, and some punk, which was not dry; I think it was from the yellow birch. "But suppose you upset, and all these and your powder get wet." "Then," said he, "we wait till we get to where there is some fire." I produced from my pocket a little vial, containing matches, stoppered water-tight, and told him, that, though we were upset, we should still have some dry matches; at which he stared without saying a word.

We lay awake thus a long while talking, and they gave us the meaning of many Indian names of lakes and streams in the vicinity,—especially Tahmunt. I asked the Indian name of Moosehead Lake. Joe answered, *Sebamook*; Tahmunt pronounced it *Sebemook*. When I asked what it meant, they answered, Moosehead Lake. At length, getting my meaning, they alternately repeated the word over to themselves, as a philologist might,—*Sebamook*,—*Sebamook*,—now and then comparing notes in Indian; for there was a slight difference in their dialects; and finally Tahmunt said, "Ugh! I know,"—and he rose up

partly on the moose-hide,—“like as here is a place, and there is a place,” pointing to different parts of the hide, “and you take water from there and fill this, and it stays here; that is *Sebamook*.” I understood him to mean that it was a reservoir of water which did not run away, the river coming in on one side and passing out again near the same place, leaving a permanent bay. Another Indian said, that it meant Large-Bay Lake, and that *Sebago* and *Sebec*, the names of other lakes, were kindred words, meaning large open water. Joe said that *Seboois* meant Little River. I observed their inability, often described, to convey an abstract idea. Having got the idea, though indistinctly, they groped about in vain for words with which to express it. Tahmunt thought that the whites called it Moosehead Lake, because Mount Kineo, which commands it, is shaped like a moose’s head, and that Moose River was so called “because the mountain points right across the lake to its mouth.” John Josselyn, writing about 1673, says, “Twelve miles from Casco Bay, and passable for men and horses, is a lake, called by the Indians Sebug. On the brink thereof, at one end, is the famous rock, shaped like a moose deer or helk, diaphanous, and called the Moose Rock.” He appears to have confounded *Sebamook* with *Sebago*, which is nearer, but has no “diaphanous” rock on its shore.

I give more of their definitions, for what they are worth,—partly *because* they differ sometimes from the commonly received ones. They never analyzed these words before. After long deliberation and repeating of the word, for it gave much trouble, Tahmunt said that *Chesuncook* meant a place where many streams emptied in (?), and he enumerated them,—Penobscot, Umbazookskus, Cusabesex, Red Brook, etc.—“*Caucomgomoc*,—what does that mean?” “What are those large white birds?” he asked. “Gulls,” said I. “Ugh! Gull Lake.”—*Pammadumcook*, Joe thought, meant the Lake with Gravelly Bottom

or Bed.—*Kenduskeag*, Tahmunt concluded at last, after asking if birches went up it, for he said that he was not much acquainted with it, meant something like this: "You go up *Penobscot* till you come to *Kenduskeag*, and you go by, you don't turn up there. That is *Kenduskeag*." (?) Another Indian, however, who knew the river better, told us afterward that it meant Little Eel River.—*Mattawamkeag* was a place where two rivers meet. (?)—*Penobscot* was Rocky River. One writer says, that this was "originally the name of only a section of the main channel, from the head of the tide-water to a short distance above Oldtown."

A very intelligent Indian, whom we afterward met, son-in-law of Neptune, gave us also these other definitions:—*Umbazooksus*, Meadow Stream; *Millinoket*, Place of Islands; *Aboljacarmegus*, Smooth-Ledge Falls (and Dead-Water); *Aboljacarmeguscook*, the stream emptying in; (the last was the word he gave when I asked about *Aboljacknagesic*, which he did not recognize;) *Mattahumkeag*, Sand-Creek Pond; *Piscataquis*, Branch of a River.

I asked our hosts what *Musketaquid*, the Indian name of Concord, Mass., meant; but they changed it to *Musketicook*, and repeated that, and Tahmunt said that it meant Dead Stream, which is probably true. *Cook* appears to mean stream, and perhaps *quid* signifies the place or ground. When I asked the meaning of the names of two of our hills, they answered that they were another language. As Tahmunt said that he traded at Quebec, my companion inquired the meaning of the word *Quebec*, about which there has been so much question. He did not know, but began to conjecture. He asked what those great ships were called that carried soldiers. "Men-of-war," we answered. "Well," he said, "when the English ships came up the river, they could not go any further, it was so narrow there; they must go back,—go-back,—that's *Que-bec*." I mention this to show the

value of his authority in the other cases.

Late at night the other two Indians came home from moose-hunting, not having been successful, aroused the fire again, lighted their pipes, smoked awhile, took something strong to drink, and ate some moose-meat, and, finding what room they could, lay down on the moose-hides; and thus we passed the night, two white men and four Indians, side by side.

When I awoke in the morning the weather was drizzling. One of the Indians was lying outside, rolled in his blanket, on the opposite side of the fire, for want of room. Joe had neglected to awake my companion, and he had done no hunting that night. Tahmunt was making a cross-bar for his canoe with a singularly shaped knife, such as I have since seen other Indians using. The blade was thin, about three quarters of an inch wide, and eight or nine inches long, but curved out of its plane into a hook, which he said made it more convenient to shave with. As the Indians very far north and northwest use the same kind of knife, I suspect that it was made according to an aboriginal pattern, though some white artisans may use a similar one. The Indians baked a loaf of flour bread in a spider on its edge before the fire for their breakfast; and while my companion was making tea, I caught a dozen sizable fishes in the *Penobscot*, two kinds of sucker and one trout. After we had breakfasted by ourselves, one of our bedfellows, who had also breakfasted, came along, and, being invited, took a cup of tea, and finally, taking up the common platter, licked it clean. But he was nothing to a white fellow, a lumberer, who was continually stuffing himself with the Indians' moose-meat, and was the butt of his companions accordingly. He seems to have thought that it was a feast "to eat all." It is commonly said that the white man finally surpasses the Indian on his own ground, and it was proved true in this case. I cannot swear to his employment during the hours of darkness, but I saw him at it again as soon as it was light,

though he came a quarter of a mile to his work.

The rain prevented our continuing any longer in the woods; so giving some of our provisions and utensils to the Indians, we took leave of them. This being the steamer's day, I set out for the lake at once. At the carry-man's camp I saw many little birds, brownish and yellowish, with some white tail-feathers, hopping on the wood-pile, in company with the slate-colored snow-bird, (*Fringilla hiemalis*,) but more familiar than they. The lumberers said that they came round their camps, and they gave them a vulgar name. Their simple and lively note, which was heard in all the woods, was very familiar to me, though I had never before chanced to see the bird while uttering it, and it interested me not a little, because I had had many a vain chase in a spring-morning in the direction of that sound, in order to identify the bird. On the 28th of the next month, (October,) I saw in my yard, in a drizzling day, many of the same kind of birds flitting about amid the weeds, and uttering a faint *chip* merely. There was one full-plumaged Yellow-crowned Warbler (*Sylvia coronata*) among them, and I saw that the others were the young birds of that season. They had followed me from Moosehead and the North. I have since frequently seen the full-plumaged ones while uttering that note in the spring.

I walked over the carry alone and waited at the head of the lake. An eagle, or some other large bird, flew screaming away from its perch by the shore at my approach. For an hour after I reached the shore there was not a human being to be seen, and I had all that wide prospect to myself. I thought that I heard the sound of the steamer before she came in sight on the open lake. I noticed at the landing, when the steamer came in, one of our bedfellows, who had been a-moose-hunting the night before, now very sprucely dressed in a clean white shirt and fine black pants, a true Indian dandy, who had evidently come over the carry to show himself to any

arrivers on the north shore of Moosehead Lake, just as New York dandies take a turn up Broadway and stand on the steps of a hotel.

Midway the lake we took on board two manly-looking middle-aged men, with their *bateau*, who had been exploring for six weeks as far as the Canada line, and had let their beards grow. They had the skin of a beaver, which they had recently caught, stretched on an oval hoop, though the fur was not good at that season. I talked with one of them, telling him that I had come all this distance partly to see where the white-pine, the Eastern stuff of which our houses are built, grew, but that on this and a previous excursion into another part of Maine I had found it a scarce tree; and I asked him where I must look for it. With a smile, he answered, that he could hardly tell me. However, he said that he had found enough to employ two teams the next winter in a place where there was thought to be none left. What was considered a "tip-top" tree now was not looked at twenty years ago, when he first went into the business; but they succeeded very well now with what was considered quite inferior timber then. The explorer used to cut into a tree higher and higher up, to see if it was false-hearted, and if there was a rotten heart as big as his arm, he let it alone; but now they cut such a tree, and sawed it all around the rot, and it made the very best of boards, for in such a case they were never shaky.

One connected with lumbering operations at Bangor told me that the largest pine belonging to his firm, cut the previous winter, "scaled" in the woods four thousand five hundred feet, and was worth ninety dollars in the log at the Bangor boom in Oldtown. They cut a road three and a half miles long for this tree alone. He thought that the principal locality for the white-pine that came down the Penobscot now was at the head of the East Branch and the Allegash, about Webster Stream and Eagle and Chamberlain Lakes. Much timber has been stolen

from the public lands. (Pray, what kind of forest-warden is the Public itself?) I heard of one man who, having discovered some particularly fine trees just within the boundaries of the public lands, and not daring to employ an accomplice, cut them down, and by means of block and tackle, without cattle, tumbled them into a stream, and so succeeded in getting off with them without the least assistance. Surely, stealing pine-trees in this way is not so mean as robbing hen-roosts.

We reached Monson that night, and the next day rode to Bangor, all the way in the rain again, varying our route a little. Some of the taverns on this road, which were particularly dirty, were plainly in a transition state from the camp to the house.

The next forenoon we went to Oldtown. One slender old Indian on the Oldtown shore, who recognized my companion, was full of mirth and gestures, like a Frenchman. A Catholic priest crossed to the island in the same *bateau* with us. The Indian houses are framed, mostly of one story, and in rows one behind another, at the south end of the island, with a few scattered ones. I counted about forty, not including the church and what my companion called the council-house. The last, which I suppose is their town-house, was regularly framed and shingled like the rest. There were several of two stories, quite neat, with front-yards inclosed, and one at least had green blinds. Here and there were moose-hides stretched and drying about them. There were no cart-paths, nor tracks of horses, but foot-paths; very little land cultivated, but an abundance of weeds, indigenous and naturalized; more introduced weeds than useful vegetables, as the Indian is said to cultivate the vices rather than the virtues of the white man. Yet this village was cleaner than I expected, far cleaner than such Irish villages as I have seen. The children were not particularly ragged nor dirty. The little boys met us with bow in hand and arrow on string, and cried, "Put up a

cent." Verily, the Indian has but a feeble hold on his bow now; but the curiosity of the white man is insatiable, and from the first he has been eager to witness this forest accomplishment. That elastic piece of wood with its feathered dart, so sure to be unstrung by contact with civilization, will serve for the type, the coat-of-arms of the savage. Alas for the Hunter Race! the white man has driven off their game, and substituted a cent in its place. I saw an Indian woman washing at the water's edge. She stood on a rock, and, after dipping the clothes in the stream, laid them on the rock, and beat them with a short club. In the grave-yard, which was crowded with graves, and overrun with weeds, I noticed an inscription in Indian, painted on a wooden grave-board. There was a large wooden cross on the island.

Since my companion knew him, he called on Governor Neptune, who lived in a little "ten-footer," one of the humblest of them all. Personalities are allowable in speaking of public men, therefore I will give the particulars of our visit. He was a-bed. When we entered the room, which was one half of the house, he was sitting on the side of the bed. There was a clock hanging in one corner. He had on a black frock-coat, and black pants, much worn, white cotton shirt, socks, a red silk handkerchief about his neck, and a straw hat. His black hair was only slightly grayed. He had very broad cheeks, and his features were decidedly and refreshingly different from those of any of the upstart Native American party whom I have seen. He was no darker than many old white men. He told me that he was eighty-nine; but he was going a-moose-hunting that fall, as he had been the previous one. Probably his companions did the hunting. We saw various squaws dodging about. One sat on the bed by his side and helped him out with his stories. They were remarkably corpulent, with smooth, round faces, apparently full of good-humor. Certainly our much-abused climate had not dried up their adipose substance.

While we were there,—for we stayed a good while,—one went over to Oldtown, returned and cut out a dress, which she had bought, on another bed in the room. The Governor said, that “he could remember when the moose were much larger; that they did not use to be in the woods, but came out of the water, as all deer did. Moose was whale once. Away down Merrimack way, a whale came ashore in a shallow bay. Sea went out and left him, and he came up on land a moose. What made them know he was a whale was, that at first, before he began to run in bushes, he had no bowels inside, but”——and then the squaw who sat on the bed by his side, as the Governor’s aid, and had been putting in a word now and then and confirming the story, asked me what we called that soft thing we find along the sea-shore. “Jelly-fish,” I suggested. “Yes,” said he, “no bowels, but jelly-fish.”

There may be some truth in what he said about the moose growing larger formerly; for the quaint John Josselyn, a physician who spent many years in this very district of Maine in the seventeenth century, says, that the tips of their horns “are sometimes found to be two fathoms asunder,”—and he is particular to tell us that a fathom is six feet,—“and [they are] in height, from the toe of the fore-foot to the pitch of the shoulder, twelve foot, both which hath been taken by some of my sceptique readers to be monstrous lies”; and he adds,—“There are certain transcendentia in every creature, which are the indelible character of God, and which discover God.” This is a greater dilemma to be caught in than is presented by the cranium of the young Bechuana ox, apparently another of the *transcendentia*, in the collection of Thomas Steel, Upper Brook Street, London, whose “entire length of horn, from tip to tip, along the curve, is 13 ft. 5 in.; distance (straight) between the tips of the horns, 8 ft. 8½ in.” However, the size both of the moose and the cougar, as I have found, is generally rather underrated than overrated, and I should

be inclined to add to the popular estimate a part of what I subtracted from Josselyn’s.

But we talked mostly with the Governor’s son-in-law, a very sensible Indian; and the Governor, being so old and deaf, permitted himself to be ignored, while we asked questions about him. The former said, that there were two political parties among them,—one in favor of schools, and the other opposed to them, or rather they did not wish to resist the priest, who was opposed to them. The first had just prevailed at the election and sent their man to the legislature. Neptune and Aitteon and he himself were in favor of schools. He said, “If Indians got learning, they would keep their money.” When we asked where Joe’s father, Aitteon, was, he knew that he must be at Lincoln, though he was about going a-moose-hunting, for a messenger had just gone to him there to get his signature to some papers. I asked Neptune if they had any of the old breed of dogs yet. He answered, “Yes.” “But that,” said I, pointing to one that had just come in, “is a Yankee dog.” He assented. I said that he did not look like a good one. “Oh, yes!” he said, and he told, with much gusto, how, the year before, he had caught and held by the throat a wolf. A very small black puppy rushed into the room and made at the Governor’s feet, as he sat in his stockings with his legs dangling from the bedside. The Governor rubbed his hands and dared him to come on, entering into the sport with spirit. Nothing more that was significant transpired, to my knowledge, during this interview. This was the first time that I ever called on a governor, but, as I did not ask for an office, I can speak of it with the more freedom.

An Indian who was making canoes behind a house, looking up pleasantly from his work,—for he knew my companion,—said that his name was Old John Pennyweight. I had heard of him long before, and I inquired after one of his contemporaries, Joe Four-pence-ha’penny; but, alas! he no longer circulates. I

made a faithful study of canoe-building, and I thought that I should like to serve an apprenticeship at that trade for one season, going into the woods for bark with my "boss," making the canoe there, and returning in it at last.

While the *bateau* was coming over to take us off, I picked up some fragments of arrow-heads on the shore, and one broken stone chisel, which were greater novelties to the Indians than to me. After this, on Old Fort Hill, at the bend of the Penobscot, three miles above Bangor, looking for the site of an Indian town which some think stood thereabouts, I found more arrow-heads, and two little dark and crumbling fragments of Indian earthenware, in the ashes of their fires. The Indians on the Island appeared to live quite happily and to be well treated by the inhabitants of Oldtown.

We visited Veazie's mills, just below the Island, where were sixteen sets of saws,—some gang saws, sixteen in a gang, not to mention circular saws. On one side, they were hauling the logs up an inclined plane by water-power; on the other, passing out the boards, planks, and sawed timber, and forming them into rafts. The trees were literally drawn and quartered there. In forming the rafts, they use the lower three feet of hard-wood saplings, which have a crooked and knobbed butt-end, for bolts, passing them up through holes bored in the corners and sides of the rafts, and keying them. In another apartment they were making fence-slats, such as stand all over New England, out of odds and ends,—and it may be that I saw where the picket-fence behind which I dwell at home came from. I was surprised to find a boy collecting the long edgings of boards as fast as cut off, and thrusting them down a hopper, where they were *ground up* beneath the mill, that they might be out of the way; otherwise they accumulate in vast piles by the side of the building, increasing the danger from fire, or, floating off, they obstruct the river. This was not only a saw-mill, but a grist-mill, then. The inhabitants of Oldtown, Stillwater, and

Bangor cannot suffer for want of kindling-stuff, surely. Some get their living exclusively by picking up the drift-wood and selling it by the cord in the winter. In one place I saw where an Irishman, who keeps a team and a man for the purpose, had covered the shore for a long distance with regular piles, and I was told that he had sold twelve hundred dollars' worth in a year. Another, who lived by the shore, told me that he got all the material of his out-buildings and fences from the river; and in that neighborhood I perceived that this refuse wood was frequently used instead of sand to fill hollows with, being apparently cheaper than dirt.

I got my first clear view of Katahdin, on this excursion, from a hill about two miles northwest of Bangor, whither I went for this purpose. After this I was ready to return to Massachusetts.

Humboldt has written an interesting chapter on the primitive forest, but no one has yet described for me the difference between that wild forest which once occupied our oldest townships, and the tame one which I find there to-day. It is a difference which would be worth attending to. The civilized man not only clears the land permanently to a great extent, and cultivates open fields, but he tames and cultivates to a certain extent the forest itself. By his mere presence, almost, he changes the nature of the trees as no other creature does. The sun and air, and perhaps fire, have been introduced, and grain raised where it stands. It has lost its wild, damp, and shaggy look, the countless fallen and decaying trees are gone, and consequently that thick coat of moss which lived on them is gone too. The earth is comparatively bare and smooth and dry. The most primitive places left with us are the swamps, where the spruce still grows shaggy with usnea. The surface of the ground in the Maine woods is everywhere spongy and saturated with moisture. I noticed that the plants which cover the forest floor there are such as are commonly confined to

swamps with us,—the *Clintonia borealis*, orchises, creeping snowberry, and others; and the prevailing aster there is the *Aster acuminatus*, which with us grows in damp and shady woods. The asters *cordifolius* and *macrophyllus* also are common, asters of little or no color, and sometimes without petals. I saw no soft, spreading, second-growth white-pines, with smooth bark, acknowledging the presence of the wood-chopper, but even the young white-pines were all tall and slender rough-barked trees.

Those Maine woods differ essentially from ours. There you are never reminded that the wilderness which you are threading is, after all, some villager's familiar wood-lot, some widow's thirds, from which her ancestors have sledded fuel for generations, minutely described in some old deed which is recorded, of which the owner has got a plan too, and old bound-marks may be found every forty rods, if you will search. 'Tis true, the map may inform you that you stand on land granted by the State to some academy, or on Bingham's purchase; but these names do not impose on you, for you see nothing to remind you of the academy or of Bingham. What were the "forests" of England to these? One writer relates of the Isle of Wight, that in Charles the Second's time "there were woods in the island so complete and extensive, that it is said a squirrel might have travelled in several parts many leagues together on the top of the trees." If it were not for the rivers, (and he might go round their heads,) a squirrel could here travel thus the whole breadth of the country.

We have as yet had no adequate account of a primitive pine-forest. I have noticed that in a physical atlas lately published in Massachusetts, and used in our schools, the "wood land" of North America is limited almost solely to the valleys of the Ohio and some of the Great Lakes, and the great pine-forests of the globe are not represented. In our vicinity, for instance, New Brunswick and Maine are exhibited as bare as

Greenland. It may be that the children of Greenville, at the foot of Moosehead Lake, who surely are not likely to be scared by an owl, are referred to the valley of the Ohio to get an idea of a forest; but they would not know what to do with their moose, bear, caribou, beaver, etc., there. Shall we leave it to an Englishman to inform us, that "in North America, both in the United States and Canada, are the most extensive pine-forests in the world"? The greater part of New Brunswick, the northern half of Maine, and adjacent parts of Canada, not to mention the northeastern part of New York and other tracts further off, are still covered with an almost unbroken pine-forest.

But Maine, perhaps, will soon be where Massachusetts is. A good part of her territory is already as bare and common-place as much of our neighborhood, and her villages generally are not so well shaded as ours. We seem to think that the earth must go through the ordeal of sheep-pasturage before it is habitable by man. Consider Nahant, the resort of all the fashion of Boston,—which peninsula I saw but indistinctly in the twilight, when I steamed by it, and thought that it was unchanged since the discovery. John Smith described it in 1614 as "the Mattahunts, two pleasant isles of groves, gardens, and cornfields"; and others tell us that it was once well wooded, and even furnished timber to build the wharves of Boston. Now it is difficult to make a tree grow there, and the visitor comes away with a vision of Mr. Tudor's ugly fences a rod high, designed to protect a few pear-shrubs. And what are we coming to in our Middlesex towns?—a bald, staring town-house, or meeting-house, and a bare liberty-pole, as leafless as it is fruitless, for all I can see. We shall be obliged to import the timber for the last, hereafter, or splice such sticks as we have;—and our ideas of liberty are equally mean with these. The very willow-rows lopped every three years for fuel or powder,—and every sizable

pine and oak, or other forest tree, cut down within the memory of man! As if individual speculators were to be allowed to export the clouds out of the sky, or the stars out of the firmament, one by one. We shall be reduced to gnaw the very crust of the earth for nutriment.

They have even descended to smaller game. They have lately, as I hear, invented a machine for chopping up huckleberry-bushes fine, and so converting them into fuel!—bushes which, for fruit alone, are worth all the pear-trees in the country many times over. (I can give you a list of the three best kinds, if you want it.) At this rate, we shall all be obliged to let our beards grow at least, if only to hide the nakedness of the land and make a sylvan appearance. The farmer sometimes talks of “brushing up,” simply as if bare ground looked better than clothed ground, than that which wears its natural vesture,—as if the wild hedges, which, perhaps, are more to his children than his whole farm beside, were *dirt*. I know of one who deserves to be called the Tree-hater, and, perhaps, to leave this for a new patronymic to his children. You would think that he had been warned by an oracle that he would be killed by the fall of a tree, and so was resolved to anticipate them. The journalists think that they cannot say too much in favor of such “improvements” in husbandry; it is a safe theme, like piety; but as for the beauty of one of these “model farms,” I would as lief see a patent churn and a man turning it. They are, commonly, places merely where somebody is making money, it may be counterfeiting. The virtue of making two blades of grass grow where only one grew before does not begin to be superhuman.

Nevertheless, it was a relief to get back to our smooth, but still varied landscape. For a permanent residence, it seemed to me that there could be no comparison between this and the wilderness, necessary as the latter is for a

resource and a background, the raw material of all our civilization. The wilderness is simple, almost to barrenness. The partially cultivated country it is which chiefly has inspired, and will continue to inspire, the strains of poets, such as compose the mass of any literature. Our woods are sylvan, and their inhabitants woodmen and rustics,—that is, *selvaggia*, and the inhabitants are *salvages*. A civilized man, using the word in the ordinary sense, with his ideas and associations, must at length pine there, like a cultivated plant, which clasps its fibres about a crude and undissolved mass of peat. At the extreme North, the voyagers are obliged to dance and act plays for employment. Perhaps our own woods and fields,—in the best wooded towns, where we need not quarrel about the huckleberries,—with the primitive swamps scattered here and there in their midst, but not prevailing over them, are the perfection of parks and groves, gardens, arbors, paths, vistas, and landscapes. They are the natural consequence of what art and refinement we as a people have,—the common which each village possesses, its true paradise, in comparison with which all elaborately and wilfully wealth-constructed parks and gardens are paltry imitations. Or, I would rather say, such *were* our groves twenty years ago. The poet's, commonly, is not a logger's path, but a woodman's. The logger and pioneer have preceded him, like John the Baptist; eaten the wild honey, it may be, but the locusts also; banished decaying wood and the spongy mosses which feed on it, and built hearths and humanized Nature for him.

But there are spirits of a yet more liberal culture, to whom no simplicity is barren. There are not only stately pines, but fragile flowers, like the orchises, commonly described as too delicate for cultivation, which derive their nutriment from the crudest mass of peat. These remind us, that, not only for strength, but for beauty, the poet must, from time to time, travel the logger's path

and the Indian's trail, to drink at some new and more bracing fountain of the Muses, far in the recesses of the wilderness.

The kings of England formerly had their forests "to hold the king's game," for sport or food, sometimes destroying villages to create or extend them; and I think that they were impelled by a true instinct. Why should not we, who have renounced the king's authority, have our national preserves, where no villages

need be destroyed, in which the bear and panther, and some even of the hunter race, may still exist, and not be "civilized off the face of the earth,"—our forests, not to hold the king's game merely, but to hold and preserve the king himself also, the lord of creation,—not for idle sport or food, but for inspiration and our own true re-creation? or shall we, like villains, grub them all up, poaching on our own national domains?

MY CHILDREN.

HAVE you seen Annie and Kitty,
Two merry children of mine?
All that is winning and pretty
Their little persons combine.

Annie is kissing and clinging
Dozens of times in a day,—
Chattering, laughing, and singing,
Romping, and running away.

Annie knows all of her neighbors,
Dainty and dirty alike,—
Learns all their talk, and, "be jabers,"
Says she "adores little Mike!"

Annie goes mad for a flower,
Eager to pluck and destroy,—
Cuts paper dolls by the hour,
Always her model—a boy!

Annie is full of her fancies,
Tells most remarkable lies,
(Innocent little romances,)
Startling in one of her size.

Three little prayers we have taught her,
Graded from winter to spring;
Oh, you should listen my daughter
Saying them all in a string!

Kitty—ah, how my heart blesses
Kitty, my lily, my rose!
Wary of all my caresses,
Chary of all she bestows.

Kitty loves quietest places,
Whispers sweet sermons to chairs,
And, with the gravest of faces,
Teaches old Carlo his prayers.

Matronly, motherly creature!
Oh, what a doll she has built—
Guiltless of figure or feature—
Out of her own little quilt!

Nought must come near it to wake it;
Noise must not give it alarm;
And when she sleeps, she must take it
Into her bed, on her arm.

Kitty is shy of a caller,
Uttering never a word;
But when alone in the parlor,
Talks to herself like a bird.

Kitty is contrary, rather,
And, with a comical smile,
Mutters, "I won't," to her father,—
Eyeing him slyly the while.

Loving one more than the other
Isn't the thing, I confess;
And I observe that their mother
Makes no distinction in dress.

Preference must be improper
In a relation like this;
I wouldn't toss up a copper—
(Kitty, come, give me a kiss!)

THE KINLOCH ESTATE, AND HOW IT WAS SETTLED.

[Continued.]

CHAPTER VII.

EARLY Monday morning, Mr. Hardwick walked across the green to call upon Mrs. Kinloch. Lucy Ransom, the housemaid, washing in the back-yard, saw him coming, and told her mistress;—before he rang, Mrs. Kinloch had time to tie on her lace cap, smooth her hair, and meet him in the hall.

"Good mum-morning, Mrs. Kinloch!"

"Walk in, Mr. Hardwick,—this way, into the sitting-room."

He took a seat quietly by the maple-shaded window. Mrs. Kinloch was silent and composed. Her coolness nerved instead of depressing him, and he began at once.

"I've ker-come to see you about the debt which my nun-nephew, Mark, owes the estate."

"I don't know what I can do about it," she replied, in a placid tone.

"We've ben nun-neighbors, now, these f-fifteen years, Mrs. Kinloch, and never h-had any difficulty th-that I know on. An' as the ler-law had been used per-pretty ha'sh toward Mark, I th-thought I'd see ef 'twa'n't per-possible 't some mistake had ben made."

"I don't know what mistake there has been. Squire Clamp must collect whatever is due. It isn't harsh to do that, is it?"

"Not ha'sh to a-ask for it, but not jest the ker-kind thing to bring ser-suit before askin'. Mark got a word 'and a ber-blow, but the blow came f-first. We didn't treat yer-you so when you was a widdier."

"So you go back to old times, and bring up my poverty and your charity, do you?" said the widow, bitterly.

"By nun-no means," replied the blacksmith. "I don't w-wish to open 'counts th-that 've ben settled so long; an' more, I don't intend to ber-ber-beg from you,

nor a-anybody else. We pay our debts, an' don't 'xpect nor don't wer-want to do any different."

"Then I don't see what you are so flurried about."

"Ef so be Squire Ker-Kinloch was alive, I could tell you ber-better; or rather, I shouldn't have to go to yer-you about it. He allers give Mark to underst-hand that he shouldn't be hard upon him,—th-that he could pay along as he ger-got able."

"Why should he favor him more than others? I am sure not many men would have lent the money in the first place, and I don't think it looks well to be hanging back now."

"As to why yer-your husband was disposed to favor Mark, I have my opinion. But the der-dead shall rest; I sh-sha'n't call up their pale faces." He drew his breath hard, and his eyes looked full of tender memories.

After a moment he went on. "I don't w-wish to waste words; I mum-merely come to say that Mark has five hundred dollars, and that I can scrape up a couple o' hunderd more, and will give my note w-with him for the balance. Th-that's all we can handily do; an' ef that 'll arnswer, we should ler-like to have you give word to stop the suit."

"You will have to go to Squire Clamp," was the reply. "I don't presume to dictate to my lawyer, but shall let him do what he thinks best. You haven't been to him, I conclude? I don't think he will be unreasonable."

Mr. Hardwick looked steadily at her.

"Wer-well, Mrs. Kinloch," said he, slowly, "I th-think I understand. Ef I don't, it isn't because you don't mum-make the matter plain. I sha'n't go to Squire Clamp till I have the mum-money, all of it. I hope no a-a-enemy of yourn

will be so hard to y-you as my friends are to me."

With singular command over her tongue and temper, Mrs. Kinloch contented herself with hoping that he would find no difficulty in arranging matters with the lawyer, bade him good-morning, civilly, and shut the door behind him. But when he was gone, her anger, kept so well under control before, burst forth.

"Stuttering old fool!" she exclaimed, "to come here to badger me!—to throw up to me the wood he cut, or the apples he brought me!—as though Mr. Kinloch hadn't paid that ten times over! He'll find how it is before long."

"What's the matter?" asked Mildred, meeting her step-mother in the hall, and noticing her flushed cheek, her swelling veins, and contorted brows.

"Why, nothing, but a talk with Uncle Ralph, who has been rather saucy."

"Saucy? Uncle Ralph saucy? Why, he is the most kindly man in the world,—sometimes hasty, but always well-mannered. I don't see how he could be saucy."

"I advise you not to stand up for him against your mother."

"I shouldn't defend him in anything wrong; but I think there must be some misunderstanding."

"He is like Mark, I suppose, always perfect in your eyes."

This was the first time since Mr. Kinloch's death that the step-mother had ever alluded to the fondness which had existed between Mark and Mildred as school-children, and her eyes were bent upon the girl eagerly. It was as though she had knocked at the door of her heart, and waited for its opening to look into the secret recesses. A quick flush suffused Mildred's face and neck.

"You are unkind, mother," she said; for the glance was sharper than the words; and then, bursting into tears, she went to her room.

"So it has come to this!" said Mrs. Kinloch to herself. "Well, I did not begin at all too soon."

She walked through the hall to the back piazza. She heard voices from beyond the shrubbery that bordered the grass-plot where the clothes were hung on lines to dry. Lucy, the maid, evidently was there, for one; indeed, by shifting her position so as to look through an opening in the bushes, Mrs. Kinloch could see the girl; but she was not busy with her clothes-basket. An arm was bent around her plump and graceful figure. The next instant, as Mrs. Kinloch saw by standing on tiptoe, two forms swayed toward each other, and Lucy, no way reluctantly, received a kiss from—Hugh Branning!

Very naughty, certainly,—but it is incumbent on me to tell the truth, and accordingly I have put it down.

Now my readers are doubtless prepared for a catastrophe. They will expect to hear Mrs. Kinloch cry, "Lucy Ransom, you jade, what are you doing? Take your clothes and trumpery and leave this house!" You will suppose that her son Hugh will be shut up in the cellar on bread and water, or sent off to sea in disgrace. That is the traditional way with angry mistresses, I know; but Mrs. Kinloch was not one of the common sort. She did not know Talleyrand's maxim,—"*Never act from first impulses, for they are always—right!*" Indeed, I doubt if she had ever heard of that slippery Frenchman; but observation and experience had led her to adopt a similar line of policy.

Therefore she did not scold or send away Lucy; she could not well do without her; and besides, there were reasons which made it desirable that the girl should remain friendly. She did not call out to her hopeful son, either,—although her fingers *did* itch to tweak his profligate ears. She knew that a dispute with him would only end in his going off in a huff, and she thought she could employ him better. So she coughed first and then stepped out into the yard. Hugh presently came sauntering down the walk, and Lucy sang among the clothes-lines as blithely and unconcerned as though

her lips had never tasted any flavor more piquant than bread and butter.

It was rather an equivocal look which the mistress cast over her shoulder at the girl. It might have said,—“Poor fool! singe your wings in the candle, if you will.” It might have been only the scorn of outraged virtue.

“Hugh,” said Mrs. Kinloch, “come into the house a moment. I want to speak with you.”

The young man looked up rather astonished, but he could not read his mother’s placid face. Her hair lay smooth on her temples, under her neat cap; her face was almost waxy pale, her lips gently pressed together; and if her clear, gray eyes had beamed with a warm or more humid light, she might have served a painter as a model for a

“steadfast nun, devout and pure.”

When they reached the sitting-room, Mrs. Kinloch began.

“Hugh, do you think of going to sea again? Now that I am alone in the world, don’t you think you can make up your mind to stay at home?”

“I haven’t thought much about it, mother. I suppose I should go when ordered, as a matter of course; I have nothing else to do.”

“That need not be a reason. There is plenty to do without waiting for promotion in the navy till you are gray.”

“Why, mother, you know I have no profession, and, I suppose I may say, no money. At least, the Squire made no provision for me that I know of, and I’m sure you cannot wish me to live on your ‘thirds.’”

“My son, you should have some confidence in my advice, by this time. It doesn’t require a great fortune to live comfortably here.”

“Yes, but it is deuced dull in this old town. No theatre,—no concert,—no music at all, but from organ-grinders,—no parties,—nothing, in fact, but prayer-meetings from one week’s end to another. I should die of the blues here.”

“Only find something to do, settle

yourself into a pleasant home, and you’ll forget your uneasiness.”

“That’s very well to say”——

“And very easy to do. But it isn’t the way to begin by flirting with every pretty, foolish girl you see. Oh, Hugh! you are all I have now to love. I shall grow old soon, and I want to lean upon you. Give up the navy; be advised by me.”

Hugh whistled softly. He did not suppose that his mother knew of his gallantry. He was amused at her sharp observation.

“So you think I’m a flirt, mother?” said he. “You are out, entirely. I’m a pattern of propriety—at home!”

“You need not tell me, Hugh! I know more than you think. But I didn’t know that a son of mine could be so simple as I find you are.”

“She’s after me,” thought Hugh. “She saw me, surely.”

His mother went on.

“With such an opportunity as you have to get yourself a wife —— Don’t laugh! I want to see you married, for you will never sow your wild oats until you are. With such a chance as you have”——

“Why, mother,” broke in Hugh, “it isn’t so bad as that.”

“Isn’t so bad? What do you mean?”

“Why, *you* know what you’re driving at, and so do I. Lucy is a good girl enough, but I never meant anything serious. There’s no need of my marrying her.”

“What *are* you talking about?”

“Now, mother, what’s the use? You are only trying to read me a moral lecture, because I gave Lucy a harmless smack.”

“Lucy Ransom!” repeated Mrs. Kinloch, with ineffable scorn. “Lucy Ransom! I hope my son isn’t low enough to dally with a housemaid, a scullion! If I *had* seen such a spectacle, I should have kept my mouth shut for shame. ‘A guilty conscience needs no accuser’; but I am sorry you had not pride enough to keep your disgusting fooleries to yourself.”

"Regularly sold!" muttered Hugh, as he beat a rat-tattoo on the window-pane.

"I gave you credit for more penetration, Hugh. Now, just look a minute. What would you think of the shrewdness of a young man, who had no special turn for business, but a great fondness for taking his ease,—with no money nor prospect of any,—and who, when he had the opportunity to step at once into fortune and position, made no movement to secure it?"

"Well, the application?"

"The fortune may be yours, if you will."

"Don't tell me riddles. Show me the prize, and I'm after it."

"But it has an incumbrance."

"Well?"

"A pretty, artless, affectionate little woman, who will make you the best wife in the world."

"Splendid, by Jove! Who is she?"

"You needn't look far. We generally miss seeing the thing that is under our nose."

"Why, mother, there isn't an heiress in Innisfield except my sister Mildred."

"Mildred is not your sister. You are no more to each other than the two farthest persons on earth."

"True enough! Well, mother, you are an old 'un!"

"Don't!"—with a look of disgust,—
"don't use your sailor slang here! To see that doesn't require any particular shrewdness."

"But Mildred never liked me much. She always ran from me, like the kitten from old Bose. She has always looked as though she thought I would bite, and that it was best she should keep out of reach under a chair."

"Any young man of good address and fair intelligence can make an impression on a girl of eighteen, if he has the will, the time, and the opportunity. You have everything in your favor, and if you don't take the fortune that lies right in your path, you deserve to go to the poor-house."

Hugh meditated.

"Good-morning," said Mrs. Kinloch. "You know the horse and carriage, or the saddle-ponies, are always yours when you want to use them."

Great discoveries seem always so simple, that we wonder they were not made from the first. The highest truths are linked with the commonest objects and events of daily life.

Hugh looked about him as much astonished as though he had been shown a gold mine in old Quobbin, where he could dig for the asking. What determination he made, the course of our story will show.

CHAPTER VIII.

HUGH had ordered George, the Asiatic, to saddle the ponies after dinner, intending to ask Mildred to take a ride northward, through the pine woods; but on making inquiries, he found that she had walked out, leaving word that she should be absent all day.

"Confound it!" thought he,—
"a mishap at the start! I'm afraid the omen isn't a good one. However, I must kill time some way. I can't lay up here, like a ship in ordinary; better be shaken by storms or covered with barnacles at sea than be housed up, worm-eaten or crumbled into powder by dry-rot on shore."

He went to ride alone, but did not go in the direction of the pine woods.

Mildred could not get over the unpleasant impressions of the morning, so, rather than remain in her room this fine day, she had walked across the meadow, east of the mill-pond, to a farm-house, where she was a frequent and welcome visitor. On her way, she called for Lizzy Hardwick, the blacksmith's daughter, who accompanied her. Mr. Alford, the farmer, was a blunt, good-humored, and rather eccentric man, shrewd and well to do, but kindly and charitable. He had no children, and he enjoyed the occasional visits of his favorites heartily; so did his wife, Aunt Mercy. Her broad face brightened as she saw the

girls coming, and her plump hands were both extended to greet them. They went to the dairy to see the creaking cheese-presses, ate of the fresh curd, saw the golden stores of butter;—thence to the barn, where they clambered upon the hay-mow, found the nest of a bantam, took some of the little eggs in their pockets;—then coming into the yard, they patted the calves' heads, scattered oats for the doves, that, with pink feet and pearly blue necks, crowded around them to be fed, and next began to chase a fine old gander down to the brook, when Mr. Alford, getting over the fence, called out, "Hold on, girls! don't bother Uncle Ralph!—don't!"

"Where is Uncle Ralph?" asked Mildred.

"Why, that gander you've been chasing; and he's about the harn'somest bird I know on, too. Talk about swans! there never was a finer neck, nor a prettier coat of feathers on anything that ever swum. His wings are powerful; only let him spread 'em, and up he goes; but as for his feet, he limps just a little, as you see. No offence, Lizzy. I love your father as well as you do; but when I hear him, with his ideas so grand,—the minister don't begin with him,—and yet to be bothered, as he is sometimes, to get a word out, I think of my good old fellow here, whose wings are so much better'n his legs. Come here, Ralph! You see he knows his name. There!"—patting his head,—"*that's a good fellow!* Now go and help marm attend to your goss-lins."

The kindly tone and the caress took away from the comparison any idea of disrespect, and the girls laughed at the odd conceit,—Lizzy, at least, not a little proud of the implied compliment. Mr. Alford left them, to attend to his affairs, and they went on with their romp,—running on the top of the smooth wall beside the meadow, gathering clusters of lilac blossoms from the fatherly great posy that grew on the sunny side of the house, and admiring the solitary state of the peacock, as, with dainty step, he trailed

his royal robe over the sward. Soon they heard voices at the house, and, going round the corner of the shed, saw Uncle Ralph and Mark Davenport talking with Mr. Alford at the door.

Not to make a mystery of a simple matter, the blacksmith had come to borrow of Mr. Alford the money necessary to make up the amount owing by Mark to the Kinloch estate.

The young man had shown great readiness to accompany his uncle; praiseworthy, certainly; but I am inclined to think he had somehow got an intimation that the girls had preceded him.

Fortunately, the farmer was able to lend the sum wanted, and, as he had an errand in town, he took Mr. Hardwick with him in his wagon.

Mark was left, nothing loath, to walk home with the girls. Do not think he was wanting in affection for his cousin Lizzy, if he wished that she were, just for one hour, a hundred miles away. They took a path that led over the plain to the river, intending to cross upon a foot-bridge, a short distance above the village. But though Mark was obliged to be silent on the matter he had most at heart, Mildred was not unaware of his feelings. A tone, a look, a grasp of the hand serves for an index, quite as well as the most fervent speech. The river makes a beautiful bend near the foot-bridge, and its bank is covered with a young growth of white pines. They sat down on a hillock, under the trees, whose spicy perfume filled the air, and looked down the stream towards the village. How fair it lay in the soft air of that June day! The water was deep and blue, with a reflected heaven. The mills that cluster about the dam, a mile below, were partially concealed by young elms, silver-poplars, and water-maples. Gardens sloped on either bank to the water's edge. Neat, white houses gleamed through the trees and shrubbery around the bases of the hills that hem in the valley; and the tall, slender spire of the meeting-house showed fairly against its densely-wooded background. Verily, if

I were a painter, I should desire no lovelier scene for my canvas than that on which Mark and Mildred looked. Lizzy walked away, and began hunting checkerberries with an unusual ardor. She *did* understand; she would not be Mademoiselle de Trop any longer. Kind soul! so unlike young women in general, who won't step aside gracefully, when they should! Further I can vouch, that she neither hemmed, nor made eyes, nor yet repeated the well-worn proverb, "Two's company, but three's none." No, she gathered berries and sang snatches of songs as though she were quite alone.

Now those of my readers who have the good-fortune still to linger in teens are expecting that I shall treat them to a report of this delightful *tête-à-tête*. But it must not be told. The older people would skip it, or say, "Pshaw!" And besides, if it were set down faithfully, you would be sadly disappointed; the cleverest men, even, are quite sure to appear silly (to other people) when in love. The speeches of the Romeos and Claude Melnottes, with which you have been so enchanted, would be commonplace enough, if translated into the actual prose in which they were delivered. When Shakspeare wooed Anne Hathaway, it might have been different; but consider, you will wait some time before you find a lover like him. No, when *your* time comes, it will be soon enough. You will see your hero in his velvet cloak and plumed hat, with the splendor of scenery and the intoxication of the music. I don't choose to show him to you in morning dress at rehearsal, under daubed canvas and dangling machinery.

However full of poetry and passion Mark's declaration was for Mildred, to him it was tame and hesitating enough. It seemed to him that he could not force into the cold formula of words the emotion that agitated him. But with quickening breath he poured out his love, his hopes, and his fears,—the old burden! She trembled, her eyelids fell; but at length, roused by his pleading tones, she looked up. Their eyes met; one look

was enough; it was a reciprocal electric flash. With a sudden energy he clasped her in his arms; and it was a very pretty tableau they made! But in the quick movement his heedless foot chanced to touch a stone, which rolled down the bank and fell into the stream with a splash. The charm was broken.

"What's that?" cried Lizzy from a distance, forgetting her discretion. "Did a pickerel jump?"

"No," replied Mark, "the pickerel know me of old, and don't come about for fear that I have a hook and line in my pocket. It was only a stone rolling into the river."

"You come here a moment," continued the unthoughtful Lizzy; "here's a beautiful sassafras sapling, and I can't pull it up by the roots alone."

"Send for the dentist, then."

"Go and help her," said Mildred, softly.

"Well," said Mark, with a look of enforced resignation,—*"if I must."*

The sapling grew on the steep bank, perhaps fifty yards from where he had been sitting. He did not use sufficient care to brace himself, as he pulled with all his might, and in a moment, he knew not how, he rolled down into the river. The girls first screamed, and then, as he came out of the water, shaking himself like a Newfoundland dog, they laughed immoderately. The affair did not seem very funny to Mark, and he joined in the laugh with no great heartiness. The shock had effectually dispelled all the romance of the hour.

"I'm so sorry!" said Lizzy, still laughing at his grotesque and dripping figure.

"You must hurry and get dry clothes on, Mark," said Mildred. "Squire Clamp's is the nearest house across the bridge."

"Hang Squire Clamp! his clothes would poison me. I'd as lief go to a quarantine hospital to be dressed."

"Don't!" said Lizzy.

But he kept on in the same mercurial strain.—"Clamp lives on poison, like Rappaccini's daughter, in Hawthorne's story; only it makes him ugly instead

of fair, as that pretty witch was. His wife never had any trouble with spiders as long as she lived; he had only to blow into a nest, and the creatures would tumble out, and give up their venomous ghosts. No vermin but himself are to be seen in his neighborhood; the rats even found they couldn't stand it, and had to emigrate."

"The breath that killed spiders must have been a little too powerful, at times, for Mrs. Clamp, one would think," said Mildred.

"It was," said Mark. "She died one day, after Clamp had cheated a widow out of her dower."

"Don't stop longer for your fun," said Mildred, "you'll surely take cold. Besides, I can't have you making any disparaging remarks upon my guardian."

"Bless my soul! your guardian! how imprudent, to be sure!"—with a significant twinkle. "Well, I'm going. Banfield's is the nearest house; so we'll part here."

The girls went towards the village; and Mark, making vigorous strides across the meadow, took a straight line for Banfield's. Near the house is a piece of woods,—one corner of the leafy mantle that covers the hill slipped down its side and trailing upon the borders of the fertile field below. Just as he passed the woods he saw Hugh Branning letting down the bars and leading his pony out into the road. The only bridle-path through the woods led over the hill to the little house on the westerly slope, where lived Dame Ransom, Lucy's bowed and wrinkled grandmother. Mark wondered not a little where the midshipman had been; but as he still retained the memory of the old quarrel, he did not accost him, and presently thought no more of it. Reaching the house, he got some dry clothes and then went home with bounding steps. The earth was never so beautiful nor the sky so benign. The cloud of doubt had furled off and left his heaven blue. He had spoken and found that the dream of his boyhood and the hope of his youth had become

the proud triumph of his manhood. Mildred Kinloch loved him! loved him as sincerely as when they were both children! What higher felicity was to be thought of? And what a motive for exertion had he now! He would be worthy of her, and the world should acknowledge that the heiress had not stooped when she mated with him.

CHAPTER IX.

MRS. KINLOCH was surprised at finding that neither Hugh nor Mildred, nor yet Lucy Ransom, was in the house.

Mildred came home first and was not accompanied by Hugh, as Mrs. Kinloch had hoped. He had not found her, then,—perhaps he had not sought for her. Next Lucy returned, coming through the garden which stretched up the hill. Being questioned, she answered that she had been to her grandmother's, and had come back the nearest way over the hill, through the woods.

"What had she gone for after the fatigue of washing-day?"

"Because Squire Clamp, who owned the house her grandmother lived in, wanted her to take a message."

Mrs. Kinloch began to become interested. "Squire Clamp!" she exclaimed,—"when did you see him?"

"He called here yesterday evening,—on his way to Mr. Hardwick's, I guess."

"Why didn't he ask *me* if you could go? I think he's pretty free to send my girls about the town on his errands."

"You were out, Ma'am,—in the next house; and after he'd gone I forgot it."

"You remembered it to-day, it seems."

"Yes'm; after dinner I thought of it and hurried right off; but granny was sick and foolish, and didn't want to let me come away, so I couldn't get back as quick as I meant to."

"Well, you can go to the kitchen."

"Yes'm."

"I must keep an eye on that girl," thought Mrs. Kinloch. "She is easily persuaded, fickle, without strong sense, and with only a very shallow kind of

cunning. She might do mischief. What can Squire Clamp want? The old hovel her grandmother lives in isn't worth fifty dollars. Whatever has been going on, I'm glad Hugh is not mixed up in it."

Just then Hugh rode up, and, tying his horse, came in. He seemed to have lost something of the gayety of the morning. "I am tired," he said. "I had to get off and lead the pony down the hill, and it's steep and stony enough."

"There are pleasant roads enough in the neighborhood," said his mother, "without your being obliged to take to the woods and clamber over the mountains."

"I know it," he replied; "but I had been up towards the Allen place, and I took a notion to come back over the hill."

"Then you passed Lucy's house?"

"Yes. The bridle-path leads down the hill about a mile above this; but on foot one may keep along the ridge and come down into the valley through our garden."

"So I suppose; in fact, I believe Lucy has just returned that way."

"Indeed! it's strange I didn't see her."

"It is strange."

Hugh bore the quiet scrutiny well, and his mother came to the conclusion that the girl had told the truth about her going for the lawyer.

Presently Mildred came down from her room, and after a few minutes Mrs. Kinloch went out, casting a fixed and meaning look at her son. She seemed as impatient for the issue of her scheme, as the child who, after planting a seed, waits for the green shoot, and twice a day digs down to see if it has not sprouted.

Mildred, as the reader may suppose, was not likely to be very agreeable to her companion; the recollections of the day were too vivid, too delicious.

She could not part with them, but constantly repeated to herself the words of love, of hope, and enthusiasm, which she had heard. So she moved or talked as in a dream, mechanically, while her soul still floated away on the summer-sea of reverie.

Hugh looked at her with real admiration; and, in truth, she deserved it. A fairer face you would not see in a day's journey; her smooth skin, not too white, but of a rich creamy tint,—eyes brown and inclined to be dreamy,—her hair chestnut and wavy,—a figure rather below the medium size, but with full, graceful lines,—these, joined with a gentle nature and a certain tremulous sensibility, constituted a divinity that it was surely no sin to worship. If sin it were, all the young men in Innisfield had need of immediate forgiveness.

Hugh had some qualms about approaching the goddess. He was sensible of a wide gulf between himself and her, and he could not but think that she was aware of it too.

"You have been to Mr. Alford's?"

A momentary pause.

"Did you speak, Hugh?"

He repeated the question. Her eyes brightened a moment as she nodded in the affirmative; then they grew dim again, like windows seen from without when the light is withdrawn to an inner room. She seemed as unconscious as a pictured Madonna.

"A beautiful day for your walk," he ventured again. The same pause, the same momentary interest as she answered, followed by the same abstraction.

"I suppose," said he, at length, "that I am having the last of my idle days here; I expect to be ordered to sea shortly."

"Indeed!" Mildred looked up.

"I shall be very sorry to leave here," he continued.

"Yes, Innisfield is quite pretty this summer. But I supposed that the pleasures of the seaport and of adventure abroad were more attractive to you than this monotonous life."

"Tis rather slow here, but—I—I meant to say that I shall be sorry to leave you."

"Me? Why, mother can take care of me."

"Certainly she will, but I shall miss you."

"No doubt you'll think of us, when

you are away; I'm sure we shall remember you. We shall never sit down to the table without thinking of your vacant chair."

It was impossible to misinterpret her kind, simple, sisterly tones. And Hugh could but feel that they indicated no particle of tenderness for him. The task of winning her was yet wholly to be done, and there was no prospect that she would give him the least encouragement in advance, if she did not utterly refuse him at the end. He saw that he must not count on an easy victory, but prepare for it by a slow and gradual approach.

Mildred sat some time leaning out of the window, then opening her piano, for the first time since her father's death, she sat down and played a nocturne by Mendelssohn. The music seemed a natural expression of her feelings,—suited to the heart "steeped in golden languors," in the "tranced summer calm." The tones rang through the silent rooms, pervading all the charmed air, so that the ear tingled in listening,—as the lips find a sharpness with the luscious flavor of the pine-apple. The sound reached to the kitchen, and brought a brief pleasure, but a bitterer pang of envy, to Lucy's swelling bosom. It calmed for a moment the evil spirit in Hugh's troubled heart. And Mrs. Kinloch in her solitary chamber, though she had always detested the piano, thought she had never heard such music before. She had found a new sense, that thrilled her with an exquisite delight. It was a good omen, she was sure, that Mildred should now, after so long a time, feel inclined to play. Only a light heart, and one supremely careless or supremely happy, could touch the keys like that. "Hugh must be a fortunate boy," she thought; and she could have hugged him for joy.

What thought Hugh, as she rose from her seat at the instrument like one in a trance and walked towards the hall? Conflicting emotions struggled for mastery; but, hardly knowing what he did, he started up and offered her a caress. It was not unusual, but her nerves had acquired an unwonted sensitiveness; she

shuddered, and rushed from him up the stairs. He could have torn his hair with rage.

"Am I, then, such a bear," he asked himself, "that she is afraid of me?"

A light at the end of the hall caught his eye. It was Lucy with tear-stained cheeks going to bed,—unconscious that the flaring candle she carried was dripping upon her dress,—unconscious that the one she both loved and feared was looking at her as she slowly went up the back-stairs. Truly, how little the inmates of that house knew of the secrets of each other's hearts! It was strange,—was it not?—that, after so long intimacy, they could not understand each other better! How many hearts do *you* really know?

CHAPTER X.

"*VERILY*, a good day's work," thought Squire Clamp, as he stretched his legs in his office that Monday evening. Mrs. Kinloch is a very shrewd woman, an extraordinarily capable woman. What a wife for a lawyer she'd make!—so long as she plotted for, and not against him. But Theophilus Clamp was not born to be overreached by one of the weaker sex. I was sure my late lamented friend could not have left his affairs in such utter disorder,—no schedule of property,—no statement of debts; too good a business man for that was Walter Kinloch. I shall now be able to know from these documents what my late client was really worth, and how large a dower the disconsolate widow has reserved for herself. Doubtless she has put by enough to suffice for her old age,—and mine, too, I am inclined to think; for I don't believe I can do better than marry her when the mourning is ended. My late spouse, to be sure, would make a quiet man rather apprehensive about a second venture; but if Mrs. Kinloch is a Tartar, she is not a vulgar shrew, but will be lady-like, even if she is bitter. I think I shall take her. Of course she'll consent. I should like to see the unmarried woman in Innisfield that would dare refuse Theophilus Clamp.

When she knows—that I know—what she knows, she'll do pretty much what I tell her. I wonder if she hasn't set on foot a marriage between her scapegrace son and Mildred? That would be a mishap, truly! But, as guardian, I can stave that off until the estate is settled, my wedding over, and myself comfortably in possession. Then, perhaps, we'll let the young folks marry,—at least we'll think of it. If my son George, now, had not that unlucky hare-lip, who knows? H'm, well, to business again. Let's see. It's just as that remarkably keen woman suspected. Hardwick's shop does stand partly on the land of the estate that joins it; the line will run right through his forge, and leave the trip-hammer and water-wheel in our possession; for I paced the distance this morning. Tomorrow Gunter will make sure of it by a survey; though I think we'd better do it while the old man is gone to dinner. He's sometimes apt to use emphatic language. Perhaps now his mangy cur Cæsar will seize me by the coat again! Perhaps Mark will insult me, and the old man laugh at it in his sleeve! I shouldn't wonder if they managed to pay the notes, but on the title to the shop we have them fast."

The lawyer looked at his watch. "Dear me! it's tea-time. I must go, for the church-committee meet this evening. I think, however, I won't complain of Hardwick to the deacons this time; for he'll be sure to get into a passion when we commence our suit for ejectment, and I shall then have a better case against him. A more disagreeable Christian to fellowship with I don't know anywhere.

"I *should* like to know," he continued, as he locked the office-door, "if that Lucy told me true,—if those were all the papers. No will, no memorandum for one! Well, perhaps Mrs. Kinloch was careful enough to give that secret to the keeping of the flames, instead of her bureau. I will make close copies of what I have got for Lucy to put back, and keep the originals myself.

They'll be safest with me. There's no telling what may happen to papers in a house where there is a prying servant-girl."

Whether the insects were poisoned by the air of the room, as Mark Davenport suggested, I cannot say. But when Squire Clamp left the office, it was as still as a tomb. No cricket chirped under the hearth, no fly buzzed on the window-pane, no spiders came forth from the dilapidated, dangling webs. Silence and dust had absolute dominion.

The next day Mark returned to New York. He had no opportunity of bidding Mildred farewell, but he comforted himself by thinking he had provided the means of safely communicating with her by letter. And as the stage passed by the house, he caught a glimpse, first of her fluttering handkerchief, and then of her graceful fingers waiting to him a kiss. It was enough; it furnished him with food for a delightful reverie as he went on his way. We shall leave him in his former situation, from which, as a starting-point, he determines to win fortune or fame, or both. He has your best wishes, no doubt, though perhaps you think he will not force his way into the close ranks of the great procession of life so soon as he expects.

That day, while Mr. Hardwick was taking his dinner, his second son, Milton, who had been fishing at the dam, came running into the house quite out of breath.

"F-father!" he stammered out.

"Nun-now st-hop," said the blacksmith. "W-what are you st-stuttering for? Wah-wait till you can talk."

"Why, father, yer-you stutter."

"Wer-well, yer-you shan't."

The look that came with this seemed to end the matter. A moment's rest quieted the nerves of the boy, and he went on to say, that Squire Clamp, and a man with a brass machine on his shoulder, and a chain, ever so long, were walking about the shop on the bank of the river. Lizzy at once looked out of the window and saw the man peering

into the shop-door, as if exploring the premises.

Impelled by some presentiment of evil, Mr. Hardwick got up from the table, and sternly motioning the boys back, went down to the shop. As he came near the door, he saw the surveyor holding one end of the chain and taking sight upon a staff which the lawyer within was adjusting to its place by his direction.

"Just as I expected," said Squire Clamp, in a satisfied tone.

"An' jest as I expected," broke in Mr. Hardwick upon the astonished pair. "I knew th-that ef Squire Clamp hed anythin' to do against me, he wer-would sneak into the shop sus-some time when I'd ger-gone to dinner."

"We thought it would be most convenient, so as not to interrupt you about your work."

"Very ker-kind indeed! As ef you wa'n't tryin' to turn me out of wer-work altogether! But 'tisn't any yer-use, Squire; this is a case you can't be ber-both sides on."

The lawyer turned, with a placid smile, to his companion. "Mr. Gunter, I believe we have finished our measurements?"

The man of chain and compass nodded. Nothing abashed by the lawyer's cool manner, Mr. Hardwick turned to the surveyor, and asked if he undertook to say that Walter Kinloch's deed called for land that was covered by the shop?

"I suppose so," was the answer.

"An' now, Sus-squire Clamp," said Mr. Hardwick, "you know that it's sus-seventeen or eighteen year sence I per-pulled down the old shop and bought this land."

"Yes, but, unfortunately, it takes twenty years to give you title," put in the Squire.

"Nun-never mind that now. Squire Kinloch knew this,—at least, that there was room for der-difficulty; for we'd talked it over sus-several times afore he died. An' he allers said th-that he'd hev new deeds made out, so's to

per-per-prevent just such a wrong as this. He didn't 'xpect to go so sus-sudden."

"I'm sorry, Brother Hardwick, to see you bringing up your talk with the lamented deceased, whom you represent as being willing to part with his legal rights without a consideration. Even if you had evidence of it, such an agreement would be a mere *nudum pactum*, binding neither upon himself nor his heirs."

"Squire Clamp! ger-get out of my shop! Fust to call me *Brother*, next to doubt my word, an' last to sus-say that a man's free an' der-deliberet promise—now he's where he can't sh-shame you into honesty—sha'n't be kept!"

The Squire smiled feebly. "You don't intend, Mister Hardwick, assault and battery, do you?"

"Yer-yes, ef you don't leave in q-q-q-quick time." And he strode up to the astonished attorney,—his blue eyes flashing, his curly gray hair flying back from his forehead, like a lion's.

Squire Clamp retreated to the street, took sight each way to be sure he was off his antagonist's territory, and then vented his cautious resentment in such well-considered phrases as a long course of experience had taught him were not actionable at law, nor ground for discipline in church.

Prudence came to Uncle Ralph's aid, and he did not make further reply, but locked the shop-door and returned to the house to finish his dinner. The suit was commenced a few days afterwards. Mr. Hardwick went to the county seat, some dozen miles distant, and secured the aid of an able lawyer, who gave him hope of prevailing and keeping his shop.

The affair necessarily created a great stir in the busy little town. As the cheerful clatter of the trip-hammer echoed along the stream on still evenings, and the fiery plume waved over the chimney, neighbors looked out from their windows, and wondered if the good blacksmith would, after so many

years of honest toil, be stripped of his property and be reduced to dependence in his old age. The sympathy of the villagers was wholly with him; but the lawyer held so many threads of interest in his hands, that few dared to give an opinion with much emphasis.

Probably the person most grieved and indignant was the one who, next after the blacksmith, was most interested in the event of the suit,—namely, Mildred Kinloch. Though no mention was made of the matter, at home, in her hearing, she could not fail to know what was going on; but she had now sufficient knowledge of her step-mother and her guardian to be aware that her influence would not be of the least avail in changing their purpose.

Mrs. Kinloch did not repeat the experiment she once made on Mildred's sensibilities by referring to her partiality for Mark Davenport and his relatives; but, on the contrary, was most gentle in her treatment and most assiduous in her endeavors to provide amusement, so far as the resources of the town allowed. In company with Hugh, Mildred explored all the pleasant roads in the vicinity, all the picturesque hills and brooks, caught trout, and snared game-birds, (the last much against her will,)—and by these means her time was fully occupied. Hugh seemed to have totally changed; he no longer absented himself from the family on mysterious errands; he went to church regularly, and appeared to take pleasure in the frequent calls of Mr. Rook, the minister. The neighbors began to say that there never was a more dutiful son or a more attentive and affectionate brother. Some half suspected the reason of the reformation,—no one so quick as Squire Clamp, who had reasons of his own, as the reader knows, for wishing delay. After a few months had passed, he thought it would be dangerous to let the schemes of the widow go on longer without interruption, and accordingly prepared to make a step towards his own long-cherished purpose.

CHAPTER XI.

ONE afternoon, about six months after the opening of our story, Mrs. Kinloch and her son were talking together concerning the progress of his suit. He complained that he was no nearer the point than on the first day he and Mildred rode out together. "It was like rounding Cape Horn," he said, "where a ship might lie twenty days and drift back as fast as she got ahead by tacking." In spite of all his attention and kindness, Mildred was merely courteous in return;—he could not get near her. If she smiled, it seemed as though it was from behind a grating, as in a nunnery. Her pulse was always firm; and if her eye was soft, it was steady as the full moon. He didn't believe she had any blood in her. If she was in love with that fellow, she kept it pretty closely covered up.

Mrs. Kinloch encouraged her son to persevere; she was sure he had not been skilful. "Mildred," she said, "was not to be won with as little trouble as a silly, low-bred girl, like—like Lucy, for instance."

"What the deuce are you always bringing up Lucy to me for?" said the dutiful son.

"Don't speak so!"

"Confound it! I must. You keep a fellow shut up here for six months, going to meeting five times a week; you give him no chance to work off his natural spirits, and the devil in him will break out somewhere. It's putting a stopper in a volcano; if you don't allow a little fire and smoke, you're bound to have an earthquake."

After this philosophical digression, the first topic was resumed, and Mrs. Kinloch gave the young man some counsel, drawn from her own experience or observation, touching the proper mode of awakening and cultivating the tender passion. It is not every mother that does so much for her son, but then few mothers have so urgent a motive.

"What was it that she advised him to do," did you ask? Really, I've quite forgotten; and I am sure Mrs. Kinloch

forgot also, at least for that day, because something occurred which turned her thoughts for the time in quite a different direction.

The ponies were brought out for Hugh and Mildred to take their customary canter. The young heiress, for whom so much time and pains were spent, looked ill; the delicate flush had vanished from her cheek; she seemed languid, and cheerful only by effort. A moment after they had gone, as Mrs. Kinloch closed the door, for it was a raw November day, she saw and picked up a rudely-folded letter in the hall. "Good-bye, Lucy Ransom," were the words she read. They were enough. Mrs. Kinloch felt that her heart was struck by a bolt of ice. "Poor, misguided, miserable girl!" she said. "Why did I not see that something was wrong? I felt it, I knew it,—but only as one knows of evil in a dream. Who can calculate the mischief that will come of this? O God! to have my hopes of so many years ruined, destroyed, by a wretch whose power and existence even I had not once thought of! Has she drowned herself, or fled to the city to hide her disgrace? But if this should be imagination merely! She may have run away with some lubberly fellow from the factory, whom she was ashamed to marry at home. But no! she was too sad last evening when she asked to go to her grandmother's for a day. What if?"—The thought coursed round her brain like fire on a train of gunpowder,—flew quicker than words could utter it; and the woman bounded to her bureau, as though with muscles of steel. She clutched at the papers and bank-notes in her private drawer, and looked and counted them over a dozen times before she could satisfy herself. Her thin fingers nervously opened the packages and folds,—the papers crackling as her eye glanced over them. They were there; but not *all*. She pored over the mystery,—her thoughts running away upon every side-avenue of conjecture, and as often returning to the frightful, remediless fact before her. She was faint with sudden terror.

By degrees she calmed herself, wiped the cold sweat from her forehead, smiled at her fright, and sat down again, with an attempt at self-control, to look through the drawers thoroughly. As she went on, the tremor returned, and before she had finished the fruitless search her heart beat so as to stop her breath; she gasped in an agony that the soul rarely feels more than once in this life. She shut up the drawers, walked up and down the room, noticed with a shudder her own changed expression as she passed before the mirror, and strove in vain to give some order to her confused and tumultuous thoughts. At length she sat down exhausted. She was startled by a knock. Opening the door, there in a newly-furbished suit, with clean linen, and a brown wig worn for the first time on his hitherto shining head, stood Theophilus Clamp. He had even picked a blossom from the geranium in the hall and was toying with it like a bashful boy.

"A fine day, Ma'am!" said he, as he took a seat.

"Yes, very," she answered, mechanically, scarcely looking up.

"The young folks have gone out to ride, I suppose."

"Yes, Sir."—A pause, in which Mrs. Kinloch covered her face with her handkerchief.

"You don't seem well, Ma'am. Shall I call Lucy?"

"Lucy is gone," she answered,—quickly adding, "gone to her grandmother's."

"Well, that is singular. I've been to-day to look at my land above the old lady's house, and she asked me to send word to Lucy to come up and see her."

"To-day?"

"Yes, Ma'am; not two hours ago."

Mrs. Kinloch was rapidly revolving probabilities. What interest had Lucy to interfere with her affairs? As for Mildred, she was not to be thought of as prying into secrets; she was too innocent. Hugh was too careless. Who more than this man Clamp was likely to have done or procured the mischief?

"Have you given her the message?"

"Of course not, Ma'am,—how could I?"

"Then you haven't sent Lucy away on any errand?"

"Certainly not, Madam," said the lawyer, beginning to wince under the cross-examination. "Lucy's gone, you say; didn't she leave things all right,—your papers, and—and so forth?"

"Papers? Lucy is not presumed to know that I *have* any papers; if any are missing, I'll warrant they are in the hands of some one who knows at least enough to read them."

"She suspects me," thought the lawyer, "but can't have discovered that hers are only copies; they're too well done." He then added aloud, "Perhaps, Mrs. Kinloch, if you had honored me, your associate in the administration of the estate, with your confidence touching the private papers you speak of, I might have saved you some trouble in keeping them."

"Very likely; but no one spoke of papers beside yourself," she replied, with a trace of sarcasm in the tone which ill suited the expression of her pallid face and drooping head.

"I'm sorry to see you looking so careworn, Mrs. Kinloch," said he, with his blandest air. "I intended to bring up a topic more agreeable, it is to be hoped, than runaway house-maids or old documents." He rubbed his hands softly and turned his eyes with a glance meant to be tender towards the place where her chair stood; if he had been a cat, he would have purred the while.

Mrs. Kinloch now, for the first time, observed the wig, the unusual look of tidiness, and, above all, the flower in his hand; she also saw the crucified smile that followed his last remark. "The ridiculous old fool!" thought she,—"*what can he mean?*" But to him she translated it,—

"What is the more agreeable topic?"

"Really, you attack me like a lawyer. Don't you know, my dear Madam, how it confuses one to be sharply interrogated?"

"It would be something novel to see you confused, Squire Clamp."

"Pray, don't banter, Mrs. Kinloch. I hoped to find you in a more complaisant humor. There are topics which cannot be discussed with the square precision of legal rules,—thoughts that require sympathy before they can be expressed." And he dropped his eyes with a ludicrous sigh.

"Oh, I appreciate your tender susceptibilities. Please consider me as asking the question again in the most engaging manner."

His new wig was becoming uncomfortable, and he fidgeted in his chair, twirling the luckless blossom.

"Why, Mrs. Kinloch, the long regard I entertained for your late lamented husband,—ah, I mean my regard for you,—ah, my lonely domicile,—ah, since the decease of my—my sainted wife,—ah, and since the Scripture says it is not good for man to live alone,—ah, your charming qualities and many virtues,—not that your fortune,—ah,—I mean to say, that, though not rich, I am not grasping,—and the cottage where you lived would be a palace,—ah, for me, if not unworthy,—ah, no desire to unduly shorten the period of mourning,—ah, but life is short and uncertain"—

There was a dead silence. His mouth was vainly working, and his expression confused and despairing. The flower had wilted in his moist hand. Little streams of perspiration trickled down his face, to be mopped up by his bandanna. Such was the ordeal of talking hollow sentiment to a cool and self-possessed woman. She enjoyed the exhibition for a time,—as what woman would not? But the waves of her trouble rushed back upon her, and the spirit of mischief and coquetry was overwhelmed. So she answered,—

"You are pleased to be polite,—perhaps gallant. You must excuse me from taking part in such conversation to-day, however little is meant by it,—and the less meant the better,—I am not well.

She rose feebly, and walked towards

the door with as much dignity as her trembling frame could assume. He was abashed; his fine speeches jumbled in meaningless fragments, his airy castle ready to topple on his unlucky head. He would have been glad to rebuke her fickle humor, as he thought it; but he knew he had made a fool of himself, so he merely said,—

"No offence, I hope, Ma'am; none meant, certainly. Wish you good-afternoon, Ma'am. Call and see you again some day, and hope to find you better."

Would he find her better? While the mystery remained, while the ruin of her hopes impended, what could restore to her the cheerfulness, the courage, the self-command she had lost?

[To be continued.]

"BRINGING OUR SHEAVES WITH US."

THE time for toil is past, and night has come,—
The last and saddest of the harvest-eves;
Worn out with labor long and wearisome,
Drooping and faint, the reapers hasten home,
Each laden with his sheaves.

Last of the laborers thy feet I gain,
Lord of the harvest! and my spirit grieves
That I am burdened not so much with grain
As with a heaviness of heart and brain;—
Master, behold my sheaves!

Few, light, and worthless,—yet their trifling weight
Through all my frame a weary aching leaves;
For long I struggled with my hapless fate,
And staid and toiled till it was dark and late,—
Yet these are all my sheaves.

Full well I know I have more tares than wheat,—
Brambles and flowers, dry stalks, and withered leaves;
Wherefore I blush and weep, as at thy feet
I kneel down reverently, and repeat,
"Master, behold my sheaves!"

I know these blossoms, clustering heavily
With evening dew upon their folded leaves,
Can claim no value nor utility,—
Therefore shall fragrant and beauty be
The glory of my sheaves.

So do I gather strength and hope anew;
For well I know thy patient love perceives
Not what I did, but what I strove to do,—
And though the full, ripe ears be sadly few,
Thou wilt accept my sheaves.

FARMING LIFE IN NEW ENGLAND.

NEW ENGLAND does not produce the bread she eats, nor the raw materials of the fabrics she wears. A multitude of her purely agricultural towns are undergoing, more or less rapidly, a process of depopulation. Yet these facts exist by the side of positive advances in agricultural science and decided improvements in the means and modes of farming. The plough is perfected, and the theory of ploughing is understood. The advantages of thorough draining are universally recognized, and tiles are for sale everywhere. Mowing and reaping machines have ceased to be a novelty upon our plains and meadows. The natural fertilizers have been analyzed, and artificial nutrients of the soil have been contrived. The pick and pride of foreign herds have regenerated our neat stock, and the Morgan and the Black-Hawk eat their oats in our stalls. The sheepfold and the sty abound with choice blood. Sterling agricultural journals are on every farmer's table, and Saxton's hand-books upon agricultural specialties are scattered everywhere. Public shows and fairs bring on an annual exacerbation of the agricultural fever, which is constantly breaking out in new places, beyond the power of the daily press to chronicle. Yet it is too evident that the results are not at all commensurate with the means under tribute and at command. What is the reason?

In looking at the life of the New England farmer, the first fact that strikes us is, that it is actually a very different thing from what it might be and ought to be. There dwells in every mind, through all callings and all professions, the idea that the farmer's life is, or may be, is, or should be, the truest and sweetest life that man can live. The merchant may win all the prizes of trade, the professional man may achieve triumphs beyond his hopes, the author may find his name upon every lip, and his works accounted

among the nation's treasures, and all may move amid the whirl and din of the most inspiring life, yet there will come to every one, in quiet evening-hours, the vision of the old homestead, long since forsaken; or the imagination will weave a picture of its own,—a picture of rural life, so homely, yet so beautiful, that the heart will breathe a sigh upon it, the eye will drop a tear upon it, and the voice will say, "It were better so!"

In a city like Boston there are farms enough imagined every year to make another New England. Could the fairest fancies of that congeries of minds be embodied and exhibited, we should see green meadows sparkling with morning dew,—silver-slippered rivulets skipping into musical abysses,—quiet pasture-lands shimmering so sleepily in the sun that the lazy flocks and herds forget to graze, and lie winking and ruminating under the trees,—and yellow fields of grain, along the hill-sides, billowy in the breeze, and bending before the shadows of the clouds that sail above them. And mingling and harmonizing with these visions, we should hear the lowing of kine, and the tinkle of the bell that leads the flock, and the shout of the boy behind the creeping plough, and the echoes of the axe, and the fall of the tree in the distant forest, and the rhythmical clangor, softened into a metallic whisper by the distance, of the mowers whetting their scythes. With these visions and these sounds there would come to the minds which give them birth convictions that rural life is the best life, and resolutions that, by-and-by, in some golden hour, when the sun of life begins to lengthen the eastward shadows, that life shall be enjoyed, and that the soul shall pass at last from the quiet scenes of Nature into those higher scenes which they symbolize. There is a thought in all this that the farm is nearer heaven than the street,—a reminiscence of the first estate, when

man was lord of Eden; and this thought, old as art and artificial life, cannot be rooted out of the mind. It has a life of its own, independent of reason, above instinct, among the quickest intuitions of the soul.

Now this idea, so universal, so identical in millions of minds, springing with such spontaneity in the midst of infinitely varied circumstances, abiding with such tenacity in every soul, can have its basis nowhere save in a Divine intention and a human possibility. The cultivation of the farm is the natural employment of man. It is upon the farm that virtue should thrive the best, that the body and the mind should be developed the most healthfully, that temptations should be the weakest, that social intercourse should be the simplest and sweetest, that beauty should thrill the soul with the finest raptures, and that life should be tranquildest in its flow, longest in its period, and happiest in its passage and its issues. This is the general and the first ideal of the farmer's life, based upon the nature of the farmer's calling and a universally recognized human want. Why does the actual differ so widely from the ideal? It is not because the farmer's labor is hard and constant, alone. There is no fact better established than that it is through the habitual use both of the physical and mental powers that the soul achieves, or receives, its most healthful enjoyment, and acquires that tone which responds most musically to the touch of the opportunities of leisure. Why, then, we repeat, does the actual differ so widely from the ideal?

A general answer to this question is, that that is made an end of life which should be but an incident or a means. Life is confounded with labor, and thrift with progress; and material success is the aim to which all other aims are made subordinate. There is no fact in physiology better established than that hard labor, followed from day to day and year to year, absorbing every thought and every physical energy, has the direct tendency to depress the intellect, blunt

the sensibilities, and animalize the man. In such a life, all the energies of the brain and nervous system are directed to the support of nutrition and the stimulation of the muscular system. Man thus becomes a beast of burden,—the creature of his calling; and though he may add barn to barn and acre to acre, he does not lead a life which rises in dignity above that of the beasts which drag his plough. He eats, he works, he sleeps. Surely, there is no dignity in a life like this; there is nothing attractive and beautiful and good in it. It is a mean and contemptible life; and all its maxims, economics, associations, and objects are repulsive to a mind which apprehends life's true enjoyments and ends. We say that it is a pestilent perversion. We say that it is the sale of the soul to the body; it is turning the back upon life, upon growth, upon God, and descending into animalism.

The true ideal of the farmer's life—of any life—contemplates something outside of, and above, the calling which is its instrument. The farmer's life is no better than the life of a street-sweeper, if it rise no higher than the farmer's work. If the farmer, standing under the broad sky, breathing the pure air, listening to the song of birds, watching the progress of

“The great miracle that still goes on,”

to work the transformation of the brown seeds which he drops into the soil into fields of green and gold, and gazing upon landscapes shifting with the seasons and flushed with new tints through every sunlit and moonlit hour, does not apprehend that his farm has higher uses for him than those of feeding his person and his purse, he might as well dwell in a coal-mine.

Our soil is sterile, our modes of farming have been rude until within a few years; and under the circumstances,—with the Yankee notion that the getting of money is the chief end of man,—exclusive devotion to labor has been deemed indispensable to success. The maxims of Franklin have been literally received

and adopted as divine truth. We have believed that to labor is to be thrifty, that to be thrifty is to be respectable, that to be respectable is to afford facilities for being still more thrifty; and our experience is, that with increased thrift comes increased labor. This is the circle of our ambitions and rewards. All begins and ends in labor. The natural and inevitable result of this is both physical and mental deterioration.

It is doubtful whether the world furnishes a finer type of man, physically and intellectually, than the Irish gentleman. He is handsome, large, courageous, —a man of fine instincts, brilliant imagination, courtly manners, and full, vital force. By the side of the Irish gentleman, there has grown for centuries the Irish peasant. He is ugly, of stunted stature, and pugnacious; and he produces children like himself. The two classes started from a common blood; they now present the broadest contrast. We do not say that freedom from severe labor on one side, and confinement to it on the other, are entirely responsible for this contrast; difference of food and other obvious causes have had something to do with it; but we say that hard labor has, directly and indirectly, degraded from a true style of manhood the great mass of the Irish peasantry. They are a marked class, and carry in their forms and faces the infallible insignia of mental and physical degeneration.

We would by no means compare New England farmers with the Irish peasantry. We only present the contrast between these two classes of the Irish population as the result of unremitting toil on one side, and a more rational kind of life on the other. If we enter a New England church, containing a strictly rural assembly, and then visit another containing a class whose labor is lighter, and whose style of life is based upon different ideas, we shall see a contrast less marked, perhaps, but presenting similar features. The farming population of New England is not a handsome population, generally.

The forms of both men and women are angular; their features are not particularly intellectual; their movements are not graceful; and their calling is evident by indubitable signs. The fact that the city assemblage is composed of a finer and higher grade of men, women, and children is of particular moment to our argument, because it is composed of people who are only one, two, or three removes from a rural origin. The city comes from the country; the street is replenished by the farm; but the city children, going back to the farm, show that a new element has been introduced into their blood. The angles are rounded; the face is brighter; the movements are more graceful; there is in every way a finer development.

There is probably no better exponent of the farmer's life than the farmer's home. We propose to present the portrait of such a home, and, while we offer it as a just outline of the farmer's home generally, in districts removed from large social centres, we gladly acknowledge the existence of a great multitude of happy exceptions. But the sketch:—A square, brown house; a chimney coming out of the middle of a roof; not a tree nearer than the orchard, and not a flower at the door. At one end projects a kitchen; from the kitchen projects a wood-shed and wagon-cover, occupied at night by hens; beyond the wood-shed, a hog-pen, fragrant and musical. Proceeding no farther in this direction, we look directly across the road, to where the barn stands, like the hull of a great black ship-of-the-line, with its port-holes opened threateningly upon the fort opposite, out of one of which a horse has thrust his head for the possible purpose of examining the strength of the works. An old ox-sled is turned up against the wall close by, where it will have the privilege of rotting. This whole establishment was contrived with a single eye to utility. The barn was built in such a manner that its deposits might be convenient to the road which divides the farm, while the sty was made an attachment of the

house for convenience in feeding its occupants.

We enter the house at the back door, and find the family at dinner in the kitchen. A kettle of soap-grease is stewing upon the stove, and the fumes of this, mingled with those that were generated by boiling the cabbage which we see upon the table, and by perspiring men in shirt-sleeves, and by boots that have forgotten or do not care where they have been, make the air anything but agreeable to those who are not accustomed to it. This is the place where the family live. They cook everything here for themselves and their hogs. They eat every meal here. They sit here every evening, and here they receive their friends. The women in this kitchen toil incessantly, from the time they rise in the morning until they go to bed at night. Here man and woman, sons and daughters, live, in the belief that work is the great thing, that efficiency in work is the crowning excellence of manhood and womanhood, and willingly go so far into essential self-debasement, sometimes, as to condemn beauty and those who love it, and to glory above all things in brute strength and brute endurance.

Here we are ready to state the point and the lesson of our discussion:—The real reason for the deterioration of agriculture in New England is to be found in the fact, that the farmer's life and the farmer's home, generally, are unloved and unlovable things, and in the multitude of causes which have tended to make them so. Let the son of such a home as we have pictured get a taste of a better life than this, or, through sensibilities which he did not inherit, apprehend a worthier style of existence, and what inducements, save those which necessity imposes, can retain him there? He hates the farm, and will flee from it at the first opportunity. If the New England farmer's life were a loved and lovable thing, the New England boys could hardly be driven from the New England hills. They would not only find a way to live here, but they would make farm-

ing profitable. They would honor the employment to which they are bred, and would leave it, save in exceptional instances, for no other. It is not strange that the country grows thin and the city plethoric. It is not strange that mercantile and mechanical employments are thronged by young men, running all risks for success, when the alternative is a life in which they find no meaning, and no inspiring and ennobling influence.

The popular ideal of the farmer's life and home, to which we have alluded, we believe to be what God intended. That life contemplates the institution and maintenance of personal and social habits, and the cultivation of tastes and faculties, separate from, and above, labor. Every farm-house should be a residence of men and women, boys and girls, who, appreciating something of the meaning and end of life, rise from every period of labor into an atmosphere of intellectual and social activity, or into some form of refined family enjoyment. It is impossible to do this while surrounded with all the associations of labor. If there is a room in every farmer's house where the work of the family is done, there should be a room in every farmer's house where the family should live,—where beauty should appeal to the eye, where genuine comfort of appointments should invite to repose, where books should be gathered, where neatness and propriety of dress should be observed, and where labor may be forgotten. The life led here should be labor's exceeding great reward. A family living like this—and there are families that live thus—will ennoble and beautify all their surroundings. There will be trees at their door, and flowers in their garden, and pleasant and graceful architectural ideas in their dwelling. Human life will stand in the foreground of such a home,—human life, crowned with its dignities and graces,—while animal life will be removed among the shadows, and the gross material utilities, tastefully disguised, will be made to retire into an unoffending and harmonious perspective.

But we have alluded to other causes than labor as in some measure responsible for the unattractiveness of the farmer's life, and affecting adversely the farming interest. These touch the matter at various points, and are charged with greater or less importance. We know of no one cause more responsible for whatever there may be of physical degeneracy among the farming population than the treatment of its child-bearing women; and this, after all, is but a result of entire devotion to the tyrannical idea of labor. If there be one office or character higher than all others, it is the office or character of mother. Surely, the bringing into existence of so marvellous a thing as a human being, and the training of that being until it assumes a recognized relation to God and human society, is a sacred office, and one which does not yield in dignity and importance to any other under heaven. For a woman who faithfully fulfils this office, who submits without murmuring to all its pains, who patiently performs its duties, and who exhausts her life in a ceaseless overflow of love upon those whom God has given her, no words can express a true man's veneration. She claims the homage of our hearts, the service of our hands, the devotion of our lives.

Yet what is the position of the mother in the New England farmer's home? The farmer is careful of every animal he possesses. The farm-yard and the stall are replenished with young, by creatures for months dismissed from labor, or handled with intelligent care while carrying their burden; because the farmer knows that only in this way can he secure improvement, and sound, symmetrical development, to the stock of his farm. In this he is a true, practical philosopher. But what is his treatment of her who bears his children? The same physiological laws apply to her that apply to the brute. Their strict observance is greatly more imperative, because of her finer organization; yet they are not thought of; and if the farm-

yard fail to shame the nursery, if the mother bear beautiful and well-organized children, Heaven be thanked for a merciful interference with the operation of its own laws! Is the mother in a farmhouse ever regarded as a sacred being? Look at her hands! Look at her face! Look at her bent and clumsy form! Is it more important to raise fine colts than fine men and women? Is human life to be made secondary and subordinate to animal life? Is not she who should receive the tenderest and most considerate ministries of the farmer's home, in all its appointments and in all its service, made the ceaseless minister and servant of the home and all within it, with utter disregard of her office? To expect a population to improve greatly under this method is simply to expect miracles; and to expect a farmer's life and a farmer's home to be attractive, where the mother is a drudge, and secures less consideration than the pets of the stall, is to expect impossibilities.

Another cause which has tended to the deterioration of the farmer's life is its solitariness. The towns in New England which were settled when the Indians were in possession of the country, and which, for purposes of defence, were settled in villages, have enjoyed great blessings; but a large portion of agricultural New England was differently settled. It is difficult to determine why isolation should produce the effect it does upon the family development. The Western pioneer, who, leaving a New England community, plants himself and his young wife in the forest, will generally become a coarse man, and will be the father of coarse children. The lack of the social element in the farmer's life is doubtless a cause of some of its most repulsive characteristics. Men are constituted in such a manner, that constant social contact is necessary to the healthfulness of their sympathies, the quickness of their intellects, and the symmetrical development of their powers. It matters little whether a family be placed in the depths of a Western forest,

or upon the top of a New England hill; the result of solitude will be the same in kind, if not in degree.

Now the farmer, partly from isolation and partly from absorption in labor, is the most unsocial man in New England. The farmers are comparatively few who go into society at all, who ever dine with their neighbors, or who take any genuine satisfaction in the company of the women whom their wives invite to tea. They may possibly be farmers among farmers, but they are not men among men and women. Intellectually, they are very apt to leave life where they begin it. Socially, they become dead for years before they die. The inhabitants of a city can have but a poor apprehension of the amount of enjoyment and development that comes to them through social stimulus. Like gold, humanity becomes bright by friction, and grows dim for lack of it. So, we say, the farmer's life and home can never be what they should be,—can never be attractive by the side of other life containing a true social element,—until they have become more social. The individual life must not only occupy a place above that of a beast of burden, but that life must be associated with all congenial life within its reach. The tree that springs in the open field, though it be fed by the juices of a rood, through absorbers that penetrate where they will, will present a hard and stunted growth; while the little sapling of the forest, seeking for life among a million roots, or growing in the crevice of a rock, will lift to the light its cap of leaves upon a graceful stem, and whisper, even-headed, with the stateliest of its neighbors. Men, like trees, were made to grow together, and both history and philosophy declare that this Divine intention cannot be ignored or frustrated with impunity.

Traditional routine has also operated powerfully to diminish the attractiveness of agricultural employments. This cause, very happily, grows less powerful from year to year. The purse is seen to have an intimate sympathy with intelligent farming. Were we to say that God had

so constituted the human mind that routine will tire and disgust it, we should say in effect that he never intended the farmer's life to be one of routine. Nature has done all she can to break up routine. While the earth swings round its orbit once a year, and turns on its axis once in twenty-four hours,—while the tide ebbs and flows twice daily, and the seasons come and go in rotation, every atom changes its relations to every other atom every moment. Influences are tossed into these skeleton cycles of motion and event which start a myriad of diverse currents, and break up the whole surface of life and being into a healthful confusion. There are never two days alike. The motherly sky never gives birth to twin clouds. The weather shakes its bundle of mysteries in our faces, and banters us with, "Don't you wish you knew?" We prophesy rain upon the morrow, and wake with a bar of golden sunlight on the coverlet. We foretell a hard winter, and, before it is half gone, become nervous lest we should miss our supply of ice. The fly, the murrain, the potato-rot, and the grasshoppers, all have a divine office in tipping over our calculations. The phantom host of the great North come out for parade without announcement, and shoot their arrows toward the zenith, and flout the stars with their rosy flags, and retire, leaving us looking into heaven and wondering. Long weeks of drought parch the earth, and then comes the sweet rain, and sets the flowers and the foliage dancing. All the seasons are either very late or very early, or, for some reason, "the most remarkable within the memory of man."

This is God's management for destroying routine within the law of stated revolution, and for bringing the mind constantly into contact with fresh influences. The soul, encased by a wall of adamantine circumstances, and driven around a track of unvarying duties, shrivels, or gets diseased. But these circumstances need not imprison the farmer, nor these duties become the polished pavement of his cell. He has his life among the most

beautiful scenes of Nature and the most interesting facts of Science. Chemistry, geology, botany, meteorology, entomology, and a dozen other related or constituent sciences,—what is intelligent farming but a series of experiments, involving, first and last, all of these? What is a farm but a laboratory where the most important and interesting scientific problems are solved? The moment that any field of labor becomes intelligently experimental, that moment routine ceases, and that field becomes attractive. The most repulsive things under heaven become attractive, on being invested with a scientific interest. All, therefore, that a farmer has to do, to break up the traditional routine of his method and his labor, is to become a scientific farmer. He will then have an interest in his labor and its results above their bare utilities. Labor that does not engage the mind has no dignity; else the ox and the ass are kings in the world, and we are but younger brothers in the royal family. So we say to every farmer,—If you would make your calling attractive to yourself and your boys, seek that knowledge which will break up routine, and make your calling, to yourself and to them, an intelligent pursuit.

A recent traveller in England speaks enthusiastically of a visit which he paid to an old farm-house in that country, and of the garden-farm upon which it stood, which had descended from father to son through a period of five hundred years. He found a family of charming intelligence and the politest culture. That hallowed soil was a beautiful body, of which the family interests and associations were the soul. To be dissociated from that soil forever would be regarded by its proprietors as almost equivalent to family annihilation. Proprietorship in English soil is one of the prime ambitions of the true Englishman; but we do not find in New England any kindred sentiments of pride in landed property and family affection for the paternal acres. The nomadic tribes of Asia would seem to have quite as strong local attachments

as Yankee landholders, most of whom will sell their homesteads as readily as they will their horses. This fact we cannot but regard as one among the many causes which have conspired to despoil the farmer's calling of some of its legitimate attractions. The son slips away from the old homestead as easily as he does from the door of a hotel. Very likely his father has rooted up all home attachments by talking of removing Westward ever since the boy saw the light. This lack of affection for the family acres is doubtless owing somewhat to the fact that in this country landed property is not associated with political privilege, as it has been in England; but this cannot be the sole reason; for the sentiment has a genuine basis in nature, and, in not a few instances, an actual existence amongst us.

Resulting from the operation of all the causes which we have briefly noticed, there is another cause of the deterioration of farming life in New England, which cannot be recovered from in many years. Actual farming life has been brought into such harsh contrast with other life, that its best materials have been sifted out of it, have slid away from it. An inquiry at the doors of the great majority of farmers would exhibit the general fact, that the brightest boys have gone to college, or have become mechanics, or are teaching school, or are in trade, or have emigrated to the West. There have been taken directly out from the New England farming population its best elements,—its quickest intelligence, its most stirring enterprise, its noblest and most ambitious natures,—precisely those elements which were necessary to elevate the standard of the farmer's calling and make it what it should be. It is very easy to see why these men have not been retained in the past; it is safe to predict that they will not be retained in the future, unless a thorough reform be instituted. These men cannot be kept on a routine farm, or tied to a home which has no higher life than that of a workshop or a boarding-house. It is not be-

cause the work of the farm is hard that men shun it. They will work harder and longer in other callings for the sake of a better style of individual and social life. They will go to the city, and cling to it while half starving, rather than engage in the dry details and the hard and homely associations of the life which they forsook.

The boys are not the only members of the farmer's family that flee from the farmer's life. The most intelligent and most enterprising of the farmer's daughters become school-teachers, or tenders of shops, or factory-girls. They condemn the calling of their father, and will, nine times in ten, marry a mechanic in preference to a farmer. They know that marrying a farmer is a very serious business. They remember their worn-out mothers. They thoroughly understand that the vow that binds them in marriage to a farmer seals them to a severe and homely service that will end only in death.

As a consequence of this sifting process, to which we have given but a glance, a very decidedly depressing element is now being rapidly introduced into New England farming life. The Irish girls have found their way into the farmer's kitchen, and the Irish laborer has become the annual "hired man." At present, there are no means of measuring the effect of this new element; but it cannot fail to depress the tone of farming society,

and surround it with a new swarm of menial associations.

In our judgment, there is but little in the improved modes of farming, in scientific discoveries, and new mechanical appliances, to be relied upon for the elevation of New England agriculture and the emancipation of New England farming life. The farmer needs new ideas more than he needs new implements. The process of regeneration must begin in the mind, and not in the soil. The proprietor of that soil should be the true New England gentleman. His house should be the home of hospitality, the embodiment of solid comfort and liberal taste, the theatre of an exalted family-life which shall be the master and not the servant of labor, and the central sun of a bright and happy social atmosphere. When this standard shall be reached, there will be no fear for New England agriculture. The noblest race of men and women the sun ever shone upon will cultivate these valleys and build their dwellings upon these hills; and they will cling to a life which blesses them with health, plenty, individual development, and social progress and happiness. This is what the farmer's life may be and should be; and if it ever rise to this in New England, neither prairie nor savanna can entice her children away; and waste land will become as scarce, at last, as vacant lots in Paradise.

LES SALONS DE PARIS.*

THE title is an ambitious one, for the *salons* of Paris are Paris itself; and, from the days of the Fronde and of the Hôtel Rambouillet down to our own, you may judge pretty accurately of what is going on upon the great political stage of France by what is observable in those green-rooms and *coulisses* called the Pa-

risian drawing-rooms, and where, more or less, the actors of all parties may be seen, either rehearsing their parts before the performance, or seeking, after the performance is over, the several private echoes of the general public sentiment that has burst forth before the light of the foot-lamps. Shakspeare's declaration, that "all the world's a stage," is nowhere so true as in the capital of

* *Les Salons de Paris.*—*Foyers Eteints.* Par Mme. Ancelet. 12mo. Paris.

Gaul. There, most truly may it be said, are

—"All the men and women merely players;
They have their exits and their entrances,
And one man in his time plays many parts."

Therefore might a profound and comprehensive study of the drawing-rooms of Paris be in a manner a history of France in our own times.

Madame Ancelot's little volume does not aim so high; nor, had it done so, would its author have possessed the talent requisite for carrying out such a design. Madame Ancelot is a writer of essentially second-rate and subordinate capacity, and consequently her account of those *salons de Paris* that she has seen (and she by no means saw them all) derives no charm from the point of view she takes. To say the truth, she has no "point of view" of her own; she tells what she saw, and (thus far we must praise her) she tells it very conscientiously. Having waited in every instance till the people she has to speak of were dead, Mme. Ancelot has a pretty fair field before her for the display of her sincerity, and we, the public, who are neither kith nor kin of the deceased, are the gainers thereby.

So interesting and so amusing is the subject Madame Ancelot has chosen, that, in spite of her decided want of originality or even talent in treating it, her book is both an amusing and an interesting one. It is even more than that; for those who wish to have a correct notion of certain epochs of the social civilization of modern France, and of certain predominant types in French society during the last forty years, Madame Ancelot's little volume is full of instruction. Perhaps in no society, so much as in that of France, have the political convulsions of the state reacted so forcibly upon the relations of man to man, revolutionizing the homes of private persons, even as the government and the monarchy were revolutionized. In England, nothing of this kind is to be observed; and if you study English society ten years, or twenty years, or fifty years

after the fall of Charles I., after the establishment of the Commonwealth, or after the restoration of Charles II., the definitive exile of the Stuarts, and the advent of a foreign dynasty to the throne, you find everywhere its constitutive elements the same,—modified only by such changes of time, circumstance, and fashion, as naturally, in every country, modify the superficial aspect of all society. But in France, it is the very *substratum* of the social soil that is overturned, it is the constitutive elements of society that are displaced; and the consequence is a general derangement of all relative positions.

In what is still termed *la vieille société Française*, little or nothing was left to chance, and one of its great characteristics was order and the perfectly regular play of its machinery. Everything was set down, *noted*, as it were, beforehand,—as strictly so as the ceremonies of a grand diplomatic ceremony, after some treaty, or marriage, or other occasion of solemn conference. Under this *régime*, which endured till the Revolution of '93, (and even, strangely enough, *beyond* that period,) politeness was, of course, the one chief quality of whosoever was well brought up,—urbanity was the first sign of good company,—and for the simple reason, that no one sought to infringe. There was no cause for insolence, or for what in England is called "exclusiveness," because there was no necessity to repel any disposition to encroach. No one dreamed of the possibility of encroaching upon his neighbor's grounds, or of taking, in the slightest degree, his neighbor's place.

The first French Revolution caused no such sudden and total disruption of the old social traditions as has been generally supposed; and as far as mere social intercourse and social conventionalities were concerned, there was, even amongst the terrible popular dictators of 1793, more of the *tone* of the *ci-devant* good company than could possibly be imagined. In later times, every one who knew Fouché remembers that he was con-

stantly in the habit of expressing his indignation at the want of good-breeding of the young exquisites of the Empire, and used perpetually to exclaim, "In *my time*" this or that "would not have been allowed," or, "In *my time* we were accustomed to do" so and so. Now Fouché's "time" was that which is regarded as the period of universal beheading and levelling.

It is certain, that, under the *régime* of the Revolution itself, bitter class-hatreds did not at first show themselves in the peaceful atmosphere of society, —and that for more than one reason. First of all, in a certain sense, "society," it may be said, was *not*. Next, what subsisted of society was fragmentary, and was formed by small isolated groups or coteries, pretty homogeneously composed, or, when not so as to rank and station, rendered homogeneous by community of suffering. It must not be imagined that only the highest class in France paid for its opinions or its vanities with loss of life and fortune. The victims were everywhere; for the changes in the governing forces were so perpetual, that, more or less, every particular form of envy and hatred had its day of power, and levelled its blows at the objects of its special antipathy. In this way, the aristocracy and the *bourgeoisie* were often brought into contact; marriages even were contracted, whether during imprisonment or under the pressure of poverty, that never would have been dreamt of in a normal state of things; and whilst parents of opposite conditions shook hands in the scaffold-surveying *charrettes*, the children either drew near to each other, in a mutual helpfulness, the principle whereof was Christian charity, or met together to partake of amusements, the aim whereof was oblivion. For several years, the turn of every individual for execution might come, and therefore it was difficult, on the other hand, to see who might also *not* be a friend.

This habit was to be modified under the Empire, but in a shape not hitherto

foreseen. Military glory began to long for what the genuine Revolutionists termed "feudal distinctions." Napoleon was desirous of a court and of an aristocracy; he set to work to create a *noblesse*, and dukes and counts were fabricated by the dozen. Very soon the strong love of depreciation, that is inherent in every Frenchman, seized upon even the higher plebeian classes, and, discontented as they were at seeing the liberties of the movement of '89 utterly confiscated by a military chief, and antipathetic as they have been, time out of mind, to what are called *les traineurs de sabre*, the civilians of France, her *bourgeois*, who were to have their day, —but with very different feelings in 1830, —joined with the genuine Pre-Revolutionary aristocrats, and the *noblesse de l'Empire* was laughed at and taken *en grippe*. Here was, in reality, the first wide breach made in France in the edifice of good-breeding and good-manners; and those who have been eye-witnesses to the metamorphosis will admit that the guillotine of Danton and Robespierre did even less to destroy *le bon ton* of the *ancien régime* than was achieved by the guard-room habits and morals of Bonaparte's glorious troopers, rushing, as they did, booted and spurred, into the emblazoned sanctuary of heraldic distinctions, and taking, as it were, *la société* by storm.

But soon another alliance and other enmities were to be formed. The Empire fell; the Bourbons returned to France; Louis XVIII. recognized the *noblesse* of the Imperial government, and the constitution of society as it had been battled for by the Revolution. At the same time his court was filled with all the great historic names of the country, who returned, no longer avowedly the first in authority, and therefore prompt to condescend, but the first in presumption, and therefore prompt to take offence. The new alliance that was formed was that of the plebeian caste with the *noblesse de l'Empire*, against which it had been previously so incensed. Notwithstanding

all the efforts sincerely made by Louis XVIII. to establish a constitutional government and to promote a genuine constitutional feeling throughout France, class-hatreds rose gradually to so violent a height that the king's only occupation soon grew to be the balancing of expedencies. He was forever obliged to reflect upon the choices he could make around him, since each choice made from one party insured him a hundred enemies in the party opposed. This, which was the political part of the drama,—that which regarded the scenes played upon the public stage,—had its instantaneous reflex, as we have already said in the commencement of these pages, in the *salons*, which were the green-rooms and *coulisses*. Urbanity, amenity of language, the bland demeanor hitherto characterized as *la grâce Française*, all these were at an end. Society in France, such as it had been once, the far-famed model for all Europe, had ceased to exist. The ambition which had once been identified with the cares of office or the dangers of war now found sufficient food in the bickerings of party-spirit, and revenged itself by *salon* jokes and *salon* impertinence for the loss of a lead it either could not or would not take in Parliament. The descendants of those very fathers and mothers who had, in many cases, suffered incarceration, and death even, together, set to hating each other cordially, because these would not abdicate what those would not condescend to compete for. The *noblesse* cried out, that the *bourgeoisie* was usurping all its privileges; and the *bourgeoisie* retorted, that the time for privilege was past. The two classes could no longer meet together in the world, but formed utterly different sets and *cliques*; and it must be avowed that neither of the two gained in good-manners, or what may be called drawing-room distinction.

From 1815 to 1830, the *noblesse* had officially the advantage. From 1830 to 1848, the *bourgeoisie* ruled over the land. But now was to be remarked another social phenomenon, that compli-

cated *salon* life more than ever. The middle classes, we say, were in power; they were in all the centres of political life,—in the Chambers, in the ministries, in the king's councils, in diplomacy; and with them had risen to importance the Imperial aristocracy, whose representatives were to be found in every department of the public service. All this while, the old families of the *ancien régime* shut themselves up among themselves entirely, constituted what is now termed the *Faubourg St. Germain*, which never was so exclusive or so powerful (socially speaking) as under Louis Philippe, and a tacit combat between envy and disdain was carried on, such as perhaps no modern civilization ever witnessed. The *Faubourg St. Germain* arrogated to itself the privilege of exclusively representing *la société Française*, and it must be confessed that the behavior of its adversaries went far to substantiate its claims.

Our purpose in these pages is not to touch upon anything connected with politics, or we could show, that, whilst apparently severed from all activity upon the more conspicuous field of the capital, the ancient French families were employed in reëstablishing their influence in the rural provincial centres; the result of which was the extraordinary influx of Legitimist members into the Chamber formed by the first Republican elections in 1848. But this is foreign to our present aim. As to what regards French *society*, properly so called, it was, from 1804, after the proclamation of the Empire, till 1848, after the fall of Louis Philippe, in gradual but incessant course of subdivision into separate cliques, each more or less bitterly disposed towards the others. From the moment when this began to be the case, the edifice of French society could no longer be studied as a whole, and it only remained to examine its component parts as evidences of the tendencies of various classes in the nation. In this assuredly not uninteresting study, Mme. Ancelot's book is of much service; for a certain number of the dif-

ferent *salons* she names are, as it were, types of the different stages civilization has attained to in the city which chooses to style itself "the brain of Europe."

The description, given in the little book before us, of what in Paris constitutes a genuine *salon*, is a tolerably correct one. "A *salon*," says Mme. Ancelot, "is not in the least like one of those places in a populous town, where people gather together a crowd of individuals unknown to each other, who never enter into communication, and who are where they are, momentarily, either because they expect to dance, or to hear music, or to show off the magnificence of their dress. This is not what can ever be called a *salon*. A *salon* is an intimate and periodical meeting of persons who for several years have been in the habit of frequenting the same house, who enjoy each other's society, and who have some reason, as they imagine, to be happy when they are brought in contact. The persons who receive, form a link between the various persons they invite, and this link binds the *habitue's* more closely to one another, if, as is commonly the case, it is a woman of superior mind who forms the point of union. A *salon*, to be homogeneous, and to endure, requires that its *habitue's* should have similar opinions and tastes, and, above all, enough of the urbanity of bygone days to enable its frequenters to feel at home with every one in it, without the necessity of a formal introduction. Formerly, this practice of speaking to persons you had not been presented to was a proof of good-breeding; for it was well known that in no house of any distinction would there be found a guest who was not worthy to be the associate of whoever was noblest and best. These habits of social intercourse gave a value to the intellectual and moral qualities of the individual, quite independent of his fortune or his rank; and in these little republics the real sovereign was *merit*."

Madame Ancelot is right here, and there were in Paris several of these

salons, which served as the models for those of all the rest of Europe. Under the Restoration, two illustrious ladies tried to recall to the generation that had sprung from the Empire or from emigration what the famous *salons* of old had once been, and the Duchesse de Duras and the Marquise de Montcalm (sister to the then minister, the Duc de Richelieu) drew around them all that was in any way distinguished in France. But the many causes we have noted above made the enterprise a difficult one, and the various divergences of society, politically speaking, rendered the task of the mistress of a house one of surpassing arduousness. Mme. de Staël, who, by her very superiority perhaps,—certainly by her vehemence,—was prevented from ever being a perfect example of what was necessary in this respect, acquired the nickname of *Présidente de Salons*; and it would appear, that, with her resolute air, her loud voice, and her violent opinions, she really did seem like a kind of speaker of some House of Commons disguised as a woman. That the management of a *salon* was no easy affair the following anecdote will prove. The Duchesse de Duras one day asked M. de Talleyrand what he thought of the evening *réunions* at her house, and after a few words of praise, he added: "But you are too vivacious as yet,—too young. Ten years hence you will know better how to manage it all." Mme. de Duras was then somewhere about fifty-four or five! We perceive, therefore, that, according to M. de Talleyrand, the proper manner of receiving a certain circle of *habitue's* was likely to be the study of a whole life.

We select from Mme. Ancelot's book sketches of the following *maitresses de maison*, because they seem to us the types of the periods of transformation to which they correspond in the order of date:—Mme. Lebrun, Mme. Gérard, Mme. d'Abrantès, Mme. Récamier, Mme. Nodier. Mme. Lebrun corresponds to the period when Pre-Revolutionary traditions were still in force, and when the remembrance yet subsisted of a society

that had been a real and not a fictive unity. Mme. Gérard—or we should rather say her husband, for she occupied herself little with her guests, whom the illustrious painter entertained—represents the period of the Empire, prolonging itself into the Restoration, and seeking by the immunities of talent and intelligence to bring the two *régimes* to meet upon what might be termed neutral ground. Mme. d'Abrantès is the type of that last remnant of the half-heroic, half-sentimental epoch which tried to endure even after the first days of 1830, and of which certain verses of Delphine Gay, certain impossible portraits of invincible colonels, certain parts played by the celebrated Elleviou, and the Troubadourish "*Partant pour la Syrie*" of Queen Hortense, are emblematical. Mme. Récamier, although in date all but the contemporary of Mme. Lebrun, is, in her position of mistress of a *salon*, essentially the impersonation of a foible peculiar to the present day; she typifies the class of women who, in Paris, are absolutely absorbed by the thought of their *salons*, for whom to receive is to live, and who are ready to expire at the notion of any celebrity not being a frequenter of their tea-table. Mme. Nodier's—and here, as with Mme. Gérard, we must substitute the husband for the wife, and say Charles Nodier's—*salon* was the menagerie whither thronged all the strange beings who, after the Revolution of July, fancied they had some special and extraordinary "call" in the world of Art. Nodier's receptions at the Arsenal represent the literary and artistic movement of 1830.

To begin, then, with Mme. Lebrun. This lady was precisely one of those individualities who, since the days of Louis XIV., had found it easy to take their place in French society, who, under the *ancien régime*, were the equals of the whole world, and who, since "Equality" has been so formally decreed by the laws of the land, would have found it impossible, under the Citizen King, Louis Philippe, or under the so-called "Democratic Empire" of Louis Napoleon, to

surround themselves with any society save that of a perfectly inferior description.

Mme. Lebrun was the daughter of a very second-rate painter of the name of Vigée, the sister of a poet of some talent of the same name, and was married young to a picture-dealer of large fortune and most expensive and dissipated, not to say dissolute habits, M. Lebrun. She was young,—and, like Mme. Récamier and a few others, remained youthful to a very late term of her existence,—remarkably beautiful, full of talent, grace, and *esprit*, and possessed of the magnificent acquirements as a portrait-painter that have made her productions to this day valuable throughout the galleries of Europe. She was very soon so brilliantly in fashion, that there was not a *grand seigneur* of the court, a *grande dame* of the queen's intimacy, a rich *fermier-général*, or a famous writer, artist, or *savant*, who did not petition to be admitted to her *soirées*; and in her small apartment, in the Rue de Cléry, were held probably the last of those intimate and charmingly uncereemonious *réunions* which so especially characterized the manners of the high society of France when all question of etiquette was set aside. The witty Prince de Ligne, the handsome Comte de Vaudreuil, the clever M. de Boufflers, and his step-son, M. de Sabran, with such men as Diderot, d'Alembert, Marmontel, and Laharpe, were the original *habitués* of Mme. Lebrun's drawing-room. At the same time used to visit her the bitter, bilious, discontented David, the painter, who, though very young, was annoyed at a woman having such incontestable proficiency in his own art, and whose democratic ideas were hurt at her receiving such a number of what he styled "great people." Madame Lebrun, one day,—little dreaming that she was addressing a future *coupe-tête* of the most violent species, (perhaps the only genuine admirer of Marat,)—said, smilingly, to the future painter of *Les Sabines*, "David, you are wretched because you are neither Duke nor Marquis. I, to

whom all such titles are absolutely indifferent, I receive with sincere pleasure all who make themselves agreeable." The apostrophe apparently hit home, for David never returned to Mme. Lebrun's house, and was no well-wisher of hers in later times. But on this occasion she had not only told the truth to an individual, she had touched upon the secret sore of the nation and the time; and vast classes were already brooding in silence over the absurd, vain, and empty regret at being "neither Duke nor Marquis." The Revolution was at hand, and the days rapidly approaching when all such pleasant assemblies as those held by Mme. Lebrun would become forever impossible. At some of these, the crowd of *intimates*, and of persons all acquainted with each other, was so great, that the highest dignitaries of the realm had to content themselves with sitting down upon the floor; and on one occasion, the Maréchal de Noailles, who was of exceedingly large build, had to request the assistance of several of his neighbors before he could be brought from his squatting attitude to his feet again.

Mme. Lebrun emigrated, like the majority of her associates,—going to Russia, to Italy, to Germany, to England, and everywhere increasing the number of her friends, besides preserving all those of former times, whom she sedulously sought out in their voluntary exile, and to whom, in many cases, she even proved an invaluable friend. In the commencement of the Restoration, Mme. Lebrun returned to France, and established herself definitively at Paris, and at Louveciennes near Marly, where she had a delightful summer residence. Here, as in her *salons* in the metropolis, she tried to bring back the tone of French society to what it had been before the Revolution, and to show the younger generations what had been the gayety, the grace, the affability, the exquisite good-breeding of those who had preceded them. The men and women of her own standing seconded her, but the younger ones were not to

be drawn into high-heartedness; and an observer might have had before him the somewhat strange spectacle of old age gay, gentle, unobservant of any stiff formality, and of youth preoccupied and grave, and, instead of being refined in manners, pedantic. "The younger frequenters of Mme. Lebrun's *salon*," says Mme. Ancelot, "were strangers to the world into which they found themselves raised; those who surrounded them were of an anterior civilization; they could not grow to be identified with a past which was unknown to them, or known only through recitals that disfigured it. . . . Amidst the remnants of a society that had been historical, there was, as it were, the breath of a spirit born of our days; new ideas, new opinions, new hopes, nay, even new recollections, were evident all around, and served to render social unity impossible; but, above all, what failed in this one particular centre was youth,—there were few or no young people." This was perfectly true; and Mme. Lebrun's *salon* is interesting only from the fact of its being the last, perhaps, in which French people of our day can have acquired a complete notion of what the Pre-Revolutionary *salons* of France were.

The evening *réunions* at the house of Gérard, the celebrated painter, were among the most famous features of the society of the Restoration. The gatherings at Mmes. de Duras's and de Montcalm's splendid hotels were all but exclusively political and diplomatic; whereas at Gérard's there was a mixture of these with the purely mundane and artistic elements, and, above all, there was a portion of Imperialist fame blended with all the rest, that was hard to be found anywhere else. Gérard, too, had painted the portraits of so many crowned heads, and been so much admitted into the intimacy of his royal models, that, whenever a foreigner of any note visited Paris, he almost immediately asked to be put in a way to be invited to the celebrated artist's Wednesday receptions. This was, to a certain degree, an innovation in regular

French society; the French being most truly, as has been said, the "Chinese of Europe," and liking nothing less than the intermixture with themselves of anything foreign. But Gérard was one of those essentially superior men who are able to influence those around them, and bring them to much whereto no one else could have persuaded them. Gérard, like many celebrated persons, was infinitely superior to what he *did*. As far as what he *did* was concerned, Gérard, though a painter of great merit, was far inferior to two or three of whom France has since been justly proud; but in regard to what he *was*, Gérard was a man of genius, who had in many ways few superiors. Few men, even in France, have so highly deserved the reputation of *un homme d'esprit*. He was as *spirituel* as Talleyrand himself, and almost as clear-sighted and profound. Add to this that nothing could surpass the impression made by Gérard at first sight. He was strikingly like the first Napoleon, but handsomer; with the same purity of outline, the same dazzlingly lustrous eyes, full of penetration and thought, but with a certain *sympathetic* charm about his whole person that the glorious conqueror of Marengo and Dictator of Gaul never possessed.

Gérard was not entirely French; born in Rome in 1770, his father only was a native of France, his mother was an Italian; and from her he inherited a certain combination of qualities and peculiarities that at once distinguished him from the majority of his countrymen. Full of poetic fire and inspiration, there was in Gérard at the same time a strong critical propensity, that showed itself in his caustic wit and, sometimes, not unmalicious remarks. There was also a perpetual struggle in his character between reflection and the first impulse, and sometimes the *étourderie* of the French nature was suddenly checked by the caution of the Italian; but, take him as he was, he was a man in a thousand, and those who were in the habit of constantly frequenting his house affirm loudly

and with the deepest regret, that they shall never "look upon his like again."

Gérard had built for himself a house in the Rue des Augustins, near the ancient church of St. Germain des Prés and there, every Wednesday evening, summer and winter, he received whatever was in any way illustrious in France, or whatever the other capitals of Europe sent to Paris, *en passant*. "Four small rooms," says Mme. Ancelot, "and a very small antechamber, composed the whole apartment. At twelve o'clock tea was served, with eternally the same cakes, over which a pupil of Gérard's, Mlle. Godefroy, presided. Gérard himself talked; his wife remained nailed to a whist-table, attending to nothing and to nobody. Evening once closed in, cards were the only occupation of Mme. Gérard."

From Mme. de Staël down to Mlle. Mars, from Talleyrand and Pozzo di Borgo down to M. Thiers, there were no celebrities, male or female, that, during thirty years, (from 1805 to 1835,) did not flock to Gérard's house, and all, how different soever might be their character or position, agreed in the same opinion of their host; and those who survive say of him to this day,—"Nothing in his *salons* announced that you were received by a great *Artist*, but before half an hour had elapsed you felt you were the guest of a distinguished *Man*; you had seen by a glance at Gérard's whole person and air that he was something apart from others,—that the sacred fire burned there!"

The regret felt for Gérard's loss by all who ever knew him is not to be told, and speaks as highly for those who cherished as for him who inspired it. His, again, was one of the *salons* (impossible now in France) where genius and social superiority, whether of birth or position, met together on equal terms. Without having, perhaps, as large a proportion of the old *noblesse de cour* at his house as had Mme. Lebrun, Gérard received full as many of those eminent personages whose political occupations would have seemed to estrange them from the world of mixed

society and the Arts. This is a *nuance* to be observed. Under the Empire, hard and despotic as was the rule of Bonaparte, and anxious even as he was to draw round him all the aristocratic names that would consent to serve his government, there was—owing to the mere force of events and the elective origin of the throne—a strong and necessary democratic feeling, that assigned importance to each man according to his works. Besides this, let it be well observed, the first Empire had a strong tendency to protect and exalt the Arts, from its own very ardent desire to be made glorious in the eyes of posterity. Napoleon I. was, in his way, a consummate artist, a prodigiously intelligent *metteur en scène* of his own exploits, and he valued full as much the man who delineated or sang his deeds, as the minister who helped him to legislate, or the diplomatist who drew up protocols and treaties. The Emperor was a lover of noise and show, and his time was a showy and a noisy one. Bonaparte had, in this respect, little enough of the genuine Tyrant nature. Unlike his nephew, he loved neither silence nor darkness; he loved the reflection of his form in the broad noon of publicity, and the echo of his tread upon the sounding soil of popular renown. Could he have been sure that all free men would have united their voices in chanting his exploits, he would have made the citizens of France the freest in the whole world. Compression with him was either a mere preventive against or vengeance for detraction.

Now this publicity-loving nature was, we repeat, as much served by Art and artists as by politicians; nay, perhaps more; and for this reason artists stood high during the period of the Empire. Talma held a social rank that under no other circumstances could have been his, and a painter like Gérard could welcome to his house statesmen such as Talleyrand or Daru, or marshals of France, and princes even. We shall show, by-and-by, how this grew to be impossible later. At present we will recur to Mme. Ancelot

for a really very true description of two persons who were among the *habitués* of the closing years of Gérard's weekly receptions, and one of whom was destined to universal celebrity: we allude to Mme. Gay, and her daughter, Delphine,—later, Mme. Girardin. Of these two, the mother, famous as Sophie Gay, was as thorough a remnant of the exaggerations and bad taste of the Empire as were the straight, stiff, mock-classical articles of furniture of the Imperialist hotels, or the *or-moulu* clocks so ridiculed by Balzac, on which turbaned Mamelukes mourned their expiring steeds. All the false-heroics of the literature of the Empire found their representative (their last one, perhaps) in Mme. Sophie Gay, and it has not been sufficiently remarked that she even transmitted a shade of all this to her daughter, in other respects one of the most sagacious spirits and one of the most essentially unconventional of our own day. A certain something that was not in harmony with the tone of contemporary writers here and there surprised you in Delphine de Girardin's productions, and, as Jules Janin once said, "One would think the variegated plumes of Murat's fantastic hat* were sweeping through her brains!" This was her mother's doing. Delphine, who had never lived during one hour of the glory of the Empire, had, through the medium of her mother, acquired a slight tinge of its *boursouffure*; and had it not been for her own personal good taste, she would have been misled precisely by her strong lyrical aptitudes. Madame Gay found in Gérard's *salon* all the people she had best known in her youth, and she was delighted to have her early years recalled to her. Mme. Ancelot, who, like many of her countrywomen, felt a marked antipathy for Madame Gay, has given a very true portrait of both mother and daughter.

"Many years after," she writes, "when these ladies were (through M. de Girar-

* It will be remembered that on field-days Murat had adopted a hat and feathers of a most ridiculous kind, and that have become proverbial.

din) at the head of one of the chief organs of the Paris press, they were much flattered and courted; at the period I speak of" (about 1817-1825) "their position was far from brilliant, and Mme. Gay was far from popular. Every word that fell from her mouth, uttered in a sharp tone, and full of bitterness and envy, went to speak ill of others and prodigiously well of herself. She had a mania for titles and tuft-hunting, and could speak of no one under a marquis, a count, or a baron. Her daughter's beauty and talents caused her afterwards to be more generally admitted into society; but at this period she was avoided by most people."

Her daughter's beauty was certainly marvellous, and when, under the reign of Louis Philippe, American society had in Paris more than one brilliant representative and more than one splendid centre of hospitality, where all that was illustrious in the society of France perpetually flocked, we make no doubt many of our countrymen noticed, whether at theatre or concert or ball, the really queenlike air of Mme. de Girardin, and the exquisitely classic profile, which, enframed, as it were, by the capricious spirals of the lightest, fairest flaxen hair, resembled the outline of some antique statue of a Muse.

Delphine Gay and her mother were more the ornaments of the *salon* of the Duchesse d'Abrantès, perhaps, than of that of Gérard; and as the former continued open long after the latter was closed by death, not only the young girl, whose verses were so immensely in fashion during the Restoration, was one of the constant guests of Junot's widow, but she continued to be so as the wife of Émile de Girardin, the intelligent and enterprising founder of the newspaper "La Presse."

The *salon* of the Duchess d'Abrantès was one of the first of a species which has since then found imitators by scores and hundreds throughout France. It was the *salon* of a person not in herself sufficiently superior or even cele-

brated to attract the genuine superiorities of the country without the accessory attractions of luxury, and not sufficiently wealthy to draw around her by her splendid style of receiving, and to disdain the bait held out to those she invited by the presence of great "lions." Gérard gave to his guests, at twelve o'clock at night, a cup of tea and "eternally the same cakes" all the year round; but Gérard was the type of the great honors rendered, as we have observed, to Art under the Empire, and to his house men went as equals, whose daily occupations made them the associates of kings. This was not the case with the Duchesse d'Abrantès. She had notoriety, not fame. Her "Mémoires" had been read all through Europe, but it is to be questioned whether anything beyond curiosity was satisfied by the book, and it certainly brought to its author little or none of that which in France stands in lieu even of fortune, but which is not easy to obtain, namely,—*consideration*.

The Duchesse d'Abrantès was rather popular than otherwise; she was even beloved by a certain number of persons; but she never was what is termed *considérée*,—and this gave to her *salon* a different aspect from that of the others we have spoken of. A dozen names could be mentioned, whose wearers, without any means of "entertaining" their friends, or giving them more than a glass of *eau sucrée*, were yet surrounded by everything highest and best in the land, simply because they were *gens considérables*, as the phrase went; but Mme. d'Abrantès, who more or less received all that mixed population known by the name of *tout Paris*, never was, we repeat, *considérée*.

The way in which Mme. Ancelot introduces her "friend," the poor Duchesse d'Abrantès, on the scene, is exceedingly amusing and natural; and we have here at once the opportunity of applying the remark we made in commencing these pages, upon Mme. Ancelot's truthfulness. She is the *habituée* of the house of Mme. d'Abrantès; she professes herself attached to the Duchess; yet she does not scru-

ple to tell everything as it really is, nor, out of any of the usual little weaknesses of friendship, does she omit any one single detail that proves the strange and indeed somewhat "Bohemian" manner of life of her patroness. We, the readers of her book, are obviously obliged to her for her indiscretions; with those who object to them from other motives we have nothing to do.

Here, then, is the fashion in which we are introduced to Mme. la Duchesse d'Abrantès, widow of Marshal Junot, and a born descendant of the Comneni, Emperors of Byzantium.

Mme. Ancelet is sitting quietly by her fireside, one evening in October, (some short time after the establishment of the monarchy of July,) waiting to hear the result of a representation at the Théâtre Français, where a piece of her own is for the first time being performed. All at once, she hears several carriages stop at her door, a number of persons rush up the stairs, and she finds herself in the arms of the Duchesse d'Abrantès, who was resolved, as she says, to be the first to congratulate her on her success. The hour is a late one; supper is served, and conversation is prolonged into the "small hours." All at once Mme. d'Abrantès exclaims, with an explosion of delight,— "Ah! what a charming time is the night! one is so deliciously off for talking! so safe! so secure! safe from bores and from duns!" (*on ne craint ni les ennuyeux ni les créanciers.*)

Madame Ancelet affirms that this speech made a tremendous effect, and that her guests looked at each other in astonishment. If this really was the case, we can only observe that it speaks well for the Parisians of the epoch at which it occurred; for, assuredly, at the present day, no announcement of the kind would astonish or scandalize any one. People in "good society," nowadays, in France, have got into a habit of living from hand to mouth, and of living by expedients, simply because they have not the strength of mind to live *out* of society, and because the life of "the world" forces them to

expenses utterly beyond what they have any means of providing for. However, we are inclined to believe that some five-and-twenty years ago this was in no degree a general case, and that Mme. d'Abrantès might perfectly well have been the first *maitresse de maison* to whom it happened.

"Alas!" sighs Mme. Ancelet, commenting upon her excellent friend's strange confidence,— "it was the secret of her whole life that she thus revealed to us in a moment of *abandon*,—the secret of an existence that tried still to reflect the splendors of the Imperial epoch, and that was at the same time perplexed and tormented by all the thousand small miseries of pecuniary embarrassment. There were the two extremes of a life that to the end excited my surprise. Grandeur! want!—between those two opposites oscillated every day of the last years of the Duchesse d'Abrantès; the exterior and visible portion of that life arranged itself well or ill, as it best could, in the middle,—now apparently colored by splendor, and now degraded by distress; but at bottom the existence was unvaryingly what I state."

Madame d'Abrantès, at the period of her greatest notoriety, occupied the ground-floor of a hotel in the Rue Rochecouart, with a garden, where dancing was often introduced upon the lawn. Some remnants of the glories of Imperialism were collected there, but the principal *habitues* were men of letters, artists, and young men who danced well! (*les jeunes beaux qui dansaient bien!*) That one phrase characterizes at once the *ex-belle* of the Empire, the contemporary of the sentimental Hortense de Beauharnais, and of the more than *légère* Pauline Borghèse.

To the "new society of July" Mme. d'Abrantès was an object of great curiosity. "I dote on seeing that woman!" said Balzac, one evening, to Mme. Ancelet. "Only fancy! she saw Napoleon Bonaparte as a mere boy,—knew him well,—knew him as a young man, unknown,—saw him occupied, like anybody else,

with the ordinary occurrences of everyday life; then she saw him grow, and grow, and rise, and throw the shadow of his name over the world. She seems to me somewhat like a canonized creature who should all at once come and recount to me the glories of paradise."

Balzac, it must be premised, was bitten just at this period by the Napoleon mania, and this transformed his inquisitive attachment for Mme. d'Abrantès into a kind of passion. It was at this period that he chose to set up in his habitation in the Rue Cassini a sort of altar, on which he placed a small statue of the Emperor, with these words engraved upon the pedestal:—

"Ce qu'il avait commencé par l'épée,
Je l'achèverai par la plume!"

What particular part of the Imperial work this was that Balzac was to "complete by the pen" was never rightly discovered,—but for a time he had a sun-stroke for Napoleon, and his attachment for Mme. d'Abrantès partook of this influence.

One anecdote told by Mme. Ancelot proves to what a degree the union of "grandeur" and "want" she has alluded to went. "Mme. d'Abrantès," says her biographer of the moment, "was always absorbed by the present impression, whatever that might happen to be; she passed from joy to despair like a child, and I never knew any house that was either so melancholy or so gay." One evening, however, it would seem that the Hôtel d'Abrantès was gayer than usual. Laughter rang loud through the rooms, the company was numerous, and the mistress of the house in unparalleled high spirits. If the tide of conversation seemed to slacken, quickly Madame la Duchesse had some inimitable story of the *ridicules* of the ladies of the Imperial court, and the whole circle was soon convulsed at her stories, and at her way of telling them. The tea-table was forgotten. Generally, tea at her house was taken at eleven o'clock; but on this occasion, midnight was long past before it was announced, and before her guests assem-

bled round the table. If our readers are curious to know why, here was the reason: All that remained of the plate had that very morning been put in pawn, and when tea should have been served it was found that tea-spoons were wanting! Whilst these were being sent for to the house of a friend who lent them, Madame la Duchesse took charge of her guests, and drowned their impatience in their hilarity.

It must be allowed that this lady was worthy to be the mother of the young man who, one day, pointing to a sheet of stamped paper, on which a bill of exchange might be drawn, said: "You see that; it is worth five sous now; but if I sign my name to it, it will be worth nothing!" This was a speech made by Junot's eldest son, known in Paris as the Duc d'Abrantès, and as the intimate friend of Victor Hugo, from whom at one time he was almost inseparable.

The eccentric personage we have just spoken of—the Duchesse d'Abrantès—died in the year 1838, in a garret, upon a truckle-bed, provided for her by the charity of a friend. The royal family paid the expenses of her funeral, and Chateaubriand, accompanied by nearly every celebrity of the literary world, followed on foot behind her coffin, from the church to the burying-ground.

Madame d'Abrantès may be considered as the inventor, in France, of what has since become so widely spread under the name of *les salons picaresques*, and of what, at the present day, is famous under the appellation of the *demi-monde*. Her example has been followed by numberless imitators, and now, instead of presuming (as was the habit formerly) that those only receive who are rich enough to do so, it is constantly inquired, when any one in Paris opens his or her house, whether he or she is ruined, and whether the *soirées* given are meant merely to throw dust into people's eyes. The history of the tea-spoons—so singular at the moment of its occurrence—has since been parodied a hundred times over, and sometimes by mistresses of houses

whose fortune was supposed to put them far above all such expedients. Madame d'Abrantès, we again say, was the founder of a *genre* in Paris society, and as such is well worth studying. The *genre* is by no means the most honorable, but it is one too frequently found now in the social centres of the French capital for the essayist on Paris *salons* to pass it over unnoticed.

The *salon* of Mme. Récamier is one of a totally different order, and the worldwide renown of which may make it interesting to the reader of whatever country. As far as age was concerned, Mme. Récamier was the contemporary of Mme. d'Abrantès, of Gérard, nay, almost of Mme. Lebrun; for the renown of her beauty dates from the time of the French Revolution, and her early friendships associate her with persons who even had time to die out under the first Empire; but the *salon* of Madame Récamier was among the exclusively modern ones, and enjoyed all its lustre and its influence only after 1830. The cause of this is obvious: the circumstance that attracted society to Mme. Récamier's house was no other than the certainty of finding there M. de Chateaubriand. He was the divinity of the temple, and the votaries flocked around his shrine. Before 1830 the temple had been elsewhere, and, until her death, Mme. la Duchesse de Duras was the high-priestess of the sanctuary, where a few privileged mortals only were admitted to bow down before the idol. It is inconceivable how easy a certain degree of renown finds it in Paris to establish one of these undisputed sovereignties, before which the most important, highest, most considerable individualities abdicate their own merit, and prostrate themselves in the dust. M. de Chateaubriand in no way justified the kind of worship that was paid him, nor did he even obtain it so long as he was in a way actively to justify it. It was when he grew old and produced nothing, and was hourly more and more rusted over by selfishness, churlishness, and an exorbitant adoration

of his own genius, that the society of his country fell down upon its knees before him, and was ready to make any sacrifice to insure to itself the honor of one of his smiles or one of his looks. In this disposition, Madame Récamier speedily obtained a leading influence over Paris society, and when it was notorious that from four to six every day the "Divinity" would be visible in her *salons*, her *salons* became the place of pilgrimage for all Paris. As with those of Mme. d'Abrantès, there was a certain mixture amongst the guests, because, without that, the *notoriety*, which neither Chateaubriand nor Mme. Récamier disliked, would have been less easily secured; but the tone of the *réunions* was vastly different, and at the celebrated receptions of the Abbaye aux Bois (where Mme. Récamier spent her last quarter of a century) the somewhat austere deportment of the *siècle de Louis XIV.* was in vogue. All the amusements were in their nature grave. Mlle. Rachel recited a scene from "Polyeucte" for the author of "Les Martyrs," and for archbishops and cardinals; the Duc de Noailles read a chapter from his history of Mme. de Maintenon; some performance of strictly classical music was to be heard; or, upon state occasions, Chateaubriand himself vouchsafed to impart to a chosen few a few pages of the "Mémoires d'Outre-Tombe."

In her youth Mme. Récamier had been reputed beautiful, and her sole occupation then was to do the honors of her beauty. She did not dream of ever being anything else; and as she remained young marvellously long,—as her beauty, or the charm, whatever it was, that distinguished her, endured until a very late epoch of her life,—she was far advanced in years before the idea of becoming famous through any other medium save that of her exterior advantages ever struck her. Madame Récamier had no intellectual superiority, but, paraphrasing in action Molière's witty sentence, that "silence, well employed, may go far to establish a man's capacity," she resolved to employ well the talent she possessed

of making other people believe themselves clever. Mme. Ancelot, whose "good friend" she is supposed to have been, and who treats her with the same sincerity she applies to Mme. d'Abrantès, has a very ingenious and, we have reason to fancy, a very true parallel for Mme. Récamier. She compares her to the mendicant described by Sterne, (or Swift,) who always obtained alms even from those who never gave to any other, and whose secret lay in the adroit flatteries with which he seasoned all his beggings. The best passages in Mme. Ancelot's whole volume are those where she paints Mme. Récamier, and we will therefore quote them.

"The Recluse of the Abbaye aux Bois," she says, "had either read the story of the beggar, or her instinct had persuaded her that vanity and pride are the surest vulnerable points by which to attack and subject the human heart. From the first to the last of all the orators, writers, artists, or celebrities of no matter what species, that were invited to Mme. Récamier's house, all heard from her lips the same admiring phrases, the first time they were presented to her. With a trembling voice she used to say: 'The emotion I feel in the presence of a superior being does not permit me to express, as I should wish to do, all my admiration, all my sympathy;—but you can divine,—you can understand;—my emotion tells the rest!'" This eulogistic sentence, a well-studied hesitation, words interrupted, and looks of the most perfect enthusiasm, produced in the person thus received a far more genuine emotion than that with which he was met. It was no other than the artifice of wholesale, universal flattery,—always and invariably the same,—with which Mme. Récamier achieved her greatest conquests, and continued to draw around her almost all the eminent men of our epoch. All this was murmured in soft, low tones, so that he only to whom she spoke tasted the honey poured into his ear. Her grace of manner all the while was infinite; for though she had no talent for conversation, she

had, in the highest degree, the ability which enables one to succeed in certain little combinations, and when she had determined that such or such a great man should become her *habitué*, the web she spun round him on all sides was composed of threads so imperceptibly fine and so innumerable, that those who escaped were few, and gifted with marvellous address."

Mme. Ancelot confesses to having "studied narrowly" all Mme. Récamier's manœuvres, and to having watched all the thousand little traps she laid for social "lions"; but we are rather astonished herein at Mme. Ancelot's astonishment, for, with more or less talent and grace, these are the devices resorted to in Paris by a whole class of *maitresses de maison*, of whom Mme. Récamier is simply the most perfect type.

But the most amusing part of all, and one that will be above all highly relished by any one who has ever seen the same game carried on, is the account of Mme. Récamier's campaign against M. Guizot, which signally failed, all her small webs having been coldly brushed away by the intensely vainglorious individual who knew he should not be placed above Chateaubriand, and who would for no consideration under heaven have been placed beneath him. The spectacle of this small and delicate vanity doing battle against this vanity so infinitely hard and robust is exquisitely diverting. Mme. Récamier put herself so prodigiously out of her way; she who was indolent became active; she who was utterly insensible to children became maternal; she who was of delicate health underwent what only a vigorous constitution would undertake. But all in vain; she either did not or would not see that M. Guizot would not be *second* where M. de Chateaubriand was *first*. Besides, she split against another rock, that she had either chosen to overlook, or the importance of which she had undervalued. If Mme. Récamier had for the idol of her shrine at the Abbaye aux Bois M. de Chateaubriand, M. Guizot had also his

Madame Récamier, the "Egeria" of the Hôtel Talleyrand,—the Princess Lieven. The latter would have resisted to the death any attempt to carry off "her Minister" from the *salons* where his presence was the "attraction" reckoned upon daily, nay, almost hourly; and against such a rival as the venerable Princess Lieven, Mme. Récamier, spite of all her arts and wiles, had no possible chance. However, she left nothing untried, and when M. Guizot took a villa at Auteuil, whither to repair of an evening and breathe the freshness of the half-country air after the stormy debates of the Chambers, she also established herself close by, and opened her attack on the enemy's outposts by a request to be allowed to walk in the Minister's grounds, her own garden being ridiculously small! This was followed by no end of attentions directed towards Mme. de Meulan, M. Guizot's sister-in-law, who saw through the whole, and laughed over it with her friends; no end of little dancing *matinées* were got up for the Minister's young daughters, and no end even of sweet biscuits were perpetually provided for a certain lapdog belonging to the family! All in vain! We may judge, too, what transports of enthusiasm were enacted when the Minister himself was *by chance* (') encountered in the alleys of the park, and with what outpourings of admiration he was greeted, by the very person who, of all others, was so anxious to become one of his votaries. But, as we again repeat, it was of no use. M. Guizot never consented to be one of the *habitués* of the *salon* of the Abbaye aux Bois. It should be remarked, also, that M. Guizot cared little for anything out of the immediate sphere of politics, and of the politics of the moment; he took small interest in what went on in Art, and none whatever in what went on in the so-called "world"; so that where a *salon* was not predominantly political, there was small chance of presenting Louis Philippe's Prime-Minister with any real attraction. For this reason he was now and then to be met at the house of Mme. de Châte-

nay, often at that of Mme. de Boigne, but *never* in any of the receptions of the ordinary run of men and women of the world. *His own salon*, we again say, — the *salon* where he was what Chateaubriand was at the Abbaye aux Bois, — was the *salon* of the Princess Lieven; and to have ever thought she could induce M. Guizot to be in the slightest degree faithless to this *habitué* argues, on the part of Mme. Récamier, either a vanity more egregious than we had even supposed, or an ignorance of what she had to combat that seems impossible. To have imagined for a moment that she could induce M. Guizot to frequent her *réunions* shows that she appreciated neither Mme. de Lieven, nor M. Guizot, nor, we may say, herself, in the light of the high-priestess of Chateaubriand's temple.

However, what Mme. Récamier went through with regard to the arrogant Président du Conseil of the Orléans dynasty, more than one of her imitators are at this hour enduring for some "lion" infinitely illustrious. This kind of hunt after celebrated persons is a feature of French civilization, and a feature peculiarly characteristic of the French women who take a pride in their receptions. A genuine *maitresse de maison* in Paris has no affections, no ties, save those of her *salon*. She is wholly absorbed in thinking how she shall render this more attractive than the *salon* of some other lady, who is her intimate friend, but whose sudden disappearance from the social scene, by any catastrophe, death even, would not leave her inconsolable. She has neither husband, children, relatives, nor friends (in the genuine acceptation of the word); — she has, above all, before all, always and invariably, her *salon*. This race of women, who date undoubtedly from the famous Marquise de Rambouillet in the time of the Fronde, are now dying out, and are infinitely less numerous than they were even twenty years ago in Paris; but a few of them still exist, and in these few the ardor we allude to, and which would lead them,

following in Mme. Récamier's track, to embark for the North Cape in search of some great celebrity, is in no degree abated. Madame Récamier is curious as the arch-type of this race, so purely, thoroughly, exclusively Parisian.

Perhaps to a foreigner, however, no *salon* was more amusing than that of Charles Nodier; but this was of an utterly different description, and all but strictly confined to the world of Literature and Art. Nodier himself occupied a prominent place in the literature that was so much talked of during the last years of the Restoration and the first years of the Monarchy of July, and his house was the rendezvous for all the combatants of both sides, who at that period were engaged in the famous Classic-Romantic struggle. Nodier was the Head Librarian of the Arsenal, and it was in the *salons* of this historic palace that he held his weekly gatherings. He himself was scarcely to be reputed exclusively of either party; he enjoyed the favors of the Monarchy, and the sympathies of the Opposition; the "Classics" elected him a member of the Académie Française, and the "Romantics" were perpetually in his intimacy. The fact was, that Nodier at heart believed in neither Classics nor Romantics, laughed at both in his sleeve, and only cared to procure to himself the most agreeable house, the greatest number of comforts, and the largest sums of money possible.

"By degrees," says Mme. Ancelot, "as Nodier cared less for other people, he praised them more, probably in order to compensate them in words for the less he gave them in affection. Besides this, he was resolved not to be disturbed in his own vanities, and for this he knew there was one only way, which was to foster the vanities of everybody else. Never did eulogium take such varied forms to laud and exalt the most mediocre things. Nowhere were so many geniuses whom the public never guessed at raised to the rank of *divinities* as in the *salons* of Charles Nodier."

The description contained in the lit-

tle volume before us, the manner in which every petty scribbler of fifth-rate talent was transformed into a giant in the society of Nodier, is extremely curious and amusing, and the more so that it is strictly true, and tallies perfectly with the recollections of the individuals who, at the period mentioned, were admitted to the *réunions* of the Arsenal.

Every form of praise having been expended upon persons of infinitely small merit, what was to be done when those of real superiority entered upon the scene? It was impossible to apply to them the forms of laudation adapted to their inferiors. Well, then, a species of slang was invented, by which it was thought practicable to make the genuine great men conceive they had passed into the condition of demigods. A language was devised that was to express the fervor of the adorers who were suddenly allowed to penetrate into Olympus, and the strange, misapplied terms whereof seemed to the uninitiated the language of insanity. For instance, if, after a dozen little unshaved, unkempt poetasters had been called "sublime," Victor Hugo vouchsafed to recite one of his really best Odes, what was the eulogistic form to be adopted? Mme. Ancelot will tell us.

"A pause would ensue, and at the end of a silence of some minutes, when the echo of Hugo's sonorous voice had subsided, one after another of the *elect* would rise, go up to the poet, take his hand with solemn emotion, and raise to the ceiling eyes full of mute enthusiasm. The crowd of bystanders would listen all agape. Then, to the surprise, almost to the consternation, of the uninitiated, one word only would be spoken,—loudly, distinctly, and with strong, deep emphasis spoken; that word would be:

Cathedral!!!

The first orator, after this effort, would return to the place whence he had come, and another, succeeding to him, after repeating the same pantomime as the former, would exclaim:

Ogive!!!

Then a third would come forward, and, after looking all around, would risk the word:

Pyramid-of-Egypt!!!

And thereat the whole assembly would start off into frenzies of applause, and fifty or sixty voices would repeat in chorus the sacramental words that had just been pronounced separately."

The degree of absurdity to which a portion of society must have attained before such scenes as the above could become possible may serve as a commentary and an explanation to half the literature which flooded the stage and the press in France for the first six or eight years after the Revolution of 1830. However, to be just, we must, in extenuation of all these absurdities, cite one passage more from Mme. Ancelot's book, in which, in one respect, at all events, the youth of twenty years ago in Paris are shown to have been superior to the youth of the present day.

"Nodier's parties were extremely amusing," says our authoress; "his

charming daughter was the life of the whole; she drew around her young girls of her own age; poets, musicians, painters, young and joyous as these, were their partners in the dance, and every one was full of hope and dreaming of glory. But what brought all the light-heartedness, all the enthusiasm, all the exultation to its utmost height was, that, in all that youth, so trusting and so hopeful, *no one gave a single thought to money!*"

Assuredly, it would be impossible to say as much nowadays.

Taken as a whole, Mme. Ancelot's little volume is, as we said, an amusing and an instructive one. It is not so from any portion of her own individuality she has infused into it, but, on the contrary, from the entire sincerity with which it mirrors other people. We recommend it to our readers, for it is a record of Paris society in its successive transformations from 1789 to 1848, and paints a class of people and a situation of things, equally true types whereof may possibly not be observable in future times.

THE DISCOVERER OF THE NORTH CAPE.

A LEAF FROM KING ALFRED'S "OROSIUS."

Othere, the old sea-captain,
Who dwelt in Helgoland,
To Alfred, the Lover of Truth,
Brought a snow-white walrus-tooth,
Which he held in his brown right-hand.

His figure was tall and stately;
Like a boy's his eye appeared;
His hair was yellow as hay,
But threads of a silvery gray
Gleamed in his tawny beard.

Hearty and hale was Othere,
His cheek had the color of oak;
With a kind of laugh in his speech,
Like the sea-tide on a beach,
As unto the King he spoke.

And Alfred, King of the Saxons,
Had a book upon his knees,
And wrote down the wondrous tale
Of him who was first to sail
Into the Arctic seas.

"So far I live to the northward,
No man lives north of me;
To the east are wild mountain-chains,
And beyond them meres and plains;
To the westward all is sea.

"So far I live to the northward,
From the harbor of Skeringes-hale,
If you only sailed by day,
With a fair wind all the way,
More than a month would you sail.

"I own six hundred reindeer,
With sheep and swine beside;
I have tribute from the Fins,—
Whalebone, and reindeer-skins,
And ropes of walrus-hide.

"I ploughed the land with horses,
But my heart was ill at ease,
For the old seafaring men
Came to me now and then
With their sagas of the seas,—

"Of Iceland, and of Greenland,
And the stormy Hebrides,
And the undiscovered deep;—
I could not eat nor sleep
For thinking of those seas.

"To the northward stretched the desert,—
How far I fain would know;
So at last I sallied forth,
And three days sailed due north,
As far as the whale-ships go.

"To the west of me was the ocean,
To the right the desolate shore;
But I did not slacken sail
For the walrus or the whale,
Till after three days more.

"The days grew longer and longer,
Till they became as one;
And southward through the haze
I saw the sullen blaze
Of the red midnight sun.

"And then uprose before me,
Upon the water's edge,
The huge and haggard shape
Of that unknown North Cape,
Whose form is like a wedge.

"The sea was rough and stormy,
The tempest howled and wailed,
And the sea-fog, like a ghost,
Haunted that dreary coast,—
But onward still I sailed.

"Four days I steered to eastward,
Four days without a night:
Round in a fiery ring
Went the great sun, O King,
With red and lurid light."

Here Alfred, King of the Saxons,
Ceased writing for a while;
And raised his eyes from his book,
With a strange and puzzled look
And an incredulous smile.

But Othere, the old sea-captain,
He neither paused nor started;
And the King listened, and then
Once more took up his pen,
And wrote down every word.

"And now the land," said Othere,
"Bent southward suddenly,
And I followed the curving shore
And ever southward bore
Into a nameless sea.

"And there we hunted the walrus,
The narwhale, and the seal;
Ha! 'twas a noble game,
And like the lightning's flame
Flew our harpoons of steel!

"There were six of us altogether,
Norsemen of Helgoland;
In two days and no more
We killed of them threescore,
And dragged them to the strand!"

Here Alfred the Truth-Teller
Suddenly closed his book,
And lifted his blue eyes
With doubt and strange surmise
Depicted in their look.

And Othere, the old sea-captain,
 Stared at him wild and weird,
 Then smiled, till his shining teeth
 Gleamed white from underneath
 His tawny, quivering beard.

And to the King of the Saxons,
 In witness of the truth,
 Raising his noble head,
 He stretched his brown hand, and said.
 "Behold this walrus-tooth!"

THE AUTOCRAT OF THE BREAKFAST-TABLE.

EVERY MAN HIS OWN BOSWELL.

[THE schoolmistress came down with a rose in her hair,—a fresh June rose. She has been walking early; she has brought back two others,—one on each cheek.

I told her so, in some such pretty phrase as I could muster for the occasion. Those two blush-roses I just spoke of turned into a couple of damasks. I suppose all this went through my mind, for this was what I went on to say:—]

I love the damask rose best of all. The flowers our mothers and sisters used to love and cherish, those which grow beneath our eaves and by our doorstep, are the ones we always love best. If the Houyhnhnms should ever catch me, and, finding me particularly vicious and unmanageable, send a man-tamer to Rarefy me, I'll tell you what drugs he would have to take and how he would have to use them. Imagine yourself reading a number of the Houyhnhnms Gazette, giving an account of such an experiment.

"MAN-TAMING EXTRAORDINARY.

"THE soft-hoofed semi-quadrupe recently captured was subjected to the art of our distinguished man-tamer in presence of a numerous assembly. The animal was led in by two stout ponies,

closely confined by straps to prevent his sudden and dangerous tricks of shoulder-hitting and foot-striking. His countenance expressed the utmost degree of ferocity and cunning.

"The operator took a handful of *budding lilac-leaves*, and crushing them slightly between his hoofs, so as to bring out their peculiar fragrance, fastened them to the end of a long pole and held them towards the creature. Its expression changed in an instant,—it drew in their fragrance eagerly, and attempted to seize them with its soft split hoofs. Having thus quieted his suspicious subject, the operator proceeded to tie a *blue hyacinth* to the end of the pole and held it out towards the wild animal. The effect was magical. Its eyes filled as if with rain-drops, and its lips trembled as it pressed them to the flower. After this it was perfectly quiet, and brought a measure of corn to the man-tamer, without showing the least disposition to strike with the feet or hit from the shoulder."

That will do for the Houyhnhnms Gazette.—Do you ever wonder why poets talk so much about flowers? Did you ever hear of a poet who did not talk about them? Don't you think a poem, which, for the sake of being original,

should leave them out, would be like those verses where the letter *a* or *e* or some other is omitted? No,—they will bloom over and over again in poems as in the summer fields, to the end of time, always old and always new. Why should we be more shy of repeating ourselves than the spring be tired of blossoms or the night of stars? Look at Nature. She never wearies of saying over her floral pater-noster. In the crevices of Cyclopean walls,—in the dust where men lie, dust also,—on the mounds that bury huge cities, the Birs Nemroud and the Babel-heap,—still that same sweet prayer and benediction. The Amen! of Nature is always a flower.

Are you tired of my trivial personalities,—those splashes and streaks of sentiment, sometimes perhaps of sentimentality, which you may see when I show you my heart's corolla as if it were a tulip? Pray, do not give yourself the trouble to fancy me an idiot whose conceit it is to treat himself as an exceptional being. It is because you are just like me that I talk and know that you will listen. We are all splashed and streaked with sentiments,—not with precisely the same tints, or in exactly the same patterns, but by the same hand and from the same palette.

I don't believe any of you happen to have just the same passion for the blue hyacinth which I have,—very certainly not for the crushed lilac-leaf-buds; many of you do not know how sweet they are. You love the smell of the sweet-fern and the bayberry-leaves, I don't doubt; but I hardly think that the last bewitches you with young memories as it does me. For the same reason I come back to damask roses, after having raised a good many of the rarer varieties. I like to go to operas and concerts, but there are queer little old homely sounds that are better than music to me. However, I suppose it's foolish to tell such things.

—It is pleasant to be foolish at the right time,—said the divinity-student;—saying it, however, in one of the dead languages, which I think are unpopular for

summer-reading, and therefore do not bear quotation as such.

Well, now,—said I,—suppose a good, clean, wholesome-looking countryman's cart stops opposite my door.—Do I want any huckleberries?—If I do not, there are those that do. Thereupon my soft-voiced handmaid bears out a large tin pan, and then the wholesome countryman, heaping the peck-measure, spreads his broad hands around its lower arc to confine the wild and frisky berries, and so they run nimbly along the narrowing channel until they tumble rustling down in a black cascade and tinkle on the resounding metal beneath.—I won't say that this rushing huckleberry hail-storm has not more music for me than the "Anvil Chorus."

—I wonder how my great trees are coming on this summer.

—Where are your great trees, Sir?—said the divinity-student.

Oh, all round about New England. I call all trees mine that I have put my wedding-ring on, and I have as many tree-wives as Brigham Young has human ones.

—One set's as green as the other,—exclaimed a boarder, who has never been identified.

They're all Bloomers,—said the young fellow called John.

[I should have rebuked this trifling with language, if our landlady's daughter had not asked me just then what I meant by putting my wedding-ring on a tree.]

Why, measuring it with my thirty-foot tape, my dear,—said I.—I have worn a tape almost out on the rough barks of our old New England elms and other big trees.—Don't you want to hear me talk trees a little now? That is one of my specialties.

[So they all agreed that they should like to hear me talk about trees.]

I want you to understand, in the first place, that I have a most intense, passionate fondness for trees in general, and have had several romantic attachments to certain trees in particular. Now, if

you expect me to hold forth in a "scientific" way about my tree-loves,—to talk, for instance, of the *Ulmus Americana*, and describe the ciliated edges of its samara, and all that,—you are an anserine individual, and I must refer you to a dull friend who will discourse to you of such matters. What should you think of a lover who should describe the idol of his heart in the language of science, thus: Class, Mammalia; Order, Primates; Genus, *Homo*; Species, *Europeus*; Variety, *Brown*; Individual, *Ann Eliza*; Dental Formula, $i \frac{2-2}{2-2} c \frac{1-1}{1-1} p \frac{2-2}{2-2} m \frac{3-3}{3-3}$, and so on?

No, my friends, I shall speak of trees as we see them, love them, adore them in the fields, where they are alive, holding their green sun-shades over our heads, talking to us with their hundred thousand whispering tongues, looking down on us with that sweet meekness which belongs to huge, but limited organisms,—which one sees in the brown eyes of oxen, but most in the patient posture, the outstretched arms, and the heavy-drooping robes of these vast beings endowed with life, but not with soul,—which outgrow us and outlive us, but stand helpless,—poor things!—while Nature dresses and undresses them, like so many full-sized, but underwitted children.

Did you ever read old Daddy Gilpin? Slowest of men, even of English men; yet delicious in his slowness, as is the light of a sleepy eye in woman. I always supposed "Dr. Syntax" was written to make fun of him. I have a whole set of his works, and am very proud of it, with its gray paper, and open type, and long ff, and orange-juice landscapes. The *Père Gilpin* had the kind of science I like in the study of Nature,—a little less observation than White of Selborne, but a little more poetry.—Just think of applying the Linnæan system to an elm! Who cares how many stamens or pistils that little brown flower, which comes out before the leaf, may have to classify it by? What we want is the meaning, the character, the expression

of a tree, as a kind and as an individual.

There is a mother-idea in each particular kind of tree, which, if well marked, is probably embodied in the poetry of every language. Take the oak, for instance, and we find it always standing as a type of strength and endurance. I wonder if you ever thought of the single mark of supremacy which distinguishes this tree from all our other forest-trees? All the rest of them shirk the work of resisting gravity; the oak alone defies it. It chooses the horizontal direction for its limbs, so that their whole weight may tell,—and then stretches them out fifty or sixty feet, so that the strain may be mighty enough to be worth resisting. You will find, that, in passing from the extreme downward droop of the branches of the weeping-willow to the extreme upward inclination of those of the poplar, they sweep nearly half a circle. At 90° the oak stops short; to slant upward another degree would mark infirmity of purpose; to bend downwards, weakness of organization. The American elm betrays something of both; yet sometimes, as we shall see, puts on a certain resemblance to its sturdier neighbor.

It won't do to be exclusive in our taste about trees. There is hardly one of them which has not peculiar beauties in some fitting place for it. I remember a tall poplar of monumental proportions and aspect, a vast pillar of glossy green, placed on the summit of a lofty hill, and a beacon to all the country round. A native of that region saw fit to build his house very near it, and, having a fancy that it might blow down some time or other, and exterminate himself and any incidental relatives who might be "stopping" or "tarrying" with him,—also laboring under the delusion that human life is under all circumstances to be preferred to vegetable existence,—had the great poplar cut down. It is so easy to say, "It is only a poplar!" and so much harder to replace its living cone than to build a granite obelisk!

I must tell you about some of my tree-

wives. I was at one period of my life much devoted to the young lady-population of Rhode Island, a small, but delightful State in the neighborhood of Pawtucket. The number of inhabitants being not very large, I had leisure, during my visits to the Providence Plantations, to inspect the face of the country in the intervals of more fascinating studies of physiognomy. I heard some talk of a great elm a short distance from the locality just mentioned. "Let us see the great elm,"—I said, and proceeded to find it,—knowing that it was on a certain farm in a place called Johnston, if I remember rightly. I shall never forget my ride and my introduction to the great Johnston elm.

I always tremble for a celebrated tree when I approach it for the first time. Provincialism has no *scale* of excellence in man or vegetable; it never knows a first-rate article of either kind when it has it, and is constantly taking second and third rate ones for Nature's best. I have often fancied the tree was afraid of me, and that a sort of shiver came over it as over a betrothed maiden when she first stands before the unknown to whom she has been plighted. Before the measuring-tape the proudest tree of them all quails and shrinks into itself. All those stories of four or five men stretching their arms around it and not touching each other's fingers, of one's pacing the shadow at noon and making it so many hundred feet, die upon its leafy lips in the presence of the awful ribbon which has strangled so many false pretensions.

As I rode along the pleasant way, watching eagerly for the object of my journey, the rounded tops of the elms rose from time to time at the road-side. Wherever one looked taller and fuller than the rest, I asked myself,—*"Is this it?"* But as I drew nearer, they grew smaller,—or it proved, perhaps, that two standing in a line had looked like one, and so deceived me. At last, all at once, when I was not thinking of it,—I declare to you it makes my flesh creep when I think of it now,—all at once I saw a

great, green cloud swelling in the horizon, so vast, so symmetrical, of such Olympian majesty and imperial supremacy among the lesser forest-growths, that my heart stopped short, then jumped at my ribs as a hunter springs at a five-barred gate, and I felt all through me, without need of uttering the words,—*"This is it!"*

You will find this tree described, with many others, in the excellent Report upon the Trees and Shrubs of Massachusetts. The author has given my friend the Professor credit for some of his measurements, but measured this tree himself, carefully. It is a grand elm for size of trunk, spread of limbs, and muscular development,—one of the first, perhaps the first, of the first class of New England elms.

The largest actual girth I have ever found at five feet from the ground is in the great elm lying a stone's throw or two north of the main road (if my points of compass are right) in Springfield. But this has much the appearance of having been formed by the union of two trunks growing side by side.

The West-Springfield elm and one upon Northampton meadows belong also to the first class of trees.

There is a noble old wreck of an elm at Hatfield, which used to spread its claws out over a circumference of thirty-five feet or more before they covered the foot of its bole up with earth. This is the American elm most like an oak of any I have ever seen.

The Sheffield elm is equally remarkable for size and perfection of form. I have seen nothing that comes near it in Berkshire County, and few to compare with it anywhere. I am not sure that I remember any other first-class elms in New England, but there may be many.

—What makes a first-class elm?—Why, size, in the first place, and chiefly. Anything over twenty feet of clear girth, five feet above the ground, and with a spread of branches a hundred feet across, may claim that title, according to my scale. All of them, with the questionable excep-

tion of the Springfield tree above referred to, stop, so far as my experience goes, at about twenty-two or twenty-three feet of girth and a hundred and twenty of spread.

Elms of the second class, generally ranging from fourteen to eighteen feet, are comparatively common. The queen of them all is that glorious tree near one of the churches in Springfield. Beautiful and stately she is beyond all praise. The "great tree" on Boston Common comes in the second rank, as does the one at Cohasset, which used to have, and probably has still, a head as round as an apple-tree, and that at Newburyport, with scores of others which might be mentioned. These last two have perhaps been over-celebrated. Both, however, are pleasing vegetables. The poor old Pittsfield elm lives on its past reputation. A wig of false leaves is indispensable to make it presentable.

[I don't doubt there may be some monster-elm or other, vegetating green, but inglorious, in some remote New England village, which only wants a sacred singer to make it celebrated. Send us your measurements,—(certified by the post-master, to avoid possible imposition.)—circumference five feet from soil, length of line from bough-end to bough-end, and we will see what can be done for you.]

—I wish somebody would get us up the following work :—

SYLVA NOVANGLICA.

Photographs of New England Elms and other Trees, taken upon the Same Scale of Magnitude. With Letter-Press Descriptions, by a Distinguished Literary Gentleman. Boston: — — & Co. 185 . .

The same camera should be used,—so far as possible,—at a fixed distance. Our friend, who is giving us so many interesting figures in his "Trees of America," must not think this Prospectus invades his province; a dozen portraits, with lively descriptions, would be a pretty complement to his larger work, which,

so far as published, I find excellent. If my plan were carried out, and another series of a dozen English trees photographed on the same scale, the comparison would be charming.

It has always been a favorite idea of mine to bring the life of the Old and the New World face to face, by an accurate comparison of their various types of organization. We should begin with man, of course; institute a large and exact comparison between the development of *la pianta umana*, as Alfieri called it, in different sections of each country, in the different callings, at different ages, estimating height, weight, force by the dynamometer and the spirometer, and finishing off with a series of typical photographs, giving the principal national physiognomies. Mr. Hutchinson has given us some excellent English data to begin with.

Then I would follow this up by contrasting the various parallel forms of life in the two continents. Our naturalists have often referred to this incidentally or expressly; but the *animus* of Nature in the two half-globes of the planet is so momentous a point of interest to our race, that it should be made a subject of express and elaborate study. Go out with me into that walk which we call *the Mall*, and look at the English and American elms. The American elm is tall, graceful, slender-sprayed, and drooping as if from languor. The English elm is compact, robust, holds its branches up, and carries its leaves for weeks longer than our own native tree.

Is this typical of the creative force on the two sides of the ocean, or not? Nothing but a careful comparison through the whole realm of life can answer this question.

There is a parallelism without identity in the animal and vegetable life of the two continents, which favors the task of comparison in an extraordinary manner. Just as we have two trees alike in many ways, yet not the same, both elms, yet easily distinguishable, just so we have a complete flora and a fauna, which, parting from the same ideal, embody it with

various modifications. Inventive power is the only quality of which the Creative Intelligence seems to be economical; just as with our largest human minds, that is the divinest of faculties, and the one that most exhausts the mind which exercises it. As the same patterns have very commonly been followed, we can see which is worked out in the largest spirit, and determine the exact limitations under which the Creator places the movement of life in all its manifestations in either locality. We should find ourselves in a very false position, if it should prove that Anglo-Saxons can't live here, but die out, if not kept up by fresh supplies, as Dr. Knox and other more or less wise persons have maintained. It may turn out the other way, as I have heard one of our literary celebrities argue,—and though I took the other side, I liked his best,—that the American is the Englishman reinforced.

—Will you walk out and look at those elms with me after breakfast?—I said to the schoolmistress.

[I am not going to tell lies about it, and say that she blushed,—as I suppose she ought to have done, at such a tremendous piece of gallantry as that was for our boarding-house. On the contrary, she turned a little pale,—but smiled brightly and said,—Yes, with pleasure, but she must walk towards her school.—She went for her bonnet.—The old gentleman opposite followed her with his eyes, and said he wished he was a young fellow. Presently she came down, looking very pretty in her half-mourning bonnet, and carrying a school-book in her hand.]

MY FIRST WALK WITH THE SCHOOL- MISTRESS.

This is the shortest way,—she said, as we came to a corner.—Then we won't take it,—said I.—The schoolmistress laughed a little, and said she was ten minutes early, so she could go round.

We walked under Mr. Paddock's row of English elms. The gray squirrels were out looking for their breakfasts, and one of them came toward us in light, soft,

intermittent leaps, until he was close to the rail of the burial-ground. He was on a grave with a broad blue-slate-stone at its head, and a shrub growing on it. The stone said this was the grave of a young man who was the son of an Honorable gentleman, and who died a hundred years ago and more.—Oh, yes, *died*,—with a small triangular mark in one breast, and another smaller opposite, in his back, where another young man's rapier had slid through his body; and so he lay down out there on the Common, and was found cold the next morning, with the night-dews and the death-dews mingled on his forehead.

Let us have one look at poor Benjamin's grave,—said I.—His bones lie where his body was laid so long ago, and where the stone says they lie,—which is more than can be said of most of the tenants of this and several other burial-grounds.

[The most accursed act of Vandalism ever committed within my knowledge was the uprooting of the ancient grave-stones in three at least of our city burial-grounds, and one at least just outside the city, and planting them in rows to suit the taste for symmetry of the perpetrators. Many years ago, when this disgraceful process was going on under my eyes, I addressed an indignant remonstrance to a leading journal. I suppose it was deficient in literary elegance, or too warm in its language; for no notice was taken of it, and the hyena-horror was allowed to complete itself in the face of daylight. I have never got over it. The bones of my own ancestors, being entombed, lie beneath their own tablet; but the upright stones have been shuffled about like chessmen, and nothing short of the Day of Judgment will tell whose dust lies beneath any of those records, meant by affection to mark one small spot as sacred to some cherished memory. Shame! shame! shame!—that is all I can say. It was on public thoroughfares, under the eye of authority, that this infamy was enacted. The red Indians would have known better; the selectmen of an African kraal-village would

have had more respect for their ancestors. I should like to see the gravestones which have been disturbed all removed, and the ground levelled, leaving the flat tombstones; epitaphs were never famous for truth, but the old reproach of "*Here lies*" never had such a wholesale illustration as in these outraged burial-places, where the stone does lie above, and the bones do not lie beneath.]

Stop before we turn away, and breathe a woman's sigh over poor Benjamin's dust. Love killed him, I think. Twenty years old, and out there fighting another young fellow on the Common, in the cool of that old July evening;—yes, there must have been love at the bottom of it.

The schoolmistress dropped a rosebud she had in her hand, through the rails, upon the grave of Benjamin Woodbridge. That was all her comment upon what I told her.—How women love Love! said I;—but she did not speak.

We came opposite the head of a place or court running eastward from the main street.—Look down there,—I said.—My friend the Professor lived in that house at the left hand, next the further corner, for years and years. He died out of it, the other day.—Died?—said the schoolmistress.—Certainly,—said I.—We die out of houses, just as we die out of our bodies. A commercial smash kills a hundred men's houses for them, as a railroad crash kills their mortal frames and drives out the immortal tenants. Men sicken of houses until at last they quit them, as the soul leaves its body when it is tired of its infirmities. The body has been called "the house we live in"; the house is quite as much the body we live in. Shall I tell you some things the Professor said the other day?—Do!—said the schoolmistress.

A man's body,—said the Professor,—is whatever is occupied by his will and his sensibility. The small room down there, where I wrote those papers you remember reading, was much more a portion of my body than a paralytic's senseless and motionless arm or leg is of his.

The soul of a man has a series of concentric envelopes round it, like the core of an onion, or the innermost of a nest of boxes. First he has his natural garment of flesh and blood. Then, his artificial integuments, with their true skin of solid stuffs, their cuticle of lighter tissues, and their variously-tinted pigments. Thirdly, his domicile, be it a single chamber or a stately mansion. And then, the whole visible world, in which Time buttons him up as in a loose outside wrapper.

You shall observe,—the Professor said,—for, like Mr. John Hunter and other great men, he brings in that *shall* with great effect sometimes,—you shall observe that a man's clothing or series of envelopes do after a certain time mould themselves upon his individual nature. We know this of our hats, and are always reminded of it when we happen to put them on wrong side foremost. We soon find that the beaver is a hollow cast of the skull, with all its irregular bumps and depressions. Just so all that clothes a man, even to the blue sky which caps his head,—a little loosely,—shapes itself to fit each particular being beneath it. Farmers, sailors, astronomers, poets, lovers, condemned criminals, all find it different, according to the eyes with which they severally look.

But our houses shape themselves palpably on our inner and outer natures. See a householder breaking up and you will be sure of it. There is a shell-fish which builds all manner of smaller shells into the walls of its own. A house is never a home until we have crusted it with the spoils of a hundred lives besides those of our own past. See what these are, and you can tell what the occupant is.

I had no idea,—said the Professor,—until I pulled up my domestic establishment the other day, what an enormous quantity of roots I had been making during the years I was planted there. Why, there wasn't a nook or a corner that some fibre had not worked its way into; and when I gave the last wrench, each

of them seemed to shriek like a man-drake, as it broke its hold and came away:

There is nothing that happens, you know, which must not inevitably, and which does not actually, photograph itself in every conceivable aspect and in all dimensions. The infinite galleries of the Past await but one brief process and all their pictures will be called out and fixed forever. We had a curious illustration of the great fact on a very humble scale. When a certain bookcase, long standing in one place, for which it was built, was removed, there was the exact image on the wall of the whole, and of many of its portions. But in the midst of this picture was another,—the precise outline of a map which had hung on the wall before the bookcase was built. We had all forgotten everything about the map until we saw its photograph on the wall. Then we remembered it, as some day or other we may remember a sin which has been built over and covered up, when this lower universe is pulled away from before the wall of Infinity, where the wrongdoing stands self-recorded.

The Professor lived in that house a long time,—not twenty years, but pretty near it. When he entered that door, two shadows glided over the threshold; five lingered in the doorway when he passed through it for the last time,—and one of the shadows was claimed by its owner to be longer than his own. What changes he saw in that quiet place! Death rained through every roof but his; children came into life, grew to maturity, wedded, faded away, threw themselves away; the whole drama of life was played in that stock-company's theatre of a dozen houses, one of which was his, and no deep sorrow or severe calamity ever entered his dwelling. Peace be to those walls, forever,—the Professor said,—for the many pleasant years he has passed within them!

The Professor has a friend, now living at a distance, who has been with him in many of his changes of place, and who

follows him in imagination with tender interest wherever he goes.—In that little court, where he lived in gay loneliness so long,—

—in his autumnal sojourn by the Connecticut, where it comes loitering down from its mountain fastnesses like a great lord, swallowing up the small proprietary rivulets very quietly as it goes, until it gets proud and swollen and wantons in huge luxurious oxbows about the fair Northampton meadows, and at last overflows the oldest inhabitant's memory in profligate freshets at Hartford and all along its lower shores,—up in that caravansary on the banks of the stream where Ledyard launched his log canoe, and the jovial old Colonel used to lead the Commencement processions,—where blue Ascutney looked down from the far distance, and the hills of Beulah, as the Professor always called them, rolled up the opposite horizon in soft climbing masses, so suggestive of the Pilgrim's Heavenward Path that he used to look through his old "Dollond" to see if the Shining Ones were not within range of sight,—sweet visions, sweetest in those Sunday walks that carried them by the peaceful common, through the solemn village lying in cataleptic stillness under the shadow of the rod of Moses, to the terminus of their harmless stroll,—the patulous fage, in the Professor's classic dialect,—the spreading beech, in more familiar phrase,—[stop and breathe here a moment, for the sentence is not done yet, and we have another long journey before us,]—

—and again once more up among those other hills that shut in the amber-flowing Housatonic,—dark stream, but clear, like the lucid orbs that shine beneath the lids of auburn-haired, sherry-wine-eyed demi-blondes,—in the home overlooking the winding stream and the smooth, flat meadow; looked down upon by wild hills, where the tracks of bears and catamounts may yet sometimes be seen upon the winter snow; facing the twin summits which rise in the far North, the highest waves of the great land-storm

in all this billowy region,—suggestive to mad fancies of the breasts of a half-buried Titaness, stretched out by a stray thunderbolt, and hastily hidden away beneath the leaves of the forest,—in that home where seven blessed summers were passed, which stand in memory like the seven golden candlesticks in the beatific vision of the holy dreamer,—

—in that modest dwelling we were just looking at, not glorious, yet not unlovely in the youth of its drab and mahogany,—full of great and little boys' playthings from top to bottom,—in all these summer or winter nests he was always at home and always welcome.

This long articulated sigh of reminiscences,—this calenture which shows me the maple-shadowed plains of Berkshire and the mountain-circled green of Grafton beneath the salt waves that come feeling their way along the wall at my feet, restless and soft-touching as blind men's busy fingers,—is for that friend of mine who looks into the waters of the Patapsco and sees beneath them the same visions that paint themselves for me in the green depths of the Charles.

—Did I talk all this off to the schoolmistress?—Why, no,—of course not. I have been talking with you, the reader, for the last ten minutes. You don't think I should expect any woman to listen to such a sentence as that long one, without giving her a chance to put in a word?

—What did I say to the schoolmistress?—Permit me one moment. I don't doubt your delicacy and good-breeding; but in this particular case, as I was allowed the privilege of walking alone with a very interesting young woman, you must allow me to remark, in the classic version of a familiar phrase, used by our Master Benjamin Franklin, it is *nullum tui negotii*.

When the schoolmistress and I reached the school-room door, the damask roses I spoke of were so much heightened in color by exercise that I felt sure it would be useful to her to take a stroll like this every morning, and made up

my mind I would ask her to let me join her again.

EXTRACT FROM MY PRIVATE
JOURNAL.

(*To be burned unread.*)

I am afraid I have been a fool; for I have told as much of myself to this young person as if she were of that ripe and discreet age which invites confidence and expansive utterance. I have been low-spirited and listless, lately,—it is coffee, I think,—(I observe that which is bought *ready-ground* never affects the head,)—and I notice that I tell my secrets too easily when I am downhearted.

There are inscriptions on our hearts, which, like that on Dighton Rock, are never to be seen except at dead-low tide.

There is a woman's footstep on the sand at the side of my deepest ocean-buried inscription!

—Oh, no, no, no! a thousand times, no!—Yet what is this which has been shaping itself in my soul?—Is it a thought?—is it a dream?—is it a *passion*?—Then I know what comes next.

—The Asylum stands on a bright and breezy hill; those glazed corridors are pleasant to walk in, in bad weather. But there are iron bars to all the windows. When it is fair, some of us can stroll outside that very high fence. But I never see much life in those groups I sometimes meet;—and then the careful man watches them so closely! How I remember that sad company I used to pass on fine mornings, when I was a schoolboy!—B., with his arms full of yellow weeds,—ore from the gold mines which he discovered long before we heard of California,—Y., born to millions, crazed by too much plum-cake, (the boys said,) dogged, explosive,—made a Polyphemus of my weak-eyed schoolmaster, by a vicious flirt with a stick,—(the multimillionaires sent him a trifle, it was said, to buy another eye with; but boys are jealous of rich folks, and I don't doubt the good people made him easy for life,)—how I remember them all!

I recollect, as all do, the story of the Hall of Eblis, in "Vathek," and how each shape, as it lifted its hand from its breast, showed its heart,—a burning coal. The real Hall of Eblis stands on yonder summit. Go there on the next visiting-day, and ask that figure crouched in the corner, huddled up like those Indian mummies and skeletons found buried in the sitting posture, to lift its hand,—look upon its heart, and behold, not fire, but ashes.—No, I must not think of such an ending! Dying would be a much more gentlemanly way of meeting the difficulty. Make a will and leave her a house or two and some stocks, and other little financial conveniences, to take away her necessity for keeping school.—I wonder what nice young man's feet would be in my French slippers before six months were over! Well, what then? If a man really loves a woman, of course he wouldn't marry her for the world, if he were not quite sure that he was the best person she could by any possibility marry.

—It is odd enough to read over what I have just been writing.—It is the merest fancy that ever was in the world. I shall never be married. She will; and if she is as pleasant as she has been so far, I will give her a silver tea-set, and go and take tea with her and her husband, sometimes. No coffee, I hope, though,—it depresses me sadly. I feel very miserably;—they must have been grinding it at home.—Another morning walk will be good for me, and I don't doubt the schoolmistress will be glad of a little fresh air before school.

—The throbbing flushes of the poetical intermittent have been coming over me from time to time of late. Did you ever see that electrical experiment which consists in passing a flash through letters of gold-leaf in a darkened room, whereupon some name or legend springs out of the darkness in characters of fire?

There are songs all written out in my soul, which I could read, if the flash might but pass through them,—but the fire must come down from heaven. Ah!

but what if the stormy *nimbus* of youthful passion has blown by, and one asks for lightning from the ragged *cirrus* of dissolving aspirations, or the silvered *cumulus* of sluggish satiety? I will call on her whom the dead poets believed in, whom living ones no longer worship,—the immortal maid, who, name her what you will,—Goddess, Muse, Spirit of Beauty,—sits by the pillow of every youthful poet, and bends over his pale forehead until her tresses lie upon his cheek and rain their gold into his dreams.

MUSA.

O MY lost Beauty!—hast thou folded quite
Thy wings of morning light
Beyond those iron gates
Where Life crowds hurrying to the haggard
Fates,
And Ago upon his mound of ashes waits
To chill our fiery dreams,
Hot from the heart of youth plunged in his
icy streams?

Leave me not fading in these weeds of care,
Whose flowers are silvered hair!—
Have I not loved thee long,
Though my young lips have often done thee
wrong
And vexed thy heaven-tuned ear with care-
less song?
Ah, wilt thou yet return,
Bearing thy rose-hued torch, and bid thine
altar burn?

Come to me!—I will flood thy silent shrine
With my soul's sacred wine,
And heap thy marble floors
As the wild spice-trees waste their fragrant
stores
In leafy islands walled with madrepores
And lapped in Orient seas,
When all their feathery palms toss, plume-
like, in the breeze.

Come to me!—thou shalt feed on honeyed
words,
Sweeter than song of birds;—
No wailing bulbul's throat,
No melting dulcimer's melodious note,
When o'er the midnight wave its murmurs
float,
Thy ravished sense might soothe
With flow so liquid-soft, with strain so velvet-
smooth.

Thou shalt be decked with jewels, like a
queen,
Sought in those bowers of green

Where loop the clustered vines
And the close-clinging dulcamara twines,—
Pure pearls of Maydew where the moonlight
shines,

And Summer's fruited gems,
And coral pendants shorn from Autumn's ber-
ried stems.

Sit by me drifting on the sleepy waves,—
Or stretched by grass-grown graves,
Whose gray, high-shouldered stones,
Carved with old names Life's time-worn roll
disowns,
Lean, lichen-spotted, o'er the crumbled bones
Still slumbering where they lay
While the sad Pilgrim watched to scare the
wolf away!

Spread o'er my couch thy visionary wing!
Still let me dream and sing,—
Dream of that winding shore
Where scarlet cardinals bloom,—for me no
more,—
The stream with heaven beneath its liquid
floor,

And clustering nenuphars
Sprinkling its mirrored blue like golden-chal-
iced stars!

Come while their balms the linden-blossoms
shed!—

Come while the rose is red,—
While blue-eyed Summer smiles
O'er the green ripples round yon sunken
piles

Washed by the moon-wave warm from Indian
isles,

And on the sultry air
The chestnuts spread their palms like holy
men in prayer!

Oh, for thy burning lips to fire my brain
With thrills of wild sweet pain!—

On life's autumnal blast,
Like shrivelled leaves, youth's passion-flowers
are cast,—

Once loving thee, we love thee to the last!—

Behold thy new-decked shrine,
And hear once more the voice that breathed
"Forever thine!"

THE TRUSTEE'S LAMENT.

Per aspera ad astra.

(SCENE.—Outside the gate of the Astronomical Observatory at Albany.)

THERE was a time when I was blest;
The stars might rise in East or West
With all their sines and wonders;
I cared for neither great nor small,
As pointedly unmoved by all
As, on the top of steeple tall,
A lightning-rod at thunders.

What did I care for Science then?
I was a man with fellow-men,
And called the Bear the Dipper;
Segment meant piece of pie,—no more;
Cosine, the parallelogram that bore
JOHN SMITH & Co. above a door,
Arc, what called Noah skippe.

No axes weighed upon my mind,
(Unless I had a few to grind.)
And as for my astronomy,

Had Hedgecock's quadrant then been known,
 I might a lamp-post's height have shown
 By gas-tronomic skill,—if none
 Find fault with the metonymy.

O hours of innocence ! O ways
 How far from these unhappy days
 When all is vicy-versy !
 No flower more peaceful took its due
 Than I, who then no difference knew
 'Twixt Ursy Major and my true
 Old crony, Major Hersey.

Now in long broils and feuds we roast,
 Like Strasburg geese that living toast
 To make a liver-pâté,—
 And all because we fondly strove
 To set the city of our love
 In scientific fame above
 Her sister Cincinnati !

We built our tower and furnished it
 With everything folks said was fit,
 From coping-stone to grounself;
 And then, to give a knowing air,
 Just nominally assigned its care
 To that unmanageable affair,
 A Scientific Council.

We built it, not that one or two
 Astronomers the stars might view
 And count the comets' hair-roots,
 But that it might by all be said
 How very freely we had bled,—
 We were not laying out a bed
 To force their early square-roots.

The observations *we* wished made
 Were on the spirit we'd displayed,
 Worthy of Athens' high days;
 But *they*'ve put in a man who thinks
 Only of planets' nodes and winks,
 So full of astronomic kinks
 He eats star-fish on Fridays.

The instruments we did not mean
 For seeing through, but to be seen
 At tap of Trustee's knuckle;
 But the Director locks the gate,
 And makes ourselves and strangers wait
 While he is ciphering on a slate
 The rust of Saturn's buckle.

So on the wall's outside we stand,
 Admire the keyhole's contour grand
 And gateposts' sturdy granite ;—
 But, ah, is Science safe, we say,
 With one who treats Trustees this way ?
 Who knows but he may snub, some day,
 A well-conducted planet ?

Who knows what mischief he may brew
 With such a telescope brand-new
 At the four-hundredth power ?
 He may bring some new comet down
 So near that it 'll singe the town
 And do the Burgess-Corps crisp-brown
 Ere they can storm his tower.

We wanted (having got our show)
 Some man, that had a name or so,
 To be our public showman ;
 But this one shuts and locks the gate
 Who'll answer but he'll peculate,
 (And, faith, some stars are missed of late,)
 Now that he's watched by no man ?

Our own discoveries he may steal,
 Or put night's candles out, to deal
 At junkshops with the sockets :
Savants, in other lands or this,
 If any theory you miss
 Whereon your cipher graven is,
 Don't fail to search his pockets !

Lock up your comets : if that fails,
 Then notch their ears and clip their tails,
 That you at need may swear to 'em ;
 And watch your nebulous flocks at night,
 For, if your palings are not tight,
 He may, to gratify his spite,
 Let in the Little Bear to 'em.

Then he's so quarrelsome, we've fears
 He'll set the very Twins by the ears,—
 So mad, if you resist him,
 He'd get Aquarius to play
 A milkman's trick, some cloudy day,
 And water all the Milky Way
 To starve some sucking system.

But plaints are vain ! through wrath or pride,
 The Council all espouse his side
 And will our missives con no more ;
 And who that knows what *savants* are,

Each snappish as a Leyden jar,
Will hope to soothe the wordy war
'Twixt Ologist and Onomer?

Search a Reform Convention, where
He- and she-resiarchs prepare
To get the world in *their* power,
You will not, when 'tis loudest, find
Such gifts to hug and snarl combined
As drive each astronomic mind
With fifty-score Great-Bear-power!

No! put the Bootees on your foot,
Elope with Virgo, strive to shoot
That arrow of O'Ryan's,
Drain Georgian Ciders to the lees,
Attempt what crackbrained thing you please,
But dream not you can e'er appease
An angry man of science!

Ah, would I were, as I was once,
To fair Astronomy a dunce,
Or launching *jeux d'esprit* at her,
Of light zodiacal making light,
Deaf to all tales of comets bright,
And knowing but such stars as might
Roll r-rs at our theatre!

Then calm I drew my night-cap on,
Nor bondsman was for what went on
Ere morning in the heavens;
'Twas no concern of mine to fix
The Pleiades at seven or six,—
But now the *omnium genitrix*
Seems all at sixes and sevens.

Alas, 'twas in an evil hour
We signed the paper for the tower,
With Mrs. D. to head it!
For, if the Council have their way,
We've merely had, as Frenchmen say,
The painful *maladie du pay*,
While they get all the credit!

Boys, henceforth doomed to spell Trustees,
Think not it ends in double ease
To those who hold the office;
Shun Science as you would Despair,
Sit not in Cassiopeia's chair,
Nor hope from Berenice's hair
To bring away your trophies!

THE POCKET-CELEBRATION OF THE FOURTH.

WELL, it has happened, and we have survived it pretty well. The Democratic Almanacs predicted a torrent, a whirlwind, and we know not what meteoric phenomena,—but the next day Nature gave no sign, the dome of the State-House was in its place, the Monument was as plumb as ever, no chimney mourned a ravished brick, and the Republican Party took its morning tea and toast in peace and safety. On the whole, it must be considered a wonderful escape. Since Partridge's time there had been no such prophecies,—since Miller's, no such perverse disobligingness in the event.

But what had happened? Why, the Democratic Young Men's Celebration, to be sure, and Mr. Choate's Oration.

The good city of Boston in New England, for we know not how many years, had been in the habit of celebrating the National Birthday, first, with an oration, as became the Athens of America, and second, with a dinner, as was meet in the descendants of Teutonic forefathers. The forenoon's oration glorified us in the lump as a people, and every man could reckon and appropriate his own share of credit by the simple arithmetical process of dividing the last census by the value he set upon himself, a divisor easily obtained by subtracting from the total of inhabitants in his village the number of neighbors whom he considered ciphers. At the afternoon's dinner, the pudding of praise was served out in slices to favored individuals; dry toasts were drunk by drier dignitaries; the Governor was compared to Solon; the Chief Justice to Brutus; the Orator of the Day to Demosthenes; the Colonel of the Boston Regiment to Julius Cæsar; and everybody went home happy from a feast where the historic parallels were sure to hold out to the last Z in *Lemprière*.

Gradually matters took a new course;

the Union was suddenly supposed to lie at the point of dissolution, and what we may call the Doctor-Brandreth style of oratory began. Every orator mounted the rostrum, like a mountebank at a fair, to proclaim the virtues of his private panacea for the morbid Commonwealth, and, as was natural in young students of political therapeutics, fancied that he saw symptoms of the dread malady of Disunion in a simple eruption of Jethro Furber at a convention of the Catawampusville Come-outers, or of Pyrophagus Quattlebum at a training of the Palmetto Plug-Uglies,—neither of which was skin-deep. The dinners became equally dreary. Did the eye of a speaker light on the national dish of beans, he was reminded of the languid pulse of the sentiment of union; did he see a broiled chicken, it called up to his mind's eye the bird of our uncommon country, with the gridiron on his breast, liable to be reduced at any moment to the heraldic duality of his Austrian congener by the strife of contending sections pulling in opposite directions; an innocent pippin was enough to suggest the apple of discord; and with the removal of the cloth came a dessert of diagnoses on the cancer that was supposed to be preying on the national vitals. The only variety was a cringing compliment, in which Bunker Hill curtsied to King's Mountain, to any Southern brother who chanced to be present, and who replied patronizingly,—while his compatriots at the warmer end of the Union were probably, with amiable sincerity, applying to the Yankees that epithet whose expression in type differs but little from that of a doctorate in divinity, but which precedes the name it qualifies, as that follows it, and was never, except by Beaumarchais and Fielding, reckoned among titles of honor or courtesy.

A delusion seemed to have taken pos-

session of our public men, that the people wanted doctors of the body-politic to rule over them, and, if those were not to be had, would put up with the next best thing,—quacks. Every one who was willing to be an Eminent Statesman issued his circulars, like the Retired Physician, on all public occasions, offering to send his recipe in return for a vote. The cabalistic formula always turned out to be this:—"Take your humble servant for four years at the White House; if no cure is effected, repeat the dose."

Meanwhile were there any symptoms of disease in the Constitution? Not the least. The whole affair was like one of those alarms in a country-town which begin with the rumor of ten cases of confluent small-pox and end with the discovery that the doctor has been called to a case of nettle-rash at Deacon Scudder's. But sober men, who loved the Union in a quiet way, without advertising it in the newspapers, and who were willing to sacrifice everything to the Constitution but the rights it was intended to protect, began to fear that the alarmists might create the disease which they kept up so much excitement about.

This being the posture of affairs, the city of Boston, a twelvemonth since, chose for their annual orator a clergyman distinguished for eloquence, and for that important part of patriotism, at least, which consists in purity of life. This gentleman, being neither a candidate for office nor the canvasser of a candidate, ventured upon a new kind of address. He took for his theme the duties consequent upon the privileges of Freedom, ventured to mention self-respect as one of them, and commented upon the invitation of a Virginia Senator, the author of the Fugitive Slave Bill, to a Seventeenth-of-June Celebration, while the Senators of Massachusetts were neglected. In speaking of this, he used, we believe, the word "flunk-eyism." It is not an elegant word; it is not even an English one;—but had the speaker sought for a Saxon correlative, he could hardly have found one that

would have seemed more satisfactory, especially to those who deserved it; for Saxon is straightforward, and a reluctance to be classified (fatal to science) is characteristic of the human animal.

An orator who suggests a new view of any topic is a disturber of the digestive organs,—this was very properly a matter of offence to the Aldermen who were to dine after the oration,—but an orator who tampers with the language we have inherited from Shakspeare and Milton, and which we share with Tupper, was an object for deeper reprobation. The Young Men's Democratic Association of Boston are purists; they are jealous for their mother-tongue,—and it is the more disinterested in them as a large proportion of them are Irishmen; they are exclusive,—a generous confusion of ideas as to the meaning of democracy, even more characteristically Hibernian; they are sentimental, too,—melancholy as gibcats,—and feared (from last year's example) that the city might not furnish them with a sufficiently lachrymose Antony to hold up before them the bloody garment of America, and show what rents the envious Blairs and Wilsons and Douglasses had made in it. Accordingly they resolved to have a public celebration all to themselves,—a pocket-edition of the cumbersome civic work,—and as the city provided fireworks in the evening, in order to be beforehand with it in their pyrotechnics, they gave Mr. Choate in the fore noon.

We did not hear Mr. Choate's oration, we only read it in the newspapers. Cold fireworks, the morning after, are not enlivening. You have the form without the fire, and the stick without the soar. But we soon found that we were to expect no such disappointment from Mr. Choate. He seems to announce at the outset that he has closed his laboratory. The Prospero of periods had broken his wand and sunk his book deeper than ever office-hunter sounded. The boys in the street might wander fancy-free, and fire their Chinese crackers as they listed; but for him this was a solemn occasion, and he

invited his hearers to a Stoic feast of Medford crackers and water, to a philosophic banquet of metaphors and metaphysics.

We confess that we expected a great deal. Better a crust with Plato than nightingales' tongues with Apicius; and if Mr. Choate promised only the crust, we were sure of one melodious tongue, at least, before the meal was over. He is a man of whom any community might be proud. Were society an organized thing here, as in Europe, no dinner and no drawing-room would be perfect without his talk. He would have been heard gladly at Johnson's club. The Hortensius of our courts, with a cloud of clients, he yet finds time to be a scholar and a critic, and to read Plato and Homer as they were read by Plato's and Homer's countrymen. Unsurpassed in that eloquence which, if it does not convince, intoxicates a jury, he was counted, so long as Webster lived, the second advocate of our bar.

All this we concede to Mr. Choate with unreserved admiration; but when, leaving the field where he had won his spurs as the successful defender of men criminally accused, he undertakes to demonstrate the sources whence national life is drawn, and the causes which lead to its decay,—to expound authoritatively the theory of political ethics and the principles of sagacious statesmanship, wary in its steps, and therefore durable in its results,—it becomes natural and fair to ask, What has been the special training that has fitted him for the task? More than this: when he comes forward as the public prosecutor of the Republican Party, it becomes our duty to examine the force of his arguments and the soundness of his logic. Has his own experience given him any right to talk superciliously to a great party overwhelmingly triumphant in the Free States? And does his oration show him to possess such qualities of mind, such grasp of reason, such continuity of induction, as to entitle him to underrate the intelligence of so large a number of his fellow-citizens by accusing them of

being incapable of a generalization and incompetent to apprehend a principle?

The Bar has given few historically-great statesmen to the world,—fewer than the Church, which Mr. Choate undervalues in a sentence which, we cannot help thinking, is below the dignity of the occasion, and jarringly discordant with the generally elevated tone of his address. Burke, an authority whom Mr. Choate will not call in question, has said that the training of the bar tends to make the faculties acute, but at the same time narrow. The study of jurisprudence may, no doubt, enlarge the intellect; but the habit of mind induced by an indiscriminate advocacy—which may be summoned to the defence of a Sidney to-day and of a spoon-thief to-morrow—is rather that of the sophist than of the philosophic reasoner. Not truth, but the questionable victory of the moment, becomes naturally and inevitably the aim and end of all the pleader's faculties. For him the question is not what principle, but what interest of John Doe, may be at stake. Such has been Mr. Choate's school as a reasoner. As a politician, his experience has been limited. The member of a party which rarely succeeded in winning, and never in long retaining, the suffrages of the country, he for a time occupied a seat in the Senate, but without justifying the expectations of his friends. So far, his history shows nothing that can give him the right to assume so high and mighty a tone in speaking of his political opponents.

But in his scholarship he has a claim to be heard, and to be heard respectfully. Here lies his real strength, and hence is derived the inspiration of his better eloquence. The scholar enjoys more than the privilege, without the curse, of the Wandering Jew. He can tread the windy plain of Troy, he can listen to Demosthenes, can follow Dante through Paradise, can await the rising of the curtain for the first acting of Hamlet. Mr. Choate's oration shows that he has drawn that full breath which is, perhaps, possible only under a Grecian sky, and it is, in its better parts, scholarly in the best

sense of the word.* It shows that he has read out-of-the-way books, like Bodinus "*De Republicâ*," and fresh ones, like Gladstone's Homer,—that he can do justice, with Spinoza, to Machiavelli,—and that in letters, at least, he has no narrow prejudices. Its sentences are full of scholarly allusion, and its language glitters continually with pattins of bright gold from Shakspeare. We abhor that profane vulgarity of our politics which denies to an antagonist the merits which are justly his, because he may have been blinded to the truth of our principles by the demerits which are justly ours,—which hates the man because it hates his creed, and, instead of grappling with his argument, seeks in the kitchen-drains of scandal for the material to bespatter his reputation. Let us say, then, honestly, what we honestly think,—the feeling, the mastery and choice of language, the intellectual comprehensiveness of glance, which can so order the many-columned aisle of a period, that the eye, losing none of the crowded particulars, yet sees through all, at the vista's end, the gleaming figure of thought to enshrine which the costly fabric was reared,—all these qualities of the orator demand and receive our sincere applause. In an age when indolence or the study of French models has reduced our sentences to the economic curtness of telegraphic despatches, to the dimension of the epigram without its point, Mr. Choate is one of the few whose paragraphs echo with the long-resounding pace of Dryden's coursers, and who can drive a predicate and six without danger of an overset.

Mr. Choate begins by congratulating his hearers that there comes one day in our year when "faults may be forgotten,— . . . when the arrogance of reform, the excesses of reform, the strife of parties, the rivalries of regions, shall give place to a wider, warmer, juster sentiment,—

* We may be allowed to wonder, however, at his speaking of "memories that burn and revel in the pages of Herodotus,"—a phrase which does injustice to the simple and quiet style of the delightful Pepys of Antiquity.

when, turning from the corners and dark places of offensiveness, . . . we may go up together to the serene and secret mountain-top," etc. Had he kept to the path which he thus marked out for himself, we should have had nothing to say. But he goes out of his way to indulge a spleen unworthy of himself and the occasion, and brings against political opponents, sometimes directly, sometimes by innuendo, charges which, as displaying personal irritation, are impolitic and in bad taste. One fruit of scholarship, and its fairest, he does not seem to have plucked,—one proof of contented conviction in the truth of his opinions he does not give,—that indifference to contemporary clamor and hostile criticism, that magnanimous self-trust, which, assured of its own loyalty to present duty, can wait patiently for future justice.

His exordium over, Mr. Choate proceeds to define and to discuss Nationality. We heartily agree with him in all he says in its praise, and draw attention, in passing, to a charming idyllic passage in which he speaks of the early influences which first develop in us its germinal principle. But when he says, that the sentiment of a national life, once existing, must still be kept alive by an exercise of the reason and the will, we dissent. It must be a matter of instinct, or it is nothing. The examples of nationality which he cites are those of ancient Greece and modern Germany. Now we affirm, that, with accidental exceptions, nationality has always been a matter of race, and was eminently so in the instances he quotes. If we read rightly, the nationality which glows in the "*Iliad*," and which it was, perhaps, one object of the poem to rouse or to make coherent, is one of blood, not territory. The same is true of Germany, of Russia, (adding the element of a common religious creed,) and of France, where the Celtic sentiment becomes day by day more predominant. The exceptions are England and Switzerland, whose intense nationality is due to insulation, and Holland, which was morally an island, cut off as it

was from France by difference of language and antipathy of race, and from kindred Germany by the antagonism of institutions. A patriotism by the chart is a monster that the world ne'er saw. Men may fall in love with a lady's picture, but not with the map of their country. Few persons have the poetic imagination of Mr. Choate, that can vivify the dead lines and combine the complex features. It seems to us that our own problem of creating a national sentiment out of such diverse materials of race, such sometimes discordant or even hostile traditions, and then of giving it an intensity of vitality that can overcome our vast spaces and our differences of climate and interest, is a new problem, not easily to be worked out by the old methods. Mr. Choate's plan seems to consist in the old formula of the Fathers. He would have us think of their sacrifices and their heroisms, their common danger and their common deliverance. Excellent, as far as it goes; but what are we to do with the large foreign fraction of our population imported within the last forty years, a great proportion of whom never so much as heard even of the war of 1812? Shall we talk of Bennington and Yorktown to the Germans, whose grandfathers, if they were concerned at all in those memorable transactions, were concerned on the wrong side? Shall we talk of the constancy of Puritan Pilgrims to the Romanist Irishman, who knows more of Brian Boroo than of the Mayflower?

It will be many generations before we become so fused as to have a common past, and the conciliation and forbearance which Mr. Choate recommends to related sections of country will be more than equally necessary to unrelated races. But while we are waiting for a past in which we can all agree, Mr. Choate sees danger in the disrespect which he accuses certain *anonymi* of entertaining for the past in general. But for what past? Does Mr. Choate mean our own American past? Does he refer us to that for lessons of forbear-

ance, submission, and waiting for God's good time? Is the contemplation of their own history and respect for their own traditions the lenitive he prescribes for a people whose only history is a revolution, whose only tradition is rebellion? To what past and to what tradition did the Pilgrim Fathers appeal, except to that past, older than all history, that tradition, sacred from all decay, which, derived from an antiquity behind and beyond all the hoary generations, points the human soul to the God from whom it derived life, and with it the privilege of freedom and the duty of obedience? To what historical past did Jefferson go for the preamble of the Declaration, unless to the reveries of a half-dozen innovating enthusiasts, men of the closet,—of that class which Mr. Choate disparages by implication, though it has done more to shape the course of the world than any number of statesmen, whose highest office is, commonly, to deal prudently with the circumstances of the moment?

Mr. Choate does a great injustice to the Republican Party when he lays this irreverence for the past to their charge. As he seems to think that he alone has read books and studied the lessons of antiquity, he will be pleased to learn that there are persons also in that party who have not neglected all their opportunities in that kind. The object of the Republicans is to bring back the policy and practice of the Republic to some nearer agreement with the traditions of the fathers. They also have a National Idea,—for some of them are capable of distinguishing "a phrase from an idea," or Mr. Choate would find it easier to convert them. They propose to create a National Sentiment, in the only way that is possible under conditions like ours, by clearing the way for the development of a nation which shall be, not only in Fourth-of-July orations, but on every day in the year, and in the mouths of all peoples, great and wise, just and brave, and whose idea, always august and venerable, by turns lovely and terrible, shall bind us

all in a common nationality by our loyalty to what is true, our reverence for what is good, our love for what is beautiful, and our sense of security in what is mighty. That is the America which the Fathers conceived, and it is that to which the children look forward,—an America which shall displace Ireland and Germany, Massachusetts and Carolina, in the hearts of those who call them mother, with an image of maternity at once more tender and more majestic.

There is a past for which Republicans have indeed no respect,—but it is one of recent date; there is a history from which they refuse to take lessons except for warning and not example,—but it is a history which is not yet written. When the future historian shall study that past and gather materials for writing that history, he will find cause for wonder at the strength of that national vitality which could withstand and survive, not the efforts of Mr. Choate's dreadful reformers, but of an administration calling itself Democratic, which, with the creed of the Ostend Manifesto for its foreign, and the practice of Kansas for its domestic policy, could yet find a scholar and a gentleman like Mr. Choate to defend it.

Mr. Choate charges the Republicans with being incapable of a generalization. They can, at least, generalize so far as this,—that, when they find a number of sophistries in an argument, they conclude that the cause which requires their support must be a weak one. One of the most amusing of these in the oration before us is where (using the very same arguments that were urged in favor of that coalition in Massachusetts against the morality of which the then party of Mr. Choate exclaimed so loudly) he extols the merits of Compromise in statesmanship. In support of what he says on this subject, he quotes from a speech of Archbishop Whately a passage in favor of Expediency. It is really too bad, that the Primate of Ireland, of all men living, should be made the abettor in two fallacies. In the first place, Mr. Choate assumes that there are certain deluded per-

sons who affirm that all compromises in politics are wrong. Having stuffed out his man of straw, he proceeds gravely to argue with him, as if he were as cunning of fence as Duns Scotus. One would think, from some of the notions he deems it necessary to combat, that we were living in the time of the Fifth-Monarchy men, and that Captain Venner with his troop was ready to issue from the garrets of Batterymarch Street, to find Armageddon in Dock Square, and the Beast of the Revelation in the Chief of Police. There is no man who believes that the ship of State, any more than an ordinary vessel, can be navigated by the New Testament alone; but neither will be the worse for having it aboard. The Puritans sailed theirs by Deuteronomy, but it was a Deuteronomy qualified by an eye to the main chance. Mr. Choate's syllogism may be stated thus: Some compromises are necessary in order to carry on a free government; but this is a compromise; therefore it is necessary. Here is the first fallacy. The other syllogism runs thus: Expediency is essential in politics; so also is compromise; therefore some particular compromise is expedient. Fallacy number two. The latent application in this part of Mr. Choate's oration is, of course, to Compromises on the Slavery question. We agree with him, that no man of sense will deny that compromise is essential in politics, and especially in our politics. With a single exception, all that he says on this topic is expressed with masterly force and completeness. But when we come to the application of it, the matter assumes another face. Men of sense may, and do, differ as to what is a compromise, or, agreeing in that, they may differ again as to whether it be expedient. For example, if a man, having taken another's cloak, insist on taking his coat also, the denudee, though he might congratulate himself on having been set forward so far on his way toward the natural man of Rousseau, would hardly call the affair a compromise on the part of the denuder. Or again, if his brother with Ostend

principles should offer to compromise about the coat by taking only half of it, he would be in considerable doubt whether the arrangement were expedient. Now there are many honest people, not as eloquent as Mr. Choate, not as scholarly, and perhaps not more illogical, who firmly believe that our compromises on the question of Slavery have afforded examples of both the species above described. It is not unnatural, therefore, that, while they assent to his general theory, they should protest against his mode of applying it to particulars. They may be incapable of a generalization, (they certainly are, if this be Mr. Choate's notion of one,) but they are incapable also of a deliberate fallacy. We think we find here one of the cases in which his training as an advocate has been of evil effect on his fairness of mind. No more potent lie can be made than of the ashes of truth. A fallacy is dangerous because of the half-truth in it. Swallow a strong dose of pure poison, and the stomach may reject it; but take half as much, mixed with innocent water, and it will do you a mischief. But Mr. Choate is nothing, if not illogical: recognizing the manifest hand of God in the affairs of the world, he would leave the question of Slavery with Him. Now we offer Mr. Choate a *dilemma*: either God *always* interferes, or *sometimes*: if always, why need Mr. Choate meddle? why not leave it to Him to avert the dangers of Anti-slavery, as well as to remedy the evils of Slavery?—if only sometimes, (*nec deus interst nisi dignus vindice nodus*;) who is to decide when the time for human effort has come? Each man for himself, or Mr. Choate for all?

Let us try Mr. Choate's style of reasoning against himself. He says, "One may know Aristophanes and Geography and the Cosmical Unity and Telluric Influences," (why *didn't* he add, "Neptune, Plutarch, and Nicodemus"!)" and the smaller morals of life, and the sounding pretensions of philanthropy," (this last, at any rate, is useful knowledge,) "and yet not know America." We must confess,

that we do not see why on earth he should. In fact, by the time he had got to the "Telluric Influences," (whatever they are,) we should think he might consider his education completed, and his head would even then be as great a wonder as that of the schoolmaster in the "Deserted Village." In the same way, a man might have seen a horse, (if only a clothes-horse,) a dog, a cat, and a tadpole, and yet never have seen the elephant,—a most blameworthy neglect of opportunities. But let us apply Mr. Choate's syllogistic process to the list of this extraordinary nameless person's acquirements. The Republican Party do *not* know any of these amazing things; *ergo*, they must know America; and the corollary (judging from Mr. Choate's own practice, as displayed in the parts of his oration which we are sure he will one day wish to blot) would seem to be, that, having the honor of her acquaintance, they may apply very contemptuous epithets to everybody that disagrees with them. The only weak point in our case is, that Mr. Choate himself seems to allow them the one merit of knowing something of Geography,—for he says they wished to elect a "geographical President,"—but, perhaps, as they did not succeed in doing so, he will forgive them the possession of that accomplishment, so hostile to a knowledge of America.

We confess that we were surprised to find Mr. Choate reviving, on "the serene and secret mountain-top,"—which, being interpreted, means the rather prosaic Tremont Temple,—the forgotten slang of a bygone political contest, as in the instance we have just quoted of the "geographical President." We think that Colonel Fremont might be allowed to rest in peace, now that a California court has decided—with a logic worthy of Mr. Choate himself—that he has no manner of right to the gold in his Mariposa mines, *because* he owns them. But we should like to have Mr. Choate define, when he has leisure, where an unfortunate candidate can take up his abode, in order to escape the imputation of being "geographical." It is a grave charge to be

brought against any man, as we see by its being coupled with those dreadful Telluric Influences and Cosmical (ought we not to *delete* the *s*?) Unities; and since the most harmless man in the world may become a candidate before he expects it, it would be charitable to warn him beforehand what is an allowable *habitat* in such a contingency.

We said we were surprised at seeing our old friend, the "geographical President," again; but we soon found that he reappeared only as the file-leader of a ragged regiment of kindred scarecrows,—nay, with others so battered and bedraggled, that they were scarce fit to be the camp-followers of the soldiery with whom Falstaff refused to march through Coventry. The sarcasms which Mr. Choate vents against the Anti-slavery sentiment of the country are so old as to be positively respectable,—we wish we could say that their vivacity increased with their years,—and as for his graver indictments, there never was anything so ancient, unless it be an American lad of eighteen. There are not a great many of either, but they are made to recur often enough to produce the impression of numbers. They remind us of the theatric army, composed always of the same old guard of supernumeraries and candle-snuffers, and which, by marching round and round the paper forest in the background, would make six men pass muster very well for sixty, did not the fatally regular recurrence of the hero whose cotton armor bunches at the knees, and the other whose legs insist on the un-Grecian eccentricity of being straight in profile and crooked in a front view, bring us back to calmer estimates.

We used the word *indictments* with design, both as appropriate to Mr. Choate's profession and exactly descriptive of the thing itself. For, as in an indictment for murder, in order to close every loophole of evasion, the prudent attorney affirms that the accused did the deed with an awfully destructive *to-wit*,—with a knife, axe, bludgeon, pistol, bootjack, six-pounder, and what not, which were then and there in the

Briarean hands of him the said What's-his-name, so Mr. Choate represents the Republican Party to have attempted the assassination of the Constitution with a most remarkable medley of instruments. He does not, indeed, use the words "Republican Party," but it is perfectly clear from the context, as in the case of the "geographical President," for whom the charges are intended. Out of tenderness for the artist, let him for whom the garment is intended put it on, though it may not fit him,—and for our own parts, as humble members of the Anti-slave-trade, Anti-filibuster, and Anti-disreputable-things-generally Party, we don our Joseph's coat (for Mr. Choate could not make one that was not of many colors) with good-humored serenity.

Of course, Sectionalism is not forgotten. The pumpkin-lantern, that had performed so many offices of alarm, though a little wrinkled now, was too valuable a stage-property to be neglected. In the hands of so skilful an operator, its slender body flutters voluminous with new folds of inexpensive cotton, and its eyes glare with the baleful terrors of unlimited tallow. Mr. Choate honestly confesses that sectional jealousies are coeval with the country itself, but it is only as fomented by Anti-slavery-extension that he finds them dreadful. When South Carolina threatened disunion unless the Tariff of the party to which Mr. Choate then belonged were modified, did he think it necessary for the Protectionists to surrender their policy? There is not, and there never was, any party numerically considerable at the North, in favor of disunion. Were homilies on fraternal concessions the things to heal this breach, the South is the fitting place for their delivery; but mouth-glue, however useful to stick slight matters together, is not the cement with which confederacies are bound to a common centre. There must be the gravitation of interest as well as of honor and duty. We wonder that the parallel case of Scotland and England did not occur to Mr. Choate, in speaking upon this point. Scotland

was clamorous and England jealously contemptuous, for nearly a century. Twice since the union, the land of cakes has been in rebellion; but as long as a pound Scots was only a twentieth part of a pound English,—as long as the treasury was filled chiefly from south the Tweed, and the sons of poor and proud Scottish lairds could make glittering abstractions from it,—as long as place was to be won or hoped for,—there was no danger. So with us,—though Jacob and Esau quarrelled already in the womb, yet, so long as the weaker and more politic brother can get the elder brother's portion, and simple Esau hunts his whales and pierces his untroudden forests, content with his mess of pottage,—honestly abiding by his bargain, though a little puzzled at its terms,—we think that fratricide, or the sincere thought of it, is very far off.

We should be glad to extract some passages of peculiar force and beauty,—such as that where Mr. Choate rebukes the undue haste of reformers, and calls to mind the slow development and longevity of states and ideas. But our duty is the less pleasing one of pointing to some of the sophistries of the argument and some of the ill-advised ebullitions of the orator. We leave his exegesis of "Render unto Cæsar" to answer itself; but what can be worse than this,—worse in taste, in temper, in reason?

"There is a cant of shallowness and fanaticism which misunderstands and denies this. There is a distempered and ambitious morality which says civil prudence is no virtue. There is a philanthropy,—so it calls itself,—pedantry, arrogance, folly, cruelty, impiousness, I call it, fit enough for a pulpit, totally unfit for a people,—fit enough for a preacher, totally unfit for a statesman."

Think of it!—fit enough for St. Augustine and St. Francis, (to mention no greater names,) fit enough for Taylor and Barrow, for Bossuet and Fénelon, but not for Mr. Buchanan or Mr. Cushing!

In another place Mr. Choate says, "that even the laughter of fools, and children, and madmen, little ministers,

little editors, and little politicians, can inflict the mosquito-bite, not deep, but stinging." As this is one of the best of his sarcasms, we give it the advantage of the circulation of the "Atlantic,"—generous and tidal circulation, as he himself might call it. We do not think the mosquito image new,—if we remember, the editor of the Bungtown Copperhead uses it weekly against "our pitiful contemporary,"—though the notion of a mosquito-bite inflicted by a laugh is original with Mr. Choate, unless Lord Castlereagh may have used it before. But we would seriously ask Mr. Choate who the big ministers of the country are, if the Beechers, if Wayland, Park, Bushnell, Cheever, Furness, Parker, Hedge, Belkows, and Huntington are the little ones?

There is an amusing passage in which Mr. Choate would seem to assume to himself and those who agree with him the honors of martyrdom. This shows a wonderful change in public opinion; though the martyrs in the "Legenda Aurea" and Fox seem to have had a harder time of it than we supposed to be the case with Mr. Choate.

We have not space to follow him farther, and only the reputation of the man, and the singularity of the occasion, which gave a kind of national significance to the affair, would have tempted us to intrude upon the select privacy of the Young Men's Democratic Association.

Finally, as Mr. Choate appears to have a very mean opinion of the understandings and the culture of those opposed to him in politics, we beg to remind him, since he has been led out, like Balaam, to prophesy against the tents and armies of the Republican Israel, and has ended by proving their invincibility, that it was an animal in all respects inferior to a prophet, and in some to a politician, who was first aware of the presence of the heavenly messenger; and it may be that persons incapable of a generalization—as that patient creature undoubtedly was—may see as far into the future as the greatest philosopher who turns his eyes always to the past.

LITERARY NOTICES.

DR. ASA GRAY'S *Botanical Series*, New York, Ivison & Phinney, consisting of—

- I. *How Plants Grow, etc., with a Popular Flora, etc.* 16mo. pp. 233.
- II. *First Lessons in Botany and Vegetable Physiology.* 8vo. pp. 236.
- III. *Introduction to Structural and Systematic Botany and Vegetable Physiology.* 8vo. pp. 655.
- IV. *Manual of the Botany of the Northern United States, including Virginia, Kentucky, etc.* 8vo. pp. 636.
- V. Same as IV., with the *Mosses and Liverworts* added, illustrated by Engravings. pp. 739.
- VI. Same as IV., with II. bound up with it. pp. 872.

THE first-named of these books is a new candidate for public favor; the others are revised and improved editions of books which have already been favorably received. We have sometimes thought that the popularity of a school-book is in inverse proportion to its merits, and are glad to learn that five editions of Dr. Gray's "Structural and Systematic Botany" are witnesses against the truth of this assumption. No man can deny that Dr. Gray's books are all of the highest order of merit. The accuracy and extent of his scholarship are manifest on every page,—a scholarship consisting not merely in an extensive acquaintance with the works of other botanists, but in a careful confirmation of their results, and in additions to their knowledge, by an observation of Nature for himself. His clearness of style is an equally valuable characteristic, making the reader sure that he understands Dr. Gray, and that Dr. Gray understands the subject. In the "Manual" this clearness of style extends to the judicious selection of distinctive marks, whereby allied species may be distinguished from each other. Even the most difficult genera of golden-rods, asters, and grasses become intelligible in this manual; and many a less difficult genus which puzzled our boyhood, with Beck's, Eaton's, and Pursh's manuals, became so plain in Gray, that we cannot now imagine where was the difficulty. The extent of the field which Gray's Manual covers

prevents him, of course, from giving such lifelike descriptions of plants as may be found in Dr. Bigelow's "Plants of Boston and its Vicinity," or such minute word-daguerreotypes as those in Mr. Emerson's "Trees of Massachusetts,"—books which no New England student of botany can afford to be without; but, on the other hand, the description of each species, aided by typographical devices of Italics, etc., is sufficient for any intelligent observer to identify a specimen. The exquisite engravings, illustrating the genera of Ferns, Hepaticæ, and Mosses, are also a great assistance.

The volume which we have marked III. is the fifth revised edition of the "Botanical Text-Book." It contains a complete, although concise, sketch of Structural Botany and Vegetable Physiology, and a birds'-eye view of the whole vegetable kingdom in its subdivision into families, illustrated by over thirteen hundred engravings on wood. It has become a standard of botany, wherever our language is read.

For those who do not wish to pursue the study so far, the "First Lessons" is one of the most happily arranged and happily written scientific text-books ever published, and is illustrated by three hundred and sixty well-executed wood-cuts. This takes scholars of thirteen or fourteen years of age far enough into the recesses of the science for them to see its beauties, and to learn the passwords which shall admit them to all its hidden and inexhaustible treasures. It goes over substantially the same ground that is covered by the volume we have marked III., but in simpler language and with much less detail; and closes with clear practical directions how to collect specimens and make an herbarium.

The first book is intended for children of ten or twelve years old, at home or in school. We hail it as a remarkably successful effort of a truly learned man to write a book actually adapted to young children. While all teachers, and writers upon education, insist on the importance of having a child's first impressions such as shall not need to be afterwards corrected, and such as shall attract the child towards the study to

which it is introduced, our elementary books have usually sinned in one or both these points. They are either dry and repulsive, or else vague and incorrect;—frequently have both faults. But the child is here told “how plants grow” in a very pleasant manner, with neat and pretty pictures to illustrate the words, by one whose thorough knowledge and perspicuity of style prevent him from ever giving a wrong impression. The “Popular Flora” which is appended, contains a description of about one hundred families of the most common cultivated and wild plants, and of the most familiar genera and species in each family. The English names are in all cases put in the foreground in bold type,—while the Latin names stand modestly back, half hidden in parentheses and Italics; and these English names are in general very well selected,—although we think that when two or three English names are given to one plant, or one name to several plants, Dr. Gray ought to indicate which name he prefers. He allows “Dogwood” to stand without rebuke for the poison sumac, as well as for the flowering cornel; and gives “Winterberry” and “Black Alder” without comment to *Prinos verticellata*. A word of preference on his part might do something towards reforming and simplifying the popular nomenclature, and this child’s manual is the place to utter that word. We think also that in a second edition of this Popular Flora it would be well to give a popular description of a few of the most beautiful flowers belonging to those families which are too difficult for the child properly to analyze. Thus, *Arethusa*, *Cypripedium*, *Pogonia*, *Calopogon*, *Spiranthes*, *Festuca*, *Osmunda*, *Onoclea*, *Lycopodium*, *Polytrichum*, *Bryum*, *Marchantia*, *Usnea*, *Parmelia*, *Cladonia*, *Agaricus*, *Chondrus*, and perhaps a few other genera, furnish plants so familiar and so striking that a child will be sure to inquire concerning them, and a general description could easily be framed in a few words which could not mislead him concerning them.

In writing for children, Dr. Gray seems to have put on a new nature, in which we have a much fuller sympathy with him than we have ever had in reading his larger books. We do not like that cold English common sense which seems re-

luctant to admit any truth in the higher regions of thought; and we confess, that, until we had read this little child’s book, “How Plants Grow,” we had always suspected Dr. Gray of leaning towards that old error, so finely exposed by Agassiz in zoölogy, of considering genera, families, etc., as divisions made by human skill, for human convenience,—instead of as divisions belonging to the Creator’s plan, as yet but partially understood by human students.

We hope that the appearance of this masterly little book, so finely adapted to the child’s understanding, may have the effect of introducing botany into the common schools. The natural taste of children for flowers indicates clearly the propriety and utility of giving them lessons upon botany in their earliest years. Go into any of our New England country-schools at this season of the year, and you will find a bouquet of wild flowers on the teacher’s desk. Take it up and separate it,—show each flower to the school, tell its name, and its relationship to other and more familiar cultivated flowers, the characteristic sensible properties of its family, etc.,—and you will find the younger scholars your most attentive listeners. And if any practical man ask, What is the use of the younger scholars learning anything about wild flowers, which the cultivation of the country may soon render extinct, and which are but weeds at best?—there are two sufficient answers ready: first, that all truth is divine, and that the workmanship of infinite skill is beautiful and worthy of the eyes which may behold it; secondly, that no mental discipline is better adapted for the young mind than this learning how to distinguish plants. No more striking deficiency is observable, in most men, than the lack of a power to observe closely and with accuracy. The general inaccuracy of testimony, usually ascribed to inaccuracy of memory, is in fact to be attributed to inaccuracy of observation. In like manner, a large proportion of popular errors of judgment spring from an imperfect perception of the data on which the true conclusions should be founded. The best remedy for this lack of clear perceptions would evidently be the cultivation of those habits of close observation and nice discrimination necessary in a successful naturalist.

THE
ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. II.—SEPTEMBER, 1858.—NO. XI.

ELOQUENCE.

It is the doctrine of the popular music-masters, that whoever can speak can sing. So, probably, every man is eloquent once in his life. Our temperaments differ in capacity of heat, or we boil at different degrees. One man is brought to the boiling point by the excitement of conversation in the parlor. The waters, of course, are not very deep. He has a two-inch enthusiasm, a patty-pan ebullition. Another requires the additional caloric of a multitude, and a public debate; a third needs an antagonist, or a hot indignation; a fourth needs a revolution; and a fifth, nothing less than the grandeur of absolute ideas, the splendors and shades of Heaven and Hell.

But because every man is an orator, how long soever he may have been a mute, an assembly of men is so much more susceptible. The eloquence of one stimulates all the rest, some up to the speaking point, and all others to a degree that makes them good receivers and conductors, and they avenge themselves for their enforced silence by increased loquacity on their return to the fireside.

The plight of these phlegmatic brains is better than that of those who prema-

turally boil, and who impatiently break the silence before their time. Our county conventions often exhibit a small-pot-soon-hot style of eloquence. We are too much reminded of a medical experiment, where a series of patients are taking nitrous-oxide gas. Each patient, in turn, exhibits similar symptoms,—redness in the face, volubility, violent gesticulation, delirious attitudes, occasional stamping, an alarming loss of perception of the passage of time, a selfish enjoyment of his sensations, and loss of perception of the sufferings of the audience.

Plato says, that the punishment which the wise suffer, who refuse to take part in the government, is, to live under the government of worse men; and the like regret is suggested to all the auditors, as the penalty of abstaining to speak, that they shall hear worse orators than themselves.

But this lust to speak marks the universal feeling of the energy of the engine, and the curiosity men feel to touch the springs. Of all the musical instruments on which men play, a popular assembly is that which has the largest compass and variety, and out of which, by genius and study, the most wonderful effects can be drawn. An audience is not a simple

addition of the individuals that compose it. Their sympathy gives them a certain social organism, which fills each member, in his own degree, and most of all the orator, as a jar in a battery is charged with the whole electricity of the battery. No one can survey the face of an excited assembly, without being apprised of new opportunity for painting in fire human thought, and being agitated to agitate. How many orators sit mute there below! They come to get justice done to that ear and intuition which no Chatham and no Demosthenes has begun to satisfy.

The Welsh Triads say, "Many are the friends of the golden tongue." Who can wonder at the attractiveness of Parliament, or of Congress, or the bar, for our ambitious young men, when the highest bribes of society are at the feet of the successful orator? He has his audience at his devotion. All other flames must hush before his. He is the true potentate; for they are not kings who sit on thrones, but they who know how to govern. The definitions of eloquence describe its attraction for young men. Antiphon the Rhamnusian, one of Plutarch's ten orators, advertised in Athens, "that he would cure distempers of the mind with words." No man has a prosperity so high or firm, but two or three words can dishearten it. There is no calamity which right words will not begin to redress. Isocrates described his art, as "the power of magnifying what was small and diminishing what was great";—an acute, but partial definition. Among the Spartans, the art assumed a Spartan shape, namely, of the sharpest weapon. Socrates says, "If any one wishes to converse with the meanest of the Lacedæmonians, he will at first find him despicable in conversation; but, when a proper opportunity offers, this same person, like a skilful jaculator, will hurl a sentence worthy of attention, short and contorted, so that he who converses with him will appear to be in no respect superior to a boy." Plato's definition of rhetoric is, "the art of ruling the minds of men." The Koran says, "A moun-

tain may change its place, but a man will not change his disposition";—yet the end of eloquence is,—is it not?—to alter in a pair of hours, perhaps in a half-hour's discourse, the convictions and habits of years. Young men, too, are eager to enjoy this sense of added power and enlarged sympathetic existence. The orator sees himself the organ of a multitude, and concentrating their valors and powers:

"But now the blood of twenty thousand men
Blushed in my face."

That which he wishes, that which eloquence ought to reach, is, not a particular skill in telling a story, or neatly summing up evidence, or arguing logically, or dexterously addressing the prejudice of the company; no, but a taking sovereign possession of the audience. Him we call an artist, who shall play on an assembly of men as a master on the keys of the piano,—who, seeing the people furious, shall soften and compose them, shall draw them, when he will, to laughter and to tears. Bring him to his audience, and, be they who they may, coarse or refined, pleased or displeased, sulky or savage, with their opinions in the keeping of a confessor, or with their opinions in their bank-safes,—he will have them pleased and humored as he chooses; and they shall carry and execute that which he bids them.

This is that despotism which poets have celebrated in the "Pied Piper of Hamelin," whose music drew like the power of gravitation,—drew soldiers and priests, traders and feasters, women and boys, rats and mice; or that of the minstrel of Meudon, who made the pallbearers dance around the bier. This is a power of many degrees, and requiring in the orator a great range of faculty and experience, requiring a large composite man, such as Nature rarely organizes, so that, in our experience, we are forced to gather up the figure in fragments, here one talent, and there another.

The audience is a constant metre of the orator. There are many audiences in every public assembly, each one of

which rules in turn. If anything comic and coarse is spoken, you shall see the emergence of the boys and rowdies, so loud and vivacious, that you might think the house was filled with them. If new topics are started, graver and higher, these roisters recede; a more chaste and wise attention takes place. You would think the boys slept, and that the men have any degree of profoundness. If the speaker utter a noble sentiment, the attention deepens, a new and highest audience now listens, and the audiences of the fun and of facts and of the understanding are all silenced and awed. There is also something excellent in every audience,—the capacity of virtue. They are ready to be beatified. They know so much more than the orator, —and are so just! There is a tablet there for every line he can inscribe, though he should mount to the highest levels. Humble persons are conscious of new illumination; narrow brows expand with enlarged affections: delicate spirits, long unknown to themselves, masked and muffled in coarsest fortunes, who now hear their own native language for the first time, and leap to hear it. But all these several audiences, each above each, which successively appear to greet the variety of style and topic, are really composed out of the same persons; nay, sometimes the same individual will take active part in them all, in turn.

This range of many powers in the consummate speaker and of many audiences in one assembly leads us to consider the successive stages of oratory.

Perhaps it is the lowest of the qualities of an orator, but it is, on so many occasions, of chief importance,—a certain robust and radiant physical health,—or, shall I say? great volumes of animal heat. When each auditor feels himself to make too large a part of the assembly, and shudders with cold at the thinness of the morning audience, and with fear lest all will heavily fail through one bad speech, mere energy and mellowness are then inestimable. Wisdom and learning would be harsh and unwelcome,

compared with a substantial cordial man, made of milk, as we say, who is a house-warmer, with his obvious honesty and good meaning, and a hue-and-cry style of harangue, which inundates the assembly with a flood of animal spirits, and makes all safe and secure, so that any and every sort of good speaking becomes at once practicable. I do not rate this animal eloquence very highly, and yet, as we must be fed and warmed before we can do any work well, even the best, so is this semi-animal exuberance, like a good stove, of the first necessity in a cold house.

Climate has much to do with it,—climate and race. Set a New Englander to describe any accident which happened in his presence. What hesitation and reserve in his narrative! He tells with difficulty some particulars, and gets as fast as he can to the result, and, though he cannot describe, hopes to suggest the whole scene. Now listen to a poor Irish-woman recounting some experience of hers. Her speech flows like a river,—so unconsidered, so humorous, so pathetic, such justice done to all the parts! It is a true transubstantiation,—the fact converted into speech, all warm and colored and alive, as it fell out. Our Southern people are almost all speakers, and have every advantage over the New England people, whose climate is so cold, that, 'tis said, we do not like to open our mouths very wide. But neither can the Southerner in the United States, nor the Irish, compare with the lively inhabitant of the South of Europe. The traveller in Sicily needs no gayer melodramatic exhibition than the *table d'hôte* of his inn will afford him, in the conversation of the joyous guests. They mimic the voice and manner of the person they describe; they crow, squeal, hiss, cackle, bark, and scream like mad, and, were it only by the physical strength exerted in telling the story, keep the table in unbounded excitement. But in every constitution some large degree of animal vigor is necessary as material foundation for the higher qualities of the art.

But eloquence must be attractive, or it is none. The virtue of books is to be readable, and of orators to be interesting, and this is a gift of Nature; as Demosthenes, the most laborious student in that kind, signified his sense of this necessity when he wrote, "Good Fortune," as his motto on his shield. As we know, the power of discourse of certain individuals amounts to fascination, though it may have no lasting effect. Some portion of this sugar must intermingle. The right eloquence needs no bell to call the people together, and no constable to keep them. It draws the children from their play, the old from their arm-chairs, and the invalid from his warm chamber; it holds the hearer fast, steals away his feet, that he shall not depart,—his memory, that he shall not remember the most pressing affairs,—his belief, that he shall not admit any opposing considerations. The pictures we have of it in semi-barbarous ages, when it has some advantages in the simpler habit of the people, show what it aims at. It is said that the Khans, or story-tellers in Ispahan and other cities of the East, attain a controlling power over their audience, keeping them for many hours attentive to the most fanciful and extravagant adventures. The whole world knows pretty well the style of these improvisators, and how fascinating they are, in our translations of the "Arabian Nights." Scheherzarade tells these stories to save her life, and the delight of young Europe and young America in them proves that she fairly earned it. And who does not remember in childhood some white or black or yellow Scheherzarade, who, by that talent of telling endless feats of fairies and magicians, and kings and queens, was more dear and wonderful to a circle of children than any orator of England or America is now? The more indolent and imaginative complexion of the Eastern nations makes them much more impressible by these appeals to the fancy.

These legends are only exaggerations of real occurrences, and every literature

contains these high compliments to the art of the orator and the bard, from the Hebrew and the Greek down to the Scottish Glenkindie, who

—"harpit a fish out o' saut water,
Or water out of a stone,
Or milk out of a maiden's breast
Who bairn had never none."

Homer specially delighted in drawing the same figure. For what is the "Odyssey," but a history of the orator, in the largest style, carried through a series of adventures furnishing brilliant opportunities to his talent? See with what care and pleasure the poet brings him on the stage. Helen is pointing out to Antenor, from a tower, the different Grecian chiefs. "Antenor said: 'Tell me, dear child, who is that man, shorter by a head than Agamemnon, yet he looks broader in his shoulders and breast. His arms lie on the ground, but he, like a leader, walks about the bands of the men. He seems to me like a stately ram, who goes as a master of the flock.' Him answered Helen, daughter of Jove: 'This is the wise Ulysses, son of Laertes, who was reared in the state of craggy Ithaca, knowing all wiles and wise counsels.' To her the prudent Antenor replied again: 'O woman, you have spoken truly. For once the wise Ulysses came hither on an embassy, with Menelaus, beloved by Mars. I received them, and entertained them at my house. I became acquainted with the genius and the prudent judgments of both. When they mixed with the assembled Trojans and stood, the broad shoulders of Menelaus rose above the other; but, both sitting, Ulysses was more majestic. When they conversed, and interwaved stories and opinions with all, Menelaus spoke succinctly, few but very sweet words, since he was not talkative, nor superfluous in speech, and was the younger. But when the wise Ulysses arose, and stood, and looked down, fixing his eyes on the ground, and neither moved his sceptre backward nor forward, but held it still, like an awkward person, you would say it was some angry or foolish man; but when he sent

his great voice forth out of his breast, and his words fell like the winter snows, not then would any mortal contend with Ulysses; and we, beholding, wondered not afterwards so much at his aspect.”* Thus he does not fail to arm Ulysses at first with this power of overcoming all opposition by the blandishments of speech. Plutarch tells us that Thucydides, when Archidamus, king of Sparta, asked him, Which was the best wrestler, Pericles or he? replied, “When I throw him, he says he was never down, and he persuades the very spectators to believe him.” Philip of Macedon said of Demosthenes, on hearing the report of one of his orations, “Had I been there, he would have persuaded me to take up arms against myself”; and Warren Hastings said of Burke’s speech on his impeachment, “As I listened to the orator, I felt for more than half an hour as if I were the most culpable being on earth.”

In these examples, higher qualities have already entered; but the power of detaining the ear by pleasing speech, and addressing the fancy and imagination, often exists without higher merits. Thus separated, as this fascination of discourse aims only at amusement, though it be decisive in its momentary effect, it is yet a juggle, and of no lasting power. It is heard like a band of music passing through the streets, which converts all the passengers into poets, but is forgotten as soon as it has turned the next corner; and unless this oiled tongue could, in Oriental phrase, lick the sun and moon away, it must take its place with opium and brandy. I know no remedy against it but cotton-wool, or the wax which Ulysses stuffed into the ears of his sailors to pass the Sirens safely.

There are all degrees of power, and the least are interesting, but they must not be confounded. There is the glib tongue and cool self-possession of the salesman in a large shop, which, as is well known, overpower the prudence and resolution of housekeepers of both

sexes. There is a petty lawyer’s fluency, which is sufficiently impressive to him who is devoid of that talent, though it be, in so many cases, nothing more than a facility of expressing with accuracy and speed what everybody thinks and says more slowly, without new information, or precision of thought,—but the same thing, neither less nor more. It requires no special insight to edit one of our country newspapers. Yet whoever can say off currently, sentence by sentence, matter neither better nor worse than what is there printed, will be very impressive to our easily-pleased population. These talkers are that class who prosper like the celebrated schoolmaster, by being only one lesson ahead of the pupil. Add a little sarcasm, and prompt allusion to passing occurrences, and you have the mischievous member of Congress. A spice of malice, a ruffian touch in his rhetoric, will do him no harm with his audience. These accomplishments are of the same kind, and only a degree higher than the coaxing of the auctioneer, or the vituperative style well described in the street-word “jawing.” These kinds of public and private speaking have their use and convenience to the practitioners; but we may say of such collectively, that the habit of oratory is apt to disqualify them for eloquence.

One of our statesmen said, “The curse of this country is eloquent men.” And one cannot wonder at the uneasiness sometimes manifested by trained statesmen, with large experience of public affairs, when they observe the disproportionate advantage suddenly given to oratory over the most solid and accumulated public service. In a Senate or other business committee, the solid result depends on a few men with working talent. They know how to deal with the facts before them, to put things into a practical shape, and they value men only as they can forward the work. But some new man comes there, who has no capacity for helping them at all, is insignificant, and nobody in the com-

* *Iliad*, III. 192.

mittee, but has a talent for speaking. In the debate with open doors, this precious person makes a speech, which is printed, and read all over the Union, and he at once becomes famous, and takes the lead in the public mind over all these executive men, who, of course, are full of indignation to find one who has no tact or skill, and knows he has none, put over them by means of this talking power which they despise.

Leaving behind us these pretensions, better or worse, to come a little nearer to the verity, eloquence is attractive as an example of the magic of personal ascendancy;—a total and resultant power,—rare, because it requires a rich coincidence of powers, intellect, will, sympathy, organs, and, over all, good-fortune in the cause. We have a half-belief that the person is possible who can counterpoise all other persons. We believe that there may be a man who is a match for events,—one who never found his match,—against whom other men being dashed are broken,—one of inexhaustible personal resources, who can give you any odds and beat you. What we really wish for is a mind equal to any exigency. You are safe in your rural district, or in the city, in broad daylight, amidst the police, and under the eyes of a hundred thousand people. But how is it on the Atlantic, in a storm? Do you understand how to infuse your reason into men disabled by terror, and to bring yourself off safe then?—how among thieves, or among an infuriated populace, or among cannibals? Face to face with a highwayman who has every temptation and opportunity for violence and plunder, can you bring yourself off safe by your wit, exercised through speech?—a problem easy enough to Cæsar, or Napoleon. Whenever a man of that stamp arrives, the highwayman has found a master. What a difference between men in power of face! A man succeeds because he has more power of eye than another, and so coaxes or confounds him. The newspapers, every week, report the adventures

of some impudent swindler, who, by steadiness of carriage, duped those who should have known better. Yet any swindlers we have known are novices and bunglers, as is attested by their ill name. A greater power of face would accomplish anything, and, with the rest of their takings, take away the bad name. A greater power of carrying the thing loftily, and with perfect assurance, would confound merchant, banker, judge, men of influence and power, poet, and president, and might head any party, unseat any sovereign, and abrogate any constitution in Europe and America. It was said, that a man has at one step attained vast power, who has renounced his moral sentiment, and settled it with himself that he will no longer stick at anything. It was said of Sir William Pepperel, one of the worthies of New England, that, “put him where you might, he commanded, and saw what he willed come to pass.” Julius Cæsar said to Metellus, when that tribune interfered to hinder him from entering the Roman treasury, “Young man, it is easier for me to put you to death than to say that I will”; and the youth yielded. In earlier days, he was taken by pirates. What then? He threw himself into their ship; established the most extraordinary intimacies; told them stories; declaimed to them; if they did not applaud his speeches, he threatened them with hanging,—which he performed afterwards,—and, in a short time, was master of all on board. A man this is who cannot be disconcerted, and so can never play his last card, but has a reserve of power when he has hit his mark. With a serene face, he subverts a kingdom. What is told of him is miraculous; it affects men so. The confidence of men in him is lavish, and he changes the face of the world, and histories, poems, and new philosophies arise to account for him. A supreme commander over all his passions and affections; but the secret of his ruling is higher than that. It is the power of Nature running without impediment from the brain and will into

the hands. Men and women are his game. Where they are, he cannot be without resource. "Whoso can speak well," said Luther, "is a man." It was men of this stamp that the Grecian States used to ask of Sparta for generals. They did not send to Lacedæmon for troops, but they said, "Send us a commander"; and Pausanias, or Gylippus, or Brasidas, or Agis, was despatched by the Ephors.

It is easy to illustrate this overpowering personality by these examples of soldiers and kings; but there are men of the most peaceful way of life, and peaceful principle, who are felt, wherever they go, as sensibly as a July sun or a December frost,—men who, if they speak, are heard, though they speak in a whisper,—who, when they act, act effectually, and what they do is imitated: and these examples may be found on very humble platforms, as well as on high ones.

In old countries, a high money-value is set on the services of men who have achieved a personal distinction. He who has points to carry must hire, not a skilful attorney, but a commanding person. A barrister in England is reputed to have made twenty or thirty thousand pounds *per annum* in representing the claims of railroad companies before committees of the House of Commons. His clients pay not so much for legal as for manly accomplishments,—for courage, conduct, and a commanding social position, which enable him to make their claims heard and respected.

I know very well, that, among our cool and calculating people, where every man mounts guard over himself, where heats and panics and abandonments are quite out of the system, there is a good deal of skepticism as to extraordinary influence. To talk of an overpowering mind rouses the same jealousy and defiance which one may observe round a table where anybody is recounting the marvellous anecdotes of mesmerism. Each auditor puts a final stroke to the discourse by exclaiming, "Can he mesmerize me?" So each man inquires

if any orator can change *his* convictions.

But does any one suppose himself to be quite impregnable? Does he think that not possibly a man may come to him who shall persuade him out of his most settled determination?—for example, good sedate citizen as he is, to make a fanatic of him? or, if he is penurious, to squander money for some purpose he now least thinks of? or, if he is a prudent, industrious person, to forsake his work, and give days and weeks to a new interest? No, he defies any one, every one. Ah! he is thinking of resistance, and of a different turn from his own. But what if one should come of the same turn of mind as his own, and who sees much farther on his own way than he? A man who has tastes like mine, but in greater power, will rule me any day, and make me love my ruler.

Thus it is not powers of speech that we primarily consider under this word Eloquence, but the power that, being present, gives them their perfection, and, being absent, leaves them a merely superficial value. Eloquence is the appropriate organ of the highest personal energy. Personal ascendancy may exist with or without adequate talent for its expression. It is as surely felt as a mountain or a planet; but when it is weaponed with a power of speech, it seems first to become truly human, works actively in all directions, and supplies the imagination with fine materials.

This circumstance enters into every consideration of the power of orators, and is the key to all their effects. In the assembly, you shall find the orator and the audience in perpetual balance, and the predominance of either is indicated by the choice of topic. If the talents for speaking exist, but not the strong personality, then there are good speakers who perfectly receive and express the will of the audience, and the commonest populace is flattered by hearing its low mind returned to it with every ornament which happy talent can add. But if there be personality in the

orator, the face of things changes. The audience is thrown into the attitude of pupil, follows like a child its preceptor, and hears what he has to say. It is as if, amidst the king's council at Madrid, Ximenes urged that an advantage might be gained of France, and Mendoza that Flanders might be kept down, and Columbus, being introduced, was interrogated whether his geographical knowledge could aid the cabinet, and he can say nothing to one party or to the other, but he can show how all Europe can be diminished and reduced under the king by annexing to Spain a continent as large as six or seven European.

This balance between the orator and the audience is expressed in what is called the pertinence of the speaker. There is always a rivalry between the orator and the occasion, between the demands of the hour and the prepossession of the individual. The emergency which has convened the meeting is usually of more importance than anything the debaters have in their minds, and therefore becomes imperative to them. But if one of them have anything of commanding necessity in his heart, how speedily he will find vent for it, and with the applause of the assembly! This balance is observed in the privatest intercourse. Poor Tom never knew the time when the present occurrence was so trivial that he could tell what was passing in his mind without being checked for unseasonable speech; but let Bacon speak, and wise men would rather listen, though the revolution of kingdoms was on foot. I have heard it reported of an eloquent preacher, whose voice is not yet forgotten in this city, that, on occasions of death or tragic disaster, which overspread the congregation with gloom, he ascended the pulpit with more than his usual alacrity, and, turning to his favorite lessons of devout and jubilant thankfulness, "Let us praise the Lord," carried audience, mourners, and mourning along with him, and swept away all the

impertinence of private sorrow with his hosannas and songs of praise. Pepys says of Lord Clarendon, with whom "he is mad in love," on his return from a conference, "I did never observe how much easier a man do speak when he knows all the company to be below him, than in him; for, though he spoke indeed excellent well, yet his manner and freedom of doing it, as if he played with it, and was informing only all the rest of the company, was mighty pretty."*

This rivalry between the orator and the occasion is inevitable, and the occasion always yields to the eminence of the speaker; for a great man is the greatest of occasions. Of course, the interest of the audience and of the orator conspire. It is well with them only when his influence is complete; then only they are well pleased. Especially, he consults his power by making instead of taking his theme. If he should attempt to instruct the people in that which they already know, he would fail; but, by making them wise in that which he knows, he has the advantage of the assembly every moment. Napoleon's tactics of marching on the angle of an army, and always presenting a superiority of numbers, is the orator's secret also.

The several talents which the orator employs, the splendid weapons which went to the equipment of Demosthenes, of Æschines, of Demades, the natural orator, of Fox, of Pitt, of Patrick Henry, of Adams, of Mirabeau, deserve a special enumeration. We must not quite omit to name the principal pieces.

The orator, as we have seen, must be a substantial personality. Then, first, he must have power of statement,—must have the fact, and know how to tell it. In any knot of men conversing on any subject, the person who knows most about it will have the ear of the company, if he wishes it, and lead the conversation,—no matter what genius or distinction other men there present may have; and in any public assembly, him who has the

* *Diary*, I. 469.

facts, and can and will state them, people will listen to, though he is otherwise ignorant, though he is hoarse and ungraceful, though he stutters and screams.

In a court of justice, the audience are impartial; they really wish to sift the statements, and know what the truth is. And, in the examination of witnesses, there usually leap out, quite unexpectedly, three or four stubborn words or phrases which are the pith and fate of the business, which sink into the ear of all parties, and stick there, and determine the cause. All the rest is repetition and qualifying; and the court and the county have really come together to arrive at these three or four memorable expressions, which betrayed the mind and meaning of somebody.

In every company, the man with the fact is like the guide you hire to lead your party up a mountain or through a difficult country. He may not compare with any of the party in mind, or breeding, or courage, or possessions, but he is much more important to the present need than any of them. That is what we go to the court-house for,—the statement of the fact, and the elimination of a general fact, the real relation of all the parties; and it is the certainty with which, indifferently in any affair that is well handled, the truth stares us in the face, through all the disguises that are put upon it,—a piece of the well-known human life,—that makes the interest of a court-room to the intelligent spectator.

I remember, long ago, being attracted by the distinction of the counsel, and the local importance of the cause, into the court-room. The prisoner's counsel were the strongest and cunningest lawyers in the Commonwealth. They drove the attorney for the State from corner to corner, taking his reasons from under him, and reducing him to silence, but not to submission. When hard-pressed, he revenged himself, in his turn, on the judge, by requiring the court to define what salvage was. The court, thus pushed, tried words, and said everything it could think of to fill the time, supposing cases, and

describing duties of insurers, captains, pilots, and miscellaneous sea-officers that are or might be,—like a schoolmaster puzzled by a hard sum, who reads the context with emphasis. But all this flood not serving the cuttle-fish to get away in, the horrible shark of the district-attorney being still there, grimly awaiting with his "The court must define,"—the poor court pleaded its inferiority. The superior court must establish the law for this, and it read away piteously the decisions of the Supreme Court, but read to those who had no pity. The judge was forced at last to rule something, and the lawyers saved their rogue under the fog of a definition. The parts were so well cast and discriminated, that it was an interesting game to watch. The government was well enough represented. It was stupid, but it had a strong will and possession, and stood on that to the last. The judge had a task beyond his preparation, yet his position remained real; he was there to represent a great reality, the justice of states, which we could well enough see beetling over his head, and which his trifling talk nowise affected, and did not impede, since he was entirely well-meaning.

The statement of the fact, however, sinks before the statement of the law, which requires immeasurably higher powers, and is a rarest gift, being in all great masters one and the same thing,—in lawyers, nothing technical, but always some piece of common sense, alike interesting to laymen as to clerks. Lord Mansfield's merit is the merit of common sense. It is the same quality we admire in Aristotle, Montaigne, Cervantes, or in Samuel Johnson, or Franklin. Its application to law seems quite accidental. Each of Mansfield's famous decisions contains a level sentence or two, which hit the mark. His sentences are not always finished to the eye, but are finished to the mind. The sentences are involved, but a solid proposition is set forth, a true distinction is drawn. They come from and they go to the sound human understanding; and I read, without surprise,

that the black-letter lawyers of the day sneered at his "equitable decisions," as if they were not also learned. This, indeed, is what speech is for, to make the statement; and all that is called eloquence seems to me of little use, for the most part, to those who have it, but inestimable to such as have something to say.

Next to the knowledge of the fact and its law, is method, which constitutes the genius and efficiency of all remarkable men. A crowd of men go up to Faneuil Hall; they are all pretty well acquainted with the object of the meeting; they have all read the facts in the same newspapers. The orator possesses no information which his hearers have not; yet he teaches them to see the thing with his eyes. By the new placing, the circumstances acquire new solidity and worth. Every fact gains consequence by his naming it, and trifles become important. His expressions fix themselves in men's memories, and fly from mouth to mouth. His mind has some new principle of order. Where he looks, all things fly into their places. What will he say next? Let this man speak, and this man only. By applying the habits of a higher style of thought to the common affairs of this world, he introduces beauty and magnificence wherever he goes. Such a power was Burke's, and of this genius we have had some brilliant examples in our own political and legal men.

Imagery. The orator must be, to a certain extent, a poet. We are such imaginative creatures, that nothing so works on the human mind, barbarous or civil, as a trope. Condense some daily experience into a glowing symbol, and an audience is electrified. They feel as if they already possessed some new right and power over a fact, which they can detach, and so completely master in thought. It is a wonderful aid to the memory, which carries away the image, and never loses it. A popular assembly, like the House of Commons, or the French Chamber, or the American Congress, is commanded by these two powers,—first by a fact, then

by skill of statement. Put the argument into a concrete shape, into an image, some hard phrase, round and solid as a ball, which they can see and handle and carry home with them, and the cause is half won.

Statement, method, imagery, selection, tenacity of memory, power of dealing with facts, of illuminating them, of sinking them by ridicule or by diversion of the mind, rapid generalization, humor, pathos, are keys which the orator holds; and yet these fine gifts are not eloquence, and do often hinder a man's attainment of it. And if we come to the heart of the mystery, perhaps we should say that the truly eloquent man is a sane man with power to communicate his sanity. If you arm the man with the extraordinary weapons of this art, give him a grasp of facts, learning, quick fancy, sarcasm, splendid allusion, interminable illustration,—all these talents, so potent and charming, have an equal power to ensnare and mislead the audience and the orator. His talents are too much for him, his horses run away with him; and people always perceive whether you drive, or whether the horses take the bits in their teeth and run. But these talents are quite something else when they are subordinated and serve him; and we go to Washington, or to Westminster Hall, or might well go round the world, to see a man who drives, and is not run away with,—a man who, in prosecuting great designs, has an absolute command of the means of representing his ideas, and uses them only to express these; placing facts, placing men; amid the inconceivable levity of human beings, never for an instant warped from his erectness. There is for every man a statement possible of that truth which he is most unwilling to receive,—a statement possible, so broad and so pungent, that he cannot get away from it, but must either bend to it or die of it. Else there would be no such word as eloquence, which means this. The listener cannot hide from himself that something has been shown him and the whole world, which he did not wish to

see; and, as he cannot dispose of it, it disposes of him. The history of public men and affairs in America will readily furnish tragic examples of this fatal force.

For the triumphs of the art somewhat more must still be required, namely, a reinforcing of man from events, so as to give the double force of reason and destiny. In transcendent eloquence, there was ever some crisis in affairs, such as could deeply engage the man to the cause he pleads, and draw all this wide power to a point. For the explosions and eruptions, there must be accumulations of heat somewhere, beds of ignited anthracite at the centre. And in cases where profound conviction has been wrought, the eloquent man is he who is no beautiful speaker, but who is inwardly drunk with a certain belief. It agitates and tears him, and perhaps almost bereaves him of the power of articulation. Then it rushes from him as in short, abrupt screams, in torrents of meaning. The possession the subject has of his mind is so entire, that it insures an order of expression which is the order of Nature itself, and so the order of greatest force, and inimitable by any art. And the main distinction between him and other well-graced actors is the conviction, communicated by every word, that his mind is contemplating a whole and inflamed by the contemplation of the whole, and that the words and sentences uttered by him, however admirable, fall from him as unregarded parts of that terrible whole which he sees, and which he means that you shall see. Add to this concentration a certain regnant calmness, which, in all the tumult, never utters a premature syllable, but keeps the secret of its means and method; and the orator stands before the people as a demoniacal power to whose miracles they have no key. This terrible earnestness makes good the ancient superstition of the hunter, that the bullet will hit its mark, which is first dipped in the marksman's blood.

Eloquence must be grounded on the

plainest narrative. Afterwards, it may warm itself until it exhales symbols of every kind and color, speaks only through the most poetic forms; but, first and last, it must still be at bottom a biblical statement of fact. The orator is thereby an orator, that he keeps his feet ever on a fact. Thus only is he invincible. No gifts, no graces, no power of wit or learning or illustration will make any amends for want of this. All audiences are just to this point. Fame of voice or of rhetoric will carry people a few times to hear a speaker, but they soon begin to ask, "What is he driving at?" and if this man does not stand for anything, he will be deserted. A good upholder of anything which they believe, a fact-speaker of any kind, they will long follow; but a pause in the speaker's own character is very properly a loss of attraction. The preacher enumerates his classes of men, and I do not find my place therein; I suspect, then, that no man does. Every thing is my cousin, and whilst he speaks things, I feel that he is touching some of my relations, and I am uneasy; but whilst he deals in words, we are released from attention. If you would lift me, you must be on higher ground. If you would liberate me, you must be free. If you would correct my false view of facts,—hold up to me the same facts in the true order of thought, and I cannot go back from the new conviction.

The power of Chatham, of Pericles, of Luther, rested on this strength of character, which, because it did not and could not fear anybody, made nothing of their antagonists, and became sometimes exquisitely provoking and sometimes terrific to these.

We are slenderly furnished with anecdotes of these men, nor can we help ourselves by those heavy books in which their discourses are reported. Some of them were writers, like Burke; but most of them were not, and no record at all adequate to their fame remains. Besides, what is best is lost, the fiery life of the moment. But the conditions for eloquence always exist. It is always dying out of

famous places, and appearing in corners. Wherever the polarities meet, wherever the fresh moral sentiment, the instinct of freedom and duty, come in direct opposition to fossil conservatism and the thirst of gain, the spark will pass. The resistance to slavery in this country has been a fruitful nursery of orators. The natural connection by which it drew to itself a train of moral reforms, and the slight yet sufficient party organization it offered, reinforced the city with new blood from the woods and mountains. Wild men, John Baptists, Hermit Peters, John Knoxes, utter the savage sentiment of Nature in the heart of commercial capitals. They send us every year some piece of aboriginal strength, some tough oak-stick of a man who is not to be silenced or insulted or intimidated by a mob, because he is more mob than they, —one who mobs the mob,—some sturdy countryman, on whom neither money, nor politeness, nor hard words, nor eggs, nor blows, nor brickbats, make any impression. He is fit to meet the bar-room wits and bullies; he is a wit and a bully himself, and something more; he is a graduate of the plough, and the stub-hoe, and the bush-whacker; knows all the secrets of swamp and snow-bank, and has nothing to learn of labor or poverty or the rough of farming. His hard head went through in childhood the drill of Calvinism, with text and mortification, so that he stands in the New England assembly a purer bit of New England than any, and flings his sarcasms right and left. He has not only the documents in his pocket to answer all cavils and to prove all his positions, but he has the eternal reason in his head. This man scornfully renounces your civil organizations,—county, or city, or governor, or army,—is his own navy and artillery, judge and jury, legislature and executive. He has learned his lessons in a bitter school. Yet, if the pupil be of a texture to bear it, the best university that can be recommended to a man of ideas is the gauntlet of the mobs.

He who will train himself to mastery

in this science of persuasion must lay the emphasis of education, not on popular arts, but on character and insight. Let him see that his speech is not differenced from action; that, when he has spoken, he has not done nothing, nor done wrong, but has cleared his own skirts, has engaged himself to wholesome exertion. Let him look on opposition as opportunity. He cannot be defeated or put down. There is a principle of resurrection in him, an immortality of purpose. Men are averse and hostile, to give value to their suffrages. It is not the people that are in fault for not being convinced, but he that cannot convince them. He should mould them, armed as he is with the reason and love which are also the core of their nature. He is not to neutralize their opposition, but he is to convert them into fiery apostles and publishers of the same wisdom.

The highest platform of eloquence is the moral sentiment. It is what is called affirmative truth, and has the property of invigorating the hearer; and it conveys a hint of our eternity, when he feels himself addressed on grounds which will remain when everything else is taken, and which have no trace of time or place or party. Everything hostile is stricken down in the presence of the sentiments; their majesty is felt by the most obdurate. It is observable, that, as soon as one acts for large masses, the moral element will and must be allowed for, will and must work; and the men least accustomed to appeal to these sentiments invariably recall them when they address nations. Napoleon, even, must accept and use it as he can.

It is only to these simple strokes that the highest power belongs, when a weak human hand touches, point by point, the eternal beams and rafters on which the whole structure of Nature and society is laid. In this tossing sea of delusion, we feel with our feet the adamant; in this dominion of chance, we find a principle of permanence. For I do not accept that definition of Isocrates, that the office of his art is to make the great small

and the small great; but I esteem this to be its perfection,—when the orator sees through all masks to the eternal scale of truth, in such sort that he can hold up before the eyes of men the fact of to-day steadily to that standard, thereby making the great great and the small small, which is the true way to astonish and to reform mankind.

All the first orators of the world have been grave men, relying on this reality. One thought the philosophers of Demosthenes's own time found running through all his orations,—this, namely, that “virtue secures its own success.” “To stand on one's own feet” Heeren finds the keynote to the discourses of Demosthenes, as of Chatham.

Eloquence, like every other art, rests on laws the most exact and determinate. It is the best speech of the best soul. It may well stand as the exponent of all that is grand and immortal in the mind. If it do not so become an instrument, but

aspires to be somewhat of itself, and to glitter for show, it is false and weak. In its right exercise, it is an elastic, unexhausted power,—who has sounded, who has estimated it?—expanding with the expansion of our interests and affections. Its great masters, whilst they valued every help to its attainment, and thought no pains too great which contributed in any manner to further it, and, resembling the Arabian warrior of fame, who wore seventeen weapons in his belt, and in personal combat used them all occasionally,—yet undervalued all means, never permitted any talent, neither voice, rhythm, poetic power, anecdote, sarcasm, to appear for show, but were grave men, who preferred their integrity to their talent, and esteemed that object for which they toiled, whether the prosperity of their country, or the laws, or a reformation, or liberty of speech or of the press, or letters, or morals, as above the whole world, and themselves also.

THE KINLOCH ESTATE, AND HOW IT WAS SETTLED.

[Concluded.]

CHAPTER XII.

THE disappearance of Lucy Ransom did not long remain a secret; it rang through the town, and was accompanied by all sorts of rumors. Some thought she had eloped; but the prevailing opinion was, that she had been tempted into a fatal error, and then, in the frenzy of remorse and shame, had destroyed herself, in order to hide her disgrace from the world. Slight hints were now recalled by many of the poor girl's acquaintance,—hints of love, unrequited and hopeless,—of base and unfeeling treachery,—of remediless sorrow, appealing to the deepest sympathy, and not the less because her heart found utterance in rude and homely phrases.

This idea of self-destruction gained the more currency because no one had seen the least trace of the girl after the twilight of the preceding night, and it was deemed improbable that she could have made her way on foot the whole distance to the railway-station without being seen by some one. And when it was reported that a boy had found a shawl not far from the dam, the public became so much aroused that it was determined to make a thorough search. The pond and canal were dragged, and the bank of the river carefully explored for miles below the town. The search was kept up far into the night, the leaders being provided with pitch-pine torches. At every bend, or eddy, or sand-bar, or fallen tree, where

it might be supposed that a drifting body would be stopped, the boldest breathed faster, and started at the first glimpse of a white stone or a peeled and bleached poplar-trunk, or other similar object, fearing it might prove to be what they expected, yet dreaded to see. But it was in vain. Lucy, whether alive or dead, was not to be found. Her grandmother hobbled down to the village, moaning piteously; but she could get little consolation, least of all from Mrs. Kinloch. This incident made a lasting impression. The village boys, who remembered the search with shuddering horror, avoided the river, and even Hugh found means to persuade Mildred to give up the pleasant road on its bank and take the hill district for their afternoon rides.

Meanwhile the time for the trial of the ejectment suit was rapidly approaching, and it was difficult to say whether plaintiff or defendant showed the more signs of anxiety. Mr. Hardwick's life seemed to be bound up in his shop; it was dear to him in the memory of long years of cheerful labor; it was his pride as well as his dependence; he had grown old by its flaming forge, and he could never feel at home in any other spot. "Young trees may be moved," he would say; "an old one dies in transplanting." It was noticed by all his friends that the stoop in his shoulders was more decided, his step less elastic, and his ordinary flow of spirits checked.

Mrs. Kinloch, too, grew older unaccountably fast. Her soft brown hair began to whiten, her features grew sharp, and her expression quick, watchful, and intense. Upon being spoken to, she would start and tremble in her whole frame; her cheeks would glow momentarily, and then become waxen again.

Impatient at the slow progress of her son's wooing, and impelled now by a new fear that all her plans might be frustrated, if Mildred should happen to hear any rumor touching the cause of Lucy's disappearance, Mrs. Kinloch proposed to herself to assist him more openly than she had

hitherto done. She was not aware that anything implicating Hugh had been reported, but she knew enough of human nature to be sure that some one would be peering into the mystery,—a mystery which she divined by instinct, but had not herself dared to explore. So, finding a favorable opportunity, she sat down beside Mildred, determined to read the secret of her soul; for she made no question that she could scan her, as she might the delicate machinery of the French clock, noiselessly moving under its crystal cover.

Mildred shuddered unconsciously, as she felt her step-mother's thin fingers gently smoothing the hair upon her temples; still more, as the pale and quivering lips were pressed to her forehead. The caress was not a feigned tenderness. Mrs. Kinloch really loved the girl, with such love as she had to bestow; and if her manner had been latterly abstracted or harsh, it was from preoccupation. She was soon satisfied that the suspicion she dreaded had not found place in the girl's mind. Leading the way by imperceptible approaches, she spoke in her softest tones of her joy at Hugh's altered manners, her hopes of his future, and especially of her desire to have him leave the navy and settle on shore.

"How happy we might be, Hugh and we," she said, "if we could live here in this comfortable home, and feel that nothing but death would break up the circle! How much your dear father counted on the happiness in store for him in growing old with his children around him!—and would he not be rejoiced to see us cling together, bound by ties as strong as life, and cherishing his memory by our mutual affection?"

Mildred replied in some commonplace,—rather wondering at the vein of sentiment, and in no way suspecting the object which her step-mother had in view.

Mrs. Kinloch continued:—"Hugh needs some new attraction now to detain him; he is tired of the sea, but he finds the village dull. He is just of the age to think of looking for some romantic attachment;

but you know how few girls there are here whose manners and education are such as to please a cultivated man."

Mildred grew uneasy, but remained silent. Mrs. Kinloch was every moment more eager in her manner; a novice, waiting for the turn of the cards in *rouge et noir*, would not have manifested a greater anxiety as to the result. But the girl looked out of the window, and did not see the compressed lips, dilated nostrils, and glittering eyes, that gave such a contradiction to the bland words.

"Mildred, my daughter," she continued, "I have no secrets from you,—least of all about matters that concern us both. Don't you see what I would say? Don't you know what would make our circle complete, inseparable? Pardon the boldness of a fond mother, whose only desire is to see her children happy."

Mildred felt a tear dropping upon the hand which Mrs. Kinloch held with a passionate grasp. She felt the powerful magnetism which the woman exerted upon her, and she trembled, but still kept silent.

"It is for Hugh that I speak. He loves you. Has he not told you so?"

"I do not wish to talk with you about it," said Mildred.

"But I have a right, as his mother and your guardian, to know. I should be wanting in my duty, if I suffered your happiness to be perilled for want of a clear understanding between you. Hugh is proud and sensitive, and you bashful and just the least foolish; so that you are at cross-purposes."

"Hugh fully understands my feelings towards him."

"You have given him encouragement?" she asked, eagerly.

"None whatever: it would have been wrong in me to do so."

"Wrong to love him! Why, he is your brother only in name."

"Wrong to encourage him in a love I do not and cannot return," replied Mildred, with a mighty effort, at the same time disengaging her hand.

Mrs. Kinloch could not repress a feeling of admiration, even in her despair, as she

saw the clear, brave glance, the heightened color, and the heaving bosom of the girl.

"But, in time, you may think differently," she said, almost piteously.

"I wished to be spared this pain, mother," Mildred replied, trembling at her own boldness, "but you will not let me; and I must tell you, kindly, but decidedly, that I never could marry Hugh under any circumstances whatever."

Her mother did not wince at the rebuff, but followed on even closer. "And why? Who is there more manly, well-educated, kindly, dutiful, than Hugh?"

"I don't wish to analyze his character; probably we shouldn't altogether agree in our judgment; but it is enough that I don't feel in the least attracted by him, and that I could not love him, if he were all that you imagine."

"Then you love another!" said Mrs. Kinloch, fiercely.

Mildred was excessively agitated; but, though her knees trembled, her voice was clear and soft as it had been. "Yes, I do love another; and I don't hesitate to avow it."

"That blacksmith's upstart?" in a still louder key.

"You mean Mark Davenport, probably, who deserves more respectful language."

"Brought up in coal-dust,—the spoiled and forward pet of a foolish old stutterer, who depends for his bread on his dirty work, and who, if he had only his own, would have to leave even the hovel he works in." It was fearful to see how these contemptuous words were hissed out by the infuriated woman.

Mildred was courageous, but she had not passed through the discipline that had developed her step-mother's faculties. So she burst into tears, saying, amidst her sobs, that Mark was allowed by all who knew him to be a young man of promise; that, for herself, she didn't care how much coal-dust he had been through,—that would wash off; that, at any rate, she loved him, and would never marry anybody else.

Mrs. Kinloch began to consider. An-

ger had whirled her away once; a second explosion might create an irreparable breach between them.

"Don't lay up what I have said, Mildred," she urged, in a mild voice. "If I object to your choice, it is because I am proud of you and want you to look high. You can marry whom you choose; no rank or station need be considered above you. Come, don't cry, dear!"

But Mildred refused to be soothed. She could not sympathize with the tropical nature, that smiled like sunshine at one moment, and the next burst into the fury of a tornado. She pushed off the beseeching hand, turned from the offered endearments, and, with reddened, tear-stained face, left the room.

Hugh presently passed through the hall. "Well, mother," said he, "I suppose you think you've done it now."

"Go about your business, you foolish boy!" she retorted. "Go and try something that you do know about. You can snare a partridge, or shoot a woodcock, perhaps!"

CHAPTER XIII.

MILDRED had now no peace; after what had happened, she could not meet Hugh and his mother with any composure. The scheming woman had risked everything in the appeal she made to her daughter,—risked everything, and lost. Nothing could restore harmony; neither could forget the struggle and live the old quiet life. Mrs. Kinloch, always pursued by anxiety, was one day full of courage, fruitful in plans and resources, and the next day cast down into the pit of despair. Now she clung to her first hope, believing that time, patience, kindness, would soften Mildred's resolution; then, seeing the blank indifference with which she treated Hugh, she racked her invention to provide other means of attaining her end.

Again, the thought of her inexplicable loss came over her, and she was frightened to madness; creeping chills alternating with cold sweats tortured her. It was a mystery she could not pen-

etrate. She could not but implicate Lucy: but then Lucy might be in her grave. After every circumstance had passed in review, her suspicions inevitably returned and fastened upon her lawyer, Clamp. She almost wished he would come to see her again; for he, being naturally sulky at his first reception, had left the haughty woman severely alone. She determined to send for him, on business, and then to try her fascinations upon him, to draw him out, and see if he held her secret.

"Aha!" thought the Squire, as he received the message, "she comes to her senses! Give a woman like Mrs. Kinloch time enough to consider, and she will not turn her back on her true interest. O Theophilus, you are not by any means a fool! Slow and steady, slow and steady you go! Let the frisky woman appear to have her way,—you will win in the end!"

The wig and best suit were brushed anew, water was brought into requisition for the visible portions of his person, and, with his most engaging expression arranged upon his parchment face, he presented himself before the widow.

There was a skirmish of small talk, during which Mr. Clamp was placid and self-conscious, while his *vis-à-vis*, though smiling and apparently at ease, was yet alert and excited,—darting furtive glances, that would have startled him like flashes of sunlight reflected from a mirror, if he had not been shielded by his own self-complacency.

"You-have-sent-for-me-on-business, I believe," said the lawyer, in a tone continuous and bland as a stream of honey.

"Yes, Sir; I have great confidence in your judgment, and I know that you are devoted to the interests of our family. My poor husband always esteemed you highly."

"Oh, Ma'am! you do me honor!"

"If I have not consulted you about our affairs of late, it is because I have had troubles which I did not wish to burden you with."

"We all have our troubles, Mrs. Kin-

loch. They are very sad to bear,—but profitable, nevertheless. But I'm sure you must be wonderfully supported in your trials; I never saw you looking better."

And truly, her thin and mobile lips were of a strangely bright coral, and her usually wan cheeks wore a delicate flush, lending her a beauty, not youthful, to be sure, but yet fascinating. One might desire to see an eye less intense and restless, but he would rarely see a woman of forty so charming.

"You notice my color," said Mrs. Kinloch, mournfully, and with a faint smile; "it's only the effect of a headache. I am far enough from well."

"Indeed!" was the sympathetic reply.

"I have met with a great loss, Mr. Clamp,—some papers of the greatest importance. I was going to consult you about them."

"In which I got ahead of you," thought he.

"Now, ever since the disappearance of Lucy, I have thought she had something to do with them. I never went to the secretary, but she was sure to be spying about. And I believe she knew about my affairs as well as I do myself."

"Or I," mentally ejaculated the lawyer,—meanwhile keeping as close as an oyster.

She continued,—*"As the girl was ignorant, and without any interest in the matter more than that of curiosity, I am puzzled to account for all this."*

"Tis strange, truly!"

"Yes, I'm sure she must be only the tool of some shrewder person."

"You alarm me! Who can it be?"

"Perhaps Mildred, or some one who is plotting for her. The Hardwicks, you know, expect she will marry Mark Davenport."

"Do they, indeed? Well, now, that's a shrewd conjecture. Then you think Lucy didn't drown herself?"

"She? By no means!"

"But what can I do in the matter, Mrs. Kinloch?"

"We must find Lucy, or else discover

her confidant,"—looking fixedly at him.

"Not very easy to do," said he, never once wincing under her scrutiny.

"Not easy for me. But those that hide can find. Nothing is beyond search, if one really tries."

During this cross-examination, Mr. Clamp's premeditated gallantry had been kept in the background; but he was determined not to let the present opportunity pass by; he therefore turned the current of conversation.

"You have not told me, Mrs. Kinloch, *what* the loss is; so I cannot judge of its importance. You don't wish to have any more repositories of secrets than are necessary; but I think you will readily see that our interests lie in the same direction. If the girl can be found and the papers recovered by anybody, I am the one to do it. If that is impossible, however, the next thing is to be prepared for what may happen; in either emergency, you can hardly do better than to accept my aid."

"Of course, I depend entirely upon you."

"We may as well understand each other," said the lawyer, forgetting the wily ways by which he had intended to approach her. "I have certain views, myself, which I think run parallel with yours; and if I am able to carry you and your property safely through these difficulties, I think you will not scruple to —"

"To pay you to your heart's content," she broke in, quickly. "No, I shall not scruple, unless you ask more than half the estate."

"I ask for nothing but yourself," said he, with sudden boldness.

"That is to say, you want the whole of it?"

"Charming woman! don't, pray, compel me to talk in this language of traffic. It is you I desire,—not the estate. If there is enough to make you more comfortable than would be possible with means, I shall be happy for your sake."

Her lips writhed and her eyes shot

fire. Should she breathe the scorn she felt, and brave the worst? Or should she temporize? Time might bring about a change, when she could safely send the mercenary suitor back to his dusty and cobwebbed office.

"We do understand each other," she said, slowly. "This is a matter to think of. I had never thought to marry again, and I cannot answer your delicate proposal now. Let me have a week to consider."

"Couldn't we arrange the matter just as well now? I beg your pardon, Ma'am, if I seem too bold."

"Oh, your youthful ardor and impetuosity! To be sure, one must forgive the impatience of a lover in his first passion! But you must wait, nevertheless."

Mr. Clamp laughed. It was a good joke, he thought.

"I must bid you good afternoon, Squire Clamp. I have made my headache worse by talking on a subject I was not prepared for."

So Mr. Clamp was bowed out. He did not clearly understand her quick and subtle movements, but he felt sure of his game in the end. The scornful irony that had played about him like electricity he had not felt.

When he was gone, the woman's worst enemy would have pitied her distress. She believed more than ever that Clamp had used Lucy to abstract her papers, and that he now would hold his power over her to bring about the hated marriage. Her firmness gave way; she sank on the sofa and wept like a child. Would that she might yet retreat! But no, the way is closed up behind her. She must go on to her destiny.

CHAPTER XIV.

MARK DAVENPORT was prosperous in all his undertakings. His position in the school did not give much scope to his ambition, but the salary he received was ample enough to pay his expenses, while the duties were not so onerous as to engross all his time. All his leisure was given

to literary pursuits. He had many times thought he would relinquish the drudgery of teaching, and support himself by his pen; but he remembered the maxim of Scott,—that literature was a good staff, but a poor crutch,—and he stuck to his school. As he grew into a practised writer, he became connected with the staff of a daily newspaper in the great city, furnishing leading articles when called upon, and he soon acquired a position of influence among his associates. He had maintained a correspondence with Mildred, and was looking forward to the time when he should make a visit to his native town, hoping then to be so well established in the world that he might be able to bring her back with him as his bride. Every thought centred in her. He coveted fame, wealth, position, only for her sake; and stimulated by this thought, he had made exertions that would have broken down a man less vigorous and less resolute.

He received a letter from Innisfield one day, after a long interval,—so long that he had become uneasy, and imagined every kind of evil as the cause of delay. He broke the seal; it was not from Mildred, but from his cousin Lizzie. These were the contents:—

"MY DEAR MARK,—I suppose you may have been anxious before this, at not hearing from us; but the truth is, we have not had anything very pleasant to write, and so have put off sending to you. Father is by no means well or strong. The lawsuit, which is now likely to go wrong, has troubled him very much. He has grown thin, he stoops as he walks about, and by night he coughs terribly. I rarely hear him sing as he used to. Then Squire Clamp has complained of him before the church, and you know father is over-sensitive about his relations with 'the brethren,'—even with those who are trying to ruin him. He is melancholy enough. I hope he will be better, if he gets through his difficulties; otherwise I am afraid to think of what may happen.

"You wonder, probably, at not getting a letter from Mildred. Don't be surprised when I tell you that she has left home and is staying at Mr. Alford's. Mrs. Kinloch has for a long time wanted her to marry that hateful Hugh Branning, and became so violent about it that Mildred was afraid of her. Lucy Ransom, who lived there, ran away a short time ago, very mysteriously. It seems that the girl had stolen something from the house, and, after Mildred had plumply refused to marry Hugh, Mrs. Kinloch charged upon her that she had induced Lucy to steal the papers or money, or whatever it was. Mrs. Kinloch acted so like an insane woman, that Mildred would not stay in the house, but ran over to Mr. Alford's, with only the clothes she wore. She passed by our house yesterday and told me this hurriedly. I have heard, too, that Squire Clamp is about to marry Mrs. Kinloch, and that he actually has procured the license. It's a very strange affair.

"To fill out the account of disagreeable things,—last evening, in one of the stores, people were talking of Lucy Ransom's fate, (as they have been for weeks,) when Will Fenton, the cripple, said, 'he guessed Hugh Branning could tell what had become of her, if he chose.' Hugh, it seems, heard of the remark, and to-day he went with a dandyish doctor, belonging to the navy, I believe, and beat the poor cripple with a horsewhip, most shamefully. I think this violence has turned suspicion against him.

"I am sorry not to have one pleasant thing to say, except that we all love you as warmly as ever, and hope to see you soon here. Indeed, Cousin Mark, I dread to write it,—but if you don't come soon, I think you will see father only on his last bed.

"Good-bye, dear Mark!

"Your Cousin,—LIZZIE."

We will waste no time in attempting to analyze Mark's conflicting emotions, but follow him to Innisfield, whither he went the same day. Great as was his desire to see his betrothed, from whom

he had received no letter for many weeks, he went first of all, where duty and affection called, to see the dear old man who had been to him more than a father.

Mr. Hardwick was sitting in the corner, but rose up with a new energy as he heard the well-known voice. Mark was not prepared, even by his cousin's foreboding letter, to see such a change as his uncle exhibited;—the hollow eyes, the wasted cheeks, the bent figure, the trembling hands, bore painful testimony to his enfeebled condition. He held both of Mark's hands in his, and, while his eyes were dim in a tear-mist, said, with a faltering voice, "Bless you, m-my boy! I'm glad to see you once more. I thought I might hear my s-summons before you'd come. You do remember your old uncle!"

Mark could not restrain himself, but wept outright. The old gentleman sank into his chair, still clasping Mark's hands. Neither could speak, but they looked towards each other an unutterable tenderness.

At length, controlling the tide of feeling, Mr. Hardwick said,—“D-don't be cast down, Mark; these tears are not b-bitter, but f-full of joy. Th-ther-e, now, go and kiss your sister and Lizzie.”

The girls appeared wiping their eyes, for they had left the room overpowered; they greeted Mark affectionately, and then all sat down about the hearth. Topics enough there were. Mark told of his pursuits and prospects. The village gossip about the lost servant-girl, (of whom Mark knew something, but had reasons for silence,) the approaching marriage of Mrs. Kinloch, and the exile of the heirless from her own home, were all discussed. After a reasonable time, Mark excused himself and went to Mr. Alford's, pondering much on the strange events that had perplexed the usually quiet village. He reached the house, after a brief walk, and was met by Aunt Mercy, the portly mistress, but with something less than her accustomed cordiality.

“Miss Kinloch is not able to see company,” she said, “and must be excused.”

Mark poured forth a torrent of ques-

tions, to which Mrs. Alford listened, her broad features softening visibly; and at length, with an apparent effort, she asked him "to come agin to-morrer or the day arter."

The more Mark reflected on Mrs. Alford's behavior, the more he was puzzled. Had Mildred denied him admission? His own betrothed refuse to see him! No, he was sure she was sick; and besides, she could not have heard of his coming. So he soothed himself. But the imps of suspicion and jealousy still haunted him at intervals, and a more miserable man than the usually buoyant and sanguine Mark it would be difficult to find.

The next day, as soon as breakfast was over, Mark, though trying to cheer up his uncle, was secretly longing for the hour when it would be proper to present himself at Mr. Alford's. But time does move, albeit with lagging pace to a lover, and in due season Mark was on his way. Near the house he met the farmer, who greeted him heartily, and wished him joy with a knowing smile. Mark took a freer breath; if there was any difficulty, Mr. Alford certainly did not know it. But then it occurred to him, that shy young ladies do not often make confidants of elderly husbandmen in long blue frocks, and his spirits fell again.

Mr. Alford leaned against a fence and threshed his hands to keep them warm, while he told Mark that "he had been with Mildred privately out to the Probate Court,—that the case had been stated to the jedge, who allowed, that, as she was above fourteen, she had a right to choose her own guardeen,—that he, Alford, was to be put in, in place of the Squire,—and that then, in his opinion, there would be an overhaulin' so's to hev things set to rights."

Mark shook the hand of his good friend warmly, and commended his shrewdness.

"But 'ta'n't best to stan' talkin' with an ol' feller like me," said the farmer, "when you can do so much better. Jest look!"

Mark turned his head, and through the window of the house saw the retreating figure of Mildred. He bounded across the yard, opened the door without knock-

ing, and rushed into the house. She had vanished: no one was visible but Mrs. Alford, who was cutting up golden pumpkins in long coils to dry.

"Come, Milly," said the good woman, "'ta'n't no use; he saw ye."

And Mildred appeared, coming slowly out of the buttery.

"Ye see, Mildred felt a little hurt about a letter; but I *knew* there was some mistake; so I wa'n't a-goin' to hev ye go off 'thout some explanation."

"A letter?—explanation?" said Mark, thoroughly bewildered.

"Here it is," said Mildred, taking a letter from her pocket, still looking down.

Mark hastily took and opened it. The envelope bore Mildred's address in a hand not unlike his own; the inclosure was a letter from Mildred to himself, which he now saw for the first time.

"Mildred," said he, holding out his hands, "could you doubt me?"

She covered her face with her apron, but stood irrelative. He looked again at the letter.

"Why, the clumsy trick, Mildred! This post-office stamp, 'New York,' is not genuine. Just look! it is a palpable cheat, an imitation made with a pen. The color did not spread, you see, as ink mixed with oil does. This letter never left this village. I never saw it before,—could not have seen it. Do you doubt me now, dear Mildred?"

Even if the evidence had been less convincing, the earnest, heartfelt tone, the pleading look and gesture, would have satisfied a much more exacting woman. She sprang towards her lover, and flung her arms about his neck. The pent-up feeling of days and weeks rushed over her like a flood, and the presence of Mrs. Alford was forgotten.

Mrs. Alford, it would seem, suddenly thought of something; for, gathering herself up, she walked off as fast as the laws of gravitation allowed, exclaiming,—
"There! I never did see! Sech hens! Allus a-flyin' into the kitchen. I wonder now who left that are door open."

The frightened cackle of the hens, the

rattling of pots and pans by the assiduous housewife in the kitchen, were unheeded by the lovers, "emparadised in one another's arms." The conversation took too wide a range and embraced too many trivial details to be set down here. Only this I may say: they both believed, (as every enamored couple believes,) that, though other people might cherish the properest affection for each other, yet no man or woman ever did or could experience such intense and all-pervading emotion as now throbbed in their breasts,—in fact, that they had been created to exemplify the passion, which, before, poets had only imagined. Simple children! they had only found out what hearts are made for!

CHAPTER XV.

THE last picture was a pleasant relief in a rather sombre story, therefore we prefer to commence a stormier scene in a new chapter. Mark and Mildred were sitting cozily by the ample fireplace,—not at opposite corners, you may believe,—when there was a warning *ahem!* at the door, and the sound of feet "a-raspin' on the scraper." Mr. Alford entered and said, "Milly, your step-mother's team is comin' up the road." In a moment there was a bustle in the house, but before any preparation could be made the carriage was at the gate, and Mrs. Kinloch, accompanied by Squire Clamp, knocked at the door.

"Milly, you go into the kitchen with Mrs. Alford," said the farmer. "I'll attend to matters for them."

"No, Mr. Alford," she answered; "you are very good, but I think I'll stay and see them. Shan't I, Mark?"

Mrs. Kinloch and the lawyer entered. She had left off her mourning, but looked as pale and thoughtful as ever. After the common courtesies, brief and cool in this case, Mrs. Kinloch made known her errand. She had been grieved that Mildred should have left her father's house and remained so long with strangers, and she had now come to beg her

to return home. Mildred replied, that she had not left home without cause, and that she had no intention of going back at present. Mrs. Kinloch looked hurt, and said that this unusual conduct, owing partly to the common and wicked prejudice against step-mothers, had wounded her sorely, and she hoped Mildred would do her the simple justice of returning to a mother who loved her, and would make every sacrifice for her happiness. Mildred said she did not wish to go over the ground again; she thought she understood the love that had been shown her; and she did not desire any further sacrifices, such as she had witnessed. The request was renewed in various forms, but to no purpose. Then Squire Clamp interposed with great solemnity, saying, that, if she had forgotten the respect and affection due to the mother who had fostered her, she ought to know that the law had conferred upon him, as her guardian, the authority of a father, and he begged her not to give him the pain of exercising the control which it would be his bounden duty to use.

Mr. Alford had been uneasy during this conversation, and broke in at the first pause.

"Well, Square, I guess you'd best wait till 'bout next week-a-Thursday afore you try to use your 'thority. Probate Court sets on Wednesday, an' I guess that'll 'bout wind up your business as guardian."

What a magazine of wrath that shot exploded! The lawyer was dumb for a moment, but presently he and Mrs. Kinloch both found breath for their indignation.

The woman turned first upon Mark. "This is your doing, Sir!"

"You do too much honor to my foresight," he replied. "I am heartily glad that my good friend here was thoughtful enough and ready to interfere for the protection of a fatherless girl."

"Insolence!" shouted the lawyer.

"The impertinent puppy!" chimed in the woman.

"Come, come!" said the farmer, "too loud talkin'!"

"Then you uphold this girl in her undutiful behavior, do you?" asked Mrs. Kinloch.

"You are amenable to the statutes, Sir," said the Squire.

Mr. Alford rose to his feet. "Now you might jest as well get inter yer ker-ridge an' drive back ter town," said he; "you won't make one o' them hairs o' yourn black or white, Square, not by talkin' all day."

The lawyer settled his wig in a foaming rage. "Come, Mrs. Clamp," said he, "we shall not remain here to be insulted. Let us go; I shall know how to protect our property, our authority, and honor, from the assault of adventurers and meddlers."

"I beg your pardon, Sir," said Mark, "but what was the appellation you gave to the lady just now? You can call us what you like."

"Mrs. Clamp, Sir," he answered, with a portentous emphasis,—"Mrs. Clamp,—united to me, Sir, this morning, by the Reverend Mr. Rook, in the holy bands of matrimony."

They swept out of the house. Mildred sank to her chair as if stunned. "O God!" she said, "*my* mother and father!"

"Poor gal!" said Mr. Alford, "small comfort you'll hev in sich parents. But cheer up; you won't need for friends."

She looked up through her tears at Mark's manly face, full now of sympathy, and blessed the farmer for his words.

Mr. Alford, taking Mark aside, said, "You know about Lucy's runnin' away, most likely. Wal, now, ef she could be found, there's no knowin' what might happen; for it's my opinion she knows about Square Kinloch's affairs. I thought mebbe you might 'a' seen her in York?"

Mark replied, that he did meet her in Broadway late one afternoon, and that she looked as if she would speak; but that he hurried on, for the flaunting style of her dress was not calculated to prepossess the passers-by.

"Good gracious! you don't say so! Seen her yourself? Now do you go right

back to York an' hunt her up,—no matter what it costs."

"But my uncle?"

"We'll look arter him."

It was speedily determined, and Mark set out the same day. Meanwhile, Mildred had promised to go and see Mr. Hardwick and endeavor to make him cheerful.

"It beats all," said Mr. Alford to his wife. "Now 'f he *should* find that unfortunate gal! Wal, wal, I begin to think the Lord does look arter things some, even in this world."

We leave Squire Clamp and his new wife to their happiness; it would not be well to lift the decent veil which drops over their household. The dark, perchance guilty, past,—the stormy present, and the retribution of the future,—let memory and conscience deal with them!

CHAPTER XVI.

NEVER was a little village in greater commotion than Innisfield after Mark's departure. The succession of events had been such as to engage the attention of the most indifferent. The mysterious exile of Mildred, the failing health and spirits of the blacksmith, the new rumors respecting the fate of Lucy, the sudden and unaccountable marriage of Mrs. Kinloch, and her fruitless attempt to bring her daughter back, were all discussed in every house, as well as in places of public resort. Hugh Branning was soon convinced that the village was no place for him. He had bravely horse-whipped a cripple, but he could not stop the tongues of the whole parish, even if he could protect himself from swift and extempore justice. He gathered his clothes, and, after a long private conference with his mother, started before daylight for the railway-station. As he does not appear on the stage again, we may say here, that, not long after, during a financial panic in New York, he made a fortune of nearly half a million dollars by speculating in stocks. He used to tell his friends in after years that he had

"only five thousand to begin with,—the sole property left him by his lamented parents." He has now a handsome mansion in the Fifth Avenue, is a conspicuous member of the Rev. Dr. Holdfast's church, and most zealous against the ill-timed discussions and philanthropic vagaries of the day. What would he not give to forget that slowly-moving figure, with swimming eyes, carrying a flaring candle? How far along the years that feeble light was thrown! He never went through the hall of his house at night without a shudder, dreading to catch a glimpse of that sorrowing face.

It was on Tuesday evening, the night preceding the Probate Court to which Squire Clamp had been cited. Nothing had been heard from Mark, and his friends were much depressed. Mildred sat by Mr. Hardwick's bedside, during the long hours, and read to him from his favorite authors. About ten o'clock, just as the family were preparing to go to bed, Mark drove up to the door. He was warmly welcomed, and at once overwhelmed with questions. "Did he find Lucy?" "What did she know?" "Why did she secrete herself?" To all these Mark merely replied, "I found Lucy; how much I have accomplished I dare not say. But do you, James, come with me. We will go up to old Mrs. Ransom's."

"Why, she's not there; she's gone to the poor-house."

"Broken down with old age and sorrow, I suppose. But I don't care to see her now. Let us go to the old house; and meantime, you girls, go to bed."

But they protested they should wait till he returned,—that they could not sleep a wink until they knew the result.

Provided with a lantern, the young men set out. They found the hovel nearly in ruins; for pilferers had taken such pieces as they could strip off for firewood. Mark eagerly ripped up the floor near the hearth. At the first flash of the light he saw a paper, dusty and discolored. He seized and opened it. *It was the will of Mr. Kinloch, duly signed and attested.* Lucy had not deceived him.

With hurried pace they returned to the village, scarcely stopping to take breath until they reached Mr. Hardwick's house. It was no vain hope, then! It was true! The schemes of the step-mother would be frustrated. The odious control of Squire Clamp would end. Mark began to read the will, then stopped, embraced his cousins and Mildred by turns, then read again. He was beside himself with joy.

All were too much excited to sleep; and when the first transports of surprise were over, they naturally inquired after the unfortunate girl. He had found her, after great difficulty, in a miserable garret. The surmises of the villagers were correct. She was ruined, heart-broken. Dissipation, exposure, and all the frightful influences of her wretched life had brought on a fever, and now, destitute and forsaken, she was left by those who had made merchandise of her beauty, to die. He learned from Lucy what she knew of the affair of the will. She became satisfied, soon after Mr. Kinloch's death, that some wrong was intended, and she watched her mistress. Then Squire Clamp had induced her by threats and bribes to get for him the papers. As she took them out of the desk, one, larger than the rest, and with several seals, attracted her attention. She felt quite sure it was Mr. Kinloch's will; so she secreted it and gave the lawyer the rest. The Monday afternoon following, she took the will to her grandmother's and put it under a plank in the floor. Squire Clamp, strangely enough, chanced to stop just as she had hidden it. He gave her back the papers, as she supposed, and she replaced them in the secretary. On her way home she fell in with Hugh,—a day neither of them would ever forget.

The lawyer, who had counted on an easy victory over Mr. Alford, was greatly surprised, the next day, to see him accompanied by Mark, as he came into court; he had not heard of the young man's return. Besides, their unmistakable air of confidence and exultation caused him, some misgivings. But he was boldness itself, compared with his wife. Her face

was bloodless, her hands tremulous, and her expression like that of one ready to faint. Imagine the horror with which she saw the production of the will, and then the proof by the only surviving witness, brought to court from his residence in a neighboring town! The letters of administration were revoked, and Mr. Alford, one of the executors, was appointed Mildred's guardian. Completely baffled, dumb and despairing, Squire Clamp and his bride left the room and drove homeward. A pleasant topic for conversation they had by the way, each accusing the other of duplicity, treachery, and folly! The will provided that she should receive an annuity of one thousand dollars *during her widowhood*; so that the Squire, by wedding her, had a new incumbrance without any addition to his resources; a bad bargain, decidedly, he thought. She, on the other hand, had thrown away her sure dependence, in the hope of retaining the control of the whole estate; for when she consented to marry Clamp, she had no doubt that he had possession of the will and would, of course, keep it concealed. Seldom it is that *both* parties to a transaction are so overreached.

The successful party stopped at Mr. Hardwick's that evening to exchange congratulations. He, as well as Mildred and Mark, was interested in the lost will; for Mr. Kinloch had mentioned the fact of the unsettled boundary-line, and directed his executors to make a clear title of the disputed tract to the blacksmith. The shop was his; the boys, at all events, would be undisturbed. One provision in the will greatly excited Mark's curiosity. The notes which he owed to the estate were to be cancelled, and there was an unexplained reference to his uncle Hardwick and to some occurrences of long ago. Mildred at once recalled to mind her father's dying words,—his calling for Mr. Hardwick, and his mention of the cabinet. She had often thought of her search in its drawers, and of her finding the lock of sunny hair and the dried flower. And the blacksmith now, when asked, shook

his head mournfully, and said, (as he had before,) "Sus-some time; nun-not now!"

CHAPTER XVII.

THE next day Mr. Alford came to town and advised Mark to marry forthwith.

"I've ben thinkin' it over," he said, "and I b'lieve it's the best thing to be done. You've got a tough customer to deal with, and it may be some trouble to git all the property out of his hands. But when the heiress is married, her husband can act for her to better advantage. I guess I'll speak to Mr. Rook and have the 'fair 'tended to right away."

Mark submitted the matter to Mildred, who blushed properly, and thought it rather hasty. But Mr. Alford's clear reasoning prevailed, and the time was appointed at once. Mark and Mr. Alford then went to call upon the lawyer. They entered his office without knocking, and by chance found him busy with the accounts and papers; they were scattered over the table, and he was making computations. As soon as he was aware of the presence of visitors, he made an effort to slide the documents under some loose sheets of paper; but Mark knew the bold hand at once, and without a word seized the papers and handed them to Mr. Alford.

"Not very p'lite, Square, I know," said Mr. Alford, "but possession is nine p'ints of the law, as I've heerd you say; and as you won't deny the handwritin', I s'pose you don't question my right to these 'ere."

The rage of Mr. Clamp may be imagined.

"Good mornin', Square," said the triumphant executor. "When we've looked over these affairs, we'll trouble you and the widder that was, to 'count for what the schedool calls for."

The simple preparations for the wedding were soon made, and the honest, great-hearted farmer had the pleasure of giving away the bride. It was a joyful, but not a merry wedding; both had passed through too many trials, and had

too many recollections. And the evident decline of Mr. Hardwick made Mark sad and apprehensive. But he devoutly thanked God, as he clasped his bride to his bosom, for the providence that had brought to him the fulfilment of his dearest hopes.

Here we might stop, according to ancient custom, leaving our hero and heroine to their happiness. But though a wedding is always an event of interest, there are other things to be narrated before we have done with our story.

Not long after, Mark called at the Kinloch house, then occupied by Mr. Clamp; as a measure of precaution, he took Mr. Alford with him. Mildred had never regained her wardrobe; everything that was dear to her was still in her step-mother's keeping,—her father's picture, her own mother's miniature, the silver cup she had used from infancy, and all the elegant and tasteful articles that had accumulated in a house in which no wish was left ungratified. Ever since the session of the Probate Court, the house had been shut to visitors, if any there had been. Mrs. Clamp had not been seen once out of doors. But after waiting a time, Mark and his friend were admitted. As they entered the house, the bare aspect of the rooms confirmed the rumors which Mark had heard. Mrs. Clamp received them with a kind of sullen civility, and, upon hearing the errand, replied,—

"Certainly, Mrs. Davenport can have her clothes. She need not have sent more than one man to get them. Is that all?"

"Not quite," said Mark. "Perhaps you are not aware of the change which the discovery of the will may make in your circumstances. I do not speak of the punishment which the fraud merits, but of the rights which are now vested in me. First, I am desired to ask after the plate, jewels, furs, and wardrobe of the first Mrs. Kinloch."

Mrs. Clamp was silent. A word let fall by Lucy suddenly flashed into Mark's mind, and he intimated to the haughty

woman his purpose to go into the east front-chamber.

"Fine gentlemen," she said at length, "to pry into a lady's private apartment! You will not dare enter it without my permission!"

And she stood defiantly in the doorway. But, without parley, Mark and Mr. Alford pushed by her and walked up the staircase, not heeding the shout of Mr. Clamp, who had followed them to the house.

"It might seem mean," said Mark to Mr. Alford; "but I think you'll agree presently, that it wasn't a case for ceremony."

He stripped the clothes from the bed. The pillows were stuffed with valuable furs; fine linen and embroideries filled the bolsters. The feather-sack contained dresses of rich and costly fabrics,—the styles showing them to be at least twenty years old. And in the mattress were stowed away the dinner and tea services of silver, together with porcelain, crystal, and Bohemian ware.

"What a deal o' comfort a body could take in sleepin' on a bed stuffed like this 'ere!" said Mr. Alford; "I sh'd think he'd dream of the 'Rabian Nights.'"

"After this, Madam," said Mark, upon returning to the hall, "you can hardly expect any special lenity from me. The will allowed you an annuity of one thousand dollars while you remained single; since you are married your interest ceases, but you shall receive two hundred a year. The house, however, belongs to my wife. Your husband there has a home to which you can go."

"Yes," said the lawyer, "he *has* a home, and won't be beholden to any man for a roof to shelter his family."

The pride of the woman was still unbent. Though her cheek was blanched and her lips were bitten blue, still she stood erect and her head turned queenly as ever. The glance she threw to the man who called her wife was enough to have pierced him. Turning to Mark, she said,—

"If you will come to-morrow,—or

Monday, rather,—you can have possession of the house and property. My own things can be easily removed, and it will be a simple matter to make ready for new comers.”

“I could keep them out of it a year, if I chose,” said Mr. Clamp.

“But I do not choose,” said she, with superb haughtiness.

“Wal, good mornin’,” said Mr. Alford.

As they left the house, Mrs. Clamp sat down in the silent room. Without, the wind whistled through the naked trees and whirled up spiral columns of leaves; the river below was cased in ice; the passers-by looked pinched with cold, and cast hurried glances over their shoulders at the ill-fated house and the adjacent burying-ground. Within, the commotion, the chill, the hurry, the fright, were even more intense. What now remained to be done? Her son, vanquished in love by a blacksmith’s *protégé*, had fled, and left her to meet her fate alone. The will had been discovered, and, as if by a special interposition of Providence, the victim of her son’s passions had been the instrument of vengeance. The lawyer who had worked upon her fears had proved unable to protect her. The estate was out of her hands; the property with which she had hoped to escape from the hated town and join her son was seized; she was a ruined, disgraced woman. She had faced the battery of curious eyes, as she walked with the husband she despised to the Sunday services; but what screen had she now that her pride was humbled? The fearful struggle in the mind of the lonely woman in the chill and silent room, who shall describe it? She denied admission to the servants and her husband, and through the long evening still sat by the darkening window, far into the dim and gusty night.

Squire Clamp went to bed moody, if not enraged; but when, on waking, he found his wife still absent, he became alarmed. Early in the morning he tracked her through a light snow, that had sifted down during the night, to the river-bank, at the bend where the cur-

rent keeps the ice from closing over. An hour after, some neighbors, hastily summoned, made a search at the dam. One of them, crossing the flume by Mr. Hardwick’s shop, broke the newly-formed ice and there found the drifting body of Mrs. Clamp. Her right hand, stretched out stiff, was thrust against the floats of the water-wheel, as if, even in death, she remembered her hate against the family whose fortune had risen upon her overthrow!

CHAPTER XVIII.

MARK and Mr. Alford, after their disagreeable interview with the Clamps, went to see Mr. Hardwick, whom they wished to congratulate. At the door they were met by Lizzie, whose sad face said, “Hush!” Mark’s spirits fell instantly. “Is he worse?” he asked. A tear was the only answer. He asked Mr. Alford to go for Mildred. “She has just come,” said Lizzie.

They found Mr. Hardwick propped up in bed, whence he could look out of the window. The church-spire rose on the one hand, and on the other the chimney of the shop was seen above the trees on the river-bank. By night the column of sparks had gladdened his eye, as he thought of the cheerful industry of his sons. Mark tenderly pressed his uncle’s hand, and leaned over him with an affectionate, sorrowing interest.

“Der-don’t take it to heart, my boy,” said Mr. Hardwick. “I am very h-happy.”

“I am glad that the boys won’t lose the shop,” said Mark. “I see you are looking out to the chimney.”

“Yer-yes, it was thoughtful of Mr. Kinloch, and a special Pr-Providence that the will was found.”

“You know he mentioned his claim against me,” said Mark; “that is paid, and it doesn’t matter; but I can’t guess the reason for the unusual kindness he has shown towards me.”

The old man answered slowly, for his breathing was difficult and often painful.

"It is an old story,—old as the dried f-flowers that Mildred told me of,—but it had a f-fragrance once. Yer-your mother, Mark, was as per-pretty a girl as you'd often see. Walter Kinloch ler-loved her, and she him. He sailed to the Indies, an' some der-diff'culty happened, so that the letters stopped. I d-don't know how 'twas. But arter a while sh-she married your father. Mr. Kinloch, he m-married, too; but I guess he nun-never forgot the girl of his choice."

Mark grasped his young wife's hand, at this tale of years gone by.

"The lock of hair and the rose were your mother's, then!" she whispered. "Dear father! faithful, even in death, to his friends, and to the memory of his first love! How much suffering and crime would have been prevented, if he could only have uttered the words which his heart prompted!"

"God forgive the woman!" said Mr. Hardwick, solemnly. None knew then how much she had need of forgiveness, standing as she was on the brink of that last fatal plunge!

Mr. Alford suggested that the fatigue of talking would wear upon the enfeebled man, and advised that he should be left to get some rest, if possible.

"To-morrow is S-Sabba'-day, ef I've counted right," said Mr. Hardwick. "I sh-should like to see the sun on the st-heeple once more."

"Dear uncle, I hope you may see it a great many times. We must leave you to rest."

"Good-night, mum-my children," he replied. "God b-bless you all! Let me put my hands on your h-heads."

They knelt by his bedside, and he blessed them fervently. Mr. Alford and Lizzie remained to attend upon him, and the others withdrew.

The night passed, how wearily! None could sleep, for through all the air there was a presage of sorrow, a solemn "tingling silentness," to which their senses were painfully alive. Who, that has passed the interminable gloomy hours that preceded the departure of a loved and venerated

friend into the world of spirits, does not remember this unutterable suspense, this fruitless struggle with eternal decrees, this clinging of affection to the parting soul? What a sinking of the heart even the recollection of such a scene produces!

The day dawned upon sleepless, tear-stained eyes. The dying man was conscious, cheerful, and calmly breathing. In the adjoining room the family sat beside the table on which was spread their untasted breakfast.

The bell began to ring for meeting. Mr. Hardwick roused up at the sound, and called for his children. He blessed them again, and placed his hands on their bowed heads in turn. He thought of the psalms which he had so often led, and he asked all to join in singing Billings's "Jordan."

"There is a land of pure delight,
Where saints immortal reign;
Infinite day excludes the night,
And pleasures banish pain."

With faltering voices they sang the triumphal hymn. The old man's eyes were fixed upon the steeple, which pointed upward through the clear air, and shone in the golden light of the sun. He kept time with a feeble movement, and once or twice essayed to raise his own wavering voice. A smile of heavenly beauty played over his pallid features as the music ceased,—a radiance like that crimson glow which covers the mountain-top at dawn. He spoke almost inaudibly, as if in a trance; then repeating with a musical flow the words of his favorite author,

"Where the bright seraphim in burning row
Their loud uplifted angel-trumpets blow,
And the cherubic host in thousand choirs
Touch their immortal harps of golden wires,
With those just spirits that wear victorious palms
Hymns devout and holy psalms
Singing everlastingly,"—

his voice sank again, though it was easy to see that a prayer trembled on his lips. As a strain of music fades into silence, his tones fell away, fainter and fainter; and with the same seraphic light on his countenance his breathing ceased.

THE BIRTH-MARK.

A. D. 12—.

SEE, here it is, upon my breast,—
The bloody image of a hand!
On her white bosom it was pressed
Who should have nursed—you understand;—
I never yet have named her name,
Nor will I, till 'tis free from shame.

The good old crone that tended me
Through sickly childhood, lonely youth,
Told me the story: so, you see,
I know it is God's sacred truth,
That holy lips and holy hands
In secrecy had blessed the bands.

And well he knew it, too,—the accursed!—
To whom my grandsire gave his child
With dying breath;—for from the first
He saw, and tried to snare the wild
And frightened love that thought to rest
Its wings upon my father's breast.

You may have seen him riding by,—
This same Count Bernard, stern and cold;
You know, then, how his creeping eye
One's very soul in charm will hold.
Snow-locks he wears, and gracious art;
But hell is whiter than his heart.

Well, as I said, the secret rite
Had joined them, and the two were one;
And so it chanced, one summer night,
When the half-moon had set, and none
But faint star-shadows on the grass
Lay watching for his feet to pass,

Led by the waiting light that gleamed
From out one chamber-window, came
The husband-lover;—soon they dreamed,—
Her lips still murmuring his name
In sleep,—while, as to guard her, fell
His arm across her bosom's swell.

The low wind shook the darkened pane,
The far clock chimed along the hall,
There came a moment's gust of rain,
The swallow chirped a single call

From his eaves'-nest, the elm-bough swayed
Moaning ;—they slumbered unafraid.

Without a creak the chamber-door
Crept open !—with a cat-like tread,
Shading his lamp with hand that bore
A dagger, came beside their bed
The Count. His hair was tinged with gray :
Gold locks brown-mixed before him lay.

A thrust,—a groan,—a fearful scream,
As from the peace of love's sweet rest
She starts !—O God ! what horrid dream
Swells her bound eyeballs ? From her breast
Fall off the garments of the night,—
A red hand strikes her bosom's white !

She knew no more that passed ; her ear
Caught not the hurried cries,—the rush
Of the scared household,—nor could hear
The voice that broke the after-hush :—
“ There with her paramour she lay !
He lies here !—carry her away ! ”

The evening after I was born
No roses on the bier were spread,
As when for maids or mothers mourn
Pure-hearted ones who love the dead ;
They buried her, so young, so fair,
With hasty hands and scarce a prayer.

Count Bernard gained the lands, while I,
Cast forth, forgotten, thus have grown
To manhood ; for I could not die—
I cannot die—till I atone
For her great shame ; and so you see
I track him, and he flies from me.

And one day soon my hand I'll lay
Upon his arm, with lighter touch
Than ladies use when in their play
They tap you with their fans ; yet such
A thrill will freeze his every limb
As if the dead were clutching him !

I think that it would make you smile
To see him kneel and hear him plead,—
I leaning on my sword the while,
With a half-laugh, to watch his need :—
At last my good blade finds his heart,
And then this red stain will depart.

RAMBLES IN AQUIDNECK.

I.

NEWPORT BEACH.

NEWPORT has many beaches, each bearing a distinctive appellation. To the one of which we are speaking rightfully belongs the name of Easton; but it is more widely known by that of the town itself, and still more familiarly to the residents as "The Beach." It lies east of the city, a mile from the harbor, and is about half a mile in length. Its form is that of the new moon, the horns pointing southward.

Let us go there now. No better time could be chosen by the naturalist, for the tide will be at its lowest ebb. Descending Bath Road, the beautiful crescent lies before us on the right,—Easton's Pond, with its back-ground of farms, upon the left. There is no wind to-day to break the surface of the standing water, and it gives back the dwarf willows upon its banks and the houses on the hill-side with more than Daguerrian fidelity. The broad ocean lies rocking in the sunshine, not as one a-weary, but resting at his master's bidding, waiting to begin anew the work he loves. In the horizon, the ships, motionless in the calm, spread all sail to catch the expected breeze. The waves idly chase each other to the shore, in childish strife to kiss first the mother Earth.

Turning the sea-wall and crossing a bit of shingle on the right, we stand upon the western extremity of the beach.

At our feet, a smooth, globular object, of the size of a crab-apple, is lying half-buried in the sand. Taking it in your hand, you find it to be a univalve shell, the inhabitant of which is concealed behind a closely-fitting door, resembling a flake of undissolved glue.

It is a Natica. Place it gently in this pool and watch for a few moments. Slowly and cautiously the horny operculum is pushed out, turned back, and hid-

den beneath a thick fleshy mantle, which spreads over half the shell. Two long tentacles appear upon its front, like the horns of an ox, and it begins to glide along upon its one huge foot.

Had you seen it, thus at first, you could not have believed it possible for so bulky a body to be retracted into so small a shell. Lift it into the air, and a stream of water pours forth as it contracts.

Two kinds are common here, one of which has a more conical spire than the other. The animals differ somewhat in other points, but both have a cream-colored base, and a mantle of pale cream clouded with purple. You may get them from half an inch to three inches in diameter. Take them home and domesticate them, and you will see surprising things.

I kept one of middling size for many months. During two or three weeks I wondered how he lived, for he was never seen to eat. He used to climb to the top of the tank and slide down the slippery glass as though it were a *montagne russe*. Then he would wander about upon the bottom, ploughing deep furrows in the sand, and end by burrowing beneath it. There he would stay whole days, entirely out of sight.

One morning I found him on his back, his body bent upward, with the edge of the base turned in all round towards the centre. Did you ever see an apple-dumpling before it was boiled, just as the cook was pinching the dough together? Yes? Then you may imagine the appearance of my Natica; but no greening pared and cored lay within that puckered wrapper.

Two days passed with no visible change; but on the third day the strange gasteropod unfolded both himself and the mystery. From his long embrace fell the shell of a Mactra, nearly as broad as his own. Near the hinge was a smooth, round hole, through which the poor Clam

had been sucked. Foot, stomach, siphon, muscles, all but a thin strip of mantle, were gone. The problem of the Natica's existence was solved, and the verification was found in more than one *Buccinum* minus the animal,—the number of the latter victims being still an unknown quantity.

Not in sport had Natty driven the plough, not in idleness had he hollowed the sand. He sought his food in the furrow, and dug riches in the mine.

Doubtless he killed the bivalve,—for until the time of its disappearance it had been in full vigor,—but with what weapon? And whereabouts in that soft bundle was hidden the wimble which bored the hole?

A few days after, a Crab, of the size of a dime, died. Nat soon learned the fact, and enveloped the crustacean as he had done the mollusk. Thirty hours sufficed to drill through the Crab's foundation-wall, and to abstract the unguarded treasure.

Every week some rifled *Trivittatum* tells a new tale of his felonious deeds.

His last feat was worthy of a cannibal, for it was the savage act of devouring a fellow-Natica. You might suppose that in this case the trap-like operculum would afford an easy entrance to one familiar with its use; but, true to his secret system, the burglar broke in as before. How did he do this? Did he abrade the stone-work with flinty sand until a hole was worn? Did he apply an acid to the limy wall until it opened before him? Who can find the tools of the cunning workman, or the laboratory where his corrodents are composed?

Some rods farther south, the shore is covered with smooth stones, and there you may find the Limpet in great numbers. *Patella* is the Latin name, but children call it Tent-Shell. Oval at the base, it slopes upward to a point a little aside from the centre.

In this locality they are small, seldom more than an inch in length. At first, you will not readily distinguish them,

they are so nearly of the color of the stones to which they are attached. This is one of those Providential adjustments by which the weak are rendered as secure as the strong. Slow in their movements, without offensive weapons, their form and their coloring are their two great safeguards. The stones to which they adhere are variegated with brown and purple blotches of incipient Coraline, and the shells are beautifully mottled with every shade of those colors. Some are lilac, heightening nearly to crimson; others are dark chocolate and white, sharply checkered.

Pebbles and *Patellæ* alike are half-covered with *Confervæ*, and from the top of the latter, fronds of *Ulva* are often found floating like flags. I have one with a clump of *Corallina* rising from its apex, like a coppice on the summit of a hill.

By atmospheric pressure, its union with the stone is so close that it is not easy to pull it away without injury; but if you slip it along, until by some slight inequality air is admitted beneath the hitherto exhausted receiver, the little pneumatician is obliged to yield.

When turned upon its back, or resting against glass, the soft arms, sprawling aimlessly about, and the bare, round head, give it the appearance of an infant in a cradle, so that a tank well stocked with them might be taken for a Lilliputian foundling-hospital.

They are as innocent as they look, being vegetable-feeders, and finding most of their sustenance in matters suspended in the water. A friend of mine placed several upon the side of a vessel coated with *Confervæ*. In a few days, each industrious laborer had mowed round him a circular space several times larger than himself.

They are not ambulatory, but remain on one spot for successive weeks, perhaps longer.

Sometimes they raise the shell so as to allow a free circulation beneath; but if some predatory Prawn draw near, the tent is lowered in a twinkling, so as

effectually to shut out the submarine Tartar.

Tread warily, or you will trip upon the slimy *Fucus* that fringes the seaward side of every rock. This is one of the few *Algæ* that grow here in luxuriance. The slate has not the deep fissures necessary to afford shelter to the more delicate kinds; and the heavy swell of the sea drags them from their slight moorings. Therefore, though *Ulva*, *Chondrus*, *Cladophora*, *Enteromorpha*, and as many more, are within our reach, we will not stop to gather them; for Newport has other shores, where we can get them in full perfection.

We will take some tufts of *Corallina*, however, for that is temptingly fine. What a curious plant it is! Its root, a mere crustaceous disk, and its fronds, depositing shelly matter upon their surface, bear so strong a resemblance to the true Corals, that, until recently, naturalists have thought it a zoöphyte.

Here the plants are of a dull brick-red; but in less exposed situations they are purple. If you wish them to live and increase, you must chip off a bit of the rock on which they are growing. With a chisel, or even a knife, you can do it without difficulty, for the soft slate scales and crumbles under a slight blow.

For an herbarium, it ought to be gummed at once to the paper, for it becomes so brittle, in drying, that it falls to pieces with the most careful handling. In the air and light it fades white, but the elegance of its pinnate branches will well repay any pains you may bestow upon it.

If you have a lingering belief in its animal nature, steeping it in acid will cause the carbonate of lime and your credulity to disappear together, leaving the vegetable tissue clearly revealed.

Between low-water and the Cliff are hundreds of pools rich in vegetable and animal life. Look at this one: it is a lakelet of exquisite beauty. Bordered with the olive-colored Rock-Weed, fronds of purple and green Laver rise from its limpid depths. Amphipods of varied

hue emerge from the clustering weeds, cleave the clear water with easy swiftness, and hide beneath the opposite bank. Here a graceful Annelid describes Hogarth's line of beauty upon the sandy bottom. There another glides over, the surface with sinuous course, rowed by more oars than a Venetian galley, more brilliant in its iridescence than the barge of Cleopatra, albeit

"The poop was beaten gold,
Purple the sails."

We loiter here, forgetful that we are only at the first end of the bow along whose curve we propose to walk. Let us go on. The firm sand affords pleasanter footing than the slippery stones we leave behind us, but it seems bare of promise to the curiosity-hunter. Nevertheless we will hunt, and quite at variance with my experience will it be, if we return empty-handed.

Here is something already. Dark-colored, horny, flat, oblong, each corner furnished with a wiry, thorn-like projection;—what is it? A child tells you it is a Mermaid's Purse, and, giving the empty bag a shake, you straightway conclude that the maids of the sea know "hard times," as well as those of the land. But the Purse is, not always so light. Sometimes it is found to contain a most precious deposit, the egg which is to produce a future fish.

These egg-cases belong to different members of the Ray family. I saw one last winter, in which the inmate was fully developed. Should some old seaman hear me, he might say that I am telling a "fish-story" in good earnest. He might inform you furthermore, that the object in question is "but a pod of sea-weed, and that he has seen hundreds of them in the Gulf Stream." I cannot help it, neither do I question his veracity. Notwithstanding, these two eyes of mine, in sound condition, awake, and in broad day, did see the supposed pericarp, with one side taken off, and did behold, lying within, as veritable a Raia as ever was caught upon the New-England coast. Moreover, its countenance was no more

classical, in its minuteness, than that of its most ancient ancestor in its hugeness.

Observe those bubbles trembling upon the edge of the wave. One is left by the receding tide, and a nearer view shows it to be a jelly-like globe, clearer than the crystal of Merlin. Dropped softly into a vessel of water, at first it lies quiescent and almost invisible upon the bottom. A moment after, it rises in quick undulations, flashing prismatic tints with every motion. Again it rests, and we see that it is banded by eight meridians, composed of square, overlapping plates. It swims, and the plates become paddles, propelling the frail craft,—prisms, dividing the sunbeams into rainbow hues. Suddenly two lines of gossamer are dropped from unseen openings in its sides, and trailed behind it as it goes. Twisting, lengthening, shortening, they are drawn back and re-coiled within, and

"The ethereal substance closed,

Not long divisible."

This delicate wonder is the *Cydippe*. Though among the most charming of marine creatures, none is more liable to be overlooked, owing to its extreme subtlety. So unsubstantial and shadowy are they, that a lady, on seeing them for the first time, declared them to be "the ghosts of gooseberries." Indeed, you will find them ghost-like, if you attempt to keep them, for they

"Shrink in haste away

And vanish from our sight."

The whole high-water line is strewn with the blanched and parted valves of the Beach Clam. Here and there yellowish streaks appear upon the gray sand, formed by the detritus of submarine shells. Among the fragments are often found perfect specimens, some of them with the living animal.

We can examine them as we go back, but now let us cross the "Creek." It is a creek only by courtesy or an Americanism, at the present day; but when those miles of fertile fields upon the north were unreclaimed, the dank herbage hindered evaporation, and Easton's Pond was fed by unfauling streams. Then the vast

body of overflowing water swept a deep channel, which the sea, rolling far up towards the pond, widened and made permanent. Boats came from ships in the offing, and followed its course to "Green End," with no fear of grounding; and traditionary pirates there bestowed in secret caves their ill-gotten gains.

Now, the Creek is a mere streamlet, and the flow of the tide is restricted to its mouth. With our rubbers we may ford it dry-shod; but if you choose to cross the bridge, we must wade through shifting sand, and our walk will be the longer. In midsummer the bed is dry, and almost obliterated by the drift. On the approach of autumnal rains, the farmers plough a passage for the water, to prevent their lands from being submerged.

On the east side, masses of conglomerate rock are strewn in wild confusion. By the action of untold ages the connecting cement is worn away from between the pebbles, leaving them prominent; and wherever the attrition of the sea has loosened one from its bed, the hollow has become the habitation of *Mollusca* and *Algæ*.

Beyond that ponderous boulder are many dark recesses among the overlying stones. Strip back your sleeve, thrust in your hand, and grope carefully about. In this way I once grasped a prickly thing that startled me. Drawing it to light, it proved to be an *Echinus*, *Sea-Urchin*, or *Sea-Egg*. That one was not larger than a walnut, was shaped like a *brioche*, and resembled a chestnut-burr. Its color was a delicate green, verging to brown.

Much larger living *Echini* are found on this spot. There is a shell now, more than two inches in diameter. It is wholly covered with spines half an inch in length. Radiating from a common centre, flexible at the base, they stand erect at right angles with the shell when the Urchin is in health; but in disease or death order is lost, and they lie across each other in great confusion. Their connection with the shell is very remarkable, for it is by a ball-and-socket joint,—

the same articulation which gives the human hip its marvellous liberty of action. Between them are five rows of minute holes, and, in life, a transparent, hair-like foot is protruded from each, at the pleasure of the owner. When disposed to change its situation, it stretches forth those on the side towards which it would go, fixes them by means of the sucker at the tip of each, and, simultaneously withdrawing those in the rear, pulls itself along.

The mouth, placed in the centre of the base, is very large in proportion to the size of the animal. It is formed of five shelly, wedge-shaped pieces, each ending in a hard, triangular tooth. The whole mouth is a conical box, called by naturalists "Aristotle's lantern."

The shell is hardly thicker than that of a hen's egg, and is even more fragile. When the spines are rubbed off, the brioche-like shape is modified, and in place of the depression in the middle of the upper side there is seen a slight prominence.

Mine was a very inoffensive creature. He occupied the same corner for many weeks, and changed his place only when a different arrangement of stones was made. He then wandered to a remote part of the tank and chose a new abode. Both retreats were on the shady side of a stone overhung with plants. There for months he quietly kept house, only going up and down his hand-breadth of room once or twice a day. Minding his own business without hurt to his neighbor, he dwelt in unambitious tranquillity. Had he not fallen a victim to the most cruel maltreatment, he might still adorn his humble station.

As he was sitting one evening at the door of his house, bending about his lithe arms in the way he was wont, two itinerant Sticklebacks chanced to pass that way. They paused, and, not seeing the necessity for organs of which they had never known the use, they at once decided on their removal.

In vain did the poor Hedgehog oppose them. With all the pertinacity of igno-

rance, they maintained their certainty of his abnormal condition; and with all the officiousness of quackery, they insisted upon immediate amputation. Aided by two volunteer assistants, the self-made surgeons cut off limb after limb before their reckless butchery could be stopped.

At last I effected their dismissal. But their pitiable patient was too far reduced for recovery. His exhausted system never rallied from the shock, and he survived but a few days.

Alas! alas! that so exemplary a member of the community should have perished through piscine empiricism!

How many things you have collected! Your well-filled basket attests your industry and zeal, and suggests the fruitful question of the novelist, "What will you do with it?" Will you throw its contents on the sand, and go away satisfied with these imperfect glimpses of sea-life? Will you take them home indeed, but consign them to a crowded bowl, to die like the prisoners in the Black Hole of Calcutta? Or will you give to each a roomy basin with water, and plants to keep it pure?

This were well; and you could thus study their structure at leisure, but not their habits. To know the character of an individual, you must watch him among his fellows; you must observe his bearing to the small; you must see how he demeans himself in presence of the great. To do this, the surroundings must be such that none shall be conscious of restraint, but that every one, with homely ease, may act out his own peculiar nature. In short, you must make ready for them another Atlantic, in all things but breadth like its grand prototype.

Nor is this a difficult undertaking. By following the advice of some experienced person, you may avoid all those failures which are apt to attend the experiments of a tyro. I will direct you to our pioneer in aquarian science, Mr. Charles E. Hammett. He can furnish you with all you want, give you most efficient aid, and add thereto a great amount of practical information.

You need have no fears for the population of your colony; for in our future walks we shall meet new objects of beauty and interest, and in such variety and abundance that your only embarrassment will be which to choose.

And now the ramble of to-day is ended. The "punctual sea" has risen, and, waking his dreaming waves, he gives to them their several tasks. Some, with gentle touch, lave the heated rock;

these, swift of foot, bring drink to the thirsty sand; those carry refreshing coolness to the tepid pool. Charged with blessings come they all, and, singing 'mid their joyous labor, they join in a chorus of praise to their God and our God; while, from each of our hearts goes up the ready response, "Thou, Lord, hast made me glad through thy works, and I will rejoice in giving praise for the operations of thy hands!"

ANN POTTER'S LESSON.

My sister Mary Jane is older than I,—as much as four years. Father died when we were both small, and didn't leave us much means beside the farm. Mother was rather a weakly woman; she didn't feel as though she could farm it for a living. It's hard work enough for a man to get clothes and victuals off a farm in West Connecticut; it's up-hill work always; and then a man can turn to, himself, to ploughin' and mowin';—but a woman a'n't of no use, except to tell folks what to do; and everybody knows it's no way to have a thing done, to send.

Mother talked it all over with Deacon Peters, and he counselled her to sell off all the farm but the home-lot, which was sot out for an orchard with young apple-trees, and had a garden-spot to one end of it, close by the house. Mother calculated to raise potatoes and beans and onions enough to last us the year round, and to take in sewin' so's to get what few groceries we was goin' to want. We kept Old Red, the best cow; there was pasture enough for her in the orchard, for the trees wa'n't growed to be bearin' as yet, and we 'lotted a good deal on milk to our house; besides, it saved butcher's meat.

Mother was a real pious woman, and she was a high-couraged woman too. Old Miss Perrit, an old widder-woman that lived down by the bridge, come up to see her the week after father died. I remember all about it, though I wa'n't but ten years

old; for when I see Miss Perrit comin' up the road, with her slimpsy old veil hanging off from her bumbazine bonnet, and her doleful look, (what Nancy Perrit used to call "mother's company-face,") I kinder thought she was comin' to our house; and she was allers so musical to me, I went in to the back-door, and took up a towel I was hemmin', and set down in the corner, all ready to let her in. It don't seem as if I could 'a' been real distressed about father's dyin' when I could do so; but children is just like spring weather, rainin' one hour and shinin' the next, and it's the Lord's great mercy they be; if they begun to be feelin' so early, there wouldn't be nothin' left to grow up. So pretty quick Miss Perrit knocked, and I let her in. We hadn't got no spare room in that house; there was the kitchen in front, and mother's bed-room, and the buttery, and the little back-space opened out on't behind. Mother was in the bed-room; so, while I called her, Miss Perrit set down in the splint rockin'-chair that creaked awfully, and went to rockin' back and forth, and sighin', till mother come in.

"Good-day, Miss Langdon!" says she, with a kind of a snuffle, "how dew you dew? I thought I'd come and see how you kep' up under this here affliction. I rec'lect very well how I felt when husband died. It's a dreadful thing to be left a widder in a hard world;—don't you find it out by this?"

I guess mother felt quite as bad as ever Miss Perrit did, for everybody knew old Perrit treated his wife like a dumb brute while he was alive, and died drunk; but she didn't say nothin'. I see her give a kind of a swaller, and then she spoke up bright and strong.

"I don't think it is a hard world, Miss Perrit. I find folks kind and helpful, beyond what I'd any right to look for. I try not to think about my husband, any more than I can help, because I couldn't work, if I did, and I've got to work. It's most helpful to think the Lord made special promises to widows, and when I remember Him I a'n't afeard."

Miss Perrit stopped rockin' a minute, and then she begun to creak the chair and blow her nose again, and she said,—

"Well, I'm sure it's a great mercy to see anybody rise above their trouble the way you do; but, law me! Miss Langdon, you a'n't got through the fust pair o' bars on't yet. Folks is allers kinder neighborly at the fust; they feel to help you right off, every way they can,—but it don't stay put, they get tired on't; they blaze right up like a white-birch-stick, an' then they go out all of a heap; there's other folks die, and they don't remember you, and you're just as bad off as though you wa'n't a widder."

Mother kind of smiled,—she couldn't help it; but she spoke up again just as steady.

"I don't expect to depend on people, Miss Perrit, so long as I have my health. I a'n't above takin' friendly help when I need to, but I mean mostly to help myself. I can get work to take in, and when the girls have got their schoolin' they will be big enough to help me. I am not afraid but what I shall live and prosper, if I only keep my health."

"Hem, well!" whined out Miss Perrit. "I allers thought you was a pretty mighty woman, Miss Langdon, and I'm glad to see you're so high-minded; but you a'n't sure of your health, never. I used to be real smart to what I am now, when Perrit was alive; but I took on so, when he was brought home friz to death,

that it sp'iled my nerves; and then I had to do so many chores out in the shed, I got cold and had the dreadfullest rheumatiz! and when I'd got past the worst spell of that and was quite folksy again, I slipped down on our door-step and kinder wrenched my ankle, and e't had'n't 'a' been for the neighbors, I don't know but what Nancy and I should 'a' starved."

Mother did laugh this time. Miss Perrit had overshot the mark.

"So the neighbors were helpful, after all!" said she. "And if ever I get sick, I shall be willin' to have help, Miss Perrit. I'm sure I would take what I would give; I think givin' works two ways. I don't feel afraid yet."

Miss Perrit groaned a little, and wiped her eyes, and got up to go away. She hadn't never offered to help mother, and she went off to the sewing-circle and told that Miss Langdon hadn't got no feelings at all, and she b'lieved she'd just as soon beg for a livin' as not. Polly Mariner, the tailoress, come and told mother all she said next day, but mother only smiled, and set Polly to talkin' about the best way to make over her old cloak. When she was gone, I begun to talk about Miss Perrit, and I was real mad; but mother hushed me right up.

"It a'n't any matter, Ann," said she. "Her sayin' so don't make it so. Miss Perrit's got a miserable disposition, and I'm sorry for her; a mint of money wouldn't make her happy; she's a doleful Christian, she don't take any comfort in anything, and I really do pity her."

And that was just the way mother took everything.

At first we couldn't sell the farm. It was down at the foot of Tarringford Hill, two good miles from meetin', and a mile from the school-house; most of it was woody, and there wa'n't no great market for wood about there. So for the first year Squire Potter took it on shares, and, as he principally seeded it down to rye, why, we sold the rye and got a little money, but 'twan't a great deal,—no more than we wanted for clothes the next winter. Aunt Langdon sent us down a lot

of maple-sugar from Lee, and when we wanted molasses we made it out of that. We didn't have to buy no great of groceries, for we could spin and knit by fire-light, and, part of the land bein' piny woods, we had a good lot of knots that were as bright as lamps for all we wanted. Then we had a dozen chickens, and by pains and care they laid pretty well, and the eggs were as good as gold. So we lived through the first year after father died, pretty well.

Anybody that couldn't get along with mother and Major (I always called Mary Jane "Major" when I was real little, and the name kind of stayed by) couldn't get along with anybody. I was as happy as a cricket whilst they were by, though, to speak truth, I wasn't naturally so chirpy as they were; I took after father more, who was a kind of a 'despondin' man, down-hearted, never thinkin' things could turn out right, or that he was goin' to have any luck. That was my natur', and mother see it, and fought ag'inst it like a real Bunker-Hiller; but natur' is hard to root up, and there was always times when I wanted to sulk away into a corner and think nobody wanted me, and that I was poor and humbly, and had to work for my living.

I remember one time I'd gone up into my room before tea to have one of them dismal fits. Miss Perrit had been in to see mother, and she'd been tellin' over what luck Nancy'd had down to Hartford: how't she had gone into a shop, and a young man had been struck with her good looks, an' he'd turned out to be a master-shoemaker, and Nancy was a-goin' to be married, and so on, a rigmarole as long as the moral law,—windin' up with askin' mother why she didn't send us girls off to try our luck, for Major was as old as Nance Perrit. I'd waited to hear mother say, in her old bright way, that she couldn't afford it, and she couldn't spare us, if she had the means, and then I flung up into our room, that was a lean-to in the garret, with a winder in the gable end, and there I set down by the winder with my chin on the

sill, and begun to wonder why we couldn't have as good luck as the Perrits. After I'd got real miserable, I heerd a soft step comin' up stairs, and Major come in and looked at me and then out of the winder.

"What's the matter of you, Anny?" said she.

"Nothing," says I, as sulky as you please.

"Nothing always means something," says Major, as pleasant as pie; and then she scooped down on the floor and pulled my two hands away, and looked me in the face as bright and honest as ever you see a dandelion look out of the grass. "What is it, Anny? Spit it out, as John Potter says; you'll feel better to free your mind."

"Well," says I, "Major, I'm tired of bad luck."

"Why, Anny! I didn't know as we'd had any. I'm sure, it's three years since father died, and we have had enough to live on all that time, and I've got my schooling, and we are all well; and just look at the apple-trees,—all as pink as your frock with blossoms; that's good for new cloaks next winter, Anny."

"Ta'n't that, Major. I was thinkin' about Nancy Perrit. If we'd had the luck to go to Hartford, may-be you'd have been as well off as she; and then I'd have got work, too. And I wish I was as pretty as she is, Major; it does seem too bad to be poor and humbly too."

I wonder she didn't laugh at me, but she was very feelin' for folks, always. She put her head on the window-sill along of mine, and kinder nestled up to me in her lovin' way, and said, softly,—

"I wouldn't quarrel with the Lord, Anny."

"Why, Major! you scare me! I haven't said nothing against the Lord. What do you mean?" said I,—for I was touchy, real touchy.

"Well, dear, you see we've done all we can to help ourselves; and what's over and above, that we can't help,—that is what the Lord orders, a'n't it? and He made you, didn't He? You can't change your face; and I'm glad of it, for it is

Anny's face, and I wouldn't have it changed a mite: there'll always be two people to think it's sightly enough, and may-be more by-and-by; so I wouldn't quarrel with it, if I was you."

Major's happy eyes always helped me. I looked at her and felt better. She wasn't any better-lookin' than I; but she always was so chirk, and smart, and neat, and pretty-behaved, that folks thought she was handsome after they knowed her.

Well, after a spell, there was a railroad laid out up the valley, and all the land thereabouts riz in price right away; and Squire Potter he bought our farm on speculation, and give a good price for it; so't we had two thousand dollars in the bank, and the house and lot, and the barn, and the cow. By this time Major was twenty-two and I was eighteen; and Squire Potter he'd left his house up on the hill, and he'd bought out Miss Perrit's house, and added on to't, and moved down not far from us, so's to be near the railroad-depot, for the sake of bein' handy to the woods, for cuttin' and haulin' of them down to the track. 'Twasn't very pleasant at first to see our dear old woods goin' off to be burned that way; but Squire Potter's folks were such good neighbors, we gained as much as we lost, and a sight more, for folks are greatly better'n trees,—at least, clever folks.

There was a whole raft of the Potters, eight children of 'em all, some too young to be mates for Major and me; but Mary Potter, and Reuben, and Russell, they were along about as old as we were: Russell come between Major and me; the other two was older.

We kinder kept to home always, Major and me, because we hadn't any brothers to go out with us; so we were pretty shy of new friends at first. But you couldn't help bein' friendly with the Potters, they was such outspoken, kindly creatures, from the Squire down to little Hen. And it was very handy for us, because now we could go to singin'-schools and quiltn's, and such-like places, of an evenin'; and we had rather moped at home

for want of such things,—at least I had, and I should have been more moped only for Major's sweet ways. She was always as contented as a honey-bee on a clover-head, for the same reason, I guess.

Well, there was a good many good things come to us from the Potters' movin' down; but by-and-by it seemed as though I was goin' to get the bitter of it. I'd kept company pretty steady with Russell. I hadn't give much thought to it, neither; I liked his ways, and he seemed to give in to mine very natural, so't we got along together first-rate. It didn't seem as though we'd ever been strangers, and I wasn't one to make believe at stiffness when I didn't feel it. I told Russell pretty much all I had to tell, and he was allers doin' for me and runnin' after me jest as though he'd been my brother. I didn't know how much I did think of him, till, after a while, he seemed to take a sight of notice of Major. I can't say he ever stopped bein' clever to me, for he didn't; but he seemed to have a kind of a hankerin' after Major all the time. He'd take her off to walk with him; he'd dig up roots in the woods for her posy-bed; he'd hold her skeins of yarn as patient as a little dog; he'd get her books to read. Well, he'd done all this for me; but when I see him doin' it for her, it was quite different; and all to once I know'd what was the matter. I'd thought too much of Russell Potter.

Oh, dear! those was dark times! I couldn't blame him; I knew well enough Major was miles and miles better and sweeter and cleverer than I was; I didn't wonder he liked her; but I couldn't feel as if he'd done right by me. So I school-ed myself considerable, talking to myself for being jealous of Major. But 'twasn't all that;—the hardest of it all was that I had to mistrust Russell. To be sure, he hadn't said nothin' to me in round words; I couldn't ha' sued him; but he'd looked and acted enough; and now,—dear me! I felt all wrung out and flung away!

By-and-by Major begun to see some-thin' was goin' wrong, and so did Russell. She was as good as she could be

to me, and had patience with all my little pettish ways, and tried to make me friendly with Russell; but I wouldn't. I took to hard work, and, what with cryin' nights, and hard work all day, I got pretty well overdone. But it all went on for about three months, till one day Russell come up behind me, as I was layin' out some yarn to bleach down at the end of the orchard, and asked me if I'd go down to Meriden with him next day, to a pic-nic frolic, in the woods.

"No!" says I, as short as I could.

Russell looked as though I had slapped him. "Anny," says he, "what have I done?"

I turned round to go away, and I caught my foot in a hank of yarn, and down I come flat on to the ground, havin' sprained my ankle so bad that Russell had to pick me up and carry me into the house like a baby.

There was an end of Meriden for me; and he wouldn't go, either, but come over and sat by me, and read to me, and somehow or other, I don't remember just the words, he gave me to understand that—well—that he wished I'd marry him.

It's about as tirin' to be real pleased with anything as it is to be troubled, at first. I couldn't say anything to Russell; I just cried. Major wasn't there; mother was dryin' apples out in the shed; so Russell he didn't know what to do; he kind of hushed me up, and begged of me not to cry, and said he'd come for his answer next day. So he come, and I didn't say, "No," again. I don't believe I stopped to think whether Major liked him. She would have thought of me, first thing;—I believe she wouldn't have had him, if she'd thought I wanted him. But I a'n't like Major; it come more natural to me to think about myself; and besides, she was pious, and I wasn't. Russell was.

However, it turned out all right, for Major was 'most as pleased as I was; and she told me, finally, that she'd known a long spell that Russell liked me, and the reason he'd been hangin' round her so long was, he'd been tellin' her his

plans, and they'd worked out considerable in their heads before she could feel as though he had a good enough lookout to ask me to marry him.

That wasn't so pleasant to me, when I come to think of it; I thought I'd ought to have been counselled with. But it was just like Major; everybody come to her for a word of help or comfort, whether they took her idee or not,—she had such feelin' for other folks's trouble.

I got over that little nub after a while; and then I was so pleased, everything went smooth ag'in. I was goin' to be married in the spring; and we were goin' straight out to Indiana, onto some wild land Squire Potter owned out there, to clear it and settle it, and what Russell cleared he was to have. So mother took some money out of the bank to fit me out, and Major and I went down to Hartford to buy my things.

I said before, we wasn't either of us any great things to look at; but it come about that one day I heerd somebody tell how we did look, and I thought considerable about it then and afterwards. We was buyin' some cotton to a store in the city, and I was lookin' about at all the pretty things, and wonderin' why I was picked out to be poor when so many folks was rich and had all they wanted, when presently I heerd a lady in a silk gown say to another one, so low she thought I didn't hear her,—“There are two nice-looking girls, Mrs. Carr.”

“Hem,—yes,” said the other one; “they look healthy and strong: the oldest one has a lovely expression, both steady and sweet; the other don't look happy.”

I declare, that was a fact. I was sorry, too, for I'd got everything in creation to make anybody happy, and now I was frettin' to be rich. I thought I'd try to be like Major; but I expect it was mostly because of the looks of it, for I forgot to try before long.

Well, in the spring we was married; and when I come to go away, Major put a little red Bible into my trunk for a weddin' present; but I was cryin' too hard to thank her. She swallowed down what-

ever choked her, and begged of me not to cry so, lest Russell should take it hard that I mourned to go with him. But just then I was thinkin' more of Major and mother than I was of Russell; they'd kept me bright and cheery always, and kept up my heart with their own good ways when I hadn't no strength to do it for myself; and now I was goin' off alone with Russell, and he wasn't very cheerful-dispositioned, and somehow my courage give way all to once.

But I had to go; railroads don't wait for nobody; and what with the long journey, and the new ways and things and people, I hadn't no time to get real down once before we got to Indiana. After we left the boat there was a spell of railroad, and then a long stage-ride to Cumberton; and then we had to hire a big wagon and team, so's to get us out to our claim, thirty miles west'ard of Cumberton. I hadn't no time to feel real lonesome now, for all our things hed got to be onpacked, and packed over ag'in in the wagon; some on 'em had to be stored up, so's to come another time. We was two days gettin' to the claim, the roads was so bad,—mostly what they call corduroy, but a good stretch clear mud-holes. By the time we got to the end on't, I was tired out, just fit to cry; and such a house as was waitin' for us!—a real log shanty! I see Russell looked real beat when he see my face; and I tried to brighten up; but I wished to my heart I was back with mother forty times that night, if I did once. Then come the worst of all, clutterin' everything right into that shanty; for our frame-house wouldn't be done for two months, and there wa'n't scarce room for what we'd brought, so't we couldn't think of sendin' for what was stored to Cumberton. I didn't sleep none for two nights, because of the whip-poor-wills that set on a tree close by, and called till mornin' light; but after that I was too tired to lie awake.

Well, it was real lonesome, but it was all new at first, and Russell was to work near by, so't I could see him, and oftentimes hear him whistle; and I

had the garden to make, round to the new house, for I knew more about the plantin' of it than he did, 'specially my posy-bed, and I had a good time gettin' new flowers out of the woods. And the woods was real splendid,—great tall tulip-trees, as high as a steeple and round as a quill, without any sort o' branches ever so fur up, and the whole top full of the yellor tulips and the queer snipped-lookin' shiny leaves, till they looked like great bow-pots on sticks; then there's lots of other great trees, only they're all mostly spindled up in them woods. But the flowers that grow round on the ma'sh edges and in the clearin's do beat all.

So time passed along pretty glib till the frame-house was done, and then we had to move in, and to get the things from Cumberton, and begin to feel as though we were settled for good and all; and after the newness had gone off, and the clearin' got so fur that I couldn't see Russell no more, and nobody to look at, if I was never so lonesome, then come a pretty hard spell. Everything about the house was real handy, so't I'd get my work cleared away, and set down to sew early; and them long summer-days that was still and hot, I'd set, and set, never hearin' nothin' but the clock go "tick, tick, tick," (never "tack," for a change,) and every now'n'then a great crash and roar in the woods where he was choppin', that I knew was a tree; and I worked myself up dreadfully when there was a longer spell 'n common come betwixt the crashes, lest that Russell might 'a' been ketched under the one that fell. And settin' so, and worryin' a good deal, day in and day out, kinder broodin' over my troubles, and never thinkin' about anybody but myself, I got to be of the idee that I was the worst-off creature goin'. If I'd have stopped to think about Russell, may-be I should have had some sort of pity for him, for he was jest as lonesome as I, and I wasn't no kind of comfort to come home to,—most always cryin', or jest a-goin' to.

So the summer went along till 'twas nigh on to winter, and I wa'n't in no bet-

ter sperrits. And now I wa'n't real well, and I pined for mother, and I pined for Major, and I'd have given all the honey and buckwheat in Indiana for a loaf of mother's dry rye-bread and a drink of spring-water. And finally I got so miserable, I wished I wa'n't never married,—and I'd have wished I was dead, if 'twan't for bein' doubtful where I'd go to, if I was. And worst of all, one day I got so worked up I told Russell all that. I declare, he turned as white as a turnip. I see I'd hurt him, and I'd have got over it in a minute and told him so,—only he up with his axe and walked out of the door, and never come home till night, and then I was too stubborn to speak to him.

Well, things got worse, 'n' one day I was sewin' some things and cryin' over 'em, when I heard a team come along by, and, before I could get to the door, Russell come in, all red for joy, and says,—

“Who do you want to see most, Anny?”

Somehow the question kind of upset me;—I got choked, and then I bu'st out a-cryin'.

“Oh, mother and Major!” says I; and I hadn't more'n spoke the word before mother had both her good strong arms round me, and Major's real cheery face was a-lookin' up at me from the little pine cricket, where she'd sot down as nateral as life. Well, I *was* glad, and so was Russell, and the house seemed as shiny as a hang-bird's nest, and by-and-by the baby came;—but I had mother.

'Twas 'long about in March when I was sick, and by the end of April I was well, and so's to be stirrin' round again. And mother and Major begun to talk about goin' home; and I declare, my heart was up in my mouth every time they spoke on't, and I begun to be miserable ag'in. One day I was settin' beside of mother; Major was out in the garden, fixin' up things, and settin' out a lot of blows she'd got in the woods, and singin' away, and says I to mother,—

“What be I going to do, mother, without you and Major? I 'most died of clear lonesomeness before you come!”

Mother laid down her knittin', and looked straight at me.

“I wish you'd got a little of Major's good cheer, Anny,” says she. “You haven't any call to be lonely here; it's a real good country, and you've got a nice house, and the best of husbands, and a dear little baby, and you'd oughter try to give up frettin'. I wish you was pious, Anny; you wouldn't fault the Lord's goodness the way you do.”

“Well, Major don't have nothin' to trouble her, mother,” says I. “She's all safe and pleasant to 'home; she a'n't homesick.”

Mother spoke up pretty resolute:—

“There a'n't nobody in the world, Anny, but what has troubles. I didn't calculate to tell you about Major's; but sence you lay her lively ways to luck, may-be you'd better know 'em. She's been engaged this six months to Reuben Potter, and he's goin' off in a slow consumption; he won't never live to marry her, and she knows it.”

“And she come away to see me, mother?”

“Yes, she did. I can't say I thought she need to, but Russell wrote you was pinin' for both of us, and I didn't think you could get along without me, but I told her to stay with Reuben, and I'd come on alone. And says she, ‘No, mother, you a'n't young and spry enough to go alone so fur, and the Lord made you my mother and Anny my sister before I picked out Reuben for myself. I can't never have any kin but you, and I might have had somebody beside Reuben, though it don't seem likely now; but he's got four sisters to take care of him, and he thinks and I think it's what I ought to do; so I'm goin' with you.’ So she come, Anny; and you see how lively she keeps, just because she don't want to dishearten you none. I don't know as you can blame her for kinder hankerin' to get home.”

I hadn't nothin' to say; I was beat. So mother she went on:—

“Fact is, Anny, Major's always a-thinkin' about other folks; it comes kind of nateral to her, and then bein' pious

helps it. I guess, dear, when you get to thinkin' more about Russell an' the baby, you'll forget some of your troubles. I hope the Lord won't have to give you no harder lesson than lovin', to teach you Major's ways."

So, after that, I couldn't say no more to mother about stayin'; but when they went away, I like to have cried myself sick,—only baby had to be looked after, and I couldn't dodge her.

Bym-by we had letters from home; they got there all safe, and Reuben wa'n't no worse, Major said;—ef't had been me wrote the letter, I should have said he wa'n't no better!—And I fell back into the old lonesome days, for baby slept mostly; and the summer come on extreme hot; and in July, Russell, bein' forced to go to Cumberton on some land business, left me to home with baby and the hired man, calculatin' to be gone three days and two nights.

The first day he was away was dreadful sultry; the sun went down away over the woods in a kind of a red-hot fog, and it seemed as though the stars were dull and coppery at night; even the whip-poor-wills was too hot to sing; nothin' but a doleful screech-owl quavered away, a half a mile off, a good hour, steady. When it got to be mornin', it didn't seem no cooler; there wa'n't a breath of wind, and the locusts in the woods chittered as though they was fryin'. Our hired man was an old Scotchman, by name Simon Grant; and when he'd got his breakfast, he said he'd go down the clearin' and bring up a load of brush for me to burn. So he drove off with the team, and, havin' cleared up the dishes, I put baby to sleep, and took my pail to the barn to milk the cow,—for we kept her in a kind of a home-lot like, a part that had been cleared afore we come, lest she should stray away in the woods, if we turned her loose; she was put in the barn, too, nights, for fear some stray wild-cat or bear might come along and do her a harm. So I let her into the yard, and was jest a-goin' to milk her when she begun to snort and shake, and finally giv'

the pail a kick, and set off, full swing, for the fence to the lot. I looked round to see what was a-comin', and there, about a quarter of a mile off, I see the most curus thing I ever see before or since,—a cloud as black as ink in the sky, and hangin' down from it a long spout like, something like an elephant's trunk, and the whole world under it looked to be all beat to dust. Before I could get my eyes off on't, or stir 'to run, I see it was comin' as fast as a locomotive; I heerd a great roar and rush,—first a hot wind, and then a cold one, and then a crash,—an' 'twas all as dark as death all round, and the roar appeared to be a-passin' off.

I didn't know for quite a spell where I was. I was flat on my face, and when I come to a little, I felt the grass against my cheek, and I smelt the earth; but I couldn't move, no way; I couldn't turn over, nor raise my head more'n two inches, nor draw myself up one. I was comfortable so long as I laid still; but if I went to move, I couldn't. It wasn't no use to wriggle; and when I'd settled that, I jest went to work to figger out where I was and how I got there, and the best I could make out was that the barn-roof had blowed off and lighted right over me, jest so as not to hurt me, but so't I could'nt move.

Well, there I lay. I knew baby was asleep in the trundle-bed, and there wa'n't no fire in the house; but how did I know the house wa'n't blowed down? I thought that as quick as a flash of lightning; it kinder struck me; I couldn't even see, so as to be certain! I wasn't naterally fond of children, but somehow one's own is different, and baby was just gettin' big enough to be pretty; and there I lay, feelin' about as bad as I could, but hangin' on to one hope,—that old Simon, seein' the tornado, would come pretty soon to see where we was.

I lay still quite a spell, listenin'. Presently I heerd a low, whimperin', pantin' noise, comin' nearer and nearer, and I knew it was old Lu, a yeller hound of Simon's, that he'd set great store by, because he brought him from the Old Country. I heerd the dog come pretty near to

where I was, and then stop, and give a long howl. I tried to call him, but I was all choked up with dust, and for a while I couldn't make no sound. Finally I called, "Lu! Lu! here, Sir!" and if ever you heerd a dumb creature laugh, he barked a real laugh, and come springin' along over towards me. I called ag'in, and he begun to scratch and tear and pull,—at boards, I guessed, for it sounded like that; but it wa'n't no use, he couldn't get at me, and he give up at length and set down right over my head and give another howl, so long and so dismal I thought I'd as lieves hear the bell a-tollin' my age.

Pretty soon, I heerd another sound,—the baby cryin'; and with that Lu jumped off whatever 'twas that buried me up, and run. "At any rate," thinks I, "baby's alive." And then I bethought myself if 'twan't a painter, after all; they scream jest like a baby, and there's a lot of them, or there was then, right round in our woods; and Lu was dreadful fond to hunt 'em; and he never took no notice of baby;—and I couldn't stir to see!

Oh, dear! the sweat stood all over me! And there I lay, and Simon didn't come, nor I didn't hear a mouse stir; the air was as still as death, and I got nigh distracted. Seemed as if all my life riz right up there in the dark and looked at me. Here I was, all helpless, may-be never to get out alive; for Simon didn't come, and Russell was gone away. I'd had a good home, and a kind husband, and all I could ask; but I hadn't had a contented mind; I'd quarrelled with Providence, 'cause I hadn't got everything,—and now I hadn't got nothing. I see just as clear as daylight how I'd nussed up every little trouble till it growed to a big one,—how I'd sp'ilt Russell's life, and made him wretched,—how I'd been cross to him a great many times when I had ought to have been a comfort; and now it was like enough I shouldn't never see him again,—nor baby, nor mother, nor Major. And how could I look the Lord in the face, if I did die? That took all my strength out. I lay shakin' and chokin' with the

idee, I don't know how long; it kind of got hold of me and ground me down; it was worse than all. I wished to gracious I didn't believe in hell; but then it come to mind, What should I do in heaven, ef I was there? I didn't love nothin' that folks in heaven love, except the baby; I hadn't been suited with the Lord's will on earth, and 'twan't likely I was goin' to like it any better in heaven; and I should be ashamed to show my face where I didn't belong, neither by right nor by want. So I lay. Presently I heerd in my mind this verse, that I'd learned years back in Sabbath School,—

"Wherefore He is able also to save them to the uttermost"—

there it stopped, but it was a plenty for me. I see at once there wasn't no help anywhere else, and for once in my life I did pray, real earnest, and—queer enough—not to get out, but to be made good. I kind of forgot where I was, I see so complete what I was; but after a while I did pray to live in the flesh; I wanted to make some amends to Russell for pesterin' on him so.

It seemed to me as though I'd laid there two days. A rain finally come on, with a good even-down pour, that washed in a little, and cooled my hot head; and after it passed by I heerd one whip-poor-will singin', so't I knew it was night. And pretty soon I heerd the tramp of a horse's feet;—it come up; it stopped; I heerd Russell say out loud, "O Lord!" and give a groan, and then I called to him. I declare, he jumped!

So I got him to go look for baby first, because I could wait; and lo! she was all safe in the trundle-bed, with Lu beside of her, both on 'em stretched out together, one of her little hands on his nose; and when Russell looked in to the door she stirred a bit, and Lu licked her hand to keep her quiet. It tells in the Bible about children's angels always seein' the face of God, so's to know quick what to do for 'em, I suppose; and I'm sure her'n got to her afore the tornado; for though the house-roof had blowed off, and the chimbley tumbled down, there wa'n't a

splinter nor a brick on her bed, only close by the head on't a great hunk of stone had fell down, and steadied up the clothes-press from tumblin' right on top of her.

So then Russell rode over, six miles, to a neighbor's, and got two men, and betwixt 'em all they pried up the beams of the barn, that had blowed on to the roof and pinned it down over me, and then lifted up the boards and got me out; and I wa'n't hurt, except a few bruises: but after that day I begun to get gray hairs.

Well, Russell was pretty thankful, I b'lieve,—more so'n he need to be for such a wife. We fixed up some kind of a shelter, but Lu howled so all night we couldn't sleep. It seems Russell had seen the tornado to Cumberton, and, judgin' from its course 'twould come past the clearin', he didn't wait a minute, but saddled up and come off; but it had crossed the road once or twice, so it was nigh about eleven o'clock afore he got home; but it was broad moonlight. So I hadn't been under the roof only about fifteen hours; but it seemed more.

In the mornin' Russell set out to find Simon, and I was so trembly I couldn't bear to stay alone, and I went with him, he carryin' baby, and Lu goin' before, as tickled as he could be. We went a long spell through the woods, keepin' on the edge of the tornado's road; for't had made a clean track about a quarter of a mile wide, and felled the trees flat,—great tulips cut off as sharp as pipe-stems, oaks twisted like dandelion-stems, and hickories curled right up in a heap. Presently Lu give a bark, and then such a howl! and there was Simon, dead enough; a big oak had blowed down, with the trunk right acrost his legs above the knees, and smashed them almost off. 'Twas plain it hadn't killed him to once, for the ground all about his head was tore up as though he'd fought with it, and Russell said his teeth and hands was full of grass and grit where he'd bit and tore, a-dyin' so hard. I declare, I shan't never forget that sight! Seems as if my body was full of little ice-spickles every time I think on't.

Well, Russell couldn't do nothin'; we had no chance to lift the tree, so we went back to the house, and he rode away after neighbors; and while he was gone, I had a long spell of thinkin'. Mother said she hoped I wouldn't have no hard lesson to teach me Major's ways; but I had got it, and I know I needed it, 'cause it did come so hard. I b'lieve I was a better woman after that. I got to think more of other folks's comfort than I did afore, and whenever I got goin' to be dismal ag'in I used to try 'n' find somebody to help; it was a sure cure.

When the neighbors come, Russell and they blasted and chopped the tree off of Simon, and buried him under a big pine that we calculated not to fell. Lu pined, and howled, and moaned for his master, till I got him to look after baby now and then, when I was hangin' out clothes or makin' garden, and he got to like her in the end on't near as well as Simon.

After a while there come more settlers out our way, and we got a church to go to; and the minister, Mr. Jones, he come to know if I was a member, and when I said I wa'n't, he put in to know if I wasn't a pious woman.

"Well," says I, "I don't know, Sir." So I up and told him all about it, and how I had had a hard lesson; and he smiled once or twice, and says he,—

"Your husband thinks you are a Christian, Sister Potter, don't he?"

"Yes, I do," says Russell, a-comin' in behind me to the door,—for he'd just stepped out to get the minister a basket of plums. "I ha'n't a doubt on't, Mr. Jones."

The minister looked at him, and I see he was kinder pleased.

"Well," says he, "I don't think there's much doubt of a woman's bein' pious when she's pious to home; and I don't want no better testimony'n yours, Mr. Potter. I shall admit you to full fellowship, sister, when we have a church-meetin' next; for it's my belief you experienced religion under that blowed-down barn."

And I guess I did.

LE MARAIS DU CYGNE.*

A BLUSH as of roses
Where rose never grew !
Great drops on the bunch-grass,
But not of the dew !
A taint in the sweet air
For wild bees to shun !
A stain that shall never
Bleach out in the sun !

Back, steed of the prairies !
Sweet song-bird, fly back !
Wheel hither, bald vulture !
Gray wolf, call thy pack !
The foul human vultures
Have feasted and fled ;
The wolves of the Border
Have crept from the dead.

From the hearths of their cabins,
The fields of their corn,
Unwarned and unweaponed,
The victims were torn,—
By the whirlwind of murder
Swooped up and swept on
To the low, reedy fen-lands,
The Marsh of the Swan.

With a vain plea for mercy
No stout knee was crooked ;
In the mouths of the rifles
Right manly they looked.
How paled the May sunshine,
Green Marais du Cygne,
When the death-smoke blew over
Thy lonely ravine !

In the homes of their rearing,
Yet warm with their lives,
Ye wait the dead only,
Poor children and wives !
Put out the red forge-fire,
The smith shall not come ;
Unyoke the brown oxen,
The ploughman lies dumb.

Wind slow from the Swan's Marsh,
O dreary death-train,

* The massacre of unarmed and unoffending men in Southern Kansas took place near the Marais du Cygne of the French *voyageurs*.

With pressed lips as bloodless
 As lips of the slain!
 Kiss down the young eyelids,
 Smooth down the gray hairs;
 Let tears quench the curses
 That burn through your prayers.

Strong man of the prairies,
 Mourn bitter and wild!
 Wail, desolate woman!
 Weep, fatherless child!
 But the grain of God springs up
 From ashes beneath,
 And the crown of His harvest
 Is life out of death.

Not in vain on the dial
 The shade moves along
 To point the great contrasts
 Of right and of wrong:
 Free homes and free altars
 And fields of ripe food;
 The reeds of the Swan's Marsh,
 Whose bloom is of blood.

On the lintels of Kansas
 That blood shall not dry;
 Henceforth the Bad Angel
 Shall harmless go by:
 Henceforth to the sunset,
 Unchecked on her way,
 Shall Liberty follow
 The march of the day.

YOUTH.

THE ancient statue of Minerva, in the Villa Albani, was characterized as the Goddess of Wisdom by an aged countenance. Phidias reformed this idea, and gave to her beauty and youth. Previous artists had imitated Nature too carelessly,—not deeply perceiving that wisdom and virtue, striving in man to resist senescence and decay, must in a goddess accomplish their purpose, and preserve her in perpetual bloom. Yet even decay and disease are often ineffectual; the

young soul gleams through these impediments, and would be poorly expressed in figures of age. Accepting, therefore, this ideal representation, age and wisdom can never be companions; youth is wise, and age is imbecile.

Our childhood grows in value as we grow in years. It is to that time that every one refers the influence which reaches to his present and somehow moulds it. It may have been an insignificant circumstance,—a word,—a book,—praise or re-

proof; but from it has flowed all that he is. We should seem ridiculous in men's eyes, were we known to give that importance to certain trifles which in our private and inmost thought they really have. Each finds somewhat in his childhood peculiar and remarkable, on which he loves to dwell. It gives him a secret importance in his own eyes, and he bears it about with him as a kind of inspiring genius. Intimations of his destiny, gathered from early memories, float dimly before him, and are ever beckoning him on. That which he really is no one knows save himself. His words and actions do but inadequately reveal the being he is. We are all greater than we seem to each other. The heart's deepest secrets will not be told. The secret of the interest and delight we take in romances and poetry is that they realize the expectations and hopes of youth. It is the world we had painted and expected. He is unhappy who has never known the eagerness of childish anticipation.

Full of anticipations, full of simple, sweet delights, are these years, the most valuable of lifetime. Then wisdom and religion are intuitive. But the child hastens to leave its beautiful time and state, and watches its own growth with impatient eye. Soon he will seek to return. The expectation of the future has been disappointed. Manhood is not that free, powerful, and commanding state the imagination had delineated. And the world, too, disappoints his hope. He finds there things which none of his teachers ever hinted to him. He beholds a universal system of compromise and conformity, and in a fatal day he learns to compromise and conform. At eighteen the youth requires much stricter truth of men than at twenty-four.

At twenty-four the prophecies of childhood and boyhood begin to be fulfilled, the longings of the heart to be satisfied. He finds and tastes that life which once seemed to him so full of satisfaction and advantage. The inclination to speak in the first person passes away, and his composition is less autobiographical. The

claims of society and friends begin to be respected. Solitude and musing are less sweet. The morbid effusions of earlier years, once so precious, no longer please. Now he regards most his unwritten thought. He uses fewer adjectives and alliterations, more verbs and dogmatism. There was a time when his genius was not domesticated, and he did his work somewhat awkwardly, yet with a fervor prophetic of settled wisdom and eloquence. The youth is almost too much in earnest. He aims at nothing less than all knowledge, all wisdom, all power. Perchance the end of all this is that he may discover his own proper work and tendency, and learn to know himself from the revelations of his own nature in universal nature.

For it is by this sign we choose companions and books. Not that they are the best persons or the best thoughts; but some subtle affinity attracts and invites as to another self. In the choosing of companions there seems to be no choice at all. We meet, we know not how or when; and though we should remember the history, yet friendship has an anterior history we know not of. We all have friends, but the one want of the soul is a friend,—that other self, that one without whom man is incomplete and but the opaque face of a planet. For such we patiently wait and hope, knowing that when we become worthy of him, continents, nor caste, nor opinion can separate us.

A like experience is known to the young man in his reading. 'Tis in vain to advise as to reading; a higher power controls the matter. Of course there are some books all must read, as every one learns the alphabet and spelling-book; but his use and combination of them he shall share with no one. Some spiritual power is ever drawing us towards what we love. Thus in books one constantly meets his own idea, his own feelings, even his most private ones, which he thought could not be known or appreciated beyond his own bosom. Therefore he quickly falls in love with those

books that discover him to himself, and that are the keepers of his secrets. Here is a part of himself written out in immortal letters. Here is that thought long dimly haunting the mind, but which never before found adequate expression. Here is a memorable passage transcribed out of his experience.

The fascination of books consists in their revelations of the half-conscious images of the reader's mind. There is a wonderful likeness and coincidence in the thoughts of men. But not alone in books does one meet his own image at every turn. He beholds himself strewn in a thousand fragments throughout the world; and all his culture is nothing but assimilation of himself to them, until he can say with wise Ulysses,

"I am a part of all that I have met."

Thus Nature compels the youth to seek every means of stimulating himself to activity. He has learned that in periods of transition and change fresh life flows in upon him, dilating the heart and disclosing new realms of thought. He thanks the gods for every mood, Doric or dithyrambic, for each new relation, for each new friend, and even for his sorrows and misfortunes. Out of these comes the complete wisdom which shall make old age but another more fair and perfect youth. Even the face and form shall be fortified against time and fate. In the physiognomy of age much personal history is revealed. The dimples and folds of infancy have become the furrows of thought and care. Yet, sometimes retaining their original beauty, they are an ornament, and in them we read the record of deep thought and experience. But the wrinkles of some old people are characterless; running in all directions, appearing as though a finely-woven cloth had left its impress upon the face, revealing a life aimless and idle, or distracted by a thousand cross-purposes and weaknesses.

If now youth will permit us to look a little deeper into its heart, we will attempt to celebrate that unpublished and

vestal wisdom written there. Age does us only indirect justice,—by the value it gives to memory. It slights and forgets its own present. This day with its trivialities dwindles and vanishes before the teeming hours wherein it learned and felt and suffered;—so the circles, which are the tree's memories of its own growth, are more distinct near the centre, where its growth began, than in the outer and later development. Give age the past, and let us be content with our legacy, which is the future. Still shall youth cast one retrospective glance at the experience of its nonage, ere it assumes its prerogative, and quite forgets it.

When the first surprise at the discovery of the faculties is over, begins the era of experience. The aspiration conducting to experiment has revealed the power or the inability. Henceforth the youth will know his relations to the world. But as yet men are ignorant how it stands between them. There has been only a closet performance, a morning rehearsal. He sees the tribute to genius, to industry, to birth, to fortune. At first he yields reluctantly to novitiate and culture; he yearns for action. His masters tell him that the world is coy, must be approached cautiously, and with something substantial in the hand. The old bird will not be caught with chaff. He does not yet understand the processes of accumulation and transmutation. The fate of the Danaïdes is his, and he draws long with a bottomless bucket. But at last his incompetency can no further be concealed. Then he either submits to the suggestions of despair and oblivion or bravely begins his work. The exhilaration and satisfaction which he felt at his first performances, in this hour of renunciation, are changed to bitterness and disgust. He remembers the old oracle: "In the Bacchic procession many carry the thyrsus, but few are inspired." The possibility of ultimate failure threatens him more and more while he reflects; as the chasm which you wish to leap grows impassable, if you measure and deliberate. But the vivacity of youth

preserves him from any permanent misanthropy or doubt. Nature makes us blind where we should be injured by seeing. We partake of the lead of Saturn, the activity of fire, the forgetfulness of water. His academic praises console him, maugre his depreciation of them. His little fame, the homage of his little world, have in them the same sweetness as the reverberation of ages. Heaven would show him his capacity for those things to which he aspires by giving him an early and representative realization of them. It is a happy confidence. Reality is tyrannous. Let him construe everything in the poet's mood. He shall dream, and the day will have more significance. Youth belongs to the Muse.

How the old men envy us! They wisely preclude us from their world, since they know how it would bereave us of all that makes our state so full of freedom and delight, and to them so suggestive of the past.

"I remember, when I think,
That my youth was half divine."

Thus the great have ever chosen young men for companions. Was it not Plato who wished he were the heavens, that he might look down upon his young companion with a thousand eyes? Thus they do homage to the gift of youth, and by its presence contrive to nestle into its buoyant and pure existence. If youth will enjoy itself virtuously with gymnastics, with music, with friendship, with poetry, there will come no hours of lamentation and repentance. They attend the imbecile and thoughtless. These halcyon days will return to temper and grace the period of old age; as upon the ripened peach reappear the hues of its early blossoms.

Among his seniors the youth perceives a certain jealousy of him. They pretend that all has been said and done. They awe him with their great names. He has to learn, that, though Jew and Greek have spoken, nevertheless he must reiterate and interpret to his own people and generation. Perchance in the process something new will likewise be added. Many things still wait an observer. Still

is there infinite hope and expectation, which youth must realize. In war, in peace, in politics, in books, all eyes are turned to behold the rising of his star.

Reluctantly does the youth yield to the claims of moderation and reserve. Abandonment to an object has hitherto been his highest wisdom. But in the pursuit of the most heroic friendship, or the most sovereign passion, the youth discovers that a certain continence is necessary. He cannot approach too closely; for that moment love is changed into disgust and hate. He would drink the nectar to the lees. This is one of Nature's limitations, and has many analogies; and he who would never see the bottom of any cup, and always be possessed with a divine hunger, must observe them. I remember how it piqued my childish curiosity that the moon seemed always to retreat when I ran towards her, and to pursue me when I fled. It was a very significant symbol. Stand a little apart, and things of their own accord will come more than half-way. Nobody ever goes to meet a loafer. Self-centred, domesticated persons attract. What would be the value of the heavens, if we could bring the stars into our lap? They cannot be approached or appropriated. Upon the highest mountain the horizon sinks you in a valley, and far aloft in night and mystery gleam the retreating stars.

It must be remembered that indirect vision is much more delicate than direct. Looking askance, with a certain oblique and upward glance, constitutes the art and power of the poet; for so a gentle invitation is offered the imagination to contribute its aid. We see clearest when the eye is elongated and slightly curtailed. Persons with round, protuberant eyes are obliged to reduce their superfluous visual power by artificial means. We subordinate the external organ in order to liberate the inner eye of the mind. The musing, pensive Hindoos, who have elongated eyes, look through the surface of things to their essence, and call the world Illusion,—the illusory energy of Vishnu.

There is a vulgar trick of wishing to touch everything. But the greatest caution is necessary, in beholding a statue or painting, not to draw too near; and it is thus with every other beautiful thing. Nature secretly writes, *Hands off!*—and men do but translate her hieroglyph in their galleries and museums. The sense of touch is only a provision against the loss of sight and hearing. We should cultivate these, until, like the Scandinavian Heimdal, we can hear the trees and the flowers grow, and see with Heraclitus the breathing of the stars.

The youth once loved Nature after this somewhat gross and material fashion, for the berries she gave him, the flowers she wove in his hair, and the brooks that drove his mimic mills. He chased the butterfly, he climbed the trees, he would stand in the rain, paint his cheeks with berry juice, dabble in the mud, and noth-

ing was secure from his prying fingers and curious eyes. He must touch and taste of everything, and know every secret. But it eluded him; and he lay down from his giddy chase, tired and unsatisfied, yet still anticipating that the morning would reveal all. Later he approaches men and things in a different mood. Experience has taught him so much. He begins to feel the use of the past. Memory renders many present advantages as nothing, and there is a rare and peculiar value to every reminiscence that connects him with the years from which he is so fast receding. The bower which his own hands wove from birch-trees and interwove with green brakes, where at the noon-time he was wont to retreat from the hot school-house, with the little maid of his choice, and beguile the hour so happily, suggests a spell and charm to preserve him in perpetual childhood.

PINTAL.

IN San Francisco, in 1849, on Dupont Street near Washington, a wretched tent, patched together from mildewed and weather-worn sails, was pitched on a hill-side lot, unsightly with sand and thorny bushes, filthy cast-aways of clothing, worn-out boots, and broken bottles. The forlorn loneliness of this poor abode, and the perfection of its Californianness, in all the circumstances of exposure, frailness, destitution, and dirt, were enough of themselves to make it an object of interest to the not-too-busy passer; yet, to complete its pitiful picturesqueness, Pathos had bestowed a case of miniatures and a beautiful child. Beside the entrance of the tent a rough shingle was fastened to the canvas, and against this hung an unpainted picture-frame of pine, in humble counterpart of those gilded rosewood signs which, at the doors of Daguerreotype galleries, display

fancy "specimens" to the goers-to-and-fro of Broadway. Attracted by an object so novel in San Francisco then, I paused one morning, in my walk office-ward from the "Anglo-Saxon Dining-Saloon," to examine it.

There were six of them,—six dainty miniature portraits on ivory, elaborately finished, and full of the finest marks of talent. The whole were seemingly reproductions of but two heads, a lady's and a child's,—the lady well fitted to be the mother of the child, which might well have been divine. There were three studies of each; each was presented in three characters, chosen as by an artist possessed of a sentiment of sadness, some touching reminiscence.

In one picture, the lady—evidently English, a pensive blonde, with large and most sweet blue eyes curtained by the longest lashes, regular and refined fea-

tures suggestive of pure blood, budding lips full of sensibility, a chin and brow that showed intellect as well as lineage, and cheeks touched with the young rose's tint—was as a beautiful *debutante*, the flower of rich drawing-rooms, in her first season: one white moss-rosebud in her smoothly-braided hair; her dimpled, round, white shoulders left to their own adornment; and for jewels, only one opal on her ripening bosom;—as much of her dress as was shown was the simple white bodice of pure maidenhood.

In the next, she had passed an interval of trial, for her courage, her patience, and her pride,—a very few years, perhaps, but enough to bestow that haughty, defiant glance, and fix those matchless features in an almost sneer. No longer was her fair head bowed, her eyes down-cast, in shrinking diffidence; but erect and commanding, she looked some tyranny, or insolence, or malice, in the face, to look it down. Jewels encircled her brow, and a bouquet of pearls was happy on her fuller bosom.¹

Still a few years further on,—and how changed! "So have I seen a rose," says that Shakspeare of the pulpit, old Jeremy Taylor, when it has "bowed the head and broke its stalk; and at night, having lost some of its leaves and all its beauty, it has fallen into the portion of weeds and outworn faces." Alas, Farewell, and Nevermore sighed from those hollow cheeks, those weebegone eyes, those pallid lips, that willow-like long hair, and the sad vesture of the forsaken Dido.

So with the child. At first, a rosy, careless, curly-pate of three years or so,—wonder-eyed and eager, all spring and joyance, and beautiful as Love.

Then pale and pain-fretted, heavy-eyed and weary, feebly half-lying in a great chair, still,—an unheeded locket scarce held by his thin fingers, his forehead wrinkled with cruel twinges, the sweet bowed lines of his lips twisted in whimpering puckers, the curls upon his vein-traced temples unnaturally bright, as with clamminess,—a painful picture for a mother's eyes!

But not tragic, like the last; for there the boy had grown. Nine years had deepened for his clustered curls their hue of golden brown, and set a seal of anxious thought upon the cold, pale surface of his intellectual brow, and traced his mouth about with lines of a martyr's resignation, and filled his profound eyes, dim as violets, with foreboding speculation, making the lad seem a seer of his own sad fate. Here, thought I, if I mistake not, is another melancholy chapter in this San Franciscan romance. This painter learned his art of Sorrow, and pitiless Experience has bestowed his style; he shall be for my finding-out.

Home-sickness had marked me for its own one day. I sat alone in my rude little office, conning over again for the hundredth time strange chapters of a waif's experience,—reproducing auld-lang-syne, with all its thronged streets and lonely forest-paths, its old familiar faces, talks, and songs,—ingathering there, in the name of Love or Friendship, forms that were dim and voices that were echoes; and many an "alas," and "too late," and "it might have been," they brought along with them.

"Let this remembrance comfort me,—that when

My heart seemed bursting,—like a restless wave,

That, swollen with fearful longing for the shore,

Throws its strong life on the imagined bliss
Of finding peace and undisturbed calm,—
It fell on rocks and broke in many tears.

"Else could I bear, on all days of the year,—
Not now alone, this gentle summer night,
When scythes are busy in the headed grass,
And the full moon warms me to thoughtfulness,—

This voice that haunts the desert of my soul:

'It might have been!' Alas! 'It might have been!'"

I drew from my battered, weather-beaten sea-box sad store of old letters, bethumbed and soiled,—an accusation in every one of them, and small hope of forgiveness, save what the gentle dead might render. There were pretty little portraits, too.—Ah, well! I put them back,

—a frown, or a shadow of reproachful sadness, on the picture of a once loving and approving face is the hardest bitterness to bide, the self-unsparing wanderer can know. Therefore I would fain let these faces be turned from me,—all save one, a merry minx of maidenhood, of careless heart, and laughing lips, and somewhat naughty eyes. It was a steel engraving, not of the finest, torn from some Book of Beauty, or other silly-sentimental keepsake of the literary catch-penny class, brought all the way from home, and tenderly saved for the sake of its strange by-chance resemblance to a smart little *lionne* I had known in Virginia, in the days when smart little *lionnes* made me a sort of puppy Cuming. The picture, unframed, and exposed to all the chances of rough travel, had partaken of my share of foul weather and coarse handling, and been spotted and smutched, and creased and torn, and every way defaced. I had often wished that I might have a pretty painting made from it, before it should be spoiled past copying. So here, I thought, shall be my introduction to my fly-in-amber artist, of the seedy tent and the romantic miniatures. So pocketing my picture, I hid me forthwith to Dupont Street.

The tent seemed quite deserted. At first, I feared my rare bird had flitted; I shook the bit of flying-jib that answered for a door, and called to any one within, more than once, before an inmate stirred. Then, so quietly that I had not heard his approach, a lad, of ten perhaps, came to the entrance, and, timidly peering up into my face, asked, "Is it my father you wish to see, Sir?"

How beautiful! how graceful! with what touching sweetness of voice! how intellectual his expression, and how well-bred his air!—plainly a gentleman's son, and the son of no common gentleman! Instinctively I drew back a pace to compare him with the child of the "specimens." Unquestionably the same,—there were the superior brow, the richly clustered curls of golden brown, the painful lips, and the foreboding eyes.

"If your father painted these pretty pictures, my boy,—yes, I would be glad to see him, if he is within."

"He is not here at present, Sir; he went with my mother to the ship, to bring away our things. But it is quite a long while since they went; and I think they will return presently. Take a seat, Sir, please."

I accepted the stool he offered,—a canvas one, made to "unship" and fold together,—such a patent accommodation for tired "hurdies" as amateur sketchers and promiscuous lovers of the picturesque in landscape take with them on excursions. My accustomed eye took in at a glance the poor furniture of that very Californian make-shift of a shelter for fortune-seeking heads. There were chests, boxes, and trunks, the usual complement, bestowed in every corner, as they could best be got out of the way,—a small, rough table, on temporary legs, and made, like the seats, to unship and be stowed,—several other of the same canvas stools,—a battered chest of drawers, at present doing the duty of a cupboard,—some kitchen utensils, and a few articles of table furniture of the plainest delft. As for the kitchen, I had noticed, as I passed, a portable furnace for charcoal, without, and at the rear of the tent; it was plain they did their cooking in the open air. On one side of the entrance, and near the top of the tent, a small square had been cut from the canvas, and the sides framed with slats of wood, making a sort of Rembrandtish skylight, through which some scanty rays of barbaric glory fell on an easel, with its palette, brushes, and paints. A canvas framed, on which the ground had been laid, and the outline of a head already traced, was mounted on the easel; other such frames, as if of finished portraits with their faces turned to the wall, stood on the earthen floor, supported by a strip of wood tacked to the tent-cloth near the bottom. On the floor, at the foot of the easel, lay an artist's sketch-book. A part of the tent behind was divided off from what, by way of melan-

choly jest, I may call the reception-room, or the studio, by a rope stretched across, from which were suspended a blanket, a travelling shawl, and a voluminous, and evidently costly, Spanish cloak. Protruding beyond the edge of this extemporaneous screen, I could see the footposts of an iron bedstead, and the end of a large *poncho*, which served for a counterpane.

"Will you amuse yourself with this sketch-book, please," said the pretty lad, "till my father comes?"

"With pleasure, my boy,—if you are sure your father will not object."

"Oh, no, indeed, Sir! My father has told me I must always entertain any gentlemen who may call when he is out,—that is, if he is to return soon; and any one may look at this book;—it is only his portfolio, in which he sketches whatever new or pretty things we see on our travels; but there are some very nice pictures in it,—landscapes, and houses, and people."

"Have you travelled much, then?"

"Oh, yes! we have been travelling ever since I can remember; we have been far, and seen a great many strange sights, and some such queer people!—There! that is our shepherd in Australia; isn't he funny? his name was Dirk. I tied that blue ribbon round his straw hat, that seems big enough for an umbrella. He looks as if he were laughing, doesn't he? That's because I was there when my father sketched him; and he made such droll faces, with his brown skin and his great grizzly moustaches, when father told him he must make up a pleasant expression, that it set me laughing,—for my father said he looked like a Cape lion making love; and then Dirk would laugh too, and spoil his pleasant expression; and father would scold; and it was so funny! I loved Dirk very much, he was so good to me; he gave me a tame kangaroo, and a black swan, and taught me to throw the boomerang; and once, when he went to Sydney, he spent ever so much money to buy me a silver bell for Lipse, my yellow lamb. I won-

der if Dirk is living yet? Do you think he is dead, Sir? I should be very much grieved, if he were; for I promised I would come back to see him when I am a man.

—"That is Dolores,—dear old Dolores! Isn't she fat?"

"Yes, and good, too, I should think, from the kind face she has. Who was Dolores?"

"Ah! you never saw Dolores, did you? And you never heard her sing. She was my Chilena nurse in Valparaiso; and she had a mother—oh, so very old!—who lived in Santiago. We went once to see her; the other Santiago—that was Dolores's son—drove us there in the *veloche*. Wasn't it curious, his name should be the same as the city's? But he was a bad boy, Santiago,—so mischievous! such a scamp! Father had to whip him many times; and once the *vigilantes* took him up, and would have put him in the chain-gang, for cutting an American sailor with a knife, in the Calle de San Francisco, if father had not paid five ounces, and become security for his good behavior. But he ran away, after all, and went as a common sailor in a nasty guano ship. Dolores cried very much, and it was long before she would sing for me again. Oh, she did know such delightful songs!—*Mi Niña*, and *Yo tengo Ojos Negros*, and

'No quiero, no quiero casarme;
Es mejor, es mejor soltera!'"

And the delightful little fellow merrily piped the whole of that "song of pleasant glee," one of the most melodious and sauciest bits of lyric coquetry to be found in Spanish.

"Ah," said he, "but I cannot sing it half so well as Dolores. She had a beautiful guitar, with a blue ribbon, that her sweetheart gave her before I was born, when she was young and very pretty;—he brought it all the way from Acapulco.

—"And *that* pretty girl is Juanita; she sold pine-apples and grapes in the Almendral, and every night she would go with her guitar—it was a very nice one, but did not cost near so much money as

Dolores's—and sing to the American gentlemen in the Star Hotel. My mother said she was a naughty person, and that she did not dare tell where she got her gold cross and those jet ear-rings. But I liked her very much, for all that; and I'm sure she would not steal, for she used to give me a fresh pine-apple every morning; and whenever her brother José came down from Casa Blanca with the mules and the *pisco*, she sent me a large melon and some lovely roses.

—“That is the house we lived in at Baltimore. It was painted white, and there was a paling in front, and a doorway with grass. We had some honeysuckles on the porch;—there they are, and there's the grape-vine. I had a dog-house, too, made to look like a church, and my father promised to buy me a Newfoundland dog,—one of those great hairy fellows, with brass collars, you know, that you can ride on,—when he had sold a great many pictures, and made his fortune. But we did not make our fortune in Baltimore, and I never got my dog; so we came here to Tom Tiddler's ground, to pick up gold and silver. When we are fixed, and get a new tent, my father is going to give me a little spade and a cradle, to dig gold enough to buy a Newfoundland dog with, and then I shall borrow a saw and make a dog-house, like the one I had in Baltimore, out of that green chest. Charley Saunders lived in that next house in the picture, and he had a martin-box, with a steeple to it; but his father gave fencing-lessons, and was very rich.”

As the intelligent little fellow ran on with his pretty prattle, I was diligently pursuing the lady and child of the specimens through the sketches. On every leaf I encountered them,—ever changing, yet always the same. Here was the child by my side,—unquestionably the same; though now I looked in vain for the anxious mouth and the foreboding eyes in his face of careless, hopeful urchinhood. But who was the other?—his mother, no doubt; and yet no trace of resemblance.

“And tell me, who is this beautiful lady, my lad,—here, and here, and here, and here again? You see I recognize her always,—so lovely, and so gentle-looking. Your mother?”

“Oh, no, Sir!” and he laughed,—“my mother is very different from that. That is nobody,—only a fancy sketch.”

“Only a fancy sketch!” So, then, I thought, my pretty entertainer, confiding and communicative as you are, it is plain there are some things you do not know, or will not tell.

“She is not any one we ever saw;—she never lived. My father made her out of his own head, as I make stories sometimes; or he dreamed her, or saw her in the fire. But he is very fond of her, I suppose, because he made her himself,—just as I think my own stories prettier than any true ones; and he's always drawing her, and drawing her, and drawing her. I love her, too, very much,—she looks so natural, and has such nice ways. Isn't it strange my father—but he's so clever with his pencil and brushes!—should be able to invent the Lady Angelica?—that's her name. But my mother does not like her at all, and gets out of patience with my father for painting so many of her. Mamma says she has a stuck-up expression,—such a funny word, ‘stuck-up’!—and does not look like a lady. Once I told mamma I was sure she was only jealous, and she grew very angry, and made me cry; so now I never speak of Lady Angelica before her. What makes me think my father must have dreamed her is that I dreamed her once myself. I thought she came to me in such a splendid dress, and told me that she was not only a live lady, but my own mother, and that mamma was — Hush! This is my father, Sir.”

Wonderful! how the lad had changed!—like a phantom, the thoughtless prattler was gone in a moment, and in his place stood the seer-boy of the picture, the profound foreboding eyes fixed anxiously, earnestly, on the singular man who at that moment entered: a singularly small man, cheaply but tidily attired

in black; even his shoes polished,—a rare and dandyish indulgence in San Francisco, before the French bootblacks inaugurated the sumptuary vanity of Day and Martin's lustre on the stoop of the California Exchange, and made it a necessity no less than diurnal ablutions; a well-preserved English hat on his head, which, when he with a somewhat formal air removed it, discovered thin black locks, beginning to part company with the crown of his head. In his large, brown eyes an expression of moving melancholy was established; a nervous tremulousness almost twitched his refined lips, which, to my surprise, were not concealed by the universal moustache,—indeed, the smooth chin and symmetrically trimmed mutton-chop whiskers, in the orthodox English mode, showed that the man shaved. His nose, slightly aquiline, was delicately cut, and his nostrils fine; and he had small feet and hands, the latter remarkably white and tender. As he stood before me, he was never at rest for an instant, but changed his support from one leg to the other,—they were slight as a young boy's,—and fumbled, as it were, with his feet; as I have seen a distinguished medical lecturer, of Boston, gesticulate with his toes. He played much with his whiskers, too, and his fingers were often in his hair,—as a fidgety and vulgar man would bite his nails. From all of which I gathered that my new acquaintance was an intensely nervous person,—very sensitive, of course, and no doubt irritable.

He was accompanied by a—female, much taller than he, and as stalwart as dear woman can be; an especially common-looking person, bungled as to her dress, which was tawdry-fine, unseasonable for the place as well as time, inappropriate to herself, inharmonious in its composition, and every way most vilely put on; a clumsy and, as I presently perceived, a loud person, whose face, still showing traces of the coarse but decided beauty it must once have possessed, fell far short of compensating for the complete gracelessness of her presence.

Her eyes had a bibulous quality, and the bright redness of her nose vied vulgarly with the rusty redness of her cheeks. I suspected her complexion of potatoes, but charitably let it off with—beer; for she was, at first glance, English. As she jerked off her flaunting bonnet, and dragged off her loud shawl, saluting me, as she did so, with an overdone obeisance, she said, "This San Fanfrisko"—why would she, how could she, always twist the decent name of the metropolis of the Pacific into such an absurd shape?—"was a norrid 'ole; she appealed to the gentleman,"—meaning me,—“didn't 'e find it a norrid 'ole, habolutely hawful?” And then she went clattering among tinware and crockery, and snubbed the gentlemanly boy in a sort of tender Billingsgate.

While she was thus gracefully employed, the agonized artist, his face suffused with blushes and fairly ghastly with an enforced smile, was painfully struggling to abstract himself, by changing the places of things, shifting the position of his easel, prying in a lost way into lumbered corners, and pretending to be in search of something,—ingenious, but unable to disguise his chagrin. He pranced with his legs, and tumbled his hair, and twitched at his whiskers more than ever, as he said,—

"My dear," (and the boy had called her Mamma; so, then, it must be a fancy sketch, after all,) "my dear, no doubt the gentleman is more a cosmopolite than yourself, and blessed with more facility in adapting himself to circumstances."

"You know, Madam," I came to his assistance, "we Americans have a famous trick of living and enjoying a little in advance, of 'going ahead' of the hour, as it were. We find in San Francisco rather what it promises to be than what it is, and we take it at its word."

"Oh, pray, don't mention Americans! I positively 'ate the hodosious people. I confess I 'ave a hinsurmountable prejudice hagaint the race; you are not haware that I am Hinglish. I think I might endure heven San Fanfrisko, if it

were not for the Americans. Are you an American?"

Alternating between the pallor of rage and the flush of mortification, her husband now turned, with a calmness that had something of desperation in it, and saved me the trouble and the pain of replying, by asking, in the frigid tone of one who resented my presence as the cause of his shame,—

"Did you wish to see me on business, Sir? and have you been waiting long?"

"The success with which your charming little boy has entertained me has made the time seem very short. I could willingly have waited longer."

That last remark was a mere *contre-temps*. I did not mean to be as severe as he evidently thought me, for he bowed haughtily and resentfully.

I came at once to business,—drew from my pocket the engraving I had brought,—"Could he copy that for me?"

"How?—in miniature or life-size?—ivory or canvas?"

"You are, then, a portrait-painter, also?—Ah! to be sure!" and I glanced at the canvas on the easel.

"Certainly,—I prefer to make portraits."

"And in this case I should prefer to have one. Extravagant as the vanity may seem, I am willing to indulge in it, for the sake of being the first, in this land of primitive wants and fierce unrefinements, to take a step in the direction of the Fine Arts,—unless you have had calls upon your pencil already."

"None, Sir."

"Then to-morrow, if you please,—for I cannot remain longer at present,—we will discuss my whim in detail."

"I shall be at your service, Sir."

"Good day, Madam! And you, my pretty lad, well met,—what is your name?"

"Ferdy, Sir,—Ferdinand Pintal."

At that moment, his father, as if reminded of a neglected courtesy, or a business form, handed me his card,—
"Camillo Alvarez y Pintal."

"Thanks, then, Ferdy, for the pains

you took to entertain me. You must let me improve an acquaintance so pleasantly begun."

The boy's hand trembled as it lay in mine, and his eyes, fixed upon his father's, wore again the ominous expression of the picture. He did not speak, and his father took a step toward the door significantly.

But the doleful silence that might have attended my departure was broken by a demonstration, "as per sample," from my country's fair and gentle 'ater. "She 'oped I would not be huffed by the freedom of 'er hobversations on my countrymen. I must hexcuse 'er Hinglish bluntness; she was haware that she 'ad a somewhat hoff-'and way of hexpressing 'er hemotions; but when she 'ated she 'ated, and it relieved 'er to hout with it hat once. Certainly she would never—bless 'er 'eart, no!—'ave taken me for an American; I was so huncommonly genteel."

With my hand upon the region of my heart, as I had seen stars, when called before the curtain on the proudest evening of their lives, give anatomical expression to their overwhelming sense of the honor done them, I backed off, hat in hand.

"Camillo Alvarez y Pintal," I read again, as I approached the Plaza. "Can this man be Spanish, then? Surely not;—how could he have acquired his excellent English, without a trace of foreign accent, or the least eccentricity of idiom? His child, too, said nothing of that. English, no doubt, of Spanish parentage; or,—oh, patience! I shall know by-and-by, thanks to my merry Virginia jade, who shall be arrayed in resplendent hues, and throned in a golden frame, if she but feed my curiosity generously enough."

Next day, in the afternoon, having bustled through my daily programme of business, I betook myself with curious pleasure to my appointment with Pintal. To my regret, at first, I found him alone; but I derived consolation from the assurance, that, wherever the engaging boy had gone, his mother had accompanied

him. Even more than at my first visit, the artist was frigidly reserved and full of warning-off politeness. With but a brief prelude of courteous commonplaces, he called me to the business of my visit.

My picture, as I have said, was a fairly executed steel engraving, taken from some one of the thousands of "Tokens," or "Keepsakes," or "Amulets," or "Gems," or such like harmless gift-books, with which youths of tender sentiment remind preoccupied damsels of their careful *penchants*. It represented an "airy, fairy Lillian" of eighteen, or thereabouts, lolling coquettishly, fan in hand, in an antique, high-backed chair, with "carven imageries," and a tasselled cushion. She rejoiced in a profusion of brown ringlets, and her costume was pretty and quaint,—a dainty chemisette, barred with narrow bands of velvet, as though she had gone to Switzerland, or the South of Italy, for the sentiment of her bodice,—sleeves quaintly puffed and "slashed,"—the ample skirt looped up with rosettes and natty little ends of ribbon; her feet beneath her petticoat, "like little mice," stole out, "as if they feared the light." Somewhere, among the many editions of Dickens's works, I have seen a Dolly Varden that resembled her.

It was agreed between us that she should be reproduced in a life-size portrait, with such a distribution of rich colors as the subject seemed to call for, as his fine taste might select, and his cunning hand lay on. I sought to break down his reserve, and make myself acceptable to him, by the display of a discreet geniality, and a certain frankness, not falling into familiarity, which should seem to proceed from sympathy, and a *bonhomie*, that, assured of its own kindly purpose, would take no account of his almost angry distance. The opportunity was auspicious, and I was on the alert to turn it to account. I made a little story of the picture, and touched it with romance. I told him of Virginia,—especially of that part of the State in which

this saucy little lady lived,—of its famous scenery, its historic places, and the peculiar features of its society. I strove to make the lady present to his mind's eye by dwelling on her certain eccentricities, and helping my somewhat particular description of her character with anecdotes, more or less pointed and amusing, especially to so grave a foreigner, of her singular ready-wittedness and graceful audacity. Then I had much to say about her little "ways" of attitude, gesture, and expression, and some hints to offer for slight changes in the finer lines of the face, and in the expression, which might make the likeness more real to both of us, and, by getting up an interest in him for the picture, procure his favorable impression for myself.

I had the gratification, as my experiment proceeded, to find that it was by no means unsuccessful. His austerity appreciably relaxed, and the kindly tone into which his few, but intelligent observations gradually fell, was accompanied by an encouraging smile, when the drift of our talk was light. Then I spoke of his child, and eagerly praised the beauty, the intelligence, and sweet temper of the lad. 'Twas strange how little pleasure he seemed to derive from my sincere expressions of admiration; indeed, the slight satisfaction he did permit himself to manifest appeared in his words only, not at all in his looks; for a shade of deep sadness fell at once upon his handsome face, and his expression, so full of sensibility, assumed the cast of anxiety and pain. "He thanked me for my eloquent praises of the boy, and—not too partially, he hoped—believed that he deserved them all. A prize of beauty and of love had fallen to him in his little Ferdy, for which he would be grieved to seem ungrateful. But yet—but yet—the responsibility, the anxiety, the ceaseless fretting care! This fierce, unbroken city";—he spoke of it as though it were a newly-lassoed and untamed mustang,—I liked the simile; "this lawless, blasphemous, obscene, and dangerous community; these sights of heartlessness and

cruelty; these sounds of selfish, greedy contention; the absence of all taste and culture,—no lines of beauty, no strains of music, no tones of kindness, no gestures of gentleness and grace, no delicate attentions, no ladies' presence, no social circle, no books, no home, no church;—Good God! what a heathenish barbarism of coarse instincts, and irreverence, and insulting equalities, and all manner of gracelessnesses, to bring the dangerous impressionability of fine childhood to! The boy was nervous, sensitive, of a spirit quick to take alarms or hurts, —physically unprepared to wrestle with arduous toil, privation, and exposure,—most apt for the teachings of gentleness and taste. It was cruel to think—he could wish him dead first—that his clean, white mind must become smeared and spotted here, his well-tuned ear reconciled to loud discords, and his fine eye at peace with deformity; but there was no help for it.” And then, as though he had suddenly detected in my face an expression of surprised discovery, he said, “But I am sure I do not know how I came to say so much, or let myself be tedious with sickly egotisms to a polite, but indifferent, stranger. If you have gathered from them more than I meant should appear, you will at least do me the justice to believe that I have not been boasting of what I regard as a calamity.”

I essayed to reassure him by urging upon his consideration the manifest advantages of courage, self-reliance, ingenuity, quick and economical application of resources, independence, and perseverance, which his son, if well-trained, must derive from even those rude surroundings,—at the same time granting the necessity of sleepless vigilance and severe restraints. But he only shook his head sadly, and said, “No doubt, no doubt; and I hope, Sir, the fault is in myself, that I do not appreciate the force and value of all that.”

The subject was so plainly full of a peculiar pain for him, he was so ill at mind on this point, that I could not

find it in my heart to pursue it further at the cost of his feelings. So we talked of other things: of gold, and the placers, and their unimpaired productiveness,—of the prospects of the country, and of the character the mineral element must stamp upon its politics, its commerce, and its social system,—of San Francisco, and all the enchantments of its sudden upspringing,—of *Alcaldes* and town-councils,—of hounds and gamblers,—of real estate and projected improvements,—of canvas houses, and iron houses, and fires,—of sudden fortunes, and as sudden failures,—of speculations and markets, and the prices of clothing, provisions, and labor,—of intemperance, disease, and hospitals,—of brawls, murder, and suicide,—till we had exhausted all the Californian budget; and then I bade him good day. He parted with me with flattering reluctance, cordially shaking my hand and urging me to repeat my visit in a few days, when he should be sufficiently forward with the picture to admit me to a sight of it. I confessed my impatience for the interval to pass; for my interest was now fully awakened and very lively;—so well-informed and so polished a gentleman, so accomplished and so fluent, so ill-starred and sad, so every way a man with a history!

I saw much of Pintal after this, and he sometimes visited me at my office. Impelled by increasing admiration and esteem, I succeeded by the exercise of studious tact in ingratiating myself in his friendship and confidence; he talked with freedom of his feelings and his affairs; and although he had not yet admitted me to the knowledge of his past, he evinced but little shyness in speaking of the present. At our interviews in his tent I seldom met his wife; indeed, I suspected him of contriving to keep her out of the way; for I was always told she had just stepped out;—or if by chance I found her there, she was never again vulgarly loquacious, but on some pretext or other at once took herself away. On the other hand, the child was rarely absent,—from which I argued

that I was in favor; nor was his pretty prattle, even his boldest communicativeness, harshly checked, save when, as I guessed, he was approaching too near some forbidden theme. Then a quick flash from his father's eye instantaneously imposed silence upon him: as if that eye were an evil one, and there were a malison in its glance, the whole demeanor of the child underwent at once a magical change; the foreboding look took possession of his beautiful eyes, the anxious lines appeared around his mouth, his lips and chin became tremulous, his head drooped, he let fall my hand which he was fond of holding as he talked, and quietly, penitently slunk away; and though he might presently be recalled by his father's kindest tones, his brightness would not be restored that time.

This mysterious, severe understanding between the father and the child affected me painfully; I was at a loss to surmise its nature, whence it proceeded, or how it could be; for Ferdy evinced in his every word, look, movement, an undivided fondness for his father. And in his tender-proud allusions to the boy, at times let fall to me,—in the anxious watchfulness with which he followed him with his eye, when an interval of peace and comparative happiness had set childhood's spirit free, and lent a degree of graceful gayety to all his motions,—I saw the brimming measure of the father's love. Could it be but his morbidly repellant pride, his jealous guarding of the domestic privacies, his vigilant pacing up and down forever before the close-drawn curtain of the heart?—was there no Bluebeard's chamber there? No! Pride was all the matter,—pride was the Spartan fox that tore the vitals of Pintal, while he but bit his lips, and bowed, and passed.

Among the pictures in Pintal's tent was one which had in an especial manner attracted my attention. It was a cabinet portrait, nearly full-length, of a venerable gentleman, of grave but benevolent aspect, and an air of imposing dignity.

Care had evidently been taken to render faithfully the somewhat remarkable vigor of his frame; his iron-gray hair was cropped quite short, and he wore a heavy grizzled moustache, but no other beard; the lines of his mouth were not severe, and his eye was soft and gentle. But what made the portrait particularly noticeable was the broad red ribbon of a noble order crossing the breast, and a Maltese cross suspended from the neck by a short chain of massive and curiously wrought links. I had many times been on the point of asking the name of this singularly handsome and distinguished-looking personage; but an instinctive feeling of delicacy always deterred me.

One day I found little Ferdy alone, and singing merrily some pretty Spanish song. I told him I was rejoiced to find him in such good spirits, and asked him if he had not been having a jolly romp with the American carpenter's son, who lived in the Chinese house close by. My question seemed to afflict him with puzzled surprise;—he half smiled, as if not quite sure but I might be jesting.

"Oh, no, indeed! I have never played with him; I do not know him; I never play with any boys here. Oh, no, indeed!"

"But why not, Ferdy? What! a whole month in this tiresome tent, and not make the acquaintance of your nearest neighbor,—such a sturdy, hearty chunk of a fellow as that is?—I have no doubt he's good-natured, too, for he's fat and funny, tough and independent. Besides, he's a carpenter's son, you know; so there's a chance to borrow a saw to make the dog-house with. Who knows but his father will take a fancy to you,—I'm sure he is very likely to,—and make you a church dog-house, steeple and all complete and painted, and much finer than Charley Saunders's martin-box?"

"Oh, I should like to, so much! And perhaps he has a Newfoundlander with a bushy tail and a brass collar,—that would be nicer than a kangaroo. But—but—"

looking comically bothered,—“I never knew a carpenter’s son in my life. I am sure my father would not give me permission,—I am sure he would be very angry, if I asked him. Are they not very disagreeable, that sort of boys? Don’t they swear, and tear their clothes, and fight, and sing vulgar songs, and tell lies, and sit down in the middle of the street?”

Merciful Heaven! thought I,—here’s a crying shame! here’s an interesting case for professors of moral hygiene! An apt, intelligent little man, with an empty mind, and a by-no-means overloaded stomach, I’ll engage,—with a pride-paralyzed father, and a beer-bewitched slattern of a mother,—with his living to get, in San Francisco, too, and the world to make friends with,—who has never enjoyed the peculiar advantages to be derived from the society of little dirty boys, never been admitted to the felicity of popular songs, nor exercised his pluck in a rough-and-tumble, nor ventilated himself in wholesome “giddy, giddy, gout,”—to whom dirt-pies are a fable!

“Ferdy,” said I, “I’ll talk with your father myself. But tell me, now, what makes you so happy to-day.”

“My father got a letter this morning,”—a mail had just arrived; it brought no smile or tear for me,—no parallelogram of tragedy or comedy in stationery,—“such a pleasant one, from my uncle Miguel, at Florence, in Italy, you know. He is well, and quite rich, my father says; they have restored to him his property that he thought was all lost forever, and they have made him a chevalier again. But I am sure my father will tell you all about it, for he said he did hope you would come to-day; and he is so happy and so kind!”

“They have made him a chevalier again,” I wondered. “Your uncle Miguel is your father’s brother, then, Ferdy. And did you ever see him?”

Before he could reply, Pintal entered, stepping smartly, his color heightened with happiness, his eyes full of an extraordinary elation.

“Ah! my dear Doctor, I am rejoiced to find you here; I have been wishing for you. See! your picture is finished. Tell me if you like it.”

“Indeed, a work of beauty, Pintal.”

“To me, too, it never looked so well before; but I see things with glad eyes to-day. I have much to tell you. Ferdy, your mother is dining at the restaurant; go join her. And when you have finished your dinner, ask her to take you to walk. Say that I am engaged. Would you not like to walk, my boy, and see how fast the new streets spring up? When you return, you can tell me of all you saw.”

The boy turned up his lovely face to be kissed, and for a moment hung fondly on his father’s neck. The poor painter’s lips quivered, and his eyes winked quickly. Then the lad took his cap, and without another word went forth.

“I am happy to-day, Doctor,—Heaven save the mark! My happiness is so much more than my share, that I shall insist, will ye, nill ye, on your sharing it with me. I have a heart to open to somebody, and you are the very man. So, sit you down, and bear with my egotism, for I have a little tale to tell you, of who I am and how I came here. The story is not so commonplace but that your kindness will find, here and there, an interesting passage in it.

“I have seen that that picture,”—indicating the one I have last described,—“attracted your attention, and that you were prevented from questioning me about it only by delicacy. That is my father’s likeness. He was of English birth, the younger son of a rich Liverpool merchant. An impulsive, romantic, adventurous boy, seized early with a passion for seeing the world, his unimaginative, worldly-wise father, practical and severe, kept him within narrow, fretting bounds, and imposed harsh restraints upon him. When he was but sixteen years old, he ran away from home, shipped before the mast, and, after several long voyages, was discharged, at his own request, at Carthage, where he

entered a shipping-house as clerk, and, having excellent mercantile talents, was rapidly promoted.

"Meantime, through a sister, the only remaining child, except a half-witted brother, he heard at long intervals from home. His father remained strangely inexorable, fiercely forbade his return, and became violent at the slightest mention of his name by his sister, or some old and attached servant; he died without bequeathing his forgiveness, or, of course, a single shilling. But the young man thrived with his employers, whose business growing rapidly more and more prosperous, and becoming widely extended, they transferred him to a branch house at Malaga. Here he formed the acquaintance of the Don Francisco de Zea-Bermudez, whose rising fortunes made his own.

"Zea-Bermudez was at that time engaged in large commercial operations. Although, under the diligent and ambitious teaching of his famous relative, the profound, sagacious, patriotic, bold, and gloriously abused Jovellanos, he had become accomplished in politics, law, and diplomacy, he seemed to be devoting himself for the present to large speculations and the sudden acquisition of wealth, and to let the state of the nation, the Cortes, and its schemes, alone.

"Only a young, beautiful, and accomplished sister shared his splendid establishment in Malaga; and for her my father formed an engrossing attachment, reciprocated in the fullest, almost simultaneously with his friendship for her brother. Zea favored the suit of the high-spirited and clever young Englishman, whose intelligence, independence, and perseverance, to say nothing of his good looks and his engaging manners, had quite won his heart. By policy, too, no less than by pleasure, the match recommended itself to him;—my father would make a famous junior-partner. So they were married under the name of Pintal, bestowed upon his favorite English clerk by the adventurous first patron at Carthagena, who had found the

boy provided with only a 'purser's name,' as sailors term it.

"I will not be so disrespectful to the memory of my distinguished uncle, nor so rude toward your intelligence, my friend, as to presume that you are not familiar with the main points of his history,—the great strides he took, almost from that time, in a most influential diplomatic career: the embassy to St. Petersburg, and the Romanzoff-Bermudez treaty of amity and alliance in 1812, by which Alexander acknowledged the legality of the ordinary and extraordinary Cortes of Cadiz; the embassy to the Porte in 1821; his recall in 1823, and extraordinary mission to the Court of St. James; his appointment to lead the Ministry in 1824; my father's high place in the Treasury; their joint-efforts from this commanding position to counteract the violence of the Apostolical party, to meet the large requisitions of France, to cover the deficit of three hundred millions of reals, and to restore the public credit; the insults of the Absolutists, and their machinations to thwart his liberal and sagacious measures; his efforts to resign, opposed by the King; the suppression of a formidable Carlist conspiracy in 1825; the execution of Bessières, and the 'ham-stringing' of Absolutist leaders; his dismissal from the Ministry in October, 1825, Ferdinand yielding to the Apostolical storm; the embassy to Dresden; his appointment as Minister at London.

"And here my story begins, for I was his Secretary of Legation then; while my brother Miguel, younger than I, was *attaché* at Paris, where he had succeeded me, on my promotion,—a promotion that procured for me congratulations for which I could with difficulty affect a decent show of gratitude, for I knew too well what it meant. It was not the enlightened, liberal Minister I had to deal with, but the hard, proud uncle, full of expediences, and calculating schemes for family advancement, and the exaltation of a lately obscure name.

"In Paris I had been admitted first to the flattering friendship, and then to the

inmost heart of—of a most lovely young lady, as noble by her character as by her lineage,”—and he glanced at the open sketch-book.

“The Lady Angelica,” I quietly said.

“Sir!” he exclaimed, quickly changing color, and assuming his most frigid expression and manner. But as quickly, and before I could speak, his sad smile and friendly tone returned, and he said,—

“Ah! I see,—Ferdy has been babbling of his visions and his dreams. Yes, the Lady Angelica. ‘Very charming,’ my uncle granted, ‘but very poor; less of the angel and more of the heiress was desirable,’ he said,—‘less heaven and more land. A decayed family was only a little worse than an obscure one,—a poor knight not a whit more respectable than a rich merchant. I must relinquish my little romance,—I had not time for it; I had occupation enough for the scant leisure my family duties’—and he laid stress on the words—‘left me in the duties of my post. He would endeavor to find arguments for the lady and employment for me.’

“It was in vain for me to remonstrate,—I was too familiar with my uncle’s temper to waste my time and breath so. I would be silent, I resolved, and pursue my honorable and gallant course without regard to his scandalous schemes. I wrote to the ‘Lady Angelica,’—since Ferdy’s name for her is so well chosen,—telling her all, giving her solemn assurances of my unchangeable purpose toward her, and scorn of my uncle’s mercenary ambition. She replied very quietly: ‘She, also, was not without pride; she would come and see for herself’;—and she came at once.

“The family arrived in London in the evening. Within two hours I was sent—after the fashion of an old-time courier, ‘Ride! ride! ride!—for your life! for your life! for your life!’—to Turin with despatches, and sealed instructions for my own conduct, not to be opened till I arrived; then I found my orders were, to remain at Turin until it should be my uncle’s pleasure to recall me.

“I had not been in Turin a month when a letter came from—the Lady Angelica. ‘It was her wish that all intercourse between us, by interview or correspondence, should cease at once and forever. She assumed this position of her own free will, and she was resolute to maintain it. She trusted that I would not inquire obtrusively into her motives,—she had no fear that I would doubt that they were worthy of her. Her respect for me was unabated,—her faith in me perfect. I had her blessing and her anxious prayers. I must go on my way in brave silence and patience, nor ever for one moment be so weak as to fool myself into a hope that she would change her purpose.’

“What should I do? I had no one to advise with; my mother, whose faith in her brother’s wisdom was sure, was in Madrid, and my father had been dead some years. At first my heart was full of bitter curses, and my uncle had not at his heels a heartier hater than I. Then came the merely romantic thought, that this might be but a test she would put me to,—that he might be innocent and ignorant of my misfortune. With the thought I flung my heart into writing, and madly plied her with one long, passionate letter after another. I got no answers; but by his spies my uncle was apprised of all I did.

“About this time,—it was in 1832,—Zea-Bermudez was recalled to Madrid in a grave crisis, and appointed to the administration of foreign affairs. Ferdinand VII. was apparently approaching the end of his reign and his life. The Apostolical party, exulting in their strength, and confiding in those well-laid plans which, with mice and men, ‘gang aft agley,’ imprudently showed their hand, and suffered their favorite project to transpire; which was, to set aside the ordinance by which the King had made null the Salic law, in favor of his infant daughter, and to support the pretensions of the King’s brother, Carlos, to the throne.

“By this stupid flourish the Apostolical

party threw themselves bound at the feet of Zea. All of their persuasion who filled high places under government were without ceremony removed, and their seats filled by Liberals. Many of them did not escape without more crippling blows. As for me, I looked on with indifference, or at most some philosophic sneers. What had I to fear or care? In my uncle's estimation, my politics had been always healthy, no doubt; and although he had on more than one occasion hinted, with sarcastic wit, that such a lady's-man must, of his devoir, be a 'galant champion of the Salic law,' and dropped something rude and ill-natured about my English blood,—still, that was only in his dyspeptic moods; his temper was sure to improve, I fancied, with his political and material digestion.

"But I deceived myself. When, in the name of the infant Queen, Isabella Segunda, and in honor of the reëstablishment of order and public safety, the pleasant duty devolved upon Zea-Bermudez of awarding approbation and encouragement to all the officers, from an ambassador to the youngest *attaché* of foreign legations, and presenting them with tokens of the nation's happiness in the shape of stars, and seals with heraldic devices, and curious chains of historic significance, not even a paltry ribbon fell to my share, but only a few curt lines of advice, 'to look well to my opinions, and be modest,—obediently to discharge the duties prescribed to me, and remember that presumption was a fault most intolerable in a young gentleman so favored by chance as to be honored with the confidence of government.'

"That exhausted the little patience I had left. Savagely I tore the note into contemptible fragments, tossed into my travelling-boxes as much of my wardrobe as happened to be at hand, consigned to a sealed case my diplomatic instructions and all other documents pertaining to my office, placed them in the hands of a confidential friend, Mr. Ballard, the British Agent, and secretly took passage for England, where, without losing an hour,

I made the best of my way to the abode of an ambitious cockney wine-merchant, to whose daughter I had not been disagreeable in other days, and within a fortnight married her. You have seen the lady, Sir," he said, eyeing me searchingly as he spoke, with a sardonic smile,—the only ugly expression I ever saw him wear.

"Certain title-deeds and certificates of stock, part of my father's legacy, which, as if foreseeing the present emergency, I had brought away with me, were easily converted into cash. I had then twenty thousand sterling pounds, to which my father-in-law generously added ten thousand more, by way of portion with his daughter.

"And now to what should I betake myself? I had small time to cast about me, and was easy to please; any tolerably promising enterprise, so the field of it were remote, would serve my purpose. The papers were full of Australian speculations, the wonderful prosperity of the several colonies there, the great fortunes suddenly made in wool. Good! I would go to Australia, and be a gentle shepherd on an imposing scale. But first I sought out my father's old friends, my Lords Palmerston and Brougham, and the Bishop of Dublin, and besought the aid of their wisdom. With but slight prudential hesitation they with one accord approved my project. Observe: a first-rate Minister, especially if he be a very busy one, always likes the plan that pleases his young friend best,—that is, if it be not an affair of State, and all the risks lie with his young friend. They would have spoken of Turin and Zea-Bermudez; but I had been bred a diplomat and knew how to stick to my point, which, this time, was wool. In another fortnight I had sailed for Sydney with my shekels and my wife. But first, and for the first time, I caused the announcement of my marriage to appear in the principal papers of London, Paris, St. Petersburg, and Madrid.

"Arrived in Australia, I at once made myself the proprietor of a considerable

farm, and stocked it abundantly with sheep. Speculation had not yet burst itself, like the frog in the fable; and large successes, as in water-lot and steamboat operations here, to-day, were the rule. On the third anniversary of my landing at Sydney, I was worth three hundred thousand pounds, and my commercial name was among the best in the colony. Six months after that, the rot, the infernal rot, had turned my thriving populous pastures into shambles for car-carrion-mutton, and I had not sixpence of my own in the wide world. A few of the more generous of my creditors left me a hundred pounds with which to make my miserable way to some South American port on the Pacific.

"So I chose Valparaiso, to paint miniatures, and teach English, French, Italian, and German in. But earthquakes shook my poor house, and the storm-fiend shook my soul with fear;—for skies in lightning and thunder are to me as the panorama and hurly-burly of the Day of Wrath, in all the stupid rushing to and fro and dazed stumbling of Martin's great picture. I shall surely die by lightning; I have not had that live shadow of a sky-reaching fear hanging over me, with its black wings and awful mutterings, so long for nothing; in every flash my eyes are seathed by the full blaze of hell. If I had been deaf and blind, I might have lived in Valparaiso. As it was, I must go somewhere where I need not sit all day and night stopping my ears and with my face covered, fearing that the rocks would fall upon me too soon.

"So, with my wife and the child,—we have had no other, thank God!—I got round Cape Horn—Heaven knows how! I dare not think of that time—to the United States. We were making for Boston; but the ship, strained by long stress of heavy weather, sprung a leak, and we put in at Baltimore. I was pleased with the place; it is picturesque, and has a kindly look; and as all places were alike to me then, save by the choice of a whim, I let go my weary anchor there.

"But the Baltimoreans only admired

my pictures,—they did not buy them; they only wondered at my polyglot accomplishment, and were content with ringing silly-kind changes on an Encyclopædic compliment about the Admirable Crichton, and other well-educated personages, to be found alphabetically embalmed in Conversations-Lexicons,—they did not inquire into my system of teaching, or have quarterly knowledge of my charges. So I fled from Baltimore, pretty speeches, and starvation, to San Francisco, plain talk, and pure gold. And now—see here, Sir!—I carry these always about with me, lest the pretty pickings of this Tom Tiddler's ground should make my experience forget."

He drew from his pocket an "illuminated" card, bearing a likeness of Queen Victoria, and a creased and soiled bit of yellow paper. The one was, by royal favor, a complimentary pass to a reserved place in Westminster Abbey, on the occasion of the coronation of her Britannic Majesty, "For the Señor Camillo Alvarez y Pintal, Chevalier of the Noble Order of the Cid, Secretary to His Catholic Majesty's Legation near the Court of St. James,"—the other, a Sydney pawnbroker's ticket for books pledged by "Mr. Camilla Allverris i Pintal." He held these contrasted certificates of Fortune,—her mocking visiting-cards, when she called on him in palace and in cabin,—one in each hand for a moment; and bitterly smiling, and shaking his head, turned from one to the other. Then suddenly he let them fall to the ground, and, burying his face in his hands, was roughly shaken through all his frame by a great gust of agony.

I laid my hand tenderly on his shoulder: "But, Pintal," I said,—“the Lady Angelica,—tell me why she chose that course.”

In a moment the man was fiercely aroused. "Ah, true! I had forgotten that delectable passage in my story. Why, man, Bermudez went to her, told her that my aspirations and my prospects were so and so,—daring, brilliant,—that she, only she, stood in the way, an im-

passable stumbling-block to my glorious advancement,—told her, (devil!) that, with all my fine passion for her, he was aware that I was not without embarrassment on this score,—appealed to her disinterested love, to her pride,—don't you see?—to her pride."

"And where is she now, Pintal?"

No anger now, no flush of excitement;—the man, all softened as by an angel's touch, arose, and, with clasped hands and eyes upturned devoutly, smiled through big tears, and without a word answered me.

I, too, was silent. Whittier had not yet written,—

"Of all sad words of tongue or pen

The saddest are these: 'It might have been!'

"Ah, well! for us all some sweet hope lies
Deeply buried from human eyes;

"And, in the hereafter, angels may
Roll the stone from its grave away!"

Then Pintal paced briskly to and fro a few turns across the narrow floor of his tent, and presently stopping, said,—his first cheerfulness, with its unwonted smile, returning,—

"But I must tell you why I should be happy to-day. I have a letter from my brother Miguel, who is Secretary to the Legation at the Porte. He has leave of absence, and is happy with his dearest friends in Florence. He shared my disgrace until lately, but bore it patiently; and now is reinstated in his office and his honors, a large portion of his property restored, which had been temporarily confiscated, while he was under suspicion as a Carlist. He is authorized to offer me pardon, and all these pretty things, if I will return and take a new oath of allegiance."

"And you will accept, Pintal?"

"Why, in God's name, what do you take me for?—Pardon! I forgot myself, Sir. Your question is a natural one. But no, I shall surely not accept. Zea-Bermudez is dead, but there is a part of me which can never die; and I am happy

to-day because I feel that I am not so poor as I thought I was."

Ferdy entered, alone. He went straight to his father and whispered something in his ear,—about the mother, I suspected, for both blushed, and Pintal said, with a vexed look,—“Ah, very well! never mind that, my boy.”

Then Ferdy threw off his cap and cloak, and, seating himself on a pile of books at his father's feet, quietly rested his head upon his knee. I observed that his face was vividly flushed, and his eyes looked weary. I felt his pulse,—it indicated high fever; and to our anxious questions he answered, that his head ached terribly, and he was “every minute hot or cold.” I persuaded him to go to bed at once, and left anxious instructions for his treatment, for I saw that he was going to be seriously ill.

In three days little Ferdy was with the Lady Angelica in heaven. He died in my arms, of scarlet fever. In the delirium of his last moments he saw *her*, and he departed with strange words on his lips: “I am coming, Lady, I am coming!—my father will be ready presently!”

Some strangers from the neighborhood helped me to bury him; and we laid him near the grave of the First Lady; but very soon his pretty bones were scattered, and there's a busy street there now.

Pintal, when I told him that the boy was dead, only bowed and smiled. He did not go to the grave, he never again named the child, nor by the least word or look confessed the change. But when, a little later, a fire swept down Dupont Street and laid the poor tent in ashes, spoiling the desolate house whose beautiful *lar* had flitted,—when his wife went moaning maudlinly among the yet warm ashes, and groping, in mean misery, with a stick, for some charred nothing she would cheat the Spoiler of, there was a dangerous quality in Pintal's look, as, with folded arms and vacant eyes, he seemed to stare upon, yet not to see, the shocking scene. Presently the woman, poking with the stick, found something

under the ashes. With her naked hands she greedily dug it out;—it was a tin shaving-case. Another moment, and Pintal had snatched it from her grasp, torn it open, and had a naked razor in his hand. I wrested it from him, as he fairly foamed, and dragged him from the place.

A few days after that, I took leave of them on board a merchant ship bound for England, and with a heavy-hearted prayer sped them on their way. On the voyage, as Pintal stood once, trembling in a storm, near the mainmast, a flash of lightning transfixed him. — That was well! He had been distinguished by his sorrows, and was worthy of that special messenger.

That picture,—it was the first and last he painted in California. I kept it long, rejoicing in the admiration it excited, and only grieved that the poor comfort of the praises I daily heard lavished upon it could never reach him.

Once, when I was ill in Sacramento, my San Francisco house was burned, but not before its contents had been removed. In the hopeless scattering of furniture and trunks, this picture dis-

appeared,—no one knew whither. I sought it everywhere, and advertised for it, but in vain. About a year afterward, I sailed for Honolulu. I had letters of introduction to some young American merchants there, one of whom hospitably made me his guest for several weeks. On the second day of my stay with him, he was showing me over his house, where, hanging against the wall in a spare room, I found,—not the Pintal picture, but a Chinese copy of it, faithful in its every detail. There were the several alterations I had suggested, and there the rich, warm colors that Pintal's taste had chosen. Of course, it was a copy. No doubt, my picture had been stolen at the fire, or found its way by mistake among the "traps" of other people. Then it had been sold at auction,—some Chinaman had bought it,—it had been shipped to Canton or Hong Kong,—some one of the thousand "artists" of China Street or the Victoria Road had copied it for the American market. A ship-load of Chinese goods — Canton crape shawls, camphor-boxes, carved toys, curiosities, and pictures—had been sold in Honolulu,—and here it was.

THE HOUSE THAT WAS JUST LIKE ITS NEIGHBORS.

Oh, the houses are all alike, you know,—
 All the houses alike, in a row!
 You'll see a hat-stand in the hall,
 Against the painted and polished wall;
 And the threaded sunbeams softly fall
 On the long stairs, winding up, away
 Up to the garret, lone and gray:
 And you can hear, if you wait awhile,
 Odd little noises to make you smile;
 And minutes will be as long as a mile;—
 Just as they would in the house below,
 Were you in the entry waiting to go.

Oh, the houses are all alike, you know,—
 All the houses alike, in a row!

And the world swings sadly to and fro,—
Mayhap the shining, but sure the woe !
For in the sunlight the shadows grow
Over the new name on the door,
Over the face unseen before.
Yet who shall number, by any art,
The chasms that keep so wide apart
The dancing step and the weary heart ?
Oh, who shall guess that the polished wall
Is a headstone over his neighbor's hall ?

Yet the houses are just alike, you know,—
All the houses alike, in a row !
And solemn sounds are heard at night,
And solemn forms shut out the light,
And hideous thoughts the soul affright :
Death and despair, in solemn state,
In the silent, vaulted chambers wait ;
And up the stairs as your children go,
Spectres follow them, to and fro,—
Only a wall between them, oh !
And the darkest demons, grinning, see
The fairest angels that dwell with thee !

For the houses are all alike, you know,—
All the houses alike, in a row !
My chariot waited, gold and gay :
"I'll ride," I said, "to the woods to-day,—
Out to the blithesome woods away,—
Where the old trees, swaying thoughtfully,
Watch the breeze and the shadow's glee."
I smiled but once, with my joy elate,
For a chariot stood at my neighbor's gate,—
A grim old chariot, dark as fate.
"Oh, where are you taking my neighbor?" I cried.
And the gray old driver thus replied :—

"Where the houses are all alike, you know,—
Narrow houses, all in a row !
Unto a populous city," he saith :
"The road lies steep through the Vale of Death
Oh, it makes the old steeds gasp for breath !
There'll be a new name over the door,
In a place where *he's* never been before,—
Where the neighbors never visit, they say,—
Where the streets are echoless, night and day,
And the children forget their childish play.
And if you should live next door, I doubt
If you'd ever hear what they were about
Who lived in the next house in the row,—
Though the houses are all alike, you know !"

DAPHNAIDES:

OR THE ENGLISH LAUREL, FROM CHAUCER TO TENNYSON.

[Concluded.-]

DORSET was still Lord Chamberlain when the death of Shadwell placed the laurel again at his disposal. Had he listened to Dryden, William Congreve would have received it. Of all the throng of young gentlemen who gathered about the chair of the old poet at Wills's, Congreve was his prime favorite. That his advice was not heeded was long a matter of pensive regret :—

"Oh that your brows my laurel had sustained !
Well had I been deposed, if you had reigned !
The father had descended for the son ;
For only you are lineal to the throne.
Thus, when the state one Edward did depose,
A greater Edward in his room arose." *

The choice fell upon Nahum Tate :—

"But now not I, but poetry is cursed ;
For Tom the Second reigns like Tom the
First."

What particular quality recommended Tate we are not wholly able to explain. Dryden alleges "charity" as the single impulse of the appointment,—not the merit or aptitude of the candidate. But throughout life Dorset continued to countenance Nahum, serving as standing dedicatee of his works, and the prompter of several of them. We have remarked the want of judgment which Lord Dorset exhibited in his anxious patronage of the scholars and scribblers of his time,—a trait which stood the Blackmores, Bradys, and Tates in good stead.

But there was still another reason why Tate was preferred to Congreve. Dorset was too practised a courtier not to study the tastes of his master to good purpose. A liking for the stage, or a lively sense of poetic excellence, was not among the preferences of King William. The Laureate was sub-purveyor of amusement for the court ; but there was no longer a court to amuse, and the King himself

* DRYDEN, *Epistle to Wm. Congreve*, 1693.

never once in his reign entered a theatre. The piety of Queen Mary rendered her a rare attendant at the play-house. Plays were therefore no longer wanted. A playwright could not amuse. Congreve was a dramatist who had never exhibited even passable talent for other forms of poetical composition. But Tate's limited gifts, displayed to Dorset's satisfaction in various encomiastic verses addressed to himself, were fully equal to the exigencies of the office under the new order of things ; he was by profession a eulogist, not a dramatist. He was a Tory ; and the King was out of humor with the Whigs. He was pretentiously moral and exemplary of life and pen, and so suited the Queen. The duties of the office were conformed, as far as practicable, to the royal tastes. Their scene was transferred from the play-house to the church. On the anniversaries of the birthdays of the two sovereigns, and upon New Year's day, the Laureate was expected to have ready congratulatory odes befitting the occasion, set to music by the royal organist, and sung after service in the Chapel Royal of St. James. Similar duties were required when great victories were to be celebrated, or national calamities to be deplored. In short, from writing dramas to amuse a merry monarch and his courtiers, an office not without dignity, the Laureate sunk into a hired writer of adulatory odes ; a change in which originated that prevalent contempt for the laurel which descended from the era of Tate to that of Southey.

And yet the odes were in no sense more thoroughly Pindaric than in the circumstance of their flatteries being bought and paid for at a stated market value. The triumphal lyrics of Pindar himself were very far from being those spontaneous

and enthusiastic tributes to the prowess of his heroes, which the vulgar receive them for. Hear the painful truth, as revealed by the Scholiast.* Pytheas of Ægina had conquered in rough-and-tumble fight all antagonists in the Pancratium. Casting about for the best means of perpetuating his fame, he found the alternative to lie between a statuette to be erected in the temple of the hero-god, or one of the odes of the learned Theban. Choosing the latter, he proceeded to the poet's shop, cheapened the article, and would have secured it without hesitation, had not the extortionate bard demanded the sum of three drachmas,† nearly equal to half a dollar, for the poem, and refused to bate a fraction. The disappointed bargainer left, and was for some days decided in favor of the brazen image, which could be had at half the price. But reflecting that what Pindar would give for his money was a draft upon universal fame and immortality, while the statue might presently be lost, or melted down, or its identity destroyed, his final determination was in favor of the ode,—a conclusion which time has justified. Nor was the Bard of the Victors ashamed of his mercenary Muse. In the Second Isthmian Ode, we find an elaborate justification of his practice of praising for pay,—a practice, he admits, unknown to primitive poets, but rendered inevitable, in his time, by the poverty of the craft, and the degeneracy of the many, with whom, in the language of the Spartan sage, “money made the man.” With this Pindaric precedent, therefore, for selling Pindaric verses, it is no wonder, if the children of the Muse, in an age still more degenerate than that of their great original, found ample excuse for dealing out their wares at the best market. When such as Dryden and Pope lavished in preface and dedication their encomiums upon wealth and power, and waited eagerly for the golden guineas the bait

might bring them, we have no right to complain of the Tates and Eusdens for prostituting their neglected Muses for a splendid sum certain *per annum*. Surely, if royalty, thus periodically and mercenarily eulogized, were content, the poet might well be so. And quite as certainly, the Laureate stipend never extracted from poet panegyric more fulsome, ill-placed, and degrading, than that which Laureate Dryden volunteered over the pall of Charles II.*

Tate had been known as a hanger-on at the court of Charles, and as a feeble versifier and pamphleteer of the Tory school, before an alliance with Dryden gave him a certain degree of importance. The first part of “Absalom and Achitophel,” in 1681, convulsed the town and angered the city. Men talked for a time of nothing else. Tate, who was in the secret of its authorship, talked of it to Dryden, and urged an extension of the poem. Were there not enough of Shaftesbury's brisk boys running at large who deserved to be gibbeted? Were there not enough Hebrew names in the two books of Samuel to name each as appropriately as those already nomenclatured? But Dryden was indisposed to undertake a continuation which must fall short of what had been executed in the exact proportion that the characters left for it were of minor consequence. He recommended the task to Tate. Tate, flattered and nothing loath, accordingly sent to the press the second part of “Absalom and Achitophel,” embodying a contribution from Dryden of two hundred lines, which are as plainly distinguishable from the rest as a patch of cloth of gold upon cloth of frieze. The credit of this first alliance proved so grateful to Nahum, that he never after ventured upon literary enterprise without the aid of a similar coalition. His genius was inherently parasitic. In conjunction with Tory and Jesuit, he coalesced in the celebration of Castlemaine's gaudy reception at Rome.

* Schol. Vet. ad *Nem. Od.* 5.

† Commentators agree, we believe, that there was an error as to the sum. But we tell the story as we find it.

* The *Threnodia Augustalis*, 1685, where the eulogy is equitably distributed between the dead Charles and the living James.

In conjunction with Nicholas Brady, he prepared that version of the Psalms still appended to the English Book of Common Prayer. In conjunction with Dryden and others, he translated Juvenal. In conjunction with Lord Dorset, he edited a praiseworthy edition of the poems of Sir John Davies, which might otherwise have been lost or forgotten. In conjunction with Garth, he translated the "Metamorphoses" of Ovid. And in conjunction with Dr. Blow, he prepared those Pindaric flights which set King William asleep, and made Godolphin ashamed that the deeds of Marlborough should be so unworthily sung.

So long as he continued to enjoy the patronage of his liberal Mæcenas, Tate, with his aid, and these labors, and the income of his office, contrived to maintain the state of a gentleman. But Dorset died in 1706; the Laureate's dull heroics found no vent; and ere the death of Queen Anne,—an event which he bewailed in the least contemptible of his odes,—his revenues were contracted to the official stipend. The accession of the house of Hanover, in 1714, was the downfall of Toryism; and Tate was a Tory. His ruin was complete. The Elector spared not the house of Pindar. The Laureate was stripped of the wreath; his only income confiscated; and after struggling feebly with fate in the form of implacable creditors, he took refuge in the Old Mint, the resort of thieves and debtors, where in 1715 he died,—it is said, of starvation. Alas, that the common lot of Grub Street should have preceded in the person of laurelled royalty itself!

The coronation of Laureate Rowe was simultaneous with that of George I. His immediate claim to the honor dated back to the year 1702, when his play of "Tamerlane" had caught the popular fancy, and proved of vast service to the ministry at a critical moment in stimulating the national antipathy to France. The effect was certainly not due to artistic nicety or refinement. King William, as *Tamerlane*, was invested with all vir-

tues conceivable of a Tartar conqueror, united with the graces of a primitive saint; while King Louis, as *Bajazet*, fell little short of the perfections of Satan. These coarse daubs, executed in the broadest style of the sign-post school of Art, so gratified the mob, that for half a century their exhibition was called for on the night of November the fifth. Rowe, moreover, belonged to the straitest sect of Whiggery,—was so bigoted, indeed, as to decline the acquaintance of a Tory, and in play and prologue missed no chance of testifying devotion to liberal opinions.* His investiture with the laurel was only another proof that at moments of revolution extremists first rise to the surface. A man of affluent fortune, and the recipient of redundant favors from the new ministry, Rowe enjoyed the sunshine of life, while the dethroned Nahum starved in the Mint, as the dethroned James starved at Rome. Had the dramatic tribute still been exacted, there is little doubt that the author of the "Fair Penitent," and of "Jane Shore," would have lent splendid lustre to his office. His odes, however,—such, at least, as have been thought worthy of preservation among his works,—are a prodigious improvement upon the tenuity of his predecessor, and immeasurably superior in poetical fire and elegance to those of any successor antecedent to Warton.

For, following Nicholas Rowe, there

* Dr. Johnson tells the story of Rowe having applied to Lord Oxford for promotion, and being asked whether he understood Spanish. Elated with the prospect of an embassy to Madrid, Rowe hurried home, shut himself up, and for months devoted himself to the study of a language the possession of which was to make his fortune. At length, he reappeared at the Minister's *levée* and announced himself a Spanish scholar. "Then," said Lord Oxford, shaking his hand cordially, "let me congratulate you on your ability to enjoy *Don Quixote* in the original." Johnson seems to throw doubt on the story, because Rowe would not even speak to a Tory, and certainly would not apply to a Tory minister for advancement. But Oxford was once a Whig, and was in office as such; and it was probably at that period the incident occurred.

were dark ages of Laureate dulness,—a period redeemed by nothing, unless by the ridicule and controversy to which the wearers of the leaf gave occasion. Rowe died in the last days of 1718. The contest for the vacant place is presumed to have been unusually active. John Sheffield, Duke of Buckinghamshire, imitating Suckling's "Session of the Poets," brings all the versifiers of the time into the canvas, and after humorously dispatching one after another, not sparing himself, closes,—

"At last, in rushed Eusden, and cried, 'Who shall have it,
But I, the true Laureate, to whom the King gave it?'
Apollo begged pardon, and granted his claim,
But vowed, though, till then, he ne'er heard of his name." *

This Laurence Eusden was a scribbling parson, whose model in Art was Sir Richard Blackmore, and whose morality was of the Puritanical stripe. He had assisted Garth in his Ovid, assuming, doubtless upon high moral grounds, the rendering of the impurest fables. He had written odes to great people upon occasions more or less great, therein exhibiting some ingenuity in varying the ordinary staple of adulation. He had addressed an epithalamium to the Duke of Newcastle upon his marriage with the Lady Henrietta Godolphin,—a tribute so gratifying to his Grace, then Lord Chamberlain, as to secure the poet the place of Rowe. Eusden's was doubtless the least honorable name as yet associated with the laurel. His contemporaries allude to him with uniform disdain. Cooke, the translator of Hesiod, tells us,—

"Eusden, a laurelled bard, by fortune raised,
By very few was read, by fewer praised."

Pope, as cavalierly, in the "Dunciad":—

"She saw old Prynne in restless Daniel shine,
And Eusden eke out Blackmore's endless line."

Jacobs, in his "Lives of the Poets," speaks of him as a multifarious writer of unreadable trash,—and names but few of his

productions. The truth was, Eusden, secluding himself at his rectory among the fens of Lincolnshire, took no part in society, declined all association with the polite circles of the metropolis, thus inviting attacks, from which his talents were not respectable enough to screen him. That the loftiest revelations of poetry were not required of the Laureate of George I., who understood little or no English, there can be no question. George II. was equally insensible to the Muses; and had the annual lyrics been a mosaic of the merest gibberish, they would have satisfied his earlier tastes as thoroughly as the odes of Collins or Gray. A court, at which Pope and Swift, Young and Thomson were strangers, had precisely that share of Augustan splendor which enabled such as Eusden to shine lustreously.*

And so Eusden shone and wrote, and in the fulness of time—September, 1730—died and was buried; and his laurel others desired.† The leading claimants were Richard Savage and Colley Cibber. The touching story of Savage had won the heart of the Queen, and she had extracted from the King the promise of the Laureateship for its he-

* "Harmonious Cibber entertains

The court with annual birthday strains,
Whence Gay was banished in disgrace,
Where Pope will never show his face,
Where Young must torture his invention
To flatter knaves, or lose his pension."

SWIFT, *Poetry, a Rhapsody*, 1733.

† "Know, Eusden thirsts no more for sack or praise;

He sleeps among the dull of ancient days;
Safe where no critics damn, no duns molest,

Where wretched Withers, Ward, and Gildon rest,

And high-born Howard, more majestic sire,

With fool of quality completes the choir.
Thou, Cibber! thou his laurel shalt support;

Folly, my son, has still a friend at court."

Dunciad, Bk. I.

Warburton, by-the-by, exculpates Eusden from any worse fault, as a writer, than being too prolix and too prolific.—See Note to *Dunciad*, Bk. II. 291.

* *Battle of the Poets*, 1725.

ro. But, in the Minister, Sir Robert Walpole, Savage had an irreconcilable opponent. The apprehension of exciting powerful enmities, if he elevated the "Bastard" and his wrongs to so conspicuous a place, had, no doubt, an influence with the shrewd statesman. Possibly, too, so keen and practical a mind could not but entertain thorough contempt for the man, who, with brains, thews, and sinews of his own, a fair education, and as many golden opportunities of advancement as a reasonable being could desire, should waste his days in profitless mendicancy at the doors of great people, in whining endeavors to excite the sympathies of the indifferent, in poem and petition, in beastly drunkenness, or, if sober, in maudlin lamentations at the bitterness of his fortune. A Falconbridge would have better suited the ministerial taste. At all events, when his Majesty came to request the appointment of the Queen's *protégé*, he found that the patent had already been made out in the name of Cibber: and Cibber had to be Laureate. The disappointed one raved, got drunk, sober again, and finally wrote an ode to her Majesty, announcing himself as her "Volunteer Laureate," who should repeat his congratulations upon each recurrence of her birthday. The Queen, in pity, sent him fifty pounds, with a promise of an equal amount for each of his annual verses. And although Cibber protested, and ridiculed the new title, as no more sensible than "Volunteer Duke, Marquis, or Prime Minister," still Savage adhered to it and the pension tenaciously, sharing the Queen's favor with Stephen Duck, the marvellous "Thresher,"* whose effusions were still more to her taste. That the yearly fifty pounds were expended in inexcusable riot, almost as soon as received, was a matter of course. Upon the demise of Queen Caroline, in 1738, Savage experienced another proof

* Duck stands at the head of the prodigious school in English literature. All the poetical bricklayers, weavers, cobblers, farmer's boys, shepherds, and basket-makers, who have since astonished their day and generation, hail him as their general father.

of Walpole's dislike. The pensions found upon her Majesty's private list were all continued out of the exchequer, one excepted. The pension of Savage was the exception. Right feelingly, therefore, might he mourn his royal mistress, and vituperate the insensible minister; and that he did both with some degree of animation, the few who still read his poems will freely admit.

Colley Cibber had recommended himself to promotion by consistent partisanship, and by two plays of fair merit and exceeding popularity. "The Careless Husband" even Pope had praised; "The Nonjuror," an adaptation of Molière's "Tartuffe," was one of the most successful comedies of the period. The King had been delighted with it,—a circumstance doubtless considered by Sir Robert in selecting a rival for Savage. Cibber had likewise been the manager, time out of mind, of Drury-Lane Theatre; and if now and then he had failed to recognize the exact direction of popular taste,—as in the instance of the "Beggar's Opera," which he rejected, and which, being accepted by Manager Rich of Covent Garden, made Rich gay and Gay rich,—he was generally a sound stage-tactician and judicious caterer. His career, however, had not been so profitable that an additional hundred pounds should be a thing of indifference; in fact, the sum seemed to be just what was needed to enable him to forsake active duty on the stage,—for the patent was no sooner signed than the veteran retired upon his laurels.

The annals of the Laureateship, during Cibber's reign, are without incident.*

* The antiquary may be pleased to know that the "Devil" tavern in Fleet Street, the old haunt of the dramatists, was the place where the choir of the Chapel Royal gathered to rehearse the Laureate odes. Hence Pope, at the close of *Dunciad I.*,

"Then swells the Chapel-Royal throat;
'God save King Cibber!' mounts in every note.

Familiar White's 'God save King Colley!' cries;

'God save King Colley!' Drury-Lane replies;

The duties remained unchanged, and were performed, there is no reason to doubt, to the contentment of the King and court.* But the Laureate himself was peculiarly the object of sarcastic satire. The standing causes were of course in operation: the envy of rival poetasters, the dislike of political opponents, the enmities originating in professional disputes and jealousies. Cibber's manners had not been studied in the school of Chesterfield, although that school was then open and flourishing. He was rude, presumptuous, dogmatic. To superiors in rank he was grudgingly respectful; to equals and inferiors, insupportably insolent. But when to these aggravating traits he added the vanity of printing an autobiography, exposing a thousand assailable points in his life and character, the temptation was irresistible, and the whole population of Grub Street enlisted in a crusade against him.† Fortunately, beneath the crust of insolence and vanity, there was a substratum of genuine power in the Laureate's make, which rendered him not only a match for these, but for even a greater than these, the author of the "Dunciad." Pope's antipathy for the truculent actor dated some distance

Back to the 'Devil,' the last echoes roll,
And 'Coll!' each butcher roars at Hockley-hole."

* "On his own works with laurel crowned,
Neatly and elegantly bound,—
For this is one of many rules
With writing Lords and laureate fools,
And which forever must succeed
With other Lords who cannot read,
However destitute of wit,
To make their works for bookcase fit,—
Acknowledged master of those seats,
Cibber his birthday odes repeats."

CHURCHILL, *The Ghost*.

† Swift charges Colley with having wronged Grub Street, by appropriating to himself all the money Britain designed for its poets:—

"Your portion, taking Britain round,
Was just one annual hundred pound;
Now not so much as in remainder,
Since Cibber brought in an attainer,
Forever fixed by right divine,
A monarch's right, on Grub-Street line."

Poetry, a Rhapsody, 1733.

back. The latter accounts for it by telling, that at the first representation of Gay's "Three Hours after Marriage," in 1717, where one of the scenes was violently hissed, some angry words passed between the irritated manager and Pope, who was behind the scenes, and was erroneously supposed to have aided in the authorship. The odds of a scolding match must have been all in favor of the blustering Cibber, rather than of the nervous and timid Pope; but then the latter had a faculty of hate, which his antagonist had not, and he exercised it vigorously. The allusions to Cibber in his later poems are frequent. Thus, in the "Epistle to Dr. Arbuthnot":—

"And has not Colley still his Lord and whore?
His butchers Henley? his freemasons Moore?"

And again:—

"So humble he has knocked at Tibbald's door,

Has drunk with Colley, nay, has rhymed for Moore."

And in the "Imitation of Horace," addressed to Lord Fortescue:—

"Better be Cibber, I maintain it still,
Than ridicule all taste, blaspheme, quadrille."

"The Dunciad," as originally published in 1728, had Lewis Theobald for its hero. There was neither sense nor justice in the selection. Pope hated Theobald for presuming to edit the plays of Shakspeare with greatly more ability and acuteness than himself had brought to the task. His dislike had no better foundation. Neither the works, the character, nor the associations of the man authorized his elevation to the throne of dulness. The disproportion between the subject and the satire instantly impresses the reader. After the first explosion of his malice, it impressed Pope; and anxious to redeem his error, he sought diligently for some plan of de-throning Tibbald, and raising another to the vacant seat. Cibber, in the mean time, was elevated to the laurel, and that by statesmen whom it was the fate of Pope to detest in secret, and yet not dare to attack in print. The Fourth Book of the "Dunciad" appeared in

1742, and its attacks were mainly levelled at the Laureate. The Laureate replied in a pamphlet, deprecating the poet's injustice, and declaring his unconsciousness of any provocation for these reiterated assaults. At the same time he announced his determination to carry on the war in prose as long as the satirist should wage it in verse,—pamphlet for poem, world without end. Hostilities were now fairly established. Pope issued a fresh edition of his satire complete. The change he had long coveted he now made. The name of Cibber was substituted throughout for that of Theobald, the portraiture remaining the same. Johnson properly ridicules the absurdity of leaving the heavy traits of Theobald on the canvas, and simply affixing the name of his mercurial contemporary beneath; and, indeed, there is much reason to doubt whether the mean jealousy which inspired the first "Dunciad," or the blundering rage which disfigured the second, is in the worse taste. Cibber kept his engagement, replying in pamphlet. The immediate victory was unquestionably his. Morbidly sensitive to ridicule, Pope suffered acutely. Richardson, who found him once with the Cibberine leaves in his hand, declared his persuasion, from the spectacle of rage, vexation, and mortification he witnessed, that the poet's death resulted from the strokes of the Laureate. If so, we must concede him to have been the victor who laid his adversary at his feet on the field. Posterity, however, which listens only to the satirist, has judged differently and unjustly.* Theobald, though of no original talent, was certainly, in his generation, the most

successful illustrator of Shakspeare, and the first, though Rowe and Pope had preceded him in the effort, who had brought a sound verbal criticism to bear on the text. It is to his credit, that many of the most ingenious emendations suggested in Mr. Collier's famous folio were anticipated by this "king of the dunces"; and it must be owned, that his edition is as far superior to Warburton's and Hanmer's, which were not long after brought out with a deafening flourish of trumpets, as the editions of Steevens and Malone are to his. Yet, prompted by the "Dunciad," it is the fashion of literature to regard Theobald with compassion, as a block-head and empiric. Cibber escapes but little better, and yet he was a man of respectable talent, and played no second-rate part in the literary history of the time.

As Laureate Cibber drew near the end of earthly things, a desire, common to poetical as well as political potentates, possessed him,—a desire to nominate a successor. In his case, indeed, the idea may have been borrowed from "Mac-Flecknoe" or the "Dunciad." The Earl of Chesterfield, during his administration in Ireland, had discovered a rival to Ben Jonson in the person of a poetical bricklayer, one Henry Jones, whom his Lordship carried with him to London, as a specimen of the indigenous tribes of Erin. It was easier for this Jones to rhyme in heroics than to handle a trowel or construct a chimney. He rhymed, therefore, for the amusement and in honor of the polite circle of which Stanhope was the centre; the fashionable world subscribed magnificently for his volume of "Poems upon Several Occasions";* his tragedy, "The Earl of Essex," in the composition of which his patron is said to have shared, was universally applauded. Its introduction to the stage was the work of Cibber; and Cibber, assisted by Chesterfield, labored zealously to secure the author a reversion of the laurel upon his own lamented demise.

* London, 1749, 8vo.

* Whatever momentary benefit may result from satire, it is clear that its influence in the long run is injurious to literature. The satirist, like a malignant Archimago, creates a false medium, through which posterity is obliged to look at his contemporaries,—a medium which so refracts and distorts their images, that it is almost out of the question to see them correctly. There is no rule, as in astronomy, by which this refraction may be allowed for and corrected.

The effort was unsuccessful. Cibber's death occurred in December, 1757. The administration of the elder Pitt, which had been restored six months before, was insensible to the merits of the prodigious bricklayer. The wreath was tendered to Thomas Gray. It would, no doubt, have proved a grateful relief to royalty, obliged for twenty-seven years to listen twice yearly, if not oftener, to the monotonous felicitations of Colley, to hear in his stead the author of the "Bard," of the "Progress of Poetry," of the "Ode at Eton College." But the relief was denied it. Gray, ambitious only of the historical chair at Cambridge, declined the laurel. In the mean time, the claims of William Whitehead were earnestly advocated with the Lord Chamberlain, by Lord and Lady Jersey, and by the Earl Harcourt. A large vote in the House of Commons might be affected by a refusal. Pitt, who cared nothing for the laurel, but much for the votes, gave his assent, and Whitehead was appointed. Whitehead was the son of a baker, and, as an eleemosynary scholar at Winchester School, had won a poetical prize offered to the students by Alexander Pope. Obtaining a free scholarship at Cambridge, he became in due time a fellow of Clare Hall, and subsequently tutor to the sons of Lord Jersey and Lord Harcourt, with whom he made the tour of the Continent. Two of his tragedies, "The Roman Father," and "Creüsa," met with more success than they deserved. A volume of poems, not without merit, was given to the press in 1756, and met with unusual favor through the exertions of his two noble friends. That he was not a personal applicant for the laurel, nor conscious of the movement in his behalf, he takes occasion in one of his poems to state:—

"Howe'er unworthily I wear the crown,
Unasked it came, and from a hand unknown." *

From the warm championship of his friends, and the commendations of Mason, the friend of Gray, we infer that

* *Charge to the Poets*, 1762.

Whitehead was not destitute of fine social qualities. His verse, which is of the only type current a century ago, is elegantly smooth, and wearisomely tame,—nowhere rising into striking or original beauties. Among his merits as a poet modesty was not. His "Charge to the Poets," published in 1762, drew upon him the wrath and ridicule of his fellow-verse-wrights, and perhaps deservedly. Assuming, with amusing vanity, what, if ever true, was only so a century before or a half-century after, that the laurel was the emblem of supremacy in the realm of letters, and that it had been granted him as a token of his matchless merit,—

"Since my king and patron have thought fit

To place me on the throne of modern wit,—
he proceeds to read the subject throng a saucy lecture on their vices and follies,—

"As bishops to their clergy give their charge."

A good-natured dogmatism is the tone of the whole; but presumption and dogmatism find no charity among the *genus irritabile*, and Whitehead received no quarter. Small wits and great levelled their strokes at a hide which self-conceit had happily rendered proof. The sturdiest assailant was Charles Churchill. He never spares him,—

"Who in the Laureate chair—

By grace, not merit, planted there—
In awkward pomp is seen to sit,
And by his patent proves his wit:
For favors of the great, we know,
Can wit as well as rank bestow;
And they who, without one pretension,
Can get for fools a place or pension,
Must able be supposed, of course,
If reason is allowed due force,
To give such qualities and grace
As may equip them for the place.

"But he who measures as he goes
A mongrel kind of tinkling prose,
And is too frugal to dispense
At once both poetry and sense,—
Who, from amidst his slumbering guards,
Deals out a charge to subject bards,
Where couplets after couplets creep,
Propitious to the reign of sleep," etc.

Again, in the "Prophecy of Famine,"—

"A form, by silken smile, and tone
Dull and unvaried, for the Laureate known,

Folly's chief friend, Decorum's eldest son,
In every party found, and yet of none,
This airy substance, this substantial shade."

And elsewhere he begs for

"Some such draught . . .
As makes a Whitehead's ode go down,
Or slakes the feverette of Brown."

But satire disturbed not the calm equanimity of the pensioner and placeman.

"The laurel worn
By poets in old time, but destined now
In grief to wither on a Whitehead's brow,"

continued to fade there, until a whole generation of poets had passed away. It was not until the middle of April, 1785, that Death made way for a successor.

The suddenness of Whitehead's decease came near leaving a royal birthday unsung,—an omission scarcely pardonable with one of George the Third's methodical habits. An impromptu appointment had to be made. It was made before the Laureate was buried. Thomas Warton, the Professor of Poetry at Oxford, received the patent on the 30th of April, and his ode, married to fitting music, was duly forthcoming on the 24th of May. The selection of Warton was faultless. His lyrical verse was the best of a vicious school; his sonnets, according to that exquisite sonneteer, Sir Egerton Brydges, were the finest in the language; his "History of English Poetry," of which three volumes had appeared, displayed an intimate acquaintance with the early English writers. Nor should we pass unnoticed his criticisms and annotations upon Milton and Spenser, manifesting as they did the acutest sensitiveness to the finest beauties of poetry. If the laurel implied the premiership of living poets, Warton certainly deserved it. He was a head and shoulders taller than his actual contemporaries.* He stood in

the gap between the old school and the new, between the dead and the coming; Goldsmith and Johnson were no more; Cowper did not print his "Task" until the autumn of 1785; Burns made his *début* about the same moment; Rogers published his "Ode to Superstition" the next year; the famous "Fourteen Sonnets" of Bowles came two years later; while Wordsworth and Landor made their first appearance in 1793. Fortunate thus in time, Warton was equally fortunate in politics. He was an Oxford Tory, a firm believer in divine right and passive obedience, and a warm supporter of the new ministers. To the King, it may be added, no nomination could have given greater satisfaction. The official odes of Warton evince all the elegant traits which characterize his other writings. Their refined taste and exquisite modulation are admirable; while the matter is far less sycophantic than was to be expected from so devout a monarchist. The tender of the laurel certainly gratified him:—

"Yet still one joy remains, that not obscure
Nor useless all my vacant days have flowed,
From youth's gay dawn to manhood's prime
mature,
Nor with the Muse's laurel unbestowed."*

And, like Southey, he was not indisposed to enhance the dignity of the wreath by classing Chaucer and Spenser, as we have seen, among its wearers. The genuine claims of Warton to respect probably saved him from the customary attacks. Bating a few bungling thrusts amid the doggerel of "Peter Pindar," he escaped scathless,—gaining, on the other

fixed to the standard edition of the *Prose Works*, 1806. Symmons denies to Warton the possession of taste, learning, or sense. Certainly, to an American, the character of Joseph Warton, the brother of Thomas, is far more amiable. Joseph was as liberal as his brother was bigoted. While Thomas omits no chance of condemning Milton's republicanism, in his notes to the *Minor Poems*, Joseph is always disposed to sympathize with the poet. The same generous temper characterizes his commentary upon Dryden.

* *Sonnet upon the River Lodon.*

* If the reader cares to hear the best that can be said of Thomas Warton, let him read the *Life of Milton*, prefixed by Sir Egerton Brydges to his edition of the poet. If he has any curiosity to hear the other side, let him read all that Ritson ever wrote, and Dr. Charles Symmons, in the *Life of Milton*, pre-

hand, a far more than ordinary proportion of poetical panegyric.

"Affection and applause alike he shared;
All loved the man, all venerate the bard:
E'en Prejudice his fate afflicted hears,
And lettered Envy sheds reluctant tears.
Such worth the laurel could alone repay,
Profaned by Cibber, and condemned by Gray;
Yet hence its wreath shall new distinction claim,
And, though it gave not, take from Warton fame." *

The last of Warton's odes was written in his last illness, and performed three days after his death. Appositely enough, it was an invocation to Health, meriting more than ordinary praise for eloquent fervor. Warton died May 21st, 1790. The laurel was vacant for a month, when Henry James Pye was gazetted. There was hardly a hungry placeman in London who had not as just pretensions to the honor. What poetical gifts he had displayed had been in school or college exercises. His real claims consisted in having spent a fortune in electioneering for ministers; and these claims being pressed with unusual urgency at the moment of Warton's death, he was offered the Laureateship as satisfaction in part.† He eagerly accepted it, and received the balance two years later in the shape of a commission as Police Magistrate of Middlesex. Thereafter, like Henry Fielding, or Gilbert A'Beckett, he divided his days between penal law and polite literature. His version of the "Poetics" of Aristotle, with illustrations drawn liberally from recent authors, was perhaps begotten of a natural wish to satisfy the public that qualifications for the laurel were not wholly wanting. A barren devotion to the drama was always his foible. It was freely indulged. With few exceptions, his plays were affairs of

partnership with Samuel James Arnold, a writer of ephemeral popularity, whose tale of "The Haunted Island" was wildly admired by readers of the intensely romantic school, but whose tragedies, melodramas, comedies, farces, operas, are now forgotten. In addition to these auxiliary labors, which ripened yearly, Pye tried his hand at an epic,—the subject, King Alfred,—the plot and treatment not greatly differing from those which Blackmore brought to the same enterprise. The poem passed at once from the bookshop to the trunk-maker,—not, however, before an American publisher was found daring enough to reprint it. There are also to be mentioned translations from Pindar, Horace, and other classics, for Sharpe's edition of the British Poets, a collection to which he lent editorial aid. "Poet Pye" * was fortunate in escaping contemporary wit and satire. Gifford alluded to him, but Gifford's Toryism was security that no Tory Court-Poet would be roughly handled. Byron passed him in silence. The Smiths treated him as respectfully as they treated anybody. Moore's wit at the expense of the Regent and his courtiers had only found vent in the "Two-Penny Post-Bag" when Pye was gathered to his predecessors.

That calamity occurred in August, 1813. With it ended the era of birth-day songs and New-Year's verses. The King was mad; his nativity was therefore hardly a rational topic of rejoicing. The Prince Regent had no taste for the solemn inanity of stipulated ode, the performance of which only served to render insufferably tedious the services of the two occasions in the year when imperative custom demanded his attendance at the Chapel. Consultation was had with John Wilson Croker, Secretary of the Admiralty. Cro-

* Dr. Huddersford's *Salmagundi*.

† One of the earlier poems of Alexander Wilson, the ornithologist, was entitled, *The Laurel Disputed*, and was published in 1791. We have not met with it; but we apprehend, from title and date, that it is a *jeu d'esprit*, founded upon the recent appointment. The poetry of Wilson was characterized by much original humor.

* "Come to our *fête*, and show again
That pea-green coat, thou pink of men!
Which charmed all eyes, that last surveyed it;
When Brummel's self inquired, "Who made it?"
When Cits came wondering from the East,
And thought thee Poet Pye at least."
Two-Penny Post-Bag, 1812.

ker's sharp common-sense at once suggested the abolition of the Laureate duties, but the retention of the office as a sinecure. Walter Scott, to whom the place was offered, as the most popular of living poets, seconded the counsel of Croker, but declined the appointment, as beneath the dignity of the intended founder of a long line of border knights. He recommended Southey. He had already recommended Southey to the "*Quarterly*," and through the "*Quarterly*" to Croker, then and still its most brilliant contributor; and this second instance of disinterested kindness was equally efficacious. Southey was appointed. The tierce of Canary ceased to be a perquisite of the office, the Laureate disclaiming it; and instead of annual odes upon set occasions, such effusions as the poet might choose to offer at the suggestion of passing events were to be accepted as the sum of official duty. These were to be said or read, not sung,—a change that completed the radical revolution of the office.

However important the salary of a hundred pounds may have been to Southey, it is very sure that the laurel seemed to infuse all its noxious and poisonous juices into his literary character. His vanity, like Whitehead's, led him to regard his chaplet as the reward of unrivalled merit. His study-chair was glorified, and became a throne. His supremacy in poetry was as indubitable as the king's supremacy in matters ecclesiastical. He felt himself constrained to eliminate utterly from his conscience whatever traces of early republicanism, pantisocracy, and heresy still disfigured it; and to conform unreservedly to the exactest requirements of high Toryism in politics and high Churchism in religion. He was in the pay and formed a part of the government; could he do else than toil mightily in his department for the service of a master who had so sagaciously anticipated the verdict of posterity, as to declare him, who was the least popular, the greatest of living poets? He found it a duty to assume a rigid censorship over as many of his Majesty's lieges as were addicted to verse,—to

enact the functions of minister of literary police,—to reprehend the levity of Moore, the impiety of Byron, the democracy of Leigh Hunt, the unhappy lapse of Hazlitt, the drunkenness of Lamb. Assumptions so open to ridicule, and so disparaging to far abler men, told as disadvantageously upon his fame as upon his character. He became the butt of contemporary satire. Horace Smith, Moore, Shelley, Byron, lampooned him savagely. The latter made him the hero of his wicked "*Vision of Judgment*," and to him dedicated his "*Don Juan*." The dedication was suppressed; but no chance offered in the body of that profligate rhapsody to assail Bob Southey, that was not vigorously employed. The self-content of the Laureate armed him, however, against every thrust. Contempt he interpreted as envy of his sublime elevation:—

"Grin, Envy, through thy ragged mask of scorn!

In honor it was given, with honor it is worn."

Of course such matchless self-complacency defied assault.

Southey's congratulatory odes appeared as often as public occasion seemed to demand them. There were in rapid succession the "*Ode to the Regent*," the "*Carmen Triumphale*," the "*Pilgrimage to Waterloo*," the "*Vision of Judgment*," the "*Carmen Nuptiale*," the "*Ode on the Death of the Princess Charlotte*." The "*Quarterly*" exalted them, one and all; the "*Edinburgh*" poured upon them volleys of keen but ineffectual ridicule. At last the Laureate desisted. The odes no longer appeared; and during the long and dark closing years of his life, the only production of the Laureate pen was the yearly signature to a receipt for one hundred pounds sterling, official salary.

Robert Southey died in March, 1843. Sir Robert Peel, who had obliged Wordsworth the year before, by transferring the post in the excise, which he had so long held, to the poet's son, and substituting a pension for its salary, testified further his respect for the Bard of Rydal by

tendering him the laurel. It was not to be refused. Had the office been hampered with any demands upon the occupant for popular lyric, in celebration of notable events, Wordsworth was certainly the last man to place in it. His frigid nature was incapable of that prompt enthusiasm, without which, poetry, especially poetry responsive to some strong emotion momentarily agitating the popular heart, is lifeless and worthless. Fortunately, there were no such exactions. The office had risen from its once low estate to be a dignified sinecure. As such, Wordsworth filled it; and, dying, left it without one poetical evidence of having worn the wreath.

To him, in May, 1850, succeeded, who, as the most acceptable poet of the day, could alone rightly succeed, Alfred Tennyson, the actual Poet-Laureate. Not without opposition. There were those who endeavored to extinguish the office, and hang up the laurel forever,—and to that end brought pregnant argument to bear upon government. “The Times” was more than usually decided in favor of the policy of extinguishment. Give the salary, it was urged, as a pension to some deserving writer of verse, whose necessities are exacting; but abolish a title degraded by association with names and uses so unworthy, as to confer shame, not honor, on the wearer. The laurel is presumed to be granted to the ablest living English poet. What vocation have the Tite Barnacles, red-tapists, vote-mongers, of Downing Street to discriminate and determine this supreme poetical excellence, in regard to which the nicest critics, or the most refined and appreciative reading public may reasonably differ among themselves as widely as the stars? On the other hand, it was argued, that the laurel had, from its last two wearers, recovered its lost dignity. They had lent it honor, which it could not fail to confer upon any survivor, however great his name. If, then, the old odium had disappeared, why not retain the place for the sake of the ancient worthies whom tradition had handed down

as at one time or another connected with it? There was rarely difficulty in selecting from among contemporary poets one of preëminent talent, whose elevation to the laurel would offend none of his fellows. There was certainly no difficulty in the present case. There was palpable evidence that Tennyson was by all admission the hierophant of his order; and it would be time enough to dispense with the title when a future occasion should be at a loss to decide among contending candidates. The latter reasoning prevailed. Tennyson accepted the laurel, and with it a self-imposed obligation to make occasional acknowledgments for the gift.

The first opportunity presented itself in the issue of a fresh edition of his poems, in 1851. To these he prefixed some noble verses, dedicating the volumes to the Queen, and referring with as much delicacy as modesty to his place and his predecessor:—

“Victoria,—since your royal grace
To one of less desert allows
This laurel, greener from the brows
Of him that uttered nothing base.”—

The next occasion was of a different order. The hero of Waterloo ended his long life in 1852, and a nation was in mourning. Then, if ever, poets, whether laurelled or leafless, were called to give eloquent utterance to the popular grief; and Tennyson, of all the poets, was looked to for its highest expression. The Threnode of the Laureate was duly forthcoming. The public was, as it had no right to be, disappointed. Tennyson's Muse was ever a wild and wilful creature, defiant of rules, and daringly insubordinate to arbitrary forms. It could not, with the witling in the play, cap verses with any man. The moment its tasks were dictated and the form prescribed, that moment there was ground to expect the self-willed jade to play a jade's trick, and leave us with no decent results of inspiration. For odes and sonnets, and other such Procrustean moulds into which poetic thought is at times cast, Tennyson had neither gift

nor liking. When, therefore, with the Duke's death, came a sudden demand upon his Muse, and that in shape so solemn as to forbid, as the poet conceived, any fanciful license of invention, the Pindaric form seemed inevitable; and that form rendered a fair exhibition of the poet's peculiar genius out of the question. Strapped up in prescription, and impelled to move by official impulse, his Pegasus was as awkward as a cart-horse. And yet men did him the justice to say that his failure out-topped the success of others.

Far better—indeed, with the animating thrill of the war-trumpet—was “The Charge of the Light Brigade,” and simply because the topic admitted of whatever novelty of treatment the bias of the bard might devise. This is the Laureate's most successful attempt at strictly popular composition. It proves him to possess the stuff of a Tyrtæus or a Körner,—something vastly more stirring and stimulating than the usual staple of

“The dry-tongued laurel's pattering talk.” *

Howbeit, late may he have call for another war-song!

With the name of Tennyson we reach the term of our Laureate calendar. Long ages and much perilously dry research must he traverse who shall enlarge these outlines to the worthier proportions of history. Yet will the labor not be wholly barren. It will bring him in contact with all the famous of letters and poetry; he will fight over again numberless quarrels of authors; he will soar in boundless Pindaric flights, or sink, sooth to say, in unfathomed deeps of bathos. With one moral he will be profoundly impressed: Of all the more splendid results of genius which adorn our language and literature,

* TENNYSON, *Maud*.

—for the literature of the English language is ours,—not one owes its existence to the laurel; not one can be directly or indirectly traced to royal encouragement, or the stimulus of salary or stipend. The laurel, though ever green, and throwing out blossoms now and then of notable promise, has borne no fruit. We might strike from the language all that is ascribable solely to the honor and emolument of this office, without inflicting a serious loss upon letters. The masques of Jonson would be regretted; a few lines of Tennyson would be missed. For the rest, we might readily console ourselves. It may certainly be urged, that the laurel was designed rather as a reward than as a provocative of merit; but the allegation has become true only within the last half-century. Antecedently to Southey, it was the consideration for which return in poetry was demanded,—in the first instance, a return in dramatic poetry, and then in the formal lyric. It was put forth as the stimulus to works good in their several kinds, and it may be justly complained of for never having provoked any good works. To represent it as a reward commensurate with the merits of Wordsworth and Tennyson, or even of Southey, is to rate three first-class names in modern poetry on a level with the names of those third-rate “poetillos” who, during the eighteenth century, obtained the same reward for two intolerable effusions yearly. Upon the whole, therefore, we incline to the opinion that the laurel can no longer confer honor or profit upon literature. Sack is palatable, and a hundred pounds are eminently useful; but the arbitrary judgments of queens and courtiers upon poetical issues are neither useful nor palatable. The world may, in fact, contrive to content itself, should King Alfred prove the last of the Laureates.

WATER-LILIES.

THE inconstant April mornings drop showers or sunbeams over the glistening lake, while far beneath its surface a murky mass disengages itself from the muddy bottom, and rises slowly through the waves. The tasselled alder-branches droop above it; the last year's black-bird's nest swings over it in the grape-vine; the newly-opened *Hepaticas* and *Epigeas* on the neighboring bank peer down modestly to look for it; the water-skater (*Gerris*) pauses on the surface near it, casting on the shallow bottom the odd shadow of his feet, like three pairs of boxing-gloves; the *Notonecta*, or water-boatman, rows round and round it, sometimes on his breast, sometimes on his back; queer caddis-worms trail their self-made homesteads of leaves or twigs beside it; the *Dytiscus*, dorbug of the water, blunders clumsily against it; the tadpole wriggles his stupid way to it, and rests upon it, meditating of future frog-dom; the passing wild-duck dives and nibbles at it; the mink and musk-rat brush it with their soft fur; the spotted turtle slides over it; the slow larvæ of gauzy dragon-flies cling sleepily to its sides and await their change: all these fair or uncouth creatures feel, through the dim waves, the blessed longing of spring; and yet not one of them dreams that within that murky mass there lies a treasure too white and beautiful to be yet intrusted to the waves, and that for many a day that bud must yearn toward the surface, before, aspiring above it, as mortals to heaven, it meets the sunshine with the answering beauty of the Water-Lily.

Days and weeks have passed away; the wild-duck has flown onward, to dive for his luncheon in some remoter lake; the tadpoles have made themselves legs, with which they have vanished; the caddis-worms have sealed themselves up in their cylinders, and emerged again as winged insects; the dragon-flies have

crawled up the water-reeds, and, clinging with heads upward, (not downward, as strangely described in a late "North British Review,") have undergone the change which symbolizes immortality; the world is transformed from spring to summer; the lily-buds are opened into glossy leaf and radiant flower, and we have come for the harvest.

We lodged, last night, in the old English phrase, "at the sign of the Oak and Star." Wishing, not, indeed, like the ancient magicians, to gather magic berry and bud before sunrise, but at least to see these treasures of the lake in their morning hour, we camped last night on a little island, which one tall tree almost covers with its branches, while a dense undergrowth of young chestnuts and birches fills all the intervening space, touching the water all around the circular, shelving shore. Yesterday was hot, but the night was cool, and we kindled a gypsy fire of twigs, less for warmth than for society. The first gleam made the dark lonely islet into a cheering home, turned the protecting tree to a starlit roof, and the chestnut-sprays to illuminated walls. Lying beneath their shelter, every fresh flickering of the fire kindled the leaves into brightness and banished into dark interstices the lake and sky; then the fire died into embers, the leaves faded into solid darkness in their turn, and water and heavens showed light and close and near, until fresh twigs caught fire and the blaze came up again. Rising to look forth, at intervals, during the night,—for it is the worst feature of a night out-doors, that sleeping seems such a waste of time,—we watched the hilly and wooded shores of the lake sink into gloom and glimmer into dawn again, amid the low splash of waters and the noises of the night.

Precisely at half-past three, a song-sparrow above our heads gave one liquid trill, so inexpressibly sudden and delicious,

that it seemed to set to music every atom of freshness and fragrance that Nature held; then the spell was broken, and the whole shore and lake were vocal with song. Joining in this jubilee of morning, we were early in motion; bathing and breakfast, though they seemed indisputably in accordance with the instincts of the Universe, yet did not detain us long, and we were promptly on our way to Lily Pond. Will the reader join us?

It is one of those summer days when a veil of mist gradually burns away before the intense sunshine, and the sultry morning only plays at coolness, and that with its earliest visitors alone. But we are before the sunlight, though not before the sunrise, and can watch the pretty game of alternating mist and shine. Stray gleams of glory lend their trailing magnificence to the tops of chestnut-trees, floating vapors raise the outlines of the hills and make mystery of the wooded islands, and, as we glide through the placid water, we can sing, with the Chorus in the "Ion" of Euripides, "O immense and brilliant air, resound with our cries of joy!"

Almost every town has its Lily Pond, dear to boys and maidens, and partially equalizing, by its annual delights, the presence or absence of other geographical advantages. Ours is accessible from the larger lake only by taking the skiff over a narrow embankment, which protects our fairyland by its presence, and eight distant factories by its dam. Once beyond it, we are in a realm of dark Lethæan water, utterly unlike the sunny depths of the main lake. Hither the water-lilies have retreated, to a domain of their own. Darker than these dark waves, there stand in their bosom hundreds of submerged trees, and dismayed roots still upright, spreading their vast, uncouth limbs like enormous spiders beneath the surface. They are remnants of border wars with the axe, vegetable Witheringtons, still fighting on their stumps, but gradually sinking into the soft ooze, and ready, perhaps, when a score of centuries has piled two more

strata of similar remains in mud above them, to furnish foundations for a newer New Orleans; that city having been lately discovered to be thus supported.

The present decline in business is clear revenue to the water-lilies, and these waters are higher than usual because the idle factories do not draw them off. But we may notice, in observing the shores, that peculiar charm of water, that, whether its quantity be greater or less, its grace is the same; it makes its own boundary in lake or river, and where its edge is, there seems the natural and permanent margin. And the same natural fitness, without reference to mere quantity, extends to its children. Before us lie islands and continents of lilies, acres of charms, whole, vast, unbroken surfaces of stainless whiteness. And yet, as we approach them, every islanded cup that floats in lonely dignity, apart from the multitude, appears as perfect in itself, couched in white expanded perfection, its reflection taking a faint glory of pink that is scarcely perceptible in the flower. As we glide gently among them, the air grows fragrant, and a stray breeze flaps the leaves, as if to welcome us. Each floating flower becomes suddenly a ship at anchor, or rather seems beating up against the summer wind, in a regatta of blossoms.

Early as it is, the greater part of the flowers are already expanded. Indeed, that experience of Thoreau's, of watching them open in the first sunbeams, rank by rank, is not easily obtained, unless perhaps in a narrow stream, where the beautiful slumberers are more regularly marshalled. In our lake, at least, they open irregularly, though rapidly. But, this morning, many linger as buds, while others peer up, in half-expanded beauty, beneath the lifted leaves, frolicsome as Pucks or baby-nymphs. As you raise the leaf, in such cases, it is impossible not to imagine that a pair of tiny hands have upheld it, or else that the pretty head will dip down again, and disappear. Others, again, have expanded all but the inmost pair of white petals, and these spring apart at the first touch of the

finger on the stem. Some spread vast vases of fragrance, six or seven inches in diameter, while others are small and delicate, with petals like fine lace-work. Smaller still, we sometimes pass a flotilla of infant leaves, an inch in diameter. All these grow from the deep, dark water, —and the blacker it is, the fairer their whiteness shows. But your eye follows the stem often vainly into those sombre depths, and vainly seeks to behold Sabrina fair, sitting with her twisted braids of lilies, beneath the glassy, cool, but not translucent wave. Do not start, when, in such an effort, only your own dreamy face looks back upon you, beyond the gunwale of the reflected boat, and you find that you float double, self and shadow.

Let us rest our paddles, and look round us, while the idle motion sways our light skiff onward, now half-embayed among the lily-pads, now lazily gliding over intervening gulfs. There is a great deal going on in these waters and their fringing woods and meadows. All the summer long, the pond is bordered with successive walls of flowers. In early spring emerge the yellow catkins of the swamp-willow, first; then the long tassels of the graceful alders expand and droop, till they weep their yellow dust upon the water; then come the birch-blossoms, more tardily; then the downy leaves and white clusters of the medlar or shadbush (*Amelanchier Canadensis* of Gray); these dropping, the roseate chalices of the mountain-laurel open; as they fade into melancholy brown, the sweet Azalea uncloses; and before its last honey-eyed blossom has trailed down, dying, from the stem, the more fragrant Clethra starts out above, the button-bush thrusts forth its merry face amid wild roses, and the Clematis waves its sprays of beauty. Mingled with these grow, lower, the spiræas, white and pink, yellow touch-me-not, fresh white arrowhead, bright blue vervain and skullcap, dull snakehead, gray monkey-flower, coarse eupatoriums, milk-weeds, golden-rods, asters, thistles, and a host beside. Beneath, the brilliant

scarlet cardinal-flower begins to palisade the moist shores; and after its superb reflection has passed away from the waters, the grotesque witch-hazel flares out its narrow yellow petals amidst the October leaves, and so ends the floral year. There is not a week during all these months, when one cannot stand in the boat and wreath garlands of blossoms from the shores.

These all crowd around the brink, and watch, day and night, the opening and closing of the water-lilies. Meanwhile, upon the waters, our queen keeps her chosen court, nor can one of these mere land-loving blossoms touch the hem of her garment. In truth, she bears no sister near her throne. There is but this one species among us, *Nymphæa odorata*. The beautiful little rose-colored *Nymphæa sanguinea*, which once adorned the Botanic Garden at Cambridge, was merely an occasional variety of costume. She has, indeed, an English half-sister, *Nymphæa alba*, less beautiful, less fragrant, but keeping more fashionable hours,—not opening (according to Linnæus) till seven, nor closing till four. Her humble cousin, the yellow Nuphar, keeps commonly aloof, as becomes a poor relation, though created from the selfsame mud,—a fact which Hawthorne has beautifully moralized. The prouder Nelumbium, a second-cousin, lineal descendant of the sacred bean of Pythagoras, keeps aloof, through pride, not humility, and dwells, like a sturdy democrat, in the Far West.

But, undisturbed, the water-lily keeps her fragrant court, with few attendants. The tall pickerel-weed (*Pontederia*) is her gentleman-usher, gorgeous in blue and gold through July, somewhat rusty in August. The water-shield (*Hydroptelis*) is chief maid-of-honor; she is a highborn lady, not without royal blood indeed, but with rather a bend sinister; not precisely beautiful, but very fastidious; encased over her whole person with a gelatinous covering, literally a starched duenna. Sometimes she is suspected of conspiring to drive her mistress

from the throne; for we have observed certain slow watercourses where the leaves of the water-lily have been almost wholly replaced by the similar, but smaller, leaves of the water-shield. More rarely seen is the slender *Utricularia*, a dainty maiden, whose light feet scarce touch the water,—with the still more delicate floating white *Water-Ranunculus*, and the shy *Villarsia*, whose submerged flowers merely peep one day above the surface and then close again forever. Then there are many humbler attendants, *Potamogetons* or pond-weeds. And here float little emissaries from the dominions of land; for the fallen florets of the *Viburnum* drift among the lily-pads, with mast-like stamens erect, sprinkling the water with a strange beauty, and cheating us with the promise of a new aquatic flower.

These are the still life of this sequestered nook; but it is in fact a crowded thoroughfare. No tropic jungle more swarms with busy existence than these midsummer waters and their bushy banks. The warm and humming air is filled with insect sounds, ranging from the murmur of invisible gnats and midges, to the impetuous whirring of the great *Libellulæ*, large almost as swallows, and hawking high in air for their food. Swift butterflies glance by, moths flutter, flies buzz, grasshoppers and katydids pipe their shrill notes, sharp as the edges of the sunbeams. Busy bees go humming past, straight as arrows, express-freight-trains from one blossoming copse to another. Showy wasps of many species fume uselessly about, in gallant uniforms, wasting an immense deal of unnecessary anger on the sultry universe. Graceful, stingless *Sphexes* and *Ichneumon-fies* emulate their bustle, without their weapons. Delicate lady-birds come and go to the milkweeds, spotted almost as regularly as if Nature had decided to number the species, like policemen or hack-drivers, from one to twenty. Elegant little *Lepturæ* fly with them, so gay and airy, they hardly seem like beetles. *Phryganææ*, (néé caddisworms,) laceflies,

and long-tailed *Ephemera* flutter more heavily by. On the large alder-flowers clings the superb *Desmocerus palliatus*, beautiful as a tropical insect, with his steel-blue armor and his golden cloak (*pallium*) above his shoulders, grandest knight on this Field of the Cloth of Gold. The countless fireflies which spangled the evening mist now only crawl sleepily, daylight creatures, with the lustre buried in their milky bodies. More wholly children of night, the soft, luxurious *Sphinxes* (or hawk-moths) come not here; fine ladies of the insect world, their home is among gardens and green-houses, late and languid by day, but all night long upon the wing, dancing in the air with unwearied muscles till long past midnight, and supping on honey at last. They come not here; but the nobler butterflyflies soar above us, stoop a moment to the water, and then with a few lazy wavings of their sumptuous wings float far over the oak-trees to the woods they love.

All these hover near the water-lily; but its special parasites are an elegant beetle (*Donacia metallica*) which keeps house permanently in the flower, and a few smaller ones which tenant the surface of the leaves,—larva, pupa, and perfect insect, forty feeding like one, and each leading its whole earthly career on this floating island of perishable verdure. The “beautiful blue damsel-flies” alight also in multitudes among them, so fearless that they perch with equal readiness on our boat or paddle, and so various that two adjacent ponds will sometimes be haunted by two distinct sets of species. In the water, among the leaves, little shining whirlwigs wheel round and round, fifty joining in the dance, till, at the slightest alarm, they whirl away to some safer ballroom, and renew the merriment. On every floating log, as we approach it, there is a convention of turtles, sitting in calm debate, like mailed barons, till, as we approach, they plump into the water, and paddle away for some subaqueous Runnymede. Beneath, the shy and stately pickerel vanishes at a

glance, shoals of minnows glide, black and bearded pouts frisk aimlessly, soft water-lizards hang poised without motion, and slender pickerel-frogs cease occasionally their submerged croaking, and, darting to the surface with swift vertical strokes, gulp a mouthful of fresh air, and down again to renew the moist soliloquy.

Time would fail us to tell of the feathered life around us,—the blackbirds that build securely in these thickets, the stray swallows that dip their wings in the quiet waters, and the kingfishers that still bring, as the ancients fabled, halcyon days. Yonder stands, against the shore, a bittern, motionless in that wreath of mist which makes his long-legged person almost as dim as his far-off booming by night. There poises a hawk, before sweeping down to some chosen bough in the dense forest; and there fly a pair of blue-jays, screaming, from tree to tree. As for wild quadrupeds, the race is almost passed away. Far to the North, indeed, the great moose still browses on the lily-pads, and the shy beaver nibbles them; but here the few lingering four-footed creatures only haunt, but do not graze upon these floating pastures. Eyes more favored than ours may yet chance to spy an otter in this still place; there by the shore are the small footprints of a mink; that dark thing disappearing in the waters, yonder, a soft mass of drowned fur, is a "musquash." Later in the season, a mound of earth will be his winter dwelling-place; and those myriad muscle-shells at the water's edge are the remnant of his banquets,—once banquets for the Indians, too.

But we must return to our lilies. There is no sense of wealth like floating in this archipelago of white and green. The emotions of avarice become almost demoralizing. Every flower bears a fragrant California in its bosom, and you feel impoverished at the thought of leaving one behind. But after the first half-hour of eager grasping, one becomes fastidious, rather scorns those on which the wasps and flies have alighted, and seeks only

the stainless. But handle them tenderly, as if you loved them. Do not grasp at the open flower as if it were a peony or a hollyhock, for then it will come off, stalkless, in your hand, and you will cast it blighted upon the water; but coil your thumb and second finger affectionately around it, press the extended forefinger firmly to the stem below, and with one steady pull you will secure a long and delicate stalk, fit to twine around the graceful head of your beloved, as the Hindoo goddess of beauty encircled with a Lotus the brow of Rama.

Consider the lilies. All over our rural watercourses, at midsummer, float these cups of snow. They are Nature's symbols of coolness. They suggest to us the white garments of their Oriental worshippers. They come with the white roses and prepare the way for the white lilies of the garden. The white doe of Rylstone and Andrew Marvell's fawn might fitly bathe amid their beauties. Yonder steep bank slopes down to the lake-side, one solid mass of pale pink laurel, but, once upon the water, a purer tint prevails. The pink fades into a lingering flush, and the white creature floats peerless, set in green without and gold within. That bright circle of stamens is the very ring with which Doges once wedded the Adriatic, Venice has lost it, but it dropped into the water-lily's bosom, and there it rests forever. So perfect in form, so redundant in beauty, so delicate, so spotless, so fragrant,—what presumptuous lover ever dared, in his most enamored hour, to liken his mistress to a water-lily? No human Blanche or Lilian was ever so fair as that.

The water-lily comes of an ancient and sacred family of white-robed priests. They assisted at the most momentous religious ceremonies, from the beginning of recorded time. The Egyptian Lotus was a sacred plant; it was dedicated to Harpocrates and to the god Nofr Atmoo,—Nofr meaning *good*, whence the name of our yellow lily, Nuphar. But the true Egyptian flower was *Nymphaea Lo-*

tus, though *Nymphaea cœrulea*, Moore's "blue water-lilies," can be traced on the sculptures also. It was cultivated in tanks in the gardens; it was the chief material for festal wreaths; a single bud hung over the forehead of many a queenly dame; and the sculptures represent the weary flowers as dropping from the heated hands of belles, in the later hours of the feast. Rock softly on the waters, fair lilies! your Eastern kindred have rocked on the stormier bosom of Cleopatra. The Egyptian Lotus was, moreover, the emblem of the sacred Nile,—as the Hindoo species, of the sacred Ganges; and both the one and the other was held the symbol of the creation of the world from the waters. The sacred bull Apis was wreathed with its garlands; there were niches for water, to place it among tombs; it was carved in the capitals of columns; it was represented on plates and vases; the sculptures show it in many sacred uses, even as a burnt-offering; Isis holds it; and the god Nilus still binds a wreath of water-lilies around the throne of Memnon.

From Egypt the Lotus was carried to Assyria, and Layard found it among fir-cones and honeysuckles on the later sculptures of Nineveh. The Greeks dedicated it to the nymphs, whence the name *Nymphaea*. Nor did the Romans disregard it, though the Lotus to which Ovid's nymph Lotis was changed, *servato nomine*, was a tree, and not a flower. Still different a thing was the enchanted stem of the Lotus-eaters of Herodotus, which prosaic botanists have reduced to the *Zizyphus Lotus* found by Mungo Park, translating also the yellow Lotus-dust into a mere "farina, tasting like sweet gingerbread."

But in the Lotus of Hindostan we find our flower again, and the Oriental sacred books are cool with water-lilies. Open the Vishnu Purana at any page, and it is a *Sortes Lilianæ*. The orb of the earth is Lotus-shaped, and is upborne by the tusks of Vesava, as if he had been sporting in a lake where the leaves and blossoms float. Brahma, first incarna-

tion of Vishnu, creator of the world, was born from a Lotus; so was Sri or Lakshmu, the Hindoo Venus, goddess of beauty and prosperity, protectress of womanhood, whose worship guards the house from all danger. "Seated on a full-blown Lotus, and holding a Lotus in her hand, the goddess Sri, radiant with beauty, rose from the waves." The Lotus is the chief ornament of the subterranean Eden, Patala, and the holy mountain Meru is thought to be shaped like its seed-vessel, larger at summit than at base. When the heavenly Urvasi fled from her earthly spouse, Purúvasas, he found her sporting with four nymphs of heaven, in a lake beautified with the Lotus. When the virtuous Prahlada was burned at the stake, he cried to his cruel father, "The fire burneth me not, and all around I behold the face of the sky, cool and fragrant with beds of Lotus-flowers!" Above all, the graceful history of the transformations of Krishna is everywhere hung with these fresh chaplets. Every successive maiden whom the deity wooes is Lotus-eyed, Lotus-mouthed, or Lotus-cheeked, and the youthful hero wears always a Lotus-wreath. Also "the clear sky was bright with the autumnal moon, and the air fragrant with the perfume of the wild water-lily, in whose buds the clustering bees were murmuring their song."

Elsewhere we find fuller details. "In the primordial state of the world, the rudimental universe, submerged in water, reposed on the bosom of the Eternal. Brahma, the architect of the world, poised on a Lotus-leaf, floated upon the waters, and all that he was able to discern with his eight eyes was water and darkness. Amid scenes so ungenial and dismal, the god sank into a profound reverie, when he thus soliloquized: 'Who am I? Whence am I?' In this state of abstraction Brahma continued during the period of a century and a half of the gods, without apparent benefit or a solution of his inquiries, a circumstance which caused him great uneasiness of mind." It is a comfort, however, to

know, that subsequently a voice came to him, on which he rose, "seated himself upon the Lotus in an attitude of contemplation, and reflected upon the Eternal, who soon appeared to him in the form of a man with a thousand heads": a questionable exchange for his Lotus-solitude.

This is Brahminism; but the other great form of Oriental religion has carried the same fair symbol with it. One of the Bibles of the Buddhists is named "The White Lotus of the Good Laer." A pious Nepaulese bowed in reverence before a vase of lilies which perfumed the study of Sir William Jones. At sunset in Thibet, the French missionaries tell us, every inhabitant of every village prostrates himself in the public square, and the holy invocation, "Oh, the gem in the Lotus!" goes murmuring over hill and valley, like the sound of many bees. It is no unmeaning phrase, but an utterance of ardent desire to be absorbed into that Brahma whose emblem is the sacred flower. The mystic formula or "mani" is imprinted on the pavement of the streets, it floats on flags from the temples, and the wealthy Buddhists maintain sculptor-missionaries, Old Mortalities of the water-lily, who, wandering to distant lands, carve the blessed words upon cliff and stone.

Having got thus far into Orientalism, we can hardly expect to get out again without some slight entanglement in philology. Lily-pads. Whence *pads*? No other leaf is identified with that singular monosyllable. Has our floating Lotus-leaf any connection with padding, or with a footpad? with the ambling pad of an abbot, or a paddle, or a paddock, or a padlock? with many-doméd Padua proud, or with St. Patrick? Is the name derived from the Anglo-Saxon *paad* or *petthian*, or the Greek *πατέω*? All the etymologists are silent; Tooke and Richardson ignore the problem; and of the innumerable pamphlets in the Worcester and Webster Controversy, loading the tables of school-committee-men, not one ventures to grapple with the lily-pad.

But was there ever a philological trouble for which the Sanscrit could not afford at least a conjectural cure? A dictionary of that extremely venerable tongue is an ostrich's stomach, which can crack the hardest etymological nut. The Sanscrit name for the Lotus is simply *Padma*. The learned Brahmins call the Egyptian deities Padma Devi, or Lotus-Gods; the second of the eighteen Hindoo Puranas is styled the Padma Purana, because it treats of the "epoch when the world was a golden Lotus"; and the sacred incantation which goes murmuring through Thibet is "Om mani padme houn." It would be singular, if upon these delicate floating leaves a fragment of our earliest vernacular has been borne down to us, so that here the schoolboy is more learned than the *savans*.

This lets us down easily to the more familiar uses of this plant divine. By the Nile, in early days, the water-lily was good not merely for devotion, but for diet. "From the seeds of the Lotus," said Pliny, "the Egyptians make bread." The Hindoos still eat the seeds, roasted in sand; also the stalks and roots. In South America, from the seeds of the Victoria (*Nymphaea Victoria*, now *Victoria Regia*) a farina is made, preferred to that of the finest wheat,—Bonpland even suggesting to our reluctant imagination Victoria-pies. But the European species are used, so far as we know, only in dyeing, and as food (if the truth be told) of swine. Our own water-lily is rather more powerful in its uses; the root contains tannin and gallic acid, and a decoction of it "gives a black precipitate, with sulphate of iron." It graciously consents to become an astringent, and a styptic, and a poultice, and, banished from all other temples, still lingers in those of Æsculapius.

The botanist also finds his special satisfactions in our flower. It has some strange peculiarities of structure. So loose is the internal distribution of its tissues, that it was for some time held doubtful to which of the two great vegetable divisions, exogenous or endogenous,

it belonged. Its petals, moreover, furnish the best example of the gradual transition of petals into stamens,—illustrating that wonderful law of identity which is the great discovery of modern science. Every child knows this peculiarity of the water-lily, but the extent of it seems to vary with season and locality, and sometimes one finds a succession of flowers almost entirely free from this confusion of organs.

Our readers may not care to know that the order of Nymphæaceæ “differs from Ranunculaceæ in the consolidation of its carpels, from Papaveraceæ in the placentation not being parietal, and from Nelumbiaceæ in the want of a large truncated disc containing monospermous achenia”; but they may like to know that the water-lily has relations on land, in all gradations of society, from poppy to magnolia, and yet does not conform its habits precisely to those of any of them. Its great black roots, sometimes as large as a man’s arm, form a network at the bottom of the water. Its stem floats, an airy four-celled tube, adapting itself to the depth, though never stiff in shallows, like the stalk of the yellow lily: and it contracts and curves when seed-time approaches, though not so ingeniously as the spiral threads of the European Vallisneria, which uncoil to let the flowers rise to the surface, and then cautiously retract, that the seeds may ripen on the very bottom of the lake. The leaves show beneath the magnifier beautiful adaptations of structure. They are not, like those of land-plants, constructed with deep veins to receive the rain and conduct it to the stem, but are smooth and glossy, and of even surface. The leaves of land-vegetation have also thousands of little breathing-pores, principally on the under side: the apple-leaf, for instance, has twenty-four thousand to a square inch. But here they are fewer; they are wholly on the upper side, and, whereas in other cases they open or shut according to the moisture of the atmosphere, here the greedy leaves, secure of moisture, scarcely deign to close them. Nevertheless,

even these give some recognition of hygrometric necessities, and, though living on the water, and not merely christened with dewdrops like other leaves, but baptized by immersion all the time, they are yet known to suffer in drought and to take pleasure in the rain.

We have spoken of the various kindred of the water-lily; but we must not leave our fragrant subject without due mention of its most magnificent, most lovely relative, at first claimed even as its twin sister, and classed as a Nymphæa. We once lived near neighbor to a Victoria Regia. Nothing, in the world of vegetable existence, has such a human interest. The charm is not in the mere size of the plant, which disappoints everybody, as Niagara does, when tried by that sole standard. The leaves of the Victoria, indeed, attain a diameter of six feet; the largest flowers, of twenty-three inches,—less than four times the size of the largest of our water-lilies. But it is not the mere looks of the Victoria, it is its life which fascinates. It is not a thing merely of dimensions, nor merely of beauty, but a creature of vitality and motion. Those vast leaves expand and change almost visibly. They have been known to grow half an inch an hour, eight inches a day. Rising one day from the water, a mere clenched mass of yellow prickles, a leaf is transformed the next day to a crimson salver, gorgeously tinted on its upturned rim. Then it spreads into a raft of green, armed with long thorns, and supported by a frame-work of ribs and cross-pieces, an inch thick, and so substantial, that the Brazil Indians, while gathering the seed-vessels, place their young children on the leaves;—*grupe*, or water-platter, they call the accommodating plant. But even these expanding leaves are not the glory of the Victoria; the glory is in the opening of the flower.

We have sometimes looked in, for a passing moment, at the green-house, its dwelling-place, during the period of flowering,—and then stayed for more than an hour, unable to leave the fascinating

scene. After the strange flower-bud has reared its dark head from the placid tank, moving it a little, uneasily, like some imprisoned water-creature, it pauses for a moment in a sort of dumb despair. Then trembling again, and collecting all its powers, it thrusts open, with an indignant jerk, the rough calyx-leaves, and the beautiful disrobing begins. The firm, white, central cone, first so closely in-folded, quivers a little, and swiftly, before your eyes, the first of the hundred petals detaches its delicate edges, and springs back, opening towards the water, while its white reflection opens to meet it from below. Many moments of repose follow,—you watch,—another petal trembles, detaches, springs open, and is still. Then another, and another, and another. Each movement is so quiet, yet so decided, so living, so human, that the radiant creature seems a Musidora of the water, and you almost blush with a sense of guilt, in gazing on that peerless privacy. As petal by petal slowly opens, there still stands the central cone of snow, a glacier, an alp, a jungfrau, while each avalanche of whiteness seems the last. Meanwhile, a strange rich odor fills the air, and Nature seems to concentrate all fascinations and claim all senses for this jubilee of her darling.

So pass the enchanted moments of the evening, till the fair thing pauses at last, and remains for hours unchanged. In the morning, one by one, those white petals close again, shutting all their beauty in, and you watch through the short sleep for the period of waking. Can this bright transfigured creature appear again, in the same chaste beauty? Your fancy can scarcely trust it, fearing some disastrous change; and your fancy is too true a prophet. Come again, after the second day's opening, and you start at the transformation which one hour has secretly produced. Can this be the virgin Victoria,—this thing of crimson passion, this pile of pink and yellow, relaxed, expanded, voluptuous, lolling languidly upon the water, never to rise again? In this short time every tint of every petal

is transformed; it is gorgeous in beauty, but it is "Hebe turned to Magdalen."

But our rustic water-lily, our innocent Nymphæa, never claiming such a hothouse glory, never drooping into such a blush, blooms on placidly in the quiet waters, till she modestly folds her leaves for the last time, and bows her head beneath the surface forever. Next year she lives for us only in her children, fair and pure as herself.

Nay, not alone in them, but also in memory. The fair vision will not fade from us, though the paddle has dipped its last crystal drop from the waves, and the boat is drawn upon the shore. We may yet visit many lovely and lonely places,—meadows thick with violet, or the homes of the shy Rhodora, or those sloping forest-haunts where the slight Linnea hangs its twin-born heads,—but no scene will linger on our vision like this annual Feast of the Lilies. On scorching mountains, amid raw prairie-winds, or upon the regal ocean, the white pageant shall come back to us again, with all the luxury of summer heats, and all the fragrant coolness that can relieve them. We shall fancy ourselves again among these fleets of anchored lilies,—again, like Urvashi, sporting amid the Lake of Lotuses.

For that which is remembered is often more vivid than that which is seen. The eye paints better in the presence, the heart in the absence, of the object most dear. "He who longs after beautiful Nature can best describe her," said Bettine; "he who is in the midst of her loveliness can only lie down and enjoy." It enhances the truth of the poet's verses, that he writes them in his study. Absence is the very air of passion, and all the best description is *in memoriam*. As with our human beloved, when the graceful presence is with us, we cannot analyze or describe, but merely possess, and only after its departure can it be portrayed by our yearning desires; so is it with Nature: only in losing her do we gain the power to describe her, and we are introduced to Art, as we are to Eternity, by the dropping away of our companions.

FIFTY AND FIFTEEN.

WITH gradual gleam the day was dawning,
 Some lingering stars were seen,
 When swung the garden-gate behind us,—
 He fifty, I fifteen.

The high-topped chaise and old gray pony
 Stood waiting in the lane:
 Idly my father swayed the whip-lash,
 Lightly he held the rein.

The stars went softly back to heaven,
 The night-fogs rolled away,
 And rims of gold and crowns of crimson
 Along the hill-tops lay.

That morn, the fields, they surely never
 So fair an aspect wore;
 And never from the purple clover
 Such perfume rose before.

O'er hills and low romantic valleys
 And flowery by-roads through,
 I sang my simplest songs, familiar,
 That he might sing them too.

Our souls lay open to all pleasure,—
 No shadow came between;
 Two children, busy with their leisure,—
 He fifty, I fifteen.

* * * * *

As on my couch in languor, lonely,
 I weave beguiling rhyme,
 Comes back with strangely sweet remembrance
 That far-removéd time.

The slow-paced years have brought sad changes,
 That morn and this between;
 And now, on earth, my years are fifty,
 And his, in heaven, fifteen.

ILLINOIS IN SPRING-TIME:

WITH A LOOK AT CHICAGO.

I REMEMBER very well, that, when I studied the "Arabian Nights," with a devotion which I have since found it difficult to bestow on the perusal of better books, the thing that most excited my imagination was the enchanted locomotive carpet, granted by one of the amiable genii to his favorite, to whom it gave the power of being in a moment where nobody expected him, paying visits at the most unfashionable hours, and making himself generally ubiquitous when interest or curiosity prompted. The other wonders were none of them inexhaustible. Donkeys that talked after their heads were cut off, just as well as some donkeys do with them on,—old cats turned into beautiful damsels,—birds that obligingly carried rings between parted lovers,—one soon had enough of. Caves full of gold and silver, and lighted by gems resplendent as the stars, were all very well, but soon tired. After your imagination had selected a few rings and bracelets, necklaces and tiaras, and carried off one or two chests full of gold, what could it do with the rest,—especially as they might vanish or turn to pebbles or hazel-nuts in your caskets?

But flying carpets! They could never tire. You seated yourself just in the middle, in the easiest possible attitude, and at a wish you were off, (not off the carpet, but off this work-a-day world,) careering through sunny fields of air with the splendid buoyancy of the eagle, steering your intelligent vehicle by a mere thought, and descending, gently as a snow-flake, to garden-bower or palace-window, moonlit kiosk or silent mountain-peak, as whim suggested or affairs urged. This was magic indeed, and worthy the genii of any age.

The sense of reality with which I accepted this wonder of wonders has furnished forth many a dream, sleeping and

waking, since those days; and it is no uncommon thing for me, even now, to be sailing through the air, feeling its soft waves against my face, and the delicious refreshment of the upper ether in my breast, only to wake as if I had dropped into bed with a celerity that made the arrival upon earth anything but pleasant. I am not sure but there is some reality in these flights, after all. These aerial journeys may be foretastes of those we shall make after we are freed from the incumbrance of avoirdupois. I hope so, at least.

Yet there are good things of the kind here below, too. After all, what were a magic carpet that could carry a single lucky wight,—at best, but a species of heavenly sulky,—compared with a railroad train that speeds along hundreds of men, women, and children, over land and water, with any amount of heavy baggage, as well as a boundless extent of crinoline? And if this equipage, gift of genii of our age, seem to lack some of the celerity and secrecy which attended the voyagers of the flying carpet, suppose we add the power of whispering to a friend a thousand miles off the inmost thoughts of the heart, the most desperate plans, the most dangerous secrets! Do not the two powers united leave the carpet immeasurably behind?

Shakspeare is said, in those noted lines,—

"Dear as the ruddy drops
That visit this sad heart,"

to have anticipated the discovery of the circulation of the blood: did not the writers of the Oriental stories foresee rail and telegraph, and describe them in their own tropical style?

It is often said, that, although medical science leaves us pretty much as it found us with regard to the days of the years

of our pilgrimage, and has as yet, with all its discoveries, done little towards prolonging "this pleasing, anxious being," yet the material improvements of our day do in effect lengthen mortal life for us. And truly, what must Indian life have been worth, when it took a month to cut down a tree with a stone hatchet, and when the shaping of a canoe was the work of a year? When two hundred miles of travel consumed a week's time, every two hundred miles' journey was worth a week's life; and if we accept the idea of a certain celebrated character, (not "Quintus Curtius," but Geoffrey Crayon, I believe,) that the time we spend in journeying is just so much subtracted from our little span of days, what a fearful loss of life must have resulted from our old modes of locomotion! And yet we inconsiderately grumble at an occasional smash-up! So easily are we spoiled!

There are grave doubts, however, in some minds, whether our present celerity of travel be wholly a gain upon the old methods. It must depend upon circumstances. If agreeable people virtually live longer now, so do bores, cheats, slanderers, hypocrites, and people who eat onions and chew tobacco; and the rail enables these to pursue their victims with inevitable, fatal swiftness.

Some hold that the pleasure of travelling is even impaired by this increase of speed. There is such a thing as fatal facility. As well eat a condensed dinner, or hear a concert in one comprehensive crash, car-splitting and soul-confounding, as see miles of landscape at a glance. Willis says, travelling on an English railway is equivalent to having so many miles of green damask unrolled before your weary eyes. And one may certainly have too much of a good thing.

But, instead of discussing railroads in general,—too grand a theme for me,—let me say that nobody can persuade me it is not delightful to fly over ground scarcely yet trodden by the foot of man; to penetrate, with the most subtle resources of inventive art, the recesses in

which Nature has enshrined herself most privately,—her dressing-room, as it were, where we find her in her freshness, before man-nulliners have marred her beauty by attempts at improvement. The contrast between that miracle of art, a railroad-train at full speed, and a wide, lonely prairie, or a dusky forest, leafless, chilly, and silent,—save for the small tinkling of streams beginning to break from their frosty limits,—is one of the most striking in all the wide range of rural effects. It reminds me, though perhaps unaccountably to some, of Browning's fine image,—

"And ever and anon some bright white shaft
Burnt through the pine-tree roof, here burnt
and there,
As if God's messenger through the close
wood-screen
Plunged and re-plunged his weapon at a venture."

Even where fields have begun to be tilled and houses and barns to be built, the scared flying of domestic animals at sound of the terrific visitor,—the resistless chariot of civilization with scythed axles mowing down ignorance and prejudice as it whirls along,—tells a whole story of change and wonder. We can almost see the shadows of the past escaping into the dim woods, or flitting over the boundless prairie, shivering at the fearful whistle, and seeking shelter from the wind of our darting.

The season for this romantic pleasure of piercing primeval Nature on the wings of subtlest Art is rapidly drawing to a close. How few penetrable regions can we now find where the rail-car is a novelty! The very cows and horses, in most places, know when to expect it, and hardly vouchsafe a sidelong glance as they munch their green dinner. A railroad to the Pacific may give excitement of this kind a somewhat longer date, but those who would enjoy the sensation on routes already in use must begin their explorings at once. There is no time to be lost. If we much longer spend all our summers in beating the changeless paths of the Old World, our chance for

the fresh but fleeting delight I have been speaking of will have passed by, never to return. It were unwise to lose this, one of the few remaining avenues to a new sensation. Europe will keep; but the prairies will not, the woods will not, hardly the rivers. Already the flowery waving oceans of Illinois begin to abound in ships, or what seem such,—houses looming up from the horizon, like three-masters sometimes, sometimes schooners, and again little tentative sloops. These are creeping nearer and nearer together, filling and making commonplace those lovely deserts where the imagination can still find wings, and world-wearied thought a temporary repose. Where neighbors were once out of beacon-sight, they are now within bell-sound; and however pleasant this may be for the neighbors, it is not so good for the traveller, especially the traveller who has seen Europe. Only think of a virgin forest or prairie, after over-populated Belgium or finished England! Europeans understand the thing, and invariably rush for the prairies; but we Americans, however little we may have seen of either world, care little for the wonders of our own. Yet, when we go abroad, we cannot help blushing to acknowledge that we have not seen the most striking features of our own country. I speak from experience.

Scott, describing the arid wastes of the Hebrides,—

"Placed far amid the melancholy main,"

and swept bare by wintry-cold sea-breezes, said,—

"Yes! 'twas sublime, but sad; the loneliness
Loaded thy heart, the desert tired thine
eye."

But how different the loneliness of a soft-waving prairie,—soft even before the new grass springs; soft in outline, in coloring, in its whispering silence! Nothing sad or harsh; no threat or repulsion; only mild hope, and promise of ease and abundance. Whether the glad flames sport amid the long dry grass of last year, or the plough turn up a deep layer of the exhaustless soil, or flocks of prairie-chickens fly up from every little valley, images of life, joy, and plenty belong to the scene. The summer flowers are not more cheerful than the spring blaze, the spring blackness of richness, or the spring whirr and flutter. The sky is alive with the return of migratory birds, swinging back and forth, as if hesitating where to choose, where all is good. Frogs hold noisy jubilees, ("Anniversary Meetings," perhaps,)—very hoarse, and no wonder, considering their damp lodging,—but singing, in words more intelligible than those of the opera-choruses, "Winter's gone! Spring's come! No, it isn't! Yes, it is!"—and the Ayes have it. The woodpecker's hammer helps the field-music, wherever he can find a tree. He seems to know the carpenter is coming, and he makes the most of his brief season. All is life, movement, freedom, joy. Not on the very Alps, where their black needles seem to dart into the blue depths, or snow-fields to mingle with the clouds, is the immediate, vital sympathy of Earth with Heaven more evident and striking.

The comparative ease with which prairie regions are prepared for the advent of the great steam-car is exactly typical of the facilities which they offer to other particulars of civilization. As the smoothing of the prairie path, preparatory to railway speed, is but short work, compared with the labor required in grading and levelling mountainous tracts for the same purpose, so the introduction of all that makes life desirable goes on with unexampled rapidity where the land requires no felling of heavy timber to make it ready for the plough, and where the soil is rich to such a depth that no man fears any need of new fertilizing in his life-time or his son's. We observe this difference everywhere in prairiedom; and it is perhaps this thought, this close interweaving of marked outward aspect with great human interests, that gives the prairie country its air of peculiar cheerfulness. To man the earth was given; for him its use and its beauty were created; it is his idea which en-

dows it with expression, whether savage or kindly. Rocks and mountains suggest the force required to conquer difficulties, and the power with which the lord of creation is endowed to subdue them; and the chief charm and interest of such regions is derived, consciously or unconsciously, from this suggestion. Prairie images are more domestic, quiet, leisurely. No severe, wasting labor is demanded before corn and milk for wife and little ones are wrung from reluctant clods. No danger is there of sons or daughters being obliged to quit their homes and roam over foreign lands for a precarious and beggarly subsistence. No prairie-boy will ever carry about a hand-organ and a monkey, or see his sister yoked to the plough, by the side of horse or ox. Blessed be God that there are still places where grinding poverty is unfelt and unfeared! "Riches fineness" belong to these deep, soft fields, and they become picturesque by the thought, as the sea becomes so by the passing of a ship, and the burning desert by the foot-print of a traveller or the ashes of his fire.

It was in spring weather, neither cold nor warm, now and then shiny, and again spattering with a heavy shower, or misty under a warm, slow rain,—the snow still lying in little streaks under shady ridges,—that I first saw the prairies of Illinois. Everybody—kind everybody!—said, "Why didn't you come in June?" But I, not being a bird of the air, who alone travels at full liberty, the world before him where to choose and Providence his guide, cared not to answer this friendly query, but promised to be interested in the spring aspect of the prairies, after my fashion, as sincerely as more fastidious travellers can be in the summer one. It is very well to be prepared when company is expected, but friends may come at any time. "Brown fields and pastures bare" have no terrors for me. Green is gayer, but brown softer. Blue skies are not alone lovely; gray ones set them off. Rain enhances shine. Mud, to be sure;—but then railroads are the Napoleons of mud.

Planks and platforms quench it completely. One may travel through tenacious seas of it without smirching one's boot-heel. There is even a feeling of triumph as we see it lying sulky and impotent on either side, while we bowl along dry-shod. When Noah and his family came out of the Ark, and found all "soft with the Deluge," it was very different. The prospect must have been discouraging. I thought of it as we went through, or rather over, the prairies. But if there had been in those days an Ararat Central, with good "incline" and stationary engine, they need not have sent out dove or raven, but might have started for home as soon as the rails shone in the sun and they could get the Ark on wheels. It would have been well to move carefully, to be sure; and it is odd to think what a journey they might have had, now and then stopping or switching-off because of a dead Mastodon across the track, or a panting Leviathan lashing out, thirstily, with impertinent tail,—to say nothing of sadder sights and impediments.

There were only pleasant reminiscences of the Great Deluge as we flew along after a little one. Happy we! in a nicely-cushioned car, berthed, curtained, and, better than all, furnished with the "best society," *sans* starch, *sans* crinoline; the gentlemen sitting on their hats as much as they pleased, and the ladies giving curls and collars the go-by, all in tip-top humor to be pleased. I could imagine but one improvement to our equipage,—that a steam-organ attached to it should have played, very softly, Felicien David's lovely level music of "The Desert," as we bowled along. There were long glittering side-streams between us and the black or green prairie,—streams with little ripples on their faces, as the breeze kissed them in passing, and now and then a dimple, under the visit of a vagrant new-born beetle. To call such shining waters mud or puddles did not accord with the spirit of the hour; so we fancied them the "mirroring waters" of the poet, and compared them to fer-

tilizing Nile,—whose powers, indeed, they share, to some extent. By their sides *ought* to be planted willows and poplars, and alders of half a dozen kinds, but are not yet. All in good time. Thirsty trees would drink up superfluous moisture, and in return save fuel by keeping off sweeping winds; and money by diverting heavy snows, those Russian enemies to the Napoleon rail, and by preserving embankments, to which nothing but interlacing roots can give stability. Rows of trees bordering her railroads would make Illinois look more like France, which in many respects she already resembles.

The haze or *mirage* of the prairies is wonderfully fantastic and deceptive. The effect which seamen call *looming* is one of the commonest of its forms. This brings real but distant objects into view, and dignifies them in size and color, till we can take a farm-house for a white marble palace, and leafless woods with sunset clouds behind them for enchanted gardens hung with golden fruit. But the most gorgeous effects are, as is usual with air-castles, created out of nothing,—that is, nothing more substantial than air, mist, and sun- or moon- or star-beams. Fine times the imagination has, riding on purple and crimson rays, and building Islands of the Blest among vapors that have just risen from the turbid waters of the Mississippi! No Loudon or Downing is invoked for the contriving or beautifying of these villa-residences and this landscape-gardening. Genius comes with inspiration, as inspiration does with genius; and we are our own architects and draughtsmen, rioting at liberty with Nature's splendid palette at our command, and no thought of rule or stint. Why should we not, in solidier things, derive more aid, like the poor little "Marchioness" of Dickens, from this blessed power of imagination? Those who do so are always laughed at as unpractical; but are they not most truly practical, if they find and use the secret of gilding over, and so making beautiful or tolerable, things in themselves mean or sad?

Once upon a time, then, the great State of Illinois was all under water;—at least, so say the learned and statistical. If you doubt it, go count the distinctly-marked ridges in the so-called bluffs, and see how many years or ages this modern deluge has been subsiding. Where it remains once lay sweltering under the hot sun, and sucking miasms from his beams, now spread great green expanses, wholesome and fertile, making the best possible use of sunbeams, and offering, by their aid, every earthly thing that men and animals need for their bodily growth and sustenance, in almost fabulous abundance.

The colored map of Illinois, as given in a nice, new book, called, "Illinois as it is," looks like a beautiful piece of silk, brocaded in green (prairies) on a brownish ground (woodland tracts),—the surface showing a nearly equal proportion of the two; while the swampy lands, designated by dark blue,—in allusion, probably, to the occasional state of mind of those who live near them,—take up a scarce appreciable part of the space. Long, straggling "bluffs," on the banks of the rivers, occupy still less room; but they make, on land and paper, an agreeable variety. People thus far go to them only for the mineral wealth with which they abound. It will be many years, yet, before they will be thought worth farming; not because they would not yield well, but because there is so much land that yields better.

Some parts of the State are hilly, and covered with the finest timber. The scenery of these tracts is equal to any of the kind in the United States; and much of it has been long under cultivation, having been early chosen by Southern settlers, who have grown old upon the soil. Here and there, on these beautiful highlands, we find ancient ladies, bright-eyed and cheerful, who tell us they have occupied the selfsame house—built, Kentucky-fashion, with chimney outside—for forty years or so. The legends these good dames have to tell are, no doubt, quite as interesting in their way as those

which Sir Walter Scott used to thread the wilds of Scotland to gather up; but we value them not. By-and-by, posterity will anathematize us for letting our old national stories die in blind contempt or sheer ignorance of their value.

The only thing to be found fault with in the landscape is the want of great fields full of stumps. It does not seem like travelling in a new country to see all smooth and ready for the plough. Trees are not here looked upon as natural enemies; and so, where they grow, there they stand, and wave triumphant over the field like victors' banners. No finer trees grow anywhere, and one loves to see them so prized. Yet we miss the dear old stumps. My heart leaps up when I behold hundreds of them so close together that you can hardly get a plough between. Long, long years ago, I have seen a dozen men toiling in one little cleared spot, jollily engaged in burning them with huge fires of brush-wood, chopping at them with desperate axes, and tearing the less tenacious out by the roots, with a rude machine made on the principle of that instrument by the aid of which the dentist revenges you on an offending tooth. The country looks tame, at first, without these characteristic ornaments, so suggestive of human occupancy. The ground is excellently fertile where stumps have been, and association makes us rather distrustful of its goodness where nothing but grass has ever grown.

The prairies are not as flat in surface as one expects to find them. Except in the scarcity of trees, their surface is very much like other portions of what is considered the best farming land. There are great tracts of what are called bushy prairies, covered with a thick growth of hazel and sassafras, jessamine and honey-suckle, and abounding in grape-vines. These tracts possess springs in abundance. The "islands" so often alluded to by travellers are most picturesque and beautiful features in the landscape. They must not be compared to oases, for they are surrounded by anything but sterility; but they are the evidence of

springs, and generally of a slight rise in the ground, and the timber upon them is of almost tropical luxuriance. Herds of deer are feeding in their shade, the murmur of wild bees fills the air, and the sweet vine-smell invites birds and insects of every brilliant color. Prairie-chickens are in flocks everywhere, and the approach of civilization scarcely ever disturbs them. No engine-driver in the southern part of the State but has often seen deer startled by the approach of his train, and many tell tales of more ferocious denizens of the wilds. Buffalo have all long since disappeared; but what times they must have had in this their paradise, before they went! On the higher prairies the grass is of a superior quality, and its seed almost like wheat. On those which are low and humid it grows rank and tough, and sometimes so high that a man on horseback may pass through it unobserved. The crowding of vegetation, owing to the over-fertility of the soil, causes all to tend upward, so that most of the growth is extra high, rather than spreading in breadth. In the very early spring, the low grass is interspersed with quantities of violets, strawberry-blossoms, and other delicate flowers. As the grass grows taller, flowers of larger size and more brilliant hues diversify it, till at length the whole is like a flowery forest, but destined to be burnt over in the autumn, leaving their ashes to help forward the splendid growth of their successors.

One of the marvels of this marvellous prairiedom, at the present hour, is the taste and skill displayed in houses and gardens. One fancies a "settler" in the Western wilds so occupied with thoughts of shelter and sustenance as hardly to remember that a house must be perpendicular to be safe, and a garden fenced before it is worth planting. But every mile of our prairie-flight reminds us, that, where no time and labor are to be consumed in felling trees and "toting" logs to mill,—planks and joists, and such like, walking in, by rail, all ready for the framing,—there is leisure for reflection

and choice as to form; and also, that, where fertility is the inevitable attendant upon the first incision of the plough, *what* we shall plant and *how* we shall plant it become the only topics for consideration. Setting aside the merely temporary residences of the poorer class of farmers,—houses sure to be replaced by palaces of pine-boards, at least, before a great while, provided the owner does not “move West,” or take to whiskey,—the cottages we catch glimpses of from car-windows are pretty and well-planned, and some of them show even better on the inside than on the out. I must forbear to enlarge on the comfort and abundance of these dwellings, lest I trench upon private matters; but I may mention, by way of illustrating my subject, and somewhat as the painter introduces human figures into his picture to give an idea of the height of a tower or the vastness of a cathedral, that I have found an abundant and even elegant table, under frescoed ceiling, in a cottage near the Illinois Central, and far south of the mid-line of this wonderful State, so lately a seeming waste through much of its extent.

And thus throughout. At one moment a bare expanse, looking man-despised, if not God-forgotten,—and at the next, a smiling village, with tasteful dwellings, fine shrubbery, great hotels, spires pointing heavenward, and trees that look down with the conscious dignity of old settlers, as if they had stood just so since the time of good Father Marquette, that stout old missionary, who first planted the holy cross in their shade, and, “after offering to the Mightiest thanks and supplications, fell asleep to wake no more.”

There are many interesting reminiscences or traditions of the early European settlers of Illinois. After Father Marquette,—whom I always seem to see in Hicks's sweet picture of a monk inscribing the name JESU on the bark of a tree in the forest,—came La Salle, an emissary of the great Colbert, under Louis XIV.; an explorer of many heroic qualities, who has left in this whole

region important traces of his wanderings, and the memory of his bloody and cruel murder at the impious hands of his own followers, who had not patience to endure to the end. Counted as part of Florida, under Spanish rule, and part of Louisiana, under that of the French,—falling into the hands of the celebrated John Law, in the course of his bubble Mississippi scheme, and afterwards ceded with Canada and Nova Scotia to the English, Illinois was never Americanized until the peace of '83. The spongy turf of her prairies bore the weight of many a fort, and drank the blood of the slain in many a battle, when all around her was at peace. The fertility of her soil and the comparative mildness of her climate caused her to be eagerly contended for, as far back as 1673, when the pioneers grew poetical under the inspiration of “a joy that could not be expressed,” as they passed her “broad plains, all garlanded with majestic forests and checkered with illimitable prairies and island groves.” “We are Illinois,” said the poor Indians to Father Marquette,—meaning, in their language, “We are men.” And the Jesuits treated them as men; but by traders they soon began to be treated like beasts; and of course—poor things!—they did their best to behave accordingly. All the forts are ruins now; there is no longer occasion for them. The Indians are nothing. There can scarcely be found the slightest trace of their occupancy of these rich acres. Nations that build nothing but uninscribed burial-places foreshadow their own doom,—to return to the soil and be forgotten. But the mode of their passing away is not, therefore, a matter of indifference.

On the stronger and more intelligent rests the responsibility of such changes; and in the case of our Indians, it is certain that a load of guilt, individual and national, rests somewhere. Necessity is no Christian plea. “It must needs be that offences come, but woe to him by whom the offence cometh!” The Indian and the negro shall rise up in judgment

against our rich and happy land, and condemn it for inhumanity and selfishness. Have they not already done so? Blood and treasure, poured out like water, have been the beginnings of retribution in one case; a deeper and more vital punishment, such as belongs to bosoms, awaits us in the other. Shall no penitence, no sacrifice, attempt to avert it?

Illinois, level, fertile, joyous, took French rule very kindly. The missionaries, who were physicians, schoolmasters, and artisans, as well as preachers, lived among the people, instructed them in the arts of life as well as in the ceremonies and spirit of the Catholic faith; and natives and foreigners seem to have dwelt together in peace and love. The French brought with them the regularity and neatness that characterize their home-settlements, and the abundance in which they lived enabled them to be public-spirited and to deal liberally even with the Indians. They raised wheat in such plenty that Indian corn was cultivated chiefly for provender, although they found the *voyageurs* glad to buy it as they passed back and forth on their adventurous journeys. The remains of their houses show how substantially they built; two or three modern sudden houses could be made out of one old French picketed and porticoed cottage.

The appearance of an Illinois settler in those days was rather picturesque than elegant,—substance before show being the principle upon which it was planned. While the Indian still wore his paint and feathers when he came to trade, the rural swain appeared in a *capote* made of blanket, with a hood that served in cold weather instead of a Leary, buck-skin overalls, moccasins of raw-hide, and, generally, only a natural shock of Sampsonian locks between his head and the sun; while his lady-love was satisfied with an outfit not very different,—save that there is no tradition that she ever capped the climax of ugliness by wearing Bloomers. There were gay colors for holidays, no doubt; but not till 1830,

we are told, did the genuine Illinois settler adopt the commonplace dress of this imitative land. What pity when people are in such haste to do away with everything characteristic in costume!

Both sexes worked hard, bore rough weather without flinching, and attended carefully to their religious duties; but, withal, they were gay and joyous, ready for dance and frolic, and never so anxious to make money that they forgot to make fun.

What must the ghosts of these primitive Christians think of their successors, ploughing in broadcloth and beaver, wading through the mud in patent-leather boots, and all the while wrinkled with anxiety, gaunt with ambition, and grudging themselves three holidays a year!

Immigrants in time changed the character of the population as well as its dress, and for a while there seems to have been something of a jumble of elements, new laws conflicting with old habits, hungry politicians preying upon a simple people, who only desired to be let alone, and who, when they discovered some gross imposition, were philosophical enough to call it, jokingly, being "greased and swallowed." This anarchical condition resulted, as usual, in habits of personal violence; and, at one time, an adverse vote was considered matter for stabbing or gouging, and juries often dismissed indictments, fearing private vengeance in case of a discharge of their duty. They made a wide distinction, in murder trials, between him who committed the crime in a passion and those who did the thing quietly; so that you had only to walk up to the person who had offended you, and shoot him in the open street, to feel tolerably sure of impunity. In short, there seems to have prevailed, at that time, north of Mason and Dixon's line, very much the same state of things that still prevails south of it; but there was other leaven at work, and the good sense of the people gradually got the better of this shortsighted folly of violence.

It is reported as fact, by all writers on

the earlier history of this State, that the holding of courts was conducted very much in the style reported of the back counties of Georgia and Alabama in our day. The sheriff would go out into the court-yard and say to the people, "Come in, boys,—the court is going to begin,"—or sometimes, "Our John is going to open court now,"—the judge being just one of the "boys."

Judges did not like to take upon themselves the *onus* of deciding cases, but shared it with the jury as far as possible. One story, well authenticated, runs thus: A certain judge, having to pass sentence of death upon one of his neighbors, did it in the following form: "Mr. Green, the jury in their verdict say you are guilty of murder, and the law in that case says you are to be hung. Now I want you and all your friends down on Indian Creek to know that it is not me that condemns you, but the jury and the law. What time would you like to be hung, Sir?" The poor man replied, that it made no difference to him; he would rather the court should appoint a time. "Well, then, Mr. Green," says the judge, "the court will allow you four weeks' time to prepare for death and settle up your business." It was here suggested by the Attorney-General that it was usual in such cases for the court to recapitulate the essential parts of the evidence, to set forth the nature and enormity of the crime, and solemnly to exhort the prisoner to repent and fit himself for the awful doom awaiting him. "Oh!" said the judge, "Mr. Green understands all that as well as if I had preached to him a month. Don't you, Mr. Green? You understand you're to be hung this day four weeks?" "Yes, Sir," replied Mr. Green, and so the matter ended.

One legal brilliant blazes on the forehead of youthful Illinois, in the shape of a summary remedy for duelling. One of those heroes who think it safer to appeal to chance than to logic in vindication of tarnished honor, and who imagine the blood of a dead friend the only salve to be relied on for the cure of wounded

feelings, killed his opponent in a duel. The law of Illinois very coolly hanged the survivor; and from that time to this, other remedies have been found for spiritual hurts, real or imaginary. Nobody has fancied it necessary to fight with a noose round his neck. If ever capital punishment were lawful, (which I confess I do not think it ever can be,) it would be as a desperate remedy against this horrid relic of mediæval superstition and impiety, no wiser or more Christian than the ordeal by burning ploughshares or poisoned wine. The rope in judicial hands is certainly as lawful as the pistol in rash ones; so the duellist has no reason to complain.

Some of the later days of Illinois, the days of Indian wars and Mormon wars, pro-slavery wars and financial wars, are too red and black for peaceful pages; and as they were incidental rather than characteristic, they do not come within our narrow limits. There is still too large an infusion of the cruel slavery spirit in the laws of Illinois; but the immense tide of immigration will necessarily remedy that, by overpowering the influence introduced over the southern border. So nearly a Southern State was Illinois once considered to be, that, in settling the northern boundary, it was deemed essential to give her a portion of the lake-shore, that her interests might be at least balanced. They have proved to be more than balanced by this wise provision.

The little excuse there is in this favored region for a sordid devotion to toil, a journey through the State, even at flying pace, is sufficient to show. The fertility of the soil is the despair of scientific farming. Who cares for rules, when he has only to drop a seed and tread on it, to be sure of a hundred-fold return? Who talks of succession of crops, when twelve burdens of wheat, taken from the same soil in as many years, leave the ground black and ready for another yield of almost equal abundance? An alluvial tract of about three hundred thousand acres, near the Mississippi, has been cultivated in Indian corn a hundred

and fifty years,—indeed, ever since the French occupation of Illinois. What of under-draining? Some forty or fifty rivers threading the State, besides smaller streams innumerable, always will do that, as soon as the Nilic floods of spring have accomplished their work by floating to the surface the finest part of the soil. Irrigation? You may now grow rice on one farm and grapes on another, without travelling far between. It is true, there must be an end to this universality of power and advantage, some day; but nobody can see far enough ahead to feel afraid, and it is not in the spirit of our time to think much about the good of our grandchildren. "What has posterity done for me?" is the instinctive question of the busy Westerner, as he sits down under vine and fig-tree which his own hands have planted, to enjoy peace and plenty, after suffering the inevitable hardships of pioneer life. You may tell him he is not wise to scorn good rules; but he will reply, that he did not come so far West, and begin life anew, for the sake of being wise, but of making money, and that as rapidly as possible. He has forgotten the care and economy learned among the cold and stony hills of New England, and wants to do everything on a large scale. He likes to hear of patent reapers, Briarean threshing-machines, and anything that will save him most of the time and trouble of gathering in his heavy crops,—but that is all. The growth of those crops he has nothing to do with. That is provided for by Nature in Illinois; if it were not, he would move "out West."

Stories of this boundless fertility are rife here. One pioneer told us, that, when a fence is to be made and post-holes are wanted, it is only necessary to drop beat-seed ten feet apart all around the field, and, when the beet is ripe, you pull it up and your post-hole is ready! To be sure, there was a twinkle in the corner of his eye as he stated this novel and interesting fact; but, after all, the fertility in question was not so extravagantly "poefied" by this *canard* as some

may suppose. Our friend went on to state, that, in his district, they had a kind of corn which produced from a single grain a dozen stalks of twelve ears each; and not content with this, on *most* of the stalks you would find, somewhere near the top, a small calabash full of shelled corn! To put the matter beyond doubt, he pulled a handful of the corn from his pocket, which he invited us to plant, and satisfy ourselves.

The reader has probably concluded, by this time, that beets and corn are not the only enormous things grown in Illinois.

A friend told us, in perfectly good faith, that a tract of his, some fourteen thousand acres, in the southern part of the State, contained coal enough to warm the world, and more iron than that coal would smelt,—salt enough for all time, and marble and rich metallic ores of various kinds besides. In one region are found inexhaustible beds of limestone, the smoke of whose burning fills the whole spring air, and the crevices of whose formation make very pokerish-looking caves, which young and adventurous ladies are fond of exploring; in another we come to quantities of that snow-white porcelain clay of which some people suppose themselves to have been originally formed, but which has been, in a commercial point of view, hitherto a *desideratum* in these United States of ours. The people at Mound City (an aspiring rival of Cairo, on the banks of the Ohio) are about building a factory for the exploitation of this clay, not into ladies and gentlemen, (unpopular articles here,) but into china-ware, the quality of which will be indisputable.

One soon ceases wondering at the tropicality of the Illinoisian imagination. Ali Baba's eye-straining experiences were poor, compared to these every-day realities.

The "Open Sesame" in this case has been spoken through the railroad-whistle. Railroads cannot make mines and quarries, and fat soil and bounteous rivers; yet railroads have been the making of Illinois. Nobody who has ever seen her

spring roads, where there are no rails, can ever question it. From the very fatness of her soil, the greater part of the State must have been one Slough of Despond for three quarters of the year, and her inhabitants strangers to each other, if these iron arms had not drawn the people together and bridged the gulfs for them. No roads but railroads could possibly have threaded the State, a large and the best portion of whose surface is absolutely devoid of timber, stone, gravel, or any other available material. The prairies must have remained flowery deserts, visited as a curiosity every year by strangers, but without dwellings for want of wood. The vast quarries must, of course, have lain useless, for want of transporting power,—our friend's coal and iron undisturbed, waiting for an earthquake,—and the poetical pioneer's beets and Indian corn unplanted, and therefore uncelebrated. Well may it be said here, that iron is more valuable than gold. Population, agriculture, the mechanic arts, literature, taste, civilization, in short, are all magnetized by the beneficent rail, and follow wherever it leads. The whole southern portion of Illinois has been nicknamed "Egypt,"—whether because at its utmost point, on a dampish delta, reposes the far-famed city of Cairo,—or whether, as wicked satirists pretend, its denizens have been found, in certain particulars, rather behind our times in intellectual light. Whatever may have been the original excuse for the *sobriquet*, the derogatory one exists no more. Light has penetrated, and darkness can reign no longer. Every day, a fiery visitant, bearing the collective intelligence of the whole world's doings and sayings, dashes through Egypt into Cairo, giving off scintillations at every hamlet on the way,—and every day the brilliant marvel returns, bringing northward, not only the good things of the Ohio and Mississippi, but tropic *on-dits* and oranges, only a few hours old, to the citizens of Chicago, far "in advance of the (New York) mail." With the rail comes the telegraph; and whis-

pers of the rise and fall of fancies and potatoes, of speculations and elections, of the sale of corner-lots and the evasion of bank-officers, are darting about in every direction over our heads, as we unconsciously admire the sunset, or sketch a knot of rosy children as they come trooping from a quaint school-house on the prairie edge. Fancy the rail gone, and we have neither telegraph, nor school-house, nor anything of all this but the sunset,—and even that we could not be there to see in spring-time, at least, unless we could transmigrate for the time into the relinquished forms of some of these aboriginal bull-frogs, which grow to the nice size of two feet in length, destined, no doubt, to receive the souls of habitual croakers hereafter.

But if the railroads have been the making of the land, it is not to be denied that the land has been the making of the railroads. Egyptian minds they must have been, that grudged the tracts given by the United States to the greatest of roads, the greatest road in the world. Having bestowed a line of alternate sections on this immense undertaking,—vital in importance, and impossible without such aid,—the Government at once doubled the price of the intermediate sections, *and sold them at the doubled price*, though they had been years, and might have been ages, in market unsold, without means of communication and building. Who, then, was the loser? Not the United States; for they received for half the land just what they would otherwise have received for the whole. Not the State; for it lays hands on a good slice of the annual profits, not to speak of incalculable benefits beside. Not the farmer, surely; for what would his now high-priced land be worth, if the grand road were annihilated? Not the bond-holder; for he receives a fair, full interest on his money. Not the stock-holder; for he looks with eyes of faith toward a great future. It was a sort of triangular or quadrangular or pentangular bargain, in which all these parties were immensely benefited. The traveller blesses such liberal policy, as

he flies along towards the land of oranges, or turns aside to measure mammoth beets or weigh extra-supernal corn, to "bore" or to "prospect," to pick at oölite and shale or to "peep and botanize" through an inexhaustible Flora. The present writer has certainly reason to be grateful,—not, alas! with that gushing warmth of feeling which the owners of shares or bonds naturally experience,—but as an "umble individual" who could not have found material for this valuable article, if certain gentlemen who do own the said shares had not been very enterprising.

The man who may be said to have devised the land-basis for railroads through unsettled tracts—a financier of unsurpassed sagacity, and once the soul of commercial honor as well as intelligence—should not, in his dishonored grave, and far beyond the reach of human scorn or vengeance, be denied the credit of what he accomplished before the fatal madness seized his soul and dragged him to perdition. Let it be enough that his name has come to be an epithet of infamy in his land's language. Let not the grandeur of his views, the intent with which he set out, and the good he achieved, be lost in oblivion. Pride—"by that sin fell the angels!"—cast him headlong down the irrecoverable steep,—

"And when he fell, he fell like Lucifer,"—
aye! like Wolsey and Bacon,—

"Never to rise again!"

It is no sin to hope that the All-seeing eye discerned in those noble undertakings and beneficent results the germ of wings that shall one day bear him back to light and mercy. Let us, who benefit by his good deeds, not insist on remembering only the evil!

Chicago, the Wondrous, sits amid her wealth, like a magnificent sultana, half-reclining over a great oval mirror, supplied by that lake of lakes, the fathomless Michigan. Perhaps the resemblance might be unpoetically traced to particulars; for we are told by lotos-eating travellers, that Oriental beauties, with all their splendor, are not especially clean.

Certain it is that our Occidental sultana dresses her fair head with towers and spires, and hangs about her neck long rows of gems in the shape of stately and elegant dwellings,—yet, descending to her feet, we sink in mud and mire, or tumble unguardedly into excavations set like traps for the unwary, or oust whole colonies of rats from beneath plank walks where they have burrowed securely ever since "improvements" began. At some seasons, indeed, there is no mud; because the high winds from the lake or the prairies turn the mud into dust, which blinds our eyes, fills our mouths, and makes us Quakers in appearance and anything but saints in heart. Chicago-walking resembles none but such as Christian encountered as he fled from the City of Destruction; yet in this case the ills are those of a City of *Construction*,—sure to disappear as soon as the builders find time to care for such trifles. Chicago people, it is well known, walk with their heads in the clouds, and, naturally, do not mind what happens to their feet. It is only strangers who exclaim, and sometimes more than exclaim, at the dangers of the way. Cast-away carriages lie along the road-side, like ships on Fire Island beach. Nobody minds them. If you see a gentleman at a distance, progressing slowly with a gliding or floundering pace, you conclude he has a horse under him, and, perhaps, on nearer approach, you see bridle and headstall. This is in early spring, while the frost is coming out of the ground. As the season advances, the horse emerges, and you are just getting a fair sight of him when the dust begins and he disappears again. So say the scoffers, and those who would, but do not, own any city-lots in that favored vicinity; and to the somewhat heated mind of the traveller who encounters such things for the first time, the story does not seem so very much exaggerated. Simple wayfarers like myself, however, tell no such wicked tales of the Garden City; but remember only her youth, her grandeur, her spirit, her hospitality, her weight of

cares, her immense achievements, and her sure promise of future metropolitan splendors.

The vicinity of Chicago is all dotted with beautiful villa-residences. To drive among them is like turning over a book of architectural drawings,—so great is their variety, and so marked the taste which prevails. Many of them are of the fine light-colored stone found in the neighborhood, and their substantial excellence inspires a feeling that all this prosperity is of no ephemeral character. People do not build such country-houses until they feel settled and secure. The lake-shore is of course the line of attraction, for it is the only natural beauty of the place. But what trees! Several of the streets of Chicago may easily become as beautiful drives as the far-famed Cascine at Florence, and will be so before her population doubles again,—which is giving but a short interval for the improvement. No parks as yet, however. Land on the lake-shore is too precious, and the flats west of the town are quite despised. Yet city parks do not demand very unequal surface, and it would not require a very potent landscape-gardener or an unheard-of amount of dollars to make a fine driving- and riding-ground, where the new carriages of the fortunate might be aired, and the fine horses of the gay exercised, during a good part of the year.

To describe Chicago, one would need all the superlatives set in a row. Grandest, flattest,—muddiest, dustiest,—hottest, coldest,—wettest, driest,—farthest north, south, east, and west from other places, consequently most central,—best harbor on Lake Michigan, worst harbor and smallest river any great commercial city ever lived on,—most elegant in architecture, meanest in hovel-propping,—wildest in speculation, solidest in value,—proudest in self-esteem, loudest in self-disparagement,—most lavish, most grasping,—most public-spirited in some things, blindest and darkest on some points of highest interest.

And some poor souls would doubtless

add,—most fascinating, or most desolate,—according as one goes there, gay and hopeful, to find troops of prosperous friends, or, lonely and poor, with the distant hope of bettering broken fortunes by struggling among the driving thousands already there on the same errand. There is, perhaps, no place in the world where it is more necessary to take a bright and hopeful view of life, and none where this is more difficult. There is too much at stake. Those who have visited Baden-Baden and her Kur-saal sisters in the height of the season need not be told that no “church-face” ever equalled in solemnity the countenances of those who surround the fatal tables, waiting for the stony lips of the *croupier* to announce “*Noir perd*,” or “*Rouge gagne*.” At Chicago are a wider table, higher stakes, more desperate throws, and Fate herself presiding, or what seems Fate, at once partial and inexorable.

But, on this great scale, even success fails to bring smiles. The winners sit “with hair on end at their own wonders,” and half-fearing that such golden showers have some illusion about them and may prove fairy favors at last. Next to this feeling comes the thirst for more. Enlarged means bring enlarged desires and ever-extending plans. The repose and lightness of heart that were at first to be the reward of success recede farther and farther into the dim distance, until at last they are lost sight of entirely, confessed, with a sigh, to be unattainable. How can people in this State wear cheerful countenances? When one looks at the gay and social faces and habits of some little German town, where are cultivated people, surrounded by the books and pictures they love, with leisure enough for music and dancing and tea-garden chat, for deep friendships and lofty musings, it would seem as if our shrewd Yankee-land and its outcroppings at the West had not yet found out everything worth knowing. Froissart’s famous remark about the English in France—“They take their pleasure sadly, after their fashion”—may apply to the popu-

lation of Chicago, and it will be some time yet, I fancy, before they will take it very gayly.

At a little country-town, the other day, not within a thousand miles of Chicago, a family about leaving for a distant place advertised their movables for sale at auction. There was such a stir throughout the settlement as called forth an expression of wonder from a stranger. "Ah!" said a good lady, "auctions are the only gayety we have here!"

Joking apart, there was a deep American truth in this seeming *niaiserie*.

Chicago has, as we have said, with all her wealth, no public park or other provision for out-door recreation. She has no gallery of Art, or the beginning of one,—no establishment of music, no public library,—no social institution whatever, except the church. Without that blessed bond, her people would be absolute units, as independent of each other as the grains of sand on the seashore, swept hither and thither by the ocean winds.

But even before these words have found their way to the Garden City, they will, perhaps, be inapplicable,—so rapid is progress at the West. The people are like a great family moving into a new house. There is so much sweeping and dusting to do, so much finding of places for the furniture, so much time to spend in providing for breakfast, dinner, and tea, lodging and washing, that nobody thinks of unpacking the pictures, taking the books out of their boxes, or getting up drives or riding-parties. All these come in good time, and will be the better done for a little prudent delay.

There is, to the stranger, an appearance of extreme hurry in Chicago, and the streets are very peculiar in not having a lady walking in them. Day after day I traversed them, meeting crowds of men, who looked like the representatives of every nation and tongue and people,—and every class of society, from the greenest rustic, or the most undisguised sharper, to the man of most seri-

ous respectability, or him of highest *ton*. Yet one lady walking in the streets I saw not; and when I say not one lady, I mean that I did not meet a woman who seemed to claim that title, or any title much above that of an ordinary domestic. Perhaps this is only a spring symptom, which passes off when the mud dries up a little,—but it certainly gave a rather forlorn or funereal aspect to the streets for the time.

There is, nevertheless, potent inspiration in the resolute and occupied air of these crowds. Hardly any one stays long among them without feeling a desire to share their excitement, and do something towards the splendid future which is evidently beckoning them on. Preparing the future! It is glorious business. No wonder it makes the pulse quicken and the eye look as if it saw spirits. It may be said, that in some sense we are all preparing the future; but in the West there is a special meaning in the expression. In circumstances so new and wondrous, first steps are all-important. Those who have been providentially led to become early settlers have immense power for good or evil. One can trace in many or most of our Western towns, and even States, the spirit of their first influential citizens. Happy is it for Chicago that she has been favored in this respect,—and to her honor be it said, that she appreciates her benefactors. Of one citizen, who has been for twenty years past doing the quiet and modest work of a good genius in the city of his adoption, it is currently said, that he has built a hundred miles of her streets,—and there is no mark of respect and gratitude that she would not gladly show him. Other citizens take the most faithful and disinterested care of her schools; and to many she is indebted for an amount of liberality and public spirit which is constantly increasing her enormous prosperity. Happy the city which possesses such citizens! Happy the citizens who have a city so nobly deserving of their best services!

AN EVENING WITH THE TELEGRAPH-WIRES.

MY cousin Moses has made the discovery that he is a powerful magnetizer.

Like many others who have newly come into possession of a small tract in those mysterious, outlying, unexplored wildernesses of Nature, which we call by so many names, but which as yet refuse to be defined or classed, he has been naturally eager to commence operations, and *exploit* and farm it a little. He is making experiments on a narrow border of his wild lands. He is a man of will and of strong *physique*, with an inquiring and scientific turn of mind, which inclines him chiefly to metaphysical studies. It is not to be wondered at, that, having lately discovered that he possesses the mesmeric gift, he should not sufficiently discriminate as to its application. Later he will see that it is an agent not to be tampered with, and never to be used on healthy subjects, but applied only to invalids. To-day he is like a newly-armed knight-errant, bounding off on his steed at sunrise, in search of adventures.

One afternoon, not long since, he was telling me of his extraordinary successes with somnambulists and *somnopalists*,—of old ladies cured of nervous headaches and face-twitches, and of young ones put to sleep at a distance from the magnetizer, dropping into a trance suddenly as a bird struck by a gun-shot, simply by an act of his volition,—of water turned into wine, and wine into brandy, to the somnambulist taste,—and so on, till we got wandering into crooked by-paths of physics and metaphysics, that seemed to lead us nowhere in particular,—when I said, "Come, Cousin Moses, suppose you try it on me, by way of experiment. But I have my doubts if you'll ever put me to sleep."

My cousin yielded to my request with alacrity;—every subject for mesmerism

was for him legitimate;—and I relinquished myself to his passes with the docility of a man about to be shaved.

The passes from the head downward were kept up perseveringly for half an hour, without my experiencing any change, or manifesting the least symptom of drowsiness. At last the charm began to work. I began to be conscious of a singular trickling or creeping sensation following the motion of his passes down my arms. My respiration grew short. I experienced, however, no tendency to sleep, and my mind was perfectly calm and unexcited. My cousin was satisfied with his experiment so far, but we both concluded it had better end here. So he made the reverse passes, in order to undo the knot he was beginning to tie in my nerves. He did not, however, entirely succeed in untying it. I was a healthy subject, and the magnetism continued to affect my nerves, in spite of the untangling passes.

Soon after, I rose and took my leave. I was strangely excited, but it was a purely physical, and not a mental excitement. Thinking that a walk would quiet me, I went through street after street, until I reached the outskirts of the city. It was a mild September evening. The fine weather and the sight of the trees and fields tempted me to continue my walk. It was near sunset, and I strolled on and on, watching the purple gray and ruddy gold of the clouds, until I had got fairly into the country.

As I rambled on, I was suddenly seized with a fancy to climb a tree which stood by the roadside, and rest myself in a convenient notch which I observed between two of the limbs. I was soon seated in among the branches, with a canopy of leaves around and over me,—feeling, in my still nervous condition, as I leaned my back against the mossy bark, like a magnified tree-toad in clothes.

The air was balmy and fragrant, and against the amber of the western sky rose and fell numberless little clouds of insects. The birds were chirping and fluttering about me, and made their arrangements for their night's lodging, in manifest dread of the clothed tree-toad who had invaded their leafy premises.

The peculiar nervousness which had taken possession of me was now passing off, to be replaced by a species of mental exaltation. I was becoming conscious of something approaching semi-clairvoyance, and yet not in the ordinary form. Sensation, emotion, thought were intensified. The landscape around me was dotted with farm-houses, pillowed in soft, dark clumps of trees. One by one, the lights began to appear at the windows,—soft rising stars of home-joys. The glorious September sunset was fading, but still resplendent in the west. The landscape was pervaded with a deeper repose, the glowing clouds with a diviner splendor than that which filled the eye. Then thronging memories awoke. My remembrances of all my past life in the crowded cities of America and Europe rose vividly before me. In the long strata of solid gray clouds, where the sun had gone down, leaving only a few vapory gold-fishes swimming in the clear spaces above, I could fancy I saw the lonely Roman Campagna and the wondrous dome of St. Peter's, as when first beheld on the horizon ten years ago. Then, as from the slopes of San Miniato at sunset, gray, red-tiled Florence, with its Boboli gardens, full of nightingales, its old towers and cathedrals, and its soaring Giotto Campanile. Then Genoa, with its terraces and marble palaces, and that huge statue of André Doria. Then Naples, gleaming white in the eye of day over her pellucid depths of sea. The golden days of Italy floated by me. Then came the memories, glad or sad, of days that had passed in my own native land,—in the very city that lay behind me,—the intimate communings with dear friends,—the musical and the merry nights,—the trials, anxieties, sorrows—

But all this is very egotistical and unnecessary. I merely meant to say that I was in a peculiar, almost abnormal state of mind, that evening. The spirit had, as it were, been drawn outwards, and perhaps slightly dislocated, by those mesmeric passes of my cousin, and I had not succeeded as yet in adjusting it quite satisfactorily in its old bodily grooves and sockets. The condition I was in was not as pleasant as I could have wished; for I was as alive to painful remembrances and imaginations, as to pleasant ones. I seemed to myself like a revolving lantern of a light-house,—now dark, now glowing with a fiery radiance.

I asked myself,—Is it that I have been blind and deaf and dull all my life, and am just waking into real existence? or am I developing into a *medium*,—Heaven forbid!—and the spirits pushing at some unguarded portal of the nervous system, and striving to take possession? Shall I hear raps and knockings when I return to my solitary chamber, and sit a powerless beholder of damaged furniture, which the spirits will never have the conscience to promise payment for, when my landlady's bill comes in? (By the way, have the spirits *ever* behaved like gentlemen in this respect, and settled up fair and square for the breakages they have indulged in by way of exemplifying the doctrine of a future state?)

As I soliloquized thus, I was attracted by a low vibrating note among the leaves. Looking through them, I saw, for the first time, that two or three telegraph-wires, which I had observed skirting the road, ran directly through the tree in which I was seated. It was a strange sort of sound, that came in hurried jerks, as it were, accompanied with a corresponding jerk of the wire.

A gigantic fancy flashed across me:—This State of New York is a great guitar; yonder, at Albany, are the legislative pegs and screws; down there in Manhattan Island is the great sounding-board; these iron wires are the strings! The spirits are singing, perhaps, with their heads up there in the sweet heavens and

the rosy clouds,—and this vibration of the wires is a sort of loose jangling accompaniment of their unpractised hands on earth. The voice is always above the strings.—This I thought in my semi-mesmeric condition, perhaps. I soon laughed at my Brobdignagian nonsense, and said,—There is a telegraphic despatch passing. Now if I could only find out what it is!—that would be something new in science,—a discovery worth knowing,—to be able to hear or feel the purport of a telegraphic message, simply by touching the wire along which it runs!

So, regardless of any electric shock I might receive, I thrust out my hand through the leaves of the tree, and boldly grasped the wire. The jerks instantly were experienced in my elbow, and it was not long before certain short sentences were conveyed, magnetically, to my brain. In my amazement at the discovery, I almost dropped out of the tree. However, I kept firm hold of the wire, and my sensorium made me aware of something passing like this:—“Market active. Fair demand for exchange. Transactions from five to ten thousand shares. Aristides railroad-stock scarce. Rates of freight to Liverpool firm. Yours respectfully, Grabber and Holdham.”

Upon my word, said I, this is rather dry!—only a merchant! I expected something better than this, to commence with.

The wire being now quiet, I fell into a musing upon the singular discovery I had made,—and whether I should get anything from the public or the government for revealing it. And then my thoughts wandered across the Atlantic, and I remembered those long rows of telegraphic wires in France, ruled along the tops of high barrier-walls, and looking against the sky like immense music-lines,—and those queer inverted-coffee-cup-like supports for the wires, on the tall posts. Then I thought of music and coffee at the Jardin Mabille. Then my fancy wandered down the Champs Elysées to

those multitudinous spider-web wires that radiate from the palace of the Tuileries, where the Imperial spider sits plotting and weaving his meshes around the liberties of France. Then I thought, What a thing this discovery of mine would be for political conspirators,—to reverse the whispering-gallery of Dionysius, and, instead of the tyrant hearing the secrets of the people, the people hearing the secrets of the tyrant! Then I thought of Robespierre, and Marat, and Charlotte Corday, and Marie Antoinette,—then of Delaroché's and Müller's pictures of the unfortunate Queen,—then of pictures in general,—then of landscape-scenery,—till I almost fell into a doze, when I was startled by a faint sound along the wire, as of a sigh, like the first thrill of the Æolian harp in the evening wind. Another message was passing. I reached my hand out to the iron thread. A confused sadness began to oppress me. A mother's voice weeping over her sick child pulsed along the wire. Her husband was far away. Her little daughter lay very ill. “Come quick,” said the voice. “I have little hope; but if you were only here, I should be calmer. If she must die, it would be such a comfort to have you here!”

I drew my hand away. I saw the whole scene too vividly. Who this mother was I knew not; but the news of the death of a child whom I knew and loved could not have affected me more strangely and keenly than this semi-articulate sob which quivered along the iron air-track, in the silence of the evening, from one unknown—to another unknown.

I roused myself from my sadness, and thought I would descend the tree and stroll home. The moon was up, and a pleasant walk before me, with enough to meditate upon in the singular discovery I had made. I was about to get down from my crotch in the tree, and was just reaching out my dexter leg to feel if I could touch a bough below me, when a low, wild shriek ran along the wire,—as when the wind-harp, above referred to for illustration, is blown upon by some

rude, sharp northwester. In spite of myself, I touched the vibrating cord. The message was brief and abrupt, like a sea-captain's command:—"Ship Trinidad wrecked off Wildcat's Beach, — all hands lost,—no insurance!"

Do you recollect, when sitting alone sometimes in your room, at midnight, in the month of November, how, after a lull in the blast, the bleak wind will all at once seem to clutch at the windows, with a demoniac howl that makes the house rock? Do you remember the half-whistles and half-groans through the key-holes and crevices,—the cries and shrieks that rise and fall,—the roaring in the chimney,—the slamming of distant doors and shutters? Well, all this seemed to be suggested in the ringing of the iron cord. The very leaves, green and dewy, and the delicate branches, seemed to quiver as the dreary message passed.

I thought,—This is a little too much! This old tree is getting to be a very lugubrious spot. I don't want to hear any more such messages. I almost wish I had never touched the wire. Strange! one reads such an announcement in a newspaper very coolly;—why is it that I can't take it coolly in a telegraphic despatch? We can read a thing with indifference which we hear spoken with a shudder,—such prisoners are we to our senses! I have had enough of this telegraphing. I sha'n't close my eyes to-night, if I have any more of it.

I had now fairly got my foot on the branch below, and was slipping myself gradually down, when the wire began to ring like a horn, and in the merriest of strains. I paused and listened. I could fancy the joyful barking of dogs in accompaniment. Ah, surely, this is some sportsman,—“the hunter's call, to faun and dryad known.” This smacks of the bright sunshine and the green woods and the yellow fields. I will stop and hear it.—It was just what I expected,—a jolly citizen telegraphing his country friend to meet him with his guns and dogs at such a place.

And immediately afterwards, in much

the same key, came a musical note and a message babbling of green fields, from a painter:—"I shall leave town to-morrow. Meet me at Bullshornville at ten, A. M. Don't forget to bring my field-easel, canvases, and the other traps."

If there is more of this music, I said, I think I shall stay. I love the sportsmen and the artists, and am glad they are going to have a good time. The weather promises well for them.

There was a little pause, and then a strain of perfect jubilation came leaping along the wire, like the flying song of the bobolink over tracts of blowing clover and apple-blossoms. I expected something very rare,—a strain of poetry at least. It was only this:—"Mr. Grinkins, Sir, we shall expect rooms for the bridal party at your hotel, on the side overlooking the lake, if possible. Yours, P. Simpkins."

Ah, I said, that's all Greek to me,—poor, lonely bachelor that I am! I wonder, by the way, if they ever wrote their love-letters by telegraph.—But what is this coming? I am clearly getting back to my normal condition:—"Miss Polly Wogg wishes to say that she has been unable to procure the silk for Mrs. Papillon for less than five dollars a yard."—Nonsense! I'm not in the dry-goods, nor millinery, nor young-lady department.

And here was another:—"I have found an excellent school for Adolphus in Birchville, near Mastersville Corners. Send him up without delay, with all the school-books you can find."

And another,—important, very:—"I find that 'One touch of Nature makes the whole world kin' is in 'Troilus and Cressida.' Don't send the MS. without this correction."

But what's this,—accompanied with a long, low whistle?—"The cars have run off the track at Breakneck Hollow. Back your engine and wait for further orders."

We are getting into the minor key again, I thought. Listen!—"Mr. S. died last night. You must be here to-

morrow, if possible, at the opening of the will."

Well, said I, I have had plenty of despatches, and have expended enough sympathy, for one night. I have been very mysteriously affected,—how, I can't exactly tell. But who will ever believe my evening's adventure? Who will not laugh at my pretended discovery? Even my cousin Moses will be incredulous. I shall be at least looked upon as a *medium*, and so settled.

And here allow me to remark,—Have you not observed how easily things apparently difficult and mysterious are arranged in the popular understanding by the use of certain stereotyped names applied to them? Only give a name to a wonder, or an unclassified phenomenon, or even an unsound notion, and you instantly clear away all the fog of mystery. Let an unprincipled fellow call his views Latitudinarianism or Longitudinarianism, he may, with a little adroitness, go for a respectable and consistent member of some sect. A filibuster may pass current under some such label as Political or Territorial Extensionist;—the name is a long, decent overcoat for his shabby ideas. So when wonderful phenomena in the nervous system are observed,—when tables are smashed by invisible hands,—when people see ghosts through stone walls, and know what is passing in the heart of Africa,—how easily you unlock your wardrobe of terms and clap on the back of every eccentric fact your ready-made phrase-coat,—Animal Magnetism, Biology, Odic Force, Optical Illusion, Second Sight, Spirits, and what not! It is a wonderful labor-saving and faith-saving process. People say, "Oh, is that all?" and pass on complacently. There are such explanatory labels to be met with everywhere. They save a deal of trouble. All the shops keep these overcoats,—shops ecclesiastical, medical, juridical, professional, political, social.

Now all I have to do is, not to go to the second-hand slop-shops for the phrase-coat I need for my naked discovery, but

look for some unfamiliar robe,—some name more *recherché*, learned, and transcendental than my neighbors sport,—and then I shall pass muster. The classic togas seem to be the most imposing. The Germans, who weave their names out of their indigenous Saxon roots, are much too *naïve*. I will get a Greek Lexicon and set about it this very night.

After all, why should it be thought so improbable, in this age of strange phenomena, that the ideas transmitted through the electro-magnetic wire may be communicated to the brain,—especially when there exist certain abnormal or semi-abnormal conditions of that brain and its nerves? Is it not reasonable to suppose that all magnetisms are one in essence? The singular experiences above related seem to hint at the truth of such a view. If it be true that certain delicately-organized persons have the power of telling the character of others, who are entire strangers to them, simply by holding in their hands letters written by those strangers, is it not full as much within the scope of belief that there are those who, under certain physical conditions, may detect the purport of an electro-magnetic message,—that message being sent by vibrations of the wire through the nerves to the brain? If all magnetisms are one in essence,—as I am inclined to believe,—and if the nerves, the brain, and the mind are so swayed by what we term animal magnetism, why not allow for the strong probability of their being also, under certain conditions, equally impressible by electro-magnetism? I put these questions to scientific men; and I do not see why they should be answered by silence or ridicule, merely because the whole subject is veiled in mystery.

It may be asked,—How can an electro-magnetic message be communicated to the mind, without a knowledge of the alphabet used by the telegraphers? This question may seem a poser to some minds. But I don't see that it raises any grave difficulty. I answer the question by asking another:—How can persons in the

somnambulist state read with the tops of their heads?

Besides, I once had the telegraph alphabet explained to me by one of the wire-operators,—though I have forgotten it,—and it is possible, that, in my semi-mesmeric condition, the recollection revived, so that I knew that such and such pulsations of the wire stood for such and such letters.

But is there not a certain spiritual significance, also, in these singular experiences here related?

We may safely lay down this doctrine,—a very old and much-thumbed doctrine, but none the less true for all its dog-ears:—No man lives for himself alone. He is related not only to the silent stars and the singing-birds and the sunny landscape, but to every other human soul. You say, This should not be stated so sermonically, but symbolically. That is just what I have been doing in my narrative of the wires.

It gives one a great idea of human communion,—this power of sending these spark-messages thousands of miles in a second. Far more poetical, too,—is it not?—as well as more practical, than tying billets under the wings of carrier-pigeons. It is removing so much time and space out of the way,—those absorbents of spirits,—and bringing mind into close contact with mind. But when one can read these messages without the aid of machinery, by merely touching the wires, how much greater does the symbol become!

All mankind are one. As some philosophers express it,—one great mind includes us all. But then, as it would never do for all minds to be literally one, any more than it would for all magnetisms to be identical in their modes of manifestation, or for all the rivers, creeks, and canals to flow together, so we have our natural barriers and channels,—our *propriums*, as the Swedish seer has it,—and so we live and let live. We feel with others and think with others, but with strict reservations. That evening among the wires, for instance, brought me into

wonderful intimate contact with a few of the joys and sorrows of some of my fellow-beings; but an excess of such experiences would interfere with our freedom and our happiness. It is our selfhood, properly balanced, which constitutes our dignity, our humanity. A certain degree, and a very considerable degree, of insulation is necessary, that individual life and mental equanimity may go on.

But there may be a degree of insulation which is unbecoming a member of the human family. It may become brutish,—or it may amount to the ridiculous. In Paris, there was an old lady, of uncertain age, who lived in the apartment beneath mine. I think I never saw her but twice. She manifested her existence sometimes by complaining of the romping of the children overhead, who called her the “*bonne femme*.” Why they gave her the name I don’t know; for she seemed to have no human ties in the world, and wasted her affections on a private menagerie of parrots, canaries, and poodle-dogs. A few shocks of the electric telegraph might have raised her out of her desert island, and given her some glimpses of the great continents of human love and sympathy.

A man who lives for himself alone sits on a sort of insulated glass stool, with a *noli-me-tangere* look at his fellow-men, and a shivering dread of some electric shock from contact with them. He is a non-conductor in relation to the great magnetic currents which run pulsing along the invisible wires that connect one heart with another. Preachers, philanthropists, and moralists are in the habit of saying of such a person,—“How cold! how selfish! how unchristian!” I sometimes fancy a citizen of the planet Venus, that social star of evening and morning, might say,—“How absurd!” What a figure he cuts there, sitting in solitary state upon his glass tripod,—in the middle of a crowd of excited fellow-beings, hurried to and fro by their passions and sympathies,—like an awkward country-bumpkin caught in the midst of

a gay crowd of polkers and waltzers at a ball,—or an oyster bedded on a rock, with silver fishes playing rapid games of hide and seek, love and hate, in the clear briny depths above and beneath! If the angels ever look out of their sphere of intense spiritual realities to indulge in a laugh, methinks such a lonely tripod-sitter, cased over with his invulnerable, non-conducting cloak and hood,—shrinking, dodging, or bracing himself up on the defensive, as the crowd fans him with its rush or jostles up against him,—like the man who fancied himself a teapot, and was forever warning people not to come too near him,—might furnish a subject for a planetary joke not unworthy of translation into the language of our dim earth.

One need not be a lonely bachelor, nor a lonely spinster, in order to live alone. The loneliest are those who mingle with men bodily and yet have no contact with them spiritually. There is no desert solitude equal to that of a crowded city where you have no sympathies. I might here quote Paris again, in illustration,—or, indeed, any foreign city. A friend of mine had an *atelier* once in the top of a house in the Rue St. Honoré. He knew not a soul in the house nor in the neighborhood. There was a German tailor below, who once made him a pair of pantaloons,—so they were connected sardonically and pecuniarily, and, when they met, recognized one another; and there was the *concierge* below, who knew when he came in and went out,—that was all. All day long the deafened roar of carts and carriages, and the muffled cry of the

marchands des légumes, were faintly heard from below. And in an adjoining room a female voice (my friend could never tell whether child's or woman's, for he never saw any one) overflowed in tones of endearment on some unresponding creature,—he could never guess whether it was a baby, or a bird, or a cat, or a dog, or a lizard, (the French have such pets sometimes,) or an enchanted prince, like that poor half-marble fellow in the "Arabian Nights." In that garret the painter experienced for six months the perfection of Parisian solitude. Now I dare say he or I might have found social sympathies, by hunting them up; but he didn't, and I dare say he was to blame, as I should be in the same situation,—and I am willing to place myself in the same category with the menagerie-loving old lady above referred to, omitting the feathered and canine pets.

As to my mesmerico-telegraphic discovery, it may pass for what it is worth. I shall submit it at least to my cousin Moses, as soon as he returns from the South. People may believe it or not. People may say it may be of practical use, or not. I shall overhaul my terminologies, and, with the "metaphysical aid" of my cousin, fit it with a scientific name which shall overtop all the *ologies*.

Having dressed my new Fact in a respectable and scholarlike coat, I shall let him take his chance with the judicious public,—and content myself, for the present, with making him a sort of humble *colporteur* of the valuable tract on Human Brotherhood of which I have herewith furnished a few dry specimens.

THE AUTOCRAT OF THE BREAKFAST-TABLE.

EVERY MAN HIS OWN BOSWELL.

[THE company looked a little flustered one morning when I came in,—so much so, that I inquired of my neighbor, the divinity-student, what had been going on. It appears that the young fellow whom they call John had taken advantage of my being a little late (I having been rather longer than usual dressing that morning) to circulate several questions involving a quibble or play upon words,—in short, containing that indignity to the human understanding, condemned in the passages from the distinguished moralist of the last century and the illustrious historian of the present, which I cited on a former occasion, and known as a *pun*. After breakfast, one of the boarders handed me a small roll of paper containing some of the questions and their answers. I subjoin two or three of them, to show what a tendency there is to frivolity and meaningless talk in young persons of a certain sort, when not restrained by the presence of more reflective natures.—It was asked, “Why tertian and quartan fevers were like certain short-lived insects.” Some interesting physiological relation would be naturally suggested. The inquirer blushes to find that the answer is in the paltry equivocation, that they *skip* a day or two.—“Why an Englishman must go to the Continent to weaken his grog or punch.” The answer proves to have no relation whatever to the temperance-movement, as no better reason is given than that island-(or, as it is absurdly written, *ile and*) water won’t mix.—But when I came to the next question and its answer, I felt that patience ceased to be a virtue. “Why an onion is like a piano” is a query that a person of sensibility would be slow to propose; but that in an educated community an individual could be found to answer it in these words,—“Because it smell odious,” *quasi*, it’s melodious,—is

not credible, but too true. I can show you the paper.

Dear reader, I beg your pardon for repeating such things. I know most conversations reported in books are altogether above such trivial details, but folly will come up at every table as surely as purslain and chickweed and sorrel will come up in gardens. This young fellow ought to have talked philosophy, I know perfectly well; but he didn’t,—he made jokes.]

I am willing,—I said,—to exercise your ingenuity in a rational and contemplative manner.—No, I do not proscribe certain forms of philosophical speculation which involve an approach to the absurd or the ludicrous, such as you may find, for example, in the folio of the Reverend Father Thomas Sanchez, in his famous tractate, “De Sancto Matrimonio.” I will therefore turn this levity of yours to profit by reading you a rhymed problem, wrought out by my friend the Professor.

THE DEACON’S MASTERPIECE:
OR THE WONDERFUL “ONE-HOSS-SHAY.”

A LOGICAL STORY.

HAVE you heard of the wonderful one-hoss-shay,
That was built in such a logical way
It ran a hundred years to a day,
And then, of a sudden, it — ah, but stay,
I’ll tell you what happened without delay,
Scaring the parson into fits,
Frightening people out of their wits,—
Have you ever heard of that, I say?

Seventeen hundred and fifty-five.
Georgius Secundus was then alive,—
Snuffly old drone from the German hive!
That was the year when Lisbon-town
Saw the earth open and gulp her down,
And Braddock’s army was done so brown,
Left without a scalp to its crown.
It was on the terrible Earthquake-day
That the Deacon finished the one-hoss-shay.

Now in building of chaises, I tell you what,
There is always *somewhere* a weakest spot,—
In hub, tire, felloe, in spring or thill,
In panel, or crossbar, or floor, or sill,
In screw, bolt, thoroughbrace,—lurking still
Find it somewhere you must and will,—
Above or below, or within or without,—
And that's the reason, beyond a doubt,
A chaise *breaks down*, but doesn't *wear out*.

But the Deacon swore (as Deacons do,
With an "I dew vum," or an "I tell *yeou*,")
He would build one shay to beat the taown
'n' the keounty 'n' all the kentry raoun';
It should be so built that it *couldn't* break
daown:

—"Fur," said the Deacon, "'t's mighty plain
That the weakes' place mus' stan' the strain;
'n' the way t' fix it, uz I maintain,

Is only jest

To make that place uz strong uz the rest."

So the Deacon inquired of the village folk
Where he could find the strongest oak,
That couldn't be split nor bent nor broke,—
That was for spokes and floor and sills;
He sent for lancewood to make the thills;
The crossbars were ash, from the straightest
trees;

The panels of white-wood, that cuts like
cheese,

But lasts like iron for things like these;
The hubs of logs from the "Settler's ellum,"—
Last of its timber,—they couldn't sell 'em,—
Never an axe had seen their chips,
And the wedges flew from between their lips,
Their blunt ends frizzled like celery-tips;
Step and prop-iron, bolt and screw,
Spring, tire, axle, and linchpin too,
Steel of the finest, bright and blue;
Thoroughbrace bison-skin, thick and wide;
Boot, top, dasher, from tough old hide
Found in the pit when the tanner died.
That was the way he "put her through."—
"There!" said the Deacon, "naow she'll
dew!"

Do! I tell you, I rather guess
She was a wonder, and nothing less!
Colts grew horses, beards turned gray,
Deacon and deaconess dropped away,
Children and grand-children—where were
they?

But there stood the stout old one-hoss-shay
As fresh as on Lisbon-earthquake-day!

EIGHTEEN HUNDRED;—it came and found
The Deacon's Masterpiece strong and sound.
Eighteen hundred increased by ten;—
"Hahnsun kerridge" they called it then.
Eighteen hundred and twenty came;—

Running as usual; much the same.
Thirty and forty at last arrive,
And then come fifty, and FIFTY-FIVE.

Little of all we value here
Wakes on the morn of its hundredth year
Without both feeling and looking queer.
In fact, there's nothing that keeps its youth,
So far as I know, but a tree and truth.
(This is a moral that runs at large;
Take it.—You're welcome.—No extra charge.)

FIRST OF NOVEMBER,—the Earthquake-day.—
There are traces of age in the one-hoss-shay,
A general flavor of mild decay,
But nothing local, as one may say.
There couldn't be,—for the Deacon's art
Had made it so like in every part
That there wasn't a chance for one to start.
For the wheels were just as strong as the thills,
And the floor was just as strong as the sills,
And the panels just as strong as the floor,
And the whippetree neither less nor more,
And the back-crossbar as strong as the fore,
And spring and axle and hub *encore*.
And yet, *as a whole*, it is past a doubt
In another hour it will be *worn out*!

First of November, 'Fifty-five!
This morning the parson takes a drive.
Now, small boys, get out of the way!
Here comes the wonderful one-hoss-shay,
Drawn by a rat-tailed, ewe-necked bay.
"Huddup!" said the parson.—Off went they.

The parson was working his Sunday's text,—
Had got to *fifthly*, and stopped perplexed
At what the—Moses—was coming next.
All at once the horse stood still,
Close by the meet'n'-house on the hill.
—First a shiver, and then a thrill,
Then something decidedly like a spill,—
And the parson was sitting upon a rock,
At half-past nine by the meet'n'-house-clock,—
Just the hour of the Earthquake-shock!
—What do you think the parson found,
When he got up and stared around?
The poor old chaise in a heap or mound,
As if it had been to the mill and ground!
You see, of course, if you're not a dunce,
How it went to pieces all at once,—
All at once, and nothing first,—
Just as bubbles do when they burst.

End of the wonderful one-hoss-shay.
Logic is logic. That's all I say.

—I think there is one habit,—I said
to our company a day or two afterwards,
—worse than that of punning. It is the

gradual substitution of cant or flash terms for words which truly characterize their objects. I have known several very genteel idiots whose whole vocabulary had deliquessed into some half dozen expressions. All things fell into one of two great categories,—*fast* or *slow*. Man's chief end was to be a *brick*. When the great calamities of life overtook their friends, these last were spoken of as being a *good deal cut up*. Nine-tenths of human existence were summed up in the single word, *bore*. These expressions come to be the algebraic symbols of minds which have grown too weak or indolent to discriminate. They are the blank checks of intellectual bankruptcy;—you may fill them up with what idea you like; it makes no difference, for there are no funds in the treasury upon which they are drawn. Colleges and good-for-nothing smoking-clubs are the places where these conversational fungi spring up most luxuriantly. Don't think I undervalue the proper use and application of a cant word or phrase. It adds piquancy to conversation, as a mushroom does to a sauce. But it is no better than a toadstool, odious to the sense and poisonous to the intellect, when it spawns itself all over the talk of men and youths capable of talking, as it sometimes does. As we hear flash phraseology, it is commonly the dishwater from the washings of English dandyism, school-boy or full-grown, wrung out of a three-volume novel which had sopped it up, or decanted from the pictured urn of Mr. Verdant Green, and diluted to suit the provincial climate.

—The young fellow called John spoke up sharply and said, it was "rum" to hear me "pitchin' into fellers" for "goin' it in the slang line," when I used all the flash words myself just when I pleased.

—I replied with my usual forbearance. —Certainly, to give up the algebraic symbol, because *a* or *b* is often a cover for ideal nihilism, would be unwise. I have heard a child laboring to express a certain condition, involving a hitherto undescribed

sensation; (as it supposed,) all of which could have been sufficiently explained by the participle—*bored*. I have seen a country-clergyman, with a one-story intellect and a one-horse vocabulary, who has consumed his valuable time (and mine) freely, in developing an opinion of a brother-minister's discourse which would have been abundantly characterized by a peach-down-lipped sophomore in the one word—*slow*. Let us discriminate, and be shy of absolute proscription. I am omnivervivorous by nature and training. Passing by such words as are poisonous, I can swallow most others, and chew such as I cannot swallow.

Dandies are not good for much, but they are good for something. They invent or keep in circulation those conversational blank checks or counters just spoken of, which intellectual capitalists may sometimes find it worth their while to borrow of them. They are useful, too, in keeping up the standard of dress, which, but for them, would deteriorate, and become, what some old fools would have it, a matter of convenience, and not of taste and art. Yes, I like dandies well enough,—on one condition.

—What is that, Sir?—said the divinity-student.

—That they have pluck. I find that lies at the bottom of all true dandyism. A little boy dressed up very fine, who puts his finger in his mouth and takes to crying, if other boys make fun of him, looks very silly. But if he turns red in the face and knotty in the fists, and makes an example of the biggest of his assailants, throwing off his fine Leghorn and his thickly-buttoned jacket, if necessary, to consummate the act of justice, his small toggery takes on the splendors of the crested helmet that frightened Astyanax. You remember that the Duke said his dandy officers were his best officers. The "Sunday blood," the super-superb sartorial equestrian of our annual Fast-day, is not imposing or dangerous. But such fellows as Brummel and D'Orsay and Byron are not to be snubbed quite so easily. Look out for "la main

de fer sous le gant de velours" (which I printed in English the other day without quotation-marks, thinking whether any *scarabæus criticus* would add this to his globe and roll in glory with it into the newspapers,—which he didn't do it, in the charming pleonasm of the London language, and therefore I claim the sole merit of exposing the same). A good many powerful and dangerous people have had a decided dash of dandyism about them. There was Alcibiades, the "curled son of Clinias," an accomplished young man, but what would be called a "swell" in these days. There was Aristoteles, a very distinguished writer, of whom you have heard,—a philosopher, in short, whom it took centuries to learn, centuries to unlearn, and is now going to take a generation or more to learn over again. Regular dandy, he was. So was Marcus Antonius; and though he lost his game, he played for big stakes, and it wasn't his dandyism that spoiled his chance. Petrarca was not to be despised as a scholar or a poet, but he was one of the same sort. So was Sir Humphrey Davy; so was Lord Palmerston, formerly, if I am not forgetful. Yes,—a dandy is good for something as such; and dandies such as I was just speaking of have rocked this planet like a cradle,—aye, and left it swinging to this day.—Still, if I were you, I wouldn't go to the tailor's, on the strength of these remarks, and run up a long bill which will render pockets a superfluity in your next suit. *Elegans "nascitur, non fit."* A man is born a dandy, as he is born a poet. There are heads that can't wear hats; there are necks that can't fit cravats; there are jaws that can't fill out collars—(Willis touched this last point in one of his earlier ambrotypes, if I remember rightly); there are *tournures* nothing can humanize, and movements nothing can subdue to the gracious suavity or elegant languor or stately serenity which belong to different styles of dandyism.

We are forming an aristocracy, as you may observe, in this country,—not a *gratiâ-Dei*, nor a *jure-divino* one,—but

a *de-facto* upper stratum of being, which floats over the turbid waves of common life as the iridescent film you may have seen spreading over the water about our wharves,—very splendid, though its origin may have been tar, tallow, train-oil, or other such unctuous commodities. I say, then, we are forming an aristocracy; and, transitory as its individual life often is, it maintains itself tolerably, as a whole. Of course, money is its corner-stone. But now observe this. Money kept for two or three generations transforms a race,—I don't mean merely in manners and hereditary culture, but in blood and bone. Money buys air and sunshine, in which children grow up more kindly, of course, than in close, back streets; it buys country-places to give them happy and healthy summers, good nursing, good doctoring, and the best cuts of beef and mutton. When the spring-chickens come to market—I beg your pardon,—that is not what I was going to speak of. As the young females of each successive season come on, the finest specimens among them, other things being equal, are apt to attract those who can afford the expensive luxury of beauty. The physical character of the next generation rises in consequence. It is plain that certain families have in this way acquired an elevated type of face and figure, and that in a small circle of city-connections one may sometimes find models of both sexes which one of the rural counties would find it hard to match from all its townships put together. Because there is a good deal of running down, of degeneration and waste of life, among the richer classes, you must not overlook the equally obvious fact I have just spoken of,—which in one or two generations more will be, I think, much more patent than just now.

The weak point in our chryso-aristocracy is the same I have alluded to in connection with cheap dandyism. Its thorough manhood, its high-caste gallantry, are not so manifest as the plate-glass of its windows and the more or less legitimate heraldry of its coach-panels. It is

very curious to observe of how small account military folks are held among our Northern people. Our young men must gild their spurs, but they need not win them. The equal division of property keeps the younger sons of rich people above the necessity of military service. Thus the army loses an element of refinement, and the moneyed upper class forgets what it is to count heroism among its virtues. Still I don't believe in any aristocracy without pluck as its backbone. Ours may show it when the time comes, if it ever does come.

— These United States furnish the greatest market for intellectual *green fruit* of all the places in the world. I think so, at any rate. The demand for intellectual labor is so enormous and the market so far from nice, that young talent is apt to fare like unripe gooseberries,—get plucked to make a fool of. Think of a country which buys eighty thousand copies of the “Proverbial Philosophy,” while the author's admiring countrymen have been buying twelve thousand! How can one let his fruit hang in the sun until it gets fully ripe, while there are eighty thousand such hungry mouths ready to swallow it and proclaim its praises? Consequently, there never was such a collection of crude pippins and half-grown windfalls as our native literature displays among its fruits. There are literary green-groceries at every corner, which will buy anything, from a button-pear to a pine-apple. It takes a long apprenticeship to train a whole people to reading and writing. The temptation of money and fame is too great for young people. Do I not remember that glorious moment when the late Mr. — we won't say who,—editor of the — we won't say what, offered me the sum of fifty cents *per* double-columned quarto page for shaking my young boughs over his foolscap apron? Was it not an intoxicating vision of gold and glory? I should doubtless have revelled in its wealth and splendor, but for learning the fact that the *fifty cents* was to be considered a rhetor-

ical embellishment, and by no means a literal expression of past fact or present intention.

— Beware of making your moral staple consist of the negative virtues. It is good to abstain, and teach others to abstain, from all that is sinful or hurtful. But making a business of it leads to emaciation of character, unless one feeds largely also on the more nutritious diet of active sympathetic benevolence.

— I don't believe one word of what you are saying,—spoke up the angular female in black bombazine.

I am sorry you disbelieve it, Madam,—I said, and added softly to my next neighbor,—but you prove it.

The young fellow sitting near me winked; and the divinity-student said, in an undertone,—*Optime dictum*.

Your talking Latin,—said I,—reminds me of an odd trick of one of my old tutors. He read so much of that language, that his English half turned into it. He got caught in town, one hot summer, in pretty close quarters, and wrote, or began to write, a series of city pastorals. Eclogues he called them, and meant to have published them by subscription. I remember some of his verses, if you want to hear them.—You, Sir, (addressing myself to the divinity-student,) and all such as have been through college, or, what is the same thing, received an honorary degree, will understand them without a dictionary. The old man had a great deal to say about “*æstivation*,” as he called it, in opposition, as one might say, to *hibernation*. Intramural *æstivation*, or town-life in summer, he would say, is a peculiar form of suspended existence or semi-asphyxia. One wakes up from it about the beginning of the last week in September. This is what I remember of his poem:—

ÆSTIVATION.

An Unpublished Poem, by my late Latin Tutor.

In candent ire the solar splendor flames;
The foles, languescient, pend from arid rames;

His humid front the cive, anhelng, wipes,
And dreams of errng on ventiferous ripes.

How dulce to vïve occult to mortal eyes,
Dorm on the herb with none to supervise,
Carp the suave berries from the crescent vine,
And bibe the flow from longicaudate kine!

To me, alas! no verdurous visions come,
Save yon exiguous pool's conferva-scum,—
No concave vast repeats the tender hue
That laves my milk-jug with celestial blue!

Mo wretched! Let me curr to quercine
shades!

Effund your albid haunts, lactiferous maids!
Oh, might I vole to some umbrageous
clump,—
Depart,—be off,—excede,—evade,—erump!

— I have lived by the sea-shore and by the mountains.—No, I am not going to say which is best. The one where your place is is the best for you. But this difference there is: you can domesticate mountains, but the sea is *feræ naturæ*. You may have a hut, or know the owner of one, on the mountain-side; you see a light half-way up its ascent in the evening, and you know there is a home, and you might share it. You have noted certain trees, perhaps; you know the particular zone where the hemlocks look so black in October, when the maples and beeches have faded. All its reliefs and intaglios have electrotyped themselves in the medallions that hang round the walls of your memory's chamber.—The sea remembers nothing. It is feline. It licks your feet,—its huge flanks purr very pleasantly for you; but it will crack your bones and eat you, for all that, and wipe the crimsoned foam from its jaws as if nothing had happened. The mountains give their lost children berries and water; the sea mocks their thirst and lets them die. The mountains have a grand, stupid, lovable tranquillity; the sea has a fascinating, treacherous intelligence. The mountains lie about like huge ruminants, their broad backs awful to look upon, but safe to handle. The sea smooths its silver scales until you cannot see

their joints,—but their shining is that of a snake's belly, after all.—In deeper suggestiveness I find as great a difference. The mountains dwarf mankind and foreshorten the procession of its long generations. The sea drowns out humanity and time; it has no sympathy with either; for it belongs to eternity, and of that it sings its monotonous song forever and ever.

Yet I should love to have a little box by the sea-shore. I should love to gaze out on the wild feline element from a front window of my own, just as I should love to look on a caged panther, and see it stretch its shining length, and then curl over and lap its smooth sides, and by-and-by begin to lash itself into rage and show its white teeth and spring at its bars, and howl the cry of its mad, but, to me, harmless fury.—And then,—to look at it with that inward eye,—who does not love to shuffle off time and its concerns, at intervals,—to forget who is President and who is Governor, what race he belongs to, what language he speaks, which golden-headed nail of the firmament his particular planetary system is hung upon, and listen to the great liquid metronome as it beats its solemn measure, steadily swinging when the solo or duet of human life began, and to swing just as steadily after the human chorus has died out and man is a fossil on its shores?

— What should decide one, in choosing a summer residence?—Constitution, first of all. How much snow could you melt in an hour, if you were planted in a hoghead of it? Comfort is essential to enjoyment. All sensitive people should remember that persons in easy circumstances suffer much more from cold in summer—that is, the warm half of the year—than in winter, or the other half. You must cut your climate to your constitution, as much as your clothing to your shape. After this, consult your taste and convenience. But if you would be happy in Berkshire, you must carry mountains in your brain; and if you would enjoy Nahant, you must have an ocean in your soul. Nature plays at dominos

with you; you must match her piece, or she will never give it up to you.

—The schoolmistress said, in rather a mischievous way, that she was afraid some minds or souls would be a little crowded, if they took in the Rocky Mountains or the Atlantic.

Have you ever read the little book called "The Stars and the Earth?" — said I.—Have you seen the Declaration of Independence photographed in a surface that a fly's foot would cover? The forms or conditions of Time and Space, as Kant will tell you, are nothing in themselves,—only our way of looking at things. You are right, I think, however, in recognizing the category of Space as being quite as applicable to minds as to the outer world. Every man of reflection is vaguely conscious of an imperfectly-defined circle which is drawn about his intellect. He has a perfectly clear sense that the fragments of his intellectual circle include the curves of many other minds of which he is cognizant. He often recognizes these as manifestly concentric with his own, but of less radius. On the other hand, when we find a portion of an are outside of our own, we say it *intersects* ours, but are very slow to confess or to see that it *circumscribes* it. Every now and then a man's mind is stretched by a new idea or sensation, and never shrinks back to its former dimensions. After looking at the Alps, I felt that my mind had been stretched beyond the limits of its elasticity, and fitted so loosely on my old ideas of space that I had to spread these to fit it.

—If I thought I should ever see the Alps!—said the schoolmistress.

Perhaps you will, some time or other,—I said.

It is not very likely,—she answered. —I have had one or two opportunities, but I had rather be anything than governess in a rich family.

[Proud, too, you little soft-voiced woman! Well, I can't say I like you any the worse for it. How long will school-keeping take to kill you? Is it possible the poor thing works with her needle,

too? I don't like those marks on the side of her forehead.]

Tableau. Chamouni. Mont Blanc in full view. Figures in the foreground; two of them standing apart; one of them a gentleman of—oh,—ah,—yes! the other a lady in a white cashmere, leaning on his shoulder.—The ingenuous reader will understand that this was an internal, private, personal, subjective diorama, seen for one instant on the background of my own consciousness, and abolished into black non-entity by the first question which recalled me to actual life, as suddenly as if one of those iron shop-blinds (which I always pass at dusk with a shiver, expecting to stumble over some poor but honest shop-boy's head, just taken off by its sudden and unexpected descent, and left outside upon the sidewalk) had come down "by the run."]

—Should you like to hear what moderate wishes life brings one to at last? I used to be very ambitious,—wasteful, extravagant, and luxurious in all my fancies. Read too much in the "Arabian Nights." Must have the lamp,—couldn't do without the ring. Exercise every morning on the brazen horse. Plump down into castles as full of little milk-white princesses as a nest is of young sparrows. All love me dearly at once.—Charming idea of life, but too high-colored for the reality. I have outgrown all this; my tastes have become exceedingly primitive,—almost, perhaps, ascetic. We carry happiness into our condition, but must not hope to find it there. I think you will be willing to hear some lines which embody the subdued and limited desires of my maturity.

CONTENTMENT.

"Man wants but little here below."

LITTLE I ask; my wants are few;

I only wish a hut of stone,
(A *very plain* brown stone will do,)

That I may call my own;—
And close at hand is such a one,
In yonder street that fronts the sun.

Plain food is quite enough for me;
 Three courses are as good as ten;—
 If Nature can subsist on three,
 Thank Heaven for three. Amen!
 I always thought cold victual nice;—
 My *choice* would be vanilla-ice.

I care not much for gold or land;—
 Give me a mortgage here and there,—
 Some good bank-stock,—some note of hand,
 Or trifling railroad share;—
 I only ask that Fortune send
 A *little* more than I shall spend.

Honors are silly toys, I know,
 And titles are but empty names;—
 I would, *perhaps*, be Plenipo,—
 But only near St. James;—
 I'm very sure I should not care
 To fill our Gubernator's chair.

Jewels are baubles; 'tis a sin
 To care for such unfruitful things;—
 One good-sized diamond in a pin,—
 Some, *not so large*, in rings,—
 A ruby, and a pearl, or so,
 Will do for me;—I laugh at show.

My dame should dress in cheap attire;
 (Good, heavy silks are never dear;—
 I own perhaps I *might* desire
 Some shawls of true cashmere,—
 Some marrowy crapes of China silk,
 Like wrinkled skins on scalded milk.

I would not have the horse I drive
 So fast that folks must stop and stare;
 An easy gait—two, forty-five—
 Suits me; I do not care;—
 Perhaps, for just a *single spurt*,
 Some seconds less would do no hurt.

Of pictures, I should like to own
 Titians and Raphaels three or four,—
 I love so much their style and tone,—
 One Turner, and no more
 (A landscape,—foreground golden dirt;
 The sunshine painted with a squirt).

Of books but few,—some fifty score
 For daily use, and bound for wear;
 The rest upon an upper floor;—
 Some *little* luxury *there*
 Of red morocco's gilded gleam,
 And vellum rich as country cream.

Busts, cameos, gems,—such things as these,
 Which others often show for pride,
 I value for their power to please,
 And selfish churls deride;—
 One Stradivarius, I confess,
 Two Meerschaums, I would fain possess.

Wealth's wasteful tricks I will not learn,
 Nor ape the glittering upstart fool;—
 Shall not carved tables serve my turn,
 But *all* must be of buhl?
 Give grasping pomp its double share;—
 I ask but *one* recumbent chair.

Thus humble let me live and die,
 Nor long for Midas' golden touch;
 If Heaven more generous gifts deny,
 I shall not miss them *much*.—
 Too grateful for the blessing lent
 Of simple tastes and mind content!

MY LAST WALK WITH THE SCHOOL- MISTRESS.

(A Parenthesis.)

I can't say just how many walks she and I had taken together before this one. I found the effect of going out every morning was decidedly favorable on her health. Two pleasing dimples, the places for which were just marked when she came, played, shadowy, in her freshening cheeks when she smiled and nodded good-morning to me from the school-house-steps.

I am afraid I did the greater part of the talking. At any rate, if I should try to report all that I said during the first half-dozen walks we took together, I fear that I might receive a gentle hint from my friends the publishers, that a separate volume, at my own risk and expense, would be the proper method of bringing them before the public.

— I would have a woman as true as Death. At the first real lie which works from the heart outward, she should be tenderly chloroformed into a better world, where she can have an angel for a governess, and feed on strange fruits which will make her all over again, even to her bones and marrow.—Whether gifted with the accident of beauty or not, she should have been moulded in the rose-red clay of Love, before the breath of life made a moving mortal of her. Love-capacity is a congenital endowment; and I think, after a while, one gets to know the warm-hued natures it belongs to from the pretty pipe-clay counterfeits of it.—Proud she may

be, in the sense of respecting herself; but pride, in the sense of contemning others less gifted than herself, deserves the two lowest circles of a vulgar woman's Inferno, where the punishments are Small-pox and Bankruptcy.—She who nips off the end of a brittle courtesy, as one breaks the tip of an icicle, to bestow upon those whom she ought cordially and kindly to recognize, proclaims the fact that she comes not merely of low blood, but of bad blood. Consciousness of unquestioned position makes people gracious in proper measure to all; but if a woman puts on airs with her real equals, she has something about herself or her family she is ashamed of, or ought to be. Middle, and more than middle-aged people, who know family histories, generally see through it. An official of standing was rude to me once. Oh, that is the maternal grandfather,—said a wise old friend to me,—he was a boor.—Better too few words, from the woman we love, than too many: while she is silent, Nature is working for her; while she talks, she is working for herself.—Love is sparingly soluble in the words of men; therefore they speak much of it; but one syllable of woman's speech can dissolve more of it than a man's heart can hold.

—Whether I said any or all of these things to the schoolmistress, or not,—whether I stole them out of Lord Bacon,—whether I cribbed them from Balzac,—whether I dipped them from the ocean of Tupperian wisdom,—or whether I have just found them in my head, laid there by that solemn fowl, Experience, (who, according to my observation, cackles oftener than she drops real live eggs,) I cannot say. Wise men have said more foolish things,—and foolish men, I don't doubt, have said as wise things. Anyhow, the schoolmistress and I had pleasant walks and long talks, all of which I do not feel bound to report.

—You are a stranger to me, Ma'am.—I don't doubt you would like to know all I said to the schoolmistress.—I sha'n't do it;—I had rather get the publishers to return the money you have invested in

this. Besides, I have forgotten a good deal of it. I shall tell only what I like of what I remember.

—My idea was, in the first place, to search out the picturesque spots which the city affords a sight of, to those who have eyes. I know a good many, and it was a pleasure to look at them in company with my young friend. There were the shrubs and flowers in the Franklin-Place front-yards or borders; Commerce is just putting his granite foot upon them. Then there are certain small seraglio-gardens, into which one can get a peep through the crevices of high fences,—one in Myrtle Street, or backing on it,—here and there one at the North and South Ends. Then the great elms in Essex Street. Then the stately horse-chestnuts in that vacant lot in Chambers Street, which hold their outspread hands over your head, (as I said in my poem the other day,) and look as if they were whispering, "May grace, mercy, and peace be with you!"—and the rest of that benediction. Nay, there are certain patches of ground, which, having lain neglected for a time, Nature, who always has her pockets full of seeds, and holes in all her pockets, has covered with hungry plebeian growths, which fight for life with each other, until some of them get broad-leaved and succulent, and you have a coarse vegetable tapestry which Raphael would not have disdained to spread over the foreground of his masterpiece. The Professor pretends that he found such a one in Charles Street, which, in its dare-devil impudence of rough-and-tumble vegetation, beat the pretty-behaved flower-beds of the Public Garden as ignominiously as a group of young tatterdemalions playing pitch-and-toss beats a row of Sunday-school-boys with their teacher at their head.

But then the Professor has one of his burrows in that region, and puts everything in high colors relating to it. That is his way about everything.—I hold any man cheap,—he said,—of whom nothing stronger can be uttered than that all his geese are swans.—How is that,

Professor?—said I;—I should have set you down for one of that sort.—Sir,—said he,—I am proud to say, that Nature has so far enriched me, that I cannot own so much as a *duck* without seeing in it as pretty a swan as ever swam the basin in the garden of the Luxembourg. And the Professor showed the whites of his eyes devoutly, like one returning thanks after a dinner of many courses.

I don't know anything sweeter than this leaking in of Nature through all the cracks in the walls and floors of cities. You heap up a million tons of hewn rocks on a square mile or two of earth which was green once. The trees look down from the hill-sides and ask each other, as they stand on tiptoe,—“What are these people about?” And the small herbs at their feet look up and whisper back,—“We will go and see.” So the small herbs pack themselves up in the least possible bundles, and wait until the wind steals to them at night and whispers,—“Come with me.” Then they go softly with it into the great city,—one to a cleft in the pavement, one to a spout on the roof, one to a seam in the marbles over a rich gentleman's bones, and one to the grave without a stone where nothing but a man is buried,—and there they grow, looking down on the generations of men from mouldy roofs, looking up from between the less-trodden pavements, looking out through iron cemetery-railings. Listen to them, when there is only a light breath stirring, and you will hear them saying to each other,—“Wait awhile!” The words run along the telegraph of those narrow green lines that border the roads leading from the city, until they reach the slope of the hills, and the trees repeat in low murmurs to each other,—“Wait awhile!” By-and-by the flow of life in the streets ebbs, and the old leafy inhabitants—the smaller tribes always in front—saunter in, one by one, very careless seemingly, but very tenacious, until they swarm so that the great stones gape from each other with the crowding of their roots, and the feldspar begins to be picked out of the granite to

find them food. At last the trees take up their solemn line of march, and never rest until they have encamped in the market-place. Wait long enough and you will find an old doting oak hugging a huge worn block in its yellow underground arms; that was the corner-stone of the State-House. Oh, so patient she is, this imperturbable Nature!

—Let us cry!—

But all this has nothing to do with my walks and talks with the schoolmistress. I did not say that I would not tell you something about them. Let me alone, and I shall talk to you more than I ought to, probably. We never tell our secrets to people that pump for them.

Books we talked about, and education. It was her duty to know something of these, and of course she did. Perhaps I was somewhat more learned than she, but I found that the difference between her reading and mine was like that of a man's and a woman's dusting a library. The man flaps about with a bunch of feathers; the woman goes to work softly with a cloth. She does not raise half the dust, nor fill her own eyes and mouth with it,—but she goes into all the corners, and attends to the leaves as much as the covers.—Books are the *negative* pictures of thought, and the more sensitive the mind that receives their images, the more nicely the finest lines are reproduced. A woman, (of the right kind,) reading after a man, follows him as Ruth followed the reapers of Boaz, and her gleanings are often the finest of the wheat.

But it was in talking of Life that we came most nearly together. I thought I knew something about that,—that I could speak or write about it somewhat to the purpose.

To take up this fluid earthly being of ours as a sponge sucks up water,—to be steeped and soaked in its realities as a hide fills its pores lying seven years in a tan-pit,—to have winnowed every wave of it as a mill-wheel works up the stream that runs through the flume upon its float-boards,—to have curled up in the keenest spasms and flattened out in the lax-

est languors of this breathing-sickness, which keeps certain parcels of matter uneasy for three or four score years,—to have fought all the devils and clasped all the angels of its delirium,—and then, just at the point when the white-hot passions have cooled down to cherry-red, plunge our experience into the ice-cold stream of some human language or other, one might think would end in a rhapsody with something of spring and temper in it. All this I thought my power and province.

The schoolmistress had tried life, too. Once in a while one meets with a single soul greater than all the living pageant that passes before it. As the pale astronomer sits in his study with sunken eyes and thin fingers, and weighs Uranus or Neptune as in a balance, so there are meek, slight women who have weighed all that this planetary life can offer, and hold it like a bauble in the palm of their slender hands. This was one of them. Fortune had left her, sorrow had baptized her; the routine of labor and the loneliness of almost friendless city-life were before her. Yet, as I looked upon her tranquil face, gradually regaining a cheerfulness that was often sprightly, as she became interested in the various matters we talked about and places we visited, I saw that eye and lip and every shifting lineament were made for love,—unconscious of their sweet office as yet, and meeting the cold aspect of Duty with the natural graces which were meant for the reward of nothing less than the Great Passion.

—I never spoke one word of love to the schoolmistress in the course of these pleasant walks. It seemed to me that we talked of everything but love on that particular morning. There was, perhaps, a little more timidity and hesitancy on my part than I have commonly shown

among our people at the boarding-house. In fact, I considered myself the master at the breakfast-table; but, somehow, I could not command myself just then so well as usual. The truth is, I had secured a passage to Liverpool in the steamer which was to leave at noon,—with the condition, however, of being released in case circumstances occurred to detain me. The schoolmistress knew nothing about all this, of course, as yet.

It was on the Common that we were walking. The *mall*, or boulevard of our Common, you know, has various branches leading from it in different directions. One of these runs downward from opposite Joy Street southward across the whole length of the Common to Boylston Street. We called it the long path, and were fond of it.

I felt very weak indeed (though of a tolerably robust habit) as we came opposite the head of this path on that morning. I think I tried to speak twice without making myself distinctly audible. At last I got out the question,—Will you take the long path with me?—Certainly,—said the schoolmistress,—with much pleasure.—Think,—I said,—before you answer; if you take the long path with me now, I shall interpret it that we are to part no more!—The schoolmistress stepped back with a sudden movement, as if an arrow had struck her.

One of the long granite blocks used as seats was hard by,—the one you may still see close by the Gingko-tree.—Pray, sit down,—I said.—No, no,—she answered, softly,—I will walk the *long path* with you!

—The old gentleman who sits opposite met us walking, arm in arm, about the middle of the long path, and said, very charmingly,—“Good morning, my dears!”

LITERARY NOTICES.

The Life of John Fitch, the Inventor of the Steamboat. By THOMPSON WESTCOTT. Philadelphia: J. B. Lippincott & Co.

WHAT would not honest Sancho have given for a good biography of the man who invented sleep? And will not the adventurous pleasure-tourist, who has been jarred, jammed, roasted, coddled, and suffocated in a railroad-car for a whole night, with two days to sandwich it, on being deposited in an airy state-room for the last two hundred miles of his journey, think the man who invented the steamboat deserving of a "first-rate" life? We well remember the time when nobody suspected that person, whoever he might be,—and nobody much cared who he was,—of any relationship to the individual whose memory Sancho blessed, so great was the churning in the palaces that then floated. But in our present boats this unpalace-like operation has been so localized and mollified as to escape the notice of all but the greenest and most inquisitive passengers. And now that we find the luxury of travelling by water actually superior to that of staying at home on land, we begin to feel a budding veneration for the man who first found out that steam could be substituted, with such marvellous advantage, for helpless dependence on the wind and miserable tugging at oars and setting-poles. Who was he? What circumstances conspired to shape his life and project it with so notable an aim? How did he look, act, think, on all matters of human concernment? Here comes a book, assuming in its title that one John Fitch, of whom his generation seems not to have thought enough to paint his portrait, was the inventor of the steamboat. It professes to be "The Life of John Fitch"; but we are sorry to say it is rather a documentary argument to prove that he was "the inventor of the steamboat." As an argument, it is both needless and needlessly strong. We already knew to a certainty that nobody could present a better claim to that honor than John Fitch. True, the *idea* did not wait for him. The engine could not have been working a hundred years in the

world without giving birth to that. But till Watt invented it anew in 1782, by admitting the steam alternately at both ends of the cylinder, it was too awkward and clumsy to become a practical navigator. Moreover, though it could pump admirably, it had not been taught to turn a crank. The French assert, that experiments in steam-propulsion were made on the Seine, by Count Auxiron and Perrier, in 1774, and on the Saone, by De Jouffroy, in 1782; but we know they led to no practical results, and the knowledge of them probably did not, for some years, travel beyond the limits of the French language. There is no satisfactory evidence that a boat was ever moved by steam, within the boundaries of Anglo-Saxondom, before John Fitch did it, on the 27th of July, 1786. His successful and every way brilliant experiment on that occasion led directly to practical results,—to wit, the formation of a company, embracing some of the foremost men of Philadelphia, which built a small steam-packet for the conveyance of passengers, and ran it during three summers, ending with that of 1790. The company then failed, and broke poor Fitch's heart, simply because the investment had not thus far proved lucrative, and they were unwilling to make the further advances requisite to carry out his moderate and reasonable plans. The only person who ever claimed, in English, to have made a steamboat experiment before Fitch, was James Rumsey, of Virginia, who, in 1788, published some testimony to show that he had done it as early as April, 1786, that he had broached the idea, *confidentially*, two years earlier, and that Fitch *might* have received it from one who violated his confidence. Fitch promptly annihilated these pretences by a pamphlet, a reprint of which may be found in the Patent-Office Report for 1850. This, and a contribution to Sparks's "American Biography," by Col. Charles Whittlesey, of Ohio, seem quite sufficient to establish the historical fact that John Fitch was the father of steam-navigation, whoever may have been its prophets. Though the infant, with the royal blood of both Neptune and Pluto in its veins, and a brand-new empire

waiting to crown it, fell into a seventeen years' swoon, during which Fitch died, and the public at large forgot all that he had ever said or done, its life did not become extinct. It was not created, but revived, by Fulton, aided by the refreshing effusion of Chancellor Livingston's money. We did not need a new book to make us more certain of these facts, but we did need a more thorough biography of John Fitch, and, with great respect for the industry and faithfulness of Mr. Westcott, it is our opinion that we do still. He has demonstrated that the materials for such a work are abundant, and a glance at the mortal career of Fitch will show him to be an uncommonly interesting subject.

John Fitch was born in Windsor, Connecticut, in 1748. At the age of five, while his father was absent from home, courting his stepmother, he heroically extinguished a fire of blazing flax, which would otherwise have consumed the house, and while he was smarting from his burns was cruelly beaten by an elder brother, who misapprehended the case of the little boy, very much as the world did that of the man he became. The domestic discipline he encountered under the paternal roof was of the severest New England pattern of those days, and between its theology and its economy he grew out of shape, like a thrifty pumpkin between two rocks. He loved to learn, but had few books and little schooling. His taste tended to mechanism, and he was apprenticed to a stingy clock-maker, who obliged him to work on his farm and kept him ignorant of his trade. Getting his liberty at last, he set up brass-founding, on a capital of twenty shillings, and made money at it. Then he went into the manufacture of potash, in which he was less successful. He married a wife who proved more caustic than the potash and more than a match for his patience. He settled his affairs so as to leave her all his little property in the most manageable shape, and left her with two children, to seek a separate fortune in the wide world. The war of the Revolution found him at Trenton, New Jersey, a man of some substance, acquired as a silversmith and peddler of silver and brass sleeve-buttons of his own manufacture. It made him an officer and then an armorer in the Continental service. As a fabricator

of patriotic weapons, he incurred the displeasure of his Methodist brethren by working on the Sabbath, and lost his orthodoxy in his disgust at their rebukes. Towards the close of the Revolution, getting poor in fact by getting rich in Continental money, he endeavored to save himself by investing in Virginia land-warrants, went to Kentucky as a surveyor, and became possessed of sixteen hundred acres of that wilderness. On a second expedition down the Ohio, early in 1782, he fell into the hands of the savages, in the most melodramatic style, was led captive through the vast forests and swamps to Detroit, had a very characteristic and remarkable prison-experience under British authority at Prison Island, was exchanged, and by a sea-voyage reached his home in Bucks County, Pennsylvania; at the close of the same year. Immediately after the establishment of peace, he formed a company to speculate in Ohio lands, and made extensive surveys for the purpose of forestalling the best locations. Mr. Westcott's book confuses this portion of his chronology by misprinting two or three dates, on the 113th page. The hopeful game was spoiled by unexpected measures of the Confederated government; but Fitch's explorations had deeply impressed him with the sublime character of the Western rivers, and when, in April, 1785, the thought first struck him that steam could easily make them navigable upwards as well as downwards, he cared no more for lands. He had noticed the mechanical power of steam, but had never seen an engine, and did not know that one existed out of his own brain. This is the less wonderful, seeing there were only three then in America, and his science extended only to arithmetic. When his minister showed him a drawing of Newcomen's engine, in "Martin's Philosophy," he was chagrined to find that his invention had been anticipated in regard to the mode of producing the power, but he was confirmed in his belief of its availability for navigation. With no better resources than a blacksmith's shop could furnish, he set himself at work to make a steam-engine to test his theory. His success is one of those wonders of human ingenuity struggling with difficulties, moral, financial, and physical combined, which deserve both a Homer and a Macaulay to

celebrate and record them. He was supposed by most people, and almost by himself, to have gone crazy. If anything, at this day, is more incredible than the feat which he accomplished, it is the derision with which the public viewed his labors, derided his success, and sneered at the rags which betokened the honesty of his poverty. To every one who had brains capable of logic, he had demonstrated the feasibility of his visions. But no amount of even physical demonstration, then possible, could bring out the funds requisite to pecuniary profit, against the head-wind of public scorn. It whistled down his high hopes of fortune. At last, dropping the file and the hammer, he took the pen, determined, that, if others must get rich by his invention, he would at least save for himself the fame of it. The result of his literary labors was an autobiography of great frankness and detail, extending to several hundred pages, and embracing almost every conceivable violation of standard English orthography, with which he seems to have had very little acquaintance or sympathy. It was placed under seal in the Philadelphia Library, not to be opened for thirty years. At the expiration of that period, in 1823, the seal was broken, and the quaint old manuscript, with the stamp of honest truth on every word, stood ready to reveal what the world is but just beginning to "want to know" about John Fitch. He afterwards went to Europe to promote his steamboat interests,—to little purpose,—wandered about a few years, settled in Bardstown, Kentucky, made a model steamboat with a brass engine, drowned disappointment in the drink of that country, and at last departed by his own will, two years before the close of the last century. A life so full of truth that is stranger than fiction ought not to be treated in the Dry-as-dust style, quite so largely as Mr. Westcott has done it.

Life Beneath the Waters; or, The Aquarium in America. Illustrated by Plates and Wood-Cuts drawn from Life. By ARTHUR M. EDWARDS. New York: 1858.

THIS book has appeared since the notice in our July number of two English works on the Aquarium. Like so many books by which our literature is discredited, it

is a work got up hastily to meet a public demand, and is deficient in method, thoroughness, and accuracy. There is much repetition in it, and the observations of its author seem to have been limited to the waters around New York, and to have extended over but a short period. In spite of these and other minor defects, it may be recommended as containing much useful information for those just beginning an aquarium and forming an acquaintance with the sea.

We trust that a misprint in our former notice has not brought disappointment to any of our readers, by leading them to expose their aquaria to too much sunshine; for the sunshine should be "not enough" (and not, as it was printed, "hot enough") "to raise the water to a temperature above that of the outer air."

The Exiles of Florida: or the Crimes committed by our Government against the Maroons, who fled from South Carolina and other Slave States, seeking Protection under Spanish Laws. By JOSHUA R. GIDDINGS. Columbus, Ohio: Follett, Foster, & Co. 1858.

A CRUEL story this, Mr. Giddings tells us. Too cruel, but too true. It is full of pathetic and tragic interest, and melts and stirs the heart at once with pity for the sufferers, and with anger, that sins not, at their mean and ruthless oppressors. Every American citizen should read it; for it is an indictment which recites crimes which have been committed in his name, perpetrated by troops and officials in his service, and all done at his expense. The whole nation is responsible at the bar of the world and before the tribunal of posterity for these atrocities, devised by members of its Cabinet and its Congress, directed by its Presidents, and executed by its armies and its courts. The cruelties of Alva in the Netherlands, which make the pen of Motley glow as with fire as he tells them, the *dragonnades* which scorched over the fairest regions of France after the Revocation of the Edict of Nantes, have a certain excuse, as being instigated by a sincere, though misguided religious zeal. For Philip II. and Louis XIV. had, at least, a fanatical belief that they were doing God service by those

holocausts of his children; while no motive inspired these massacres, tortures, and banishments, but the most sordid rapacity and avarice, the lowest and basest passions of the human breast.

And so carefully has the truth of this story been covered up with lies, that, probably, very few indeed of the people of the Free States have any just idea of the origin, character, and purposes of the Seminole Wars, or of the character of the race against which they were waged. And yet there is no episode in American history more full of romantic interest, of heroic struggles, and of moving griefs. We have been taught to believe that these wars were provoked by incursions of the savages of Florida on the frontier, and, if the truth could not be concealed, that an incidental motive of our war of extermination against them was to be found in the sanctuary which the fugitive slaves of the neighboring States found in their fastnesses. The general impression has been, that these were mainly runaways of recent date, who had made their escape from contemporary masters. How many of our readers know that for more than three quarters of a century before the purchase of Florida there had been a nation of negroes established there, enjoying the wild freedom they loved, mingling and gradually becoming identified with the Indians, who had made it their city of refuge from slavery also? For the slaveholders of Carolina had no scruples against enslaving Indians any more than Africans, until it was discovered that the untamable nature of the red man made him an unprofitable and a dangerous servant. These Indian slaves fled into the wilderness, which is now the State of Georgia, pushing their way even to the peninsula of Florida, and were followed, in their flight and to their asylum, by many of their black companions in bondage. For near seventy-five years this little nation lived happy and contented, till the State of Georgia commenced the series of piratical incursions into their country, then a Spanish dependency, from which they were never afterwards free; the nation at last taking up the slaveholders' quarrel and prosecuting it to the bitter and bloody end.

This whole story is told, and well told, by Mr. Giddings. And a most touching

picture it is. First, the original evasion of the slaves into that peninsular wilderness, which they reclaimed as far as the supply of their simple wants demanded. They planted, they hunted, they multiplied their cattle, they intermarried with their Indian friends and allies, their children and their children's children grew up around them, knowing of slavery only by traditionary legend. The original founders of the tribe passed away, and their sons and grandsons possessed their cornfields and their hunting-grounds in peace. For many years no fears disturbed their security. Under the Spanish rule they were safe and happy. Then comes the gradual gathering of the cloud on the edges of their wilderness, its first fitful and irregular flashes, till it closes over their heads and bursts upon them in universal ruin and devastation. Their heroic resistance to the invasion of the United States troops follows, sublime from its very desperation. A more unequal contest was never fought. On one side one of the mightiest powers on earth, with endless stores of men and money at its beck,—and on the other a handful of outcasts fighting for their homes, and the liberties, in no metaphorical sense, of themselves, their wives, and their children, and protracting the fight for as many years as the American Revolution lasted.

Then succeeded the victory of Slavery, and the reduction to hopeless bondage of multitudes who had been for generations free, on claim of pretended descendants of imaginary owners, by the decision of petty government-officials, without trial or real examination. More than five hundred persons, some of them recent fugitives, but mostly men born free, were thus reduced to slavery at a cost to us all of forty millions of dollars, or eighty thousand dollars for each recovered slave! Then comes their removal to the Cherokee lands, west of Arkansas, under the pledge of the faith of the nation, plighted by General Jessup, its authorized agent, that they should be sent to the West, and settled in a village separate from the Seminole Indians, and that, in the mean time, they should be protected, should not be separated, "nor any of them be sold to white men or others." This, however, was not a legitimate issue of a war waged solely for the reduction

of these exiles to slavery; and so the doubts of President Polk as to the construction of this treaty were solved by Mr. John Y. Mason, of Virginia, who was sandwiched in between two Free-State Attorney-Generals for this single piece of dirty work, (of which transaction see a most curious account, pp. 328-9 of this book,) and who enlightened the Presidential mind by the information, that, though the exiles were entitled to their freedom, under the treaty, and had a right to remain in the towns assigned to them, "the Executive could not in any manner interfere to protect them!"

The bordering Creeks, who by long slave-holding had sunk to the level of the whites around them, longed to seize on these valuable neighbors, and, indeed, they claimed rights of property in them as fugitives in fact from themselves. The exiles were assured by the President that they "*had the right to remain in their villages, free from all interference or interruption from the Creeks.*" Trusting to the plighted word of the Head of the Nation, they built their huts and planted their ground, and began again their little industries and enjoyments.

But the sight of so many able-bodied negroes, belonging only to themselves, and setting an evil example to the slaves in the spectacle of an independent colony of blacks, was too tempting and too irritating to be resisted. A slave-dealer appeared amongst the Creeks and offered to pay one hundred dollars for every Floridian exile they would seize and deliver to him,—he taking the risk of the title. Two hundred armed Creek warriors made a foray into the colony and seized all they could secure. They were repulsed, but carried their prisoners with them and delivered them to the tempter, receiving the stipulated pieces of silver for their reward. The Seminole agent had the prisoners brought before the nearest Arkansas judge by Habeas Corpus, and the whole matter was reviewed by this infamous magistrate, who overruled the opinion of the Attorney-General as to their right to reside in their villages, overrode the decision of the President, repealed the treaty-stipulations, pronounced the title of the Creek Indians, and consequently that of their vendee, legal and perfect, and directed the kidnapped captives to be delivered up to the

claimant! We regret that Mr. Giddings has omitted the name of this wretch, and we hope that in a future edition he will tell the world how to catalogue this choice specimen in its collection of judicial monsters.

Then comes the last scene of this drama of exile. Finding that there was no rest for the sole of their foot in the United States, these peeled and hunted men resolved to turn their backs upon the country that had thus cruelly entreated them, and to seek a new home within the frontiers of Mexico. The sad procession began its march westward by night, the warriors keeping themselves always in readiness for an attack. The Creeks, finding that their prey had escaped them, went in pursuit, but were bravely repulsed and fled, leaving their dead upon the field,—the greatest disgrace that can befall, according to the code of Indian honor. The exiles then pursued their march into Mexico without further molestation. There, in a fertile and picturesque region, they have established themselves and resumed the pursuits of peaceful life. But they have not been permitted to live in peace even there. At least one marauding party, in 1853, was organized in Texas, and went in search of adventures towards the new settlement. Of the particulars of the expedition we have no account. Only, it is known that it returned without captives, and, as the Texan papers announcing the fact admitted, "*with slightly diminished numbers.*" How long they will be permitted to dwell unmolested in their new homes no one can say. Complaints are already abroad that the escape of slaves is promoted by the existence of this colony, which receives and protects them. And when the Government shall be ordered by its Slave-holding Directory to add another portion of Mexico to the Area of Freedom, these "outrages" will be sure to be found in the catalogue of grievances to be redressed. Then they will have to dislodge again and fly yet farther from before the face of their hereditary oppressors.

Mr. Giddings has done his task admirably well. It is worthy to be the crowning work of his long life of public service. His style is of that best kind which is never remarked upon, but serves as a clear medium through which the events he por-

trays are seen without distortion or exaggeration. He has done his country one more service in entire consistency with those that have filled up the whole course of his honorable and beneficent life. We have said that this is fit to be the crowning work of Mr. Giddings's life; but we trust that it is far from being the last that he will do for his country. A winter such as rounds his days is fuller of life and promise than a century of vulgar summers. He has won for himself an honorable and enduring place in the hearts and memories of men by the fidelity to principle and the

unflinching courage of his public course. Of the ignoble hundreds who have flitted through the Capitol, since he first took his place there,

"Heads without name, no more remembered,"

his is one of the two or three that are household words on the lips of the nation. And it will so remain and be familiar in the mouths of posterity, with a fame as pure as it is noble. The ear that hath not heard him shall bless him, and the eye that hath not seen him shall give witness to him.

OBITUARY.

THE conductors of "The Atlantic" have the painful duty of announcing to their readers the death of CALVIN W. PHILLEO, author of "Akin by Marriage," published in the earlier numbers of this magazine. The plot of the story was sketched at length, and in the brain of the writer it was complete; but no hand save his own could give it life and form: it must remain an unfinished work. The mind of Mr. Philleo was singularly clear, his observation of nature and character sharp and discriminating, and his feeling for beauty, in its more placid forms, was intense and pervading. His previous work, "Twice Married," and the various sketches of New England life, with which the readers of magazine literature are familiar, are sufficient to give him a high place among novelists. He was warm in his friendships, pure in life, and his early death will be lamented by a wide circle of friends. *In pace!*

THE
ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. II.—OCTOBER, 1858.—NO. XII.

THE NEW WORLD AND THE NEW MAN.

HALF a dozen rivulets leap down the western declivity of the Rocky Mountains, and unite; four thousand miles away the mighty Missouri debouches into the Mexican Gulf as the result of that junction. Did the rivulets propose or plan the river? Not at all; but they knew, each, its private need to find a lower level; the universal law they obeyed accomplished the rest. So is it with the great human streams. Mighty beginnings do not lie in the minds of the beginners. History is a perpetual surprise, ever developing results of which men were the agents without being the expectants. Individual actors, with respect to the master claim of humanity, are, for the most part, not unlike that fleet hound which, enticed by a tempting prospect of meat, outran a locomotive engine all the way from Lowell to Boston, and won a handsome wager for his owner, while intent only on a dinner for himself. Humanity is served out of all proportion to the intention of service. Even the noble souls, never wanting in history, who follow not a bait, but belief, see only in imperfect survey the connections and relations of their deeds. Each is faithfully obeying his own inward vocation, a voice unheard by other soul than

his own, and the inability to calculate consequences makes the preëminent grandeur of his position; or he is urged by the high inevitable impulse to publish or verify an idea: the Divine Destiny *works* in their hearts, and *plans* over their heads.

Socrates felt a sacred impulse to test his neighbors, what they knew and were: this is such account of his life as he himself can give at its close. His contemporaries generally saw in him an imperturbable and troublesome questioner, fatally sure to come at the secret of every man's character and credence, whom no subterfuge could elude, no compliments flatter, no menaces appall,—suspected also of some emancipation from the popular superstitions: this is the account of him which *they* are able to give. At twenty-three centuries' distance *we* see in him the source of a river of spiritual influence, that yet streams on, more than a Missouri, in the minds of men,—more than a Missouri, for it not only flows as an open current, but, percolating beneath the surface, and coming up in distinct and distant fountains, it becomes the hidden source of many a constant tide in the faiths and philosophies of nations.

The veil covers the eyes of spectators

and agents alike. Columbus returns, freighted with wondrous tidings, to the Spanish shore; the nation rises and claps its hands; the nation kneels to bless its gods at all its shrines, and chants its delight in many a choral *Te Deum*. What, then, do they think is gained? Why, *El Dorado*! Have they not gained a whole world of gold and silver mines to buy jewelled cloaks and feathers and frippery with? Have they not gained a cornucopia of savages, to support new brigades at home by their enslavement, and new bishoprics abroad by their salvation? Touching, truly, is the childish eagerness and *bonhomie* with which those Spaniards in fancy assume, as it were, between thumb and finger, this continent, deemed to be nothing less than gold, and feed with it the leanness of hungry purses; and the effect is not a little enhanced by the extreme pains they are at to say a sufficient grace over the imagined meal. "Oh, wonderful, Pomponius!" shouts the large-minded Peter Martyr. "Upon the surface of that earth are found rude masses of gold, of a weight that one fears to mention! . . . Spain is spreading her wings," etc. He is of the minority there, who does not suppose this New World a Providential donation to aid him to dinners, dances, and dawdling, or at best to promote his "glory" and pride of social estimation. Even Columbus, more magnanimous than most of his contemporaries, is not so greatly more wise. The noblest use he can conceive for his discovery is to aid in the recovery of the Holy Sepulchre. With the precious metals that should fall to his share, says his biographer, he made haste to vow the raising of a force of five thousand horse and fifty thousand foot for the expulsion of the Saracens from Jerusalem. Nor is this the only instance in which even the noble among men have sought to clutch the grand opening futures, and wreath the beauty of their promise about the consecrated graves of the past. "Servants of Sepulchres" is a title which even now, not individuals alone, but whole nations, may lawfully claim.

The Old World, we say, seized upon this magnificent new force now thrown into history, and harnessed it unsuspectingly to its own car, as if it could have been designed for no other possible use. Happily, however, the design was different, and Providence having a peculiar faculty of protecting its own plans, the holding of the reins after such a steed proved anything but a sinecure. Spain, indeed, rode in a high chariot for a time, but at length, in that unlucky Armada drive, crashed against English oak on the ocean highways, and came off creaking and rickety, — grew thenceforth ever more unsteady, — finally, came utterly to the ground, with contusions, fractures, and much mishap, — and now the poor nation hobbles hypochondriacally upon crutches, all its brave charioteering sadly ended. England drove more considerately, but could not avoid fate; so in 1783 she, too, must let go the rein with some mental disturbance. For the great Destiny was not exclusively a European Providence, — had meditated the establishment of a fresh and independent human centre on the western side of the sea. The excellent citizens of London and Madrid found themselves incapable of crediting this until it was duly placarded in gunpowder print. — It is, indeed, an unaccountable foible men have, not to recognize a plain fact till it has been published in this blazing hieroglyphic. What were England and France doing at Sebastopol? Merely issuing a poster to this effect, — "Turkey is not yours," — in a type that Russia could feel free to understand. Terribly costly editions these are, and in a type utterly hideous; but while nations refuse to see the fact in a more agreeable presentation, it may probably feel compelled to go into this ugly, but indubitable shape. — Well, somewhat less than a century since, England had committed herself to the proposition, that America was really a part or dependency of Europe, a lower-caste Europe, having about the same relation to the Cisatlantic continent that the farmer's barn has to his house. Mild

refutations of this modest doctrine having been attempted without success, posters in the necessary red-letter type were issued at Concord, Bunker Hill, Yorktown, etc., which might be translated somewhat thus:—"America has its own independent root in the world's centre, its own independent destiny in the Providential thought." This important fact, having then and there exploded itself into legibility, and come to be known and read of all men, admits now of no dispute, and requires no confirmation. It is evidently so. The New World is not merely a newly-discovered hay-loft and dairy-stall for the Old, but is itself a proper household, of equal dignity with any. To draw the due inferences from this, to see what is implied in it, is all that we are here required to do.

Be it, then, especially noted that the continent by itself can take no such rank. A spirituality must appear to crown and complete this great continental body; otherwise America is acephalous. Unless there be an American Man, the continent is inevitably but an appendage, a kitchen and laundry for the European parlor. American Man,—and the word Man is to receive a large emphasis. Observe, that it does not refer to mere population. The fact required will hardly be reported in the census. Indeed, there is quite too much talk about population, about prospective increase of numbers. We are to have thirty millions of inhabitants, they say, in 1860; soon forty, fifty, one hundred millions. Doubtless; and if that be all, one yawns over the statement. Could any prophet assure us of one million of men who would stand for the broadest justice as Leonidas and his three hundred Spartans stood for Lacedæmon! But Hebrew David was thought to be punished for taking a census; nor is the story without significance. To reckon numbers alone a success is a sin, and a blunder beside. Russia has sixty millions of people: who would not gladly swap her out of the world for glorious little Greece back again, and Plato and Æschylus and Epaminondas still there?

Who would exchange Concord or Cambridge in Massachusetts for any hundred thousand square miles of slave-breeding dead-level? Who Massachusetts in whole for as many South American (or Southern) republics as would cover Saturn and all his moons? Make sure of depth and breadth of soul as the national characteristic; then roll up the census columns; and roll out a hallelujah for each additional thousand.

Thus had the great Genocese been destined merely to make a new highway on the ocean and new lines on the map,—to add the potato, maize, and tapioca to the known list of edibles, and tobacco to that of narcotics,—to explode Spain, give England a cotton-field, Ireland a hospital, and Africa a hell. This could by no means seem sufficient. The crew of the *Pinta* shouted, "Land! Land!"—peering through the dark at the new shores; the Spanish nation chanted, "Gold! Gold!"—gazing out through murky desires toward the wondrous West; but it is only with the cry of "Man! Man!" as at the sight of new cerebral shores and wealth of more than golden humanities, that the true America is discovered and announced. So whatever reason we have to assert for America a really independent existence and destiny, the same have we for predicting an opulence of heart and brain, to which Western prairies and Californian gold shall seem the natural appurtenance.

And this noble man must be likewise a new man,—not merely a migrated European. Western Europe pushed a little farther west does not meet our demand. Why should Europe go three thousand miles off to be Europe still? Besides, can we afford to England, France, Spain, a larger room in the world? Are we more than satisfied with their occupaney of that they already possess? The Englishman is undeniably a wholesome picture to the mental eye; but will not twenty million copies of him do, for the present? It would seem like a poverty in Nature, were she unable to vary, but must go helplessly on to reproduce that selfsame British likeness over all North

America. But history fully warrants the expectation of a new form of man for the new continent. German and Scandinavian Teutons peopled England; but the Englishman is *sui generis*, not merely an exported Teuton. Egypt, says Bunsen, was peopled by a colony from Western Asia; but the genius and physiognomy of Egypt are peculiar and its own. Mr. Pococke will have it that Greece was a migrated India: it was, of course, a migration from some place that first planted the Hellenic stock in Europe; but if the man who carved the Zeus, and built the Parthenon, and wrote the "Prometheus" and the "Phædrus," were a copy, where shall we find the original? Indeed, there has never been a great migration that did not result in a new form of national genius. And it is the thoroughness of the transformations thus induced which makes the chief difficulty in tracing the affinities of peoples.

So it is that the world is enriched. Every new form of man establishes another current in those reciprocations of thought, in those electrical streams of sympathy,—of wholesome attraction and wholesome repulsion,—by which the intellectual life is kindled and quickened. Thought begins not until two men meet. Col. Hamilton Smith makes it quite clear that civilization has found its first centres there where two highways of national movement crossed, and dissimilar men looked each other in the face. They have met, it may be, with the rudest kind of greetings; but have obtained good thoughts from hard blows, and beaten ideas out of each other's heads, if not into them, according to the ancient pedagogic tradition. Higher culture brings higher terms of meeting; traffic succeeds war, conversation follows upon traffic; ever the necessity of various men to each other remains. There is no pure white light until seven colors blend; so to the mental illumination of humanity many hues of national genius must consent: and the value of life to all men is greater so soon as a new man has made his advent.

All this is matter of daily experience

with us. We do not, indeed, tire of old friends. A soul whose wealth we have once recognized must be ever rich to us. Gold turns not to copper by keeping; and perhaps old friends are rather like old wine, and can never be too old. Yet who does not mark in the calendar those days wherein he has met a *new* rich soul, that has a physiognomy, a grace and expression, peculiarly its own? Even decided repulsions have also a use. We whet our conscience on our neighbors' faults, as sober Spartans were made by the spectacle of drunken Helots;—though he who makes habitual *talk* about his neighbors' faults whets his conscience across the edge. If there be sermons in stones, no less is there blessing in bores and in bullies. We found one day in the face of a black bear what could not be so well found in libraries. The creature regarded us attentively, and with affection rather than malice,—saw simply certain amounts of savory flesh, useful for the satisfaction of ursine hungers,—and saw nothing more. It was an incomparable lesson to teach that the world is an endless series of levels, and that each eye sees what its own altitude commands; the rest to it is non-extant. *That* bear was in his natural covering of hair; his brothers we frequently meet in broadcloth.

Now, as Nature keeps up this inexhaustible variety of individual genius which individual quickening requires, so on the larger scale is she ever working and compounding to produce varieties of national genius. Her aim is the same in both cases,—to enrich the whole by this electrical and enlivening relation between its parts. And thus an American man, no copy, but an original, formed in unprecedented moulds, with his own unborrowed grandeur, his own piquancy and charm, is to be looked for,—is, indeed, even now to be seen,—on this shore.

Yes, the man we seek is already found, his features rapidly becoming distinct. He is the offspring of Northern Europe; he occupies Central North-America. Other fresh forms are doubtless to appear, but, though dimly shaping themselves, are as

yet inchoate. But the Anglo-American is an existing fact, to be spoken of without prognostication, save as this is implied in the recognition of tendencies established and unfolding into results. The Anglo-American may be considered the latest new-comer into this planet. Let us, then, a little celebrate his advent. Let us make all lawful and gentle inquiry about the distinguished stranger.

First, what is his pedigree? He need not be ashamed to tell; for he comes of a noble family, the Teutonic,—a family more opulent of human abilities, and those, for the most part, the deeper kind of abilities, than any other on the earth at present. He reckons among his progenitors and relatives such names as Shakspeare, Goethe, Milton, the two Bacons, Lessing, Richter, Schiller, Carlyle, Hegel, Luther, Behmen, Swedenborg, Gustavus Adolphus, William of Orange, Cromwell, Frederick II., Wellington, Newton, Leibnitz, Humboldt, Beethoven, Handel, Turner; and nations might be enriched out of the names that remain when the supreme ones in each class have been mentioned. Consider what incomparable range and variety, as well as depth, of genius are here affirmed. Greece and India possessed powers not equally represented here; but otherwise these might stand for the full abilities of mankind, each in its handsomest illustration.—It is remarkable, too, that our Anglo-American has no “poor relations.” Not a scurvy nation comes of this stock. They are the Protestant nations, giving religion a moral expression, and reconciling it with freedom of thought. They are the constitutional nations, exacting terms of government that acknowledge private right. *Resource* may also be emphasized as a characteristic of these nations. Hitherto they have honored every draft that has been made upon them. The Dutch first fished their country out from under the sea, and afterwards defended it in a war of eighty years’ duration against the first military power on the globe: two feats, perhaps, equally without parallel.

Being thus satisfied upon the point of pedigree, we may proceed to inquire about estate. To what inheritance of land has Nature invited our New Man? He comes to the country of highest organization, perhaps, upon either hemisphere. Brazil and China suggest, but probably do not sustain, a rivalry. What is implied in superior organization will appear from the items to be mentioned.

1. Elaboration. Central North-America is to an extraordinary degree worked out everywhere in careful detail, in moderate hill and valley, in undulating prairie and fertile plain,—not tossed into barren mountain-masses and table-lands, like that vast desert *plateau* which stretches through Central Asia,—not struck out in blank, like the Russian *steppes* and the South American *llanos*, as if Nature had wanted leisure to elaborate and finish. Indeed, these primary conditions of fertility and large habitability appertain to America, as a whole, to such degree, that, with less than half the extent of the Old World, it actually numbers more acres of fertile soil, and can, of course, sustain a larger population.

2. Unity. Between the Rocky Mountains and the Atlantic coast, and between the Gulf of Mexico and the northern wheat-limit, a larger space of fertile territory, embracing a wider variety of climate and production, is thrown into one mass, broken by no barrier, than can, perhaps, elsewhere be found.

3. Communication. No mass of land equal in other advantages is to the same extent thrown open and enriched by natural highways. The first item under this head is access to the ocean, which is the great road-space and highway of the world. Not mentioning the Pacific, as that coast is not here considered, we have the open sea upon two sides, while upon the northern boundary is an inclosed sea, the string of lakes, occupying a space larger than Great Britain and Ireland, and of a form to afford the greatest amount of coast-line and accommodation in proportion to space. But coast-line is not enough; land and sea must be wed-

ded as well as approximated. The Doge of Venice went annually forth to wed the Adriatic in behalf of its queen, and to cast into its bosom the symbolic ring; but Nature alone can really join the hands of ocean and main. By bays, estuaries, ports, spaces of sea lovingly inclosed by arms of sheltering shore, are conversation and union established between them.

"The sea doth wash out all the ills of life," sings Euripides; and it is, indeed, with some penetration of wonder that one observes how deep and productive a relation to man the ocean has sustained. Some share in the greatest enterprises, in the finest results, it seldom fails to have. Not capriciously did the subtle Greek imagination derive the birth of Venus from the foam of the sea; for social love,—that vast reticulation of wedlock which society is—has commonly arisen not far from the ocean-shore. The Persian is the only superior civilization, now occurring to our recollection, which has no intimate relation either with river or sea; and that pushed inevitably toward the Tigris and Euphrates. Now to Europe must be conceded the supremacy in this single respect, that of representing the most intimate coast relation with the sea; North America follows next in order. Africa, washed, but not wedded, by the wave, represents the greatest seclusion,—and has gone into a sable suit in her sorrow.

After the ocean, rivers, which are interior highways, claim regard. The United States have on this side the Rocky Mountains more than forty thousand miles of river-flow, that is, eighty thousand miles of river-bank,—counting no stream of less than one hundred miles in length. Europe, in a larger space, has but seventeen thousand miles. The American rivers are nearly all accessible from the ocean, and, owing to the gentle elevation of the continent, flow at easy declivities, and accordingly are largely navigable. The Mississippi descends at an average of only eight inches *per* mile from source to mouth; the Mis-

souri is said to be navigable to the very base of the Rocky Mountains; and these monarch streams represent the rivers of the continent. Thus here do these highways of God's own making run, as it were, past every man's door, and connect each man with the world he lives in.

Rivers await their due celebration. We easily see that Nile, Ganges, Euphrates, Jordan, Tiber, Thames, are rivers of influence in human history, no less than water-currents on the earth's surface. They have borne barks and barges that the eye never saw. They have brought on their soft bosoms freight to the cities of the brain, as well as to Memphis, Rome, London. Some experience of their spiritual influence must have fallen to the lot of most men. The loved and lovely Merrimac no longer accedes to the writer's eye, but, as of old, glides securely seaward in his thought,—like a strain of masterly music long ago heard, and, when heard, so identical in its suggestions with the total significance and vital progress of one's experience, that, intertwining itself as a twin thread with the shuttled fibre of life, it was woven into the same fabric, and became an inseparable part of the consciousness; so, hearken when one will, after the changes and accessions of many peopled years, and amid the thousand-footed trample of the mob of immediate impressions, still secure and predominant it is heard subtly sounding. Deep conversation with any river readily interprets to us that venerable mythus which connects Eden with the four rivers of the world; as if water must flow where man is chiefly blest.

But the point here to be emphasized is, that rivers are the progressive and public element in its geographical expression. They throw the continent open; they are doors and windows, through which the nations look forth upon the world, and leave and enter their own household. They are the hospitality of the continent,—every river-mouth chanting out over the sea a perpetual "Walk in," to all the world. Or again, they are geographical senses,—eyes, ears, and speech; for of

these supreme mediators in the body, voice, vision, and hearing, it is the office, as of rivers, to open communication between the interior and exterior world; they are rivers of access to the outlying universe of men and things, which enters them, and approaches the soul through the freighted suggestions of sight and sound. Rivers, lastly, are the geographical symbol of public spirit, the flowing and connecting element, suggesting common interests and large systems of action.

Thus in these characteristics of Various Productiveness, Unity, and Openness or Publicity, the continent indicates the description of man who may be its fit habitant. It suggests a nation vast in numbers and in power, existing not as an aggregate of fragments, but as an organic unit, the vital spirit of the whole prevailing in each of its parts; and consequently predicts a man suitable for wide and yet intimate societies. Let us not, however, thoughtlessly jump to accept these easy prognostics; first let it be fully understood what an enormous demand they imply. Americans speak complacently of their prospective one hundred millions of inhabitants; but do they bear well in mind that the requisition upon the individual is augmented by every multiplication and extension of the mass? It is not without significance, that great empires have uniformly been, or become, despotisms. Liberty lives only in the life of just principle; and as the weight of an elephant could not be sustained by the skeleton of a gazelle,—as, moreover, the bones must be made stouter as well as longer,—so must a vast body politic be permeated by a sturdier element of justice than is required for a diminutive state. It is, indeed, the chief recommendation of our federative form of government, that this, so far as may be, localizes legislation, and thus, by lessening the number of interests that demand a national consent, lessens equally the strain upon the conscience and judgment of the whole. Near at hand, the mere good feeling of neigh-

bors, the companionable sentiment of cities and clans, proves a valuable succedaneum for that deeper principle which is good for all places and times. But this sentiment, like gravitation, diminishes in the ratio of the square of the distance, and at any considerable remove can no longer be reckoned upon as a counter-balance to the lawlessness of egotism. Athenians could be passably just, or at least not disastrously unjust, to Athenians; Spartans to Spartans; but Sparta must needs oppress the other cities of Laconia, while Athens was at best a fickle ally; and when Grecian liberty could be strong only in Grecian union, the common sentiment was bankrupted by too great a draft upon its resources. How far beyond the range of egotism of neighborhood a *free* state may go is determined chiefly by limits in the souls of its constituents. At that point where equal justice begins to halt, fatigued by too long a journey, the inevitable boundaries of the state are fixed. Nor is it the mere sentiment of justice alone that suffices; but this must be sustained in its applications by a certain breadth of nature, a certain freedom and flexibility, akin to the dramatic faculty, which enables us to enter into the feelings and wants of others. Nothing, perhaps, in the world can be so unjust as a narrow and frigid conscience beyond its proper range. The bounds of the state may, indeed, not pause where the sustenance of its integral life fails. But then its extension will be purchased with its freedom,—the quality be debased as the quantity increases. Jelly-fish, and creatures of the lowest animation, may sustain magnitude of body, not only with a slight skeleton, but with none at all; and society of a cold-blooded or bloodless kind follows the analogy. But these low grades of social organization, having some show of congruity with the blank levels of Russia, can pretend to none with the continent we inhabit. Yet some species of arbitrament between man and man is sure to establish itself; if it live not, as a part of freedom, in the bosom of each,

then does it inevitably build itself into a Fate over their heads; and despotism, war, or similar brutal and violent instrumentalities of adjustment, supply in their way the demand that love and reason failed to meet.

Accordingly, in our American Man must be found, first, social largeness and susceptibility,—whatsoever, in the breadth of a flexile and sympathetic nature, may contribute to the keeping of the Golden Rule. But the broadest good-feeling will not alone suffice. The great pledge of peace, fellowship, and profitable co-working among such a population as we anticipate must be sought in the deeper unity of moral principle. For Right is one, and is every man's interest. Right is better than Charity; for Right meets, or even anticipates, normal wants, while Charity only mends failures. Nothing, therefore, that we could discover in the New Man would be such a security for his future, nothing so fit him for his place, as a tendency to simple and universal principles of action. In the absence of this, he will infallibly be compelled one day to enter Providence's court of chancery, and come forth bankrupt. But let him be, even by promise, a seer of those primary truths in which the interests of all are comprehended and made identical, and the virtue of his vision will become the assurance of his welfare. Doubtless, sad men will say that our own eyes are clouded with some glittering dust of optimism, when we declare that this Man for the Continent is the very one whose advent we celebrate. This might, indeed, seem a fatuously dulcet song to sing just now, when a din of defection and recreancy is loud through all the land,—now, when we have immediately in view, and on the largest scale, an open patronage of infamous wrong-doing, so brazen-fronted and blush-proof that only the spectacle itself makes its credibility;—the prior possibility of it we should one and all hasten, for the honor of human nature, to deny. Yet in the midst of all this are visible the victorious influences that mould the imported Teuton to the spiritual form

which his appointed tasks imply. These we now hasten to indicate.

And first, every breath of American air helps to make him the American Man. The atmosphere of America was early noted as a wonder-worker. Ten years subsequent to the landing at Plymouth, the Rev. Francis Higginson, an acute observer, wrote to the mother country,—“A sup of New England air is better than a whole flagon of old English ale.” Jean Paul says that the roots of humankind are the lungs, and that, being rooted in air, we are properly children of the æther. Truly, children of the æther,—and so, children of fire. For the oxygen, upon which the lungs chiefly feed, is *the* fiery principle in Nature,—all that we denominate fire and flame being but the manifestation of its action. We are severe upon fire-eaters, Southern and other; yet here are we, cool Northerners, quaffing this very principle and essence of fire in large lung-draughts every moment, each of us carrying a perpetual furnace in his bosom. Now it is doubtless true that we inhale more oxygen, or at least inhale it less drenched with damp, than the people of Europe, and are, therefore, more emphatically children of fire than they. Be this, or be some other, the true theory of the fact, the fact itself unquestionably is, that our climate produces the highest nervous intensity. As there are conditions of atmosphere in which the magnetic telegraph works well, and others in which it works ill, so some conditions stimulate, while others repress nervous action. The air of England seems favorable to richness and abundance of blood; there the life-vessels sit deep, and bring opulent cargoes to the flesh-shores; and the rotund figure, the ruddy solid cheek, and the leisurely complacent movement, all show how well supported and stored with vital resources the Englishman is. But to the American's lip the great foster-mother has proffered a more pungent and rousing draught,—not an old Saxon sleeping-cup for the night, but a waking-cup for the bright morning and busy day. It is forenoon with him.

He is up and dressed, and at work by the job. Bring an Englishman here, and nothing short of Egyptian modes of preservation will keep him an Englishman long. Soon he cannot digest so much food, cannot dispose of so much stimulant; his step becomes quicker, his eye keener, his voice rises a note on the scale, and grows a trifle sharper. In fine, the effects observed in our autumn foliage may be traced in the people themselves, a heightening of colors; and while this accounts for much that is prurient and bizarre, it infolds also the best promise of America.

The effect of this upon American physiology and physiognomy is already quite visible. Of course we must guard against hasty generalizations, since the interfusing of various elements in our Western States is producing new types of manhood. But the respective *physiques* of Old and New England can easily be compared, and the difference strikes every eye. The American is lean, he has a paler complexion, a sharper face, a slighter build than his ancestors brought from the Old World. Mr. Emerson is reported as saying (though the precise words escape us) that the Englishman speaks from his chest, the American more from the mouth or throat,—that is, the one associates his voice more with the stomach and viscera, the other with the head; and, indeed, the pectoral quality of the prevailing tones catches the ear immediately upon setting foot on British soil. Every man instinctively apprehends where he is strongest, and will tend to associate voice and movement with the centre of his strengths. The American, since in him the nervous force predominates, instinctively lifts his voice into connection with the great household of that force, which is the brain; for an equally good reason the Englishman speaks from the visceral and sanguineous centres. The American (we are still dwelling chiefly on the New England type) is also apt to throw the head forward in walking,—thereby indicating, first, his chief reliance upon the forces which that

part harbors, and, secondly, his impulse to progress; so that our national motto, "Go ahead," may have a twofold significance, as if it were in some sort the antipodes of going a-foot, and suggested not only the direction of movement, but also the active agent therein!

Mr. Robert Knox, of England, somewhat known as an ethnological lecturer and author,—a thinker in a sort, though of the "slam-bang" school, of far more force than faculty, and of a singular avidity for ugly news,—dogmatically proclaims that all Americans are undergoing a physical degeneration, involving, as he thinks, an equal lapse of mental power, proceeding with swift fated steps, and sure ere long to land them in sheer impotence and imbecility; and he appeals to the common loss of adipose tissue and avoidupois as proof. This author belongs to a class of well-meaning gentlemen, so unfortunately constituted that the distractions of their time induce in them an acetous fermentation (as milk sometimes sours during thunder); and from acid becoming acrid, they at length fall fairly in love with the Erinnyes, and henceforth dote upon destruction and ugliness as happier lovers do upon cosmical health and beauty. Concluding that the universe is a shabby affair, they like to make it out shabbier still,—and so, seldom brighten up till they have an ill thing to say. They are not persons toward whom it is easy to feel amiable. Dogmatism is ever unlovely, though it be in behalf of the sweetest hopes; but chronic doubt and disbelief erected into a dogmatism are intolerable. Yet Mr. Knox's misinterpretations of the facts are taking root in many minds that do not share his fierce hypochondria and hunger for bitter herbs. That the American has lost somewhat in animal resources is incontestable; but Mr. Knox's ever-implied premise, "The animal is the man," from which his Jeremiah derives its plaint, is but a provincial paper-currency, of very local estimation, and can never, like gold and silver, pass by weight in the world's marts of thought. The physical constitution of the

New Man is comparatively delicate and fragile; but as a china vase is not necessarily less sound than a stone jug or iron kettle, so delicacy and fragility in man are no proof of disease. The ominous prognosis of this doctor, therefore, seems no occasion for despair, perhaps not even for alarm. But to perceive what different harping can be performed on this string, hear Carus:—"Leanness, as such," says the master, "is the symbol of a certain lightness, activity, rapidity, and mental power." Thus the adipose impoverishment, which to the yellow-eyed Englishman seems utter bankruptcy, is at once recognized by a superior man as denoting an augmentation, rather than diminution, of proper human wealth.

But while the typical American organization is of this admitted delicacy and lightness, it is still capable, under high and powerful impulse, of extraordinary feats of endurance. This has of late been admirably illustrated. Not long since, there returned to our shores a hero who—as Dante was believed by the people of Italy to have entered the Inferno of Fire—had actually descended into the opposite Inferno of Frost, and done unprecedented battle with the demons of that realm. Dr. Kane was slight, delicately framed, lean, with sharp, clear-cut features, of quivering mobility and fineness of texture, having the aspect rather of an artist than an explorer,—not at all the personage to whom most judges would assign great power of endurance. And as one follows him through those thrice Herculean toils,—sees him not only bearing cheerfully the great burden of his own cares and ills, but lifting up, as it were, from his companions, and assuming upon his own shoulders, the awful oppression of the polar night, as Atlas of old was fabled to support the heavens,—not even one's admiration at such force of soul can wholly exclude wonder at such fortitude of body. Whence, we ask, this power of endurance? We can trace it to no ordinary physical resource. It comes from no ordinary physical resource. It is pure brain-power. It streams down

upon the body, in rivers of invigoration, from the cerebral hemispheres. A conversational philosopher, discoursing to a circle of intelligent New England mechanics, said,—“It is commonly supposed that the earth supports man. Not so; man upholds the earth!” “How!” exclaimed a wide-eyed auditor; “upholds the earth? How do you make that out?” “How?” answered the philosopher, with superb innocence,—“Don’t you see that it sticks to his heels?” When the question is asked, How the slight frame of this Arctic hero could support such tests, the answer must be analogous,—It clung to his brain. The usual order of support is reversed; and here is that truer Mercury, in whom the winged head, possessing as function what its prototype only exhibited as ornament and symbol, really soars in its own might, bearing the pendent feet. Dr. Kane was one of the purest examples of the American organization; and as he issued victorious from that region where “the ground burns froze, and cold performs the effect of fire,” the Man of the New World was represented, and in him came forth with proven strength. The same significance would not attach to all feats of endurance, even where equally representative. Here are Hercules and Orpheus in one,—the organization of a poet, and the physical stamina of a gladiator.

Now this peculiar organization offers the physical inducement for two great tendencies,—one relating to the perception of truth, the other to the feeling of social claims,—while these tendencies are supported on the spiritual side by the great disciplines of our position; and the genius which these foreshow is precisely that which ought to be the genius of the New Man.

This organization is that of the seer, the poet, the spiritualist, of all such as have an eye for the deeper essences and first principles of things. Concede intellectual power, or the spiritual element, then add this temperament, and there follows a certain subtle, penetrative, radical quality of thought, a characteristic

percipience of principles. And principles are not only seen, but felt; they thrill the nerve as well as greet the eye; and the man consequently becomes highly amenable to his own belief. The primary question respecting men is this,—How far are they affected by the original axiomatic truths? Truths are like the winds. Near the earth's surface winds blow in variable directions, and the weathercock becomes the type of fickleness. So there is a class of little truths, dependent upon ever-variable relations, with which it is the function of cunning, shrewdness, tact, to deal, and numbers of men seldom or never lift their heads above this weathercock region. Yet the upper air, alike of the spiritual and the physical atmosphere, has its perpetual currents, unvarying as the revolution of the globe or the sailing of constellations; and these fail not to represent themselves by eternal trade-winds upon the surface of our planet and of our life. Now the grand inquiry about any man is,—Does he belong to the great current, or to the lesser ones? He appertains to the great in proportion to his access to principles. Or we may illustrate by another analogy a distinction of importance so emphatic. The Arctic voyagers find two descriptions of ice. The field-ice spreads over vast spaces, and moves with immense power; but goes with the wind and the surface-flow. The bergs, on the contrary, sit deep, are bedded in the mighty under-currents; and when the field-ice was crashing down with tide and storm, Dr. Kane found these heroes holding their steady inevitable way in the teeth of both. Thus may one discover men who are very massive, very powerful, engrossing such enormous spaces that there hardly seems room in the world for anybody else; but they are Field-ice Men; they represent with gigantic force the impulse of the hour. But there is another class, making, perhaps, little show upon the surface, or making it by altitude alone, who represent the grand circulations of law, the orbital courses of truth. It is a question of depth, of penetration. And depth,

be it observed, secures unity; diversity, contrariety, contention are of the surface. Numbers need not concern us, whether one hundred, or one hundred millions, provided all are imbedded in the central, commanding truths of the human consciousness. And if the Man of the New World be characteristically one who will attach himself to the eternal master-tides, that fact alone fits him for his place.

Of course no sane man would intimate that organization alone can bring about such results. The Arabian horse will hardly manufacture a Saladin for his back. But let the Saladin be given, and this marvel of nerve and muscle will multiply his presence,—will, as it were, give two selves. So, if the Teutonic man who comes to our shores were innately empty or mean, this nervous intensity would only ripen his meanness, or make his inanity obstreperous. But in so far as he has real depth of nature, this radical organization will aid him, quickening by its heat what is deepest within him; and when he turns his face toward principles, this flying brain-steed will swiftly bring him to his goal. Nay, it is best that even meanness should ripen. The slaveholder of South Carolina must avouch a false principle to cover his false practice,—must affirm that slavery is a Divine institution. It is well. A Quaker, hearing a fellow blaspheme, said,—“That is right, friend; get such bad stuff out of thee!” A lie is dangerous, till it is told,—like scarlatina, before it is brought to the surface: when either breaks out, it is more than half conquered. The only falsehoods of appalling efficacy for evil are those which circulate subtly in the vital unconsciousness of powerful but obscure or undemonstrative natures,—deadly from the intimacy which also makes them secret and secure, and silently perverting to their own purposes the normal vigors of the system. A Mephistopheles is not dangerous; he is too clear-headed; he knows his own deserts: some muddiness is required to harbor self-deceptions, in order that badness may reach real working power. To all perversion iron

limits are, indeed, set; but obscure falsehood works in the largest spaces and with the longest tether.—Thus the expressive intensity which appertains to this organization is serviceable every way, even in what might, at first blush, seem wholly evil effects.

While thus the brain-hand of the American is formed for grasping principles, for apprehending the simple, subtle, universal truths which slip through coarser and more sluggish fingers, there is also an influence on the moral and intellectual faculties, coming in to accept and use these cerebral ones. We are more in conversation with the heart and pure spiritual fact of humanity than any other people of equal power and culture. We necessarily deal more with each other on a bond and basis of common persuasion, of open unenacted truth, than others. This matter is of moment enough to justify somewhat formal elucidation.

Nations, like individual men, birds, and many quadrupeds and fishes, are house-builders. They wall and roof themselves in with symbols, creeds, codes, customs, etiquettes, and the like; they stigmatize by the terms heresy, high-treason, and names of milder import, any attempt to quit this edifice; and send such offenders into purgatory, penitentiary, coventry, as the case may be. Some nations omit to insert either door or window; they make penal even the desire to look out of doors, even the assertion that a sky exists other than the roof of their building, or that there is any other than a very unblest out-of-doors beyond its walls. Such are countries where free speech is forbidden, where free thought is racked and thumb-screwed, and where not only a man's overt actions, but his very hopes, his faith, his prayers, are prescribed. Here man is put into his own institutions, as into a box; and a very bad box it proves. Now these blank walls not only encompass society as a mass, but also run between individuals, cutting off bosom from bosom, and rendering impossible that streaming of heart-fires, that mounting flame from meeting brands, out of whose

wondrous baptism come the consecrate deeds of mankind. Go to China, and to any living soul you obtain no access, or next to none,—such disastrous roods of etiquette are interposed between. It is as if one very cordially shook hands with you by means of a pair of tongs or a ten-foot pole. Indeed, it is hardly a man that you meet; it is a piece of automatic ceremony. Nor is it in China alone that men may be found who can hardly be accredited with proper personality. As one dying may distribute his property in legacies to various institutions and organizations,—so much, for example, to the Tract Society, so much to the Colonization Society, and the like,—in the same manner do many make wills at the outset of life for the disposal of their own personal powers, and do nothing afterward but execute this testament,—executing themselves in another sense at the same time. They parcel out themselves, their judgment, their conscience, and whatsoever pertains to their spiritual being, among the customs, traditions, institutions, etiquettes of their time, and renounce all claim to a free existence. After such a piece of spiritual *felo-de-se*, the man is nothing but one wheel in a machine, or even but one cog upon a wheel. Thenceforth he merely hangs together;—simple cohesion is the utmost approximation to action which can be truly attributed to him.

And as nothing is so ridiculous, so, few things are so mischievous, as the sincere insincerity, the estrangement from fact, of those who have thus parted with themselves. It is worse, if anything can be worse, than hypocrisy itself. The hypocrite sees two things,—the fact, and the fiction, the gold and its counterfeit; he has virtue enough to know that he is a hypocrite. But the *post-mortem* man, the walking legacy, does not recognize the existence of eternal Fact; it has never occurred to his mind that anything could be more serious than “spiritual taking-on” and make-belief. An innocent old gentleman, being at a play where the heroine is represented as destroyed in at-

tempting to cross a broken bridge, rose, upon seeing her approach it, and in tones of the deepest concern offered his opinion that said bridge was unsafe! The *post-mortem* man reverses this harmless blunder, and makes it anything but harmless by the change; as that one took theatricals to be earnest fact, so this conceives virtue itself to consist in posturing; he thinks gold a clever imitation of brass, and the azure of the sky to be a kind of celestial cosmetic; in fine, formalities are the realest things he knows. It is said, that, in the later days of Rome, the augurs and inspectors of entrails could not look each other in the face during their ceremonies, for fear of bursting into a laugh. But still worse off than these pitiful peddlers of fraud is he who feigns without knowing that he feigns,—feigns unfeignedly, and calls God to witness that he is faithful in the performance of his part. This is ape's earnest, and is, perhaps, the largest piece of waste that ever takes place upon this earth. *Ape's earnest*,—it is a pit that swallows whole nations, whole ages; and the extent to which it may be carried is wellnigh incredible, even with the fact before our eyes. A Chinese gentleman spends an hour in imploring a relative to dine with him,—utterly refusing, so urgent is his desire of company, to accept No for an answer,—and then flies into a rage because the cousin commits the *faux pas* of yielding to his importunity, and agreeing to dine. Louis Napoleon perpetrates the king-joke of the century by solemnly presenting the Russian Czar with a copy of Thomas à Kempis's "Imitation of Christ,"—a book whose great inculcation is to renounce the world!

Now no sooner do men lose hold upon fact than they inevitably begin to wither. They resemble a tree drawn with all its roots from the earth; the juices already imbibed may sustain it awhile, but with every passing day will sustain it less. If Louis Napoleon is so removed from conversation with reality as not to perceive the colossal satire implied in his gift, it will soon require more vigor than he pos-

sesses to keep astride the Gallic steed. That Chinese etiquette explains the condition of the Chinese nation. Indeed, it is easy to give a recipe for mummifying men alive. Take one into keeping, prescribe everything, thoughts, actions, manners, so that he never shall find either permission or opportunity to ask his own intellect, What is true? nor his own heart, What is right? nor to consider within himself what is intrinsically good and worthy of a man; and if he does not rebel, you will make him as good a mummy as Egyptian catacombs can boast.

The capital art of life is to renew and augment your power by its expenditure. It was intimated some eighteen centuries since that the highest are obtained only by loss of the same; and the transmutation of loss into gain is the essence and perfection of all spiritual economies. Now of this art of arts he is already master who steadily draws upon his own spiritual resources. The soul is an extraordinary well; the way to replenish is to draw from it. It is more miraculous than the widow's cruse;—that simply continued unexhausted,—never less, indeed, but also never more; while from this the more you take, the more remains in it. Were it, therefore, desired to arrange with forethought a scheme of life that should afford the highest invigoration, in such scheme there should be the minimum of prescription, and nothing be so sedulously avoided as the superseding of inward and active *principles* by outward and passive *rules*;—that is, life would be made as much moral and spontaneous, as little political and mechanical, as possible.

And this does not ill describe our own case. No civilized nation is so little imprisoned in precedents and traditions. Our national maxim is, "The world is too much governed." In the degree of this release we are, of course, thrown back upon underlying principles and universal persuasions,—since these of necessity become, in the absence of more artificial ties, the chief bond of such peace and coöperation as obtain. Leave two men to deal with each other, not merely

as subjects or citizens, but as men, and they must recur to that which is at once native and common to both, to the universal elements in their consciousness, that is, to principles; and thus the most ordinary mutual dealing becomes, in some degree, a spiritual discipline. Harness these men in precedents, and whip them through the same action with penalties, and they will gain only such discipline as the ox obtains in the furrow and the horse between the thills. Statutes serve men, but lame them. They render morality mechanical. Men learn to say not, "It is right," but, "It is enacted." And the difference is immense. "Right" sends one to his own soul, and requires him to produce the living law out of that; "Enacted" sends him to the Revised Statutes, or the Reports, and there it ends. The latter gives a bit of information; the former a step in development. Laws are necessary; but laws which are not necessary are more and worse than unnecessary;—they pilfer power from the soul; they intercept the absolute uses of life; they incarcerate men, and make Caspar Hausers of them. Now in America not only is there already much emancipation from those outside regulations which supersede moral and private judgment, but the tendency toward a fresh life daily gains impetus. That repeal of the Missouri Compromise, however blamable, has several happy features, and prominent among these must be reckoned the illustration it affords of a growing disposition to say, "No putting To-day into Yesterday's coffin; let the Present live and be its own lord."

We need be at no loss to discover the effects of the combined influences here stated. The ordinary phrases of our country-people denote an alert judgment,—as, "I reckon," "I calculate," "I guess." The inventiveness which characterizes Americans, the multiplicity of patents, comes from the tendency to go behind the actual, to test possibilities, to bring everything to the standard of thought. Emerson dissolves England in the alembic of his brain, and makes a thought of

that. Our politics are yearly becoming more and more questions of principle, questions of right and wrong. There is almost infinite promise and significance in this gradual victory of the moral over the political, of life over mechanism. Mr. Benton complains of the "speculative philanthropy" of New England, because it suggests questions upon which he could not meet his constituents, and interferes with his domestic arrangements. It is much as if one should pray God to abolish the sun because his own eyes are sore!

We now pass to the second great tendency which, as is here affirmed, organization and moral discipline are unitedly tending to establish on this shore. An inevitable consequence of the nervous intensity and susceptibility characteristic of Americans is an access of personal magnetism, or influence; we keenly feel each other, have social impressibility. The nervous is the public element in the body, the mediating and communicating power. It is the agent of every sense,—of sight, hearing, taste, touch, smell,—and of the power of speech. It is the vehicle of all fellow-feeling, of all social sympathy. It introduces man to man, and makes strangers acquainted. And a most unceremonious master of these ceremonies it is;—running indiscriminately across ranks; introducing beggar and baron; forcing the haughtiest master, spite of his theories, to feel that the slave is a man and a fellow; compelling the prince to acknowledge the peasant,—not with a shake of the hand, perhaps, but, it may be, with knee-shakings and heart-shakings. A terrible leveller and democrat is this master element in the human frame; yet king and kaiser must entertain him in courts and on thrones. Now the high development of this in the American Man renders him communicative, gives him a quick interest in men; he cannot let them pass without giving and taking. Hence the much-blamed inquisitiveness,—“What is your name? Where do you live? Where are you going?

What is your business? Do you eat baked beans on Sunday?" Mrs. Trollope is horrified; it is a bore; but one likes the man the better for it. He is interested in you;—that is the simple secret of all. King Carlyle calls us "eighteen millions of bores." To be sure; is that so bad? The primitive English element was pirate; let the primitive American be bore. The fathers of the Britain that is took men by the throat; let the fathers of the America that is to be take them by the—button;—that is amelioration enough for one thousand years! In truth, this intense personal interest which characterizes the American, though often awkwardly manifested and troublesome, is an admirable feature in his constitution, and few traits should awaken our pride or expectation more. It is this keen fellow-feeling that fits him for the broadest and most beneficent public interest. This makes him a philanthropist. And his philanthropy is peculiar. It is not merely of the neighborhood sort, such as sends a Thanksgiving turkey to poor Robert and a hat that does not fit well to poor Peter. For here the predilection for principles and generalizations comes in, and leads him to translate his fellow-feeling into social axioms. Thus it occurs that the American is that man who is grappling most earnestly and intelligently with the problem of man's relation to man. In every village is some knot of active minds that brood over questions of this kind. The monarch newspaper of America is deeply tinged with the same hue; nor could one with a contrary complexion attain its position. This great current of human interest floats our politics; it feeds the springs of enthusiasm, coming forth in doctrines of non-resistance, of government by love, and the like; and our literature contains essays upon love and friendship which, in our judgment, are not equalled in the literature of the world.

Nor is a moral discipline wanting to second this tendency. A terrible social anomaly has been forced upon us,—has had time to intertwine itself with trade,

with creeds, with partisan prejudice and patriotic pride, and, having become next to unconquerable, now shows that it can keep no terms and must kill or be killed. And through this the question of man's duties to man, on the broadest scale, is incessantly kept in agitation. It is like a lurid handwriting across the sky,—“Learn what man should be and do to his fellow.” And the companion sentence is this,—“Thy justice to the strangers shall be the best security to thine own household.”

By the co-working of these two grand tendencies we obtain at once the largest speculative breadth and the closest practical and personal interest. What sweeter promise could any one ask than that of this rare and admirable combination? Thought and action have been more than sufficiently separated. The philosopher has discoursed to a few, and in the dialect of the few, in Academic shades; sanctity has hidden itself away, lost in the joy of its secret contemplations; the great world has rolled by, unhearing, unheeding,—like London roaring with cataract thunder around St. Paul's, while within the choral service is performed to an audience of one. Thinking and doing have hardly recognized each other. Now we are not of those vague, enthusiastic persons who fancy that all truths are for all ears,—that the highest spiritual fact can be communicated, where there is no spiritual apprehension to lay hold upon it. *He that hath ears*, let him hear. Nor would we attempt to confuse the functions of sayer and doer. But let there be a sympathy and understanding between them, that, when achieved, will mark an epoch in the world's history. Nowhere, at least in modern times, have thought and action approached so nearly and intimately as in America; nowhere is speculative intellect so colored with the hues of practical interest without limiting its own flight, nowhere are labor and executive power so receptive of pure intellectual suggestion. The union of what is deepest and most recondite in thought with clear-sighted

sagacity has been well hit by Lowell in his description of the typical American scholar,—

“Sits in a mystery calm and intense,
And looks round about him with sharp common-sense.”

That is, the New Man has two things that seldom make each other's acquaintance,—Sight and Insight. Accordingly, our subtilest thinker, whom the scholarly Mr. Vaughan classes with the mystics and accuses of going beyond the legitimate range even of mystics, has written such an estimate of the most practical nation in the world as has never been written of that or any other before. The American knows what is about him, has tact, sagacity, conversance with surfaces and circumstances, is the shrewdest guesser in the world; and seeing him on this side alone, one might say,—This is the man of to-day, a quick worker, good to sail ships, bore mountains, buy and sell, but belonging to the surface, knowing only that. The medal turns, and lo! here is this 'cute Yankee a thinker, a mystic, fellow of the antique, Oriental in his subtilest contemplations, a rider of the sunbeam, dwelling upon Truth's sweetness with such pure devotion and delight that vigorous Mr. Kingsley must shriek, “Windrush!” “Intellectual Epicurism!” and disturb himself in a somewhat diverting manner. Pollok declaimed against the attempt to lay hold of the earth with one hand and heaven with the other. But that is the peculiar feat for which the American is born,—to bring together seeing and doing, principle and practice, eternity and to-day. The American is given, they say, to extremes. True, but to *both* extremes; he belongs to the two antipodes. To the one he appertains by intellectual emancipation and penetrative power; to the other by his pungent element of sympathy with persons. Speaking of the older Northern States, and of the people as a whole, we affirm that their inhabitants are more speculative *and* more practical, the scholars know more of immediate common interests and speak more the dialect of the peo-

ple, while the mechanics know more of speculative truth and understand better the necessary vocabulary of thought, than any other people.

Lyell says, that the New World is really the Old World,—that there, preëminently, the antique geological formations are found, and nearer the surface than elsewhere. Thus the physical peculiarity of our continent is, that here an elaborate and highly finished surface is immediately superimposed upon the oldest rock, rock wrought in fire and kneaded with earthquake knuckles. We discover in this a symbol of the American Man. He likewise brings into near association the most ancient and the most modern. By insight he dwells in the old thoughts, the eternal truths, the meditations that rapt away the early seers into trance and dream; but he brings these into sharp contact with life, associates them with the newest work, the toil and interests of this year and day.

We shall find space to mention but one peril which besets the New Man. It is danger of physical exhaustion. Dr. Kane, the hero of two Arctic nights, came forth to the day only to die. That which makes the preëminence of our organization makes also its peril. Denmark is said to be impoverished by the disproportion of the learned to the industrial class; production is insufficient, and too much of a good thing cripples the country. The nervous system is a learned class in the body; it contributes dignity and superior uses, but makes no corn grow in the physiological fields. A brain of great animation and power is a perilous freight for the stanchest body; in a weak and shattered body it is like gold in a spent swimmer's pocket,—the richer it would make him on dry land, the less chance it gives him of arriving there. That this danger is not imaginary too many are able to testify.—Few scenes in Rabelais are more exquisitely ludicrous than that in which he pictures the monk Panurge in a storm at sea. The oily ecclesiastic is terrified as only a combination of hypocrite and coward can be; and, in the ex-

tremity of his craven distress, he fancies that any situation on shore, no matter how despicable, would be paradise. So at length he whines, "Oh that I were on dry land, and somebody kicking me!" In a similar manner—similar, save that farce deepens to tragedy—many a man in America of opulent mental outfit, but with only a poor wreck of a body to bear the precious cargo, must often have been tempted to cry, "Oh that I had a sound digestion, and were some part of a dunce!" In truth, we are a nation of health-hunters, betraying the want by the search. It were to be wished that an accurate computation could be made how much money has been paid in the United States, within a score of years, for patent medicines. It would buy up a kingdom of respectable dimensions. So eager is this health-hunger, that it bites at bare hooks. The "advertising man" of Arnold's Globules offers his services as nostrum-puffer-general, and appeals to past success as proof of his abilities in this line. But Arnold's Globules will sell no whit the worse. Is the amiable Mr. Knox right, after all? Doubtless, we answer, the American organization is more easily disordered than the English,—just as a railway-train running at forty miles an hour is more liable to accident than one proceeding at twenty. Besides, Americans have not learned to live as these new circumstances require. The New Man is a clipper-ship, that can run out of sight of land while one of the old bluff-bowed, round-ribbed craft is creeping out of port; but, from the very nature of his superiorities, he is apt to be shorter-lived, and more likely to spring a leak in the strain of a storm. He demands nicer navigation. It will not do for him to beat over sand-bars. Yet dinner-pilotage in this country is reckless and unscientific to a degree. The land is full of wrecks hopelessly snagged upon indigestible diet. As yet, it is difficult to obtain a hearing for precaution. Men answer you out of their past experience,—much like a headstrong personage who was about to attempt crossing a river in

a boat sure to sink. "You will drown, if you go in that thing," said a bystander. "Never was drowned yet," was the prompt retort; and pushing off, he soon lost the opportunity to repeat that boast! But this resistance is constantly becoming less. Meantime, numbers of foreseeing men are waking up, or are already awakened, to the importance of recreation and physical culture,—members of the clerical profession, to the credit of the craft be it said, taking the lead. Messrs. Beecher, Bellows, and Hale plead the cause of amusements; the author of "Saints and their Bodies" celebrates the uses and urges the need of athletic sports; gymnasia are becoming matters of course in the cities and larger towns; "The New York Tribune" attends to the matter of cookery; and it is safe to predict that the habits of the people will undergo in time the necessary changes. That health is possible to Americans ought not to be questioned. Of despair we will not listen to a word. In crossing the ocean, in the backwoods-experience which everywhere precedes cultivation, in the excitement which has followed the obliteration of social monopolies and the throwing open of the wealth of a continent to free competition, the old traditional precautions have been lost, the old household wisdoms, the old economies of health; and these we have now to reproduce for ourselves. It will be done. And when this is done, though ancient English brawn will not reappear, there will be health, and its great blessing of cheerful spirits. The special means by which this shall be accomplished we leave to the care of the gentlemen abovenamed, and their compeers,—merely putting in one word for *gentle* exercise, and two words for the cherishing of mental health, the expulsion of morbid excitements, assume what guise they may. We should take extreme care not to admit decay at the summit. A healthy soul is a better prophylactic than belladonna. Refusing to despond respecting American health, we cheerfully trust that the genius of the New Man will find all required physical sup-

port, and due length of time for demonstrating its quality.

And now we may notice a doubt which some readers will cherish. Is not all this, they may say, over-sanguine and enthusiastic? Is it not a self-complacent dream? Are the tendencies adverted to so productive? Is any such genius really forming as is here claimed? Is it not, on the contrary, now fully understood that the Americans are a commonplace people, meagre-minded money-makers, destitute of originality? What have they done to demonstrate genius yet?—These skepticisms are somewhat prevalent nowadays, and are a natural enough reaction from Fourth-of-July flatulencies. Let them have their day. The fact will vindicate itself. Meanwhile we may remark, that the appeal to attained performance, in justification of the view taken in this paper of American abilities and prospects, would obviously place us at undue disadvantage. We speak here, and are plainly entitled to speak, rather of tendencies than of attainments, of powers forming themselves in man, and not of results produced without him. Nevertheless, results there are,—admirable, satisfactory results.

As first of these may be mentioned American Reform. In depth, in breadth, in vigor, in practical quality, this may challenge comparison with anything of a similar kind elsewhere. This is the direct outburst of a new life, arising and wrestling with the old forms, habitudes, institutions,—with whatsoever is imported and traditional, on the one hand, and with the crude or barbarous improvisations of native energy, on the other. It is a force springing out of the summit of the brain, the angel of its noblest sentiment, going forth with no less an aim than to construct a whole new social status from ideas. And the token of its superiority is this,—that it builds its new outward life only from the most ancient incorruptible material, out of the eternal granite of Moral Law. Sweeping social schemes prevail in France. But American Reform is not a scheme; it is the ser-

vice of an *idea*. It is made conservative by that which also makes it radical, by working in the interest of the moral sentiment.

The Literature of the New World is also worthy of the New Man. We are quite aware that a large portion of this literature is trash. So was a large part in Shakspeare's, in Cervantes's, in Plato's age and place. But we admit even that the comparison does not hold,—that an especial accusation may be brought against the issues of the press in this country. Wise men should have anticipated this, and, instead of reasoning from the size of our lakes, prairies, and mountains, and demanding epics and philosophies of us before we are fairly out of our primitive woods, the critics should have hastened to say,—A colony must have time to strike root, and to draw up therefrom a new life, before it can arrive at valuable and genuine literary expression. The Life must come before the Thought. Nothing could be more absurd than the expectation that American literature should spring away into the air from the top of European performance. Our first literature was colonial,—that is, imitative, written for the approbation of European critics,—of course, having somewhat the empty correctness of good school-boy composition. Next followed what we may call fire-weed literature,—the first rank, raw product of new lands. Under these two heads a vast number of books must of course be reckoned. But beyond these American literature has already passed, and now can point to books that spring out of the pure genius of the New Man. And having only these in mind, we hesitate not to say that there is now sounding upon these shores a deeper, subtler, and more universal note than is heard in any other land touched by the Atlantic Sea. We have now writings in several departments of literature, and in both prose and verse, which are characterized by a breadth and largeness of suggestion, by a spirituality and a prophetic adherence to the moral sentiment, which justify all that has here been affirmed or reasoned.

And our deepest thought finds a popular reception which proves it not foreign or exceptional. Wilkinson's "Human Body," the largest piece of speculative construction which England has produced in two centuries, has not yet, after some eight years, we believe, exhausted its first edition. Emerson's Poems, still less adapted, one would say, than the work just mentioned, to the taste of populaces, had reached its fourth edition in about the same period. Learned works have, of course, a superior reception in the mother-country; works of pure thought in the daughter. Said to us, during the past season, the subtlest thinker of Great Britain,—“I must send to America whatever I wish to put in print, unless I pay for its publication from my own pocket.”

And beyond this, there is a hush in the nation's heart, an expectancy, a waiting and longing for some unspoken word, which sometimes seems awful in the bounty of its promise. I know men educated to speak, with the burden of a speaker's vocation on their hearts, but now these many years remaining heroically silent; the fountains of a fresh consciousness sweet within them, but not yet flowing into speech, and they too earnest, too expectant, too sure of the future to say aught beneath the strain. “Why do you not speak?” was inquired of one. “Because I can keep silent,” he said, “and the word I am to utter will command me.” No man assumes that attitude until he is already a party to the deepest truth, is the silent side of a seer;

and in a nation where any numbers are passing this more than Pythagorean lustrum, a speech is surely coming that will no more need to apologize for itself than the speech of the forest or the ocean-shore. The region of the trade-winds is skirted with calm. Sydney Smith said of Macaulay, that his talk, to render it charming, “needed only a few brilliant flashes of silence.” We are talkative, but the flashes of silence are not wanting, and there is prophecy in them as well as charm. Said one, of a speaker,—“He was so rarely eloquent, that what he did not say was even better than what he did.” And here, not only are some wholly silent, but in our best writings the impressive not-saying lends its higher suggestion than that expressly put forth. What spaces between Emerson's sentences! Each seems to float like a solitary summer-cloud in a whole sky of silence.

Yes, the fact is already indubitable, a rich life, sure in due time of its rich expression, is forming here. As out of the deeps of Destiny, the Man for the Continent, head-craftsman, hand-craftsman, already puts his foot to this shore. All hail, new-comer! Welcome to great tasks, great toils, to mighty disciplines, to victories that shall not be too cheaply purchased, to defeats that shall be better than victories! We give thee joy of new powers, new work, unprecedented futures! We give the world joy of a new and mighty artist to plan, a new strong artisan to quarry and to build in the great architectures of humanity!

THE POET KEATS.

HIS was the soul, once pent in English clay,
Whereby ungrateful England seemed to hold
The sweet Narcissus, parted from his stream,—
Endymion, not unmindful of his dream.
Like a weak bird the flock has left behind,

Untimely notes the poet sung alone,
 Checked by the chilling frosts of words unkind;
 And his grieved soul, some thousand years astray,
 Paled like the moon in most unwelcome day.

His speech betrayed him ere his heart grew cold;
 With morning freshness to the world he told
 Of man's first love, and fearless creed of youth,
 When Beauty he believed the type of Truth.

In the vexed glories of unquiet Troy,
 So might to Helen's jealous ear discourse
 The flute, first tuned on Ida's haunted hill,
 Against Ænone's coming, to betray
 In what sweet solitude her shepherd lay.

Yet, Poet-Priest! the world shall ever thrill
 To thy loved theme, its charm undying still!
 Hearts in their youth are Greek as Homer's song.
 And all Olympus half contents the boy,
 Who from the quarries of abounding joy
 Brings his white idols without thought of wrong.

With reverent hand he sets each votive stone,
 And last, the altar "To the God Unknown."

As in our dreams the face that we love best
 Blooms as at first, while we ourselves grow old,—
 As the returning Spring in sunlight throws
 Through prison-bars, on graves, its ardent gold,—
 And as the splendors of a Syrian rose
 Lie unreprieved upon the saddest breast,—
 So mythic story fits a changing world:
 Still the bark drifts with sails forever furled.
 An unschooled Fancy deemed the work her own,
 While mystic meaning through each fable shone.

HER GRACE, THE DRUMMER'S DAUGHTER.

FORAY, a mass of crags embellished by some greenness, looked up to heaven a hundred miles from shore. It was a fortified position, and a place of banishment. In the course of a long war, waged on sea and land between two great nations, this, "least of all," became a point of some importance to the author-

ity investing it; the fort was well supplied with the machinery of death, and the prison filled with prisoners. But peace had now been of long continuance; and though a nation's banner floated from the tower of the fort, and was seen afar by mariners,—though the cannon occupied their ancient places, ordered for

instant use,—though all within the fort was managed and conducted day by day with careful regard to orders,—the operations indicated, in the spirit of their conduct, no fear of warlike surprises. No man gave or obeyed an order as if his life depended on his expedition. Neither was the prison the very place it had been; for, once, every cell had its occupant,—an exile, or a prisoner of war.

The officials of the island led an easy life, therefore. Active was the brain that resisted the influences of so much leisure as most of these people had. But, under provocation even, Nature must be true. So true is she, indeed, that every violation of her dignities illustrates the meaning of that sovereign utterance, VENGEANCE IS MINE. She will not bring a thorn-tree from an acorn. Pray, day and night, and see if she will let you gather figs of thistles. Prayer has its conditions, and faith is not the sum of them.

But Nature's buoyant spirits must needs conquer the weight of influences whose business is to depress. And they, seeking, find their centre among things celestial, in spite of all opposing. Much leisure, light labor, was not the worst thing that could befall some of the men whose lot was cast on Foray.

Adolphus Montier was a member of the military band. He was drummer to the regiment by the grace of his capacity. Besides, he played on the French horn, to the admiration of his wife, and others; and he could fill, at need, the place of any missing member of the company, leaving nothing to be desired in the performance.

Adolphus came to Foray in the first vessel that brought soldiers hither. He saw the first stone laid in the building of the fort. Here he had lived since. He was growing gray in the years of peace. He had some scars from the years of strife. He was a brave fellow, and idleness, a devil's bland disguise, found no favor with him.

His daughter Elizabeth was the first child born on the island. Bronzed war-

riors smiled on her fair infancy; sometimes they called her, with affectionate intonation, "The Daughter of the Regiment." She deserved the notice they bestowed,—as infancy in general deserves all it receives,—but Elizabeth for other reasons than that she had come whence none could tell, and was going whither no man could predict,—for other reason than that she was the first discovered native of the island. She was a beautiful child; and I state this fact not specially in deference to the universal expectation that a character brought forward for anybody's notice should be personally capable of fascinating such. Indeed, it seems inevitable that we find our heroines and heroes in life beautiful. Miss Nightingale must needs remain our type of pure charity in person, as in character. Elisha Kent Kane among his icebergs must stand manifestly efficient for his "princely purpose," his eye and brow magnificent with beauty. Rachel, to every woman's memory, must live the unparalleled Camille.

Little Elizabeth—I smile to write her name upon the page with these—it were a shame to cheat of beauty by any bungle of description. Is not a fair spirit predestined conqueror of flesh and blood? Have we not read of the noble lady whose loveliness a painter's eye was the very first to discover? Where the likeness? The soul saw it, not the eye; and he understood, who, seeing it, exclaimed, "Our friend—in heaven!"

While Adolphus Montier cleaned and polished his French horn, an occupation which was his unfailing resource, if he could find nothing else to do, or when he practised his music, business in which he especially delighted when off duty, it was his pleasure to have wife and child with him.

Imagination was an active power in the Drummer's sphere. He, away off in Foray, used to talk about the forms and colors of sounds, as if he knew about them; and he had not learned the talk in any school. He would have done no injury to transcendentalism. And he was

a happy man, in that the persons before whom he indulged in this manner of speech rather encouraged it. Never had his Pauline's pride and fondness failed Adolphus the Drummer. Life in Foray was little less than banishment, though it had its wages and—renown; but Pauline made out of this single man her country, friends, and home. Never woman endeavored with truer single-heartedness to understand her spouse. In her life's aim was no failure. Let him expatiate on sound to the bounds of fancy's extravagance, she could confidently follow, and would have volunteered her testimony to a doubter, as if all were a question of tangible fact, to be definitely proved. So in every matter. For all the comfort she was to the man she loved, for her confidence in him who deserved it, for her patient endurance of whatsoever ill she met or bore, for choosing to walk in so peaceful a manner, with a heart so light and a face so fair, praise to the Drummer's wife!

Elizabeth, the companion of her parents in all their happy rambling and unambitious home-life, was their joy and pride. If she frolicked in the grass while her father played his airs, she lost not a strain of the music. She hearkened also to his deep discourse, and gave good heed, when he illustrated the meaning of the tunes he loved to play. And these were rarely the stirring strains with which the Governor's policy kept the band chiefly busy when the soldiers gathered on summer nights in knots of listeners, and the ladies of the fort, the Governor's wife, and the wives of the officers, came out to enjoy the evening, or when a vessel touched the rocky shore.

Elizabeth's vision was clearer than even love could make her mother's,—clearer than music made her father's; since a distinct conception of images seems not to be inevitable among the image-makers. The prophets are not always to be called upon for an interpretation. No white angel ever floats more clearly before the eyes of those

who look on the sculptor's finished work than before the eyes of Elizabeth appeared the shapes and hues of sounds which swept in gay or solemn procession through the windings of her father's horn, floating over the blue water, dissolving as the mist. No bright-winged bird, fair flower, or gorgeous sunset or sea-wave, was more distinct to the child's eyes than the hues of the same notes, stately as palm or pine,—red as crimson, white as wool, rich and full as violet, softly compelling as amethyst.

Pauline Montier was by nature as active and diligent as Adolphus. She was a seamstress before the days of Foray and the Drummer, and still continued to ply her needle, though no longer urged by necessity. She sewed for the officers' wives, she knit stockings and mufflers for the soldiers. The income thus derived independently of Montier's public service was very considerable.

Born of such parents, Elizabeth would have had some difficulty in persuading herself that her business was to idle through this life.

Her early experiences were not as peaceful as those which followed her tenth year. The noise of battle, the cries of defeat, the shouts of victory, the sight of agonized faces, the vision of death, the struggles of pain and anguish, the sorrow of bereavement,—she had seen all with those young eyes. She had heard the whispered command in hushed moments of mortal danger, and the shout of triumph in the tumult of victory,—had watched blazing ships, seen prisoners carried to their cells, attended the burial of brave men slain in battle, had marched with soldiers keeping time to funeral strains. Her courage and her pity had been stirred in years when she could do no more than see and hear. Once standing, through the heat of a bloody engagement, by the side of a lad, a corporal's son, who was stationed to receive and communicate an order, a random shot struck the boy down at her side. She saw that he was dead,—waited for the order, transmitted it,

and then carried away the lifeless body of her fellow-sentinel, staggering under the weighty burden, never resting till she had laid him in the shelter of his father's quarters. After the engagement, this story was told through the victorious ranks by the witnesses of her valor, and a medal was awarded the child by acclamation. She always wore it, and was as proud of it as a veteran of his ribbons and stars.

But now, in times of peace, the fair flower of her womanhood was forming. Like a white hyacinth she grew,—a lady to look upon, with whom, for loveliness, not a lady of the fort could be compared. Not one of them in courage or unselfishness exceeded her.

The family lived in a little house adjoining the barracks. It was a home that could boast of nothing beyond comfort and cleanliness;—the word comfort I use as the poor man understands it. Neither Adolphus nor Pauline had any worldly goods to bring with them when they came to Foray. They lived at first, and for a long time, in the barracks; the little house they now occupied had once been used for the storage of provisions; but when the war ended, Adolphus succeeded in obtaining permission to turn it into a dwelling-house. Here the child was sheltered, and taught the use of a needle; and here she learned to read and write.

In the great vegetable garden which covered the space between the prison and the fort was a corner that reflected no great credit on the authorities. The persons who might reasonably have been expected to take that neglected bit of ground under their loving care did no such thing. The beds were weeded by Sandy, the gardener, and now and then a blossom rewarded that attention; but the flower-patch waited for Elizabeth.

The gardener knew very well how she prized the pretty flowers;—they appealed to his own rude nature in a very tender way. He loved to see the young girl flying down the narrow paths as swiftly as a bird, if she but spied a bloom from afar. There was a tree whose branches

hung over the wall, every one of them growing, with dreadful perversity, away from the cold, hard prison-ground which held the roots so fast. Time was never long enough when she sat in the shade of those branches, watching Sandy at his work.

By-and-by it happened that the flower-garden was given over to the charge of the girl. It was natural that she, who had never seen other flower-beds than these, should, aided by the home-recollections of her mother, imagine far prettier,—that she should dare suggest to Sandy, until his patience and his skill were exhausted,—that the final good result should have come about in a moment when no one looked for it,—he giving up his task with vexation, she accepting it with humility, and both working together thereafter, the most helpful of friends.

It required not many seasons for Elizabeth to prove her skill and diligence in the culture of this garden-ground,—not many for the transformation of square, awkward beds into a mass of bloom. How did those flowers delight the generous heart! With what particular splendor shone the house of Montier through all the summer season! The ladies now began to think about bouquets, and knew where they could find them. From this same blessed nook the Governor's table was daily supplied with its most beautiful ornament. Men tenderly disposed smiled on the young face that from under the broad-brimmed garden-hat smiled back on them. Some deemed her fairer than the flowers she cared for.

One day in the spring of the year that brought her thirteenth birthday, Elizabeth ran down through the morning mist, and plucked the first spring flower. She stayed but to gather the beauty whose budding she had long watched; no one must rob her mother of this gift.

She carried off the prize before the gaze of one who had also hailed it in the bleak, drear dawn. This was not the gardener;—and there was neither man, woman, nor child in sight, during the swift run;—no freeman; but a prisoner

in an upper room of the prison. Through its grated window, the only one on that side of the building, he had that morning for the first time looked upon the island which had held him long a prisoner.

Since daybreak he had stood before the window. The evening before, the stone had been rolled away from the door of his sepulchre,—not by an angel, neither by force of the resistless Life-spirit within, shall it be said? Who knows that it was *not* by an angel? who shall aver it was *not* by the resistless Life? At least, he was here,—brought from the cell he had occupied these five years,—brought from the arms of Death. His window below had looked on a dead stone-wall; this break in the massive masonry gave heaven and earth to him.

The first ray of daylight saw him dragging his feeble body to the window. He did not remove from that post till the rain was over,—nor then, except for a moment. As the clouds rose from the sea, he watched them. How strange was the aspect of all things! Thus, while he had lived and not beheld, these trees had waved, these waters rolled, these clouds gathered,—grass had grown, and flowers unfolded; for he saw the scarlet bloom before Elizabeth plucked it. And all this while he had lived like a dead man, unaware! Not so; but now he remembered not the days, when, conscious of all this life, he had deathly despair in his heart, and stones alone for friends.

Imprisonment and solitude had told upon the man. He was still young, and one whom Nature and culture had fitted for no obscure station in the world. He could, by every evidence he gave, perform no mere commonplaces of virtue or of vice. The world's ways would not assign his limitation. He was capable of devising and of executing great things,—and had proved the power; and to this his presence testified, even in dilapidation and listlessness.

His repose was the repose of helplessness,—not that of grace or nature. The opening of this prospect with the day-

light had not the effect to increase his tranquillity. His dejection in the past months had been that of a strong man who yields to necessity; his present mood was not inspired with hope. The waves that leaped in the morning's gloomy light were not so aimless as his life seemed to him. He had heard a bird sing in the branches of a tree whose roots were in the prison-yard,—now he could see her nest; he had heard the dismal pattering of the rain,—and now beheld it, and the clouds from which it fell; he saw the glimpses of the blue beyond, where the clouds were breaking; he saw the fort, the cannon mounted on the walls, the flag that fluttered from the tower, the barracks, the parade-ground, and the surrounding sea, whose boundaries he knew not; he saw the trees, he saw the garden-ground. Slowly his eyes scanned all,—and the soul that was lodged in the emaciated figure grew faint and sick with seeing. But no tears, no sighs, no indications of grief or despair or desperate submission. He had little to learn of suffering;—that he knew. How could he greet the day, hail the light, bless Nature for her beauty, thank God for his life? Oh, the weariness with which he leaned his head against those window-bars, faint and almost dying under the weight of thoughts that rushed upon him, fierce enough to slay, if he showed any resistance! But he manifested none. The day of struggle was over with him. He believed that they had brought him to this room to die. If any thought could give him joy, surely it was this. He was right. Yesterday the Governor of the island, hearing the condition of the prisoner, this one remaining man of all whose sentence had been endured within these walls, had ordered a change of scene for him. His sentence was imprisonment for life. Did they fear his release by the hands of one who hears the sighing of the prisoner, and gives to every bondman the Year of Jubilee? Were they jealous and suspicious of the approach of Death?

Though he had been so long a prisoner, he showed in his person self-respect and

dignity of nature. His hair and beard were grown long; many a gray thread shone in his chestnut locks; his mouth was a firm feature; his eyes quiet, but not the mildest; his forehead very ample; he was lofty in stature;—outside the prison, a freeman, his presence would have been commanding. But he needed the free air for his lungs, and the light to surround him,—the light to set him in relief, the sense of life to compel him to stand out in his own powerful individuality, distinct from every other living man.

By-and-by, while he stood at the window, looking forth upon the strange scenes before him, this new heaven and new earth, the landscape became alive. The first human creature he had seen outside his cell since he became an inmate of this prison appeared before his eyes,—the young girl skipping through the garden till she came to the flower-bed and plucked the scarlet blossom. If she had been a spirit or an angel, he could hardly have beheld her with greater surprise.

She was singing when she came. He thought he recognized that voice,—that it was the same he had often heard from the cell below. Many a time the horrible stillness of that cell had been broken by the sound of a child's voice, which, like a spirit, swept unhindered through the walls,—an essence of life, and a power.

It was but a moment that she paused before the flower; she plucked it, and was gone. But his eyes could follow her. She did not really, with her disappearing, vanish. And yet this vision had not to him the significance of the bow seen in the cloud, whose interpreter, and whose interpretation, was the Almighty Love.

All day he stood before that window. The keeper hailed the symptom. The Governor was satisfied with the report. Towards sunset the rain was over, and with the sun came forth abundant indications of the island life. The gardener walked among the garden-beds and measured his morrow's work, calculating time and means within his reach,—and vouch-

safing some attention to the flower-garden, as was evident when he paused before it and made his thoughtful survey. The prisoner saw him smile when he took hold of the broken stalk which had been flower-crowned. And Sandy saw the prisoner.

The next day Elizabeth came out with the gardener, and they began their day's work together. They seemed to be in the best spirits. The smell of the fresh-turned earth, the sight of the fresh shoots of tender green springing from bulb and root and branch, acted upon them like an inspiration. The warm sun also held them to their task. Sandy was generous in bestowing aid and counsel,—and also in the matter of his land,—trenching farther on the ground allotted to the vegetables than he had ever done before.

"The land must pay for it," said he. "We'll make a foot give us a yard's worth. Cram a bushel into a peck, though 'The Doctor' said you never could do that! I know how to coax."

"Yes, and you know how to order, if you have not forgotten, Sandy. You frightened me once for taking an inch over my share."

"That was a long while back," answered honest Sandy,—“before I knew what the little girl could do. I've seen young folk work at gardening afore, but you do beat 'em all. How could I tell you would, though? You don't look it. Yes,—maybe you do, though. But you've changed since I first knew you."

"Why, I was nothing but a baby then, Sandy."

"Yes, yes,—I know; but you're changed since then!"

So they all spoke to Elizabeth, praising her, confiding in her with loving willingness,—the Daughter of the Regiment.

The gardener was proud of his assistant, and seemed to enjoy the part she took in his labor. They worked till noon, Elizabeth stopping hardly a moment to rest. All this while the prisoner stood watching by his window, and the gardener saw him. The sight occasioned him a new perplexity, and he gravely considered

the subject. It was a good while before he said to Elizabeth, speaking on conviction, in his usual low and rather mysterious tone,—

"There's some one will enjoy it when all's done."

"Who is that?" asked she, thinking he meant herself, perhaps.

"One up above," was the answer.

But though Sandy spoke thus plainly, he did not look toward the prison,—and the prison was the last place of which Elizabeth was thinking. It was so long a time since the cell with the window had an occupant, that she was almost unconscious of that gloomy neighborhood. So, when the gardener explained that it was one up above who would enjoy her work, her eyes instantly sought the celestial heights. She was thinking of sun, or star, or angel, may-be, and smiling at Sandy's speech, for sympathy.

He saw her new mistake, and made haste to correct this also.

"Not so high," said he, cautiously.

Then, but as it seemed of chance, and not of purpose, the eyes of Elizabeth Montier turned toward the prison-wall, and fixed upon that window, the solitary one visible from the garden, and her face flushed in a manner that told her surprise when she saw a man behind the iron bars.

"Oh," said she, looking away quickly, as if conscious of a wrong done, "what made you tell me?"

"I guess you will like to think one shut up like him will take a little pleasure looking at what he can't get at," said Sandy, almost sharply,—replying to something he did not quite understand, the pain and the reproof of Elizabeth's speech.

"Oh, yes!" she answered, and went on with her work.

But though she might be pleased to think that her labor would answer another and more serious purpose than her own gratification, or that of the pretty flowers, it was something new and strange for the girl to work under this mysterious sense of oversight.

"You have only got to speak the

word," said the gardener, who had perceived her perplexity, and was desirous of bringing her speedily to his view of the case, "just speak, and he will be carried back to his old cell below, t'other side."

"Will he?"

"Yes,—sure's you live, if he troubles you, Miss Elizabeth. Nobody will think of letting him trouble you."

"Oh, me!" she exclaimed, quickly, "I should die quicker than have him moved where he couldn't see the garden."

"I thought so," said Sandy, satisfied.

"Did you think I would complain of his standing by his window, Sandy?"

"How did I know you would like to be stared at?" asked he, with a laugh.

Elizabeth blushed and looked grave; to her the matter seemed too terrible.

"I might have said something," she mused, sadly.

"And if it had been to the wrong person," suggested Sandy;—"for they a'n't very fond of him, I guess."

"Who is he, then? I never heard."

"He has been shut up in that building now a'most five year, Elizabeth," said Sandy, leaning on the handle of the spade he had struck into the ground with emphasis.

"Five years!"

"Summer heat, and winter cold. All the same to him. No wonder he sticks, as if he was glued, to the window, now he's got one worth the glass."

"Oh, let him!"

"If he could walk about the garden, it would be better yet."

"Won't he, Sandy?"

"I can't say. He's here for some terrible piece of work, they say. And nobody knows what his name is, I guess,—hereabouts, I mean. I never heard it. He won't be out very quick. But let him *look* out, any way."

"Oh, Sandy! I might have said something that would have hindered!"

"Didn't I know you wouldn't for the world? That's why I told you."

The gardener now went on with his spading. But Elizabeth's work seemed

finished for this day. Above them stood the prisoner. He guessed not what gentle hearts were pitiful with thinking of his sorrow.

The next day the prisoner was not at the window, nor the next day, nor the next. Sandy was bold enough to ask the keeper, Mr. Laval, what was the meaning of it, and learned that the man was ill, and not likely to recover. Sandy told Elizabeth, and they agreed in thinking that for the poor creature death was probably the least of evils.

But the day following that on which they came to this conclusion, the sick man appeared before Sandy's astonished eyes. He was under the keeper's care. The physician had ordered this change of air, and they came to the garden at an hour when there was least danger of meeting other persons in the walks.

Sandy had much to tell Elizabeth when he saw her next. She trembled while he told her how he thought that he had seen a ghost when the keeper came leading the prisoner, whose pale face, tall figure, feeble step, appeared to have so little to do with human nature and affairs.

"Did he seem to care for the flowers? did he take any?" she asked.

"No,—he would not touch them. The keeper offered him whatever he would choose. He desired nothing. But he looked at all, he saw everything,—even the beds of vegetables," Sandy said.

"Did he seem pleased?" Elizabeth again asked.

"Pleased!" exclaimed Sandy. "That's for you and me,—not a man that's been shut up these five years. No,—he didn't look pleased. I don't know how he looked; don't ask me; 'tisn't pleasant to think of."

"I would have made him take the flowers, if I had been here," said Elizabeth, in a manner that seemed very positive, in comparison with Sandy's uncertain speech.

"May-be,—I dare say," Sandy acquiesced; but he evidently had his doubts even of her power in this business.

She must take no notice of the prisoner, she was given to understand one day, if she was to remain in the garden while he walked there. So she took no notice.

He came and went. Manuel, the keeper called him; and she was busy with her weeding, and neither saw nor heard. Ah, she did not!—did *not* see the figure that came moving like a spectre through the gates!—did not hear the slow dragging step of one who is weary almost to helplessness,—the listless step that has lost the spring of hope, the exultation of life, the expectation of spirit, the strength of manhood!—She did hear, did see the man. We feel the nearness of our friend who is a thousand miles away. Something beside the sunshine is upon us, and receives our answering smile. That sudden shadow is not of the passing cloud. That voice at midnight is not the disturbance of a dream.—He walked about the garden; he retired to his cell. It might have been an hour, or a minute, or a day. It does not take time to dream a life's events. How is the drowning man whirled round the circle of experiences which were so slow in their development!

Compassion without limit, courageous purpose impatient of inaction, troubled this young girl.

"You behaved like a lady," said Sandy,—“you never looked up. You needn't run now, I'm sure, when he thinks of taking a turn. All we've got to do is to mind our own business, Mr. Laval says. I guess we can. But I did want to let off those chains."

"What chains?" asked Elizabeth, as with a shudder she looked up at Sandy.

"His wrists, you know,—locked," he explained.

"Oh!" groaned the gentle soul, and she walked off, forgetful of the flowers, tools, Sandy, everything. But Sandy followed her; she heard him calling to her, and before the garden-gate she waited for him; he was following on a run.

"I can tell you what it's for," said he, for he had no idea of keeping the secret

to himself, and he dared not trust it to any other friend.

"What is it?" she asked,—and she trembled when she asked, and while she waited for his answer.

"For fighting the Church. Would you think that? He did such damage, it wasn't safe for him to be at liberty. That's how it was. I think he must be a Lutheran;—you know they don't believe in the Holy Ghost! Of course,—poor fellow!—it's right he should be shut up for warring with the Church that came down through the holy Apostles, when you know all the rest only started up with Luther and Calvin. He ought to have knowed better."

"Who told you, Sandy?" asked Elizabeth, as if her next words might undertake to extenuate and justify.

"It came straight enough, I understand. But—remember—you don't know anything about it. His name is Manuel, though;—don't dare to mention it;—that's what Mr. Laval calls him. Are you going? I wouldn't have told you a word, but you took his trouble so to heart. You see, now, it's right he should be shut up. But let on that you know anything, all the worse for me,—I mean, him!"

"Yes," said Elizabeth, "you're safe, Sandy. Thank you for telling me."

Sandy walked off with a mind relieved, for he believed in Elizabeth, and had found the facts communicated too great a burden to bear alone.

She passed through the garden-gate most remote from the fort; it opened into a lonely road which ran inland from the coast, between the woods and the prison, and to the woods she went. The shadows were gloomy to-day, for she went among them lamenting the fate of the stranger;—the mystery surrounding him had increased, not lessened, with Sandy's explanation.

Fighting against *the Church* was an unimagined crime. Of the great conflict in which he had taken part, to the ruin of his fortunes, she knew nothing. The disputes of Christendom, had they been explained, would have seemed almost incredible to her. For, whatever was

known and discussed in the circle of the Governor of the island, Drummer Montier, and such as he, kept the peace with all mankind. The Church took care of itself, and appeared neither the oppressor nor the Saviour of the world. What they had fought about in the first years of the possession of Foray, Montier could hardly have told,—and yet he was no fool. He could have given, of course, a partisan version of the struggle; but as to its real cause, or true result, he knew as little as the other five hundred men belonging to the regiment.

While Elizabeth wandered through those gloomy woods, she saw no flowers, gathered no wild fruits,—though flowers and berries were perfect and abundant. Now and then she paused in her walk to look towards the prison, glimpses of whose strong walls were to be had through the trees. At length the sound of her father's horn came loud and clear from the cliffs beyond the wood. It fell upon her sombre meditation and slightly changed the current. She hurried forward to join him, and, as she went, a gracious purpose was shining in her face.

When she returned home, it was by the unfrequented prison-way, her father playing the liveliest tunes he knew. For the first time in their lives they sat down by the side of the lonely road where they had emerged from the wood; Elizabeth's memory served her to recall every air that was sweet to her, and she listened while her father played, endeavoring to understand the sound those notes would have to "Manuel."

Montier could think of no worthier employment than the practice of his music. Especially it pleased him that his daughter should ask so much as she was now asking: he could not discern all that was passing in her heart, nor see how many shadows moved before those sweet, serious eyes.

They went home at night-fall together; and the young girl's step was not more light, now that her heart was troubled by what she must not reveal, even to him.

The next morning Sandy was very busy with Elizabeth, tying up some flowers which had been tossed about, and broken, many of them, in the night gale, when the keeper came through the gate, leading this Manuel, who, grim as a spectral shadow, that had been fearful but for its exceeding pitifulness, stood now between her and all that she rejoiced in.

"There!" exclaimed Sandy. Looking up, she saw them approaching straight along the path that led past the flower-beds.

"Your flowers had a pretty rough time of it in the storm," said Jailer Laval, as he drew near. He addressed the drummer's daughter,—but his eyes were on Sandy, with the suspicious and stern inquiry common to men who have betrayed a secret. But Sandy was busy with his delving.

"Yes," answered Elizabeth, and she looked from the ground up to the faces of these men.

"Is that a rose-bush? That was roughly handled," said Laval, pointing with his stick to the twisted rose-stalk covered with buds, over whose blighted promise she had been lamenting.

"Yes," said Elizabeth again; but she hardly knew what she said, still less was she aware of the expression her face wore when she looked at the prisoner. Yes,—even as Sandy said, his wrists were chained together; he was more like a ghost than a man; his face was pale and hopeless, and woful beyond her understanding was the majesty of his mien.

At such a price he paid for fights against *the Church!* But in truth he had not the look of an evil, warring man. His gravity, indeed, was such as it seemed impossible to dispel. But only pity stirred the heart of Elizabeth Montier as she looked on him. Surely it was a face that never, in any excess of passion, could have looked malignance. Ah! and at such a price he purchased his sunshine, the fresh air, and a near vision of this flower-garden!—in chains!

When she looked at him, his gaze was on her,—not upon the roses. She smiled, for pity's sake; but the smile met no return. His countenance had not the habit of responding to such glances. Sombre as death was that face. Then Elizabeth turned hastily away; but as the keeper also moved on a step, she detained him with a hurried "Wait a minute," and went on plucking the finest flowers in bloom. Like an iron statue stood the prisoner while she plucked the roses,—it was but a minute's work,—then she tied the flowers together and laid them on his fettered hands; whether he would refuse them, whether the gift pained or pleased him, whether the keeper approved, she seemed afraid to know,—for, having given the flowers, she went away in haste.

It was not long after this first act of friendly courtesy, which had many a repetition,—for the keeper was at bottom a humane man, and not disposed to persecute his charge, while he was equally far from any carelessness in guarding or leniency of treatment that would have excited suspicion as to his purpose, in the minds of the authorities of the island,—not long after this day, when the fine sympathy betrayed for him by Elizabeth fell on Manuel's heart like dew, that the wife of the jailer died.

Her death was sudden and unlooked-for, though neither Nature nor the woman could have been blamed for the shock poor Laval experienced. Death had fairly surrounded her, disarming her at every point, so that when he called her there was no resistance.

Jailer Laval took the bereavement in a remorseful mood. The first thing to be done now was the very last he would have owned to purposing during her lifetime. Release from that prison had been the woman's prayer, year in and year out, these ten years, and Death was the bearer of the answer to that prayer,—not her husband.

But now, from the day of her sudden decease, the prison had become to him dreary beyond endurance. The mantle of her discontent fell on him, and, having

no other confidant beside honest, stupid Sandy, he talked to him like a man who seriously thought of abandoning his labor, and retiring to that land across the sea for which his wife had pined during ten homesick years.

Sandy, who might have regarded himself in the light of an "humble instrument," had he been capable of a particle of vanity or presumption, told Elizabeth Montier, with whom he had held many a conference concerning prison matters, since Manuel first began to walk along the southern garden-walk, where the flower-beds lay against the prison-wall. What was her answer? It came instantly, without premeditation or precaution,—

"Then we must take his place, Sandy."

"We, Miss?" said Sandy, with even greater consternation than surprise.

"Yes," she replied, too much absorbed by what she was thinking, to mind him and his blunders,—*"papa must take the prison."*

"Oh!"—and Sandy blushed through his tan at his absurd mistake. Then he laughed, for he saw that she had not noticed it. Then he looked grave, and wondering, and doubtful. The idea of Adolphus Montier's pretty wife and pretty daughter changing their pretty home for life in the dark prison startled him. He seemed to think it no less wrong than strange. But he did not express that feeling out and out; he was hindered, as he glanced sideways at the young girl who gazed so solemnly, so loftily, before her. At what she was looking he could not divine. He saw nothing.

"I wouldn't be overly quick about that," said he, cautiously.

"No danger!" was the prompt reply.

"For I tell *you*, of all the places I ever see, that prison makes me feel the queerest. I believe it's one reason I let the flower-garden go so long," owned Sandy. He did not speak these words without an effort; and never had Elizabeth seen him so solemn. She also was grave,—but not after his manner of gravity.

"You see what I did with the poor flower-beds, Sandy," said she. "Wait now till you see what happens to the prison."

But it is one thing to purpose, and another to execute. Far easier for Elizabeth to declare than to conduct an heroic design. One thing prevented rest day and night,—the knowledge that Laval's intended resignation must be followed by a new application and appointment. With such a degree of sympathy had the condition of the captive inspired her, that the idea of the bare possibility of cruelty or neglect or brutality assuming the jailer's authority seemed to lay upon her all the responsibility of his future. She must act, for she dared not hesitate.

One evening Adolphus took his horn, and, attended by wife and child, went out to walk. He meant to send a strain from the highest of the accessible coast-rocks. But Elizabeth changed his plan. The time was good for what she had to say. Instead of expending his enthusiasm on a flourish of notes, he was called upon to manifest it in a noble resolution.

When Elizabeth invited her father to a prospect sylvan rather than marine, to the shady path on the border of the wood between it and the prison, Montier, easily drawn from any plan that concerned his own inclination merely, let his daughter lead, and she was responsible for all that followed in the history of that little family. So love defers to love, with divine courtesy, through all celestial movements.

After playing a few airs, Montier's anticipated evening ended, and another set in. The sympathies of a condition, the opposite to that of which he had been so happily conscious, pressed too closely against him. The musician could not, for the life of him, have played with becoming spirit through any one of all the strains of victory he knew.

Near him, under a tulip-tree, sat Pauline, with her knitting in her hand, the image of peace. Not so Elizabeth. She

was doubting, troubled. But when the bird her father's music moved to sing was still, she spoke, as she had promised herself she would, asking a question, of whose answer she had not the slightest doubt.

"Papa, do you know that Mr. Laval is going away?"

"Why, yes, that's the talk, I believe."

"Will they get somebody to take his place?"

"Of course. There's a prisoner on hand yet, you know,—and the house to look after."

"A big house, too, and dreadful dreary," remarked the mother of Elizabeth. "Laval's wife used to say, when she came up to see me sometimes, it was like being a prisoner to live in that building. And now she's dead and gone, he begins to think the same."

"Suppose we take Laval's place," suggested Montier, looking very seriously at his wife; but the suggestion did not alarm her. Adolphus often expressed his satisfaction with existing arrangements by making propositions of exchange for other states of life, propositions which never disturbed his wife or daughter. They understood these demonstrations of his deep content. Therefore, at these words of his, Pauline smiled, and for the reason that the words could draw forth such a smile Elizabeth looked grave.

"I wish we could, papa," said she.

"You wish we could, you child?" exclaimed her mother, wondering. "It looks so pleasant, eh?" and the fair face of Pauline turned to the prison, and surveyed it, shuddering.

"For the prisoner's sake," said Elizabeth. "Who knows but a cruel keeper may be put in Laval's place? He is almost dead with grief, that prisoner is,—I know by his face. After he is gone, there won't be any prisoner there,—and we could make it very pleasant."

"Pleasant! What do you mean by pleasant?" asked Pauline, inwardly vexed that her child had suggested the question,—and yet too just, too kindly dis-

posed, to put the subject away with imperative refusal to consider it. "I never was in a place so horrid."

"But if it was our home, and all our things were there," urged Elizabeth, "it would be different. It depends on who lives in a house, you know."

"Yes, that is so; it depends a little, but not entirely. It would be more than your mother could do to make a pleasant-looking place out of that prison. You see it is different in the situation, to begin with. Up where we live the sun is around us all day, if it is anywhere; and then the little rooms are so light! If you put a flower into them, you think you have a whole garden. Besides, it's Home up there, and down here it isn't."—Saying this, Adolphus rose up quickly, as though he had a mind to quit the spot.

"When they select a man to fill Laval's place, of course they will be careful to choose one as good and kind," said Pauline, with mild confidence.

"The jailer before him was not good and kind," remarked her daughter.

"They dismissed him for it," said Adolphus, quickly.

"But they said the prisoners were half-starved, and abused every way. It was a good while before it was found out. That might happen again, and less chance of any one knowing it. He is so near dead now, it wouldn't take much to kill him."

No one replied to this argument. Pauline and Adolphus talked of other things, and the musician returned to his music. But all in good time. Elizabeth was capable of patience, and at last her father said, looking around him to make sure that his remark would have only two listeners,—

"That prisoner isn't a man to be talked of about here. You never heard me mention him. Laval used to give a—bad account of him. He had to be kept alive."

"Till he heard your music, papa, and was moved up to the room with a window. Did he tell you that?" asked Elizabeth.

"He said he thought the music did him good," acknowledged Adolphus.

"May-be it was the same as with Saul when David played for him. But he does not look like a bad man, papa. He looks grander than any of our officers. And he has fought battles, they say. He is very brave."

Both Adolphus and Pauline Montier looked at their daughter with the most profound surprise when she spoke thus. Not merely her words, but her manner of speaking, caused this not agreeable perplexity. Her emotion was not only too obvious, it was too deep for their understanding. The mother was the first to speak.

"How did you hear all this, child? I never heard him talked of in this way. They don't talk about him at all,—do they, Adolphus?"

"No," he answered; but he spoke the word very mildly. The tone did not indicate a want of sympathy in the compassion of his daughter.

Elizabeth looked from her mother to her father. What friends had she, if these were not her friends?

"The jailer told Sandy, and Sandy told me," she said. "But they never talk to any other person. Oh! I was afraid to hear about it; but now I have heard, I was afraid not to speak. Would it be so dreadful for you to live here, when we could always have music and the garden? And these woods seem pleasant, when you get acquainted. Day or night I can't get him out of my mind. It is just as if you were shut up that way, papa. I am afraid to be happy when any one is so wretched."

The result was, that Elizabeth's words, and not so much her words as the state of things she contrived to make apparent by them, brought Adolphus Montier to a clear, resistless sense of the prisoner's fate. Over the features of that fate he was for days brooding. Now and then a word that indicated the direction of his thinking would escape him in his wife's hearing. Silently Pauline followed Adolphus to the end of all this

thinking. Once she walked alone along the unfrequented road that ran between the prison and the wood, down to the sea; and she looked at the gloomy fortress, and tried to think about it as she should, if certain that within its walls her lot would soon be cast.

And more than once Montier walked home that way; and if it chanced that he had his horn or his drum with him, he marched at quickstep, and played the liveliest tunes, and emerged from the shadows of the wood with a spirit undaunted. He had played for the prisoner, whom he had never yet seen,—but not more for him than for himself.

One Sunday, when the little family walked out together, Adolphus and his wife fell into a pleasant train of thought,—and when they were together, thought and speech were generally simultaneous. As they passed the prison,—for Adolphus had led the way to this path,—Laval was standing in the door. They stopped to speak with him; whereat he invited them into his quarters.

In this walk, Elizabeth had fallen behind her parents. When she saw them going into the prison, she quickened her pace, for her father beckoned to her. But she was in no earnest haste to follow, as became sufficiently manifest when she was left alone.

They had not gone far in their talk, however, when she came to the doorway. Laval, in all his speech, was a deliberate man, and neither Adolphus nor his wife showed any eagerness in the conduct of the conversation now begun. The contrast between the gloom of the apartment and the light and cheerfulness of their own home was apparent to all of them. Elizabeth felt the oppression under which each of the little party seemed to labor, the instant she joined her parents. Susceptible as they all were to the influences of Nature, her sunshine and her shadow, this gloom which fell upon them was nothing more than might have been anticipated.

Jailer Laval was homesick, and innocent of a suspicion of what was passing

in the minds of his guests; he was therefore free in making his complaints, and acknowledged that he was not fit to keep the prison,—it required a man of more nerve than he had. The dread of the place which his poor wife had entertained seemed to have taken possession of him since her death. All the arguments which he once used, in the endeavor to bolster her courage, he had now forgotten. He was very cautious when he began to speak of the prisoner, and tried to divert Adolphus from the point by saying that he would much prefer a house full of convicts to one so empty as this. There was at least something like society in that, and something to do.

Adolphus, in spite of his discontent at hearing merely these deductions of experience, when his desire was to know something special of Manuel, heard nothing of importance. The speech of the jailer on this subject was not to be had. His mind seemed to be wandering, except when his wife, or his native land, was referred to; then he brightened into speech, but never once into cheerfulness. As he sat there in the middle of his chamber, he seemed to represent the genius of the place,—and anything less enlivening or desirable in the way of human life could hardly be imagined. Pauline looked at him and sighed. She looked at Adolphus;—a pang shot through her heart; the shadow of the man seemed to overshadow him. Out of this place, where all appeared to be fast changing into “goblins damned”!

It was she who led the way; but, pausing in the court-yard, Elizabeth evinced still greater haste to be gone, for she ran on with fleet step, and a heart heavy with foreboding as to the result of this interview. She was also impatient to get into the open sunlight, and did not rest in this progress she was making outward till she had come to the sea-shore. Elizabeth Montier was in a state of dire perplexity just then, and if she had been asked whether she would really choose to effect the change proposed in their

way of living, it would have been no easy matter for her to discover her mind.

By the sea-shore she sat down, and her father and mother followed slowly on. They were not talking as they came. But as they approached the beach, Adolphus could not resist the prospect before them. Loud was the blast he blew upon his horn, nor did he cease playing until his music had restored him to a more natural mood than that in which the interview with Laval left him. The prison was becoming a less startling image of desolate dreariness to him. And Adolphus was the master-spirit in his family. If he was gay, it was barely possible for his wife or child to be sad. Of the prison not one word was spoken by either. They had not revealed to each other their inmost mind when they went into Laval's quarters; they did not reveal it when they came thence. But as they strolled along the rocky shore, or returned homeward, they thought of little beside the prison and the prisoner. As to Elizabeth, nothing required of her that she should urge the matter further. She had neither heart nor courage for such urging.

It was Adolphus himself who spoke to Pauline the next day, after he had deliberately thrown himself in the way of the prisoner, that he might with his own eyes see what manner of man he was; for seeing was believing.

“Pauline,” said he, almost persuaded of the truth of his own words, “you and Elizabeth would make a different place of that prison from what it is now. I should like to see it tried.”

Pauline Montier made no haste to answer; she was afraid that she knew what he expected of her.

“Do you see,” continued Adolphus, “Elizabeth won't speak of it again? But what must she think of us? He is a man. They say we are all brothers.”

“I know it,” said, almost sighed, his wife.

“Looking out for our own comfort!” exclaimed Adolphus. “So mighty afraid

of doing what we'd have done for us! Besides, I believe we could make it pretty pleasant. Cool in summer, and warm in winter. I'd whitewash pretty thorough. And if the windows were rubbed up, your way, the light might get through."

"Poor Joan Laval," said Pauline. "Body and mind gave out. She was different at first."

"Do you think it was the prison?" asked Adolphus, quickly, like a man halting between two opinions,—there was no knowing which way he would jump.

"Something broke her down," replied his wife. She was looking from one window,—he from another.

"Joan Laval was Joan Laval," said Adolphus, with an effort. "Always was. Frightened at her own shadow, I suppose. But—there! we won't think of it. I know how it looks to you, Pauline. Very well,—I don't see why we should make ourselves miserable for the sake of somebody who has got to be miserable anyhow,—and deserves it, I suppose, or he wouldn't be where he is."

"Poor fellow!" sighed Pauline,—as if it were now her turn on the rack.

Here Adolphus let the matter rest. He had overcome his own scruples so far as honestly to make this proposal to his wife. But he would do no more than propose,—not for an instant urge the point. Surely, that could not be required of him. Charity, he remembered, begins at home.

But Pauline could not let the matter rest here. Her struggle was yet to come. It was she, then, who alone was unwilling to sacrifice her present home for the sake of a stranger and prisoner!

Now Pauline Montier was a good Christian woman, and various words of holy utterance began herewith to trouble her. And from a by no means tranquil musing over them, she began to ask herself, What, after all, was home? Was happiness indeed dependent on locality when the heart of love was hers? Could she not give up so little as a house, in order to secure the comfort of a son of misfor-

tune,—a solitary man,—a dying prisoner? What she would not give up freely might any day be taken from her. If fire did not destroy it, the government, which took delight in interference, might see fit to order that the house they occupied should be used again for the original purpose of storage.

And then the discomforts of the prison began to appear very questionable. She remembered that Jean Laval was, as Adolphus hinted, weakly, nervous, 'frightened at her own shadow,'—a woman who had never, for any single day of her life, lived with a lofty purpose,—a cumberer of the ground, who could only cast a shadow.

She perceived that they would be close to the flower-garden; a minute's walk would lead them to the pleasant woods,—and Pauline Montier always loved the woods.

Indeed, when she began to take this ground, the first steps of occupation alone could be timid or doubtful. After that, her humanity, her sympathy, her confidence in her husband and daughter, drew the woman on, till she forgot how difficult the first steps had been.

She surprised both husband and daughter by saying to Adolphus, the moment she came to her conclusion, that he had better make inquiry of Laval whether he had signified his intention to resign, and forthwith seek the appointment from the Governor of the island.

When Pauline said this, she attested her sincerity by making ready to accompany Adolphus at once to the prison, that they might run no risk of losing the situation by delay. Seeing that they were of one mind, and entirely confiding in each other, they all went together to the prison to consult with Laval. Thus it came to pass, that, before the week ended, the charge of the prison had been transferred to Adolphus Montier.

The family made great efforts in order to impart an air of cheerfulness and home-comfort to their new dwelling-place. Adolphus whitewashed, according

to promise; Pauline scrubbed, according to nature; they arranged and rearranged their little stock of furniture,—set the loud-ticking day-clock on the mantel-shelf, and displayed around it the china cups, the flower-vase, and the little picture of their native town which Adolphus cut from a sheet of letter-paper some old friend had sent him, and framed with more tender feeling than skill. They did their best, each one, and said to one another, that, when they got used to the place, to the large rooms and high ceilings and narrow windows, it would of course seem like home to them, because—it *was* their HOME. Were they not all together? were not these their own household goods, around them? Still, they needed all this mutual encouragement and heartiness of coöperation which was so nobly, so generously manifested; and it was sincere enough to insure the very result of contentment and satisfaction which they were so wise as to anticipate. But the Governor thought,—*The Drummer is getting ambitious; he wants a big house, and authority!*

Ex-jailer Laval was exceedingly active in assisting his own outgoing and the incoming of Montier. He helped Adolphus in the heavy labors of removal, and laughed more during the conduct of these operations than he had been known to do in years. He said nothing to Prisoner Manuel of the intended change in jail-administration until the afternoon when for the last time he walked out with him.

The information was received with apparent indifference, without question or comment, until Laval, half vexed, and wholly sorrowful for the sad state of the prisoner, said,—

"I am sorry for you, Sir. I can say that, now I'm going off. I've been as much a prisoner as you have, I believe. And I wish you were going to be set free to-night, as I am. I am going home! But I leave you in good care,—better than mine. I never have gone ahead of my instructions in taking care of you. I never took advantage of your case, to

be cruel or neglectful. If anything has ever passed that made you think hard of me, I hope you will forgive it, for I can say I have done the best I could or dared."

Thus called upon to speak, the prisoner said, said merely, "I believe you."

Whereat the jailer spoke again, and with a lighter heart.

"I am glad you're in luck this time,—for you are. You don't know who is coming to take the charge,—come, I mean, for they are all in, and settled. That's Montier, the little girl's father. He is a drummer, and a little of everything else. It's his horn that you hear sometimes. And you know Elizabeth, who was always so kind about the flowers. His wife, too, she's a pretty woman, and kind as kind can be."

"What have they come here for?" asked the prisoner, amazed.

"I'll tell you," said Laval, more generous than he had designed to be; but he knew how he should wish, when the sea rolled between him and Foray, that he had spoken every comfortable word in his knowledge to this man; he knew it by his recent experiences of remorse in reference to his buried wife, and was wise enough to profit by the knowledge;—"I'll tell you. It's on your account. They were afraid somebody that didn't know how long you have been here, and how much you have suffered, would get the place; so they all came together and asked for it. They had a pretty little house up nigh the barracks, but they gave it up to come here. You'll see Montier to-night. For when I go back to your room with you, then I'm going off to—to"—he hesitated, for foremost among his instructions was this, that he should remain silent about his purpose of returning home; he was not to go as a messenger for the prisoner across the ocean to their native land—"to my business," he said. "If you'll be kind to him, you will make something by it. I thought I would tell you,—so, when you saw a strange face in your room, you would know what it meant without asking."

"I thank you," said the prisoner; and to the jailer it now seemed as if the figure of the man beside him grew in height and strength,—as if he trod the ground less feebly and listlessly while he spoke these words. A divine consolation must have strengthened him even then, or he could never have added with such emphasis, "Wherever you go, take this my assurance with you,—you have not been cruel or careless. You have done as well as you could. I thank you for it."

"You don't ask me where I'm going," said the jailer, after a silence that seemed but brief to him,—such a deal of argument he had dispatched, so many difficulties he had overcome in those few moments, whose like, for mental activity and conclusiveness, he had never seen before, and never would see again. "I shall be asked if I have told you. But—where did you come from? Do not tell me your name. But whom did you leave behind you that you would care most should know you are alive and in good hands?"

These questions, asked in good faith, would have had their answer; but while the prisoner was preparing such reply as would have proceeded, brief and wholly to the point, from the confusion of hope and surprise, the Governor of Foray came in sight, drew near, and, suspicious, as became him, walked in silence by the prisoner's side, while Laval obeyed his mute instructions, leading Manuel back to his cell. A vessel was approaching the shore of Foray.

Having disposed of his prisoner, the jailer in turn was marched, like one under arrest, up to the fort, where he remained, an object of suspicion, until his time came for sailing, and, without knowing it, he went home under guard.

When Adolphus Montier ascended to the prisoner's room that night, he found him standing by the window. After Laval left him, he had looked from out that window, and seen the white sail of a vessel; he could not see it now, but there he stood, watching, as though he knew not that his chance of hope was over.

As Adolphus entered the room, the prisoner turned immediately to him,—asking quietly, as if he had not been suddenly tossed into a gulf of despair by the breeze that brought him hope,—

"Has Laval sailed?"

"When the cannon fired," was the answer.

Then Adolphus placed the dish containing the prisoner's supper on the table; he had already lighted the lamp in the hall. And now he wanted to say something, on this his first appearance in the capacity of keeper, and he knew what to say,—he had prepared himself abundantly, he thought. But both the heart and the imagination of Adolphus Montier stood in the way of such utterance as he had prepared. The instant his eyes fell on that figure, lonely and forlorn, the instant he heard that question, his kind heart became weakness, he stood in the prisoner's place,—he saw the vessel sailing on its homeward voyage,—he beheld men stepping from sea to shore, walking in happy freedom through the streets of home;—a vision that filled his eyes with tears was before him, and he was long in controlling his emotion sufficiently to say,—

"We are in Laval's place, Sir, and we hope you will have no cause to regret the change. I don't know how to be cruel and severe,—but I must do my duty. But I wasn't put here for a tyrant."

"I know why you are here; Laval told me," said the prisoner.

"Then we're friends, a'n't we?" asked Adolphus; "though I must do my duty by them that employ me. You understand. I'd set every door and window of this building wide open for you, if I had my way; though I don't know what you're here for. But I swear before heaven and earth, nothing will tempt me to forget my duty to the government;—if you should escape, it would be over my dead body. So you see my position."

"Yes," said the prisoner; and if anything could have tempted a smile from him, this manner of speech would have

done it. But Adolphus was far enough from smiling.

"Come, eat something," said he, with tremulous persuasion. "My wife knows how to get up such things. She will do the best for you she can."

"Thank you."

The prisoner again looked out of the window. It was growing dark; the outline of sea and land was fading out of sight; dreary looked the world without,—but within the lamp seemed shining with a brighter light than usual. And here was a person and a speech, a human sympathy, that almost warmed and soothed him.

He approached the table where Adolphus had spread his supper. He sat in the chair that was placed for him, and the Drummer waited on him, recommending Pauline's skill again, much as he might have presented a petition. The prisoner ate little, but he praised Pauline, and said outright that he had tasted nothing so palatable as her supper these five years. This cheered Montier a little, but still his spirits were almost at the lowest point of depression.

"You seem to pity me," remarked the prisoner, when Adolphus was gathering up the remains of the frugal supper.

"My God!—yes!" exclaimed Adolphus, stopping short, and looking at the man.

It was a sort of sympathy that could not harm the person on whom it was bestowed.

"I consider myself well off to-night," said he, quietly. "It is your little daughter that works in the garden so much? I have often watched her."

"Yes," said Adolphus, almost with a sob.

"And you are the man whose music has been so cheering many a time?"

"I want to know what airs you like best," said the poor Drummer, hurriedly.

"I never heard you play one that I did not like."—Precious praise!

"Then you like music? I can be pretty tolerably severe, Sir, if I make up my mind!" said Adolphus, as if addressing his own conscience, to set that at rest by

this open avowal. "There's no danger of my doing wrong by the government. I'd have to pay for you with my life. Yes,—for it would be with my liberty. And there's my wife and child. So you understand where I am, as I told you before; but, by thunder! you shall have all the music you want, and all the flowers; and my little girl can sing pretty well,—her mother taught her. And if you're sick, there a'n't a better nurse in the hospital than Pauline Montier. There! good night!"

Adolphus took up the tray and hurried out of the room,—and forgot to fasten the door behind him until he had gone half way down the stairs. He came back in haste, and turned the great key with half the blood in his body burning in his face,—not merely an evidence of the exertion made in that operation, which he endeavored to perform noiselessly. He was ashamed of this caging business; but he would have argued you out of countenance then and there, had you ventured a word against the government,—though, as he said, he was in the dark concerning the prisoner's crime.

When he went down stairs he found supper prepared, and Pauline and their daughter waiting for him. He sat down in silence, seeking to avoid the questioning eyes which turned toward him so expectant and so hopeful. Discerning his mood, neither wife nor daughter troubled him with questions; at last, of himself, he broke out vehemently,—

"I wouldn't for the world have lost the chance! Laval wasn't the man to take care of that gentleman. But he don't say a word against Laval, mind you. He spoke about the flowers and the music. Oh, hang it!"

Here, in spite of himself, the Drummer was wholly overcome. He bowed his head to the table and broke into violent weeping. Another barrier gave way beside. Elizabeth flew to him. He seemed not to heed her, nor the sudden cry, "Oh, father!" that escaped her. She sat down by his side,—she wept as he was weeping. It was a stormy emo-

tion that raged through her heart, when her tears burst forth. She was not weeping for pity merely, nor because her father wept. Long before he lifted his head, she was erect, and quiet, and hopeful,—but a child no more. She was a woman to love, a woman to dare,—fit and ready for the guiding of an angel.

By-and-by Adolphus said to Pauline,—

“If any one else had undertaken this

job in our place, we should have deserved to be shut out of heaven for it. Thinking twice about it! I’m ashamed of myself. Why,—why,—he looks like a ghost. But he won’t look that way long! We a’n’t here to browbeat a man, and kill him by inches, I take it.”

“No, indeed!” said Pauline, as if the bare idea filled her with indignation.

The three were surely one now.

[To be continued.]

WALDEINSAMKEIT.

I do not count the hours I spend

In wandering by the sea;

The forest is my loyal friend,

Like God it useth me.

In plains that room for shadows make

Of skirting hills to lie,

Bound in by streams which give and take

Their colors from the sky,

Or on the mountain-crest sublime,

Or down the oaken glade,

Oh, what have I to do with time?

For this the day was made.

Cities of mortals woebegone

Fantastic care derides,

But in the serious landscape lone

Stern benefit abides.

Sheen will tarnish, honey cloy,

And merry is only a mask of sad;

But sober on a fund of joy

The woods at heart are glad.

There the great Planter plants

Of fruitful worlds the grain,

And with a million spells enchants

The souls that walk in pain.

Still on the seeds of all he made

The rose of beauty burns;

Through times that wear, and forms that fade,

Immortal youth returns.

The black ducks mounting from the lake,
 The pigeon in the pines,
 The bittern's boom, a desert make
 Which no false art refines.

Down in yon watery nook,
 Where bearded mists divide,
 The gray old gods that Chaos knew,
 The sires of Nature, hide.

Aloft, in secret veins of air,
 Blows the sweet breath of song;
 Ah! few to scale those uplands dare,
 Though they to all belong.

See thou bring not to field or stone
 The fancies found in books;
 Leave authors' eyes, and fetch your own,
 To brave the landscape's looks.

And if, amid this dear delight,
 My thoughts did home rebound,
 I should reckon it a slight
 To the high cheer I found.

Oblivion here thy wisdom is,
 Thy thrift the sleep of cares;
 For a proud idleness like this
 Crowns all life's mean affairs.

THE GERMAN POPULAR LEGEND OF DOCTOR FAUSTUS.

WE doubt whether any popular legend has ever taken deeper root among the common people and spread farther in the world than the story of Dr. Faustus and his reckless compact with the Evil One. We do not intend to compare it, of course, to those ancient traditions which seem to have constituted a tie of relationship between the most distant nations in times anterior to history. These are mostly of a mythological character, —as, for instance, those referring to the existence of elementary spirits. Their connection with mankind has, in the ear-

liest times, occupied the imagination of the most widely different races. A certain analogy we can easily explain by the affinity of human hearts and human minds. But when we find that exactly the same tradition is reëchoed by the mountains of Norway and Sweden in the ballad of "Sir Olaf and the Erlking's Daughter," which the milkmaid of Brittany sings in the lay of the "Sieur Nann and the Korigan," and in a language radically different from the Norse, —when, here and there, the same *forms* of superstition meet us in the ancient pop-

ular poetry of the Servians and modern Greeks, which were familiar to the Teutonic and Cambrian races of early centuries,—must we not believe in a primeval intimate connection between distant nations? are we not compelled to acknowledge that there must have existed; in those remote times, means of communication unknown to us?

We repeat, however, that, in calling the legend of Dr. Faustus the most widely-spread we know of, we cannot allude to these primitive traditions, the circulation of which is perfectly mysterious. We speak of such popular legends as admit of their origin being traced. Among these the Faustus-tradition may be called comparatively new. To us Americans, indeed, whose history commences only with the modern history of Europe, a period of three hundred years seems quite a respectable space of time. But to the Germans and the Scandinavians, from whose popular lore the names of Horny Siegfried and Dietric of Berne, (Theodoric the Great,) and of Roland, are not yet completely erased, a story of the sixteenth century must appear comparatively modern.

The popularity of the legend of Faustus, although of German origin, was, almost from its first rise, not confined to German lands. The French, Dutch, and English versions of the poor Doctor's adventurous life are but very little younger than his German biographies; and it was about the same time that he was made the subject of a tragedy by Marlowe, one of the most gifted of Shakspeare's dramatic predecessors. We are not afraid of erring, when we ascribe the uncommon popularity and rapid circulation of this legend principally to its deep and intrinsic moral interest. Faustus's time of action was exactly the period of the great religious reformation which shook all Europe. During the sixteenth century, even the untaught and illiterate classes learned to watch more closely over the salvation of their souls than when they felt themselves safe beneath the guardianship of the Holy Mother Church. And to those who re-

mained under the guidance of the latter, the dangers of learning and independent thinking, and of meddling with forbidden subjects, were pointed out by the monks with two-fold zeal. It cannot, therefore, surprise us, that the life and death of a famous contemporary, who for worldly goods and worldly wisdom placed his soul at stake, excited a deep and general interest. In one feature, indeed, his history bears decidedly the stamp of the great moral revolution of the time: we mean its awful end. There are two legends of the Middle Ages—and perhaps many more—in which the fundamental ideas are the same. The two Saints, Cyprianus, (the "Magico Prodigioso" of Calderon,) and Bishop Theophilus, (the hero of Conrad of Würzburg,) were both tempted by the Devil with worldly goods and worldly prosperity, and allured into the pool of sin perhaps deeper than Faustus; but repentance and penitence saved them, and secured to them finally a place among the saints of the Church. But for Faustus there is no compromise; his awful compact is binding; and whatever hope of his salvation modern poetry has excited for the unfortunate Doctor is, to say the least, in direct contradiction of the popular legend.

Faustus was the Cagliostro of the sixteenth century. It is not an easy task to find the few grains of historical truth referring to him, among the chaff of popular fiction that several centuries have accumulated around his name. A halo so mysterious and miraculous surrounds his person, that not only have various other famous individuals, who lived long before or after him, been completely amalgamated with him, but even his real existence has been denied, and not much over a hundred years after his death he was declared by scholars to be a mere myth. A certain J. C. Duerr attempted to prove, in a learned "*Dissertatio Epistolica de Johanne Fausto*," (printed at Altorf, in 1676,) that the magician of that name had never existed, and that all the strange things which had been

related of him referred to the printer John Faust, or Fust,—who had, indeed, been confounded with him before, although he lived nearly a century earlier. And when we think of the superstitious fear and monkish prejudice with which the great invention of printing was at first regarded, such a confusion of two persons of similar name, and both, in the eyes of a dark age, servants of Satan, cannot surprise us. Our John Faustus was also sometimes confounded with two younger contemporaries, one of whom was called Faustus Socinus, and made Poland the chief theatre of his operations; the other, George Sabellius, expressly named himself Faustus Junior, also Faustus Minor. Both were celebrated necromancers and astrologers, who probably availed themselves of the advantage derived from the adoption of the famous name of Faustus.*

A second attempt to prove the historical nonentity of Dr. Faustus was made at Wittenberg, in the year 1683. Some of his popular biographers had claimed for him a professorship at that celebrated university, or at least brought him into connection with it,—a pretension which the actual professors of that learned institution thought rather prejudicial to their honor, and which they were desirous of seeing refuted. Stimulated, as it would seem, by a zeal of this kind, J. G. Neumann wrote a "*Dissertatio de Fausto Præstigiatore*," in which he not only tried to prove that Dr. Faustus had never been at Wittenberg, but pronounced his whole story fabulous. An attempt like this would not surprise us in our own time, the age of historical skepticism; but the seventeenth century gave credit to narratives having much slighter foundation. Although this dissertation was full of historical mistakes and erroneous statements, it made some sensation, as is proved by its four successive editions. It was also translated into German. All Neumann's endeavors, however, could not stand against the testimony of contem-

poraries, who partly had known Faustus personally, partly had heard of him from living witnesses, and allude to his death as an occurrence of recent date.

John Faustus, or rather, after the German form of his name, Faust, was born in the last quarter of the fifteenth century, probably not before the year 1490. According to the oldest "*Volksbuch*" (People's Book) which bears his name,* his parents then lived at Roda, in the present Duchy of Saxe-Weimar. The same place is likewise named as his native village by G. R. Widmann, his first regular biographer, who says that his father was a peasant.† Although these two works are the foundation of the great number of later ones referring to the same subject, some of these latter deviate with respect to Faustus's birthplace. J. N. Pfitzer, for instance, who, seventy years after Widmann, published a revised and much altered edition of his book, makes Faust see the light at Saltwedel, a small town belonging then to the principality of Anhalt, and must have had his reasons for this amendment. A confusion of this kind may, indeed, have early arisen from a change of residence of our hero's parents during his infancy. But the oldest *Volksbuch* was written nearly forty years after the death of Faustus, and Widmann's work appeared even ten years later,—both, indeed, professing to be founded on the Doctor's writings, as well as on an autobiographical manuscript, discovered in his library after his death. Perhaps, however, the assertion of two of his contemporaries, one of whom was personally acquainted with him, is more entitled to credit in this respect. Joh. Manlius and Joh. Wier—the latter in his biography of Cornelius Agrippa—name Kundlingen, in Würtemberg, as his birthplace.

* *Historie von D. Johann Fausten, den weltbeschreyten Zauberer und Schwarzkünstler*, etc. Frankfurt a. M. 1588.

† *Wahrhaftige Historien von den greulichen und abscheulichen Sünden und Lasten*, etc., so D. Johannes Faustus, etc., bis an sein schreckliches End hat getrieben, etc., erklärt durch Georg Rudolf Widmann. Hamburg, 1599.

* Some regard Sabellius and Faustus Socinus as one and the same person.

Manlius, in his work, "Collectanea Locorum Communium," (Basel, 1600,) speaks of him as of an acquaintance. He says that Faustus studied at Krakow, in Poland, where there was a regular professorship of Magic, as was the case at several universities. Others let him make his studies at Ingolstadt, and acquire there the honors of a Doctor of Medicine. Both these statements may be true, as also that he was for some time the companion and pupil of Cornelius Agrippa, of Nettesheim, the celebrated scholar, whose learning and mysterious researches after the philosopher's stone brought him, like many other wise men of the age, into suspicion of witchcraft. Agrippa had a pet dog, black, like the mystical companion of Dr. Faustus, and, in the eyes of a superstitious multitude, like him, the representative of the Evil One. Black dogs seem to have been everywhere considered as rather suspicious creatures. The Pope Sylvester II. had also a favorite black poodle, in whom the Devil was supposed to have taken up his abode. According to Wier, however, Agrippa's black dog was quite a harmless beast, and remarkable only for the childlike attachment which the great philosopher had for him. It may be worth remarking, that this writer, although he speaks of Faustus in his biography of Agrippa, makes no mention of his ever having been a friend or scholar of the latter.

In several of the old stories of Faustus, we read that he had a cousin at Wittenberg, who took him as a boy to his house, brought him up, and made him his heir when he died. If this was true, it would be more probable that he was a native of Saxony than of Suabia. It is, however, more probable that this narrative rests on one of the numerous cases found in old writings in general, and above all in the history of Faustus, in which the names Wittenberg and Würtemberg are confounded. Our hero's abode at the former place was very probably merely that of a traveller; he left there, as we shall soon see, a very unenviable reputation. It is true that Saxony was

the principal scene of the Doctor's achievements; but this very circumstance makes it improbable that he was born and brought up there, as it is well known that "a prophet hath no honor in his own country."

Faust's studies were not confined to medicine and the physical sciences. He was also considered eminent as a philologist and philosopher. Physiology, however, with its various branches and degenerate offshoots, was the idol of the scholars of that age, and of Faustus among the rest. A passionate desire to fathom the mysteries of Nature, to dive into the most hidden recesses of moral and physical creation, had seized men of real learning, and seduced them into mingling absurd astrological and magical fancies with profound and scholarlike researches. The deepest thinkers of their time, like Nostradamus, Cardan, Cornelius Agrippa, Paracelsus, Thomas Campanella, flattered themselves that they could enter, by means of art and science, into communion with good or evil spirits, on whose aid they depended for obtaining knowledge, fame, wealth, and worldly honors and enjoyments. Faustus was one of those whom a passion for inquiry, in league with a powerful, sensual nature, led astray. What had been originally an honest thirst for knowledge, a deep interest in the supernatural, became gradually a morbid craving after the miraculous, the pretension of having attained the unattainable, and the attempt to represent it by means of vulgar jugglery.

Dr. Faustus seems at first to have settled as a practising physician, and at this period of his life Wagner appears as his *famulus*; for we never find this *Philister* among scholars as a companion of the travelling Faustus, although his connection with him was apparently lasting. According to the popular legend, the Doctor made him his heir, and expressly obtained for him Auerhahn, (Heathcock,) a familiar spirit in the shape of a monkey. This was a sort of caricature of Mephistopheles, who became, through his ludi-

crous clumsiness, a pet-devil of the populace in the puppet-shows, particularly in Holland. Widmann calls Wagner *Wai-ger*; while in all other publications referring to him he bears his right name, Christoph Wagner.

What city it was where Faustus lived before the reputation of witchcraft made him the subject of so much talk remains unsettled. Wittenberg and Ingolstadt are alternately named. Some of his biographers relate, that he led a loose and profligate life, and soon wasted his cousin's inheritance. Others represent him as a deep, secluded student, laying hold of one science after another, and unsatisfied by them all, until he found, by means of his physical and chemical experiments, the secret path to the supernatural, and, in order to reap their full fruits, allied himself with the hellish powers. Faustus himself tells us, in his "*Mirakel-, Kunst-, und Wunder-buch*," (or rather, the author of this book makes him tell us,) how his intercourse with the Devil commenced almost accidentally and against his intentions:—

"I, Doctor Johann Faust, who apply myself to the Free Arts, having read many kinds of books from my youth, happened once to light upon a book that contained various conjurations of the spirits. Feeling some desire to enlarge my ideas on these things, having, indeed, at the beginning, small belief that the prescriptions of that book would so soon be verified, I tried them only for an experiment. Nevertheless, I became aware that a mighty spirit, named Astaroth, presented himself before me, and asked me wherefore I had cited him. Then, hurried as I was, I did not know how to make up my mind otherwise than to demand that he should be serviceable to me in various wishes and desires, which he promised *conditionale*, asking to make a compact with me. To do this I was at first not inclined; but as I was only provided with a bad *circle*, being merely experimenting, I did not dare to bid him defiance, but was obliged to yield to the circumstances. I therefore made up

my mind, inasmuch as he would serve me, and would be bound to me a certain number of years. This being settled, this spirit presented to me another, named Mochiel, who was commanded to serve me. I asked him how quick he was. Answer: 'Like the wind.' 'Thou shalt not serve me! get thee back to whence thou camest!' Now came Aniguel; he answered, that he was as quick as the bird in the air. 'Thou art still too slow,' I replied; 'begone!' At the same moment a third stood before me, named Aziel; this one, too, I asked how quick he was. 'Quick as the thought of man.' 'Right for me! thee will I keep!' And I accepted him. This spirit has served me long, as has been made known by many writings."

Whether it was this quick Aziel, or Astaroth himself, who became Faustus's travelling-companion under the name of Mephistopheles, or whether the prince of the lower regions in person condescended to play that part, we do not know; but in all popular stories of the Doctor, his servant bears the latter name, —while in the various books in which, under the name of *Hoellenzwang*, the system of his magic is laid down, he is called Aziel.

In possession of such a power, Faustus soon became tired of his lonely study. He craved the world for his theatre. His travels seem in reality to have been very extensive, while in the popular stories a magic mantle carried him over the whole globe. Conrad Gesner, the great physiologist, who speaks of him with some respect as a physician, comparing him with Theophrastus Paracelsus, reckons him among the *scholastici vagantes*, or *fahrende Schueler*, an order of men already considerably in the decline, and grown disreputable at that period. As early as the thirteenth century, we find the custom in Germany, of young clergymen who did not belong to any monkish order travelling through the land to get a living,—here by instructing in schools for a certain period,—there by temporarily serving in churches

as choristers, sacristans, or vicars,—often, too, as clerks and copyists to lawyers or other private men. When they could no longer find a livelihood at one place, they went to another. Their offices became, in course of time, of the most varied and unsuitable order. They were generally received and treated with hospitality, and this may have been one reason why all kinds of adventurers were ready to join them. Their unstable mode of life easily explains their frequenting the society of other vagabonds, who traversed the country as jugglers, treasure-diggers, quacks, or sorcerers, and that their clerical dignity did not prevent their occasionally adopting these professions themselves. The Chronicle of Limburg, in speaking of the Diet of Frankfurt in 1397, says: "The number of princes, counts, noblemen, knights, and esquires, that met there, amounted to five thousand one hundred and eighty-two"; adding: "Besides these, there were here four hundred and fifty persons more, such as *fahrende Schueler*, wrestlers, musicians, jumpers, and trumpeters." The character of the clergy having sunk so low, the Church declared itself against the custom, and at several German councils theological students were expressly forbidden to lead this roving life. It required, however, considerable time for the ancient custom to become extinct, and we learn, among others, from Conrad Gesner, that it still existed at the time of the Reformation.

The part played by Faustus was at first in some degree respectable, and that of a scholar. An old Erfurt Chronicle tells us that he had come to that city and obtained permission from the university to deliver a course of lectures on Homer. A dark rumor of his magic powers had preceded him; the students, therefore, thronged to hear him, and, deeply interested, requested him to let them see the heroes of Homer by calling them from their graves. Faustus appointed another day for this, received the excited youths in a dark chamber, commanded them to be perfectly silent,

and made the great men of the Greek bard rise up, one by one, before their eyes. At length Polyphemus appeared; and the one-eyed Cyclops, with his red hair, an iron spear in his hand, and, to designate him at once as a cannibal, two bloody human thighs in his mouth, looked so hideous, that the spectators were seized with horror and disgust, the more so that the wily magician professed to have some difficulty in dismissing the monster. Suddenly a violent shake of the whole house was felt; the young men were thrown one over another, and were seized with terror and dismay. Two of the students insisted upon having already felt the teeth of the Cyclops.—This ridiculous story was soon known throughout the city, and confirmed the suspicions of the Franciscan monks and magistrates, that the learned guest was in league with the Evil One. It is said that Faustus had previously offered to procure for them the manuscripts of the lost comedies of Terence and Plautus, and to leave them for a short time in their hands, to be copied,—but that the fathers of the city and of the university declined, because they believed this could be done only by sorcery, or with the help of Satan. Now they sent to him the Guardian of the Convent, Dr. Klünger, in order to convert him and to have masses read for him, for the purpose of delivering him from his hellish connection. But Faustus opposed, was by the clergy solemnly delivered to the Devil, and, in consequence, banished from the city by the magistrates.

We do not know whether it was for similar juggleries, that, when at Wittenberg, the Elector John the Steadfast ordered him to be arrested, as Manlius relates. He saved himself by flight. Melancthon, in one of his letters, mentions having made his acquaintance; the whole tone of the allusion, however, expresses contempt.

The character of the miracles he performed soon ceased to have the literary tincture of the one related above, and they became mere vulgar juggleries and exhibitions of legerdmain, suited to the

taste of the multitude. Scholars turned their backs on him, and we find him only among tipplers and associates of the lowest kind. At one of their carousals his half-intoxicated companions asked him for a specimen of his witchcraft. He declared himself willing to gratify them in any request. They then demanded that he should make a grape-vine full of ripe fruit grow out of the table around which they sat. Faustus enjoined complete silence, ordered them to take their knives and keep themselves in readiness for cutting the fruit, but not to stir before he gave them leave. And, behold, before the eyes of the gaping youths, while they themselves were enveloped in a magic mist, there arose a great vine, with as many bunches of grapes as there were persons in the room. Suddenly the obscuring mist dissolved, and each one saw the others with their hands at their own noses, ready to cut them off, as the promised grapes. But the vine and the magician had disappeared, and the disenchanting drunkards were left to their own rage.

The reader will be aware that this is the tale of which Goethe availed himself in representing Faustus's visit to Auerbach's cellar at Leipzig. Whether it really occurred there is not stated; but that Faustus was said to have been at Leipzig, and even in Auerbach's cellar, is an historical fact, attested by two pictures still extant at this famous old tavern, where many of our curious American travellers may have seen them. These pictures, which have been retouched and renovated more than once,—last in 1759,—are marked at the top with the date 1525. Whether this means the year in which they were painted, or that in which Faustus performed the great feat which the scene represents, remains uncertain. As it occurred in the beginning of his career, upon which we may assume him to have entered somewhere between 1520 and 1525, the date is quite likely to refer to the time of the feat; but, to judge from the costumes and several other signs, the pictures cannot have been painted much

later. They were evidently made expressly for the locality, sloping off on both sides at the top, to suit the shape of the vault. The German inscription at the foot of one of the pictures indicates that it was written after the Doctor's death, which must have occurred between 1540 and 1550; but it is probable that these verses were added at a later time, the more so as the traces of an older inscription, now no longer legible, may still be discovered. One of these curious paintings represents Faustus in company with students and musicians sitting around a table covered with dishes and bottles. Faustus is lifting his goblet with one hand, and with the other beating time on the table to the music. At the bottom we read the following verse in barbarous Latin:—

"Vive. Bibe. Obgregare. Memor Fausti hujus.
et hujus
Pœnæ. Aderat claudo hæc. Ast erat ampla
Gradu. 1525." *

The other picture shows us the same jolly party risen from table, and all expressing their wonder and astonishment, as Dr. Faustus is just riding out of the door on a wine-tub. Beneath it is the following inscription in German:—

"Dr. Faustus zu dieser Frist
Aus Auerbach's Keller geritten ist,
Auf einem Fass mit Wein geschwind,
Welches gesehn manch Mutterkind.
Solches durch seine subtilne Kunst hat ge-
than,
Und des Teufels Lohn empfangen davon.
1525." †

On neither of the two pictures does Mephistopheles appear, unless he is meant to be represented in the shape of the black dog. It is not, however, Goethe's

* Live, drink, and be merry, remembering this Faust and his punishment. It came slowly, but was in ample measure. 1525.

† Dr. Faustus on this day
From Auerbach's cellar rode away,
Of a barrel of wine astride,
Which many mothers'-children eyed;
This through his subtle art achieved,
And for it the Devil's reward received.

1525.

poodle that meets us here, but a sleek little creature with a collar around his neck, looking very much like a wooden toy-dog.

Most of the tricks and pranks reported of Dr. Faustus are of the same absurd kind, though not all of so harmless a character. According to the popular legend, he travelled like a great lord, had the spirits pave the highways for him when he rode in the post-coach,—it seems, then, that he did not always use his mantle,—and lived in the taverns at which he stopped with an unheard-of luxury. On his departure, he paid the hosts in a princely manner; but scarcely was he out of sight, when the gold in the receiver's hand was changed to straw, or to round slices of gilded horn,—a shabby trick indeed, as he could have as much money as he liked.

How much we have to believe of all these popular stories we may learn from Dr. Phil. Begardi's "*Zeyger der Gesundheit*," (Guide to Health,) a book published in 1539, at Worms, at a time when Faustus seems to have already disappeared from Germany, after having lost caste there completely, and when he was trying his fortune in other countries.

"There is still another famous man," says Begardi, "whose name I would rather not mention at all, only that he himself would not wish to remain hidden or unknown. For he was roving, *some years ago*, through all the different countries, principalities, and kingdoms, and has made known his name and his great skill, boasting not only of his medical science, but likewise of Chiromancy, Necromancy, Physiognomy, Visions in Crystals, and more arts of the kind. And he called himself Faustus, a celebrated experienced master, *philosophum philosophorum*, etc. But the number of those who have complained to me of having been cheated by him is very great. Well, his promises were likewise very great, just like those of Thessalus, (in Galen's time,) and his reputation like that of Theophrastus; but in deeds he was, I hear, found small and

deceitful. But in taking and receiving money he was never slow, and was off before any one knew it."

Thus we see the historical Faustus, the esteemed scholar, the skilful physician, gradually merged in the juggler, the quack, the adventurer, and the impostor. The popular legend follows him to foreign countries. His magic mantle carries him, in eight days, over the whole world, and even into the infernal regions. He is honorably received at the Emperor's court at Innspruck, introduces himself invisibly at Rome, into the Vatican, where the Pope and his cardinals are assembled at a banquet, snatches away his Holiness's plate and cup from before his mouth, and, enraged at his crossing himself, boxes his ears. In the puppet-shows he figures mostly at the court of the Duke of Parma. In Venice his daring spirit presumed too far. He announced an exhibition of a flight to heaven. But Mephistopheles, who had hitherto satisfied his most extravagant demands, though often with grumbling, would not permit *that* feat. In the midst of a staring, wondering multitude, Faustus rose to a certain height by means of his own Satanic skill, acquired in his long intercourse with the Devil. But now the latter showed that he was still his master. He suddenly hurled him from on high, and he fell half dead upon the ground. The twenty-four years of the compact, however, were not yet ended, and he was therefore restored to life by the same bellish power.

In a very trite, popular ballad, which we find in "*Des Knaben Wunderhorn*," we see, that, when the travellers came to Jerusalem, the Devil declined still another request. Faustus wishes him to make a picture of Christ crucified, and to write under it his holy name. But the Devil declared that he would rather give him back his signature than be obliged to do *such* a thing, and succeeded in turning the Doctor's mind from the subject by showing him, instead, a picture of Venus.

Popular imagination seems to have

been inexhaustible in stories of this kind. But, after the twenty-four years of vile enjoyments, the hour of retribution came at last. According to our scanty historical notices, Faustus died an unnatural death: he was found dead in his bed, at his birthplace, Kundlingen, with his neck twisted. How such a death must have confirmed all the superstitious rumors about him the reader will easily conceive. But, according to the popular legend, his end was still more terrible. He seems to have returned to his own country, and scholars, worthy young men, surround him once more, and become much attached to him. From this one would suppose him to have been at Wittenberg, or Ingoldstadt, or any university city, but, instead of this, we find him in a little Saxon village, called Rimlich. The twenty-fourth year draws to its close. At last, at the eleventh hour, Faustus bethinks himself to repent; but it is too late. His end, related in the simple language of the Volksbuch, is truly awful. He dismisses his sympathizing friends, bidding them not to be disturbed by any noises in the night. At midnight a terrible storm arises; it reaches its height amid thunder and lightning. The friends hear a fearful shriek. They rise and pray. But when, in the morning, they enter his room, they are horror-struck at seeing his limbs scattered round, and the walls, against which the fiend had dashed him to pieces, covered with his blood. His body was found in the court-yard on a dung-hill.

The horror of this end made a peculiarly awful impression on the popular mind. During the Thirty Years' War, it once happened that a troop of Catholic soldiers broke into a village in Saxony, on the Elbe, named Breda. They were just about to plunder one of the principal houses, when the judge of the place, who, it seems, was a shrewd man, stepped out and told them that this village was the one where Dr. Faustus was carried off by the Devil, and that in this very house the blood of the Doctor was still to be seen on the walls. The soldiers

were seized with terror, and left the village.

The story of Faustus's adventurous life and shocking death, with its impressive lessons, appears at first to have been kept extant only by oral tradition. Nearly forty years passed before it was written down and printed. But then, indeed, the book was received with so much favor, that not only several new and enlarged editions appeared in a short time, but many similar works were published soon after, which, though founded on the oldest Volksbuch (of 1588) and Widmann's "Histories," were yet abundant in new facts and inventions. And that not to the illiterate classes alone was the subject interesting is proved by the circumstance that a Latin version of the first Volksbuch was advertised, and (probably) appeared. On the title-pages of all these books it is expressly stated that they were written as a warning to, and for the edification of, Christian readers. In 1712, a book was published at Berlin, under the title, "*Zauberkünste und Leben Dr. Fausti*," (The Magic Arts and Life of Dr. Faust,) as the author of which Christoph Wagner was named. Wagner himself became the subject of a biographical work.

Of still greater effect was Faustus's history on the stage. Through the whole of the seventeenth, as well as the first half of the eighteenth century, it remained one of the favorite subjects of puppet-shows, popular melodramas, exhibitions of *ombres chinoises*, and pantomimes. The more the awful event, with its moral lessons, receded into the background of time, the more it lost its serious and impressive character, until it became a mere burlesque, and *Hanswurst* and *Casperle* its principal figures.

The "Historie" had scarcely appeared, when it was translated into Dutch, and the later publication of other similar works did not prevent the demand for several new editions. These Dutch books were illustrated, as were also the newer German ones. Only a little later, two French versions were published, one

of which was even reprinted at Paris as late as 1712.

In Holland, our hero excited no small interest even among the artists. There are extant several portraits of Faustus painted by Rembrandt, — whether ideal, or copied from older pictures, is not known. Another Dutch painter, Christoph von Sichein, represented two scenes from the life of the celebrated magician; and of these productions engravings still exist. On the one, we see Faustus and Mephistopheles, — the latter dressed like a monk, as, according to the popular tales, he mostly appeared. On the other, Wagner and Auerhahn, (or Auerhain,) — the latter in the shape of a monkey. There is a striking contrast between Faustus and Wagner. The first is a well-dressed man, in deep meditation; globes and instruments of science surround him; — the other the impersonation of vulgarity. Various scenes from Faustus's life adorn the walls. Christoph von Sichein was born in 1580, and flourished at Amsterdam during the first quarter of the seventeenth century. These pictures were consequently made when the whole interest of the public for Faustus and his companions was still fresh.

Some books seem to have been published by Faustus during his lifetime, — at least, his biographers allude to them; but it was only after his death that the work which gave him his name its chief reputation became known. This was his peculiar System of Magic, called "Faust's Hoellenzwang" (Compulsion of Hell). Wagner, who was said to be his heir, published it first under the title of "Dr. Johannis Faust's *Magia Celeberrima*, und *Tabula Nigra*, oder *Hoellenzwang*." It contained all the different forms of conjuration, as well for the citation as for the dismissal of spirits. There are, besides this, several other similar works extant, such as his "Schwarzer Mohrenstern," "Der schwarze Rabe," the "Mirakel-, Kunst-, und Wunder-buch," already mentioned, and several more, containing about the same matter, and most of them written

in his name. Of all these productions only manuscripts are known to remain, although they are all professedly copies of printed works. The most singular thing is, that, while they are represented as having been published after the magician's death, some of them are, nevertheless, marked with dates as early as 1509, 1510, and 1511, — and with the names of Lion, (Lyons,) London, etc., as the places where they were printed. These circumstances make their authenticity very doubtful, even if we allow for mistakes made by the copyists.

Although so large a part of Faustus's life was, according to the popular legend, spent in Italy, we are not aware that this legend was ever current among the Italian people. Some unfortunate attempts have been made to engraft the story of Don Giovanni upon this German stock, but, as it seems to us, by very arbitrary arguments and conclusions. The career of a mere rake, who shuns no means of gratifying his low appetites, has little analogy with that of an originally honest inquirer, led astray by the want of faith and his sensual nature. The only resemblance is in the end. There was at first more apparent success in the endeavor to transplant the tale to Spain, where Calderon's "Magico Prodigioso" was taken by some critics for a representation of it. The foundation of Calderon's drama, as mentioned before, is rather the legend of St. Cyprianus. More may be said in favor of the radical identity of the stories of Faustus with some popular legends of the Poles, referring to a necromancer called Twardowski. But Polish scholars will not admit this; at least, they object to giving up their great magician, and some attempts have even been made from that side to prove that theirs is the original whom the Germans appropriated under the name of *Faust*.

The most interesting result of the publication of the Volksbuch appeared in England, where it fell, for the first, and in a hundred and fifty years the only time, into the hands of a poet. Mr. Collier, in his "History of English Dramatic

Poetry," says,—“In 1588, a ballad of the Life and Death of Dr. Faustus was licensed to be printed”; and adds,—“This would, according to the language of the time, have meant any composition in verse, even the play,” (of Marlowe,) and subsequently mentions the same circumstance with reference to “the old romance of Dr. Faustus.” On this, Mr. A. Dyce (Works of Christopher Marlowe, 1850, I. p. xvi., note) remarks,—“When Mr. Collier states that the old romance of Faustus was entered into the Stationers’ books in 1588, (according to a note on Henslowe’s Diary, p. 42,) he meant, I apprehend, the old *ballad*.” If we bear in mind that the first German History of Dr. Faustus did not appear before the same year, we should also conclude that he must have meant the ballad, as a translation could hardly have been made in so short a time. But considering, on the other hand, that the tragedy, which cannot have been composed later than 1589 or 1590, (as the poet, who was murdered in 1593, wrote several pieces after the one in question,) is evidently and without the least doubt founded on the Volksbuch, often adopting the very language of its English version, we must conclude that a translation of the German work was made immediately after its appearance, or possibly even from the manuscript,—which Spiess, the German editor, professes to have obtained from Spires. Although the word “ballad” was not properly employed for prose romances, it may have been thus used in Henslowe’s Diary by mistake. We are not aware that any *old* English version of this “History of Dr. Faustus” is now extant; that from which Mr. Dyce quotes is of 1648. Marlowe’s tragedy was first entered in the Stationers’ books in 1600–1, but brought upon the stage many years before. In 1597, it had already been played so often that additions were required. Philips, who wrote about fifty years later, remarks, that, “of all that Marlowe hath written to the stage, his ‘Dr. Faustus’ has made the greatest noise with its devils and such-like tragi-

cal sport.” In course of time it was “made into a farce, with the Humors of Harlequin and Scaramouch,” and represented through the whole kingdom, like similar compositions, with immense applause.

Marlowe’s “Faustus” has been judged rather favorably by modern English critics. Mr. Hazlitt calls it, “though an imperfect and unequal performance, Marlowe’s greatest work. Mr. Hallam remarks,—“There is an awful melancholy about Marlowe’s Mephistopheles, perhaps more impressive than the malignant mirth of that fiend in the renowned work of Goethe.” Charles Lamb even preferred Marlowe’s “Faustus,” as a whole, to the latter! Mr. Collier calls it “a drama of power, novelty, interest, and variety.” So, indeed, it is; but all that power, interest, novelty, and variety do not belong to Marlowe, but to the prose romance, after which he wrote. Indeed, he followed it so closely,—as every reader can see for himself, by reading the play in Dyce’s edition, and comparing it with the notes under the text,—that sometimes whole scenes are copied, and even whole speeches, as, for instance, that of the Emperor Charles V. The coarse buffoonery, in particular, of which the work is full, is retained word for word. Of the countless absurdities and prolixities of the Volksbuch, Marlowe has, of course, omitted a great deal, and condensed the story to the tenth part of its original length; but the fundamental idea, the plot, and the characters, belong exclusively to the original. Marlowe’s poetical merit lies partly in the circumstance that he was the first to feel the depth and power of that idea, partly in the thoughts and pictures with which some speeches, principally the monologues of Faustus himself, are interwoven. The Faustus of Marlowe is the Faust of the legend, tired of learning because it is so unproductive, and selling his soul, not for knowledge, but for wealth and power. His investigating conversations with Mephistopheles, his inquiries, and the answers of the latter, are almost

as shallow and childish as those in the *People's Book*; and Faustus himself remarks, on the information which his companion gives him,—

“These slender trifles Wagner could decide;
Has Mephistopheles no greater skill?”

This latter, indeed, seems to us, in spite of the admiration of English critics, a decided failure. There is in him no trace of either the cruel, icy-cold malignity of the fiend of Goethe, or the awful grandeur of Milton's Tempter. It cannot be said that Marlowe's Devil seduces Faustus. He is almost on the verge of repentance himself; of the two, he is decidedly the better Christian. The proposition of the compact comes from Faustus himself, and Mephistopheles only accepts it. Marlowe's Faustus knows nothing of the feeling of aversion and disgust with which Goethe's Faust sees himself bound to his hellish companion; he calls him, repeatedly, “sweet Mephistopheles,” and declares,—

“Had I as many souls as there be stars,
I'd give them all for Mephistopheles.”

Mr. Hallam, in comparing Marlowe's production with Goethe's, remarks,—
“The fair form of Margaret is wanting.”
As if this were all that was wanting! Margaret belonged, indeed, exclusively to Goethe. But Helena, the favorite ideal of beauty of all old writers, is introduced in the popular tale, and so, too, in Marlowe. Faustus conjures up her spirit at the request of the students. Her beauty is described with glowing colors; “it would,” says the old romance, “nearly have enflamed the students, but that they persuaded themselves she was a spirit, which made them lightly passe away such fancies.” Not so Faustus; although he is already in the twenty-third year of his compact, he himself falls in love with the spirit, and keeps her with him until his end. In all this, Marlowe follows closely; though he has good taste enough to suppress the figure of the little Justus Faustus, who was the fruit of this union.

It now only remains to us to consider the way in which modern poets have ap-

prehended the idea of the Faust-fable. None of the German dramas and operas which the seventeenth century produced, though they never failed to draw large audiences, could be compared, in poetical value, to Marlowe's tragedy. The German stage of that period was of very low standing, and the few poets who wrote for it, as, for instance, Lohenstein, preferred foreign subjects,—the more remote in space and time, the better. The writers of neither the first nor the second Silesian school were exactly the men to appreciate the depth of a legend like that of Faustus,—still less the watery poets of the beginning of the eighteenth century. Lessing, who, with his sharp, sound criticism, and his clear perception of the beautiful, led the way to a higher state of things in literature, appears also to have been the first to discover the deep meaning buried in the popular farces of Faustus. He pronounced it worthy the genius of a Shakespeare, and himself attempted to make it the subject of a tragedy. How much it occupied his mind we may conclude from the circumstance that he seems to have made for it two plans, essentially different from each other. We can only regret that they were never executed. Although Lessing was not a poetical genius like Goethe, the power and acuteness of his mind were so eminent, the force of his critical faculties was so penetrating, that his treatment of a subject of so much depth and intrinsic poetry would have been of the highest interest. This expectation is also justified by the few sketches of single scenes which are all that remain of his plans. One of the latter is, indeed, also in so far remarkable, as we see from it that Lessing's mind inclined to the modern view, according to which Faustus ought to be and would be finally saved. One of the devils describes him, before temptation, as “a solitary, thinking youth, entirely devoted to wisdom,—living, breathing, only for wisdom and knowledge,—renouncing every passion but the one for truth,—highly dangerous to thee [Satan] and to us all, if he were ever to be a

teacher of the people." Satan resolves at once to seduce and destroy him. But Faustus's good angel has mercy on him. He buries him in a deep sleep, and creates in his place a phantom, with which the cheated devils try successfully the whole process of temptation and seduction. All this appears to Faustus in a dream. He awakes; the Devil discovers his error, and flies with shame and fury, and Faustus, thanking Providence for its warning, clings to truth and virtue more firmly than ever.

The other plan, to judge from the fragment we possess, is less fanciful, and seems to follow more closely the popular tradition, according to which the temptations of Faustus were by no means external, but lay deep in his individual mind. In one of its lightly-sketched scenes, the poet has evidently availed himself of the one from the *Miracle-Book* heretofore mentioned, and, indeed, with a great deal of force. Faustus, impatient and annoyed at the slow process of human action, desires the quickest servant from hell, and successively cites seven spirits. One after another he rejects. The arrows of the plague, the wings of the winds, the beams of light, are all not quick enough for him. The fifth spirit rises:—

"Faustus. How quick art thou?"

"Fifth Spirit. As quick as the thoughts of men.

"Faustus. That is something!—But the thoughts of men are not always quick. They are slothful when truth and virtue demand them. Thou canst be quick, if thou wilt. But who will warrant me thy being always quick?—No, I trust thee as little as I ought to have trusted myself.—Ah!—(to the sixth spirit.) Now tell me how quick thou art!

"Sixth Spirit. As quick as the vengeance of the Avenger.

"Faustus. Of the Avenger? Of what Avenger?"

"Sixth Spirit. Of the All-powerful, the Terrible, who has kept vengeance for himself alone, because vengeance is his delight.

"Faustus. Devil, thou blasphemest, for I see thou art trembling!—Quick, thou sayest, as the vengeance of—no! he may not be named among us! Quick, thou sayest, is his vengeance? Quick? And I still live? And I still sin?

"Sixth Spirit. That he suffereth thee still to sin is the beginning of his vengeance.

"Faustus. Oh that a Devil should teach me this!—But no, his vengeance is not quick; if thou art no quicker, begone!—(To the seventh spirit.) How quick art thou?"

"Seventh Spirit. Unsatisfiable (*unzuvergnuegender*) mortal! If I, too, am not quick enough for thee —

"Faustus. Tell me, then, how quick?"

"Seventh Spirit. No more nor less than the transition from Good to Evil.

"Faustus. Ha! thou art my devil! Quick as the transition from Good to Evil!—Yes, that is quick! Nothing is quicker!—Away from here, ye horrors of Orcus! Away!—Quick as the transition from Good to Evil!—I have learned how quick that is! I know it!"

Lessing had this fragment printed in the "*Literaturbriefe*," professedly as a specimen of one of the old popular dramas, despised at that time by the higher classes, though Lessing remarks,—"How fond was Germany once of its Dr. Faustus,—and is so, partly, still!" But even this bold reformer of German taste seems not to have had the temerity to come forward at once as the author of a conception so entirely contrary to the reigning rules and the Frenchified taste by which, at the period of the "*Literaturbriefe*," (1759–1763,) Germany was still subjugated.

We do not know whether some of the young poets who took hold of the subject a short time after were instigated by this fragment of Lessing's, or whether they were moved by the awakening German Genius, who, just at that period, was beginning to return to his national sources for the quenching of his thirst. Between 1770 and 1780, Lenz and Mäler Müller composed, the former his "*Hoellenrichter*," the latter his dramatized *Life of Dr. Faustus*. No more appropriate hero could have been found for the young "*Kraft-Genies*" of the "*Sturm und Drang Periode*" (Storm and Stress period) of German literature. Schreiber, Soden, Klinger, Schink, followed them, the last-named with several productions referring to the subject. In 1786, Goethe communicated to the world,

for the first time, a fragment of that astonishing dramatic poem which has since been acknowledged, by the whole literary public, as his masterpiece, and the most remarkable monument of his great genius.* The whole first part of the tragedy, still under the name of a fragment, was not published before 1808. Since then Germany may be said to have been inundated by "Fausts" in every possible shape. Dramas by Nic. Voigt, K. Schoene, Benkowitz,—operas by Adolph Bäurle, J. von Voss, Bernard, (with music by Spohr),—tales in verse and prose by Kamarack, Seybold, Gerle, and L. Bechstein,—and besides these, the productions of various anonymous writers, followed close upon each other in the course of the next twenty years. Chamisso's tragedy of "Faustus," "in one actus," in truth only a fragment, had already appeared in the "Musenalmanach" of 1804.

To Goethe the legendary literature of his nation had been familiar from his boyhood. Very early in life, and several years before the publication of Maler Müller's spirited drama, his mind was powerfully impressed by the Faust-fable, and the greater part of the present fragmentary poem was already written and ready for print when Müller's first sketch, under the title, "Situations in the Life of Dr. Faustus," appeared (1776). As the entire poetry of Goethe was more or less *autobiographical*,—that is, as all his poetical productions reflect, to a certain extent, his own personal sensations, trials, and experiences,—he fused himself and his inner life into the mould of Faustus, with all his craving for knowledge, his passionate love of Nature, his unsatisfied longings and powerful temptations, adhering closely in all external action to the popular story, though of course in a symbolic spirit. Goethe had, as he tells us himself, a happy faculty of delivering himself by poetical production, as well of all the partly imaginary, partly morbid cares and doubts which troubled his mind, as of the real and acute sufferings

which tormented him, for a certain period, even to agony. Love, doubt, sorrow, passion, remorse—all found an egress from his soul into a poem, a novel, a parable, a dramatic character, or some other form of poetical expression. He felt as if eased of a burden, after having thus given his feelings body and shape. Thus his works became his history. "Faust," in its two parts, is the production of his lifetime. Conceived in early youth, worked out in manhood, completed in old age, it became a vehicle for all the various commotions of his existence. There is no other poem which contains such a diversity of thought and feeling, such a variety of sentences, pictures, scenes, and situations. For enlarging on the poetical value of this incomparable work this is not the place. Closely as Goethe has followed up the popular legend, it is emphatically and entirely his own production, because it contains his complete self.

Nearly a quarter of a century passed before this extraordinary poem was followed by its second part. It is not difficult to trace in this continuation, published only after the death of the aged poet, the few scenes which may have been composed contemporarily with or soon after the first part; but that the whole is conceived and executed in a totally different spirit not even the most unconditional admirers of Goethe's genius will deny. There is no doubt that he regarded his "Faust" only as a beginning, and always contemplated a continuation. The rôle of Dr. Faustus, the popular magician, was only half-played. Its most brilliant part, his intercourse with the great of the earth and the heroes of the past, had not yet commenced. But as, in the course of advancing life, the poet's views and ideas changed, the mirror of his soul reflected an altered world to him; and as the second part of "Faust" is hardly less an image of himself than the first, it is not unnatural that it is as different from the latter as the Goethe the septuagenarian was from Goethe the youth.

Meanwhile the *litterati* of Germany

* It first appeared in the fourth volume of his Works. Leipzig. Goeschen. 1786.

became exceedingly impatient for the promised second part; and when the master lingered, and did not himself come forth with the solution of the mystery, the disciples attempted to supply him as well as they could. C. C. L. Schoene and J. D. Hoffmann had both the requisite courage for such an undertaking; and the first even sent his production, with perfect *naïveté*, to the great master, as the second part of his own work. C. Rosenkranz and Gustav Pfitzer—two very honorable names—also wrote after-plays.

We must confess that we have never felt any desire to see "Faust" continued. It ought to have remained a fragment. Its last scene, perhaps, surpasses, in sublimity and heart-rending power, anything ever written. No light of this world can ever entirely clear up the sacred mystery of the Beyond, but that scene gives us a surety for the salvation of Margaret, and *hope* for Faust, to every one who has not forgotten the words of the Lord in the second Prologue:—

"Draw down this spirit from its source,
And, *canst thou catch him*, to perdition
Carry him with thee in thy course;
But stand abashed, if thou must needs
confess
That a good man, though passion blur his
vision,
Has of the right way still a consciousness." *

By the appearance of the second part of "Faust" the magic spell was completely broken. No work of Art of a more chilling, disenchanting character was ever produced. For the striking individuality of the first part, we have here nothing but abstractions; for its deep poetry, symbolism; for its glow and thrilling pathos, a plastic finish, hard and cold as marble; for its psychological truth, a bewildering mysticism. All the fine thoughts and reflections, and all the abundance of poetical passages, scattered like jewels through the thick mist of the whole work, cannot compensate for its total want of interest; and we doubt whether many readers have ever worked their way

* Mr. Brooks's translation.

through its innumerable obscure sayings and mystical allegories without feeling something of the truth of Voltaire's remark: "*Tout genre est permis hors le genre ennuyeux.*"

The impression which the first part of "Faust," the poetical masterpiece of German literature, made among foreigners, was, though in some instances ultimately powerful, yet on the whole surprisingly slow. While the popular legend, in its coarsest shape, had, in its time, spread with the rapidity of a running fire through all countries, the great German poet's conception of it, two hundred years later, found no responding echo in either French or English bosoms. Here and there some eccentric genius may have taken it up, as, for instance, Monk Lewis, who, in 1816, communicated the fundamental idea to Lord Byron, reading and translating it to him *vis à voce*, and suggesting to him, in this indirect way, the idea of his "Manfred." But even the more profound among the few German scholars then extant in England did not understand "Faust," and were inclined to condemn it,—as, for instance, Coleridge, who, as we see from his "Table-Talk," misconceived the whole idea of the poem, and found fault with the execution, because it was different from what he fancied he himself would have made of this legend, had he taken it in hand. The first English translation was published in the same year as the first French version, that is, in 1825; both were exceedingly imperfect. Since then several other translations in prose and verse have appeared in both languages, especially in English,—though the "twenty or thirty metrical ones" of which Mr. C. T. Brooks speaks in his preface are probably to be taken as a mere mode of speech,—and lately one by this gentleman himself, in our very midst. This latter comes, perhaps, as near to perfection as it is possible for the reproduction of all idiomatic poetical composition in another language to do. All this indicates that the time for the just appreciation of German literature in general

and of Goethe in particular is drawing near at last; that its influence has for some time been felt is proved, among other things, by that paraphrastic imitation of "Faust," Bailey's "Festus."

That a poem like "Faust" could not at first be generally understood is not unnatural. Various interpretations of its seeming riddles have been attempted; and if the volumes of German "Goethe-Literature" are numerous enough to form a small library, those of the "Faust-Literature" may be computed to form the fourth part of it. To the English reader we cannot recommend highly enough, for the full comprehension of "Faust," the commentary on this poem which Mr. Lewes gives in his "Life of Goethe," as perhaps the most excellent portion of that excellent work. Goethe himself has given many a hint on his own conception, and as to how far it was the reflex of his own soul. "The puppet-show-fable of 'Faust,'" he says, "murmured with many voices in my soul. I, too, had wandered into every department of knowledge, and had returned disgusted, and convinced of the vanity of science. And life, too, I had tried under various aspects, and had always come back sorrowing and unsatisfied." "Faust's character," he says in another place, "at the

height to which the modern elaboration (*Ausbildung*) of the old, crude, popular tale has raised it, represents a man, who, feeling impatient and uncomfortable within the general limits of earth, esteems the possession of the highest knowledge, the enjoyment of the fairest worldly goods, inadequate to satisfy his longings even in the least degree,—a mind which, turning to every side in search of this satisfaction, ever recedes into itself with increased unhappiness."—He remarks, too, that "the approbation which this poem has met with, far and near, may be owing to the rare peculiarity, that it fixes permanently the developing process of a human mind, which by everything that torments humanity is also pained, by all that troubles it is also agitated, by what it condemns is likewise enthralled, and by what it desires is also made happy."*

If this article were devoted to Goethe's "Faust," instead of the popular legend of Faustus, of which the former is only the most eminent apprehension, it would be easy to add to these reasons for the universal "approbation" which it has won still others, founded on the great genius of the poet. This, however, would by far exceed our limits.

MISS WIMPLE'S HOOP.

"Believe in God and yourself, and do the best you can."

IN Hendrik on the Hudson, fifty miles from New York, there was, winter before last, a certain "patent seamless."—

But a hooped skirt with a history, touching and teaching, is no theme for flippancy; so, by your leave, I will unwind my story tenderly, and with reverential regard for its smooth turns of sequence.

The Wimples, of whom Sally is the last, were among the oldest and most re-

spectable of Hendrik families. Sally's father, Mr. Paul Wimple, had been a publisher in good standing, and formerly did a flourishing business in New York; but seven years ago he failed, and so, quite penniless, his health sadly broken, his cheerfulness and energy all gone with his fortunes, without heart for any new beginning, he returned to Hendrik, his native place.

There, the friends of his youth, stead-

fast and generous, pitying his sad plight, and having perfect faith in his unimpeached integrity, purchased—principally at the sale in bankruptcy of his own effects—a modest stock of new and second-hand books and magazines, together with some stationery and a few fancy articles in that line, and reestablished him in the humble but peaceful calling of a country bookseller. They called his shop “The Hendrik Athenæum and Circulating Library,” and all the county subscribed; for, at first, the Wimples were the fashionable charity, “the Wimples were always so very respectable, you know,” and Sally was such a sweet girl that really it was quite an interesting case. Mrs. Splurge forthwith began improving the minds of her girls to the extent of three full annual subscriptions for Josephine, Adelaide, and Madeline respectively; and that triplet of fair students, who, separately or conjointly, were at all times competent to the establishment of a precedent for the graceful charities of Hendrik good society, handsomely led off with a ten-dollar investment in “fountain” pens, “cream-laid assembly note,” motto-wafers, Blessington envelopes “with crest and initial,” ivory tablets, pencil-sharpeners, and ink-erasers.

But all their munificence came to nought. Mr. Paul Wimple's heart was broken,—as they say of any weary Sisyphus who lies down by his stone and sleeps forever;—so he died.

Poor little Sally! The first thing she did was to disappoint her friends, and shock the decencies of Hendrik; for it had been agreed on all sides that “the poor dear thing would take on dreadfully, or else fret herself into fits, or perhaps fall into one of them clay-cold, corpsy swoons, like old Miss Dunks has regular every ‘revival.’” But when they came, with all their tedious commonplaces of a stupid condolence not wholly innocent of curiosity, Sally thanked them with dry eyes and prudent lips and quiet nerves, and only said she thought she should do very well after she had set the house to

rights and slept awhile. The sewing-circle of that week was a coroner's inquest on Sally's character, and “ungrateful,” “cold-blooded,” “indecent,” “worse than a hypocrite,” were not the hardest epithets in the verdict of the jury.

But Sally set the place to rights, and bade her father's old friends to the funeral, and buried him with all the money that was in the house, neither asking nor accepting aid from any; and with the poor pittance that her severe conscience could afford her sorrow she procured some cheap material of the doleful sort and went into the most unbecoming of “full mourning.” When she made her appearance in church,—which she did, as usual, the very first Sunday after the funeral,—that plainest of bonnets and straitest of black delaines, unadorned save by the old-fashioned and dingy lace-cape, descended through many shifts of saving from her long-ago-dead-and-gone mother, were so manifestly a condescending concession to the conventionalities or superstitions of Hendrik, and said so plainly, “This is for your ‘decencies,’”—it is all that I can honestly spare, and more than you should demand,—my life is mourning enough,—that all the congregation bristled at the affront. Henceforth Miss Wimple—no longer dear Sally, or even Miss Sally, but sharp “Miss Wimple”—had that pew to herself.

Now I believe it was not generally known in Hendrik that Miss Wimple had narrowly escaped being a very pretty girl. She was but just in her nineteenth year when her father died. Her features were regular, her expression lovely, her complexion, before trouble nipped the roses of her cheeks, full of the country's freshness. She had tender eyes, profoundly overshadowed by long, pensive lashes; in the sweet lines of her very delicate mouth a trace of quiet pride was prettily blended with thoughtfulness, and a just-forming smile that was always melancholy. Her feet were little, and her hands were soft and white; nor had toil and sorrow, and the weariness, and indifference to self, that come of them,

as yet impaired the symmetry of her well-turned shape, or the elasticity of her free and graceful carriage. Her deportment was frank and self-reliant, and her manners, though reserved, far from awkward; her complete presence, indeed, compelled consideration and invited confidence.

In her father's lifetime, she had sought, on occasions of unwonted cheerfulness, to please him with certain charming tricks of attire; and sometimes, with only a white rose-bud gleaming through the braided shadows of her hair, lighted herself up as with a star; then, not a carping churl, not an envious coquette in Hendrik, but confessed to the prettiness of Sally Wimple.

But now there was no longer a grateful life for her white rose-star to brighten; so she sat down, in her loneliness and sombre unbecomingness, between her forlorn counters with their pitiful shows of stock, and let her good looks go by, entertaining only brave thoughts of duty,—till she grew pale “and fell into the portion of weeds and outworn faces,” so that “how anybody could see the least beauty in that distressing Miss Wimple” began to be with many a sincere and almost reasonable expression of surprise, instead of a malicious sin against knowledge. She waited for customers, but they seldom came,—often, from opening to window-barring, not one; for the unwilling little martyr of the Hendrik Athenæum and Circulating Library had made herself a highly disapproved-of Miss Wimple by her ungrateful and contumacious behavior at her father's death, even if the hard and sharp black lines of that scrimped delaine had not sufficed to turn the current of admiration, interest, and custom. Besides, the attractions of her slender stock were all exhausted. She had not the means of refreshing it with pretty novelties and sentimental toys in that line,—with albums and valentines, fancy portfolios and pocket-secretaries, pearl paper-knives and tortoise-shell card-cases, Chinese puzzles and *papier-maché* checker-boards. Nor was the Library replenished “to keep up with the current literature of the day”; its last new novel

was a superannuated dilapidation; not one of its yearly subscribers but had worked through the catalogue once and a half.

Since the funeral, and especially since the inauguration of the delaine, Mrs. Marmaduke Splurge had been less alive to the necessity of improving the minds of her girls; and that virginal ten-dollar investment had provided Josephine, Adelaide, and Madeline with supplies of small arms and ammunition enough for a protracted campaign of epistolary belligerence, interrupted by hair-strokes of coquettish diplomacy.

In the flaunting yellow house on the hill the widow and daughters of the late Marmaduke Splurge, Esq., railroad-director and real-estate broker, fondled and hated each other. Mrs. Marmaduke was a well-preserved woman, stylish, worldly-minded, and weak. Miss Josephine, her eldest, was handsome, patronizing, *passée*, and a sentimental fool; Miss Adelaide, who came next, was handsome, eccentric, malicious, and sly; and Miss Madeline, the youngest, was handsome, distinguished-looking, intellectual, passionate, and proud.

Mrs. Marmaduke's heart was set on marrying her daughters “advantageously,” and she gave all of her narrow mind to that thankless department. Josephine insisted on a romantic attachment, and pursued a visionary spouse with all the ardor and obstinacy of first-rate stupidity. Adelaide had the weakness to hate Josephine, the shrewdness to fear Madeline, and the viciousness to despise her mother; she skilfully and diligently devoted herself to the thwarting of the family. Madeline waited, only waited,—with a fierceness so dangerously still that it looked like patience,—hated her insulting bondage, but waited, like Samson between the pillars upon which the house of Dagon stood, resolved to free herself, though she dragged down the edifice and were crushed among the wreck.

Mrs. Marmaduke talked tediously of the trials and responsibilities of conscientious mothers who have grown-up daughters to provide for, was given to frequent

freshets of tears, consumed many "nervous pills" of the retired-clergyman—whose sands-of-life-have-nearly-run-out sort, and netted bead purses for the Select Home for Poor Gentlemen's Daughters. Josephine let down her back hair dowdily, partook recklessly of poetry and pickles, read inordinately in bed,—leaning all night on her elbow,—and was threatened with spinal curvature and spiritualism. Adelaide set invisible little traps in every nook and cranny, every cupboard and drawer, from basement to attic, and with a cheerful, innocent smile sat watching them night and day. Madeline, fiercely calm, warned off the others, with pale lips and flashing eyes and bitter tongue, resenting *en famille* the devilish endearments she so sweetly suffered in company; but ever as she groped about in her soul's blindness she felt for the central props of that house of Dagon.

All the good society of Hendrik said the Splurges were a charming family, a most attached and happy family, lovely in their lives and in death not to be divided, and that they looked sweetly in hoops. And yet the Splurges had but few visitors; the young women of the neighborhood, when they called there, left always an essential part of their true selves behind them as they entered, and an ornamental part of their reputations when they took their departure; nor were the young men partial to the name,—for Josephine bored them, and Adelaide taunted them, and Madeline snubbed them, and Mrs. Marmaduke pumped them, and the combined family confounded them. Only Mr. Philip Withers was the intimate and encouraged *habitué* of the house.

Mr. Philip Withers was the very man for the looser principles of Hendrik,—a fine gentleman's fine son, and his only one, who, by the death of his father, had come, whilst he was yet very young, into a pretty property in the neighborhood,—a sort of idyllic man of the world, with considerable cleverness, a neat miscellaneous education, handsome person, ef-

fective clothes, plausible address, mischievous brilliancy of versatile talk, a deep voice, two or three accomplishments best adapted to the atmosphere of sentimental women, graceful self-possession, small feet, nice hands, striking attitudes, a subduing smile, magnetic whisper, Machiavellian tact, and French morals. He could sing you into tears, and dance you into love, and talk you into wonder; when he drew, you begged for his portrait by himself, and when he wrote, you solicited his autograph.

Mr. Philip Withers had taken his moustache to foreign parts, and done the Continent sophisticatedly. He was well-read in cities, and had brought home a budget of light, popular, and profusely illustrated articles of talk on an equivocal variety of urban life, which he prettily distributed among cloverly pastoral, Wordsworthian ballads, De Coverly entertainments, Crayon sketches, and Sparrowgrass Papers, for the benefit of his country subscribers. From all of which you have no doubt gathered by this time that Mr. Philip Withers was a graceful scamp, and a friend of the Splurges,—who had money, which Mr. Philip Withers had not; for he had been a munificent patron of elegant pleasures abroad, and since his return had erected an addition to his father's house in the shape of a pair of handsome mortgages, as a proprietor of romantic tastes in architecture might flank his front door with mediæval donjons.

Mrs. Marmaduke made much of that good-looking and delightful Withers. Though not a pious man, in the formal sense of the term, she felt sure he was religious according to that stained-glass and fragrant religion of the tastes which is an essential attribute of every gentleman,—that is, of every well-born man of cultivated preferences and sensitive antipathies,—and she had no doubt that gentlemen's souls could be saved by that arrangement just as satisfactorily, and so much more gracefully. She only wished, my dear, you could hear Mr. Withers express himself on those subjects,

—his ideas were so delightfully—"your deal, my love"—clear, his illustrations so sweetly pretty, and his manner so earnest; really, he stirred her like—"hearts, did you say?—a trump."

Josephine Splurge contented herself with letting down her back hair for Mr. Withers and making eyes at him.

"Good-morrow, to the guileless Genevieve!"—Withers delighted in dispensing equivocal nothings to the dowdy Muse of the sofa and back hair.—"Charming weather!"

"There, you bewildering Joseph Surface, you need not go on,—I know what you are going to say, and I will neither be flattered nor fascinated. Come, confess now, like a dear candid creature, throw off your irresistibly bewitching mask, and own that your sentiments are all rhetoric."

"Josy, dear," Adelaide would insinuate, "what a wonderful memory you have!—so well managed, too! Now whom did you hear say that?"

Josephine was wont to declare that the Admirable Crichton lived again in that kaleidoscopic creature; but he was so dazzling, so bewildering, so dangerous, that to converse with him was like having fireworks in one's boudoir.

With Madeline Withers was on strange terms, if any terms at all. She threatened to him in the middle of his best stories, smiled quietly when he preached, yawned to his poetical recitations, left the room when he sang, mistook the subjects of his sketches with a verisimilitude of innocence that often deceived even himself, was silent and sneered much whenever he was present. And all these rudenesses she performed with a successful air of genuine abstraction; they never failed of their intention by being overdone, or by being too *directly* directed at him.

Remarks seldom passed between these two; when they did, Withers spoke always first, and Madeline replied briefly and with politeness. And yet there were occasions when a sharp-sighted and suspicious observer might have detected a strange discomposure in Madeline's con-

duct in the presence of Withers,—when, indeed, she seemed to be laboring under irritability, and proneness to singular excitement, which began with his entrance and disappeared with his departure. At such times she would break her haughty quiet with fierce sallies upon her sisters; but Withers stung her back into silence with sharp and telling retorts,—as you may have seen a practised beast-tamer in a cage flog an angry tigress, when her eyes flashed, and her ears were set back, and she unsheathed her horrid claws, and lashed her sides, and growled with all the appalling fee-faw-fum of the jungle,—flog her back into her corner, with nought more formidable than a lady's riding-whip, dainty, slender, and sharp. But Withers administered the chastisement with such devilish grace that it was unperceived, save by the quick, shrewd Adelaide perhaps, who perceived everything,—but never *saw*, nor ever spoke. If you could have beheld the lips and the eyes of Madeline, on such occasions, you would have cursed this Philip Withers, or beaten him to her feet.

Between Withers and Adelaide the relations were plainer; indeed, before the small Splurge set they appeared as avowed lovers. Toward "Addy" Withers was all elegant devotion and gracious gallantry, knight-like in his chivalric and debonair *devoir*.

For Withers Addy was, openly, all deference and tenderly wistful solicitude, but in secret not all security and exultation. Even while it seemed high triumph in her heart's camp, her well-drilled eyes and ears were still on guard, and her hidden thoughts lay upon their arms.

Still it wore the aspect of a lyric match, and the hearts of humbler Hendrik lovers set it to music.

"For other guests," Withers seemed to say,

"I wile the hours with tale or song,
Or web of fancy, fringed with careless rhyme;
But how to find a fitting lay for thee,
Who hast the harmonies of every time?"

And Addy looked,

"Thou art to me most like a royal guest,
Whose travels bring him to some humble
roof,
Where simple rustics spread their festal fare,
And, blushing, own it is not good enough.

"Bethink thee, then, whene'er thou com'st to
me,
From high emprise and noble toil to rest,
My thoughts are weak and trivial, matched
with thine,
But the poor mansion offers thee its best."

So Mrs. Marmaduke exalted her horn
and exceedingly magnified her manœ-
uvring office. On the strength of it, she
treated herself to profuse felicitations and
fished among her neighbors for more.

CHAPTER II.

AND now I will let you into a secret,
which, according to the received rules
for story-construction, should be barred
against you yet a little longer. I will
fling it wide open at once, instead of
holding it ajar and admitting you edge-
wise, as it were, one conjecture at a time.

Miss Wimple had a lover;—she had
had him since six months before her
father died, and the decayed publisher
had never guessed of him nor Sally con-
fessed him; for the good, thoughtful
daughter knew it would but complicate
the old man's perplexities and cares to
no purpose. To be sure, his joyful con-
sent was certain; but so long as he lived,
"the thing was not to be thought of," she
said, and it was not wise to plant in his
mind a wish with which her duty could not
accord. So Sally's lover was hushed up,
—hidden in discretion as in a closet.

Simon Blount was his name, and he
was a young farmer of five hundred
acres in first-rate cultivation, with barns,
stables, and offices in complete repair,—
a well-stocked, well-watered place, with
"all the modern improvements," and con-
venient to the Hendrik branch of the
New York and Bunker Hill railroad.

The young man had inherited this very
neat property from his father,—a thriv-
ing, intelligent farmer of the best class,

Mr. Wimple's oldest friend, his playmate
in boyhood, and his crony when he died.
Simon's mother and Sally's had likewise
been schoolmates, and intimates to the
last, fondly attached to each other, and
mutually confiding in each other's love
and truth in times of pain and trouble.

But Mr. Blount and Mrs. Wimple had
been dead these ten years;—they died
in the same month. Simon and Sally
were children when that happened, and
since then they had grown up together
in the closest family intimacy, interrupted
only by Sally's winter schooling in New
York, and renewed every summer by
her regular seasons at Hendrik.

To the young man and the ripening
maiden, then, their love came as natu-
rally as violets and clover-blooms, and
was as little likely to take their parents
or the familiar country-folk by surprise.

When Simon took trips to New York,
he "stopped" at Mr. Wimple's, and
Sally's summer home in Hendrik was
always "Aunt Phoebe's," as she had
been taught to call Simon's mother.

You will wonder, then, that Mr. Paul
Wimple should have blushed and strug-
gled and died in the forlorn little "Athe-
næum," and that Sally should sit down in
her loneliness and "that fright of a de-
laine" to wait for customers that came
not, when in their old friends' house were
comfortable mansions, and in their old
friends' hearts tearful kisses and welcome
free as air. But you must remember
that with sudden poverty comes, often,
shrinking pride, and a degree of suspi-
cion, and high scorn of those belittled
pensioners who hang upon old ties; that
old age, when it is sorely beset, is not
always patient, clear-sighted, and just;
that, when the heart of a young girl, in
Sally's extremity, carries the helpless
love that had been clad in purple, and
couched in eider, and pampered with
bonny eates, and served in gold, to Pride,
and asks, "Stern master, what shall I
do with this now?" the answer will
be, "Strip it of its silken fooleries,—let it
lie on the ground, the broad bosom of
its honest, hearty mother,—teach it the

wholesomeness of brown bread and cresses, fairly earned, and water from the spring,—and let it wait on itself, and wait for the rest!" Once, when the talk at the Splurge house descended for a moment from its lofty flights to describe a few eccentric mocking circles around the Hendrik Athenæum and Miss Wimple, Madeline said, "If you have sense or decency, be silent;—the girl is true and brave, every way better taught than we, and prouder than she knows. If we were truly as scornful of her as she is indifferent to us, we would let her glorious insignificance alone."

So Miss Wimple waited in her shabby little shop and plied her needle for hire. Her lover was a handsome fellow, with a bright, frank face, and a vigorous, agile, and graceful form; there was more than common intellect in his clear, broad brow, overhung with close clusters of brown country curls; taste was on his lips and tenderness in his eyes; his soul was full of generosity, candor, and fidelity; his every movement and attitude denoted native refinement, and in his talk he displayed an excellent understanding and remarkable cultivation; for his father had bestowed on him superior advantages of education;—"as fine a young fellow, Sir," that estimable old Doctor Vandyke would say, "as ever you saw."

It was true, Simon's travels had never reached beyond New York; but, unlike Mr. Philip Withers, he had brought home solid comforts, useful facts, wholesome sentiments, natural manners, and sensible, but modest conversation,—instead of an astonishing variety of intellectual curiosities and intricate moral toys, whereat plain people marvelled—as in the case of a certain ingenious Chinese puzzle, ball within ball, all save the last elaborately carved—how the very diminutive *plain* one at the centre ever got in there, or ever could be got out.

In another respect the young farmer enjoyed a noticeable advantage over the man-of-the-world;—he was quite able to tear down those fancy donjon additions, and erect a plain, honest, substantial,

very comfortable, and very cheerful Yankee porch on their site.

But Miss Wimple said to Simon,—“For a season you will keep aloof from this place and from me. I must see you no oftener than it would be allowable for an occasional customer of the better sort to drop in; and when you do come, state your business—let it always be *business*, or pass by—and take your leave, like any indifferent neighbor who came to change a book, or purchase a trifle, or engage work. On these terms our love must wait, until by my own unaided exertions—without help, mark you, Simon, from any man or woman on earth—I have discharged the debt of charity that is due to the good people of this place who helped my father in his utmost need, and gave him this shop and these things in trust. From you, of all men, Simon, I will accept no aid. Play no tricks of kindness upon me; nor let your love tempt you to experiment, with disguised charity, upon my purpose. You would only find that you had failed, and ruined all. The proceeds of this poor shop must belong to those whose money procured it, until I shall have paid its price; on no pretext shall that fund be touched for other purposes. I will sustain myself independently; you know that I ply a nimble needle, and that my handiwork will be in esteem among the richer folks of Hendrik. And now, dear Simon, let me have my way. You need no more earnest assurance of my love than the pains I would take, in this matter, to make you respect me more. When my task is done, I will deck myself as of old, and again light up the rose-star in my hair, and stand in the door and clap my hands to call you hither, and hold you fast; but not till then. Let me have my way till then.”

And Simon said,—“You are wiser than I, Sally, and braver, and every way better. I will obey you in this, and wait,—the more cheerfully because I shall be always at hand, and, if your heart should fail you, I know you will not refuse my aid, nor prefer another's to mine.”

And so they passed for mere acquaintances; and there were some who said—Philip Withers among them—that “that plausible Golden Farmer, young Blount, had treated the forlorn thing shabbily.”

About that time hoops came in, and the Splurge girls flourished the first that appeared in Hendrik.

One day, as Miss Wimple sat in a low Yankee rocking-chair, sewing among her books, she was favored with the extraordinary apparition of Miss Madeline Splurge,—her first visitor that day, whether on business or curiosity.

“I wish to procure a small morocco pocket-book, Miss Wimple, if you keep such things.”

Miss Wimple, with a slight bow of assent, took from a glass counter-case a paper box in which was a miscellaneous assortment of such articles; there were five or six of the pocket-books. Madeline selected one,—a small, flexible affair, of some dark-colored morocco lined with pink silk. She paid the trifle the shy, demure little librarian demanded, and was taking her leave in silence, without even a “Good-day,” when, as she was passing the door, Miss Wimple espied on the counter, near where her customer had stood, a visiting-card; her eye fell on the engraved name,—“Mr. Philip Withers”; of course Miss Splurge had dropped it unawares. She hastened with it to the door,—Madeline had just stepped into the street,—

“This card is yours, I presume, Miss Splurge?”

Madeline turned upon her with a surprised air, inquiringly,—looked in her own hands, and shook her handkerchief with the quick, nervous, alarmed movement of one who suddenly discovers a very particular loss,—became, in an instant, pale as death, stared for a moment at Miss Wimple with fixed eyes, and slightly shivered. Then, quickly and fiercely, she snatched the card from Miss Wimple’s hand,—

“Where—where did you find this? Did—did I leave—drop—?”

“You left it on my counter,” Miss

Wimple quietly replied, with a considerate self-possession that admirably counterfeited unconsciousness of Madeline’s consternation.

“Come hither, into the shop,—a word with you,”—and Madeline entered quickly, and closed the door behind her. For a moment she leaned with her elbow on the counter, and pressed her eyes with her fingers.

“Are you ill, Miss Splurge?” Miss Wimple gently inquired.

“No. Did you read what is on this card?”

“Yes.”

“You—you—you read?”—Madeline’s hands were clenched, her face red and distorted; she gnashed her teeth, and seemed choking.

“Why, Miss Splurge, what is the matter with you? Yes, I read the name,—Mr. Philip Withers. The card lay on the counter,—I could not know it was yours,—I read the name, and immediately brought it to you. What excites you so? Sit down, and calm yourself; surely you are ill.”

Madeline did not accept the stool Miss Wimple offered her, but, availing herself of the pause to assume a forced calmness which left her paler than at first, she fixed her flashing eyes steadily on the deep, still eyes of her companion, and asked,—

“You did not turn this card, then?—you did not look on the other side?”

“On my honor, I did not.”

“On your honor! You are not lying, girl?”—Miss Splurge thrust the card into the newly-purchased pocket-book, and hid that in her bosom.

“Miss Splurge,” said Miss Wimple, very simply, and with no excitement of tone or expression, “when you feel sufficiently recovered to appear on the street, without exposing yourself there as you have done in here, go out!”

And Miss Wimple turned from Madeline and would have resumed her sewing; but Madeline cried,—

“Stay, stay, Miss Wimple, I beseech you! I knew not what I said; forgive

me, ah, forgive me!—for you are merciful, as you are pure and true. If you were aware of all, you would know that I could not insult you, if I would. Trouble, distraction, have made me coarse,—false, too, to myself as unjust and injurious to you; for I know your virtues, and believe in them as I believe in little else in this world or the next. If in my hour of agony and shame I could implore the help of any human being, I would come to you—dear, honest, brave girl!—before all others, to fling myself at your feet, and kiss your hands, and beseech you to pity me and save me from myself, to hold my hot head on your gentle bosom, and your soothing hand on my fierce heart. Good-by! Good-by! I need not ask your pardon again,—you have no anger for such as I. But if your blessed loneliness is ever disturbed by vulgar, chattering visitors, you will not name me to them, or confess that you have seen me.” And ere Miss Wimple could utter the gentle words that were already on her lips, Madeline was gone.

For a while Miss Wimple remained standing on the spot, gazing anxiously, but vacantly, toward the door by which the half-mad lady had departed,—her soft, deep eyes full of painful apprehension. Then she resumed her little rocking-chair, and, as she gathered up her work from the floor where she had dropped it, tears trickled down her cheeks; she sighed and shook her head, in utter sorrow.

“They were always strange women,” she thought, “those Splurges,—not a sound heart nor a healthy mind among them. Could their false, barren life have maddened this proud Madeline? Else what did she mean by her ‘hot head’ and her ‘fierce heart’? And what had that Philip Withers to do with her trouble and her distraction? She recollected now that Simon had once said, in his odd, significant way, that Mr. Withers was a charming person to contemplate from a safe distance,—Simon, who never lent himself to idle detraction. She remembered, too, that she had often reproached

herself for her irrational prejudice against the man,—that she was forever finding something false and sinister in the face that every one else said was eminently handsome, and ugly dissonance in the voice that all Hendrik praised for its music. Was he on both sides of that card?—Ah, well! it might be just nothing, after all; the poor lady might be ill, or vexed past endurance at home; or some unhappy love affair might have come to fret her proud, impatient, defiant temper. But not Withers,—oh, of course not Withers!—for was it not well known that Adelaide was his choice, that his assiduous and graceful attentions to her silenced even his loudest enemies, who could no longer accuse him of duplicity and disloyalty to women? But she would feel less disturbed, and sleep better, perhaps, if she knew that Madeline was safe at home, and tranquil again.”

Thinking of sleep reminded Miss Wimple that she had a pious task to perform before she could betake her to her sweet little cot. A superannuated and bedridden woman, who had nursed her mother in her last illness, lived on the northern outskirts of the town; and she must cross the long covered bridge that spanned the Hendrik River to take a basket full of comforting trifles to old Hetty that night.

About nine o'clock Miss Wimple had done her charitable errand, and was on her way home again, with a light step and a happy heart, an empty basket and old Hetty's abundant blessings. She was alone, but feared nothing,—the streets of Hendrik at night were familiar to her and she to them; and although her shy and quiet traits were not sufficiently understood to make her universally beloved, not a loafing ruffian in town but knew her modest face, her odd attire, and her straightforward walk; and the rudest respected her.

As she approached the covered bridge, the moon was shining brightly at the entrance, making the gloom within profounder. It was a long, wooden structure, of a kind common enough on the

turnpikes of the Atlantic States, where they cross the broader streams. Stout posts and cross-beams, and an arch that stretched from end to end, divided the bridge into two longitudinal compartments, for travellers going and coming respectively; there were small windows on each side, and at either end, on a conspicuous signboard, were the Company's "Rules,"—"Walk your Horses over this Bridge, or be subject to a Fine of not less than Five nor exceeding Twenty Dollars."—"Keep to the Right, as the Law directs."

As Miss Wimple entered the shadow of the bridge on the right hand, she was startled by hearing excited voices, which seemed to come from the other side of the central arch, and about the middle of the bridge, where the darkness was deepest:—

"Speak low, I say, or be silent! Some one will be coming presently;—I heard steps approaching even now"—Miss Wimple instinctively stopped, and stood motionless, almost holding her breath, at the end of the arch where the moonlight did not reach. She was no eavesdropper, mark you,—the meannesses she scorned included that character in a special clause. But she had recognized the voice, and with her own true delicacy would spare the speaker the shame of discovery and the dread of exposure.—"Speak low, or I will leave you. If you are indifferent for yourself, you shall not toss me to the geese of Hendrik."

"You are right";—it was a woman's voice; but, whatever her tone had been before, she spoke so low now, and with a voice so hoarse with suppressed emotion, so altered by a sort of choking whisper, that Miss Wimple, if she had ever heard it before, could not recognize it;—"You are right; the time for that has not come;—I could not stay to enjoy it;—I am going now, but we will meet again."

"What would you have? I have said I would marry you,—and leave you,—so soon as I can shake myself clear of that other stupid infatuation."

"Now, Philip Withers, what a weak, pusillanimous wretch you must be, having known me so long, and tried my temper so well, to hope to find me such a fool, after all,—that kind of fool, I mean! My deepest shame, in this unutterably shameful hour, is that I chose such a cowardly ass to besot myself with.—There, the subject sickens me, and I am going. Dare to follow me, and the geese of Hendrik shall have you. I go scot-free, fearing nothing, having nothing to lose; but I hold you, my exquisite Joseph Surface—oh, the wit of my sister! oh, the wisdom of fools!—by your fine sentiments; and when I want you I shall find you. I can take care of me and *mine*; but beware how you dare to claim lot or portion in what I choose to call my own, even though your brand be on it,—Joseph!"

She hissed the name, and, with hurried steps, and a low, scornful laugh, departed. As Miss Wimple, all aghast, leaned forward with quick breath and tumultuous heart, and peered through the gloom toward where the silver moonlight lay across the further end of the bridge, she saw a white dress flash across a bright space and disappear. Then Philip Withers stepped forth into the moonlight, stood there for a minute or two, and gazed in the direction of a branch road which made off from the turnpike close to the bridge, and led, at right angles to it, to the railroad station on the right; then slowly, and without once looking back, he followed the turnpike to the town.

All astonished, bewildered, full of strange, vague fears, Miss Wimple remained in the now awful gloom and stillness of the bridge till he had quite disappeared. Then gathering up her wits with an effort, she resumed her homeward way. As she emerged from the shadows into the same bright place which Withers and his mysterious companion had just passed, she spied something dark lying on the ground. She stooped and picked it up; it was a small morocco pocket-book lined with pink silk.

Good Heaven! She remembered,—

the one she had sold to Miss Madeline Splurge that afternoon,—the very same! So, then, that was her voice, her dress; she had, indeed, dimly thought of Madeline more than once, while that woman was speaking so bitterly,—but had not recognized her tones, nor once fancied it might be she. Now she easily recalled her words, and understood some of her allusions. And her wild, distracted, incoherent speech in the shop, too,—ah! it was all too plain; that was surely she; but what might be the nature or degree of her trouble Miss Wimple dared not try to guess. This Philip Withers,—was he a villain, after all? “Had he—this poor lady—Oh, God forbid! No, no, no!”

She opened the pocket-book;—a visiting-card was all it contained. She drew it forth,—“Mr. Philip Withers,”—yes, she knew it by that broken corner, as though it had been marked so for a purpose. She held it up before her eyes where the moon was brightest, and—turned the other side.

“Ah, me!” exclaimed that Chevalier Bayard in shabby, skimped delaine, “what was I going to do?”

Blushing, she returned the card to its place, and hiding the pocket-book in her honorable bosom, hurried homeward. But her soul was troubled as she went; sometimes she sobbed aloud, and more than once she stood still and wrung her hands.

“Ah! if Simon Blount would but come now to advise me what is safest and best to do!”

Should she go to Mrs. Splurge and tell her all? No,—what right had she? That would but precipitate an exposure which might not be necessary. The case was not clear enough to justify so officious a step. Madeline was in no immediate danger. Perhaps she had only taken a different road to avoid the odious companionship of Withers. No doubt she was half-way home already. She would wait till morning, for clearer judgment

and information. Till then she would hope for the best.

When Miss Wimple reached her humble little nest, she knelt beside her bed and prayed, tearfully; to the God who averts danger and forgives sin; but she did not sleep all night.

In the morning a gossiping neighbor came with the news;—“that little cooped-up Wimple never hears anything,” she thought.

Miss Madeline Splurge had disappeared. Mr. Philip Withers was searching for her high and low. She had not been seen since yesterday afternoon,—had not returned home last night. It was feared she had drowned herself in the river for spite. She, the knowing neighbor, “had always said so,—had always said that Madeline Splurge was a quare girl,—sich high and mighty airs, and *sich* a temper. Now here it was, and what would people say,—specially them as had always turned up their nose at her opinion?”

Miss Wimple said nothing; but she treated Pity to two poor little lies;—one she told, and the other she looked;—She was not well, she said, which was the reason why she was so pale; and then she looked surprised at the news of Madeline’s flitting.

Later in the day another report:—A letter left by Madeline had been found at home. She had taken offence at some sharp thing that sarcastic Mr. Withers, who always did hate her, had said; and had gone off in a miff, without even good-by or a carpet-bag, and taken the night train to New York, where she had an uncle on the mother’s side.—And a good riddance! Now Miss Addy and Mr. Withers would have some peace of their time. Such a sweet couple, too!

Madeline *had* left a note:—“I was sick of you all, and I have escaped from you. You will be foolish to take any trouble about it.”

[To be continued.]

THE CUP.

THE cup I sing is a cup of gold,
Many and many a century old,
Sculptured fair, and over-filled
With wine of a generous vintage, spilled
In crystal currents and foaming tides
All round its luminous, pictured sides.

Old Time enamelled and embossed
This ancient cup at an infinite cost.
Its frame he wrought of metal that run
Red from the furnace of the sun.
Ages on ages slowly rolled
Before the glowing mass was cold,
And still he toiled at the antique mould,—
Turning it fast in his fashioning hand,
Tracing circle, layer, and band,
Carving figures quaint and strange,
Pursuing, through many a wondrous change,
The symmetry of a plan divine.
At last he poured the lustrous wine,
Crowned high the radiant wave with light,
And held aloft the goblet bright,
Half in shadow, and wreathed in mist
Of purple, amber, and amethyst.

This is the goblet from whose brink
All creatures that have life must drink :
Foemen and lovers, haughty lord
And sallow beggar with lips abhorred.
The new-born infant, ere it gain
The mother's breast, this wine must drain.
The oak with its subtile juice is fed,
The rose drinks till her cheeks are red,
And the dimpled, dainty violet sips
The limpid stream with loving lips.
It holds the blood of sun and star,
And all pure essences that are :
No fruit so high on the heavenly vine,
Whose golden hanging clusters shine
On the far-off shadowy midnight hills,
But some sweet influence it distils
That slideth down the silvery rills.
Here Wisdom drowned her dangerous thought,
The early gods their secrets brought ;
Beauty, in quivering lines of light,
Ripples before the ravished sight ;
And the unseen mystic spheres combine
To charm the cup and drug the wine.

All day I drink of the wine and deep
 In its stainless waves my senses steep;
 All night my peaceful soul lies drowned
 In hollows of the cup profound;
 Again each morn I clamber up
 The emerald crater of the cup,
 On massive knobs of jasper stand
 And view the azure ring expand:
 I watch the foam-wreaths toss and swim
 In the wine that o'erruns the jewelled rim,
 Edges of chrysolite emerge,
 Dawn-tinted, from the misty surge;
 My thrilled, uncovered front I lave,
 My eager senses kiss the wave,
 And drain, with its viewless draught, the lore
 That warmeth the bosom's secret core,
 And the fire that maddens the poet's brain
 With wild sweet ardor and heavenly pain.

THE LANGUAGE OF THE SEA.

EVERY calling has something of a special dialect. Even where there is, one would think, no necessity for it, as in the conversation of Sophomores, sporting men, and reporters for the press, a dialect is forthwith partly invented, partly suffered to grow, and the sturdy stem of original English exhibits a new crop of parasitic weeds which often partake of the nature of fungi and betoken the decay of the trunk whence they spring.

Is this the case with the language of the sea? Has the sea any language? or has each national tongue grafted into it the technology of the maritime calling?

The sea has its own laws,—the common and unwritten law of the fore-castle, of which Admiralty Courts take infrequent cognizance, and the law of the quarter-deck, which is to be read in acts of Parliament and statutes of Congress. The sea has its own customs, superstitions, traditions, architecture, and government; wherefore not its own language? We maintain that it has, and that this tongue, which is not enumerated by Adelung,

which possesses no grammar and barely a lexicon of its own, and which is not numbered among the polyglot achievements of Mezzofanti or Burritt, has yet a right to its place among the world's languages.

Like everything else which is used at sea,—except salt-water,—its materials came from shore. As the ship is originally wrought from the live-oak forests of Florida and the pine mountains of Norway, the iron mines of England, the hemp and flax fields of Russia, so the language current upon her deck is the composite gift of all sea-loving peoples. But as all these physical elements of construction suffer a sea-change on passing into the service of Poseidon, so again the landward phrases are metamorphosed by their contact with the main. But no one set of them is allowed exclusive predominance. For the ocean is the only true, grand, federative commonwealth which has never owned a single master. The cloud-compelling Zeus might do as he pleased on land; but far

beyond the range of outlook from the white watch-tower of Olympus rolled the immeasurable waves of the wine-purple deep, acknowledging only the Enosigaïos Poseidon. Consequently, while Zeus allotted to this and that hero and demigod Argos and Mycene and the woody Zæcynthus, each to each, the ocean remained unbounded and unmeted. Nation after nation, race after race, has tried its temporary lordship, but only at the pleasure of the sea itself. Sometimes the ensign of sovereignty has been an eagle, sometimes a winged lion,—now a black raven, then a broom,—to-day St. Andrew's Cross, to-morrow St. George's, perhaps the next a starry cluster. There is no permanent architecture of the main by which to certify the triumphs of these past invaders. Their ruined castles are lying "fifty fathom deep,"—Carthaginian galley and Roman trireme, the argosy of Spain, the "White Ship" of Fitz Stephen, the "Ville de Paris," down to the latest "non-arrival" whispered at Lloyd's,—all are gone out of sight into the forgotten silences of the green underworld. Upon the land we can trace Roman and Celt, Saxon and Norman, by names and places, by minster, keep, and palace. This one gave the battlement, that the pinnacle, the other the arch. But the fluent surface of the sea takes no such permanent impression. Gone are the quaint stern-galleries, gone the high top-gallant forecastles, gone the mighty banks of oars of the olden time. It is only in the language that we are able to trace the successive nations in their march along the mountain waves; for to that each has from time to time given its contribution, and of each it has worn the seeming stamp, till some Actium or Lepanto or Cape Trafalgar has compelled its reluctant transfer to another's hands.

Or rather, we may say, the language of the sea comes and makes a part, as it were, of the speech of many different nations, as the sailor abides for a season in Naples, Smyrna, Valparaiso, Canton, and New York,—and from each it borrows, as the sailor does, from this a silk handker-

chief, from that a cap, here a brooch, and there a scrap of tattooing, but still remains inhabitant of all and citizen of none,—the language of the seas.

What do we mean by this? It is that curious nomenclature which from truck to keelson clothes the ship with strange but fitting phrases,—which has its proverbs, idioms, and forms of expression that are of the sea, salt, and never of the land, earthy. Wherever tidewater flows, goes also some portion of this speech. It is "understood of the people" among all truly nautical races. It dominates over their own languages, so that the Fin and Mowree, (Maori,) the Lascar and the Armorian, meeting on the same deck, find a common tongue whereby to carry on the ship's work,—the language in which to "hand, reef, and steer."

Whence did it come? From all nautical peoples. Not from the Hebrew race. To them the possession of the soil was a fixed idea. The sea itself had nothing wherewith to tempt them; they were not adventurers or colonizers; they had none of that accommodating temper as to creed, customs, and diet, which is the necessary characteristic of the sailor. But the nations they expelled from Canaan, the worshippers of the fish-tailed Dagon, who fled westward to build Tartessus (Tarshish) on the Gaditanian peninsula, or who clung with precarious footing to the sea-shore of Philistia and the rocky steepes of Tyre and Sidon,—these were seafarers. From them their Greek offshoots, the Ionian islanders, inherited something of the maritime faculty. There are traces in the "Odyssey" of a nautical language, of a technology exclusively belonging to the world "off soundings," and an exceeding delight in the rush and spray-flinging of a vessel's motion,—
 "The purple wave hissed from the bow of the bark in its going."

Hence the Greek is somewhat of a sailor to this day, and in many a Mediterranean port lie sharp and smartly-rigged brigantines with classic names of old Heathendom gilt in pure Greek type upon their sterns.

But the Greek and Carthaginian elements of the ocean language must now lie buried very deep in it, and it is hard to recognize their original image and superscription in those smooth-worn current coins which form the basis of the sea-speech. It is not within the limits of a cursory paper like this to enter into too deep an investigation, or to trace perhaps a fanciful lineage for such principal words as "mast," and "sail," and "rope." In one word, "anchor," the Greek plainly survives, — and doubtless many others might be made out by a skilful philologist.

The Roman, to whom the empire of the sea, or, more properly speaking, the petty principality of the Mediterranean, was transferred, had little liking for that sceptre. He was driven to the water by sheer necessity, but he never took to it kindly. He was at best a sea-soldier, a marine, not brought up from the start in the merchant-service and then polished into the complete blue-jacket and able seaman of the navy. Nobody can think of those ponderous old Romans, whose comedies were all borrowed from Attica, whose poems were feeble echoes of the Greek, and whose architecture, art, and domestic culture were at best the work of foreign artists, — nobody can think of them at sea without a quiet chuckle at the inevitable consequences of the first "reef-topsail breeze." Fancy those solemn, stately Patricians, whose very puns are ponderous enough to set their galleys a streak deeper in the water, fancy them in a brisk sea with a nor'wester brewing to windward, watching off the port of Carthage for Admiral Hasdrubal and his fleet to come out. They were good hand-to-hand fighters, — none better; and so they won their victories, no doubt; but, having won them, they dropped sea-going, and made the conquered nations transport their corn and troops, while they went back to their congenial camps and solemn Senate-debates.

But Italy was not settled by the Roman alone. A black-haired, fire-eyed, daring, flexible race had colonized the Si-

cilian Islands, and settled thickly around the Tarentine Gulf, and built their cities up the fringes of the Apennines as far as the lovely Bay of Parthenope. Greek they were, — by tradition the descendants of those who took Troy-town, — Greek they are to this day, as any one may see who will linger on the Mole or by the Santa Lucia Stairs at Naples. At Salerno, at Amalfi, were cradled those fishing-hamlets which were to nurse seamen, and not soldiers. Far up the Adriatic, the storm of Northern invasion had forced a fair-haired and violet-eyed folk into the fastnesses of the lagoons, to drive their piles and lay their keels upon the reedy islets of San Giorgio and San Marco; while on the western side an ancient Celtic colony was rising into prominence, and rearing at the foot of the Ligurian Alps the palaces of Genoa the Proud.

Thus upon the Italian stock was begun the language of the seas. Upon the Italian main the words "tack" and "sheet," "prow" and "poop," were first heard; and those most important terms by which the law of the marine highway is given, — "starboard" and "larboard." For if, after the Italian popular method, we contract the words *questo bordo* (this side) and *quello bordo* (that side) into *sto bordo* and *lo bordo*, we have the roots of our modern phrases. And so the term "port," which in naval usage supersedes "larboard," is the abbreviated *porta lo timone*, (carry the helm,) which, like the same term in military usage, "port arms," seems traditionally to suggest the left hand.

But while the Italian races were beginning their brief but brilliant career, there was in training a nobler and harder race of seamen, from whose hands the helm would not so soon be wrested. The pirates of the Baltic were wrestling with the storms of the wild Cattegat and braving the sleety squalls of the Skager Rack, stretching far out from the land to colonize Iceland and the Faroes, to plant a mysteriously lost nation in Eastern Greenland, and

to leave strange traces of themselves by the vine-clad shores of Narraganset Bay. For, first of all nations and races to steer boldly into the deep, to abandon the timid fashion of the Past, which groped from headland to headland, as boys paddle skiffs from wharf to wharf,—the Viking met the blast and the wave, and was no more the slave, but the lord of the sea. He it was, who, abandoning the traditional rule which loosened canvas only to a wind dead aft or well on the quarter, learned to brace up sharp on a wind and to baffle the adverse airs. Yet he, too, was overmuch a fighter to make a true seaman, and his children no sooner set foot on the shore than they drew their swords and went to carving the conquered land into Norman lordships. But where they piloted the way others followed, and city after city along the German Ocean and upon the British coasts became also maritime. For King Alfred had come, and the English oaks were felled, and their gnarled boughs found exceedingly convenient for the curved knees of ships. Upon the Italian stock became engrafted the Norman, and French, and Danish, the North German and Saxon elements. And so, after a century of crusading had thoroughly broken up the stay-at-home notions of Europe, the maritime spirit blazed up. Spain and Portugal now took the lead and were running races against each other, the one in the Western, the other in the Eastern seas, and flaunting their crowned flags in monopoly of the Indian archipelagos and the American tropics. Just across the North Sea, over the low sand-dykes of Holland, scarce higher than a ship's bulwarks, looked a race whom the spleeny wits of other nations declared to be born web-footed. Yet their sails were found in every sea, and, like resolute merchants, as they were, they left to others the glory while they did the world's carrying. Their impress upon the sea-language was neither faint nor slight. They were true marines, and from Manhattan Island to utmost Japan, the brown, bright sides, full bows, and bulwarks tumbling home of the Dutch-

man were familiar as the sea-gulls. Underneath their clumsy-looking upperworks, the lines were true and sharp; and but the other day, when the world's clippers were stooping their lithe race-horse-like forms to the seas in the great ocean sweepstakes, the fleetest of all was—a Dutchman.

But to combine and fuse all these elements was the work of England. To that nation, with its noble inheritance of a composite language, incomparably rich in all the nomenclature of natural objects and sounds, was given especially the coast department, so to speak, of language. Every variety of shore, from shingly beaches to craggy headlands, was theirs. While the grand outlines and larger features are Italian, such as Cape, Island, Gulf, the minuter belong to the Northern races, who are closer observers of Nature's nice differences, and who take more delight in a frank, fearless acquaintance and fellowship with out-door objects. Beach, sand, headland, foreland, shelf, reef, breaker, bar, bank, ledge, shoal, spit, sound, race, reach, are words of Northern origin. So, too, the host of local names by which every peculiar feature of shore-scenery is individualized,—as, for instance, the Needles, the Eddystone, the Three Chimneys, the Hen and Chickens, the Bishop and Clerks. The strange atmospheric phenomena, especially of the tropics, have been christened by the Spaniard and Portuguese, the *Corposant*, the *Pampero*, the *Tornado*, the *Hurricane*. Then follows a host of words of which the derivation is doubtful,—such as *sea*, *mist*, *foam*, *scud*, *rack*. Their monosyllabic character may only be the result of that clipping and trimming which words get on shipboard. Your seaman's tongue is a true bed of Procrustes for the unhappy words that roll over it. They are docked without mercy, or, now and then, when not properly mouth-filling, they are "spliced" with a couple of vowels. It is impossible to tell the whys and wherefores of sea-prejudices.

We have now indicated the main

sources of the ocean-language. As new nations are received into the nautical brotherhood, and as new improvements are made, new terms come in. The whole whaling diction is the contribution of America, or rather of Nantucket, New Bedford, and New London, aided by the islands of the Pacific and the mongrel Spanish ports of the South Seas. Here and there an adventurous genius coins a phrase for the benefit of posterity,—as we once heard a mate order a couple of men to “go forrard and trim the ship’s whiskers,” to the utter bewilderment of his captain, who, in thirty years’ following of the sea, had never heard the martin-gale chains and stays so designated. But the source of the great body of the sea-language might be marked out on the map by a current flowing out of the Straits of Gibraltar and meeting a similar tide from the Baltic, the two encountering and blending in the North Sea and circling Great Britain, while not forgetting to wash the dykes of Holland as they go. How to distinguish the work of each, in founding the common tongue, is not here our province.

It would be difficult to classify the words in nautical use,—impossible here to do more than hint at such a possibility. A specimen or two will show the situation of the present tongue, and the blending process already gone through with. We need not dip for this so far into the tar-bucket as to bother (*nauticè*, “galley”) the landsman. We will take terms familiar to all. The three masts of a ship are known as “fore,” “main,” and “mizzen.” Of these, the first is English, the second Norman-French, the third Italian (*mezzano*). To go from masts to sails, we have “duck” from the Swedish *duk*, and “canvas” from the Mediterranean languages,—from the root *canna*, a cane or reed,—thence a cloth of reeds or rushes, a mat-sail,—hence any sail. Of the ends of a ship, “stern” is from the Saxon *stearn*, steering-place; “stem,” from the German *stamm*. The whole family of ropes—of which, by the way, it is a common saying, that there are but three

to a ship, namely, *bolt-rope*, *bucket-rope*, and *man-rope*, all the rest of the cordage being called by its special name, as *tack*, *sheet*, *clew-line*, *bow-line*, *brace*, *shroud*, or *stay*—the whole family of ropes are akin only by marriage. “Cable” is from the Semitic root *kebel*, to cord, and is the same in all nautical uses. “Hawser”—once written *halser*—is from the Baltic stock,—the rope used for halsing or hauling along; while “painter,” the small rope by which a boat is temporarily fastened, is Irish,—from *painter*, a snare. “Sheet” is Italian,—from *scotta*; “brace” French, and “stay” English. “Clew” is Saxon; “garnet” (from *granato*, a fruit) is Italian,—that is, the garnet- or pomegranate-shaped block fastened to the clew or corner of the courses, and hence the rope running through the block. Then we find in the materials used in stopping leaks the same diversity. “Pitch” one easily gets from *pix* (Latin); “tar” as easily from the Saxon *tare*, *tyr*. “Junk,” old rope, is from the Latin *juncus*, a bulrush,—the material used along the Mediterranean shore for calking; “oakum,” from the Saxon *acumbe*, or hemp. The verb “calk” may come from the Danish *kalk*, chalk,—to rub over,—or from the Italian *calafatare*. The now disused verb “to pay” is from the Italian *pagare*;—it survives only in the nautical aphorism, “Here’s the Devil to pay,”—that is, to pitch the ship,—“and no pitch hot.” In handing the sails, “to loose” is good English,—“to furl” is Armorican, and belongs to the Mediterranean class of words. “To rake,” which is applied to spars, is from the Saxon *racian*, to incline;—“to steeve,” which is applied to the bowsprit, and often pronounced “stave,” is from the Italian *stivare*. When we get below-decks, we find “cargo” to be Spanish,—while “ballast” (from *bat*, a boat, and *last*, a load) is Saxon. A ship in ballast comes from the Baltic,—a vessel and cargo from the Bay of Biscay. Sailors must eat; but there is a significant distinction between merchant-seamen and man-o’-war’s-men. The former

is provided for at the "caboose," or "camboose," (Dutch, *kombuis*); the latter goes to the "galley," (Italian, *galera*, in helmet, primitively). This distinction is fast dying out,—the naval term superseding the mercantile,—just as in America the title "captain" has usurped the place of the more precise and orthodox term, "master," which is now used only in law-papers. The "bowsprit" is a compound of English and Dutch. The word "yard" is English; the word "boom," Dutch. The word "reef" is Welsh, from *rhevu*, to thicken or fold; "tack" and "sheet" are both Italian; "deck" is German. Other words are the result of contractions. Few would trace in "dipsey," a sounding-lead, the words "deep sea"; or in "futtocks" the combination "foot-hooks,"—the name of the connecting-pieces of the floor-timbers of a ship. "Breast-hook" has escaped contraction. Sailors have, indeed, a passion for metamorphosing words,—especially proper names. Those lie a little out of our track; but two instances are too good to be omitted:—The "Bellerophon," of the British navy, was always known as the "Bully-ruffian," and the "Ville de Milan," a French prize, as the "Wheel-'em-along." Here you have a random bestowal of names which seems to defy all analysis of the rule of their bestowal.

If the reader inclines to follow up the scent here indicated, we can add a hint or two which may be of service. We have shown the sources, which should, for purposes of classification, be designated, not as English, Italian, Danish, etc., but nautically, as Mediterranean, Baltic, or Atlantic. These three heads will serve for general classification, to which must be added a fourth or "off-soundings" department, into which should go all words suggested by whim or accidental resemblances,—such terms as "monkey-rail," "Turk's head," "dead-eye," etc.,—or which get the name of an inventor, as a "Matthew-Walker knot." More than that cannot well be given without going into the whole detail of

naval history, tactics, and science,—a thing, of course, impossible here.

This brings us to another view of the subject, which may serve for conclusion. A great many people take upon themselves to act for and about the sailor, to preach to him, make laws for him, act as his counsel, write tracts for him, and generally to look after his moral and physical well-being. Now eleven out of every dozen of these are continually making themselves ridiculous by an utter ignorance of all nautical matters. They pick up a few worn-out phrases of sea-life, which have long since left the fore-castle, and which have been bandied about from one set of landmen to another, have been dropped by sham-sailors begging on fictitious wooden-legs, then by small sea-novelists, handed to smaller dramatists for the Wapping class of theatres, to be by them abandoned to the smallest writers of pirate and privateer tales for the Sunday press. And stringing these together, with a hazy apprehension of their meaning, they think they are "talking sailor" in great perfection. Now the sailor will talk with pleasure to any straightforward and perfectly "green" landsman, and the two will converse in an entirely intelligible manner. But confusion worse confounded is the result of this ambitious ignorance,—confusion of brain to the sailor, and confusion of face to the landsman.

For the sea has a language, beyond a peradventure,—an exceedingly arbitrary, technical, and perplexing one, unless it be studied with the illustrated grammar of the full-rigged ship before one, with the added commentaries of the sea and the sky and the coast chart. To learn to speak it requires about as long as to learn to converse passably in French, Italian, or Spanish; and unless it be spoken well, it is exceedingly absurd to any appreciative listener.

If you desire to study it philologically, after the living manner of Dean Trench, it will well repay you. If you desire to use it as a familiar vehicle of discourse,

wherewith to impress the understanding and heart of the sailor, you undertake a very difficult thing. For though men are moved best by apt illustrations from the things familiar to them, unapt illustrations most surely disgust them.

But if you earnestly desire it, we know of but one certain course, which is best explained in a brief anecdote. An English gentleman, who was in all the agonies of a rough and tedious passage from Folkestone to Boulogne, was especially irritated by the aggravating nonchalance of a fellow-passenger, who perpetrated all manner of bilious feats, in eating, drinking, and smoking, unharmed. English

reserve and the agony of sea-sickness long contended in Sir John's breast. At last the latter conquered, and, leaning from the window of his travelling-carriage, which was securely lashed to the forward deck of the steamer, he exclaimed,—“I say, d'ye know, I'd give a guinea to know your secret for keeping well in this infernal Channel.” The traveller solemnly extended one hand for the money, and, as it dropped into his palm, with the other shaded his mouth, that no portion of the oracle might fall on unpaid-for ears, and whispered,—“Hark'ye, brother, GO TO SEA TWENTY YEARS, AS I HAVE.”

THE WHIRLIGIG OF TIME.

“And thus the whirligig of time brings in his revenges.”—TWELFTH NIGHT.

My friend Jameson, the lawyer, has frequently whiled away an evening in relating incidents which occurred in his practice during his residence in a Western State. On one occasion he gave a sketch of a criminal trial in which he was employed as counsel; the story, as developed in court and completed by one of the parties subsequently, made so indelible an impression on my mind that I am constrained to write down its leading features. At the same time, I must say, that, if I had heard it without a voucher for its authenticity, I should have regarded it as the most improbable of fictions. But the observing reader will remember that remarkable coincidences, and the signal triumph of the right, called poetical justice, are sometimes seen in actual life as well as in novels.

The tale must begin in Saxony. Carl Proch was an honest farmer, who tilled a small tract of crown land and thereby supported his aged mother. Faithful to his duties, he had never a thought of discontent, but was willing to plod on in

the way his father had gone before him. Filial affection, however, did not so far engross him as to prevent his casting admiring glances on the lovely Katrine, daughter of old Rauchen, the miller; and no wonder, for she was as fascinating a damsel as ever dazzled and perplexed a bashful lover. She had admiration enough, for to see her was to love her; many of the village youngsters had looked unutterable things as they met her at May-feasts and holidays, but up to this time she had received no poetical epistles nor direct proposals, and was as cheerful and heart-free as the birds that sang around her windows. Her father was the traditional guardian of beauty, surly as the mastiff that watched his sacks of flour and his hoard of thalers; and though he doted on his darling Katrine, his heart to all the world beside seemed to be only a chip from one of his old mill-stones. When Carl thought of the severe gray eyes that shot such glances at all lingering youths, the difficulty of winning the pretty heiress seemed to be

quite enough, even with a field clear of rivals. But two other suitors now made advances, more or less openly, and poor Carl thought himself entirely overshadowed. One was Schönfeld, the most considerable farmer in the neighborhood, a widower, with hair beginning to show threads of silver, and a fierce man withal, who was supposed to have once slain a rival, wearing thereafter a seam in his cheek as a souvenir of the encounter. The other was Hans Stolzen, a carpenter, past thirty, a shrewd, well-to-do fellow, with nearly a thousand thalers saved from his earnings. Carl had never fought a duel,—and he had not saved so much as a thousand groschen, to say nothing of thalers; he had only a manly figure, a cheery, open face, the freshness of one-and-twenty, and a heart incapable of guile. Katrine was not long in discovering these excellences, and, if his boldness had equalled his passion, she would have shown him how little she esteemed the pretensions of the proud landholder or the miserly carpenter. But he took it for granted that he was a fool to contend against such odds, and, buttoning his jacket tightly over his throbbing heart, toiled away in his little fields, thinking that the whole world had never contained so miserable a man.

Hans Stolzen was the first to propose. He began by paying court to the jealous Rauchen himself, set forth his property and prospects, and asked to become his son-in-law. The miller heard him, puffed long whiffs, and answered civilly, but without committing himself. He was in no hurry to part with the only joy he had, and, as Katrine was barely eighteen, he naturally thought there would be time enough to consider of her marriage hereafter. Hans hardly expected anything more decisive, and, as he had not been flatly refused, came frequently to the house and chatted with her father, while his eyes followed the vivacious Katrine as she tripped about her household duties. But Hans was perpetually kept at a distance; the humming-bird would nev-

er alight upon the outstretched hand. He had not the wit to see that their natures had nothing in common, although he did know that Katrine was utterly indifferent towards him, and after some months of hopeless pursuit he began to grow sullenly angry. He was not long without an object on which to vent his rage.

One evening, as Katrine was returning homeward, she chanced to pass Carl's cottage. Carl was loitering under a tree hard by, listening to the quick footsteps to which his heart kept time. It was the coming of Fate to him, for he had made up his mind to tell her of the love that was consuming him. Two days before, with tears on his bashful face, he had confided all to his mother; and, at her suggestion, he had now provided a little present by way of introduction. Katrine smiled sweetly as she approached, for, with a woman's quick eye, she had read his glances long before. His lips at first rebelled, but he struggled out a salutation, and, the ice once broken, he found himself strangely unembarrassed. He breathed freely. It seemed to him that their relations must have been fixed in some previous state of existence, so natural was it to be in familiar and almost affectionate communication with the woman whom before he had loved afar off, as a page might sigh for a queen.

"Stay, Katrine," he said, — "I had nearly forgotten." He ran hastily into the cottage, and soon returned with a covered basket. "See, Katrine, these white rabbits!—are they not pretty?"

"Oh, the little pets!" exclaimed Katrine. "Are they yours?"

"No, Katrinchen,—that is, they were mine; now they are yours."

"Thank you, Carl. I shall love them dearly."

"For my sake?"

"For their own, Carl, certainly; for yours also,—a little."

"Good-bye, Bunny," said he, patting the head of one of the rabbits. "Love your mistress; and, mind, little whitey, don't keep those long ears of yours for

nothing; tell me if you ever hear anything about me."

"Perhaps Carl had better come and hear for himself,—don't you think so, Bunny?" said Katrine, taking the basket.

The tone and manner said more than the words. Carl's pulses bounded; he seized her unresisting hand and covered it with kisses. "So! this is the bashful young man!" thought Katrine. "I shall not need to encourage him any more, surely."

The night was coming on; Katrine remembered her father, and started towards the mill, whose broad arms could scarcely be seen through the twilight. Carl accompanied her to the gate, and, after a furtive glance upward to the house-windows, bade her farewell, with a kiss, and turned homeward, feeling himself a man for the first time in his life.

Frau Proch had seen the pantomime through the flowers that stood on the window-sill, not ill-pleased, and was waiting her son's return. An hour passed, and he did not come. Another hour, and she began to grow anxious. When it was near midnight, she roused her nearest neighbor and asked him to go towards the mill and look for Carl. An hour of terrible suspense ensued. It was worse than she had even feared. Carl lay by the roadside, not far from the mill, insensible, covered with blood, moaning feebly at first, and afterwards silent, if not breathless. Ghastly wounds covered his head, and his arms and shoulders were livid with bruises. The neighboring peasants surrounded the apparently lifeless body, and listened with awe to the frenzied imprecations of Frau Proch upon the murderer of her son. "May he die in a foreign land," said she, lifting her withered hands to Heaven, "without wife to nurse him or priest to speak peace to his soul! May his body lie unburied, a prey for wolves and vultures! May his inheritance pass into the hands of strangers, and his name perish from the earth!" They muttered their prayers, as they encountered her bloodshot, but tearless eyes, and left her with her son.

For a whole day and night he did not speak; then a violent brain-fever set in, and he raved continually. He fancied himself pursued by Hans Stolzen, and recoiled as from the blows of his staff. When this was reported, suspicion was directed at once to Stolzen as the criminal; but before an arrest could be made, it was found that he had fled. His disappearance confirmed the belief of his guilt. In truth, it was the rejected suitor, who, in a fit of jealous rage, had waylaid his rival in the dark, beat him, and left him for dead.

Katrine, who had always disliked Stolzen, especially after he had pursued her with his coarse and awkward gallantry, now naturally felt a warmer affection for the victim of his brutality. She threw off all disguise, and went frequently to Frau Proch's cottage, to aid in nursing the invalid during his slow and painful recovery. She had, one day, the unspeakable pleasure of catching the first gleam of returning sanity in her hapless lover, as she bent over him and with gentle fingers smoothed his knotted forehead and temples. An indissoluble tie now bound them together; their mutual love was consecrated by suffering and sacrifice; and they vowed to be faithful in life and in death.

When Carl at length became strong and commenced labor, he hoped speedily to claim his betrothed, and was waiting a favorable opportunity to obtain her father's consent to their marriage. The scars were the only evidence of the suffering he had endured. No bones had been broken, and he was as erect and as vigorous as before the assault. But Carl, most unfortunate of men, was not destined so soon to enjoy the happiness for which he hoped,—the love that had called him back to life. As the robber eagle sits on his cliff, waiting till the hawk has seized the ring-dove, then darts down and beats off the captor, that he may secure for himself the prize,—so Schönfeld, not uninformed of what was going on, stood ready to pounce upon the suitor who should gain Katrine's favor, and

sweep the last rival out of the way. An officer in the king's service appeared in the village to draw the conscripts for the army, and the young men trembled like penned-up sheep at the entrance of the blood-stained butcher, not knowing who would be seized for the shambles. The officer had apparently been a friend and companion of Schönfeld's in former days, and passed some time at his house. It was perhaps only a coincidence, but it struck the neighbors as very odd at least, that Carl Proch was the first man drawn for the army. He had no money to hire a substitute, and there was no alternative; he must serve his three years. This last blow was too much for his poor mother. Worn down by her constant assiduity in nursing him, and overcome by the sense of utter desolation, she sunk into her grave, and was buried on the very day that Carl, with the other recruits, was marched off.

What new torture the betrothed Katrine felt is not to be told. Three years were to her an eternity; and her imagination called up such visions of danger from wounds, privations, and disease, that she parted from her lover as though it were forever. The miller found that the light and the melody of his house were gone. Katrine was silent and sorrowful; her frame wasted and her step grew feeble. To all his offers of condolence she made no reply, except to remind him how with tears she had besought his interference in Carl's behalf. She would not be comforted. The father little knew the feeling she possessed; he had thought that her attachment to her rustic lover was only a girlish fancy, and that she would speedily forget him; but now her despairing look frightened him. To the neighbors, who looked inquisitively as he sat by the mill-door, smoking, he complained of the quality of his tobacco, vowing that it made his eyes so tender that they watered upon the slightest whiff.

For six months Schönfeld wisely kept away; that period, he thought, would be

long enough to efface any recollection of the absent soldier. Then he presented himself, and, in his usual imperious way, offered his hand to Katrine. The miller was inclined to favor his suit. In wealth and position Schönfeld was first in the village; he would be a powerful ally, and a very disagreeable enemy. In fact, Rauchen really feared to refuse the demand; and he plied his daughter with such argument as he could command, hoping to move her to accept the offer. Katrine, however, was convinced of the truth of her former suspicion, that Carl was a victim of Schönfeld's craft; and her rejection of his proposal was pointed with an indignation which she took no pains to conceal. The old scar showed strangely white in his purple face, as he left the mill, vowing vengeance for the affront.

Rauchen and his daughter were now more solitary than ever. The father had forgotten the roaring stories he used to tell to the neighboring peasants, over foaming flagons of ale, at the little inn; he sat at his mill-door and smoked incessantly. Katrine shunned the festivities in which she was once queen, and her manner, though kindly, was silent and reserved; she went to church, it is true, but she wore a look of settled sorrow that awed curiosity and even repelled sympathy. But scandal is a plant that needs no root in the earth; like the houseleek, it can thrive upon air; and those who separate themselves the most entirely from the world are apt, for that very reason, to receive the larger share of its attention. The village girls looked first with pity, then with wonder, and at length with aversion, upon the gentle and unfortunate Katrine. Careless as she was with regard to public opinion, she saw not without pain the altered looks of her old associates, and before long she came to know the cause. A cruel suspicion had been whispered about, touching her in a most tender point. It was not without reason, so the gossip ran, that she had refused so eligible an offer of marriage as Schönfeld's. The story reached the ears of Rauchen, at last. With a fierce

energy, such as he had never exhibited before, he tracked it from cottage to cottage, until he came to Schönfeld's house-keeper, who refused to give her authority. The next market-day Rauchen encountered the former suitor and publicly charged him with the slander, in such terms as his baseness deserved. Schönfeld, thrown off his guard by the sudden attack, struck his adversary a heavy blow; but the miller rushed upon him, and left him to be carried home, a bundle of aches and bruises. After this the tongues of the gossips were quiet; no one was willing to answer for guesses or rumors at the end of Rauchen's staff; and the father and daughter resumed their monotonous mode of life.

The three years at length passed, and Carl Proch returned home,—a trifle more sedate, perhaps, but the same noble, manly fellow. How warmly he was received by the constant Katrine it is not necessary to relate. Rauchen was not disposed to thwart his long-suffering daughter any further; and with his consent the young couple were speedily married, and lived in his house. The gayety of former years came back; cheerful songs and merry laughter were heard in the lately silent rooms. Rauchen himself grew younger, especially after the birth of a grandson, and often resumed his old place at the inn, telling the old stories with the old *gusto* over the ever-welcome ale. But one morning, not long after, he was found dead in his bed; a smile was on his face, and his limbs were stretched out as in peaceful repose.

There was no longer any tie to bind Carl to his native village. All his kin, as well as Katrine's, were in the grave. He was not bred a miller, and did not feel competent to manage the mill. Besides, his mind had received new ideas while he was in the army. He had heard of countries where men were equal before the laws, where the peasant owed no allegiance but to society. The germ of liberty had been planted in his breast, and he could no longer live contented

with the rank in which he had been born. At least he wished that his children might grow up free from the chilling influences that had fallen upon him. At his earnest persuasion, Katrine consented that the mill should be sold, and soon after, with his wife and child, he went to Bremen and embarked for America.

We must now follow the absconding Stolzen, who, with his bag of thalers, had made good his escape into England. He lived in London, where he found society among his countrymen. His habitual shrewdness never deserted him, and from small beginnings he gradually amassed a moderate fortune. His first experiment in proposing for a wife satisfied him, but in a great city his sensual nature was fully developed. His brutal passions were unchecked; conscience seemed to have left him utterly. At length he began to think about quitting London. He was afraid to return to Germany, for, as he had left Carl to all appearance dead, he thought the officers of the law would seize him. He determined to go to Australia, and secured a berth in a clipper ship bound for Melbourne, but some accident prevented his reaching the pier in season; the vessel sailed without him, and was never heard of afterwards. Then he proposed to buy an estate in Canada; but the owner failed to make his appearance at the time appointed for the negotiation, and the bargain was not completed. At last he took passage for New York, whither a Hebrew acquaintance of his had gone, a year or two before, and was established as a broker. Upon arriving in that city, Stolzen purchased of an agent a tract of land in a Western State, situated on the shore of Lake Michigan; and after reserving a sum of money for immediate purposes, he deposited his funds with his friend, the broker, and started westward. He travelled the usual route by rail, then a short distance in a mail-coach, which carried him within six miles of his farm. Leaving his luggage to be sent for, he started to walk the remaining dis-

tance. It was a sultry day, and the prairie road was anything but pleasant to a pedestrian unaccustomed to heat and dust. After walking less than an hour, he determined to stop at a small house near the road, for rest, and some water to quench his thirst; but as he approached, the baying hounds, no less than the squalid children about the door, repelled him, and he went on to the next house. He now turned down a green lane, between rows of thrifty trees, to a neat log-cabin, whose nicely-plastered walls and the regular fence inclosing it testified to the thrift and good taste of the owner. He knocked; all was still. Again, and thirsty as he was, he was on the point of leaving, when he heard a step within. He waited; the door opened, and before him stood—Katrine!

She did not know him; but he had not forgotten that voluptuous figure nor those melting blue eyes. He preferred his requests, looking through the doorway at the same time to make sure that she had no protector. Katrine brought the stranger a gourd of water, and offered him a chair. She did not see the baleful eyes he threw after her as she went about her household duties. Stolzen had dropped from her firmament like a fallen and forgotten star. Secure in her unsuspecting innocence, she chirruped to her baby and resumed her sewing.

That evening, when Carl Proch returned from his field, after his usual hard day's labor, he found his wife on the floor, sobbing, speechless, and the child, unnoticed, crying in his cradle. His dog sat by the hearth with a look of almost intelligent sympathy, and whined as his master entered the room. He raised Katrine and held her in his arms like a child, covered her face with kisses, and implored her to speak. She seemed to be in a fearful dream, and shrunk from some imagined danger in the extremest terror. Gradually her sobs became less frequent, her tremors ceased, and she smiled upon the manly face that met hers, as though she had only suffered from an imaginary fright. But when she felt her hair floating upon

her shoulders, saw the almost speaking face of the dog, Bruno, and became conscious of the cries of the neglected child, the wave of agony swept over her again, and she could utter only broken ejaculations. As word after word came from her lips, the unhappy husband's flesh tingled; his hair stiffened with horror; every nerve seemed to be strung with a new and maddening tension. There was for him no such thing as fatigue, no distance, no danger,—no law, no hereafter, no God. All thought and feeling were drowned in one wild desire for vengeance,—vengeance swift, terrible, and final.

He first caressed the dog as though he had been a brother; he put his arms about the shaggy neck, and shook each faithful paw; he made his wife caress him also. "God be praised, dear Katrine, for your protector, the dog!" said he. "Come, now, Bruno!"

Katrine saw him depart with his dog and gun; but if she guessed his errand, she did not dare remonstrate. He walked off rapidly,—the dog in advance, now and then baying as though he were on a trail.

In the night he returned, and he smiled grimly as he set down the rifle in its accustomed corner. His wife was waiting for him with intense anxiety. It was marvellous to her that he was so cheerful. He trotted her upon his knee, pressed her a hundred times to his bosom, kissed her forehead, lips, and cheeks, called her his pretty Kate, his dear wife, and every endearing name he knew. So they sat, like lovers in their teens, till the purpling east told of a new day.

The luggage of one Stolzen, a stage-coach passenger, remained at the tavern uncalled-for, for nearly a year. No one knew the man, and his disappearance, though a profound mystery, was not an uncommon thing in a new country. The Hebrew broker in New York received no answers to his letters, though he had carefully preserved the post-office address which Stolzen had given him. He began to fear lest he should be obliged to

fulfil the duty of heirship to the property deposited with him. To quiet his natural apprehensions in view of this event, he determined to follow Stolzen's track, as much of it as lay in *this* world, at least, and find out what had become of him. Upon arriving in the neighborhood, the Jew had a thorough search made. The country was scoured, and on the third day there was a discovery. A man walking on the sandy margin of a river, about two or three miles from Carl's house, saw a skull before him. As the steep bluff nearly overhung the spot where he stood, he conjectured that the body to which the skull belonged was to be found above on its verge. He climbed up, and there saw a headless skeleton. It was the body of Stolzen, as his memorandum-book and other articles showed. His pistol was in his pocket, and still loaded; that fact precluded the idea of suicide. Moreover, upon examining more closely, a bullet-hole was found in his breast-bone, around which the parts were broken *outwardly*, showing that the ball must have entered from behind. It was clear that Stolzen had been murdered.

The curse of Frau Proch had been most terribly fulfilled.

Circumstances soon pointed to Carl Proch as the perpetrator. A stranger, corresponding to the deceased in size and dress, had been seen, about the time of his disappearance, by the neighboring family, walking towards Proch's house; and on the evening of the same day an Irishman met Carl going at a rapid rate, with a gun on his shoulder, as though in furious pursuit of some one. A warrant for his arrest was issued, and he was lodged in jail to await his trial. If now the Hebrew had followed the *lex talionis*, after the manner of his race in ancient times, it might have fared badly with poor Carl. But as soon as the broker was satisfied beyond a peradventure that the depositor was actually dead, he hastened back to New York, joyful as a crow over a newly-found carcass, to administer upon the estate, leaving the law to take its own course with regard to the murderer.

Beyond the two facts just mentioned as implicating Carl, nothing was proved at the trial. Jameson, the lawyer, whom I mentioned at the beginning of this story, was engaged for the defence. He found Carl singularly uncommunicative; and though the government failed to make out a shadow of a case against his client, he was yet puzzled in his own mind by Carl's silence, and his real or assumed indifference. Katrine was in court with her child in her arms, watching the proceedings with the closest attention; though she, as well as Carl, was unable to understand any but the most familiar and colloquial English. The case was speedily decided; the few facts presented to the jury appeared to have no necessary connection, and there was no known motive for the deed. The jury unanimously acquitted Carl, and with his wife and boy he left the court-room. The verdict was approved by the spectators, for no man in the neighborhood was more universally loved and respected than Carl Proch.

Having paid Jameson his fee for his services, Carl was about to depart, when the lawyer's curiosity could be restrained no longer, and he called his client back to the private room of his office.

"Carl," said he, "you look like a good fellow, above anything mean or wicked; but yet I don't know what to make of you. Now you are entirely through with this scrape; you are acquitted; and I want to know what is the meaning of it all. I will keep it secret from all your neighbors. Did you kill Stolzen, or not?"

"Well, if I did," he answered, "can they do anything with me?"

"No," said Jameson.

"Not, if I acknowledge?"

"No, you have been acquitted by a jury; and by our law a man can never be tried twice for the same offence. You are safe, even if you should go into court and confess the deed."

"Well, then, I did kill him,—and I would again!"

For the moment, a fierce light gleamed upon the calm and kindly face. Then, feeling that his answer would give a false

view of the case, without the previous history of the parties, Carl sat down and in his broken English told to his lawyer the story I have here attempted to record. It was impossible to doubt a word of it; for the simplicity and pathos of the narrative were above all art. Here was a simple case, which the boldest inventor of schemes to punish villany would have

been afraid to use. Its truth is the thing that most startles the mind accustomed to deal with fictions.

We leave Carl to return to his farm with his wife, for whom he had suffered so much, and with the hope that no further temptation may come to him in such a guise as almost to make murder a virtue.

THE TELEGRAPH.

THOU lonely Bay of Trinity,
Ye bosky shores untrod,
Lean, breathless, to the white-lipped sea
And hear the voice of God!

From world to world His couriers fly,
Thought-winged and shod with fire;
The angel of His stormy sky
Rides down the sunken wire.

What saith the herald of the Lord?—
“The world’s long strife is done!
Close wedded by that mystic cord,
Her continents are one.

“And one in heart, as one in blood,
Shall all her peoples be;
The hands of human brotherhood
Shall clasp beneath the sea.

“Through Orient seas, o’er Afric’s plain,
And Asian mountains borne,
The vigor of the Northern brain
Shall nerve the world outworn.

“From clime to clime, from shore to shore,
Shall thrill the magic thread;
The new Prometheus steals once more
The fire that wakes the dead!

“Earth gray with age shall hear the strain
Which o’er her childhood rolled;
For her the morning stars again
Shall sing their song of old.

“For, lo! the fall of Ocean’s wall,
Space mocked, and Time outrun!—

And round the world, the thought of all
Is as the thought of one !”

Oh, reverently and thankfully
The mighty wonder own !
The deaf can hear, the blind may see,
The work is God's alone.

Throb on, strong pulse of thunder ! beat
From answering beach to beach !
Fuse nations in thy kindly heat,
And melt the chains of each !

Wild terror of the sky above,
Glide tamed and dumb below !
Bear gently, Ocean's carrier-dove,
Thy errands to and fro !

Weave on, swift shuttle of the Lord,
Beneath the deep so far,
The bridal robe of Earth's accord,
The funeral shroud of war !

The poles unite, the zones agree,
The tongues of striving cease ;
As on the Sea of Galilee,
The Christ is whispering, “ Peace !”

THE BIRDS OF THE GARDEN AND ORCHARD.

THE singing-birds whose notes are familiar to us, in towns and villages and the suburbs of the city, are found in the breeding-season only in these places, and are strangers to the deep woods and solitary pastures. Most of our singing-birds follow in the wake of the pioneer of the wilderness, and increase in numbers with the clearing and settlement of the country,—not, probably, from any dependence on the protection of mankind, but on account of the increased abundance of the insect food upon which they subsist, consequent upon the tilling of the ground. It is well known that the labors of the husbandman cause an excessive multiplication of all those species of insects whose larvæ are cherished in the soil, and of all that infest the orchard and garden. The farm is capable

of supporting insects just in proportion to its capacity for producing corn and fruit. Insects will multiply with their means of subsistence in and upon the earth ; and birds, if not destroyed by artificial methods, will increase in proportion to the multiplication of those insects which constitute their principal food.

These considerations will sufficiently account for the fact, which often excites a little astonishment, that more singing-birds are found in the suburbs of the city, and among the parks and gardens of the city, than in the deep forest, where, even in the singing-season, the silence is sometimes melancholy. It is still to be remarked, that the species which are thus familiar in their habits do not include all the singing-birds, but they include all that are well known to

the majority of our people. These are the birds of the garden and orchard. There are many other species, wild and solitary in their habits, which are delightful songsters in uncultivated regions remote from the town. But even these are rare in the depths of the forest. They live on the edge of the wood and in the half-wooded pasture.

The birds of the garden and orchard have been frequently described, and their habits are very generally known; but in the usual descriptions little has been said of their powers and peculiarities of song. In the present sketches, I have given particular attention to the vocal powers of the different birds, and have endeavored to designate the parts which each one performs in the grand hymn of Nature. I shall first introduce the Song-Sparrow, (*Fringilla melodia*), a little bird that is universally known and admired. The Song-Sparrow is the earliest visitant and the latest resident of the vocal tenants of the field. He is plain in his vesture, undistinguished from the female by any superiority of plumage, and comes forth in the spring and takes his departure in the autumn in the same suit of russet and gray by which he is always recognized.

In March, before the violet has ventured to peep out from the southern knoll of the pasture or the sunny brow of the hill, while the northern skies are liable to pour down at any hour a storm of sleet and snow, the Song-Sparrow, beguiled by southern winds, has already made his appearance, and, on still mornings, may be heard warbling his few merry notes, as if to make the earliest announcement of his arrival. He is, therefore, the true harbinger of spring, and, though not the sweetest songster of the woods, has the merit of bearing to man the earliest tidings of the opening year, and of declaring the first vernal promises of Nature. As the notes of those birds that sing only in the night come with a double charm to our ears, because they are harmonized by silence and hallowed by the hour that is sacred to repose,—in like

manner does the Song-Sparrow delight us in tenfold measure, because he sings the sweet prelude to the universal hymn of Nature.

His haunts are the pastures which have been half reduced to tillage, and are still partially filled with wild shrubbery; for he is not so familiar in his habits as the Hair-bird, that comes close up to our door-step, to find the crumbs that are swept from our tables. Though his voice is constantly heard in the garden and orchard, he selects a more retired spot for his nest, preferring not to trust his progeny to the doubtful mercy of the lords of creation. In some secure retreat, under a tussock of herbage or a tuft of shrubbery, the female sits upon her nest of soft dry grass, containing four or five eggs, of a greenish white ground, almost entirely covered with brownish specks. Commencing in April, she rears three broods of young during the season, and her mate prolongs his notes until the last brood has flown from the nest.

The notes of the Song-Sparrow would not entitle him to be ranked among our principal singing-birds, were it not for the remarkable variations of his song, in which respect he is equalled, I think, by no other bird. Of these variations there are seven or eight which may be distinctly recognized, and differing enough to be considered separate tunes. The bird does not warble these in regular succession; he is in the habit of repeating one several times, and then leaves it, and repeats another in a similar manner. Mr. Paine* took note, on one occasion, of the number of times a Song-Sparrow sang each of the tunes, and the order of singing them. Of the tunes, as he had numbered them, the bird "sang No. 1, 27 times; No. 2, 36 times; No. 3, 23 times; No. 4, 19 times; No. 5, 21 times; No. 6, 32 times; No. 7, 18 times. Perhaps next he would sing No. 2, then perhaps No. 4, or 5, and so on." Mr. Paine

* Mr. Charles S. Paine, of East Randolph, who, I believe, was the first to observe this habit of the Song-Sparrow.

adds, "Some males will sing each tune about fifty times, though seldom; some will only sing them from five to ten times. But as far as I have observed, each male has his seven songs. I have applied the rule to as many as a dozen different birds, and the result has been the same."

An individual will sometimes, for half a day, confine himself almost entirely to a few of these variations; but, he will commonly sing each one more or less in the course of the day. I have observed also, that, when one principal singer takes up a particular tune, other birds in the vicinity will unite in the same. The several variations are mostly in triple time, a few in common time, and there is an occasional blending of both in the same tune, which consists usually of four bars or strains, sometimes five, though the song is frequently broken off at the end of the third strain. This habit of varying his notes through so many permutations, and the singularly fine intonations of many of them, entitle the Song-Sparrow to a very high rank as a singing-bird.

There is a manifest difference in the expression of these several tunes. The one which I have marked as No. 3 is particularly plaintive, and is usually in common time. No. 2 is the one which I think is most frequently sung. No. 5 is querulous and entirely unmusical. There is a remarkable precision in the song of this bird, and the finest singers are those which, in the language of musicians, have the least execution. There are some individuals that blend their notes together so promiscuously, and use so many flourishes, that it is difficult to identify their song, or to perceive its expression.

Whether these tunes of the Song-Sparrow express to his mate, or to others of his species, different sentiments, and convey different messages, or whether the bird adopts them for his own amusement, I have not been able to determine. Neither have I learned whether a certain hour of the day or a certain state of the weather predisposes him to sing a partic-

ular tune. This point may, perhaps, be determined* by some future observer; and it may be ascertained that the birds of this species have their matins and their vespers, their songs of rejoicing and of complaining, of courtship when in presence of their mate, and of encouragement and solace when she is sitting upon her nest. As Nature has a benevolent and a definite object in every instinct which she has established among her creatures, it is not probable that this habit of the Song-Sparrow is the mere result of accident. All the variations of his song are given, with the specimens, at the end of this article, and, though individuals differ in their singing, the notes will afford the reader a good general idea of the several tunes.

Soon after the arrival of the Song-Sparrow, when the spring-flowers have begun to be conspicuous in the meadow, we are greeted by the more fervent and lengthened notes of the Vesper-bird, (*Fringilla graminea*), poured out with a peculiarly pensive modulation. This species closely resembles the former, but may be distinguished from it, when on the wing, by two white lateral feathers in the tail. The chirp of the Song-Sparrow is also louder, and pitched on a lower key, than that of the present species. By careless observers, these two Finches, on account of the similarity in their general appearance and habits, are considered identical. The Vesper-bird, however, is the least familiar of the two, and, when both are singing at the same time, will be found to occupy a position more remote from the house than the other. In several localities, these two species are distinguished by the names of Bush-Sparrow and Ground-Sparrow, from their supposed different habits of placing their nests, one in a bush and the other on the ground. But they do not in fact differ in this respect, as each species occasionally builds in both ways.

The Vesper-bird attracts more general attention to his notes than the Sparrow, because he sings a longer, though a more monotonous song, and warbles with more

fervency. His notes bear considerable resemblance to those of the Canary-bird, but they are more subdued and plaintive, and have a peculiar *reedy* sound, which is never perceived in the notes of the Canary. This bird is periodical in his habits of song, confining his lays to particular hours of the day and conditions of the weather. The Song-Sparrow, on the contrary, sings about equally from morning to night, and but little more at one hour than another; and the different performers of this species do not seem to join in concert. This habit renders the latter more companionable, at the same time it causes his notes to be less regarded than those of the Vesper-bird, who pours them forth more sparingly, and at regular periods.

The Vesper-bird begins with all his kindred in a general concert at early dawn, after which they are comparatively silent until sunset, when they repeat their concert, with still greater zeal than they chanted in the morning. It is from this circumstance that it has obtained the name it bears,—from its evening hymn, or vespers. I have heard this name applied to it only in one locality; but it is so precisely applicable to its habits, that I have thought it worthy of being retained as its distinguishing *cognomen*. There are particular states of the weather that frequently call out the birds of this species into a general concert at other periods of the day,—as when rain is suddenly followed by sunshine, or when a clear sky is suddenly darkened by clouds, presenting to them a sort of occasional morn and occasional even. It may be remarked, that you seldom hear one of these birds singing alone; but when one begins, all others in the vicinity immediately join him.

The usual resorts of the Vesper-bird are the pastures and the hay-fields; hence the name of Grass-Finch, by which he is usually distinguished. His voice is heard frequently by the rustic roadsides, where he picks up a considerable portion of his subsistence. This is the little bird that so generally serenades

us during our evening walks, at a little distance from the town, and not so far into the woods as the haunts of the Thrushes. When we go out into the country, on pleasant days in June or July, at nightfall, we hear multitudes of them singing sweetly from a hundred different points in the fields and farms.

Among the birds which are endowed by Nature with the gift of song in connection with gaudy plumage is the American Goldfinch, or Hemp-bird, (*Fringilla tristis*,) one of the most interesting and delicate of the feathered tribe. Of all our birds this bears the closest resemblance to the Canary, both in his plumage and in the notes of his song. He cannot be ranked with the finest of our songsters, being deficient in compass and variety. But he has great sweetness of tone, and is equalled by few birds in the rapidity of his execution. His note of complaint is exactly like that of the Canary, and is heard at almost all times of the year. He utters also, when flying, a very animated series of notes, during the repeated undulations of his flight, and they seem to be uttered with each effort he makes to rise.

It is remarkable that this bird, though he often rears two broods in a season, does not begin to build his nest until July, after the first broods of the Robin and the Song-Sparrow have flown from their nests. Mr. Augustus Fowler* is of opinion, from his observation of their habits of feeding their young, that the cause of this procrastination is, "that they would be unable to find, in the spring and early summer, those new and milky seeds which are the necessary food of their young," and takes occasion to al-

* Mr. Augustus Fowler of Danversport, who has made one of the finest collections of the eggs of native birds. His drawings of the same are beautifully executed, accompanied by representations of the nests and of the foliage that surrounded them. This gentleman and his brother, Mr. S. P. Fowler, have found leisure, during the intervals of their occupation in a mechanical art, to acquire a knowledge of certain branches of natural history which would do honor to a professor.

lude to that beneficent law of Nature which provides that these birds "should not bring forth their young until the very time when those seeds used by them for food have passed into the milk, in which state they are easily dissolved by the stomach, and when an abundant supply may always be found."

The Hemp-birds are remarkable for associating at a certain season, and singing, as it were, in choirs. "During spring and summer," says Mr. Fowler, "they rove about in small flocks, and in July will assemble together in considerable numbers on a particular tree, seemingly for no other purpose than to sing. These concerts are held by them on the forenoon of each day, for a week or ten days, after which they soon commence building their nests. I am inclined to believe that this is their time of courtship, and that they have a purpose in these meetings beside that of singing. If perchance one is heard in the air, the males utter their call-note with great emphasis, particularly if the new-comer be a female; and while in her undulating flight she describes a circle, preparatory to alighting, they will stand almost erect, move their heads to the right and left, and burst simultaneously into song."

While engaged in these concerts, it would seem as if they were governed by some rule, that enabled them to time their voices, and to swell or diminish the volume of sound. Some of this effect is undoubtedly produced by the gradual manner in which the different voices join in harmony, beginning with one or two, and increasing in numbers in a sort of geometrical progression, until all are singing at once, and then in the same gradual manner becoming silent. This produces the effect of a perfect *crescendo* and *diminuendo*. Beginning, as it seems, at a distance, one voice leads on another, and the numbers multiply until they make a loud shout, which dies away gradually until one single voice winds up the chorus. These concerts are repeated at intervals, sometimes for an hour in duration.

Another peculiar habit of the Hemp-bird is that of building a nest, and then tearing it to pieces before any eggs have been deposited in it, and using the materials to make a new nest in another locality. In former years I have repeatedly watched this singular operation, in the Lombardy poplars that stood before my study-windows. I have thought that the male bird only was addicted to this practice, and that this might be his method of amusement while unprovided with a partner. The nest of the Hemp-bird is made of cotton, the down of the fern, and other soft materials, woven together with threads and the fibres of bark, and lined with thistle-down, if it be late enough to obtain it, and sometimes with cow's hair. It is commonly placed in the fork of the slender branches of a maple, linden, or poplar, and is fastened to them with singular ingenuity.

Among the earliest songsters of spring, occasionally tuning his voice before the arrival of the multitudinous choir, is the Crimson Finch or American Linnet (*Fringilla purpurea*). I have frequently heard his notes on warm days in March, and once, in a very mild season, I heard one warbling cheerily on the 18th of February. But the Linnet does not persevere like the Song-Sparrow, after he has once commenced. His voice is only occasionally heard, until the middle of April, after which he is a very constant singer.

The notes of this bird are very simple and melodious, and some individuals greatly excel others in their powers of song. It is generally believed that the young males are the best singers, and that age diminishes their vocal capacity. The greater number utter only a few strains, resembling the notes of the Warbling Fly-catcher, (*Vireo gilvus*), and these are constantly repeated during the greater part of the day. His song consists of four or five bars or strains; but there are individuals that extend them *ad libitum*, varying their notes after the manner of the Canary. The latter, however, sings with more precision, and is louder and

shriller in his tones. I have not observed that this bird is more prone to sing in the morning and evening than at noonday and at all hours.

I have alluded to the fact that the finest singing-birds build their nests and seek their food either on the ground or among the shrubbery and the lower branches of trees, and that, when singing, they are commonly perched rather low. The Linnet is an exception to this general habit of the singing-birds, and, in company with the Warbling Fly-catchers, he is commonly high up in an elm or some other tall tree, and almost entirely out of sight, when exercising himself in song. It is this preference for the higher branches of trees that enables these birds, as well as the Golden Robin, to be denizens of the city. Hence they may be heard singing as freely and melodiously from the trees on Boston Common as in the wild-wood or orchard in the country.

I have seen the Linnet frequently in confinement; but he does not sing so well in a cage as in a state of freedom. His finest and most prolonged strains are delivered while on the wing. On such occasions only does he sing with fervor. While perched on a tree, his song is short and not greatly varied. If you closely watch his movements when he is singing, he may be seen on a sudden to take flight, and, while poising himself in the air, though still advancing, he pours out a continued strain of melody, not surpassed by the notes of any other bird. On account of the infrequency of these occasions, it is seldom we have an opportunity to witness a full exhibition of the musical powers of the Linnet.

The male American Linnet is crimson on the head, neck, and throat, dusky on the upper part of its body, and beneath somewhat straw-colored. It is remarkable that a great many individuals are destitute of this color, being plainly clad, like the female. These are supposed to be old birds, and the loss of color is attributed to age. The same change takes place when the bird is confined.

The little bird whose notes serve more

than those of any other species to enliven the summer noondays in our villages is the House-Wren (*Troglodytes fulvus*). It is said to reside and rear its young chiefly in the Middle States; but it is far from being uncommon in Massachusetts, and, as it extends its summer migrations to Labrador, it is probable that it breeds there also. It is evident, however, that its breeding-places are not confined to northern latitudes. It is a migratory bird, is never seen here in winter, but commonly arrives in May and returns south early in October. It builds in a hollow tree, like the Blue-bird, or in a box or other vessel provided for it, and by furnishing such accommodations we may easily entice one to make its home in our inclosures.

The Wren is a very active bird, and one of the most restless of the feathered tribe. He is continually in motion, and even when singing he is always flitting about and changing his position. We see him in almost all places, as it were, at the same moment of time,—now warbling in ecstasy from the roof of a shed, then, with his wings spread and feathers ruffled, scolding furiously at a Blue-bird or a Swallow that has alighted on his box, or driving a Robin from a cherry-tree that stands near his habitation. The next instant we observe him running along on a stone wall, and diving down and in and out, from one side to the other, through the openings between the stories, with all the nimbleness of a squirrel. He is on the ridge of the barn-roof, he is peeping into the dove-cote, he is in the garden under the currant-bushes, or chasing a spider or a moth under a cabbage-leaf; again he is on the roof of the shed, warbling vociferously; and all these manœuvres and peregrinations have occupied hardly a minute, so rapid and incessant is he in his motions.

The notes of the Wren are very lively and garrulous, and, if not uttered more frequently during the heat of the day, are certainly more noticeable at this hour. There is a concert at noonday, as well as in the morning and evening, among

the birds, and in the former the Wren is one of the principal musicians. After the full rays of the sun have silenced the early performers, the Song-Sparrow and the Red Thrush continue to sing, at intervals, the greater part of the day. The Wren is likewise heard at all hours; but when the languishing heat of noon has arrived, and most of the birds are silent, the few that continue to sing become more than usually vocal, and seem to form a select company. They appear, indeed, to prefer the noonday, because the general silence that prevails at this hour renders their voices more distinguishable than at other times. The birds which are thus, as it were, associated with the Wren, in this noonday concert, are the Bobolink, the Cat-bird, and the two Warbling Fly-catchers, occasionally joined by the few and simple notes of the Summer Yellow-bird. If we are in the vicinity of the deep woods, we may also hear, at this hour, the loud and shrill voice of the Golden-Crowned Thrush, a bird that is partial to the heat of noon.

Of all these, however, the Wren is the most remarkable, having a note that is singularly varied and animated. He exhibits great compass and power of execution, but wants variety in his tones. He begins very sharp and shrill, like a grasshopper, then suddenly falls to a series of low guttural notes, and ascends, like the rolling of a drum, to another series of high notes, rapidly trilled. Almost without a pause, he recommences with his querulous insect-chirp, and proceeds through the same trilling and demisemiquavering as before. He is not particular about the part of the song which he makes his closing note, but will leave off right in the middle of a strain, when he appears to be in the height of ecstasy, to pick up a spider or a fly.

As the Wren raises two broods of young in a season, his notes are prolonged to a late period of the summer, being frequently heard in the second or third week in August. He leaves for a southern clime about the first of October. In his migratory habits he differs from

the European Wren, which is a constant resident in his native regions.

Our American birds, like the American flowers, have not been celebrated in classic song. They are scarcely known, except to our own people, and they have not in general been exalted by praise above their real merits. We read, both in prose and verse, the praises of the European Lark, Linnet, and Nightingale, and the English Robin Redbreast has been immortalized in song. But the American Robin, (*Turdus migratorius*), though surnamed Redbreast, is a bird of different species and different habits. Little has been written about him, and he enjoys but little celebrity; he has never been puffed and overpraised, and, though universally admired, the many who admire him are diffident all the while, lest they are mistaken in their judgment and are wasting their admiration upon an object that is unworthy of it, and whose true merits fall short of their own estimate.

I shall not ask pardon of those critics who are always canting about genius—and who would probably deny this gift to the Robin, because he cannot cry like a chicken or squall like a cat, and because with his charming strains he does not mingle all sorts of discords and incongruous sounds—for assigning to the Robin the highest rank as a singing-bird. Let them say of him, in the cant of modern criticism, that his performances cannot be great, because they are faultless; it is enough for me, that his mellow notes, heard at the earliest flush of morning, in the more busy hour of noon, or the quiet lull of evening, come upon the ear in a stream of unqualified melody, as if he had learned to sing under the direct instruction of that beautiful Dryad who taught the Lark and the Nightingale. The Robin is surpassed by certain birds in some particular qualities. The Mocking-bird has more power, the Red Thrush more variety, the Vesper-bird more execution, and the Bobolink more animation; but each of these birds has more faults than the Robin, and would be less

esteemed as a constant companion, a vocalist for all hours, whose strains never tire and never offend.

There are thousands who admire the Mocking-bird, because, after pouring forth a continued stream of ridiculous and disagreeable sounds, or a series of two or three notes repeated more than a hundred times in uninterrupted and monotonous succession, he condescends to utter a single delightfully modulated strain. He often brings his tiresome *extravaganzas* to a magnificent climax of melody, and just as often concludes an inimitable chant with a most contemptible bathos. But the notes of the Robin are all melodious, all delightful,—loud without vociferation, mellow without monotony, fervent without ecstacy, and combining more of mellowness of tone, plaintiveness, cheerfulness, and propriety of execution, than those of any other bird.

The Robin is the Philomel of our spring and summer mornings in New England, and in all the country north and west of these States. Without his sweet notes, the mornings would be like a vernal landscape without flowers, or a summer-evening sky without tints. He is the chief performer in the delightful anthem that welcomes the rising day. Of the others, the best are but accompaniments of more or less importance. Remove the Robin from this woodland orchestra, and it would be left without a *soprano*. Over all the northern parts of this continent, wherever there are any human settlements, these birds are numerous and familiar. There is probably not an orchard in all New England that is not supplied with several of these musicians. When we consider the millions thus distributed over this broad country, we can imagine the sublimity of that chorus which, from the middle of April until the last of July, must daily ascend to heaven from the voices of these birds, not one male of which is silent, on any pleasant morning, from the earliest flush of dawn until sunrise.

In my boyhood, an early morning-walk was one of my favorite recreations, and

never can I forget those delightful matins that awaited me at every turn. Even then I wondered that so little admiration was expressed for the song of the Robin, who seemed to me to be worthy of the highest regard. The Robin, when reared in confinement, is one of the most affectionate and interesting of birds. His powers of song are likewise susceptible of great improvement. Though not prone to imitation, he may be taught to sing tunes, and to imitate the notes of other birds. I have heard one whistle "Over the water to Charlie" as well as it could be played with a fife. Indeed, this bird is so tractable, that I believe any well-directed efforts would never fail of teaching him to sing any simple melody.

But what do we care about his power of learning artificial music? Even if he could be taught to perform like a *maestro*, this would not enhance his value as a minstrel of the woods. We are concerned with the birds only as they are in a state of nature. It is the simplicity of the songs of birds, as I have before remarked, that constitutes their principal charm; and were the Robins so changed in their nature as to relinquish their native notes, and sing only tunes hereafter, we should listen to them with as much indifference as to the whistling of boys in the streets.

In the elms on Boston Common, and in all the lofty trees in the suburbs as well as in the country villages, are two little birds whose songs are heard daily and hourly, from the middle of May until the latter part of summer. These are the Warbling Fly-catchers (*Vireo gilvus* and *V. olivaceus*). The first is commonly designated as the Warbling Vireo, the second as the Red-eyed Vireo. The former arrives about a week or ten days earlier than the other, and becomes silent likewise at a somewhat earlier period. Both species are very similar in their habits, frequenting the villages in preference to the woods, singing at all hours of the day, particularly at noon, taking all their insect prey from the leaves and

branches of trees, or seizing it as it flits by their perch, and amusing themselves, while thus employed, with oft-repeated fragments of song. Each builds a pensile nest, or places it in the fork of the slender branches of a tree. I have seen a nest of the Warbling Vireo placed less than fifteen feet from the ground, on a pear-tree, directly opposite the window of a chamber that was constantly occupied; but the nests of both species are usually suspended at a considerable height from the ground.

The notes of the Warbling Vireo have been described by the words, "Brigadier, Brigadier, Bridget." They are few, simple, and melodious, and being often repeated, they form a very important part of the sylvan music of cultivated and thickly-settled places. It is difficult to obtain sight of this little warbler while he is singing, on account of his small size, the olive color of his plumage, and his habit of perching among the dense foliage of the trees.

The Red-eyed Vireo is more generally known by his note, because he is particularly vocal during the heat of the long summer-days, when other birds are comparatively silent. The modulation of his notes is similar to that of the common Robin, but his tones are sharper, and he sings in a very desultory manner, leaving off very frequently in the middle of a strain to seize a moth or a beetle. Singing, while he is engaged in song, never seems to be his sole employment. This is the little bird that warbles for us late in the summer, after almost all other birds have become silent, uttering his moderate notes, as if for his own amusement, during all the heat of the day, from the trees by the roadsides and in our inclosures. We might then suppose him to be repeating very moderately the words, "Do you hear me? Do you see me?" with the rising inflection of the voice, and with a pause after each sentence, as if he waited for an answer.

As soon as the cherry-tree is in blossom, and when the oak and the maple

are beginning to unfold their plaited leaves, the loud and mellow notes of the Golden Robin (*Icterus Baltimore*) are heard for the first time in the year. I have never known the birds of this species to arrive before this date, and they seem to be governed by the supply of their insect food, which probably becomes abundant simultaneously with the flowering of the orchards. These birds may from that time be observed diligently hunting among the branches and foliage of the trees, and they appear to make a particular examination of the blossoms, from which they obtain a great variety of flies and beetles that are lodged in them. While thus employed, the bird frequently utters his brief, but loud and melodious notes; but he sings, like the Vireo, only while attending to the wants of life. Almost all remarkable singing-birds, when warbling, give themselves up entirely to song, and pay no regard to other demands upon their time until they have concluded. But the Golden Robin never relaxes from his industry, nor remains stationed upon the branch of a tree for the sole purpose of singing. He sings, like an industrious maid-of-all-work, only while employed in the ordinary concerns of life.

The Golden Robin is said to inhabit North America from Canada to Mexico; but there is reason to believe that the species is most abundant in the north-eastern parts of the continent, and that a greater number breed in the New England States than either south or west of this section. They are also more numerous in the suburbs of cities and towns than in the ruder and more primitive parts of the country. Their peculiar manner of protecting their pensile nests, by hanging them from the extremities of the lofty branches of an elm or other tall tree, enables the bird to rear its young with great security, even in the heart of the city. The only animals that are able to reach their nests are the smaller squirrels, which sometimes descend the long, slender branches upon which they are suspended, and devour the eggs.

This depredation I have never witnessed; but I have seen the Red Squirrel descend in this manner to devour the crystals of a certain insect, which was rolled up in a leaf.

The ways and manners of the Golden Robin are very interesting. He is remarkable for his vivacity, and his bright plumage renders all his movements conspicuous. His plumage needs no description, since every one is familiar with its colors, as they are seen like flashes of fire among the trees. The bird derives its specific name (Baltimore) from the resemblance of its colors to the livery of Lord Baltimore of Maryland. The name of a bird ought to have either a sylvan or a poetic origin. This has neither. I prefer, therefore, the common and expressive name of Golden Robin.

This bird is supposed to possess considerable power of musical imitation. Still it may be observed that in all cases he gives the notes of those birds only whose voice resembles his own. Thus, he often repeats the song of the Red-bird, but in doing this he varies his own notes no more than he might do without meaning any imitation. Though he repeats but few notes, he utters them with great variety of modulation. Sometimes for several days he confines himself to a single strain, and afterwards for about an equal space of time he will adopt another strain. Sometimes he lengthens his brief notes into an extended melody, and sings in a sort of ecstasy, like the birds of the Finch tribe. Such musical paroxysms are exceedingly rare in his case, and seem to be occasioned by some momentary exultation.

The Golden Robin rears but one brood of young in this part of the country, and his cheerful notes are discontinued soon after the young have left their nest. The song of the old bird seems after this period hardly necessary to the offspring, who keep up an incessant chirping from the moment of leaving their nest until they are able to accompany the old ones to the woods, whither they retire in the latter part of the season. It is remarkable,

that, after a perfect silence of two or three weeks after this time, the Golden Robins suddenly make their appearance again for a few days, uttering the same merry notes with which they hailed the arrival of summer. They soon disappear again, and before autumn arrives they make their annual journey to the South, where they pass the winter.

There is no singing-bird in New England that enjoys the notoriety of the Bobolink (*Icterus agripennis*). He is like a rare wit in our social or political circles. Everybody is talking about him and quoting his remarks, and all are delighted with his company. He is not without great merits as a songster; but he is well known and admired, because he is showy, noisy, and flippant, and sings only in the open field, and frequently while poised on the wing, so that everybody who hears him can see him, and know who is the author of the strains that afford him so much delight. He sings also at broad noonday, when everybody is out, and is seldom heard before sunrise, while other birds are pouring forth their souls in a united concert of praise. He waits until the sun is up, and when most of the early performers have become silent, as if determined to secure a good audience before exhibiting his powers.

The Bobolink, or Conquedle, has unquestionably great talents as a musician. In the grand concert of Nature it is he who performs the *recitative* parts, which he delivers with the utmost fluency and rapidity; and one must be a careful listener, not to lose many of his words. He is plainly the merriest of all the feathered creation, almost continually in motion, and singing upon the wing, apparently in the greatest ecstasy of joy.

There is not a plaintive strain in his whole performance. Every sound is as merry as the laugh of a young child; and one cannot listen to him without fancying that he is indulging in some jocose railery of his companions. If we suppose him to be making love, we cannot look upon him as very deeply enamored, but

rather as highly delighted with his spouse, and overflowing with rapturous admiration. The object of his love is a neatly formed bird, with a mild expression of countenance, a modest and amiable deportment, and arrayed in the plainest apparel. It is evident that she does not pride herself upon the splendor of her costume, but rather on its neatness, and on her own feminine graces. She must be entirely without vanity, unless we suppose that it is gratified by observing the pomp and display which are made by her partner, and by listening to his delightful eloquence of song: for if we regard him as an orator, it must be allowed that he is unsurpassed in fluency and rapidity of utterance; and if we regard him only as a musician, he is unrivalled in brilliancy of execution.

Vain are all attempts, on the part of other birds, to imitate his truly original style. The Mocking-bird gives up the attempt in despair, and refuses to sing at all when confined near one in a cage. I cannot look upon him as ever in a very serious humor. He seems to be a lively, jocular little fellow, who is always jesting and bantering, and when half a dozen different individuals are sporting about in the same orchard, I often imagine that they might represent the persons dramatized in some comic opera. These birds never remain stationary upon the bough of a tree, singing apparently for their own solitary amusement; but they are ever in company, and passing to and fro, often commencing their song upon the extreme end of the bough of an apple-tree, then suddenly taking flight, and singing the principal part while balancing themselves on the wing. The merriest part of the day with these birds is the later afternoon, during the hour preceding dewfall, and before the Robins and Thrushes commence their evening hymn. Then, assembled in company, it would seem as if they were practising a cotillon upon the wing, each one singing to his own movements, as he sallies forth and returns,—and nothing can exceed their apparent merriment.

The Bobolink usually commences his warbling just after sunrise, when the Robin, having sung from the earliest dawn, brings his performance to a close. Nature seems to have provided that the serious parts of her musical entertainment in the morning shall first be heard, and that the lively and comic strains shall follow them. In the evening this order is reversed; and after the comedy is concluded, Nature lulls us to meditation and repose by the mellow notes of the little Vesper-bird, and the pensive and still more melodious strains of the solitary Thrushes.

In pleasant, sunshiny weather, the Bobolink seldom flies without singing, often hovering on the wing over the place where his mate is sitting upon her ground-built nest, and pouring forth his notes with great loudness and fluency. The Bobolink is one of our social birds, one of those species that follow in the footsteps of man, and multiply with the progress of agriculture. He is not a frequenter of the woods; he seems to have no taste for solitude. He loves the orchard and the mowing-field, and many are the nests which are exposed by the scythe of the haymaker, if the mowing be done early in the season. Previously to the settlement of America, these birds must have been comparatively rare in the New England States, and were probably confined to the open prairies and savannas in the northwestern territory.

THE O'LINCON FAMILY.

A flock of merry singing-birds were sporting in the grove;
Some were warbling cheerily, and some were making love:
There were Bobolincon, Wadolincon, Winter-seeble, Conquedle,—
A livelier set was never led by tabor, pipe, or fiddle,—
Crying, "Phew, shew, Wadolincon, see, see, Bobolincon,
Down among the tickle-tops, hiding in the but-tercups!

I know the saucy chap, I see his shining cap
Bobbing in the clover there,—see, see, see! "

Up flies Bobolincon, perching on an apple-tree,
Startled by his rival's song, quickened by his
raillery.

Soon he spies the rogue afloat, curvetting in
the air,

And merrily he turns about, and warns him
to beware!

" 'Tis you that would a-wooing go, down
among the rushes O!

But wait a week, till flowers are cheery,—wait
a week, and, ere you marry,

Be sure of a house wherein to tarry!

Wadolink, Whiskodink, Tom Denny, wait,
wait, wait! "

Every one's a funny fellow; every one's a lit-
tle mellow;

Follow, follow, follow, follow, o'er the hill and
in the hollow!

Merrily, merrily, there they hie; now they
rise and now they fly;

They cross and turn, and in and out, and down
in the middle, and wheel about,—

With a "Phew, shew, Wadolincon! listen to
me, Bobolincon!—

Happy's the wooing that's speedily doing,
that's speedily doing,

That's merry and over with the bloom of the
clover!

Bobolincon, Wadolincon, Winterseeble, follow,
follow me! "

Oh, what a happy life they lead, over the hill
and in the mead!

How they sing, and how they play! See, they
fly away, away!

Now they gambol o'er the clearing,—off again,
and then appearing;

Poised aloft on quivering wing, now they soar,
and now they sing:—

" We must all be merry and moving; we must
all be happy and loving;

For when the midsummer has come, and the
grain has ripened its ear,

The haymakers scatter our young, and we
mourn for the rest of the year.

Then Bobolincon, Wadolincon, Winterseeble,
haste, haste, away! "

SONG OF THE SONG-SPARROW, AND ITS VARIATIONS.

THEME. 

Var. 1. *Brisk.*  *guttural.* *tr*

Var. 2. *Joyful.*  *tr*

Var. 3. *Plaintive.*  *tr* *guttural.*

Var. 4. *Fervent.*  *tr* *diminuendo.*

Var. 5. *Subdued and querulous.*  *tr* *tr*

Var. 6. *Brilliant.* *tr*

Var. 7. *Sad.*

NOTE.—The notes marked *cultural* seem to me to be performed by a rapid trilling of these notes with their octave. It should be added, that no bird sings constantly in so regular time as is represented above, and the intervals between the high and low notes are very irregular. Both the time and the tune are in great measure *ad libitum*.

SONG OF THE LINNET. (*Fringilla purpurea*.)

THEME. *tr*

Variation. *tr* *tr* *tr*

etc., etc.

SONG OF THE WREN. (*Troglodytes fulvus*.)

Sharp and shrill.

tr

Concluded Ad Libitum.

SONG OF THE ROBIN. (*Turdus migratorius*.)

Shrill. *Shrill.* etc.

Another — Flexibly modulated, as if pronouncing the words below.

NOTE.—The Robin is continually varying his notes; so that the two specimens, as given above, may be considered but the *theme* upon which he constructs his melody.

SONG OF THE WARBLING VIREO. (*V. Gilvus.*)

SONG OF THE RED-EYED VIREO. (*V. olivaceus.*)

SONG OF THE GOLDEN ROBIN. (*Icterus Baltimore.*)

THE OLD WELL.

ON a bright April morning many years ago, a stout, red-faced old gentleman, Geoffrey Purcill, followed by several workmen bearing shovels and pick-axes, took his way to a little knoll on which stood a wide-spreading chestnut-tree. When they reached the top of the knoll, the old man paused a moment and then struck his gold-headed cane upon the ground at some little distance from the trunk of the tree, saying, "Dig here."

The workmen looked at each other and then at their master.

"It would be useless to dig a well here, Sir," said one of the workmen, very respectfully,—"no water would ever come into it."

"Who asked for your opinion?" inquired Geoffrey, in an angry tone. "Do as I bid you;—the well shall be dugged here, and water *shall* come into it."

The man ventured no further remon-

strance; he took off his jacket, and struck his pickaxe into the hard, dry soil near the point where the cane rested.

Geoffrey Purcill was a choleric old gentleman, who, having had his own way all his life, was by no means inclined to forego that privilege now that he was advanced in years. As he sat beneath the chestnut-tree, one warm spring day, he felt very thirsty, and he suddenly thought what a good thing it would be to have a well there, so that he might refresh himself with a draught of clear, cool water, without the trouble of returning to the house. The more thirsty he grew, the pleasanter seemed the project to him,—a large, deep well, neatly stoned, with a sweep and buckets,—it would be a pretty object to look at, as well as comfort to man and beast. The well should be dugged forthwith, and what Geoffrey Purcill once resolved upon he was not slow to execute; and, despite the remonstrances of those who knew better than he, the work was commenced at once.

A more unpromising place for a well could not have been selected in all his extensive grounds; but he was not a man to be patiently baffled even by Nature herself, and he stood looking with grim satisfaction at the hole which rapidly widened and deepened under the vigorous efforts of his sturdy workmen.

Day after day old Geoffrey watched his workmen on the knoll. The well increased in size till it was large enough to have watered a whole caravan,—but the desert of Sahara itself was not drier. Geoffrey fumed, raved, and swore; and when two of the men were killed by the falling of the earth, and the rest absolutely refused to work any longer, he bade them go, a pack of ungrateful scoundrels as they were, and, procuring more laborers, declared “he would dig there till the Devil came to fetch him.”

Geoffrey was as good as his word;—he labored with a pertinacity worthy of a better object, and dug deeper into the bowels of the earth, and partly stoned his well,—but no water, save that which fell from heaven, ever appeared in it.

And when old Geoffrey was gathered to his fathers, he left his house and grounds to his only daughter, Eleanor Purcill, on the express condition that the well was not to be filled up, but to remain open till water did come into it.

One July day, when Geoffrey Purcill had been some twenty years with his fathers, or with Satan, (which two destinies might have been one and the same, after all, for he came of a turbulent, wicked race,) two children, a boy and girl, sat on the brink of the well and looked down into it.

It was half filled with the rubbish of the fallen stones, but it was still deep, and dark enough to tempt their curious eyes into trying to discover what lay hidden in its shadowy depths. The great chestnut-tree, rich with drooping, feathery blossoms, shaded them from the burning sun,—a few stray beams only finding their way through the glossy leaves, and resting on the golden curls of the girl.

The boy leaned over the well, and peered into it;—the little girl bent forward, as if to do the same, but drew back again.

“Take hold of my hand, Mark,” said she, “and let me lean over as you do.”

“What do you want to look in for?” asked the boy,—“there is nothing to see. Oh, yes,” continued he, mischievously, “there is a horrid dragon, just such as St. George fought with, lying all curled up in the bottom of the well, with fire and smoke coming out of his mouth.”

Rosamond Purcill was too true a descendant of old Geoffrey to be frightened at the thought of a dragon. She caught hold of Mark’s arm to steady herself, and leaned over the well.

“Let me see! let me see!” cried she, eagerly.

Mark made one or two feints of pushing her in, but at last held her firmly by the waist, while she looked in vain for the fabulous monster below.

“Where is he, Mark? I don’t see anything, and I don’t believe you saw him.”

"Oh, yes, I did," said Mark;—"there, don't you see the end of his tail sticking out from under the largest stone? May-be he has had one little girl for breakfast this morning, and don't care about another for luncheon, or else he would spring up after you, and gobble you up in a minute."

"What stories, Mark! Aunt Eleanor says there are no dragons, nor ever were."

"Pooh!" retorted Mark, contemptuously,—*"Aunt Eleanor has not seen everything that there is to be seen in the world. Look again, Rosy."*

Again the little curly head was bent over the well, somewhat puzzled which to believe, Aunt Eleanor or Mark, but half-inclined to credit Mark's eyes rather than Aunt Eleanor's words.

"Do you think that can be one of his scales?" asked she, pointing to a small piece of tin which glittered in a stray sunbeam among the stones.

Mark's eyes followed the direction of her finger, and he was about to declare that it must be a scale that the dragon had scraped off his back, wriggling among the stones, when both children were startled by a loud voice calling out, "What are you doing, children? You will fall into the well and break your good-for-nothing little necks!"

Mark and Rosamond drew back, and saw a young man, their brother Bradford, with a basket and a fishing-rod in his hand, coming up the knoll.

"Why are you here, Mark?" asked he. "Aunt Eleanor thinks it a dangerous place, and has forbidden you to play here."

Mark looked up at his brother. "I come," said he, sturdily, "for that very reason,—because I am told not to. I won't mind Aunt Eleanor, nor any other woman."

Bradford shook his head and burst out into a laugh. "Ah, Mark, my boy," said he, with a serious, comical air, "it will do very well for you to talk,—you will find out, sooner or later, that all men have to do just what women wish."

Mark opened his incredulous eyes, and

inwardly resolved that this should never be the case with him; and considering that Bradford was only eighteen, it is somewhat remarkable that he should have gained so much wisdom, either by observation or experience, at so early an age.

"Mark says," chimed in Rosamond, "that there is a dragon at the bottom of the well; and I want to see him."

"A dragon?" cried Bradford,—*"Mark is a story-teller, and you are a goose;—but if there is one, I will catch him for you"*;—and he stood on the brink of the well, and sportively threw his line into it.

"You are a pretty fellow to talk about catching a dragon, Brad!" retorted Mark, a little nettled at the tone in which Bradford spoke of him,—*"you can't even catch a shiner!"*—and he glanced at Bradford's empty basket.

Bradford laughed louder than before. "And for that very reason I expect to catch the dragon. One kind of a line will not catch all kinds of fish; and this line may be good for nothing but dragons, after all.—There! I've got a bite. Stand back, Rosy," cried he, "the dragon will be on the grass in a minute."

Bradford tried to pull up his line, but it was either entangled among the stones, or had some heavy object attached to it, for the rod bent beneath the weight as he with a strong pull endeavored to draw up his prize. Rosamond's eyes opened to their widest extent, and, fully expecting to see the dragon swinging wide-mouthed in the air over her head, drew a little closer to Mark, who, on his part, wondered what Bradford was at, and whether he was not playing some trick upon him.

When the end of the line rose to the top of the well, they saw suspended by the two hooks, not a winged, scaly monster, but a small rusty box, in the fastenings of which the hooks had caught.

Rosamond drew a long breath,—*"Is that all, Bradford? I am so sorry! I thought, to be sure, you had the dragon."*

"Never mind the dragon, Rosy," cried he; "let us see what I have caught."

Who knows but the purse of Fortunatus or the slipper of Cinderella may be in here?—they have been lost for many a day, and nobody knows where they are.”

Bradford knelt down on the grass, and, unhooking his line, strove to undo the rusty hasp; but it resisted all the efforts of his fingers, and it was only by the aid of a knife and a stone that he opened the box. In it was a morocco case, much discolored, but still in tolerable preservation, from which he drew a small manuscript book.

Rosamond's disappointment was greater than before. “It is nothing but a writing-book, after all,” said she. “I wish you had not said anything about the purse or slipper, and then I should never have thought of them. You never heard anybody say where they thought the purse and slipper were hid,—did you?”

“Come, Rosy,” cried Mark, “come down to the meadow; there is nothing more to be got out of the old well. Let us leave Brad alone with his book and his fish.”

The children turned away towards the meadow,—Rosamond meditating upon the probability of her ever finding the purse and slipper, if she should ever set out in quest of them, and Mark thinking what a fool such a big fellow as Bradford must be, to mind any woman that ever was born.

Bradford took the box and the book to the chestnut-tree, and, stretching himself at full length in the shade, began to turn over the leaves. It was a journal, written in a delicate, graceful hand; and though the paper was somewhat yellow, and the ink faded, the writing was perfectly legible. Bradford looked at it, carelessly reading here and there a sentence, till his eye catching some familiar names, he opened it at the commencement, and read as follows:—

“*December 31.*—It is the last night of the old year. A few more steps, and the old year will have vanished into the great hall of the Past, where all the ages that ever have been are gathered. I have

been sitting the last hour by myself, and have fancied that time moved not with its usual swiftness,—that the old year lingered with a sad regret, as if loath to pass away and let the new come in. Even now the midnight clock is striking,—eleven,—twelve;—the last flutter of the old year's robe is out of sight, and the new year glides in with noiseless feet, like one who enters the chamber of the dead. These are but melancholy fancies;—because I am sad myself must I put all the world in mourning? The old year did not linger;—it is only I that am loath to go. I have been so happy here, that the prospect of spending the coming year with Cousin Eleanor fills my mind with sad forebodings;—and yet my childish remembrances of her have in them nothing unpleasant. I think of her as a grave, quiet woman, who never strove to attract and win the love of a child. How I shall miss the life and gayety, the jests and laughter of Madge and Bertha! Madge the more, because she is so full of whims and oddities. To-night she came into my room, and brought this little book for me to write a journal of all that befell me while I was gone, making me promise to write often in it. Not that she ever wished to see it again. Heaven forbid that she should ever be so cruelly punished as to be made to read anybody's journal!—least of all such a stupid one as mine must be, shut up with Cousin Eleanor!—but she thought that I could never draw the book from the case (she had chosen one that fitted very tightly, and would give me much trouble for that very reason) without thinking of her;—and to be thought of often by her friends she confesses she is weak enough to wish. —Dear Madge, I could not forget her, if I would. The book just fits in a little japanned box that belonged to my grandmother, in which she used to keep rouge and pearl-powder. I will keep it in that, and remember my promise to Madge.

“*February 21.*—The journey is over, and I am at Cousin Eleanor's. How the evils that we dread shrink into nothing when we fairly meet them! Cousin

Eleanor received me kindly, and looked neither so grave nor so cold as my memory, assisted by my imagination, had pictured her; and Ashcroft is a pretty place, even in midwinter. I am never tired of sitting at the library-window, and looking at the bare branches of the black ash-trees, as they spread out their network against the winter sky. I have a little desk near the bay-window, where I have my drawing and writing materials, and where I pretend to write and draw, while Eleanor occupies a larger one at the opposite window. Eleanor is a woman of business,—keeps all her accounts, looks after her farm and servants, and manages all her own affairs, and, though a strict and exacting mistress, is neither harsh nor unkind;—she evidently intends to perform all her own duties punctually and faithfully, and expects others to do the same. I often look at her with wonder, her nature is so different from mine,—never impulsive, always cool and steady,—full of ceaseless activity, yet never hurried, and seemingly never perplexed. I sometimes think she sees the whole of her life mapped out before her, and takes up every event in order. With the exception of the servants, we are the only occupants of the house. Eleanor does not seek nor desire the society of her neighbors; and so while she works I dream, read, or answer Madge or Bertha's letters.

"*February 28.*—It has been snowing ceaselessly for two days. I have read, drawn, and sewed till I am as weary as Marianna in the moated grange. I have yawned aloud a dozen times, but Eleanor does not mind it. She has been extremely busy with accounts, papers, and letters. For the last four hours I do not think she has spoken a word. I hear nothing but the scratch of her pen as it moves over the paper, and the wind in the ash-trees. I have taken Madge's journal in despair. Ah, Madge! I wish the bonnie girl were here;—how we would talk nonsense by the hour together, just to keep our tongues in practice, and Madge

would hunt down an idea through all its turnings and windings, as if it were a hare, and she a dog in chase of it! A ring at the door;—I hope it may be some human body that will make Cousin Eleanor open her lips at last.

"*March 1.*—The blots on the opposite page show with what haste I shut up my journal yesterday. The ring at the door brought more than I anticipated, and opened my eyes effectually for the rest of the day. 'Mr. Lee,' said the servant, throwing the library-door wide open, and ushering in a man wrapped in a cloak, with a travelling-cap in his hand. Cousin Eleanor rose instantly, and advanced to meet him. I expected to see her extend her hand towards him, and welcome him in her usual courteous manner. Instead of that, she gave him a hearty kiss, which could be heard as well as felt, and which was returned, as I thought, with interest. If the marble Widow Wadman in the library had kissed the sympathizing face of Uncle Toby, I should not have been so much surprised, and should have thought it much more likely to happen.

"'I am very glad to see you, Thornton,' said she. 'I did not think you could come till to-morrow.'

"'I have made the best use of my time,' returned he, 'and had no wish to spend my precious hours at a country inn. It seemed good to see winter and snow again, after so many months of summer.'

"Bending forward to catch a better view of him, as he spoke, the rustling of my dress reminded Eleanor of my presence.

"'My cousin Elizabeth Purcill, Thornton Lee,' said she. 'My two good friends I hope will also be friends to each other.'

"Mr. Lee made me a gentlemanly bow, and said something about the pleasure of seeing me; but more than suspecting that my presence in the library was no pleasure to either of them, I shut up my journal, crowded it into the box, and stole out of the room at the first convenient opportunity. On the stairs I met Mrs. Bickford, the housekeeper.

"'Is any one in the library with Miss Purcill?' asked she.

"'Yes,—a Mr. Lee.'

"'Mr. Lee?' exclaimed she, in surprise. 'I did not know as he was expected home now.'

"'Who is Mr. Lee?'

"'He is the gentleman whom Miss Purcill is to marry; but I thought he was not coming till autumn. I wonder if she knew it.'

"What Eleanor knows she always keeps to herself; none of her household are any the wiser for it. I was more surprised than Mrs. Bickford. Eleanor affianced! I never thought or dreamed of such a thing. Eleanor in love must be a curious spectacle. I did not feel sleepy any longer. What could a woman, so independent, so self-relying, so sufficient for herself, want of a lover? She always seemed to be a whole, and did not need another half to complete herself. I speculated much on the subject, and, when the bell rang for tea, went down-stairs with something of the same feeling of eager curiosity with which I open the pages of a good novel. There is nothing so interesting to idle, observant people as a pair of lovers, provided they are not silly, in which stage they are perfectly unbearable, and never should suffer themselves to be seen even by their intimate friends. Was it my fancy, or not? I thought Eleanor had grown young since I left the library. A soft light beamed in her eyes, and a clear crimson—the first trace of color I had ever seen in her face—burned on her cheek. It was a very different countenance from that at which I had been casting sidelong glances half the day, and yet it seemed to me that she was ashamed of these signs of joy, and thought it but a weakness to feel so glad. I sat silent nearly all the evening;—words always come more readily to my pen than to my lips, and, were it not so, there would have been no occasion for any speech of mine. Their conversation flowed on uninterruptedly, like a full, free river, whose current is strong and deep. How much richer both their

lives seemed than mine! He had travelled, thought, seen, and felt so much, and had brought such wealth home with him, fitly coined into aptly chosen words; and she had gathered treasures as priceless from the literature of her own and foreign lands. I had nothing to offer either of them but my ears, and for those I doubt whether they felt grateful,—and when that doubt became a certainty, I crept into the great window in the drawing-room, and looked out upon the lawn. The moon, breaking through the clouds, shone brightly on the new-fallen snow. I sat down on a low chair,—the curtains fell about me,—their voices came to me with a low, dreamy sound,—I leaned my head on my hand, and fell asleep. When I awoke, the fire had died away, and the chairs were empty.

"*March 20.*—Mr. Lee comes every day. His father lives only a few miles from us,—a distance so short as to be no obstacle to a lover with a good horse; though I suspect, if the horse could speak, he would wish the distance either less or greater. These midnight rides must be detrimental to the constitution of any steady horse, and he often wakes me up at night, pawing impatiently under the window while his master is making his lingering adieux on the door-step.

"*April 1.*—I dislike Eleanor more every day. I know not why, unless because I watch her so closely. When Mr. Lee is not here she works as industriously as ever. If I were in love, I would give myself up to a dream or reverie now and then, and build myself an air-castle, if it were only to see it tumble down, and call myself a fool for my pains; but she is too matter-of-fact to do that. Well, if there is not much romance about her love, perhaps there is more reality; yet Thornton Lee is just the man one could make an ideal of, if one only would. But this is not what I especially dislike her for; people must love according to their own nature and temperament, and not after another's pattern. The thing that frets me most just now is the way that Eleanor has of divining my thoughts before they

are spoken, and even before they are quite clear to myself. Sometimes, when we are talking together, some subject comes up on which I do not care to express my opinion. Eleanor fixes her clear, penetrating eyes upon me, and drags my thought out into the light, just as a kingfisher pounces upon and pulls a fish out of the water. Had I anything to conceal, any secret, I should be afraid of her; and as it is, I do not like this invasion of my personal kingdom,—though my thoughts often acquire new strength and beauty from Eleanor's strong and vigorous language. Last evening, Mr. Lee, Eleanor, and myself were turning over the prints in a large portfolio. We paused at one, the Departure of Hagar into the Wilderness. The artist had represented Hagar turning away from the door of the tent with Ishmael and the bottle of water; Abraham was near her; while Sarah in the background with a triumphant face exulted at the driving out of the bondmaid. The picture had not much merit as a work of Art; but in Hagar's face was such a look of despairing, wistful tenderness, as she turned towards Abraham for the last time, that it moved me almost to tears. I drew a long breath as the picture was turned over. Looking up, I saw Eleanor's eyes fixed upon me.

"You pity Hagar, then? You think it was a harsh and cruel thing to drive her out into the wilderness with her child?"

"Yes," said I, shortly,—a little provoked that she should have seen it in my face.

"She went on: 'Sarah was right. Had I been she, I would have driven her out as remorselessly and as pitilessly. Did she not, presuming upon her youth, her beauty, and her child, despise her mistress? and why should her mistress feel compassion for her? The love of a long life might well thrust aside the passion of a few months, and Sarah, contemned by her bondmaid, is more worthy of pity than Hagar, in my eyes.'

"I was about to say that Sarah was more to blame for Hagar's conduct than

she was herself, when Mr. Lee observed 'that Abraham was more to be pitied than either of them, for he was unable or unwilling to protect either of the women whom he loved,—his wife from the contempt of her bondmaid, or the bondmaid from the fury of his wife.'

"I fancied Eleanor did not exactly like this remark, for she turned to the next print hastily and began commenting upon it.

"May 6.—The groves and fields are beautiful with the fresh beauty of the early spring. We have given up our winter occupations for long rambles on the hills and in the woods. I sometimes decline being a third in the lovers' walks; but Eleanor seems so dissatisfied, if I refuse to accompany them, that I consent, lagging behind often, and have learned to be both blind and deaf as occasion requires. I think, too, that Mr. Lee is not sorry to have me with them. He and Eleanor have been separated for three years, and I sometimes wonder if they have not grown away from each other in that time. A long absence is a dangerous experiment even for friends, much more for lovers. Besides, no life is long enough to allow such great gaps in it.

"June 1.—We were sitting yesterday under the ash-trees on the lawn,—Eleanor netting, Mr. Lee reading Dante aloud, and I making myself rings and bracelets out of the shining blades of grass, and pretending to listen, when a servant brought Eleanor a letter. It was very short, for she did not turn the leaf. When she had read it she drew out her watch.

"I have an hour before the express-train starts. Tell Mrs. Bickford to pack my trunk for a journey. Harness the black horse to drive to the station.'

"She put the letter into Mr. Lee's hands. 'My brother is very ill, and I shall go to him at once. Elizabeth, I am sorry to leave you here alone, but while I am gone I hope Thornton will consider you under his charge and protection.'

"She rose, as she spoke, and went towards the house, followed by Thornton.

In a few minutes she appeared again, dressed in a gray travelling-dress,—kissed me lightly on the cheek, and bade me good-bye. All her preparations for this long journey had been made without any hurry or confusion, and she did not apparently feel so agitated or nervous at the thought of travelling this distance alone as I should to have gone by myself to the nearest town. Why Thornton did not accompany her, whether he could not or she did not wish it, I do not know; but he parted from her at the station, and soon returned for his horse.

"July 1.—Eleanor has been gone a month; in that time we have received but one letter from her. Her brother still lies in a very critical state, and she will not leave him at present. His motherless children, too, she thinks require her care. It seemed very lonesome at first without her. I did not think I could have missed an uncongenial person, one with whom I had so little sympathy, so much. I think I must belong to the tribe of creeping plants, which cling to whatever is nearest to them. Ashcroft grows daily more beautiful, and Thornton comes often to see me. We read together books that I like, (not Dante.) walk and sketch. We are on excellent terms, and call each other Cousin in view of our future relationship. I can talk more freely to him, now that Eleanor is not here,—and feel no disposition to hide my thoughts, now that I can keep them to myself, if I choose.

"July 24.—A week ago, one fair midsummer afternoon, we strolled to the knoll, and sat down under the blossoming boughs of the chestnut-tree.

"‘I think,’ said I, ‘this is the pleasantest place in all the grounds; but Eleanor never seemed willing to come here.’

"‘Eleanor has many unpleasant remembrances connected with the place,’ replied Thornton. ‘Her father’s obstinate persistence in digging the well was a great annoyance to the whole household, and, unimaginative as Eleanor is, I fancy sometimes, from her avoidance of the spot, that she has some superstitious idea

connected with the well,—that she fears through it some great misfortune may happen to some of the family.’

"‘I hardly see how that can be,’ said I, rising and going to the brink of the well; ‘it is very deep, but there was never any water in it.’

"Just then I caught sight of a little flower growing out of the cleft of one of the stones. I knelt down and bent over to reach it. I slipped, I know not how, and should have fallen, had not Thornton sprung to my side and caught me.

"‘Ah, my foolish cousin!’ said he, ‘there needs not to be water in the well to make it a dangerous place. Promise me that you will not attempt such a thing again.’

"‘Not I,’ said I, laughing gayly to conceal my fright,—for I did think I was about to break my neck on the stones below. ‘There is no harm done, and I have got what I was after,’—and I held up the flower.

"It was an ugly little thing, and looked not half so pretty in my hand as it did in the shadow of the well. I would not have gathered it, had I seen it growing by the roadside. ‘Is it not pretty?’

"‘Humph!’ said he, ‘very!—worth breaking one’s neck for!’

"‘I was about to offer it to you, but, since you despise it, I will keep it myself,’—and I stuck it into my hair.

"Some time after, I missed the flower. I did not see it on the grass, but a leaf strangely similar peeped out of Thornton’s waistcoat-pocket. When we passed by the well, on leaving the knoll, ‘Promise me,’ said he again, ‘that you will not reach over the well for flowers any more.’

"I was a little irritated at his pertinacity. ‘I shall do no such thing,’ returned I; ‘you are growing as superstitious as Eleanor. On the contrary, I think I shall make a garden there and tend it every day; and whenever I go away from Ashcroft, I will leave something on the stone for you, to show how idle your fears are.’

"Thornton did not answer. He was provoked, but showed his anger only by

his silence. We sauntered back to the house in a different mood from that in which we had left it.

"August 4.—Thornton came into the library to-day with a letter from Eleanor. She cannot leave her brother, and wrote to Thornton about some papers that she wished sent to her without delay. They were in the drawer of the desk at which I was sitting. Thornton said he was in haste, as he wished to prepare the packet for the next mail. I rose at once. In his hurry he knocked the little japanned box on to the floor. Begging pardon for his awkwardness, he picked it up, and looked at it a moment to assure himself that it had suffered no damage.

"'It is a curious little thing,' said he, 'and looks as if it were a hundred years old.'

"'It belonged once to my grandmother, and held pearl-powder and rouge,' said I.

"'And is used for the same purpose now?' inquired he.

"'Yes,' returned I, my cheek reddening a little. 'I was just putting some on as you entered.'

"'It must be very uncommon rouge,' remarked he, quietly fixing his eyes on me; 'it grows red after it is put on, and must require much care in the use of it.'

"'I thought you were in a great hurry, Thornton, when you came in.'

"'And so I am';—and he began undoing and separating papers, but every few moments he would steal a glance—a glance that made me feel uneasy—towards me, as I sat at the other window busying myself with my needle.

"August 25.—I wish Eleanor would come home. I sometimes think I will go away; but to leave Ashcroft now would imply a doubt of Thornton's honor, and impute thoughts to him which perhaps have no existence but in my vanity.

"October 3.—Ah, why was I so foolish? Why did I not go when I saw the danger so clearly, instead of cheating myself into the belief that there was none? Would that I had never come to Ashcroft, or had had the courage to leave it! These last six weeks, I do not know, I

cannot tell, how they have been spent. Thornton was ever by my side, and I—did not wish him away. We sat this afternoon on the lawn under the great ash-tree,—the one under which he sat reading Dante to Eleanor the last day she was with us. The love which had burned in his eyes all day found utterance at last, and flamed out in fiery, passionate words. He drew me towards him. His vehemence frightened me, and I muttered something about Eleanor. It checked him for a moment, but, quickly recovering, he spoke freely of himself and of her,—of the love which had existed between them,—a feeling so feeble and so poor, compared to that which he felt for me, as to be unworthy of the name. He entreated, he implored my love. I was 'silent. He bent over me, gazing into my face. There was a traitor lurking in my heart, which looked out of my eyes, and spoke without my consent. He understood that language but too well. I bent my eyes upon the ground,—his arm was around my waist, his hand clasped mine, his lips approached my cheek. A shadow seemed suddenly to come between me and the sun. I looked up and saw Eleanor, clad in mourning, standing before us. I started at once to my feet, and, like the coward that I am, fled and left them together. I ran down to the old hawthorn-tree, against which I leaned, panting and trembling. Yet, in a few moments, ashamed of my weakness, I stole back to where I could see them unobserved. Eleanor stood upon the same spot, calm and motionless. Thornton was speaking, but I was too far off to hear more than the sound of his voice. When he had ended, he approached her, as if to bid her adieu; but she passed him with a stately bow, and entered the hall-door. Thornton took his way to the stables, and I soon heard the clattering of his horse's hoofs on the hard gravelled road. When the sound died away in the distance, I stole into the house and crept up to my chamber. How long I was there I could not tell; but when I heard the bell ring for tea, I washed my face and smoothed my hair.

I would not be so cowardly as to fear to see Eleanor again, and perhaps it would be better for us both to meet in the presence of a third person.

"Mrs. Bickford was alone at the table. 'Miss Purcill would not come down to-night,—she was fatigued with her journey.'

"The good lady strove to entertain me with her conversation, but, finding that I neither heard, answered, nor ate, our meal was soon brought to a close. It is long past midnight. I have thought till I am sick and giddy with thinking. I cannot sleep, and have been writing here to control the wildness of my imaginings. I have been twice to Eleanor's chamber. The door is half ground-glass, and I can see her black shadow as she walks to and fro across the room. She has been walking so ever since she entered it.

"October 4. — What shall I do? Where shall I go? All night and all day Eleanor has walked her chamber-floor. I have been to the door. I have knocked. I have called her by name. I have turned the handle,—the door is locked. No answer comes to me,—nothing but the black shadow flitting across the panes. I sat down by the threshold and burst into tears.

"Mrs. Bickford found me there. 'Do not grieve so, Miss Elizabeth,' said she, kindly. 'It is dreadful, I know; but Miss Purcill walked the floor all night after her father died, and would admit no one to her room. She will be better to-morrow.'

"I shook my head. Could I believe that grief for the dead, and not sorrow for the conduct of the living, moved her thus, I should be happy. Then I could offer consolation and sympathy; but now, if I saw her, what could I say? Pity, sorrow for her grief, would be but idle words, which she would spurn with contempt,—and she would be right. There is but one thing left for me,—I must go from Ashcroft; then, perhaps, she and Thornton—But no, it cannot be; so wide asunder, they cannot come together again. And do I wish it? Is not his love as much mine now as it ever was

hers? Ah, how some words once spoken cannot be forgotten! Before me now is the little picture of Hagar, which Eleanor had framed and hung in the library. Did she place it before my eyes as a warning to me? In Hagar's fate I see my own; for even now I hear Eleanor asking if the passion of a few hours is to thrust aside the love of long years. The bondmaid will go ere she is driven out. But Thornton—I cannot, will not, see him again. He has written to me to-day, saying that he cannot come here, and asking me to meet him at the well to-morrow. By that time I shall be far on my way to Madge. He will wait for me, and I shall not come. How can I leave him thus? He will believe me heartless and cruel. I grieve even now for his pain and grief. He will think that I did not love, but only sported with him. How dearly I love him words cannot tell; and I go that his way may be smoother, and that in my absence he may find—peace at last. A little dried flower lies on the page that I turned. It is one of those that grew in the well, that I wore on my bosom one day, that he might see and know it, and chide me for having been there again. His chiding was sweeter to me than others' praise. I will not be so unjust to myself. I will not go without one word. I jestingly told him once I would leave a token for him on the stone in the well when I went away from Ashcroft. I will put my journal there. He will see the box and remember it. He will learn that I have gone, and will know that I love, but that I leave and renounce him."

The remaining pages of the book were blank. Elizabeth Purcill's journal was ended. Bradford was busy with conjectures. Why had not Thornton found and kept the journal intended for him? Had it fallen at once to the bottom of the well, and lain there for years, while he waited in vain for her coming or her token? Her departure had not brought Eleanor Purcill and Thornton Lee together; for his aunt still remained un-

wedded, and he came every Sunday to the village church, with a sweet matronly-faced woman on his arm, and two children by his side.

Bradford thrust the journal into his pocket, took up his fishing-rod and basket, and sauntered towards the village. He thought he remembered the name of Elizabeth Purcill on a head-stone in the church-yard. He opened the little wicket and went in. The setting sun threw the long shadows of the head-stones across the thick, rank grass. The sounds of the village children at play on the green came to his ear softened and mellowed by the distance.

He turned towards the spot where, year after year, the Purcills had been gathered,—those who had died in their beds in their native town, and those who had perished in far-off climes, and whose bones had been brought to moulder by the old church-wall. He found the stone, and, bending down, read, "Elizabeth Purcill, died Oct. 5th, 18—, aged 19." Bradford opened the journal and looked at the last date. She had died, then, the day after the journal was ended. But how, and where?

He sat down on the flat stone which covered his grandfather, and turned over the pages again, as if they could tell him more than he already knew. So absorbed was he, that he did not see a woman who a few minutes afterwards knelt down before the same stone, and with a sickle began to cut away the weeds and grass.

Bradford looked up at last, and, as the woman raised her head for an instant, saw that it was Mrs. Bickford. He approached her and called her by name. She gave a little start, as she heard his voice.

"Why, Master Bradford, who would have thought of seeing you here at this time?"

Bradford smiled. "Whose grave is this that you are taking such pains to clear?"

She pointed to the name with her sickle.

"Yes, I know all that that can tell me. But who was Elizabeth Purcill?—what re-

lation was she to me?—and how came she to die so young, and to be buried here?"

"Why do you think I should know?" she replied. "People often die young; and no matter where the Purcills die, they all wish to come here at last;—that one died in Cuba,—that in France,—that in Greece,—and that at sea." And she turned her hand towards them, as she spoke.

"But you do not care for their graves; look, how the grass and weeds nod over that tombstone; and you would not clear this, unless you knew something about the girl that lies underneath it."

"It is an old story," said she, with a sigh, "and I can tell you but little of it."

She laid her sickle down on the cut grass and sat down by it.

"Elizabeth Purcill was the daughter of your grandfather's brother, and therefore your father's cousin. Long as I have lived in the family, I never saw him; for he went to India, while a young man, to seek a fortune, which was found too late to benefit either himself or his children. Elizabeth, his eldest daughter, was sent home for her education, and lived first with one of her kinsfolk, and then another, as her father's whims or their convenience dictated. You remember, though so young, when your Aunt Eleanor came to your father's house on her way to your Uncle Erasmus in his last illness?"

Bradford nodded.

"A little before that time Elizabeth Purcill came to Ashcroft. She was a pretty, lively girl, and it was pleasant to see in our sober household one who had time to be idle and could laugh. Your Aunt Eleanor was always a busy woman,—busier then than she is now,—and had no time for mirth. Every servant in the house liked Miss Elizabeth for her sunny smile and her pleasant ways. Shortly afterwards, Thornton Lee came home. He had been three years in Africa, and he and your aunt were to be married in the autumn.

"When Miss Purcill went away, Mr. Lee remained, and came often to see

Miss Elizabeth. She had a winsome face, that few men could look upon and not love; and I sometimes thought, when I saw them together, how much better she was suited to Mr. Lee than your Aunt Eleanor, and wondered if he had not found it out himself. Your aunt was away a long time, and, by some mistake, the letter, saying that she was coming home, did not reach us till the day after her arrival.

"It was a beautiful October afternoon. I had been gathering the grapes that grew on the garden wall, and was carrying a basket of them to Miss Elizabeth, whom I had seen, half an hour before, with Mr. Lee, on the lawn. As I was crossing the hall, Miss Purcill, dressed in deep mourning, looking ghastly pale, entered the front door. I started as if I had seen a ghost, and dropped my basket. Miss Eleanor passed me quickly and went up-stairs. I spoke to her. She did not answer, but, entering her chamber, fastened the door behind her.

"I looked out of the window. No one was on the lawn; but presently I saw Mr. Lee coming out of the stable, leading his horse. He mounted and was out of sight in an instant. Miss Elizabeth was nowhere to be seen. What had happened I could not tell. I could only guess.

"Miss Elizabeth was the only one who came to tea, and her eyes were heavy and dull, and she seemed like one in a dream. That night was a wretched one to both. When I went to the library to see if the windows were fastened for the night, Miss Elizabeth sat by the smouldering fire with her face buried in her hands. I shut the door softly and left her, and till I slept I heard Miss Eleanor's steps across her chamber-floor.

"The day was no better than the night. Miss Purcill did not leave her room, and her cousin wandered about the house, as if her thoughts would not let her rest. Once I found her in tears at your aunt's door, and tried to console her; but she shook her head impatiently, as if I could not understand the cause of her grief.

"The next morning, while I was dress-

ing, my niece Sally came to me in great haste, saying that Roger, the gardener, wished to see me at once. I hurried on my clothes and went down. I knew by the man's face that something dreadful had happened; but when he told me that he had been to the old well, and had found Miss Elizabeth lying dead at the bottom of it, I felt as if I was stunned.

"I roused myself at last. I ran to Miss Purcill's door. I shook it violently and called her by name. She came and opened the door in her night-dress. Somehow, I know not and cared not how, for it seemed to me that she had something to do with all this, I told her that her Cousin Elizabeth was lying dead at the bottom of the old well. She staggered and leaned against the door like one who had received a heavy blow. For a moment I repented my roughness. But she was soon herself again. She thrust her feet into her slippers, and, wrapping her dressing-gown about her, went down-stairs, and gave directions, as calmly and collectedly as if she were (Heaven help her!) ordering a dinner for the men — to bring the body home. Ah, me! I never shall forget how the poor thing looked when the four men who bore the litter set it down on the library-floor. A bruise on the temple showed where she had struck on the cruel stones. The hoarfrost, which had turned into drops of dew, glittered among her soft brown curls."

The tears which had been gathering in Mrs. Bickford's eyes fell in large drops into her lap as she went on.

"On the day of the funeral, she lay in the library, still and cold in her coffin. I had gathered a few flowers, with which I was vainly trying to cheat death into looking more like life, by placing them on her bosom and in her stiffened fingers. Miss Eleanor sat at the foot of the coffin, almost as motionless as the form within it. I had finished my task and turned away, when the door opened and Mr. Lee came in silently. A slight shudder went through him, as he came to the coffin and bent over it. What a change had three days made in the man! Ten years would not

have taken so much youth and life from him and made him look so old and wan. He looked upon her as a man who looks his last upon what he loved best in the world;—his whole soul was in his eyes.

"I think he did not see Miss Eleanor till he was about to leave the room. She had not spoken, and he was unconscious of her presence. He turned towards her and held out his hand; his lips moved, but no words escaped them. I heard Miss Purcill's low, unfaltering answer to his unspoken thoughts. She did not take his proffered hand, but said, 'Nothing can unite us again, Thornton,—not even death.'

"His hand dropped by his side;—he quickly left the room, and never came to Ashcroft again. When I went to take a last look of Miss Elizabeth, I saw that the white rose which I had placed in her hand was gone;—he had taken it."

Mrs. Bickford paused. Her story was ended. In a few minutes she took up her sickle again, and Bradford stood leaning against the head-stone till the grass was all cut on the grave. He had no more questions to ask,—for the journal had told him more of the dead below, than Mrs. Bickford, with all her love and sympathy, could do. She had fallen into the well, then, while endeavoring to place the box on the stone. When Mrs. Bickford's task was done, she walked silently back to Ashcroft with Bradford.

Late in the evening he was alone in the library with his Aunt Eleanor. The picture of Hagar, now so full of interest to him, still hung on the wall, and the little desk was at the window which looked out upon the lawn. Should he show the journal to his aunt, or keep it to himself? Would Elizabeth Purcill wish her Cousin Eleanor to read her written words as she once read her untold thoughts?

Wrapped up in his own musings, he started suddenly when Miss Purcill said to him, "Rosamond tells me that you found a book to-day in the old well; what was it?"—and answered promptly, "It was Elizabeth Purcill's journal."

It was the first time Eleanor had heard the name for years. She showed no

signs of emotion. "I should like to see it," said she; "give it to me."

Bradford had been brought up in such habits of obedience, that he never thought of disputing his aunt's command. He drew the journal from his pocket and handed it to her without speaking.

"You have read it?" said she, fixing her keen eyes upon him.

"Yes."

She drew the lamp towards her and opened the book. The shade on the lamp kept the light from her face; but had Bradford seen it, it would have told him no more of the thoughts beneath it than the stone in the churchyard had told him of Elizabeth Purcill.

He watched her turning over the leaves slowly, and thought that her hand trembled a little at the close. Those pages must have stirred many a memory and many a grief, as the wind shakes the bare boughs of the trees, though blossom, fruit, and leaves have long since fallen.

She closed the book, and spoke at last:—"I think, Bradford, this book belongs rightfully but to one person,—Mr. Thornton Lee. Shall I send it to him?"

Eleanor's question was uttered in a tone that seemed to admit of but one reply. Bradford assented. If he might not keep the journal himself, he would rather Thornton Lee should have it than his aunt.

The next day, Thornton Lee received a small packet, accompanied by a note which ran thus:—

"To do justice to the memory of one who, years ago, came between us, I send you this little book, found in the old well yesterday. From it you will learn how she came by her death, and—how much she loved you. ELEANOR PURCILL."

As Thornton Lee read the journal, his children climbed his knee and twined his gray curls around their fingers, and his wife came and leaned sportively over his shoulder and looked at the yellow leaves.

In some lives, as in some years, there is an after-summer; but in others, the hoar-frosts are succeeded by the winter snow.

THE DEAD HOUSE.

HERE once my step was quickened,
 Here beckoned the opening door,
 And welcome thrilled from the threshold
 To the foot it had felt before.

A glow came forth to meet me
 From the flame that laughed in the grate,
 And shadows a-dance on the ceiling
 Danced blither with mine for a mate.

"I claim you, old friend," yawned the arm-chair,—
 "This corner, you know, is your seat."
 "Rest your slippers on me," beamed the fender,—
 "I brighten at touch of your feet."

"We know the practised finger,"
 Said the books, "that seems like brain";
 And the shy page rustled the secret
 It had kept till I came again.

Sang the pillow, "My down once quivered
 On nightingales' throats that flew
 Through moonlit gardens of Hafiz
 To gather quaint dreams for you."

Ah, me, where the Past sowed heart's-ease,
 The Present plucks rue for us men!
 I come back: that scar unhealing
 Was not in the churchyard then.

But, I think, the house is unaltered;
 I will go and beg to look
 At the rooms that were once familiar
 To my life as its bed to a brook.

Unaltered! Alas for the sameness
 That makes the change but more!
 'Tis a dead man I see in the mirrors,
 'Tis his tread that chills the floor!

To learn such a simple lesson
 Need I go to Paris and Rome,—
 That the many make a household,
 But only one the home?

'Twas just a womanly presence,
 An influence unexpressed,—

But a rose she had worn on my grave—
Were more than long life with the rest!

'Twas a smile, 'twas a garment's rustle,
'Twas nothing that I can phrase,—
But the whole dumb dwelling grew conscious,
And put on her looks and ways.

Were it mine, I would close the shutters,
Like lids when the life is fled,
And the funeral fire should wind it,
This corpse of a home that is dead.

For it died that autumn morning
When she, its soul, was borne
To lie all dark on the hillside
That looks over woodland and corn.

THE AUTOCRAT OF THE BREAKFAST-TABLE.

EVERY MAN HIS OWN BOSWELL.

[I DID not think it probable that I should have a great many more talks with our company, and therefore I was anxious to get as much as I could into every conversation. That is the reason why you will find some odd, miscellaneous facts here, which I wished to tell at least once, as I should not have a chance to tell them habitually, at our breakfast-table.—We're very free and easy, you know; we don't read what we don't like. Our parish is so large, one can't pretend to preach to all the pews at once. Besides, one can't be all the time trying to do the best of one's best; if a company works a steam fire-engine, the firemen needn't be straining themselves all day to squirt over the top of the flagstaff. Let them wash some of those lower-story windows a little. Besides, there is no use in our quarrelling now, as you will find out when you get through this paper.]

—Travel, according to my experience, does not exactly correspond to the idea one gets of it out of most books of

travels. I am thinking of travel as it was when I made the Grand Tour, especially in Italy. Memory is a net; one finds it full of fish when he takes it from the brook; but a dozen miles of water have run through it without sticking. I can prove some facts about travelling by a story or two. There are certain principles to be assumed,—such as these:—He who is carried by horses must deal with rogues.—To-day's dinner subtends a larger visual angle than yesterday's revolution. A mote in my eye is bigger to me than the biggest of Dr. Gould's private planets.—Every traveller is a self-taught entomologist.—Old jokes are dynamometers of mental tension; an old joke tells better among friends travelling than at home,—which shows that their minds are in a state of diminished, rather than increased vitality. There was a story about "strahps to your pahnts," which was vastly funny to us fellows—on the road from Milan to Venice.—*Celum, non animum*,—travellers change their guineas, but not their characters. The

bore is the same, eating dates under the cedars of Lebanon, as over a plate of baked beans in Beacon Street.—Parties of travellers have a morbid instinct for “establishing raws” upon each other.—A man shall sit down with his friend at the foot of the Great Pyramid and they will take up the question they had been talking about under “the great elm,” and forget all about Egypt. When I was crossing the Po, we were all fighting about the propriety of one fellow’s telling another that his argument was *absurd*; one maintaining it to be a perfectly admissible logical term, as proved by the phrase, “*reductio ad absurdum*”; the rest badgering him as a conversational bully. Mighty little we troubled ourselves for *Padus*, the Po, “a river broader and more rapid than the Rhone,” and the times when Hannibal led his grim Africans to its banks, and his elephants thrust their trunks into the yellow waters over which that pendulum ferry-boat was swinging back and forward every ten minutes!

—Here are some of those reminiscences, with morals prefixed, or annexed, or implied.

Lively emotions very commonly do not strike us full in front, but obliquely from the side; a scene or incident in *undress* often affects more than one in full costume.

“Is this the mighty ocean?—is this all?” says the Princess in Gebir. The rush that should have flooded my soul in the Coliseum did not come. But walking one day in the fields about the city, I stumbled over a fragment of broken masonry, and lo! the World’s Mistress in her stone girdle—*alta mœnia Romæ*—rose before me and whitened my cheek with her pale shadow as never before or since.

I used very often, when coming home from my morning’s work at one of the public institutions of Paris, to stop in at the dear old church of St. Etienne du Mont. The tomb of St. Genevieve, surrounded by burning candles and votive tablets, was there; the mural tablet of

Jacobus Benignus Winslow was there; there was a noble organ with carved figures; the pulpit was borne on the oak-shoulders of a stooping Samson; and there was a marvellous staircase like a coil of lace. These things I mention from memory, but not all of them together impressed me so much as an inscription on a small slab of marble fixed in one of the walls. It told how this church of St. Stephen was repaired and beautified in the year 16**, and how, during the celebration of its reopening, two girls of the parish (*filles de la paroisse*) fell from the gallery, carrying a part of the balustrade with them, to the pavement, but by a miracle escaped uninjured. Two young girls, nameless, but real presences to my imagination, as much as when they came fluttering down on the tiles with a cry that outscramed the sharpest treble in the *Te Deum*! (Look at Carlyle’s article on Boswell, and see how he speaks of the poor young woman Johnson talked with in the streets one evening.) All the crowd gone but these two “*filles de la paroisse*,”—gone as utterly as the dresses they wore, as the shoes that were on their feet, as the bread and meat that were in the market on that day.

Not the great historical events, but the personal incidents that call up single sharp pictures of some human being in its pang or struggle, reach us most nearly. I remember the platform at Berne, over the parapet of which Theobald Weinzäpfli’s restive horse sprung with him and landed him more than a hundred feet beneath in the lower town, not dead, but sorely broken, and no longer a wild youth, but God’s servant from that day forward. I have forgotten the famous bears, and all else.—I remember the Percy lion on the bridge over the little river at Alnwick,—the leaden lion with his tail stretched out straight like a pump-handle,—and why? Because of the story of the village boy who must fain bestride the leaden tail, standing out over the water,—which breaking, he dropped into the stream far below, and was taken out an idiot for the rest of his life.

Arrow-heads must be brought to a sharp point, and the guillotine-axe must have a slanting edge. Something intensely human, narrow, and definite pierces to the seat of our sensibilities more readily than huge occurrences and catastrophes. A nail will pick a lock that defies hatchet and hammer. "The Royal George" went down with all her crew, and Cowper wrote an exquisitely simple poem about it; but the leaf that holds it is smooth, while that which bears the lines on his mother's portrait is blistered with tears.

My telling these recollections sets me thinking of others of the same kind that strike the imagination, especially when one is still young. You remember the monument in Devizes market to the woman struck dead with a lie in her mouth. I never saw that, but it is in the books. Here is one I never heard mentioned;—if any of the "Note and Query" tribe can tell the story, I hope they will. Where is this monument? I was riding on an English stage-coach when we passed a handsome marble column (as I remember it) of considerable size and pretensions.—What is that?—I said.—That, —answered the coachman,—is *the hangman's pillar*. Then he told me how a man went out one night, many years ago, to steal sheep. He caught one, tied its legs together, passed the rope over his head, and started for home. In climbing a fence, the rope slipped, caught him by the neck, and strangled him. Next morning he was found hanging dead on one side of the fence and the sheep on the other; in memory whereof the lord of the manor caused this monument to be erected as a warning to all who love mutton better than virtue. I will send a copy of this record to him or her who shall first set me right about this column and its locality.

And telling over these old stories reminds me that I have something that may interest architects and perhaps some other persons. I once ascended the spire of Strasburg Cathedral, which is the highest, I think, in Europe. It is a shaft of stone

filigree-work, frightfully open, so that the guide puts his arms behind you to keep you from falling. To climb it is a noon-day nightmare, and to think of having climbed it crisps all the fifty-six joints of one's twenty digits. While I was on it, "pinnacled dim in the intense inane," a strong wind was blowing, and I felt sure that the spire was rocking. It swayed back and forward like a stalk of rye or a cat-o'-nine-tails (bulrush) with a bobolink on it. I mentioned it to the guide, and he said that the spire did really swing back and forward,—I think he said some feet.

Keep any line of knowledge ten years and some other line will intersect it. Long afterwards I was hunting out a paper of Dumeril's in an old journal,—the "*Magazin Encyclopédique*" for *l'an troisième*, (1795,) when I stumbled upon a brief article on the vibrations of the spire of Strasburg Cathedral. A man can shake it so that the movement shall be shown in a vessel of water nearly seventy feet below the summit, and higher up the vibration is like that of an earthquake. I have seen one of those wretched wooden spires with which we very shabbily finish some of our stone churches (thinking that the lidless blue eye of heaven cannot tell the counterfeit we try to pass on it) swinging like a reed, in a wind, but one would hardly think of such a thing's happening in a stone spire. Does the Bunker-Hill Monument bend in the blast like a blade of grass? I suppose so.

You see, of course, that I am talking in a cheap way;—perhaps we will have some philosophy by and by;—let me work out this thin mechanical vein.—I have something more to say about trees. I have brought down this slice of hemlock to show you. Tree blew down in my woods (that were) in 1852. Twelve feet and a half round, fair girth;—nine feet, where I got my section, higher up. This is a wedge, going to the centre, of the general shape of a slice of apple-pie in a large and not opulent family. Length, about eighteen inches. I have

studied the growth of this tree by its rings, and it is curious. Three hundred and forty-two rings. Started, therefore, about 1510. The thickness of the rings tells the rate at which it grew. For five or six years the rate was slow,—then rapid for twenty years. A little before the year 1550 it began to grow very slowly, and so continued for about seventy years. In 1620 it took a new start and grew fast until 1714; then for the most part slowly until 1786, when it started again and grew pretty well and uniformly until within the last dozen years, when it seems to have got on sluggishly.

Look here. Here are some human lives laid down against the periods of its growth, to which they corresponded. This is Shakspeare's. The tree was seven inches in diameter when he was born; ten inches when he died. A little less than ten inches when Milton was born; seventeen when he died. Then comes a long interval, and this thread marks out Johnson's life, during which the tree increased from twenty-two to twenty-nine inches in diameter. Here is the span of Napoleon's career;—the tree doesn't seem to have minded it.

I never saw the man yet who was not startled at looking on this section. I have seen many wooden preachers,—never one like this. How much more striking would be the calendar counted on the rings of one of those awful trees which were standing when Christ was on earth, and where that brief mortal life is chronicled with the stolid apathy of vegetable being, which remembers all human history as a thing of yesterday in its own dateless existence!

I have something more to say about elms. A relative tells me there is one of great glory in Andover, near Bradford. I have some recollections of the former place, pleasant and other. [I wonder if the old Seminary clock strikes as slowly as it used to. My room-mate thought, when he first came, it was the bell tolling deaths, and people's ages, as they do in the country. He swore—

(ministers' sons get so familiar with good words that they are apt to handle them carelessly)—that the children were dying by the dozen, of all ages, from one to twelve, and ran off next day in recess, when it began to strike eleven, but was caught before the clock got through striking.] At the foot of "the hill," down in town, is, or was, a tidy old elm, which was said to have been hooped with iron to protect it from Indian tomahawks, (*Credat Hahnemannus*,) and to have grown round its hoops and buried them in its wood. Of course, this is not the tree my relative means.

Also, I have a very pretty letter from Norwich, in Connecticut, telling me of two noble elms which are to be seen in that town. One hundred and twenty-seven feet from bough-end to bough-end! What do you say to that? And gentle ladies beneath it, that love it and celebrate its praises! And that in a town of such supreme, audacious, Alpine loveliness as Norwich!—Only the dear people there must learn to call it Norridge, and not be misled by the mere accident of spelling.

Norwich.

Porchmouth.

Cincinnati.

What a sad picture of our civilization!

I did not speak to you of the great tree on what used to be the Colman farm, in Deerfield, simply because I had not seen it for many years, and did not like to trust my recollection. But I had it in memory, and even noted down, as one of the finest trees in symmetry and beauty I had ever seen. I have received a document, signed by two citizens of a neighboring town, certified by the postmaster and a selectman, and these again corroborated, reinforced, and sworn to by a member of that extraordinary college-class to which it is the good fortune of my friend the Professor to belong, who, though he has *formerly* been a member of Congress, is, I believe, fully worthy of confidence. The tree "girts" eighteen and a half feet, and spreads over a hundred, and is a real beauty. I hope

to meet my friend under its branches yet; if we don't have "youth at the prow," we will have "pleasure at the 'elm."

And just now, again, I have got a letter about some grand willows in Maine, and another about an elm in Wayland, but too late for anything but thanks.

[And this leads me to say, that I have received a great many communications, in prose and verse, since I began printing these notes. The last came this very morning, in the shape of a neat and brief poem, from New Orleans. I could not make any of them public, though sometimes requested to do so. Some of them have given me great pleasure, and encouraged me to believe I had friends whose faces I had never seen. If you are pleased with anything a writer says, and doubt whether to tell him of it, do not hesitate; a pleasant word is a cordial to one, who perhaps thinks he is tiring you, and so becomes tired himself. I purr very loud over a good, honest letter that says pretty things to me.]

—Sometimes very young persons send communications, which they want forwarded to editors; and these young persons do not always seem to have right conceptions of these same editors, and of the public, and of themselves. Here is a letter I wrote to one of these young folks, but, on the whole, thought it best not to send. It is not fair to single out one for such sharp advice, where there are hundreds that are in need of it.

DEAR SIR,—You seem to be somewhat, but not a great deal, wiser than I was at your age. I don't wish to be understood as saying too much, for I think, without committing myself to any opinion on my present state, that I was not a Solomon at that stage of development.

You long to "leap at a single bound into celebrity." Nothing is so commonplace as to wish to be remarkable. Fame usually comes to those who are thinking about something else,—very rarely to those who say to themselves, "Go to, now, let us be a celebrated individual!" The struggle for fame, as such, commonly

ends in notoriety;—that ladder is easy to climb, but it leads to the pillory which is crowded with fools who could not hold their tongues and rogues who could not hide their tricks.

If you have the consciousness of genius, do something to show it. The world is pretty quick, nowadays, to catch the flavor of true originality; if you write anything remarkable, the magazines and newspapers will find you out, as the school-boys find out where the ripe apples and pears are. Produce anything really good, and an intelligent editor will jump at it. Don't flatter yourself that any article of yours is rejected because you are unknown to fame. Nothing pleases an editor more than to get anything worth having from a new hand. There is always a dearth of really fine articles for a first-rate journal; for, of a hundred pieces received, ninety are at or below the sea-level; some have water enough, but no head; some head enough, but no water; only two or three are from full reservoirs, high up that hill which is so hard to climb.

You may have genius. The contrary is of course probable, but it is not demonstrated. If you have, the world wants you more than you want it. It has not only a desire, but a passion, for every spark of genius that shows itself among us; there is not a bull-calf in our national pasture that can bleat a rhyme but it is ten to one, among his friends and no takers, that he is the real, genuine, no-mistake Osiris.

Qu'est ce qu'il a fait? What has he done? That was Napoleon's test. What have you done? Turn up the faces of your picture-cards, my boy! You need not make mouths at the public because it has not accepted you at your own fancy-valuation. Do the prettiest thing you can and wait your time.

For the verses you send me, I will not say they are hopeless, and I dare not affirm that they show promise. I am not an editor, but I know the standard of some editors. You must not expect to "leap with a single bound" into the so-

ciety of those whom it is not flattery to call your betters. When "The Pactolian" has paid you for a copy of verses,—(I can furnish you a list of alliterative signatures, beginning with Annie Aureole and ending with Zoë Zenith,)—when "The Rag-bag" has stolen your piece, after carefully scratching your name out,—when "The Nut-cracker" has thought you worth shell-ing, and strung the kernel of your cleverest poem,—then, and not till then, you may consider the presumption against you, from the fact of your rhyming tendency, as called in question, and let our friends hear from you, if you think it worth while. You may possibly think me too candid, and even accuse me of incivility; but let me assure you that I am not half so plain-spoken as Nature, nor half so rude as Time. If you prefer the long jolting of public opinion to the gentle touch of friendship, try it like a man. Only remember this,—that, if a bushel of potatoes is shaken in a market-cart without springs to it, the small potatoes always get to the bottom.

Believe me, etc., etc.

I always think of verse-writers, when I am in this vein; for these are by far the most exacting, eager, self-weighing, restless, querulous, unreasonable literary persons one is like to meet with. Is a young man in the habit of writing verses? Then the presumption is that he is an inferior person. For, look you, there are at least nine chances in ten that he writes *poor* verses. Now the habit of chewing on rhymes without sense and soul to match them is, like that of using any other narcotic, at once a proof of feebleness and a debilitating agent. A young man can get rid of the presumption against him afforded by his writing verses only by convincing us that they are verses worth writing.

All this sounds hard and rough, but, observe, it is not addressed to any individual, and of course does not refer to any reader of these pages. I would always treat any given young person passing through the meteoric showers

which rain down on the brief period of adolescence with great tenderness. God forgive us, if we ever speak harshly to young creatures on the strength of these ugly truths, and so, sooner or later, smite some tender-souled poet or poetess on the lips who might have sung the world into sweet trances, had we not silenced the matin-song in its first low breathings! Just as my heart yearns over the unloved, just so it sorrows for the ungifted who are doomed to the pangs of an undeceived self-estimate. I have always tried to be gentle with the most hopeless cases. My experience, however, has not been encouraging.

—X. Y., æt. 18, a cheaply-got-up youth, with narrow jaws, and broad, bony, cold, red hands, having been laughed at by the girls in his village, and "got the mitten" (pronounced mittin) two or three times, falls to soul-ing and controlling, and youthing and truthing, in the newspapers. Sends me some strings of verses, candidates for the Orthopedic Infirmary, all of them, in which I learn for the millionth time one of the following facts: either that something about a chime is sublime, or that something about time is sublime, or that something about a chime is concerned with time, or that something about a rhyme is sublime or concerned with time or with a chime. Wishes my opinion of the same, with advice as to his future course.

What shall I do about it? Tell him the whole truth, and send him a ticket of admission to the Institution for Idiots and Feeble-minded Youth? One doesn't like to be cruel,—and yet one hates to lie. Therefore one softens down the ugly central fact of donkeyism,—recommends study of good models,—that writing verse should be an incidental occupation only, not interfering with the hoe, the needle, the lapstone, or the ledger,—and, above all, that there should be no hurry in printing what is written. Not the least use in all this. The poetaster who has tasted type is done for. He is like the man who has once been a candidate for the Presidency. He feeds on

the madder of his delusion all his days, and his very bones grow red with the glow of his foolish fancy. One of these young brains is like a bunch of India crackers; once touch fire to it and it is best to keep hands off until it has done popping,—if it ever stops. I have two letters on file; one is a pattern of adulation, the other of impertinence. My reply to the first, containing the best advice I could give, conveyed in courteous language, had brought out the second. There was some sport in this, but Dulness is not commonly a game fish, and only sulks after he is struck. You may set it down as a truth which admits of few exceptions, that those who ask your *opinion* really want your *praise*, and will be contented with nothing less.

There is another kind of application to which editors, or those supposed to have access to them, are liable, and which often proves trying and painful. One is appealed to in behalf of some person in needy circumstances who wishes to make a living by the pen. A manuscript accompanying the letter is offered for publication. It is not commonly brilliant, too often lamentably deficient. If Rachel's saying is true, that "fortune is the measure of intelligence," then poverty is evidence of limited capacity, which it too frequently proves to be, notwithstanding a noble exception here and there. Now an editor is a person under a contract with the public to furnish them with the best things he can afford for his money. Charity shown by the publication of an inferior article would be like the generosity of Claude Duval and the other gentlemen highwaymen, who pitied the poor so much they robbed the rich to have the means of relieving them.

Though I am not and never was an editor, I know something of the trials to which they are submitted. They have nothing to do but to develop enormous calluses at every point of contact with authorship. Their business is not a matter of sympathy, but of intellect. They must reject the unfit productions of those whom they long to befriend, because it

would be a profligate charity to accept them. One cannot burn his house down to warm the hands even of the fatherless and the widow.

THE PROFESSOR UNDER CHLOROFORM.

— You haven't heard about my friend the Professor's first experiment in the use of anæsthetics, have you?

He was mightily pleased with the reception of that poem of his about the chaise. He spoke to me once or twice about another poem of similar character he wanted to read me, which I told him I would listen to and criticize.

One day, after dinner, he came in with his face tied up, looking very red in the cheeks and heavy about the eyes.—Hy'r'ye?—he said, and made for an arm-chair, in which he placed first his hat and then his person, going smack through the crown of the former as neatly as they do the trick at the circus. The Professor jumped at the explosion as if he had sat down on one of those small *calthrops* our grandfathers used to sow round in the grass when there were Indians about,—iron stars, each ray a rusty thorn an inch and a half long,—stick through moc-casins into feet,—cripple 'em on the spot, and give 'em lockjaw in a day or two.

The Professor let off one of those big words which lie at the bottom of the best man's vocabulary, but perhaps never turn up in his life,—just as every man's hair *may* stand on end, but in most men it never does.

After he had got calm, he pulled out a sheet or two of manuscript, together with a smaller scrap, on which, as he said, he had just been writing an introduction or prelude to the main performance. A certain suspicion had come into my mind that the Professor was not quite right, which was confirmed by the way he talked; but I let him begin. This is the way he read it:—

Prelude.

I'M the fellah that tole one day
The tale of the won'erful one-hoss-shay.

Wan' to hear another? Say.
 —Funny, wasn't it? Made *me* laugh,—
 I'm too modest, I am, by half,—
 Made me laugh 's *though I sh'd split*.—
 Cahn' a fellow like fellow's own wit?
 —Fellahs keep sayin', —“Well, now that's
 nice;
 Did it once, but cahn' do it twice.”—
 Dön' you b'lieve the 'z no more fat;
 Lots in the kitch'n 'z good 'z that.
 Fus'-rate throw, 'n' no mistake,—
 Han' us the props for another shake;—
 Know I'll try, 'n' guess I'll win;
 Here sh' goes for hit 'm ag'in!

Here I thought it necessary to interpose.—Professor,—I said,—you are inebriated. The style of what you call your “Prelude” shows that it was written under cerebral excitement. Your articulation is confused. You have told me three times in succession, in exactly the same words, that I was the only true friend you had in the world that you would unbutton your heart to. You smell distinctly and decidedly of spirits.—I spoke, and paused; tender, but firm.

Two large tears orb'd themselves beneath the Professor's lids,—in obedience to the principle of gravitation celebrated in that delicious bit of bladdery bathos, “The very law that moulds a tear,” with which the “Edinburgh Review” attempted to put down Master George Gordon when that young man was foolishly trying to make himself conspicuous.

One of these tears peeped over the edge of the lid until it lost its balance,—slid an inch and waited for reinforcements,—swelled again,—rolled down a little further,—stopped,—moved on,—and at last fell on the back of the Professor's hand. He held it up for me to look at, and lifted his eyes, brimful, till they met mine.

I couldn't stand it,—I always break down when folks cry in my face,—so I hugged him, and said he was a dear old boy, and asked him kindly what was the matter with him, and what made him smell so dreadfully strong of spirits.

Upset his alcohol lamp,—he said,—and spilt the alcohol on his legs. That was it.—But what had he been doing to get his

head into such a state?—had he really committed an excess? What was the matter?—Then it came out that he had been taking chloroform to have a tooth out, which had left him in a very queer state, in which he had written the “Prelude” given above, and under the influence of which he evidently was still.

I took the manuscript from his hands and read the following continuation of the lines he had begun to read me, while he made up for two or three nights' lost sleep as he best might.

PARSON TURELL'S LEGACY:

OR, THE PRESIDENT'S OLD ARM-CHAIR.

FACTS respecting an old arm-chair.
 At Cambridge. Is kept in the College there.
 Seems but little the worse for wear.
 That's remarkable when I say
 It was old in President Holyoke's day.
 (One of his boys, perhaps you know,
 Died, at *one hundred*, years ago.)
He took lodging for rain or shine
 Under green bed-clothes in '69.

Know old Cambridge? Hope you do.—
 Born there? Don't say so! I was, too.
 (Born in a house with a gambrel-roof,—
 Standing still, if you must have proof.—
 “Gambrel?—Gambrel?”—Let me beg
 You'll look at a horse's hinder leg,—
 First great angle above the hoof,—
 That's the gambrel; hence gambrel-roof.)
 —Nicest place that ever was seen,—
 Colleges red and Common green,
 Sidewalks brownish with trees between.
 Sweetest spot beneath the skies
 When the canker-worms don't rise,—
 When the dust, that sometimes flies
 Into your mouth and ears and eyes,
 In a quiet slumber lies,
 Not in the shape of unbaked pies
 Such as barefoot children prize.

A kind of harbor it seems to be,
 Facing the flow of a boundless sea.
 Rows of gray old Tutors stand
 Ranged like rocks above the sand;
 Rolling beneath them, soft and green,
 Breaks the tide of bright sixteen,—
 One wave, two waves, three waves, four,
 Sliding up the sparkling floor;
 Then it ebbs to flow no more,
 Wandering off from shore to shore
 With its freight of golden ore!
 —Pleasant place for boys to play;—

Better keep your girls away;
Hearts get rolled as pebbles do
Which countless fingering waves pursue,
And every classic beach is strown
With heart-shaped pebbles of blood-red stone.

But this is neither here nor there;—
I'm talking about an old arm-chair.
You've heard, no doubt, of PARSON TURELL?
Over at Medford he used to dwell;
Married one of the Mather's folk;
Got with his wife a chair of oak,—
Funny old chair, with seat like wedge,
Sharp behind and broad front edge,—
One of the oddest of human things,
Turned all over with knobs and rings,—
But heavy, and wide, and deep, and grand,—
Fit for the worthies of the land,—
Chief-Justice Sewall a cause to try in,
Or Cotton Mather to sit—and lie—in.
—Parson Turell bequeathed the same
To a certain student,—SMITH by name;
These were the terms, as we are told:
"Saide Smith saide Chaire to have and holde;
When he doth graduate, then to passe
To ye oldest Youth in ye Senior Classe,
On Payment of"—(naming a certain sum)—
"By him to whom ye Chaire shall come;
He to ye oldest Senior next,
And soe forever,"—(thus runs the text,)—
"But one Crown lesse then he gave to claime,
That being his Dehte for use of same."

Smith transferred it to one of the BROWNS,
And took his money,—five silver crowns.
Brown delivered it up to MOORE,
Who paid, it is plain, not five, but four.
Moore made over the chair to LEE,
Who gave him crowns of silver three.
Lee conveyed it unto DREW,
And now the payment, of course, was two.
Drew gave up the chair to DUNN,—
All he got, as you see, was one.
Dunn released the chair to HALL,
And got by the bargain no crown at all.
—And now it passed to a second BROWN,
Who took it, and likewise claimed a crown.
When Brown conveyed it unto WARE,
Having had one crown, to make it fair,
He paid him two crowns to take the chair;
And Ware, being honest, (as all Wares be,)
He paid one POTTER, who took it, three.
Four got ROBINSON; five got DIX;
JOHNSON *primus* demanded six;
And so the sum kept gathering still
Till after the battle of Bunker's Hill.
—When paper money became so cheap,
Folks wouldn't count it, but said "a heap,"
A certain RICHARDS, the books declare,
(A. M. in '90? I've looked with care
Through the Triennial,—name not there,)

This person, Richards, was offered then
Eight score pounds, but would have ten;
Nine, I think, was the sum he took,—
Not quite certain,—but see the book.
—By and by the wars were still,
But nothing had altered the Parson's will.
The old arm-chair was solid yet,
But saddled with such a monstrous debt!
Things grew quite too bad to bear,
Paying such sums to get rid of the chair!
But dead men's fingers hold awful tight,
And there was the will in black and white,
Plain enough for a child to spell.
What should be done no man could tell,
For the chair was a kind of nightmare curse,
And every season but made it worse.

As a last resort, to clear the doubt,
They got old GOVERNOR HANCOCK out.
The Governor came with his Light-horse
Troop

And his mounted truckmen, all cock-a-hoop;
Halberds glittered and colors flew,
French horns whinnied and trumpets blew,
The yellow fifes whistled between their teeth
And the bumble-bee bass-drums boomed be-
neath;

So he rode with all his band,
Till the President met him, cap in hand.
—The Governor "hefted" the crowns, and
said,—

"A will is a will, and the Parson's dead."
The Governor hefted the crowns. Said he,—
"There is your p'int. And here's my fee.
These are the terms you must fulfil,—
On such conditions I BREAK THE WILL!"
The Governor mentioned what these should be.
(Just wait a minute and then you'll see.)
The President prayed. Then all was still,
And the Governor rose and BROKE THE WILL!
—"About those conditions?" Well, now you
go

And do as I tell you, and then you'll know.
Once a year, on Commencement-day,
If you'll only take the pains to stay,
You'll see the President in the CHAIR,
Likewise the Governor sitting there.
The President rises; both old and young
May hear his speech in a foreign tongue,
The meaning whereof, as lawyers swear,
Is this: Can I keep this old arm-chair?
And then his Excellency bows,
As much as to say that he allows.
The Vice-Gub. next is called by name;
He bows like t'other, which means the same.
And all the officers round 'em bow,
As much as to say that they allow.
And a lot of parchments about the chair
Are handed to witnesses then and there,
And then the lawyers hold it clear
That the chair is safe for another year.

God bless you, Gentlemen! Learn to give Money to colleges while you live. Don't be silly and think you'll try To bother the colleges, when you die, With codicil this, and codicil that, That Codicil may starve while Law grows fat; For there never was pitcher that wouldn't spill, And there's always a flaw in a donkey's will!

—Hospitality is a good deal a matter of latitude, I suspect. The shade of a palm-tree serves an African for a hut; his dwelling is all door and no walls; everybody can come in. To make a morning call on an Esquimaux acquaintance, one must creep through a long tunnel; his house is all walls and no door, except such a one as an apple with a worm-hole has. One might, very probably, trace a regular gradation between these two extremes. In cities where the evenings are generally hot, the people have porches at their doors, where they sit, and this is, of course, a provocative to the interchange of civilities. A good deal, which in colder regions is ascribed to mean dispositions, belongs really to mean temper-ature.

Once in a while, even in our Northern cities, at noon, in a very hot summer's day, one may realize, by a sudden extension in his sphere of consciousness, how closely he is shut up for the most part.—Do you not remember something like this? July, between 1 and 2, P. M. Fahrenheit 96°, or thereabout. Windows all gaping, like the mouths of panting dogs. Long, stinging cry of a locust comes in from a tree, half a mile off; had forgotten there was such a tree. Baby's screams from a house several blocks distant;—never knew of any babies in the neighborhood before. Tinman pounding something that clatters dreadfully,—very distinct, but don't know of any tinman's shop near by. Horses stamping on pavement to get off flies. When you hear these four sounds, you may set it down as a warm day. Then it is that one would like to imitate the mode of life of the native at Sierra Leone, as

somebody has described it: stroll into the market in natural costume,—buy a water-melon for a halfpenny,—split it, and scoop out the middle,—sit down in one half of the empty rind, clap the other on one's head, and feast upon the pulp.

—I see some of the London journals have been attacking some of their literary people for lecturing, on the ground of its being a public exhibition of themselves for money. A popular author can print his lecture; if he deliver it, it is a case of *quæstum corpore*, or making profit of his person. None but "snobs" do that. *Ergo*, etc. To this I reply,—*Negatur minor*. Her Most Gracious Majesty, the Queen, exhibits herself to the public as a part of the service for which she is paid. We do not consider it low-bred in her to pronounce her own speech, and should prefer it so to hearing it from any other person or reading it. His Grace and his Lordship exhibit themselves very often for popularity, and their houses every day for money.—No, if a man shows himself other than he is, if he belittles himself before an audience for hire, then he acts unworthily. But a true word, fresh from the lips of a true man, is worth paying for, at the rate of eight dollars a day, or even of fifty dollars a lecture. The taunt must be an outbreak of jealousy against the renowned authors who have the audacity to be also orators. The sub-lieutenants of the press stick a too popular writer and speaker with an epithet in England, instead of with a rapier, as in France.—Poh! All England is one great menagerie, and, all at once, the jackal, who admires the gilded cage of the royal beast, must protest against the vulgarity of the talking-bird's and the nightingale's being willing to become a part of the exhibition!

THE LONG PATH.

(Last of the Parentheses.)

Yes, that was my last walk with the schoolmistress. It happened to be the

end of a term; and before the next began, a very nice young woman, who had been her assistant, was announced as her successor, and she was provided for elsewhere. So it was no longer the school-mistress that I walked with, but—Let us not be in unseemly haste. I shall call her the schoolmistress still; some of you love her under that name.

—When it became known among the boarders that two of their number had joined hands to walk down the long path of life side by side, there was, as you may suppose, no small sensation. I confess I pitied our landlady. It took her all of a sudden,—she said. Had not known that we was keepin' company, and never mistrusted anything partic'lar. Ma'am was right to better herself. Didn't look very rugged to take care of a family, but could get hired haälp, she cale'lated.—The great maternal instinct came crowding up in her soul just then, and her eyes wandered until they settled on her daughter.

—No, poor, dear woman,—that could not have been. But I am dropping one of my internal tears for you, with this pleasant smile on my face all the time.

The great mystery of God's providence is the permitted crushing out of flowering instincts. Life is maintained by the respiration of oxygen and of sentiments. In the long catalogue of scientific cruelties there is hardly anything quite so painful to think of as that experiment of putting an animal under the bell of an air-pump and exhausting the air from it. [I never saw the accursed trick performed. *Laus Deo!*] There comes a time when the souls of human beings, women, perhaps, more even than men, begin to faint for the atmosphere of the affections they were made to breathe. Then it is that Society places its transparent bell-glass over the young woman who is to be the subject of one of its fatal experiments. The element by which only the heart lives is sucked out of her crystal-line prison. Watch her through its transparent walls;—her bosom is heaving; but

it is in a vacuum. Death is no riddle, compared to this. I remember a poor girl's story in the "Book of Martyrs." The "dry-pan and the gradual fire" were the images that frightened her most. How many have withered and wasted under as slow a torment in the walls of that larger Inquisition which we call Civilization!

Yes, my surface-thought laughs at you, you foolish, plain, overdressed, mincing, cheaply-organized, self-saturated young person, whoever you may be, now reading this,—little thinking you are what I describe, and in blissful unconsciousness that you are destined to the lingering asphyxia of soul which is the lot of such multitudes worthier than yourself. But it is only my surface-thought which laughs. For that great procession of the UNLOVED, who not only wear the crown of thorns, but must hide it under the locks of brown or gray,—under the snowy cap, under the chilling turban,—hide it even from themselves,—perhaps never know they wear it, though it kills them,—there is no depth of tenderness in my nature that Pity has not sounded. Somewhere,—somewhere,—love is in store for them,—the universe must not be allowed to fool them so cruelly. What infinite pathos in the small, half-unconscious artifices by which unattractive young persons seek to recommend themselves to the favor of those towards whom our dear sisters, the unloved, like the rest, are impelled by their God-given instincts!

Read what the singing-women—one to ten thousand of the suffering women—tell us, and think of the griefs that die unspoken! Nature is in earnest when she makes a woman; and there are women enough lying in the next churchyard with very commonplace blue slate-stones at their head and feet, for whom it was just as true that "all sounds of life assumed one tone of love," as for Letitia Landon, of whom Elizabeth Browning said it; but she could give words to her grief, and they could not.—Will you hear a few stanzas of mine?

THE VOICELESS.

We count the broken lyres that rest
 Where the sweet wailing singers slumber,—
 But o'er their silent sister's breast
 The wild flowers who will stoop to number?
 A few can touch the magic string,
 And noisy Fame is proud to win them;—
 Alas for those that never sing,
 But die with all their music in them!

Nay, grieve not for the dead alone
 Whose song has told their hearts' sad story,—

Weep for the voiceless, who have known
 The cross without the crown of glory!
 Not where Leucadian breezes sweep
 O'er Sappho's memory-haunted billow,
 But where the glistening night-dews weep
 On nameless sorrow's churchyard pillow.

O hearts that break and give no sign
 Save whitening lip and fading tresses,
 Till Death pours out his cordial wine
 Slow-dropped from Misery's crushing presses,—

If singing breath or echoing chord
 To every hidden pang were given,
 What endless melodies were poured,
 As sad as earth, as sweet as heaven!

I hope that our landlady's daughter is not so badly off, after all. That young man from another city, who made the remark which you remember about Boston State-house and Boston folks, has appeared at our table repeatedly of late, and has seemed to me rather attentive to this young lady. Only last evening I saw him leaning over her while she was playing the accordion,—indeed, I undertook to join them in a song, and got as far as "Come rest in this boo-oo," when, my voice getting tremulous, I turned off, as one steps out of a procession, and left the basso and soprano to finish it. I see no reason why this young woman should not be a very proper match for a man that laughs about Boston State-house. He can't be very particular.

The young fellow whom I have so often mentioned was a little free in his remarks, but very good-natured.—Sorry to have you go,—he said.—Schoolma'am made a mistake not to wait for me.

Haven't taken anything but mournin' fruit at breakfast since I heard of it. — *Mourning fruit*,—said I,—what's that? — Huckleberries and blackberries,—said he;—couldn't eat in colors, raspberries, currants, and such, after a solemn thing like this happening.—The conceit seemed to please the young fellow. If you will believe it, when we came down to breakfast the next morning, he had carried it out as follows. "You know those odious little "saäs-plates" that figure so largely at boarding-houses, and especially at taverns, into which a strenuous attendant female trowels little dabs, sombre of tint and heterogeneous of composition, which it makes you feel homesick to look at, and into which you poke the elastic coppery teaspoon with the air of a cat dipping her foot into a wash-tub,—(not that I mean to say anything against them, for, when they are of tinted porcelain or starry many-faceted crystal, and hold clean bright berries, or pale virgin honey, or "lucent syrups tinct with cinnamon," and the teaspoon is of white silver, with the Tower-stamp, solid, but not brutally heavy,—as people in the green stage of millionism will have them,—I can dally with their amber semi-fluids or glossy spherules without a shiver,)—you know these small, deep dishes, I say. When we came down the next morning, each of these (two only excepted) was covered with a broad leaf. On lifting this, each boarder found a small heap of solemn black huckleberries. But one of those plates held red currants, and was covered with a red rose; the other held white currants, and was covered with a white rose. There was a laugh at this at first, and then a short silence, and I noticed that her lip trembled, and the old gentleman opposite was in trouble to get at his bandanna handkerchief.

— "What was the use in waiting? We should be too late for Switzerland, that season, if we waited much longer."—The hand I held trembled in mine, and the eyes fell meekly, as Esther bowed herself before the feet of Ahasuerus.—She had been reading that chapter, for

she looked up,—if there was a film of moisture over her eyes, there was also the faintest shadow of a distant smile skirting her lips, but not enough to accent the dimples,—and said, in her pretty, still way,—“If it please the king, and if I have found favor in his sight, and the thing seem right before the king, and I be pleasing in his eyes”——

I don't remember what King Ahasuerus did or said when Esther got just to that point of her soft, humble words,—but I know what I did. That quotation from Scripture was cut short, anyhow. We came to a compromise on the great question, and the time was settled for the last day of summer.

In the mean time, I talked on with our boarders, much as usual, as you may see by what I have reported. I must say, I was pleased with a certain tenderness they all showed toward us, after the first excitement of the news was over. It came out in trivial matters,—but each one, in his or her way, manifested kindness. Our landlady, for instance, when we had chickens, sent the *liver* instead of the *gizzard*, with the wing, for the schoolmistress. This was not an accident; the two are *never* mistaken, though some landladies *appear* as if they did not know the difference. The whole of the company were even more respectfully attentive to my remarks than usual. There was no idle punning, and very little winking on the part of that lively young gentleman who, as the reader may remember, occasionally interposed some playful question or remark, which could hardly be considered relevant,—except when the least allusion was made to matrimony, when he would look at the landlady's daughter, and wink with both sides of his face, until she would ask what he was pokin' his fun at her for, and if he wasn't ashamed of himself. In fact, they all behaved very handsomely, so that I really felt sorry at the thought of leaving my boarding-house.

I suppose you think, that, because I lived at a plain widow-woman's plain table, I was of course more or less infirm

in point of worldly fortune. You may not be sorry to learn, that, though not what *great merchants* call very rich, I was comfortable,—comfortable,—so that most of those moderate luxuries I described in my verses on *Contentment*—most of them, I say—were within our reach, if we chose to have them. But I found out that the schoolmistress had a vein of charity about her, which had hitherto been worked on a small silver and copper basis, which made her think less, perhaps, of luxuries than even I did,—modestly as I have expressed my wishes.

It is rather a pleasant thing to tell a poor young woman, whom one has contrived to win without showing his rent-roll, that she has found what the world values so highly, in following the lead of her affections. That was a luxury I was now ready for.

I began abruptly :—Do you know that you are a rich young person ?

I know that I am very rich,—she said.—Heaven has given me more than I ever asked ; for I had not thought love was ever meant for me.

It was a woman's confession, and her voice fell to a whisper as it threaded the last words.

I don't mean that,—I said,—you blessed little saint and seraph !—if there's an angel missing in the New Jerusalem, inquire for her at this boarding-house !—I don't mean that ; I mean that I—that is, you—am—are—confound it !—I mean that you'll be what most people call a lady of fortune.—And I looked full in her eyes for the effect of the announcement.

There wasn't any. She said she was thankful that I had what would save me from drudgery, and that some other time I should tell her about it.—I never made a greater failure in an attempt to produce a sensation.

So the last day of summer came. It was our choice to go to the church, but we had a kind of reception at the boarding-house. The presents were all arranged, and among them none gave more

pleasure than the modest tributes of our fellow-boarders,—for there was not one, I believe, who did not send something. The landlady would insist on making an elegant bride-cake, with her own hands; to which Master Benjamin Franklin wished to add certain embellishments out of his private funds,—namely, a Cupid in a mouse-trap, done in white sugar, and two miniature flags with the stars and stripes, which had a very pleasing effect, I assure you. The landlady's daughter sent a richly bound copy of Tupper's Poems. On a blank leaf was the following, written in a very delicate and careful hand:—

Presented to . . . by . . .

On the eve ere her union in holy matrimony.
May sunshine ever beam o'er her!

Even the poor relative thought she must do something, and sent a copy of "The Whole Duty of Man," bound in very attractive variegated sheepskin, the edges nicely marbled. From the divinity-student came the loveliest English edition of "Keble's Christian Year." I opened it, when it came, to the *Fourth Sunday in Lent*, and read that angelic poem, sweeter than anything I can remember since Xavier's "My God, I love thee."—I am not a Churchman,—I don't believe in planting oaks in flower-pots,—but such a poem as "The Rose-bud" makes one's heart a proselyte to the culture it grows from. Talk about it as much as you like,—one's breeding shows itself nowhere more than in his religion. A man should be a gentleman in his hymns and prayers; the fondness for "scenes," among vulgar saints, contrasts so meanly with that—

"God only and good angels look
Behind the blissful scene,"—

and that other,—

"He could not trust his melting soul
But in his Maker's sight,"—

that I hope some of them will see this, and read the poem, and profit by it.

My laughing and winking young friend

undertook to procure and arrange the flowers for the table, and did it with immense zeal. I never saw him look happier than when he came in, his hat saucily on one side, and a cheroot in his mouth, with a huge bunch of tea-roses, which he said were for "Madam."

One of the last things that came was an old square box, smelling of camphor, tied and sealed. It bore, in faded ink, the marks, "Calcutta, 1805." On opening it, we found a white Cashmere shawl, with a very brief note from the dear old gentleman opposite, saying that he had kept this some years, thinking he might want it, and many more, not knowing what to do with it,—that he had never seen it unfolded since he was a young supercargo,—and now, if she would spread it on her shoulders, it would make him feel young to look at it.

Poor Bridget, or Biddy, our red-armed maid of all work! What must she do but buy a small copper breast-pin and put it under "Schoolma'am's" plate that morning, at breakfast? And Schoolma'am would wear it,—though I made her cover it, as well as I could, with a tea-rose.

It was my last breakfast as a boarder, and I could not leave them in utter silence.

Good-bye,—I said,—my dear friends, one and all of you! I have been long with you, and I find it hard parting. I have to thank you for a thousand courtesies, and above all for the patience and indulgence with which you have listened to me when I have tried to instruct or amuse you. My friend the Professor (who, as well as my friend the Poet, is unavoidably absent on this interesting occasion) has given me reason to suppose that he would occupy my empty chair about the first of January next. If he comes among you, be kind to him, as you have been to me. May the Lord bless you all!—And we shook hands all round the table.

Half an hour afterwards the breakfast things and the cloth were gone. I looked up and down the length of the bare

boards, over which I had so often uttered my sentiments and experiences—and—Yes, I am a man, like another.

All sadness vanished, as, in the midst of these old friends of mine, whom you know, and others a little more up in the world, perhaps, to whom I have not introduced you, I took the schoolmistress before the altar from the hands of the old gentleman who used to sit opposite,

and who would insist on giving her away.

And now we two are walking the long path in peace together. The "schoolmistress" finds her skill in teaching called for again, without going abroad to seek little scholars. Those visions of mine have all come true.

I hope you all love me none the less for anything I have told you. Farewell!

THE DOT AND LINE ALPHABET.

JUST in the triumph week of that Great Telegraph which takes its name from the ATLANTIC MONTHLY, I read in the September number of that journal the revelations of an observer who was surprised to find that he had the power of reading, as they run, the revelations of the wire. I had the hope that he was about to explain to the public the more general use of this instrument,—which, with a stupid fatuity, the public has, as yet, failed to grasp. Because its signals have been first applied by means of electro-magnetism, and afterwards by means of the chemical power of electricity, the many-headed people refuses to avail itself, as it might do very easily, of the same signals, for the simpler transmission of intelligence,—whatever the power employed.

The great invention of Mr. Morse is his register and alphabet. He himself eagerly disclaims any pretension to the original conception of the use of electricity as an errand-boy. Hundreds of people had thought of that and suggested it; but Morse was the first to give the errand-boy such a written message, that he could not lose it on the way, nor mistake it when he arrived. The public, eager to thank Morse, as he deserves, thanks him for something he did not invent. For this he probably cares very little. Nor do I care more. But the public does not thank him for what he

did originate,—this invaluable and simple alphabet. Now, as I use it myself in every detail of life, and see every hour how the public might use it, if it chose, I am really sorry for this negligence,—both on the score of his fame, and of general convenience.

Please to understand, then, ignorant Reader, that this curious alphabet reduces all the complex machinery of Cadmus and the rest of the writing-masters to characters as simple as can be made by a dot, a space, and a line, variously combined. Thus, the marks · — designate the letter A. The marks — . . . designate the letter B. All the other letters are designated in as simple a manner.

Now I am stripping myself of one of the private comforts of my life, (but what will one not do for mankind?) when I explain that this simple alphabet need not be confined to electrical signals. *Long* and *short* make it all,—and wherever long and short can be combined, be it in marks, sounds, sneezes, fainting-fits, canes, or children, ideas can be conveyed by this arrangement of the long and short together. Only last night I was talking scandal with Mrs. Wilberforce at a summer party at the Hammer-smiths. To my amazement, my wife, who scarcely can play "The Fisher's Hornpipe," interrupted us by asking Mrs. Wilberforce if she could give her the idea of an air in "The Butcher of Turin."

Mrs. Wilberforce had never heard that opera,—indeed, had never heard of it. My angel-wife was surprised,—stood thrumming at the piano,—wondered she could not catch this very odd bit of discordant accord at all,—but checked herself in her effort, as soon as I observed that her long notes and short notes, in their tum-tee, tee,—tee-tee, tee-tum tum, meant, “He’s her brother.” The conversation on her side turned from “The Butcher of Turin,” and I had just time, on the hint thus given me by Mrs. I., to pass a grateful eulogium on the distinguished statesman whom Mrs. Wilberforce, with all a sister’s care, had rocked in his baby-cradle,—whom, but for my wife’s long and short notes, I should have clumsily abused among the other statesmen of the day.

You will see, in an instant, awakening Reader, that it is not the business simply of “operators” in telegraphic dens to know this Morse alphabet, but your business, and that of every man and woman. If our school-committees understood the times, it would be taught, even before phonography or physiology, at school. I believe both these sciences now precede the old English alphabet.

As I write these words, the bell of the South Congregational strikes dong, dong, dong;—dong, dong, dong, dong,—dong,—dong. Nobody has unlocked the church-door. The old tin sign, “In case of fire, the key will be found at the opposite house,” has long since been taken down, and made into the nose of a water-pot. Yet there is no Goody Two-Shoes locked in. No! But, thanks to Dr. Channing’s Fire-Alarm, the bell is informing the South End that there is a fire in District Dong-dong-dong,—that is to say, District No. 3. Before I have explained to you so far, the “Eagle” engine, with a good deal of noise, has passed the house on its way to that fated district. An immense improvement this on the old system, when the engines radiated from their houses in every possible direction, and the fire was extinguished by the few machines whose lines of quest happened to

cross each other at the particular place where the child had been building cob-houses out of lucifer-matches in a paper-warehouse. Yes, it is a very great improvement. All those persons, like you and me, who have no property in District Dong-dong-dong, can now sit at home at ease,—and little need we think upon the mud above the knees of those who have property in that district and are running to look after it. But for them the improvement only brings misery. You arrive wet, hot or cold, or both, at the large District No. 3, to find that the lucifer-matches were half a mile from your store,—and that your own private watchman, even, had not been waked by the working of the distant engines. Wet property-holder, as you walk home, consider this. When you are next in the Common Council, vote an appropriation for applying Morse’s alphabet of long and short to the bells. Then they can be made to sound intelligibly. Dǎung dǐng dǐng,—dǐng,—dǐng dǎung,—dǎung dǎung dǎung, and so on, will tell you, as you wake in the night, that it is Mr. B.’s store which is on fire, and not yours, or that it is yours, and not his. This is not only a convenience to you and a relief to your wife and family, who will thus be spared your excursions to unavailable and unsatisfactory fires, and your somewhat irritated return,—it will be a great relief to the Fire Department. How placid the operations of a fire where none attend except on business! The various engines arrive, but no throng of distant citizens, men and boys, fearful of the destruction of their all. They have all roused on their pillows to learn that it is No. 530 Pearl Street which is in flames. All but the owner of No. 530 Pearl Street have dropped back to sleep. He alone has rapidly repaired to the scene. That is he, who stands in the uncrowded street with the Chief Engineer, on the deck of No. 18, as she plays away. His property destroyed, the engines retire,—he mentions the amount of his insurance to those persons who represent the daily press, they all retire to their homes,—and

the whole is finished as simply, almost, as was his private entry in his day-book the afternoon before.

This is what might be, if the magnetic alarm only struck *long* and *short*, and we had all learned Morse's alphabet. Indeed, there is nothing the bells could not tell, if you would only give them time enough. We have only one chime, for musical purposes, in the town. But, without attempting tunes, only give the bells the Morse alphabet, and every bell in Boston might chant in monotone the words of "Hail Columbia" at length, every Fourth of July. Indeed, if Mr. Barnard should report any day that a discouraged 'prentice-boy had left town for his country home, all the bells could instantly be set to work to speak articulately, in language regarding which the dullest imagination need not be at loss,

"Turn again, Higginbottom,
Lord Mayor of Boston!"

I have suggested the propriety of introducing this alphabet into the primary schools. I need not say I have taught it to my own children,—and I have been gratified to see how rapidly it made head, against the more complex alphabet, in the grammar schools. Of course it does;—an alphabet of two characters matched against one of twenty-six,—or of forty-odd, as the very odd one of the phonotypists employs! On the Franklin-medal-day I went to the Johnson-School examination. One of the committee asked a nice girl, what was the capital of Brazil. The child looked tired and pale, and, for an instant, hesitated. But, before she had time to commit herself, all answering was rendered impossible by an awful turn of whooping-cough which one of my own sons was seized with,—who had gone to the examination with me. Hawm, hem hem;—hem hem hem;—hem, hem;—hawm, hem hem;—hem hem hem;—hem, hem,—barked the poor child, who was at the opposite extreme of the school-room. The spectators and the committee looked to see him fall dead with a broken blood-vessel. I confess that I felt no alarm, after I observed that some of his

gasps were long and some very *staccato*;—nor did pretty little Mabel Warren. She recovered her color,—and, as soon as silence was in the least restored, answered, "*Rio* is the capital of Brazil,"—as modestly and properly as if she had been taught it in her cradle. They are nothing but children, any of them,—but that afternoon, after they had done all the singing the city needed for its annual entertainment of the singers, I saw Bob and Mabel start for a long expedition into West Roxbury,—and when he came back, I know it was a long featherfew, from her prize school-bouquet, that he pressed in his Greene's "Analysis," with a short frond of maiden's hair.

I hope nobody will write a letter to "The Atlantic," to say that these are very trifling uses. The communication of useful information is never trifling. It is as important to save a nice child from mortification on examination-day, as it is to tell Mr. Fremont that he is not elected President. If, however, the reader is distressed, because these illustrations do not seem to his more benighted observation to belong to the big bow-wow strain of human life, let him consider the arrangement which ought to have been made years since, for lee shores, railroad collisions, and that curious class of maritime accidents where one steamer runs into another under the impression that she is a light-house. Imagine the Morse alphabet applied to a steam-whistle, which is often heard five miles. It needs only *long* and *short* again. "*Stop Comet*," for instance, when you send it down the railroad line, by the wire, is expressed thus: . . . —

. . . — — . —
Very good message, if Comet happens to be at the telegraph station when it comes! But what if Comet has gone by? Much good will your trumpety message do then! If, however, you have the wit to sound your long and short on an engine-whistle, thus:—Sere sere, sere; screeee; sere sere; sere sere sere sere; sere sere—sere, sere sere, screeeee screeeee; sere; screeeee;—why, then the

whole neighborhood, for five miles round, will know that Comet must stop, if only they understand spoken language,—and, among others, the engineman of Comet will understand it; and Comet will not run into that wreck of worlds which gives the order,—with his nucleus of hot iron and his tail of five hundred tons of coal.—So, of the signals which fog-bells can give, attached to light-houses. How excellent to have them proclaim through the darkness, “I am Wall”! Or of signals for steamship-engineers. When our friends were on board the “Arabia” the other day, and she and the “Europa” pitched into each other,—as if, on that happy week, all the continents were to kiss and join hands all round,—how great the relief to the passengers on each, if, through every night of their passage, collision had been prevented by this simple expedient! One boat would have screamed, “Europa, Europa, Europa,” from night to morning,—and the other, “Arabia, Arabia, Arabia,”—and neither would have been mistaken, as one unfortunately was, for a light-house.

The long and short of it is, that whoever can mark distinctions of time can use this alphabet of long-and-short, however he may mark them. It is, therefore, within the compass of all intelligent beings, except those who are no longer conscious of the passage of time, having exchanged its limitations for the wider sweep of eternity. The illimitable range of this alphabet, however, is not half disclosed when this has been said. Most articulate language addresses itself to one sense, or at most to two, sight and sound. I see, as I write, that the particular illustrations I have given are all of them confined to signals seen or signals heard. But the dot-and-line alphabet, in the few years of its history, has already shown that it is not restricted to these two senses, but makes itself intelligible to all. Its message, of course, is heard as well as read. Any good operator understands the sounds of its ticks upon the flowing strip of paper, as well as when he sees it. As he lies in his cot at midnight, he will

expound the passing message without striking a light to see it. But this is only what may be said of any written language. You can read this article to your wife, or she can read it, as she prefers; that is, she chooses whether it shall address her eye or her ear. But the long-and-short alphabet, of Morse and his imitators despises such narrow range. It addresses whichever of the five senses the listener chooses. This fact is illustrated by a curious set of anecdotes—never yet put in print, I think—of that critical dispatch which in one night announced General Taylor’s death to this whole land. Most of the readers of these lines probably read that dispatch in the morning’s paper. The compositors and editors had read it. To them it was a dispatch to the eye. But half the operators at the stations *heard* it ticked out, by the register stroke, and knew it before they wrote it down for the press. To them it was a dispatch to the ear. My good friend Langenzunge had not that resource. He had just been promised, by the General himself, (under whom he served at Palo Alto,) the office of Superintendent of the Rocky-Mountain Lines. He was returning from Washington over the Baltimore and Ohio Railroad, on a freight-train, when he heard of the President’s danger. Langenzunge loved Old Rough and Ready,—and he felt badly about his own office, too. But his extempore train chose to stop at a forsaken shanty-village on the Potomac, for four mortal hours, at midnight. What does he do, but walk down the line into the darkness, climb a telegraph-post, cut a wire, and apply the two ends to his tongue, to *taste*, at the fatal moment, the words, “Died at half past ten.” Poor Langenzunge! he hardly had nerve to solder the wire again. Cogs told me that they had just fitted up the Naguadavick stations with Bain’s chemical revolving disc. This disc is charged with a salt of potash, which, when the electric spark passes through it, is changed to Prussian blue. Your dispatch is noislessly written in dark blue dots and lines,

Just as the disc started on that fatal dispatch, and Cogs bent over it to read, his spirit-lamp blew up,—as the dear things will. They were beside themselves in the lonely, dark office; but, while the men were fumbling for matches, which would not go, Cogs's sister, Nydia, a sweet blind girl, who had learned Bain's alphabet from Dr. Howe at South Boston, bent over the chemical paper, and smelt out the prussiate of potash, as it formed itself in lines and dots to tell the sad story. Almost anybody used to reading the blind books can read the embossed Morse messages with the finger,—and so this message was read at all the midnight way-stations where no night-work is expected, and where the companies do not supply fluid or oil. Within my narrow circle of acquaintance, therefore, there were these simultaneous instances, where the same message was seen, heard, smelled, tasted, and felt. So universal is the dot-and-line alphabet,—for Bain's is on the same principle as Morse's.

The reader sees, therefore, first, that the dot-and-line alphabet can be employed by any being who has command of any long and short symbols,—be they long and short notches, such as Robinson Crusoe kept his accounts with, or long and short waves of electricity, such as these which Valentia is sending across to the Newfoundland Bay, so prophetically and appropriately named "The Bay of Bulls." Also, I hope the reader sees that the alphabet can be understood

by any intelligent being who has any one of the five senses left him,—by all rational men, that is, excepting the few eyeless deaf persons who have lost both taste and smell in some complete paralysis. The use of Morse's telegraph is by no means confined to the small clique who possess or who understand electrical batteries. It is not only the torpedo or the *Gymnotus electricus* that can send us messages from the ocean. Whales in the sea can telegraph as well as senators on land, if they will only note the difference between long spoutings and short ones. And they can listen, too. If they will only note the difference between long and short, the eel of Ocean's bottom may feel on his slippery skin the smooth messages of our Presidents, and the catfish, in his darkness, look fearless on the secrets of a Queen. Any beast, bird, fish, or insect, which can discriminate between long and short, may use the telegraphic alphabet, if he have sense enough. Any creature, which can hear, smell, taste, feel, or see, may take note of its signals, if he can understand them. A tired listener at church, by properly varying his long yawns and his short ones, may express his opinion of the sermon to the opposite gallery before the sermon is done. A dumb tobacconist may trade with his customers in an alphabet of short-sixes and long-nines. A beleaguered Sebastopol may explain its wants to the relieving army beyond the line of the Chernaya, by the lisps of its short Paixhans and its long twenty-fours.

LITERARY NOTICES.

Études sur Pascal. Par M. VICTOR COUSIN.
Cinquième Edition, revue et augmentée.
Paris: 1857. pp. 566. 8vo.

WE render hearty thanks to M. Cousin for this new edition of a favorite work. No library which contains Pascal's "Provinciales" and "Pensées" should be without it.

"Of all the monuments of the French language," says M. Cousin, in the *Avant-propos* to this new edition, "none is more celebrated than the work 'Les Pensées,' and French literature possesses no artist more consummate than Pascal. Do not expect to find in this young geometrician, so soon consumed by disease and passion, the breadth, surface, and infinite variety

of Bossuet, who, supported by vast and uninterrupted study, rose and rose until he gained the loftiest reaches of intellect and art, and commanded at pleasure every tone and every style. Pascal did not fulfil all his destiny. Besides the mathematics and natural philosophy he knew scarcely more than a little theology, and he barely passed through good society. It is true, Pascal passed away from earth quickly; but during his short life he discerned glimpses of the *beau idéal*, he attached himself to it with all his heart and soul and strength, and he never allowed anything to leave his hands unless it bore its lively impress. So great was his passion for perfection, that unchallenged tradition tells us he wrote the seventeenth 'Provinciale' thirteen times over. 'Les Pensées' are merely fragments of the great work on which he consumed the last years of his life; but these fragments sometimes present so finished a beauty, that we do not know which most to admire, the grandeur and vigor of the sentiments and ideas, or the delicacy and depth of the art."

This praise is unexaggerated. What a career was run by this genius! Discovering the science of geometry at twelve years of age,—next inventing the arithmetical machine,—discovering atmospheric pressure, while every philosopher was prating about "Nature's horror of a vacuum,"—inventing the wheelbarrow, to divert his mind from the pains of the toothache, and succeeding,—inventing the theory of probabilities,—establishing the first omnibuses that ever relieved the public,—then writing the "Provinciales,"—dying at thirty-three, leaving behind him two small volumes (you may carry them in your pocket) which are the unchallengeable title-deeds of his immortal fame, the favorite works of Gibbon, Voltaire, Macaulay, and Cousin! Where else can so crowded and so short a career be found?

It is scarcely possible to repress a smile in reading this work and discovering the patient care with which M. Cousin avoids speaking of the "Provinciales." And it is strange to say (no contemptible proof of the influence exercised by the Church of Rome, even when checked as it is in France) that no decent edition of the "Provinciales" can be found in the French language. While we possess M. Cousin's "Études sur Pascal," and M. Havet's edi-

tion of "Les Pensées," the only editions of "Les Provinciales" of recent date are the miserable publications of Charpentier and the Didots. Editions of Voltaire and Rousseau are numerous, elaborate, and elegant; for atheism is pardoned much more easily than abhorrence of the Jesuits.

The volume named at the head of this article contains a great many valuable documents relating to Pascal and his family: all of Pascal's correspondence known to exist, including his celebrated letter on the death of Étienne Pascal, his father, which is usually printed in "Les Pensées," being cut up into short sentences to fit it for that work, a large part of it being omitted; his singular essay on Love; curious details concerning the De Roanner family; an essay on the true text of the "Pensées"; a curious fac-simile of a page of that work; and a discussion (perhaps M. Cousin would say a refutation) of Pascal's philosophy. But we must protest against the easy manner in which M. Cousin wears his honors. When a book has reached its fifth edition and is evidently destined to a good many more during the author's lifetime, he lies under an obligation to place the new information he may have collected, and the additional thoughts which may have occurred to him, during the intervals between the different editions, in a form more convenient to the reader than new prefaces and new notes. To master the information contained in this work is no recreation, but a severe task, and one not to be accomplished except upon repeated perusals of the book. This is the more inexcusable because M. Cousin is now free from all official and professional cares; and it would involve the less labor to him, as he never writes, but dictates all his compositions.

Belle Brittan on a Tour; at Newport, and Here and There. New York: Derby & Jackson. 1858.

THE compulsion of hunger, or the request of friends, was the excuse for the printing of sorry books in Pope's time; and it has not become obsolete yet. The writer of the book, the title of which we have given above, pleads the latter alternative as the occasion of this publication. He says it was "a few friends" that pre-

ferred this request. It is unfortunate for him that he had any so void of judgment and empty of taste. He thinks his Letters will "receive unjust censure," as well as "undue praise." We think that he may relieve his mind of any such apprehension. We cannot think his book at all likely to receive more dispraise than it richly merits. A more discreditable one, not absolutely indictable, we hope, has seldom issued from the American press.

What motive the author had in assuming a female character, we know not. He certainly has been very unfortunate in his female acquaintance, if he accurately imitates their tone of thought and style of talk, in his letters. Should they happen to fall in the way of any foreigners, we beg them to believe that this is not the way in which American women converse. But we think that there can scarcely be a cockney so spoony as not to "spy a great peard under her muffler," and know that it is a man awkwardly masquerading in women's clothes. It is a libel on the women of the country, to put such balderdash into the mouth of one who may be supposed to have been finished at a fifth-rate boarding-school.

The letters are in the worst style of the "Own Correspondents" of third-rate papers. The "*deadhead*" perks itself in your face at every turn, in flunkeyish gratitude for invitations, drinks, dinners, and free passes,—from "the gentlemanly Lord Napier," down to "intelligent and gentlemanly" railway-conductors, "gentlemanly and attentive" hotel-clerks, "gracious, gentlemanly, and gallant" tavern-keepers, and their "lovely and accomplished brides." The soul of a footman is expressed by the pen of an abigail,—and the one not a Humphrey Clinker, nor the other a Winifred Jenkins,—and we are expected to admire the result as a good imitation of a lively, intelligent, well-bred American young lady! We protest against the profanation.

The letters take a wide range of subject, and treat of "Shakspeare, taste, and the musical glasses," in a vein that would have done no discredit to Lady Blarney and Miss Arabella Wilhelmina Amelia Skeggs themselves. We might divert our readers with some specimens of criticism, or opinion, did our limits admit of such entertainment. We can only inform them, on Belle Brittan's authority, that worthy Dr.

Charles Mackay, who suffers throughout the book from intermittent — nay, chronic — attacks of puffery, is "one of the best living poets of England"; Made-moiselle Lamoureux, the *danseuse*, is "better than Ellsler"; and pretty Mrs. John Wood, the lively *soubrette* of the Boston Theatre, "possesses many of the rarest requisites of a great actress"! But these are inanities which an inexperienced and half-taught girl might possibly utter in a familiar letter. Not so, we trust, as to the belief expressed by Belle Brittan, in puffing "Jim Parton's, Fanny Fern's Jim's," Life of Burr,— "more charming than a novel," because, as she implies, of the successful libertinism of its hero,—when she says, speaking in the name of the maidens of America, "We all, I suppose, must fall, like our first parents, when the hour of our temptation comes"!

We should not have given the space we have bestowed on this worthless book, had it not been made the occasion of newspaper puffs innumerable, recommending it to the public as something worthy of their time and money. It is one of the worst signs of our time that a false good-nature or imperfect taste should lead respectable papers to give currency to books destitute of all merit, by the application to them of stereotyped phrases of commendation. These letters, without a grace of style, without a flash of wit, without a genial ray of humor, deformed by coarse breeding, vulgar self-conceit, and ignorant assumption, are bepraised as if they were fresh from the mint of genius, and bore the image and superscription of Madame de Sévigné or Lady Mary Wortley! This evil must be cured, or the daily press may find that it will cure itself.

We know nothing of the author of this book, excepting what he has here shown us of himself. He may be capable of better things, and when they come before us, we shall rejoice to do them justice. But we advise him, first of all, to discard his disguise, which becomes him as ill as the gown of Mrs. Ford's "maid's aunt, the fat woman of Brentford," did Sir John Falstaff. Or, if he will persist in playing the part of a woman, let him bear in mind that to be unmanly is not necessarily to be womanly, and that it does not follow that one writes like a lady because he does not write like a gentleman.

Appleton's Cyclopædium of Drawing. Designed as a Text-book for the Mechanic, Architect, Engineer, and Surveyor. Comprising Geometrical Projection, Mechanical, Architectural, and Topographical Drawing, Perspective, and Isometry. Edited by W. E. WORTHEN. New York: D. Appleton & Co. 1857.

MR. WORTHEN has given us in this book a most judicious and complete compilation of the best works on the various branches of "practical" drawing,—having, with real thoughtfulness and knowledge of what was needed in a handbook, condensed all the most important rules and directions to be found in the works of MM. Le Brun and Armengaud on geometrical and mechanical drawing, Ferguson and Garbett on architectural, and Williams, Gillespie, Smith, and Frome, on topographical drawing.

It includes a very full chapter of geometrical definitions, a complete and minute description of all the implements of mechanical drawing, and solutions of all the useful problems of geometrical drawing,—a part of the work especially needed by practical mechanics, and hitherto to be found, so far as we know, only in the form of results in the pocket-books of tables, or in the lengthy and elaborate treatises of the heavy cyclopædias, or works specially devoted to the topic.

There is an admirably condensed treatise on the mechanical powers, containing all the problems of use in construction, with tables of the mechanical properties of materials. In mechanical drawing there are directions for the most complicated drawings, going up to the last improvements in the steam-engine. The same completeness of elementary instruction marks the section on architectural drawing, though in this department we should have liked a fuller and better-chosen series of examples, especially of domestic architecture,—an Italian villa planned by Mr. Upjohn being the only really tasteful

and appropriate dwelling-house given. The designs by Downing, rarely much more than commodious residences with great neatness rather than artistic beauty, stand very well for that style of building which consults comfort and attains it, but it is a misuse of words to call them artistic. Picturesque they may be at times, but often the affectation of external style puts Downing's designs into the category of Gothic follies and Grecian villanies, in which the outside gives the lie to the inside,—emulating in wood the forms of stone, giving to cottages on whose roof snow will never lie three inches deep all the pitch a Swiss *chalet* would need. We are especially sorry to see a plate of Thomas's house in Fifth Avenue, New York,—the most absurd and ludicrous pile of building material which can be found on the avenue,—and to find such evidence of taste as is shown by the editor's commendation of it as "uniting richness and grandeur of effect," "admirably suited," etc. Mr. Worthen, however, generally abstains from much expression of opinion as to styles or the respective merits of works.

His examples of the steam-engine are nearly all from American models, and include the oscillating engines of the "Golden Gate," the last important advance in the construction of the marine engine; for, although the form of the oscillator has been known for years, it had never been applied to marine uses until the success of the "Golden Gate" proved its applicability to the heaviest engines. The examples of architectural details and ornaments are copious, and represent all styles with great fairness; but there is much confusion in the numbering of the plates, so that it is a problem at times to find the illustration desired.

The tinted illustrations, though answering their proposed purpose, are a disgrace to the art of lithotinting,—coarse, ineffective, and cheap. The publishers, we think, would have profited by a little more liberality in this respect.

THE

ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. II.—NOVEMBER, 1858.—NO. XIII.

RAILWAY-ENGINEERING IN THE UNITED STATES.*

THOUGH our country can boast of no Watt, Brindley, Smeaton, Rennie, Telford, Brunel, Stephenson, or Fairbairn, and lacks such experimenters as Tredgold, Barlow, Hodgkinson, and Clark, yet we have our Evans and Fulton, our Whistler, Latrobe, Roebling, Haupt, Ellet, Adams, and Morris,—engineers who yield to none in professional skill, and whose work will bear comparison with the best of that of Great Britain or the Continent; and if America does not show a Thames Tunnel, a Conway or Menai Tubular Bridge, or a monster steamer,

yet she has a railroad-bridge of eight hundred feet clear span, hung two hundred and fifty feet above one of the wildest rivers in the world,—locomotive engines climbing the Alleghanies at an ascent of five hundred feet per mile,—and twenty-five thousand miles of railroad, employing upwards of five thousand locomotives and eighty thousand cars, costing over a thousand millions of dollars, and transporting annually one hundred and thirty millions of passengers and thirty million tons of freight,—and all this in a manner peculiarly adapted to our country, both financially and mechanically.

In England the amount of money bears a high proportion to the amount of territory; in America the reverse is the case; and the engineers of the two countries quickly recognized the fact: for we find our railroads costing from thirty thousand to forty thousand dollars per mile,—while in England, to surmount much easier natural obstacles, the cost varies from seventy-five to one hundred thousand dollars per mile.

The cost of railroad transport will probably never be so low as carriage by water,—that is, natural water-communication; because the river or ocean is given

* *Handbook of Railroad Construction*, for the Use of American Engineers. By GEORGE L. VOSE, Civil Engineer. Boston and Cambridge: James Munroe & Company. 1857.

Baltimore and Ohio Railroad Reports, from 1830 to 1850. BENJAMIN H. LATROBE, Chief Engineer.

Railways and their Management, being a Pamphlet written by JAMES M. WHITON, Esq., late of the Boston, Concord, and Montreal Railroad. 1856.

Report of the President, Treasurer, and General Superintendent of the New York and Erie Railroad Company to the Stockholders. March, 1856.

Final Report of JOHN A. ROEBLING, Civil Engineer on the Niagara Railway Suspension-Bridge. May, 1855.

to man complete and ready for use, needing no repairs, and with no interest to pay upon construction capital. Indeed, it is just beginning to be seen all over the country that the public have both expected and received too much accommodation from the companies. Men are perfectly willing to pay five dollars for riding a hundred miles in a stage-coach; but give them a nicely warmed, ventilated, cushioned, and furnished car, and carry them four or five times faster, with double the comfort, and they expect to pay only half-price,—as a friend of the writer once remarked, “Why, of course we ought not to pay so much when we a’n’t half so long going,”—as if, when they paid their fare, they not only bargained for transport from one place to another, but for the luxury of sitting in a crowded coach a certain number of hours. It would be hard to show a satisfactory basis for such an establishment of tolls. We need not wonder at the unprofitableness of many of our roads when we consider that the relative cost of transport is,—

By Stage, one cent,

By Railroad, two and seven-twelfths;

and the relative charge,—

By Stage, five cents,

By Railroad, three cents;

and the comparative profit, as five less one to three less two and seven-twelfths, or as *four to five-twelfths*, or as *nine and six-tenths to one*.

America has, it is true, a grander system of natural water-communication than any other land except Brazil; but, for all that, there is really but a small part of the area, either of the Alleghany coal and iron fields, or of the granaries of the Mississippi valley, reached even by our matchless rivers. A certain strip or band of country, bordering the water-courses, is served by them both as regards export and import; just as much is served wherever we build a railroad. In fact, whenever we lay a road across a State, whether it connects the West di-

rectly with the East, or only with some central commercial point in the West, just so often do we open to market a band of country as long as the road, and thirty, forty, or fifty miles wide,—the width depending very much upon the cost of transport over such road; and as the charge is much less upon a railroad than upon a common road, the distance from the road from which produce may be brought is much greater with the former than with the latter. The actual determination of the width of the band is a simple problem, when the commercial nature of the country is known.

The people of the great valley have not been slow, where Nature has denied them the natural, to make for themselves artificial rivers of iron. These railroads are more completely adapted to the physical character of the Western States than would be any other mode of communication. The work of construction is oftentimes very light, little more being necessary for a railway across the prairies of the West (generally) than a couple of ditches twenty or thirty feet apart, the material taken therefrom being thrown into the intermediate space, thus forming the surface which supports the cross-ties, the sills or sleepers, and the rails. Indeed, the double operation of ditching and embanking is in some cases performed by a single machine, (a nondescript affair, in appearance half-way between a threshing-machine and a hundred-and-twenty-pound field-piece,) drawn by six, eight, or ten pairs of oxen.

It is even probable that in a great many cases the common road would cost more than the railway in the great central basin of America; as the rich alluvial soil, when wet in spring or fall, is almost impassable, and lack of stone and timber prevents the construction of artificial roads.

The influence of the railroad upon the Western farm-lands is quickly seen by the following figures, extracted from a lately published work on railroad construction.

Table showing the Effect of Railroad Transport upon the Value of Grain in the Market of Chicago, Illinois.

	WHEAT.		CORN.	
	Carried by railroad.	Carried by wagon.	Carried by railroad.	Carried by wagon.
At market	\$49.50	49.50	25.60	25.60
Carried 10 m.	49.25	48.00	24.25	23.26
" 50 m.	48.75	42.00	24.00	17.25
" 100 m.	48.00	34.50	23.25	9.75
" 150 m.	47.25	27.00	22.50	2.25
" 200 m.	46.50	19.50	21.75	0.00
" 300 m.	45.00	4.50	20.25	0.00
" 330 m.	44.55	0.00	19.80	0.00

Thus a ton of corn carried two hundred miles costs by wagon-transport more than it brings at market,—while, moved by railroad, it is worth \$21.75. Also wheat will not bear wagon-transport of 330 miles,—while, moved that distance by railroad it is worth \$44.55 per ton.

The social effect of railroads is seen and felt by those who live in the neighborhood of large cities. The unhealthy density of population is prevented, by enabling men to live five, ten, or fifteen miles away from the city and yet do business therein. The extent of this diffusion is as the square of the speed of transport. To illustrate. If a person walks four miles an hour, and is allowed one hour for passing from his home to his place of business, he can live four miles from his work; the area, therefore, which may be lived in is the circle of which the radius is four miles, the diameter eight miles, and the area $50\frac{1}{2}$ square miles. If by horse he can go eight miles an hour, the diameter of the circle becomes sixteen miles, and the area 201 square miles. Finally, if by railroad he goes thirty miles an hour, the diameter becomes sixty miles, and the area 2,827 square miles.

In the case of railroads, as of other labor-saving (and labor-producing) contrivances, the innovation has been loudly decried; but though it does render some classes of labor useless, and throw out of employment some persons, it creates new

labor for more than the old, and gives much more than it takes away.

Twenty years of experience show that the diminished cost of transport by railroad invariably augments the amount of commerce transacted, and in a much larger ratio than the reduction of cost. It is estimated by Dr. Lardner that three hundred thousand horses, working daily in stages, would be required to perform the passenger-traffic alone which took place in England during the year 1848.

Regarding the safety of railroad-travelling, though the papers teem with awful calamities from collisions and other causes, yet so great is the number of persons who use the new mode of transport, that travelling by railroad is really about one hundred times safer than by stage. The mortality upon English roads was for one year observed:—one person killed for each sixty-five million transported; in America, for the same time, one in forty-one million.

If we should try to reason from the rate of past railway-growth as to what the future is to be, we should soon be lost in figures. Thus, in the United States,—

In 1829	there were	3 miles.
In 1830		41 miles.
In 1840		2167 miles.
In 1850		7355 miles.
In 1856		23,242 miles.

Thus from 1830 to 1840, the rate is as $2\frac{1}{2}$ to 1, or 53 nearly; from 1840 to 1850,

$\frac{7355}{2167}$, or 3 nearly; and from 1850 to 1856, $\frac{23242}{7355}$, or 3 nearly; and from 1850 to 1860 we may suppose the rate will be about 4. The rate is probably now at its permanent maximum, taking the whole country together,—the increase in New England having nearly ceased, while west of the Mississippi it has not reached its average.

Among the larger and more important roads and connected systems in our country may be named the New York and Erie Railroad,—connecting the city of New York with Lake Erie at Dunkirk, (and, by the road's diverging from its western terminus, with "all places West and South," as the bills say,)—crossing the Shawangunk Mountains through the valley of the Neversink, up the Delaware, down the Susquehanna, and through the rich West of the Empire State.

The Pennsylvania Central Road: from Philadelphia through Lancaster to Harrisburg, on the Susquehanna, up the Juniata and down the western slope of the Alleghanies, through rock-cut galleries and over numberless bridges, reaching at last the bluffs where smoky Pittsburg sees the Ohio start on its noble course.

The Baltimore and Ohio Railroad: from Baltimore, in Maryland, to Wheeling and Parkersburg, on the Ohio;—crossing the lowlands to the Washington Junction, thence up the Patapsco, down the Monocacy, to the Potomac; up to Harper's Ferry, where the Potomac and the Shenandoah chafe the rocky base of the romantic little town perched high above; winding up the North Branch to Cumberland,—the terminus of the Chesapeake and Ohio Canal, and of the great national turnpike to the West, for which Wills' Creek opened so grand a gate at the narrows,—to Piedmont the foot and Altamont the summit, through Savage Valley and Crabtree Gorge, across the glades, from which the water flows east to the Chesapeake Bay and west to the Gulf of Mexico; down Saltlick Creek, and up the slopes of Cheat River and Laurel Hill, till rivers dwindle to creeks,

creeks to rills, and rills lose themselves on the flanks of mountains which bar the passage of everything except the railroad; thence, through tunnels of rock and tunnels of iron, descending Tygart's Valley to the Monongahela, and thence through a varied but less rugged country to Moundsville, twelve miles below Wheeling, on the Ohio River.

These are our three great roads where engineering skill has triumphed over natural obstacles. We have another class of great lines to which the obstacles were not so much mechanical as financial,—the physical difficulties being quite secondary. Such are the trunk lines from the East to the West,—through Buffalo, Erie, and Cleveland, to Toledo and Detroit, and from Detroit to Chicago, Rock Island, Burlington, Quincy, and St. Louis; from Pittsburg, Wheeling, and Parkersburg, on the Ohio, to Cleveland, Columbus, Cincinnati, Indianapolis, Louisville, and St. Louis; and from Cleveland, through Columbus, to Cincinnati, and from Cincinnati to the Northwest.

In progress also may be noticed roads running west from St. Louis, Hannibal, and Burlington, on the Mississippi, all tending towards some point in Kansas, from which the great Pacific Road, the crowning effort of American railway-engineering, may be supposed to take its departure for California and Oregon.

The chief point of difference between the English and the American engineer is, that the former defies all opposition from river and mountain, maintains his line straight and level, fights Nature at every point, cares neither for height nor depth, rock nor torrent, builds his matchless roads through the snowy woods of Canada or over the sandy plains of Egypt with as much unconcern as among the pleasant fields of Hertford or Surrey, and spans with equal ease the Thames, the Severn, the St. Lawrence, and the Nile. The words "fail," "impossible," "can't be done," he knows not; and when all other means of finding a firm base whereon to build his bridges and viaducts fail, he puts in a foundation of

golden guineas and silver dollars, which always gives success.

On the other hand, the American engineer, always respectful (though none the less determined) in the presence of natural obstacles to his progress, bows politely to the opposing mountain-range, and, bowing, passes around the base, saying, as he looks back, "You see, friend, we need have no hard feelings,—the world is large enough for thee and me." To the broad-sweeping river he gently hints, "Nearer your source you are not so big, and, as I turned out for the mountain, why should I not for the river?" till mountain and river, alike aghast at the bold pigmy, look in silent wonder at the thundering train which shoulders aside granite hills and tramples rivers beneath its feet. But if Nature corners him between rocks heavenward piled on the one hand and roaring torrents on the other, whether to pass is required a bridge or a tunnel, we find either or both designed and built in a manner which cannot be bettered. He is well aware that the directors like rather to see short columns of figures on their treasurer's books than to read records of great mechanical triumphs in their engineer's reports.

Of the whole expense of building a railroad, where the country is to any considerable degree broken, the reduction of the natural surface to the required form for the road, that is, the earthwork, or, otherwise, the excavation and embankment, amounts to from thirty to seventy per cent. of the whole cost. Here, then, is certainly an important element on which the engineer is to show his ability; let us look a little at it, even at the risk of being dry.

It is by no means necessary to reduce the natural surface of the country to a level or horizontal line; if it were so, there would be an end to all railroads, except on some of the Western prairies. This was not, however, at first known; indeed, those who were second to understand the matter denied the possibility of moving a locomotive even on a level

by applying power to the wheels, because, it was said, the wheels would slip round on the smooth iron rail and the engine remain at rest. But lo! when the experiment was tried, it was found that the wheel not only had sufficient bite or adhesion upon the rail to prevent slipping and give a forward motion to the engine, but that a number of cars might be attached and also moved.

This point gained, the objectors advanced a step, but again came to a stand, and said, "If you can move a train on a level, that is all,—you can't go up hill." But trial proved that easy inclines (called grades) could be surmounted,—say, rising ten feet for each mile in length.

The objectors take another step, but again put down their heavy square-toed foot, and say, "There! ar'n't you satisfied? you can go over grades of twenty feet per mile, but no more,—so don't try." And here English engineers stop,—twenty feet being considered a pretty stiff grade. Meanwhile, the American engineers Whistler and Latrobe, the one dealing with the Berkshire mountains in Massachusetts, the other with the Alleghanies in Virginia, find that not only are grades of ten and of twenty feet admissible, but, where Nature requires it, inclines of forty, sixty, eighty, and even one hundred feet per mile,—it being only remembered, the while, that just as the steepness of the grade is augmented, the power must be increased. This discovery, when properly used, is of immense advantage; but in the hands of those who do not understand the nice relation which exists between the mechanical and the financial elements of the question, as governed by the speed and weight of trains, and by the funds at the company's disposal, is very liable to be a great injury to the prospects of a road, or even its ruin.

It was urged at one time, that the best road would have the grades undulating from one end to the other,—so that the momentum acquired in one descent would carry the train almost over the succeeding ascent, and that very little steam-power would be needed. This

idea would have place, at least to a certain extent, if the whole momentum was allowed to accumulate during the descent; but even supposing there would be no danger from acquiring so great a speed, a mechanical difficulty was brought to light at once, namely, that the resistance of the atmosphere to the motion of the train increased nearly, if not quite, as the square of the speed; so that after the train on the descent acquired a certain speed, a regular motion was obtained by the balance of momentum and resistance,—whence a fall great enough to produce this regular speed would be advantageous, but no more. On the other hand, the extra power required to draw the train up the grades much overbalances the gain by gravity in going down.

Here, then, we have the two extremes: first, spending more money than the expected traffic will warrant, to cut down hills and fill up valleys; and second, introducing grades so steep that the amount of traffic does not authorize the use of engines heavy enough to work them.

The direction of the traffic, to a certain extent, determines the rate and direction of the inclines. Thus, the Reading Railroad, from Philadelphia up the Schuylkill to Reading, and thence to Pottsville, is employed entirely in the transport of coal from the Lehigh coal-fields to tide-water in Philadelphia; and it is a very economically operated road, considering the large amount of ascent encountered, because the load goes down hill, and the weight of the train is limited only by the number of empty cars that the engine can take back.

This adoption of steep inclines may be considered as an American idea entirely, and to it many of our large roads owe their success. The Western Railroad of Massachusetts ascends from Springfield to Pittsfield, for a part of the way, at 83 feet per mile. The New York and Erie Railroad has grades of 60 feet per mile. The Baltimore and Ohio climbs the Alleghanies on inclines of 116 feet per mile. The Virginia Cen-

tral Road crosses the Blue Ridge by grades of 250 and 295 feet per mile; and the ridge through which the Kingwood Tunnel is bored, upon the Baltimore and Ohio Railroad, was surmounted temporarily by grades of 500 feet per mile, up which each single car was drawn by a powerful locomotive.

Another element, of which American engineers have freely availed themselves, is curvature. More power is required to draw a train of cars around a curved track than upon a straight line. In England the radius of curvature is limited to half a mile, or thereabouts. The English railway-carriage is placed on three axles, all of which are fixed to the body of the vehicle; the passage of curves, of even a large diameter, is thus attended by considerable wear and strain; but in America, the cars, which are much longer than those upon English roads, are placed upon a pintle or pin at each end, which pin is borne upon the centre of a four-wheeled truck,—by which arrangement the wheels may conform to the line of the rails, while the body of the car is unaffected. This simple contrivance permits the use of curves which would otherwise be entirely impracticable. Thus we find curves of one thousand feet radius upon our roads, over which the trains are run at very considerable speed; while in one remarkable instance (on the Virginia Central Railroad, before named) we find the extreme minimum of 234 feet. Such a track does not admit of high speeds, and its very use implies the existence of natural obstacles which prevent the acquirement of great velocities.

In fine, the use which the engineer makes of grades and curves, when the physical nature of the country and the nature and amount of the traffic expected are known, may be taken as a pretty sure index of his real professional standing, and sometimes as an index of the moral man; as when, for example, he steepens his grades to suit the contractor's ideas of mechanics,—in other words, to save work.

Not less in the construction of bridges

and viaducts, than in the preparation of the road-bed proper, does the American engineering faculty display itself. Timber, of the best quality, may be found in almost every part of the country, and nowhere in the world has the design and building of wooden bridges been carried to such perfection and such extent as in the United States. We speak here of structures built by such engineers as Haupt, Adams, and Latrobe,—and not of those works, wretched alike in design and execution, which so often become the cause of what are called terrible catastrophes and lamentable accidents, but which are, in reality, the just criticisms of natural mechanical laws upon the ignorance of pretended engineers.

Among the finest specimens of timber-work in America are the Cascade Bridge upon the New York and Erie Railroad, designed and built by Mr. Adams, consisting of one immense timber-arch, having natural abutments in the rocky shores of the creek;—the second edition of the bridges generally upon the same road, by Mr. McCallum, which replaced those originally built during the construction of the road,—these hardly needing to be taken down by other exertion than their own;—the bridges from one end to the other of the Pennsylvania Central Road, by Mr. Haupt;—the Baltimore and Ohio “arch-brace” bridges, by Mr. Latrobe;—and the Genessee “high bridge,” (not a bridge, by the way, but a trestle,) near Portageville, by Mr. Seymour, which is eight hundred feet long, and carries the road two hundred and thirty feet above the river, having wooden trestles (post and brace-work) one hundred and ninety feet high, seventy-five feet wide at base, and twenty-five feet at top, and carrying above all a bridge fourteen feet high; containing the timber of two hundred and fifty acres of land, and sixty tons of iron bolts, costing only \$140,000, and built in the short time of eighteen months. This structure, if replaced by an earth embankment, would cost half a million of dollars, and could not be built in less than five years

by the ordinary mode of proceeding.* Further, the interest, for so long a time, on the large amount of money required to build the embankment, at the high rate of railroad interest, would nearly, if not quite, suffice to build the wooden structure.

Again, our wooden bridges of the average span cost about thirty-five dollars per lineal foot. Let us compare this with the cost of iron bridges, on the English tubular plan, the spans being the same, and the piers, therefore, left out of the comparison.

Suppose that a road has in all one mile in length of bridges. Making due allowance for the difference in value of labor in England and America, the cost per lineal foot of the iron tubular bridges could not be less (for the average span of 150 feet) than three hundred dollars.

5280 feet by	\$35 is	\$184,800.00
5280 feet by	300 is	1,584,000.00

The six per cent. interest on

the first is	. . .	11,088.00

And the difference is	. . .	83,952.00
-----------------------	-------	-----------

or nearly enough to rebuild the wooden bridges once in two years; and ten years is the shortest time that a good wooden bridge should last.

The reader may wonder why such structures as the bridge over the Susquehanna at Columbia, which consists of twenty-nine arches, each two hundred feet span, the whole water-way being a mile long, and many other bridges span-

* Lest these statements should sound extravagant, the reader will please reckon up the amounts for himself. A bank twenty-five feet wide on top, eight hundred feet long, and two hundred and thirty feet high, would contain two million cubic yards of earth; which, at twenty-five cents per yard, would cost half a million of dollars, exclusive of a culvert to pass the river, of sixty, eighty, or one hundred feet span and seven hundred feet long. Twenty trains per day, of thirty cars each, one car holding two yards, would be twelve hundred yards per day; two million, divided by twelve hundred, gives 1,666 days.

ning large rivers, and having an imposing appearance, are not referred to in this place. The reason is this: *large* bridges are by no means always *great* bridges; nor do they require, as some seem to think, skill proportioned to their length. There are many structures of this kind in America, of twenty, twenty-five, or thirty spans, where the same mechanical blunders are repeated over and over again in each span; so that the longer they are and the more they cost, the worse they are. It does not follow, because newspapers say, "magnificent bridge," "two million feet of timber," "eighty or one hundred tons of iron," "cost half a million," that there is any merit about either the bridge or its builder; as one span is, so is the whole; and a bridge fifty feet long, and costing only a few hundreds, may show more engineering skill than the largest and most costly viaducts in America. Few bridges require more knowledge of mechanics and of materials than Mr. Haupt's little "trussed girders" on the Pennsylvania Central Road,—consisting of a single piece of timber, trussed with a single rod, under each rail of the track.

Again, as regards American iron bridges, the same result is found to a great extent. Thus, Mr. Roebling's Niagara Railroad Suspension-Bridge cost four hundred thousand dollars, while a boiler-plate iron bridge upon the tubular system would cost for the same span about four million dollars, even if it were practicable to raise a tubular bridge in one piece over Niagara River at the site of the Suspension Bridge. Strength and durability, *with the utmost economy*, seem to have been attained by Mr. Wendel Bollman, superintendent of the road-department of the Baltimore and Ohio Railroad,—the minute details of construction being so skilfully arranged, that changes of temperature, oftentimes so fatal to bridges of metal, have no hurtful effect whatever. And here, again, is seen the distinctive American feature of adaptation or accommodation, even in the smallest detail. Mr. Bollman does not get savage and say, "Messieurs Heat

and Cold, I can get iron enough out of the Alleghanies to resist all the power you can bring against me!"—but only observes, "Go on, Heat and Cold! I am not going to deal directly with you, but indirectly, by means of an agent which will render harmless your most violent efforts!"—or, in other words, he interposes a short link of iron between the principal members of his bridge, which absorbs entirely all undue strains.

It is not to be supposed from what has preceded, that the American engineer does not know how to spend money, because he gets along with so little, and accomplishes so much; when occasion requires, he is lavish of his dollars, and sees no longer expense, but only the object to be accomplished. Witness, for example, the Kingwood Tunnel, on the Baltimore and Ohio Railroad, where for a great distance the lining or protecting arching inside is of heavy ribs of cast iron,—making the cost of that mile of road embracing the tunnel about a million of dollars. Nor will the traveller who observes the construction of the New York and Erie Railroad up the Delaware Valley, of the Pennsylvania Central down the west slopes of the Alleghanies, or of the Baltimore and Ohio down the slopes of Cheat River, think for a moment that the American engineer grudges money where it is really needed.

Stone bridges so rarely occur upon the roads of America, that they hardly need remark. The Starucca Viaduct, by Mr. Adams, upon the New York and Erie Railroad, and the viaduct over the Patapsco, near the junction of the Washington branch with the main stem of the Baltimore and Ohio Railroad, show that our engineers are not at all behind those of Europe in this branch of engineering.

From the civil let us pass to the mechanical department of railroad engineering. This latter embraces all the machinery, both fixed and rolling; locomotives and cars coming under the latter,—and the shop-machines, lathes, planers, and boring-machines, forging, cut-

ting, punching, rolling, and shearing engines, pumps and pumping-engines for the water-stations, turn-tables, and the like, under the former. Of this branch, little, except the design and working of the locomotive power, needs to be mentioned as affecting the prosperity of the road. Machine-shops, engine-houses, and such apparatus, differ but slightly upon different roads; but the form and dimensions of the locomotive engines should depend upon the nature of the traffic, and upon the physical character of the road, and that most intimately,—so much, indeed, that the adjustment of the grades and curvatures must determine the power, form, and whole construction of the engine. This is a fact but little appreciated by the managers of our roads; when the engineer has completed the road-bed proper, including the bridging and masonry, he is considered as done with; and as the succeeding superintendent of machinery is not at that time generally appointed, the duty of obtaining the necessary locomotive power devolves upon the president or contractor, or some other person who knows nothing whatever of the requirements of the road; and as he generally goes to some particular friend, perhaps even an associate, he of course takes such a pattern of engine as the latter builds,—and the consequence is that not one out of fifty of our roads has steam-power in any way adapted to the duty it is called upon to perform.

There is no nicer problem connected with the establishment of a railroad, than, having given the grades, the nature of the traffic, and the fuel to be used, to obtain therefrom by pure mechanical and chemical laws the dimensions complete for the locomotives which shall effect the transport of trains in the most economical manner; and there is no problem that, until quite lately, has been more totally neglected.*

* The most careless observer has doubtless noticed that the front part of a locomotive rests upon the centre of a truck, having four small wheels; the back and middle part, he will also remember, is borne upon large spoke-

Of the whole cost of working a railroad about one third is chargeable to the locomotive department; from which it is plain that the most proper adaptation is well worth the careful attention of the engineer. Though it is generally considered that the proper person to select the locomotive power can be none other than a practical machinist, and though he would doubtless select the best workmanship, yet, if not acquainted with the general principles of locomotion, and aware of the character of the road and of the expected traffic, and able to judge, (not by so-called experience, but by real knowledge,) he may get machinery totally unfit for the work required of it. Indeed, American civil engineers ought to qualify themselves to equip the roads they build; for none others are so well acquainted with the road as those who from a thorough knowledge of the matter have established the grades and the curvatures.

The difference between adaptation and non-adaptation will plainly be seen by the comparison below. The railway from Boston to Albany may be divided into four sections, of which the several lengths and corresponding maximum grades are as tabulated.

wheels, which are connected with the machinery; upon the size of these last depend the power and speed of the engine. The larger the wheels, the less the power, and the higher the velocity which may be got; again, the wheel remaining of the same size, by enlarging the dimensions of the cylinders the power is increased; and the wheels and cylinders remaining the same, by enlarging the boiler we can make stronger steam and thus increase the power. There may be seen upon the road from Boston to Springfield engines with wheels nearly seven feet in diameter, used for drawing light express-trains; while upon the roads ascending the Alleghanies may be seen wheels of only three and a half feet diameter, which are employed in drawing trains up the steep grades. Increase of steepness of grades acts upon the locomotive in the same manner as increase of actual load; as upon a level the natural tendency of the engine is to stand still, while on an incline the tendency is to roll backwards down-hill.

	Length in miles.	Steepest grade.
Boston to Worcester, . . .	44 . . .	30
Worcester to Springfield, . .	54½ . . .	50
Springfield to Pittsfield, . .	52 . . .	83
Pittsfield to Albany, . . .	49½ . . .	45

A load of five hundred tons upon a grade of thirty feet per mile requires of the locomotive a drawing-power of 11,500 lbs.

Upon a 50 feet grade 15,500 lbs.

Upon an 83 feet grade 22,500 lbs.

Upon a 45 feet grade 14,500 lbs.

Now, if the engines are all alike, (as they are very nearly,) and each is able to exert a drawing-power of five thousand

B. to W. 44 miles

W. to S. 54½ miles

S. to P. 52 miles

P. to A. 49½ miles

pounds to move a load of five hundred tons from Boston to Albany, we need as follows:—

B. to W. $\frac{11500}{5000}$ or 2 engines.

W. to S. $\frac{22500}{5000}$ or 3 engines.

S. to P. $\frac{22500}{5000}$ or 5 engines.

P. to A. $\frac{14500}{5000}$ or 3 engines.

From which the whole number of miles run by engines for one whole trip would be,—

by 2 engines, or 88

by 3 engines, or 163½

by 5 engines, or 260

by 3 engines, or 148½

And the sum, 660

Now suppose, that, by making the engines for the several divisions strong in proportion to the resistance encountered upon these divisions, one engine only is employed upon each: our mileage becomes,

B. to W. 44 by 1 or 44

W. to S. 54½ by 1 or 54½

S. to P. 52 by 1 or 52

P. to A. 49½ by 1 or 49½

And the sum, 200 miles.

And the saving of miles run is therefore 660 less 200, or 460; and if 500 tons pass over the road daily, the annual saving of mileage becomes 460 by 313, or 143,980, or 70 per cent. of the whole. The actual cost for freight-locomotives per ton, per mile run, during the year ending Sept. 30, 1855, was $\frac{384}{10000}$ of a cent; and the above 143,980 miles saved, multiplied by this fraction, amounts to \$55,288 per annum. The actual expense of working the power will not of course show the whole 70 per cent. of saving, as heavy and strong engines cost more at first, and cost more to operate, than lighter ones; but the figures show the effect of correct adaptation. If we call the saving 50 per cent. only of the mileage, we

have then (as the locomotive power consumes $\frac{30}{100}$ of the whole cost of operating) $\frac{30}{100}$ of $\frac{30}{100}$, or $\frac{15}{100}$, of the whole cost of working the road, and this by simply knowing how to adapt the machinery to the requirement.

So very slight are the points of difference between a good and a bad engine, that they often escape the eye of those whose business it is to deal with such works. It is not the brass and steel and bright metal and elaborate painting that make the really good and serviceable engine,—but the length, breadth, and depth of its furnace, the knowledge of proportion shown in its design, and the mechanical skill exhibited in the fitting of its parts. The apparently complex portions are really very simple in action, while the apparently simple parts are those where the greatest knowledge is required. Any man of ordinary mechanical acquirements can design and arrange the general form,—the whole mass of cranks, pistons, connecting-rods, pumps, and the various levers for working the engine; but to find the correct dimensions of the inner parts of the boiler, and of the valve-gearing, by which the movements of the steam are governed, requires a very

considerable knowledge of the chemistry of combustion, of practical geometry, and of the physical properties of steam. So nice, indeed, is the valve-adjustment of the locomotive, as depending upon the work it has to do, whether fast or slow, light or heavy, that a single eighth of an inch too much or too little will so affect its power as to entirely unfit it for doing its duty with any degree of economy.

When a single man takes the general charge of five hundred miles of railroad, upon which the annual pay-roll is a million of dollars, and which employs over two hundred locomotives and three thousand cars, earning five million dollars a year,—a road which cost thirty-three million, has five miles in length of bridges, and over four hundred buildings,—it is plain that the system of operation must be somewhat elaborate. And so it is. Indeed, so complete is the organization and management of *employées* upon the New York and Erie Railroad, that the General Superintendent at his office can at any moment tell within a mile where each car or engine is, what it is doing, the contents of the car, the consignor and consignee, the time at which it arrives and leaves each station, (the *actual* time, not the time when it *should* arrive,) and is thus able to correct all errors almost at the moment of commission, and in reality to completely control the road.

The great regulator upon long lines of railroad is the electric telegraph, which connects all parts of the road, and enables one person to keep, as it were, his eye on the whole road at once.

A single-track railroad, says Mr. McCallum, may be rendered more safe and efficient by a proper use of the telegraph than a double-track railroad without,—as the double-tracks commonly obviate collisions which occur between trains moving in *opposite* directions, whilst the telegraph may be used effectually in preventing them between trains moving either in *opposite* directions or in the *same* direction; and it is a well-established fact, deduced from the history of railroads both

in Europe and in this country, that collisions from trains moving in the *same* direction have proved by far the most fatal and disastrous, and should be the most carefully guarded against.

From the admirable report of Mr. McCallum, above referred to, we take the following:—"Collisions between fast and slow trains moving in the same direction are prevented by the following rule: 'The conductor of a slow train will report himself to the Superintendent of Division immediately on arrival at a station where, by the time-table, he should be overtaken by a faster train; and he shall not leave that station until the fast train passes, without special orders from the Superintendent of Division.' A slow train, under such circumstances, may, at the discretion of the Division Superintendent, be directed to proceed; he, being fully apprised of the position of the delayed train, can readily form an opinion as to the propriety of doing so; and thus, while the delayed train is permitted to run without regard to the slow one, the latter can be kept entirely out of its way.

"The passing-place for trains is fixed and determined, with orders positive and defined that neither shall proceed beyond that point until after the arrival of the other; whereas, in the absence of the telegraph, conductors are governed by general rules, and their individual understanding of the same,—which rules are generally to the effect, that, in case of detention, the **train* arriving first at the regular passing-place shall, after waiting a few moments, *proceed cautiously* (expecting to meet the other train, which is generally running as much faster, to make up lost time, as the cautious train is slower) until they have met and passed; the one failing to reach the half-way point between stations being required to back,—a dangerous expedient always,—an example of which operation was furnished at the disaster on the Camden and Amboy Railroad near Burlington; the delayed train further being subjected to the same rule in regard to all other

trains of the same class it may meet, thus pursuing its hazardous and uncertain progress during the entire trip."

The following table shows the rate and direction of subordination for a first-class railroad:—

General Superintendent.	Superintendent of road.	Roadmaster.	Section men.
		Roadmaster.	Section men.
	Superintendent of machinery.	Roadmaster.	Section men.
		Foreman of machine-shop. .	Machinists.
		Foreman of blacksmith's shop.	Blacksmiths
		Foreman of carpenter's shop.	Carpenters.
		Foreman of paint-shop. . .	Painters.
		Engineers (not on trains). .	Firemen.
	General passenger-agent.	Car-masters.	Oilers and cleaners.
		Conductors.	Brakemen.
		Mail agents.	Engineers (on trains).
		Station agents.	Ticket-collectors.
	General freight-agent.	Express agents.	Hackmen.
		Police.	Switchmen.
		Conductors.	Brakemen.
	Supply agent.	Station agents.	Engineers (on trains).
		Weighters and gaugers.	
	Fuel agent.	Yard-masters.	
		Clerks and teamsters furnishing supplies.	
		All men employed about wood-sheds.	

All subordinates should be accountable to and directed by *their immediate superiors only*. Each officer must have authority, with the approval of the general superintendent, to appoint all *employées* for whose acts he is responsible, and to dismiss any one, when, in his judgment, the interests of the company demand it.

Fast travelling is one of the most dangerous as well as one of the most expensive luxuries connected with the railroad system. Few companies in America have any idea what their express-trains cost them. Indeed, the proper means of obtaining quick transport are not at all understood. It is not by forcing the train at an excessively high speed, but by reducing the number of stops. A train running four hundred miles, and stopping once in fifty minutes,—each stop, including coming to rest and starting, be-

ing five minutes,—to pass over the whole distance in eight hours, must run fifty-five miles per hour; stopping once in twenty minutes, sixty-three miles per hour; and stopping once in ten minutes, eighty-six miles per hour.

The proportions in which the working-expenses are distributed under the several heads are nearly as follows:—

Management	7
Road-repairs	16
Locomotives	35
Cars	38
Sundries	4

In all 100

And the percentage of increase due to fast travelling, to be applied to the several items of expense, with the resulting increase in total expense, this:—

Management	7	increased by	0	per cent. is	0.0
Road-repairs	16	"	27	"	4.3
Locomotives	35	"	30	"	10.5
Cars	38	"	10	"	3.8
Sundries	4	"	0	"	0.0

100

And the whole increase 18.6

The causes of accident beyond the control of passengers are,—

Collision by opposition,
Collision by overtaking,
Derailment by switches misplaced,
Derailment by obstacles on the track,
Breakage of machinery,
Failure of bridges,
Fire,
Explosion.

Those causes which are aggravated by fast travelling are the first, second, fifth, and sixth. The effects of all are worse at high than at low velocities.

The proportion of accidents due to each of these causes, taken at random from one hundred cases on English roads, (American reports do not detail such information with accuracy,) were,—

Collision	56	56
Breakage of machinery	18	18
Failure of road	14	14
Misplaced switches	5	5
Obstacles on rails	6	6
Boiler explosions	1	1
	—	—
	88	100

Eighty-eight per cent. being from those causes which are aggravated by increase of speed; and if we suppose the amount of aggravation to augment as the speed, the danger of travelling is eighty-eight per cent. greater by a fast than by a slow train.

These are the direct evils of high speeds; there are also indirect evils, which are full as bad.

All trains in motion at the same time, within a certain distance of the express, must be kept waiting, with steam up, or driven at extra velocities to keep out of the way.

Where the time-table is so arranged as to call for speed nearly equal to the full capacity of the engine, it is very obvious that the risks of failure in "making time" must be much greater than at reduced rates; and when they do occur, the ef-

forts made to gain the time must be correspondingly greater and uncertain. A single example will be sufficient to show this.

A train, whose prescribed rate of speed is thirty miles per hour, having lost five minutes of time, and being required to gain it in order to meet and pass an opposing train at a station ten miles distant, must necessarily increase its speed to forty miles per hour; and a train, whose prescribed rate of speed is forty miles per hour, under similar circumstances, must increase its speed to sixty miles per hour. In the former case it would probably be accomplished, whilst in the latter it would more probably result in failure,—or, if successful, it would be so at fearful risk of accident.

However true it may be that many of our large roads are well, some of them admirably, managed, it is none the less a fact that the greater portion are directed in a manner far from satisfactory,—many, indeed, being subjected to the combined influence of ignorance and recklessness.

Many people wonder at the bad financial state of the American railroads; the wonder is, to those who understand the way in which they are managed, that they should be worth anything at all. It is useless to disguise the fact, says a writer in one of our railroad-papers, that the great body of our railroad-directors are entirely unfit for their position. They are, personally, a very respectable class of men, (Schuylerisms and Tuckermanisms excepted,)—men who, after having passed through their active business-lives successfully, and after retirement, are, in the minds of some, eminently fitted to adorn a director's chair. Never was there a greater mistake. What is wanted for a railway-director is an active, clear-headed man, who has not outlived his term of activity. We want railway-directors who know how to reduce the operating-expenses per mile, and not men who 'oppose their bigoted ignorance to everything like change or improvement, who can see no difference between sci-

ence and abstract ideas. It would seem that the only question to be asked with regard to the fitness of a man for being a director is—Is he rich and respectable? If he has these qualities, and is pretty stupid withal, he is in a fair line for election. We tell our railway-readers, that, if they desire to make their property valuable, and rescue it from becoming a byword and a reproach, they have got to elect men of an entirely different stamp,—men of practical experience, in the best sense of the term, who have intelligence enough to know and apply all those vital reforms upon which depends the future success of their undertakings,—the men of the workshop, the track, and the locomotive. And we shall yet see the more intelligent of them taking the place, at the directors' board, of the retired merchants, physicians, and other respectable gentlemen, who now lend only the names of their respectability to perpetuate a system of folly that has reduced our railroad-management below contempt. As at present constituted, our boards are a very showy, but very useless piece of mechanism. The members attend at meetings when they feel just like it, and sign their names to documents and statements which have been prepared for them by others, without much knowledge of what the contents are; their other duties consisting chiefly in riding over their own and connecting roads, free of charge.

Why should railway-directors work for nothing for the stockholders? Ah, Messrs. Stockholders, you little know in reality how fat a salary your directors make to themselves, by nice little commissions, by patronizing their favorite builders of locomotives and cars, and by buying the thousand and one patents that are so urgently recommended! Do you carry your broken watch to a blacksmith or to a stone-mason to be mended? Neither, we think. Why, then, do you leave the management of a work which engineers, machinists, carpenters, masons, and men of almost every trade, have spent time and care upon to build, to the respectable merchant, lawyer, or

banker, who thinks the best road that which has the softest cushions and the most comfortable seats on which to ride?

Railroad-building, remarks a late writer, (Mr. Whiton,) may be divided into three periods,—the first, the *introductory*, in which roads were a sort of experimental enterprise, where the men who labored expected to be paid for their time or money, and were willing to wait a reasonable time for the expected profit. Second, the *speculative* period, when men were possessed with an unhealthy desire for fortune-making, and, not content to wait the natural harvest of the seed sown, departed from the sound and honest principles of construction and management; trying, at first, by all sorts of pretence and misrepresentation, to conceal, and last by legislation to counterbalance, the results of their ignorance and of their insane desires. Railroads were compared, as an investment, to banks; and it was even supposed that the more they cost the more they would divide; and tunnels, rock-cuts, and viaducts were then as much sought after as they are now avoided. Shrewd and intelligent business-men, who had made for themselves fortunes, embraced these ridiculous opinions, and seemed at once, upon taking hold of railroad-enterprises, to lose whatever of common sense they before might have possessed; and even at the present day these same men have not the manly honesty to acknowledge their errors, but endeavor to cover them up with greater.—The third period is that of *reaction*, which embraces the present time. To a person unacquainted with the management of railroads, to see a body of men, no one of whom has ever before had anything to do with mechanical operations, assembled to decide upon the relative merits of the different plans of bridges or of locomotives or cars, upon the best means of reducing the working-expenses of a machine of whose component parts they have not the slightest idea, of the most complicated and elaborate piece of mechanism that men have

ever designed, might at first seem absurd; but custom has made it right. It is generally supposed that the moment a man, be he lawyer, doctor, or merchant, is chosen director in a railroad enterprise, immediately he becomes possessed of all knowledge of mechanics, finance, and commerce; but, judging from past experience, it appears in reality that he leaves behind at such time whatever common sense he perchance possessed before; otherwise why does he not follow the same correct business-rules, when managing the property of others, as when he accumulated his own? A man who should show as much carelessness and ignorance, when operating for himself, as railway-directors do when operating for others, would be considered as a fit subject for an insane asylum.

When railroads are built where they are needed, at the time they are wanted, in a country able to support them, by permanent investors, and not by speculators, and are well made by good engineers, and well managed by competent men, whose interest is really connected with the success of the enterprise, then they will pay, and be railroads indeed. But so long as money is obtained on false pretences, to be played for by State and Wall Street gamblers on the one hand, and ravenous contractors on the other hand, they will be what they are,—worthless monuments of extravagance and folly.

“Experience keeps a dear school,” says poor Richard, “but fools will learn in no other.”

Let not the reader think for a single moment that we have no appreciation of the labors of a De Witt Clinton, or of a Livingston,—that we at all underrate the services of the Eastern capitalists who render available the public-land grants of the West, whether to build ship-canal or railroads. We have the highest respect for that talent without which our Western lands would still be left to the buffalo and the deer, and the gold and silver of Europe would remain on the other side of the Atlantic. These capi-

talists are the mainsprings of the system; but we should no more apply their energy and skill to the detailed operation of so mechanical a structure as a railroad, than we should attach the mainspring of a watch to the hands directly, without the intermediate connecting chains and wheels.

Not less incompetent for the construction of railways, than are the directors for the management of the completed roads, are at least one half of the so-called engineers in America. Obligated to complete no course of education, to pass no examination, they are at once let loose upon the country whenever they feel like it, to build what go by the names of railroads and bridges, but are in reality traps in which to lose both life and money. Indeed, any man (in the United States) who has carried a rod or chain is called an engineer; while the correct definition is, a man who has, first, a thorough knowledge of mechanics, mathematics, and chemistry,—second, the knowledge necessary for applying these sciences to the arts,—and last, the knowledge requisite to the correct adaptation of such arts to the wants of man, but, more than all, that experience which is got only from continual practice. We have such a class of engineers, and to them we owe what of fame we have in the engineering world. Second, comes another grade, men who, commencing as subordinates, without any preparatory knowledge, but with natural genius, and an intuitive knowledge of mechanics, need only to have their ideas generalized to see the bearing of their special knowledge upon the whole, in order to rank high in the profession. Third, a class who lack both natural and acquired knowledge, and whose only recommendation is that they are always for sale to the highest bidder, whether he be president, director, or contractor; sometimes working nominally for the company, but really for the contractor,—or in some cases, so debased is this class of persons, for both contractor and company openly. Of late years this prostitution of mongrel

engineers has had place to an alarming extent. Let us hope that the old professional pride, and, better still, a love of truth and honesty for their own sake, may

yet triumph, and place real engineers high above the dead level to which ignorance and pretence and venality have degraded the profession.

HER GRACE, THE DRUMMER'S DAUGHTER.

[Concluded.]

THE girl whose suggestion had brought about this change in her father's household, introducing anxiety and tears and pain where these were almost strangers, was not exceeding joyous in view of what she had done. But she was resolved and calm. It was everything to her, that night when she lay down to rest, to know that the same roof that covered her was also spread above the prisoner, and all the joys of youth passed into forgetfulness as she thought and vowed to herself concerning the future.

It seemed, perhaps, a state of things involving no consequences, this sympathy that Elizabeth had shared with the gardener Sandy, when the prisoner's eyes gazed on them from his window, or turned towards them while he walked in the garden; but Sandy said to himself, when she told him that they were to have Laval's place in the prison, "*It took her!*"—neither did it seem incredible to him when she assured him that the new house was like home. He honestly believed that with the child—child he considered her—all things were possible.

What he had lacked and missed so long that the restoration had a charm of novelty about it, added to its own excellency, was now the prisoner's portion. Good manners, kind and courteous voices, greeted eyes and ears once more. As in the days of Joan Laval, a woman was now sometimes in attendance on the prisoner. But in not one particular did Pauline Montier resemble Joan Laval. She called herself a soldier's wife, and was exact and brave accordingly. She

was thoughtful of her husband's charge, and when she paused in her efforts for his comfort and content, it was because she had exhausted the means within her reach, but not her wit in devising.

The effect was soon manifest. The prisoner received this care and sympathy as he might have received the ministration of angels. The attendance was almost entirely confined to Montier and his wife, but now and then Elizabeth also could serve him. She served him with her heart, with unobtrusive zeal that was exhaustless as the zeal of love. Unobserved, she watched, as well as waited on him; and oh, how jealous and impatient of time and authority did she become! Her pity knew no limit; it beamed from her eyes, spoke through her voice, was unceasing in activity. He was to her a romance terrible and sweet, a romance that had more abundant fascination than the world could show beside.

She went up to his room one morning, carrying his breakfast. Her father had been ordered to the barracks, and her mother was not well; the service therefore fell upon her.

The prisoner did not seem to heed her when she entered; at least, he gave no sign, until she approached him, and even then was not the first to speak. Going to the window, her eyes followed his to the garden below.

"It looks well this morning," she said, pleasantly.

"Yes,—but I have seen prettier," he answered.

"Where?" she asked, so quickly that

Manuel almost smiled as he looked at her before he answered. He knew why she spoke thus, and was not offended by the compassion of her sympathy.

"In my own home, Elizabeth," he answered.

"Ar'n't you *ever* going back to it, Sir?" she asked, hurriedly.

He did not reply.

"Won't you ever see it again?" she persisted.

"Banishment, — a prisoner for life," said he, for the first time explaining to any person his dread sentence.

Elizabeth Montier quietly pondered the words thus spoken.

"If you had your freedom," said she, "would you go back to your own country?—Your breakfast is cooling, Sir."

Manuel looked at her,—she bore his scrutiny with composure,—then he came to the table, sat down, and broke his bread, before he answered this bold speaking.

"Yes," said he, at length. "An honorable man is bound to keep his honor clean. Mine has been blackened by some false accusation. I owe it to all who ever believed in me to clear it, if I can."

"And besides, your home is there."

"Yes."

"Oh, if you would only tell me about it! I don't want to know for anybody else,—only for you. Did you leave many behind, that—that loved you, Mr. Manuel?"

"Yes," said the prisoner,—but he said no more.

This answer was sufficient; with it Elizabeth walked away from the table where he sat, and took her stand by the window. By-and-by she said, speaking low, but with firm accent,—

"I am sorry I asked you anything about it; but I will never speak of it again. I heard it was for religion; but I know you could not hurt the Truth. They said you fought against the Church. Then I believe the Church was wrong. I am not afraid to say it. I want you to understand. Of course I cannot do anything for you; only I was so in hopes

that I could! You must not be angry with me, Sir, for hoping that."

The integrity of nature that spoke in these words came to the hearer's heart with wondrous power and freshness. He looked at Elizabeth; she was gazing full on him, and lofty was the bearing of the girl; she had set her own fears and all danger and suspicion at defiance in these words. Partly he saw and understood, and he answered,—

"I am not angry. You surprised me. I know you are not curious on your own account. But you can do nothing for me. I did fight against the Church, but not any Church that you know. I fought against an intolerant organization, boundless superstition, shameful idolatry, because it was making a slave and a criminal of the world.—You can do nothing for me."

"Nothing?"

"No, dear child, nothing."

"Is it because you think I am a child that you say so?" asked Elizabeth. "I am not a child. I knew you must be innocent. I will do anything for you that any one can do. Try me."

The prisoner looked again at the pleader. Truly, she was not a child. It is not in childhood to be nerved by such courage and such longing as were in her speech, as that speech was indorsed by her bearing. His thought toward her seemed to change in this look.

"Can you write, Elizabeth?" asked he.

"I can write," she answered, proudly, standing forward like a young brave eager for orders. "I can write. My father taught me."

"You might write"—

"A letter?" she asked, breathless.

"Yes." He paused and considered, then continued,— "You might write to —you might write to my friend, and tell her about the garden, and how I am now allowed to walk in it,—and about your father and your mother, — about yourself, too; anything that will make this place seem pleasant to her. You know the pleasant side of Foray,—give her that."

"Yes. Is she your mother?"

"No."

"Your sister, Sir?"

"No, Elizabeth. She and I were to have been married."

"Oh, Sir,—and you in Foray,—in a prison,—so far away!"

"Wide apart as death could put us. And shall I let you write to her? Yes! we will triumph over this death and this grave!"

"By me!—yes,—I will tell her,—it shall surely be by me," said Elizabeth, in a low voice.

"Then tell her;—you will be able, I know, to think of a great deal that is comforting. I should not remember it, I'm afraid, if I could write the letter. Tell her what fine music I have. You can say something, too, about the garden, as I said. You can speak of the view from this window. See! it is very fine. You can tell her—yes, you can tell her now, that I am well, Elizabeth."

"Oh, Sir, can I tell her you are well?"

"Yes, — yes, — say so. Besides, it is true. But you must add that I have no hope now of our meeting in this world. She can bear it, for she is strong, like you. She, too, is a soldier's daughter. If you will say those things, I will tell you her name. That shall be our secret." In this speech his tone was altogether that of one who takes the place of a comforter.

"Yes," said Elizabeth, calm and attentive. It was quite impossible that she should so mistake as to allow the knowledge that was quickening her perception into pain to appear.

"You must tell her about yourself," said he, again.

"What shall I say? There is nothing about myself to tell, Mr. Manuel."

"Is there not? That would be strange. Tell her what music you like best to hear your father play. She will understand you by that. Tell her anything,—she will not call it a trifle. What if she answers you in the same mood? Should we call it foolish, if she told us her thoughts, and the events that take place daily in

her quiet life? You can tell her what songs you love to sing. And if she does not know them, she will learn them, Elizabeth. Tell her how much it comforts me to hear you sing. Tell her, that, if she has prayed some light might shine on me from Heaven, her prayer is answered. For it is true. You serve me like an angel, and I see it all. Tell her she must love you for my sake,—though there is no need to tell her.—Do you see?"

"I see."

"Tell her I remember"—There he faltered; he could say no more.

"Yes," said Elizabeth, "I will,—I will tell her everything, Mr. Manuel,—everything that it would comfort her to hear."

She had written letters now and then. Great pride Montier and Pauline took in their daughter's skilful use of pen and ink, and pencil,—for Elizabeth could sketch as well as write. There was nothing new or strange, therefore, in her addressing this conversation to a spirit. But, also, there was nothing easy in this task, though she had the mighty theme of faithful love to dwell upon, and love's wondrous inspiration to enlighten her labor.

The description to be given of island scenery was such as she had given more than once, in writing to her distant, unknown relatives. She need vary only slightly from what she had written before, when she gave report of her own daily life. She was always eloquent when talking about the flowers or her father's music.

But this she had undertaken was not a repetition of what she had done before. With painful anxiety she scrutinized her words, her thoughts, her feelings. The work was a labor of love; the loving best know what anguish their labor sometimes costs them. The pain of this letter was not fairly understood by her who endured it,—it could not be shared.

Why was she so cautious? why in her caution lurked so much of fear? Perhaps she might have answered, if questioned by one she trusted, that further intrusion of herself than should serve as

a veil for the really important information she had to convey would be cruel intrusion. But there was a very different reason; it had to do with the sudden revelation made to herself when her father wept at the prisoner's hard fate,—a revelation that terrified her, and influenced every succeeding movement; it had to do with the illumination that came when Manuel told her the sad secret of his heart,—with that moment when she stood up stronger in love than in fear, stronger in devotion than in pride, strong for self-sacrifice, like one who bears a charmed life pierced to the heart, and never so capable as then.

More than once did Elizabeth rewrite that letter. More than once in the progress to its completion did she break away from the strange task, that had no evidence of strangeness or of labor, to seek in the garden, or with her needle, or in the society of father or mother, deliverance from the trouble that disturbed her. In the toils of many an argument with her heart and conscience was she caught; but even through her doubting of the work she had engaged to perform, she persevered in its continuance, till the letter was ready for address.

It was surely right to aid, and comfort by such aid, one so unfortunate as this prisoner; yet her parents must not be implicated by such transaction. Therefore they must be kept in ignorance, that, if blame fell anywhere, it might not fall on them. So she satisfied her conscience;—love will not calculate coldly. But it was less easy to satisfy her heart.

She had lived but sixteen years; she looked to her youth as to a protector, while it rebuked her. She leaned upon it, while daily she took to herself the part of womanhood, its duties and its dignity. He had called her a child; she called herself a child. She was careful to let this estimate of herself appear in that letter; and in what she undertook she was entirely successful; Madeline Desperiers would be sure to read it as the letter of a child.

When all was done Elizabeth repeated

to Manuel the substance of this letter. He praised it. Jealous scrutiny would find it difficult to lay its finger on a passage, and condemn the writer for evading the law concerning the prisoner. When she signed and sealed the letter, addressed it, and carried it away with her to mail, he was satisfied; his praise was sweet to the girl who had earned it.

No sooner was this work off her hands than another engaged her. With a purpose prompted may-be by her angel, certainly by no human word, and unshared by any human intelligence, Elizabeth began to make a sketch of the island as seen from Manuel's prison-window. She made the sketch from memory, correcting it by observation when occasion called her to the prisoner's room.

At length she brought the sheet of paper, on which this sketch was drawn, to Manuel, and laid it before him. She did this without any accompanying word of explanation. In the foreground was the garden, stretching up the slope of the hill towards the top, where the fort-wall began; beyond, fort, barracks, settlement,—and still beyond, the sea. The island of Foray, as thus represented, appeared like many other views on paper, very pleasing and attractive. Nature is not responsible for sin and suffering, that she should veil her glory wherever these may choose to pitch their tent.

The prisoner took the drawing from the table where she had laid it, and scanned it closely.

"You have left out my house," said he.

"There was no room for it," she answered.

"True!" He understood her.

"Do you know whom this is for, Mr. Manuel?"

"Whom is it for, Elizabeth?"

"For Madeline; is it a pretty view?"

"Really for her, Elizabeth?"

"Surely. Her eyes shall look on the same view as yours."

"The fort, flag, sea-wall, burial-ground, ocean, barracks, garden;—it is well done. —Now I will tell you of the place where it will find her."

He paused a moment ere he began that description. He looked at the quiet figure of the child for whom he dared recall the past. She stood with folded hands, so fair, so young, the sight was a refreshment, and a strange assurance always, to his weary eyes and weary heart. Never did she look so lovely to him as now when he was about to speak again to her of his life's love for another.

"It was once a magnificent estate," he began.

"Oh, is she a grand lady?" broke from Elizabeth.

"Yes, a grand lady. You speak well," replied Manuel, with a smile. "The estate was once ten times as large as this island. Towns and villages are built over the land now, but the old house stands as it has stood through ten generations. There she lives. If she stands by the library-window to-day, she can see the church built by her great-grandfather, and the little town of Desperiers, which had in his day a population of tenantry. She can see the ponds and the park, and a garden where there are hot-houses, and graperies, and conservatories, and winding walks where you might walk all day and find something new to surprise and delight you at every turn. There is a tower that commands a view of fifty miles in one direction. The old house is full of treasure. She is mistress of all,—the only representative of a long line of noble men and beautiful women who have dispensed magnificent hospitality there. The last time I saw her, Elizabeth, she was standing in the library, a woman so beautiful and so strong you would not have thought that trouble could approach her. It came through me. I opened those ancient gates for the black train,—I, who loved no mortal as I loved her! But I lost her in my fight for Truth. Shall I complain? Her heart was with mine in that struggle. Cannot Truth comfort her?"

"She is not lost to you, Sir,—you are not lost to her," cried Elizabeth, in a voice as strong as breaks sometimes through dying agony.

"I know," said he, more gently. His thought was not the same as hers; he was taking refuge in that future which remains to the loving when this life wholly fails in hope.

"You shall go back to that old place, Sir! You shall—you two—shall forget all this!"

The prisoner smiled to hear her,—a sad smile, yet a sweet smile too. He did not despise the comfort she would give him, nor resent her presumptuous speech.

"As when I dream sometimes," said he, gently,—“or in some pleasant vision. Yes, that is true, Elizabeth. I have been back, and I shall go again.”

Vehemently now she broke forth. It was love defying the whole universe, if the whole universe opposed itself to the sovereign rights of love, the divine strength and the divine courage of love. —“You shall go on board some vessel, a passenger; you shall see with your own eyes; your hands shall be free to gather the sweetest rose that—ever blossomed in the world for you. Mr. Mantiel, do not look so doubting,—do not smile so! Am I not in earnest? Do you not hear me? As God lives, and as I live, I will do what I promise. Why, what do you think I am here for?”

Wondering, doubting if he heard aright, Manuel looked at Elizabeth. The painful, kindly smile, the incredulity, had disappeared from his face; the power and confidence of her words seemed to persuade him that at least she purposed seriously and was not uttering mere wishes. It might be the enthusiasm and generosity of a child that inspired her speech, but its determination and gravity of utterance demanded at least a respectful hearing.

"What do you mean, Elizabeth?" he asked.

"I mean that I will go home and explain, and you shall be set free."

He shook his head. "There is nothing to be explained," said he. "I am not here by mistake. I am very clearly guilty, if there is guilt in doing what I am accused of. The hearts of those who

condemned me must be changed, and their eyes opened, or I shall never be set free."

"God chooses humble agents," she said, humbly. "David slew Goliath, and he was but a boy. He will open the way for me, and will change the hearts of those who condemned, and by me open their eyes. Therefore I shall go,—I shall surely go! Ah, Mr. Manuel, give me the picture! It is all that you shall have of the island of Foray, please Almighty God, when these doors are all open for you, and your hands are free, Sir, and we tell you to come, for the vessel is waiting!"

She went out from the room while these words took solemn possession of the place. She locked the door behind her;—no requirement of law was to be neglected or withstood; she made him a prisoner whom she would set free;—and from this interview she went away, not to solitude, and the formation of secret plans, but, as became the daughter of Adolphus and Pauline Montier, she went quietly, with that repose of manner which distinguished her through almost every event, back to her mother's chamber.

There stood Adolphus Montier, drummer to the regiment, jailer to the prisoner, father of Elizabeth,—loving man, whichever way you looked at him. He had his French horn in his hands, and was about to raise it to his lips; in a moment more a blast would have rung through the house, for Adolphus was in one of his tempestuously happy moods.

But his daughter's entrance arrested his purpose. Say, rather, the expression of her face performed that feat. He saw, likewise, the paper which she carried, the pencilled sketch,—and he followed her with his eyes when she crossed the room and placed it on the mantel under the engraving of the city of Fatherland. This act took the parents to the fireplace, for discussion and criticism of their daughter's work, and of the two homes now brought into contrasted connection.

"But you have left out the prison," was the comment of Adolphus.

"I am glad of that," said Pauline.

"But it is part of the island."

"It ought to be left out, though," maintained his wife.

"Where would you keep *him*, then?" asked Adolphus, a broad smile spreading over his face. He knew well enough what the answer would be.

"I'd set him adrift," was Pauline's reply, spoken without the least pretence of caution.

"Hush!" said her husband; but that was because he was the jailer. He laughed outright close on this admonition, and asked Elizabeth if she expected him to make a frame for this picture to hang opposite Chalons.

"No," she answered, "I am going to take it with me."

"Where now?" asked the parents in one breath.

"Oh, home,—Chalons."

This reply seemed to merit some consideration, by the way the eyes of Adolphus and Pauline regarded their child. They did not understand her;—her meaning was deeper than her utterance.

"To Chalons?" repeated Adolphus, quietly.

"Home?" said Pauline;—it was almost the sweetest word she knew, almost the easiest of utterance.

"You have promised me a hundred times that I should go. Did you mean it? May I go? You wish me to see the old place and the old people. But the old place is changing, and the old people are dying. Soon, if I go to Chalons, it will not be your Chalons I shall see."

Dumb with wonder, Adolphus and Pauline looked at one another. To be sure, they had done their best in order to excite in the breast of Elizabeth such love of country as was worthy of their child, and such curiosity about locality as would constrain her to cherish some reverent regard for the place of their birth, the home of their youthful love; but *never* had they imagined the possibility of her projecting a pilgrimage in that direction, except under their guidance. They could hardly imagine it now.

Often they had talked over every step of that journey they would one day make together; the progress was as familiar to Elizabeth as it could be made by the description of another; but that they had succeeded in so awaking the feeling of their child, that she should seriously propose making the pilgrimage alone, passed their comprehension.

"You know," said Adolphus, with a shrug, "your father is an officer, and he cannot now leave his post. Are you going to take your mother along with you?"

He said these words at a venture, not certain of his ground. He was not kept in suspense long.

"My mother must not leave you," answered Elizabeth, greatly agitated, and yet speaking strongly, as one whose will exceeded her emotion.

"Then you go alone?" asked Adolphus, shortly. He could not understand her, and was thoroughly vexed that he could not; mysteries were not for him. "What is the matter? is it the prison? Wife!"—he turned to Pauline, but, as he looked at her, his perplexity seemed to increase, as did his impatience also.

Wife and daughter evidently were not in league against him; she, the mother of his child, shared his anxiety and doubt. Tears were in her eyes, and he had only been impatient!—she had passed so quickly to an apprehension that was grievous, Adolphus stood the image of dismay. Those three, so entirely one, seemed to have been thrust apart by a resistless evil Fate who had some malignant purpose to serve.

Not now for the first time did Pauline see that the young face before her was pale, and grave with a gravity once unknown to it. It might be, that, for the first time, she was asking herself outright if this prison-life was to serve Elizabeth as it had served the wife of Laval,—but not for the first time was she now visited by a foreboding that pointed to this fear.

"It is the prison," said she.

"Elizabeth, is it so? Is this house going to be the death of you?" asked Montier, abruptly,—referring the point,

with stern authority, to the last person who would be likely to acknowledge the danger of which he spoke.

"If you think so, papa and mamma, I must give up the voyage, just to prove that you are mistaken," answered she.

"Look at her, Adolphus," said Pauline; "remember what she was a year ago! She's not the same now. I can see it. Strange if I could not! Young people are different from old. I thought this place would never seem like home to me, but I found out my mistake."

"I knew you would," said Adolphus, quickly.

"Of course it is the place for me, on the prisoner's account. I hate the prison just the same, though. But if I was mistaken, so was Elizabeth. She thought it would seem like home to her;—it never has; it never will. But I do not think there is a chance of our being kept here long by poor Mr. Manuel. Adolphus, I am for Elizabeth's going home."

"Colonel Farel and his lady are getting ready to go in the next vessel," said Adolphus, as if in a sleep, or as though his power of speech opposed and defied him in its activity,—so bewildered did he look at his wife and daughter.

"Oh, then, may I go? It is only out and back. I will not be long away. Then we shall all go some day together, and never, never return."

"That is my wish," said Pauline; "isn't it yours, Adolphus?"

"Yes!" And this answer was given by a man who was neither asleep nor bewildered, but by one who had put himself out of sight, and was thinking only of others.

Adolphus had not been as blind as Pauline must have supposed him when she bade him remember what their daughter was a year ago. He, too, had seen that the bloom was fading from her face, and by many a device he had striven to divert the gravity, descending upon her, from taking possession of her. Pauline's words revived every fear, every anxiety he had felt for their child. Generous as impetuous, he saw now only one thing to be

done, one result to be accomplished. Elizabeth must sail in the next vessel, and he was not the man to know another quiet moment till that vessel hove in sight. That was his way; why hesitate a twelvemonth, when a moment sufficed for a decision, and the good and happiness of others were concerned in the deciding? And it was not merely his way, as has been made sufficiently apparent,—it was his wife's way, and his daughter's.

Yet fain would Pauline have entered now upon a discussion of what remained to be done; she could have gone on from this point at which they suddenly found themselves standing so wistfully; she would have made, in advance, every needful preparation and arrangement for Elizabeth, up to the time of her return. But Adolphus was in no mood for this. He must go and see Colonel Farel, he said, by way of excuse,—and he must see the doctor. It would have been a dangerous experiment, had Pauline persisted in the endeavor to discover how much he could endure. Montier felt that he was not fit for family deliberation now, and wisely made his escape from it.

"I know," said Pauline, when she and her child were left together, "I know why it is the best thing in the world for you to go on this voyage,—but—I do not know how you came by the sudden wish to go,—or if it is sudden, Elizabeth."

No demand,—no confidence required,—not a request, even, to enter into any secret counsel with her child. But that child saw the relation in which she stood to the loving woman by her side, whose eyes were gazing into her eyes, whose love was seeking to fathom her heart, and she answered humbly, and with confidence,—

"I am going to your old home, my mother,—and to see if it is true that Manuel is to die here in this abhorred prison. It is my secret,—it is my errand. I trust you, for you love me; oh, love me, my mother, and trust me! I dare not live, I cannot endure my freedom, while

he is wearing out his life in a prison. Am I ill? Has it worn me to see him, this year past, dying by inches? I am glad of it,—I am proud of it! Now I will see if there is any pity or justice among rulers."

Pauline Montier was confounded by this outbreak. She had expected no such word as this she heard. It terrified her, for she was a loving woman, and she thought she heard in the voice of her daughter the voice of a woman who loved,—the impassioned, daring voice of one whom love incited to action such as sober reason never would attempt. She repented already the words she had spoken to her husband. She had no power then, could not prevail then, or the misgivings which sent Adolphus weeping into the wood, and not in search of doctor or colonel, would have drawn him back to her side, and against their love and their authority this girl had not prevailed. A question trembled on her lips. But how should she ask it of her child? She could not ask it of her child,—but as woman of woman. The simplest and the shortest speech was best; and far away were curiosity and authority.

"Elizabeth, do you love this prisoner?"

The answer did not linger.

"He is dying,—a noble man perishing unrighteously! Oh, my mother, in that land there is a lady waiting to know why the arm of the Lord so long delays! He shall not die a prisoner! She loves him,—*he loves her*. I will give them to each other. Only keep him alive till I come."

"My child!"

"Why do you weep?"—but Elizabeth, so speaking, bowed to the floor by her mother's side, and wept with her, and the tender arms maternal clasped her close; and the girl did not see when her mother's eyes looked upward, nor did she hear when her mother's voice said, with a saint's entreaty, and a lover's faith, "O Saviour!"

That night Elizabeth went for the tray which her father had left in the prisoner's

room when he carried him his supper. No danger that Adolphus would stand to gossip now with any man, for a moment. His heart was sore at the prospect of his daughter's departure, at the prospect of actual separation, every feature of which state of being he distinctly anticipated; and yet he would have scorned himself, had he thrown in the way anything like the shadow of an impediment to her departure from Foray. So far from that, he was already doing everything, in act and thought, by which that going might be made more certain and immediate.

Elizabeth found the prisoner sitting before his untasted supper. She went up the room at a rapid pace.

"Strength does not come of fasting," said she, as she glanced at the table.

"Appetite does not come of torpor," was the reply, spoken almost as quickly; he seemed to be echoing her tone. She looked at him surprised; so much energy of speech she had not expected of him, and never before had heard.

"I must wait for the tray," said she; and she took her usual stand by the window. "Eat something to please my mother,—she will be so troubled."

At this he took his spoon and tasted the porridge, which had grown cold in the dish before him.

Now, as she stood there waiting, a curious state of mind was that through which Elizabeth passed. When he answered her greeting, it was with less apparent weariness, less exhibition of sad indifference to all things, than usual,—with some animation, indeed; not at all as one speaks who is dead to every hope. And with this utterance, which on any other day would have lightened the burden Elizabeth bore, a new darkening of the spirit of heaviness seemed to fall upon her. She knew that by her he must have come to whatever hopefulness he had; and she would give him freedom that she might see his face no more!

"There is no crucifixion without pain." It is never with a light heart that man or woman attends his or her own immola-

tion. There is awful terror in the triumphs of the divine human nature. If, indeed, *Suttee* is noiseless, superstition and force have stifled the voice of the widow.

And therefore the words which Elizabeth only by an effort restrained, as she crossed the prison-threshold, could come from her now by effort only. If she had found him drooping, despairing, utterly cast down,—no hinderance then to a full utterance of the heroic purpose which death alone could dampen or defeat! But now some strength seemed in himself,—and liberty would give him to others, of whom he could not think as quietly as he could think of her. Could she, then, better afford to weep than to rejoice with him?

Before he had pushed away the table and its contents, before time constrained her to speak, she said,—

"I promised you something, Mr. Manuel. You remember what. I may go to-morrow. So tell me,—how shall I serve you best? Tell me now; something may happen; and I wish my work to be clear."

The prisoner started from the table at these words. He hastily approached the quiet speaker, his face brightened not more by hope than by wondering admiration.

"What do you mean?—to-morrow? I am waiting, Elizabeth."

"Colonel Farel and his lady are going home. He has leave of absence. I have spoken to my father and mother. I have told my mother everything. She knows that I am going to visit your relations as well as hers. Tell me how I shall find them. Tell me what I must do. You shall have freedom, if woman can ask or man can give it."

She had advanced a single step towards him, in thus speaking. She stood now with hands folded, quiet, waiting his answer.

"Noble girl!" he began; then he paused. Full of reverence was his gaze.

"Do not praise,—direct me," she said,

hurriedly. "I know what I shall say. But to whom shall I say it?—Yes, I will find her whom you love. I will carry balm across the sea to heal her breaking heart. I will join together whom,"—here for an instant she hesitated, then began again,—“whom God has joined,—whom man dared separate. Direct me, Sir.”

And there she stood, waiting. Who sighing beholds her? No pusillanimity there; but on the very heights of danger, which none other than the bravest could have gained, dauntless and safe, let her stand and fight her battle. So strong, yet so defenceless, so conspicuous for purpose and position there, the arrows rain upon her,—yet not one is poisoned to the power of hurting her sacred life. Listen, Elizabeth, while he speaks of *her*! Deeply can his voice grave every word of direction; not one wilt thou lose! Chosen of the few from among the many called, go, woman to love, and hero to endure,—yea, if thou must, as gentle and dauntless martyr, to die before the stronghold thou wouldst summon to surrender!

Later in the day the prisoner heard Elizabeth singing, as not rarely he heard her,—for, knowing that the sound of her voice was pleasant to him, and that its cheerfulness cheered him, she had the habit of frequenting with her songs that part of the house in which his room was. The prisoner heard her singing later in the day, and thanked her for the grace, but did not catch the words whose sound swept past him. It was an ancient hymn she sang,—one that she often sang; and that she sang it this day of all days, I copy here the first verse:—

“Sing, my tongue, the glorious battle,
With completed victory rife,
And above the Cross's trophy
Tell the triumph of the strife,
How the world's Redeemer conquered
By surrendering of his life.”

The Drummer's Daughter has crossed the sea,—has landed on the shores of Fatherland. She has even parted from her

fellow-voyagers at the station whence the coach shall take her on to Chalons, that venerable town and well-beloved, where the lives whence her own sprung were born and blended. She is in the land of wonders, of meadows, vineyards, gardens, lakes, and rivers, and of cattle feeding on a thousand hills,—among the graves of millions of men, among the works of heroes and of martyrs, in the land of mighty towns, of palaces, of masters, and of slaves, where a great king is building the great palace which shall witness, centuries hence, the dire humiliation of his race.

Of all the crowds and companies that hurry to and fro from one end of the land to the other, Elizabeth seeks only two persons. It is not to her father's native town that she is drawn by the superior attraction. She passes Chalons in the moonlight. When the coach stops at the inn-door for a change of horses, she keeps her place,—she acts not with the quicker beating of her heart. She looks about her as they drive through the silent streets,—out on the moonlit landscape when they have passed the borders of the town; she sees the church-towers, and the old buildings, and the river whose windings she has heard described so often by the voices that once talked of love all along its borders. Chalons is dear to her; she looks back with tearful longing when the driver hurries on his horse as they pass into the open country. But she has no right to wait on her own pleasure,—to verify her parents' calculations when they talk together, by the fireside in Foray, of her journeying through Fatherland.

No,—each sunrise appoints him one more day of imprisonment and exile! Every sunset leaves him to one more night of cruel dreams which morning shall deride! And while this can be said, what has Chalons, or any other spot on earth, that it should lure her into rest?

The higher powers sometimes convey their messages and do their work after a prosaic fashion. It was no uncommon thing for a young girl in neat raiment to stand waiting admittance before the

door of the Château Desperiers. Hospitality was called upon in those days not so often, perhaps, as benevolence; and for its charity the château had a reputation far and wide; the expectation of the poor perished only in fruition there.

Into the library of this ancient mansion Elizabeth Montier was ushered by the old gray servant. There she might wait the return of his mistress; at what hour the return should be anticipated he could not undertake to say. His counsel to the stranger was, that she had better return at a later hour; but when Elizabeth said it was impossible, that she had come from a great distance to see the lady of the place, and must await her return *there*, he led her without further parley to the library, and left her.

And from its lofty windows, at her leisure, she might now look down upon the prospect Prisoner Manuel had described. When she crossed the threshold of that room, she knew where she was; left alone, she looked around her. There he once had stood; there he had parted from Madeline Desperiers; from that last interview he had gone forth to long captivity! She stood by the lofty, narrow windows, to see what he had seen when standing before them,—that town the ancient Desperiers laid out for his tenants in the ancient days,—the church, the pond, the park,—the garden, so vast, and so astonishing for beauty, the gazer scarce believed her eyes. And she remembered beds of flowers under a prison-wall, and who that day looked on them.

He had said that the mistress of this grand domain was a soldier's daughter. He had said that she was a grand lady. A soldier's daughter had come here to hold an interview with her! A drummer's daughter, a girl from out the barracks and the prison of Foray, was here!—A strange light, so strange that it seemed not natural, broke from these reflections of Elizabeth, and illuminated the library. It fell on the great bookcases that were filled from floor to ceiling with books which cost a fortune, on the great easy-chairs black with age, on picture and

on bust, on the old writing-stand, the more modern centre-table piled with newspapers and pamphlets, on the curious clock that told the hours with a "silvery voice." It fell, too, on a portrait that did not often greet the gaze even of such as found access into that room,—a portrait of him for whose sake she was here, having compassed land and sea.

When she first saw the picture, she was sitting in one of the chairs beside the table,—her eyes had taken cognizance of everything but that,—and of that became aware so strangely that she could not at first persuade herself of the nature of the mystery that took such hold of her and possessed her so wholly. A proud and glorious vision, it rose up before her, emerging from the shadows of the alcove where it stood. This was not Manuel, not the wan prisoner of Foray,—but her heart needed none to tell her it was the hero who had loved the lady of this château, in the splendor of his manhood. She saw it, and saw nothing more,—the prescience of her soul was satisfied. As he was, she beheld him now;—was it safe for her to sit there gazing at that likeness?

The old servant, who now and then walked up and down the hall, perceiving that the stranger was sitting quiet, with her eyes generally in one direction, was satisfied that she should prove so patient with this long delay in his mistress's return. He knew not what occupied her eyes or thoughts,—fancied, may-be, that she was numbering the books of the library, or engaged in some equally diverting occupation.

At last came Madeline.

Learning from the servant in the hall that a young person waited her return, and had waited half the day, with a patience that was evidently proof against time, the lady proceeded at once to the library.

Elizabeth, who heard the arrival, and the approach, arose and stood, waiting the meeting. In her hand she held a paper scroll, the drawing of Foray, which

she had brought to aid her in this interview.

It was, indeed, a royal person upon whom the eyes of the Drummer's Daughter fell,—a person whose dignity and grace held at a distance even those whom they attracted. Nothing short of reverence could have dictated the movement of any noble mind that had to do with her. She was the Sister of Mercy, whom the whole country round about knew for the most righteous Desperiers of them all. The noble line was ending nobly in her pure and lofty and most gracious womanhood. She was the star of society, if the "sweet influences" might only be bound,—no comet, no fiery splendor of intellect or passion, but a pure light that would still shine through all paling, and enter with its own distinct ray into the last absorption.

She approached to meet her guest with a kind and frank expression of regret that she should have been kept waiting so long.

Beholding her, remembering him, strong even through her sense of impotence, Elizabeth unrolled the pencilling of Foray. The moment during which she was thus occupied passed in silence; then she looked up and spoke, with the coldness in which her embarrassment and emotion sought disguise.

"I came here with a message,—on an errand," said she; "and I have come so far, that, finding myself really in this house, I did not like to leave it again till I had seen the lady I sought. I knew that it would give you pain, if you could know the whole."

"Tell me the whole," was the reply, spoken with evident and encouraging approval of the stranger's mode of address; and the lady sat down in the great chair on one side of the table. "Be seated; tell me your wish."

"It is to serve you," said Elizabeth, a little proudly. "I have not come to ask favor for myself or mine. I came across the sea for you and him."

She spoke now with vehemence, and as she spoke glanced at the portrait in

the alcove. Quickly the eyes of Madeline Desperiers followed hers. How had this stranger managed to discover what was so securely hidden from the observation of ordinary eyes? She did not even suspect the light which had illumined that dim recess, and made it brighter to the gazer than the bright garden even.

"This is Foray," said Elizabeth, exposing now the token that would instantly make all plain and equal between them. "I should have sent it to you, Madam, when I wrote; but there was more to be done,—and so I came. I am Elizabeth Montier. I am a soldier's daughter; so, he said, are you."

The lady's answer was not at first by speech. She arose, swiftly as light moves she moved, and brought her guest up to the window of the shadowy room. Well she scanned the face of Elizabeth.

"Truth," she murmured. "It was you that wrote. You are Truth. You speak it. Blessings on you! Blessings descend upon you from all the saints and heroes who have moved and suffered here! Do you come from him,—Stephen Cordier?"

How proudly and how tenderly she spoke that name! To hear her soothed the heart of Elizabeth Montier,—soothed her, and made her strong.

"Is that *his* name?" she asked, pointing to the portrait. "We call him Manuel." She paused a moment, but not for an answer. Before Madeline could speak, she went on,—

"If you can hear me, I will tell you of him, and why I am here."

"Tell me all. I can bear to hear anything that you can endure to tell. You are his friend. I claim you for mine, too. You came to find me. Speak."

This was the utterance of a calm self-knowledge. By what she had endured, the woman knew what she could yet endure.

Without pause Elizabeth now spoke. Without interruption the lady listened,—listened while this young stranger told

the life of the past months, in which he was concerned,—of the garden where she worked and he walked,—of her father, the musician,—of their old home near the barracks, and the new home in the prison,—of the day when he first told her of his country and his love,—how for him she had written the letter, repeating oftentimes in the narration the very words he had used,—of his gestures, his looks;—she was thoughtful of all.

How strangely intelligent in all her communication! Ah, if it was eager love that hearkened, it was thoughtful love that spoke!

The story, as she told it, was brief; but the voice never faltered in telling the tale, and the eyes of Elizabeth, with constant scrutiny, were upon her listener. She was satisfied, when, having said all, she paused, and had now no further fear for her own heart's integrity or of the listener's constancy.

A long silence followed her speech. At length said Mlle. Desperiers,—

"I see it all. You are God's messenger from that other world. I have believed too little. You are truer and wiser than I. Lead me, dear child! Shall we go to Foray? I will sail with you to-morrow, if you say so. Better a prison, with him, than all this freedom, so alone."

"He must be set free, first," said Elizabeth. The manner of her speaking, her look as well as her tone, might almost have been taken for a rebuke. Madeline might pardon that.

"I have said so," she answered, mildly. "I have tried to move heaven and earth. I was but a feeble woman. Still it is a consolation to know that I have done everything my wit or my love could devise, and not stopped at what looked like extravagance or indelicacy. What further, Elizabeth? The man who is now in power, and through whom alone the king can be reached, will grant him liberty!"—

"He will?"

"At a price that would take away its value from him."

"What is that price?"

"My life. He wants me for his wife,—a purchase, you perceive."

Elizabeth Montier did not heed the scorn and bitterness of these words, as Mlle. Desperiers spoke them. The blood in her veins seemed turning to fire,—it swept through her body and brain like the flood of a volcano,—and she thought, she who knew the prisoner's life, and all that captivity was to him,—

"Coward and selfish, that will not instantly give up her life for his!"

A very dismal satisfaction, that the woman he loved best should so prove unworthy of him! The horror of that satisfaction, its humiliation and its pain, sufficiently attested to the poor girl who endured it that her soul's integrity remained secure. As if for a personal conflict with an enemy, she started to her feet.

"It must not be!" she exclaimed.

And, far from suspecting to whom the words were addressed, to what the speaker closed her eyes, rebuking her pure heart, the lady answered,—

"Then, unless he outlives this tyranny of power, he will die a prisoner, Elizabeth. I will go with you to him. I can die with him. God, certainly, does not require me to stay here longer, for He has sent you to me."

"He has sent me for *him*!" exclaimed Elizabeth. "I am here to make him free." She did not add, "If I were you, my life for his!" but again, in spite of her, she thought it, and a terrible strength of pride possessed her at that moment.

"Speak on," was the eager, tremulous response. "You are here to set him free. God knows; but at least I believe wholly in you. What will you do, Elizabeth?"

"Go to the officer to-morrow. Tell him everything that is to be told. If he is human!"—

"That is what I doubt. He knows what petitions I presented and caused to be presented to his predecessor."

"You?"

"I?—who but I? Do you think I have

been idle, or that I have left anything undone that I could think to do? Child, the sun has never risen on me since I saw him last! They say I am dead to the world. But they who say it know not how terribly true their words are. Shall I tell *you* how many times, when the weary days have come to an end, I have said, in the morning I would make that loathsome bargain with General Saterges, and in the morning God's grace, as I believe, has alone prevented me? Do you think that it is because I love myself better than him, that I have not bought his freedom at this price? It is because I know him,—because I am sure that liberty at such price would be worthless to him. I cannot torture him with the belief that I am unfaithful, nor suffer him to look on me as a sacrifice. We can endure what God allows. Trust me. You have done so bravely, you are yourself so true, believe in me. I am really no coward. I am not a selfish woman."

"Forgive me," said Elizabeth, most humbly. Her pride had left her defenceless in its flight. If there was not now the true, brave, generous woman to lift and proclaim herself from the humiliation of her mistake, alas for her!

The woman was there,—ready and true,—was there. Humbled, yet resolute, she spoke,—and in her speaking was the triumph of a spirit that should never again surrender its stronghold of peace.

"You must direct me, Madam. Show me how I shall find this minister. I will speak then as God's servants spoke of old,—trusting in Him. If the man will not hear me, then I will conduct you to Foray. You shall see Mr. Manuel. You can live—with us. My mother's heart is kind, and my father is a soldier; we shall all love to serve you. Let us take courage! They cannot prevent us here. You could endure exile for him?"

"Exile? Ah, how do you shame me! All these years I might have"—

"No," said Elizabeth, hurriedly. "Never till now. You could not. The way was not open till this day. Love, too,

must have its servants. I am yours and his. I trust in God. In His time He has opened His own way."

By Mlle. Desperiers's management, Elizabeth without difficulty obtained audience, the next day, of the chief ministerial power of the realm.

I shall attempt no pictorial description of that interview. The men of authority know best how often women come into their presence, burdened with prayers for the pardon of those who have justly, or unjustly, fallen under the displeasure of the powers that be. From high station and low Love draws its noblest and most courageous witnesses, and the ears of the officials are not always deaf.

The case of Stephen Cordier was of sufficient importance to come under discussion before the governing power as often as that power underwent a change in person or policy. Twice petitions in his behalf had been presented,—once by the lady of Château Desperiers in person,—petitions that were in themselves the proudest praise of him, the greatest honor that could be conferred upon him. They had fallen powerless to the ground.

The old man, statesman and soldier, now holding office, had, before he came to this position, knowing the interest and the kind of interest taken by Madeline Desperiers in the petitions presented, volunteered his name to the last document, mentioning, though with due deference to the fashion of the world, the price at which it was to be procured,—her hand. His name had just the weight that would have made the other more honorable names successful in their pleading. What sort of success was to be expected, now that he occupied the passage to royalty? Elizabeth Montier crossed the threshold of the apartment where the old warrior and statesman sat amongst books and papers, without dismay ruling by pen and voice, as confident in himself, when he took up these weapons, as in the former time of sword and powder.

His practice was to receive all petitioners,—all should have audience. But he

made short work of business. Never were affairs dispatched with more celerity, seldom with less conscience. At a glance his keen eye read, to his own satisfaction, the state of every case,—and he came to his own conclusions. His requirement was, that the petitioner should be self-possessed and brief,—which requisition, hinted by the doorkeeper, and reiterated by the General himself, had not always precisely the effect intended.

The fault was not in Mlle. Desperiers that she had proved so unsuccessful in her petitions, as has been made sufficiently clear. General Saterges had found in Stephen Cordier a powerful antagonist in action. He had moved to power through the very paths which Stephen Cordier had attempted to lay waste. He upheld the faith against which Cordier had preached a crusade. The old warrior regarded the young thinker as a personal enemy. It was hardly probable that he would very energetically strive to procure the reversal of a hard sentence in behalf of such a man.

As Adolphus Montier's daughter came into his presence, she had not the bearing common to such as appeared there with intent to plead for the life or liberty of those they loved. A sense of the sacredness of her mission was upon her. She had cried to God, and she believed that He had heard her. Where do the possibilities of such faith end? "Time would fail me to tell of Gideon, and of Barak, and of Samson, and of Jephthah, of David also, and of Samuel, and of the prophets; who through faith subdued kingdoms, wrought righteousness, obtained promises, stopped the mouths of lions, quenched the violence of fire, escaped the edge of the sword, out of weakness were made strong, waxed valiant in fight, turned to flight the armies of the aliens. Women received their dead raised to life again; and others were tortured, not accepting deliverance, that they might obtain a better resurrection; and others had trial of cruel mockings and scourgings, yea, moreover, of bonds and imprisonment; they were stoned, they were

sawn asunder, were tempted, were slain with the sword; they wandered about in sheep-skins and goat-skins, being destitute, afflicted, tormented. *And these all, having obtained a good report through faith, received not the promise.*"

She had considered well what she would do and say, and did not forget and was not confounded when she stood before the old man, knowing her time had come. Calm and strong, because so bent on accomplishing her purpose, and so conscious of her past secret weakness, of her suspicion and cruel judgment, as if she would here atone for it, she took stern vengeance of herself.

General Saterges recognized at one glance the evidences of a strong and determined spirit. When she had crossed the room and stood before him, he requested her to be seated,—and it was the first time that he had made such request of such visitor.

Declining the civility, Elizabeth stood, and told her errand. She had come across the ocean, she said, to plead the cause of a poor prisoner who was dying under sentence of the law. She paused a moment, having made this statement, and was answered by a nod. Prisoners often died without reprieve, he seemed to be aware. This cold civility warned the petitioner's speech. Her mother would have been satisfied, Madeline Desperiers would have been overwhelmed with grief and horror, to have heard this young girl's testimony in regard to prison-life. The old man, as he listened, sighed unconsciously,—for not every nerve in him was strung to cruelty. To one of his restless career what image of life more dreadful could have been presented than was in this testimony? To be shut away from human society so many years, patient, resigned, receiving the few comforts yet allowed him!—to live on, pure in spirit, lofty in thought, hoping still in God and man! The old warrior in self-defence, because she brought the case too vividly, the life too forcibly before him, broke through the words she was speaking, interrupting her.

"Who is this person?" he asked.

"Stephen Cordier," was the answer. Without hesitation, even proudly, she spoke it. She had compelled him to ask the name!

"And who are you?" he asked; and if he felt displeasure, as if his sympathy, of which he was so chary, had been stolen from him, he did not allow it to appear.

"Elizabeth Montier," she replied.

"That is no answer. What is a name, if it conveys no meaning to my mind?"

"I am the daughter of Adolphus and Pauline Montier. My father is a drummer in the military band of Foray. He is also present keeper of the prison where Stephen Cordier is confined."

"Very well. Does he know your errand here?"

"He does not. He let me come to this country,—it is his native land, and my mother's,—he let me come because in his heart he has always loved his country, and he has never been able to return. We were to have come back together. But there was an opportunity for me. I dared not wait. So I am here,—and for nothing, Sir, but this man's liberty."

Those last words she spoke seemed to quicken the thought of General Saterges. He drew himself up still more erect in his chair. His eyes were on Elizabeth with the will to scan her heart of hearts. He spoke,—

"What is this man to you?"

She paused a moment. And she, too, had a thought. She could play a game for life. She looked at the old man, hesitated, answered,—

"He is everything."

"Just let me understand you," and he looked upon her as if *he* might touch her secret. "Do you love Cordier?"

"I love him," she answered, with exceeding dignity, evident truthfulness.

"Do I understand you?" he said again,—*"what are you to him?"*

"Everything," she again replied, with perfect confidence and faith. Was she not liberty and the joy of life to him?

If liberty and joy were ever to be his portion, they must come through her. So she believed, and thus answered.

"Does he love you?"

"Yes."

"You speak with great assurance. I know the man better, I'm afraid." Then his voice and manner changed. "He is sentenced. Justice passed that sentence;—to reverse it were the work of imbecility. Speak no more. It is not in man to grant what you ask."

He was trying her in her last stronghold,—proving her in her last depth.

"Is this your answer?" she asked. And indeed, after what had just passed between them, it did seem incredible.

The old man bowed. He seemed now impassible. He was stern, and hard as rock. He believed that he had wellnigh been deceived,—and deception practised successfully on him would have disgraced him in his own eyes forever. He believed, what he would not trust his lips to utter, that this applicant was Madeline Desperiers's agent. When he bowed and did not answer, a fear came down upon Elizabeth that almost took away her power of speech; that it did not quite deprive her of that power rendered it so much the more terrible for the anguish of its emphasis.

"Do women kneel to you when they ask the pardon of those they love?" said she, with a paling face. "What shall I do to move you? What have I not done? I trusted, that, having come so far, on such an errand, it must be that God was my leader. Am I mistaken? Or dare you withstand God? Tell me,—you are an old man,—have you no pity? Have you never had a sorrow? Can you not see that I never could have come here to plead for a bad man's life? Must I go back to see him die?"

"Madam, you are standing where I cannot come to argue with you. Pity and justice have their respective duties to perform. Oftentimes pity may be exercised, and the claims of justice waived; in the case of the man you plead for, it is simply impossible."

He had risen in displeasure to pronounce these final words. When that word "impossible" smote her as a sword, he touched a spring in the table, a bell sounded, Elizabeth went forth,—the audience was over.

She went not with tears, but self-possessed, imperious in mien, strong in despair. Coming into the presence of Madeline Desperiers, it was not needful that she should speak to make known the result of her audience.

"Have you learned when the vessel sails?" was her first question. It was her reply to the lady's glance,—a glance for which there were no attendant words in all the language.

"To-morrow, Elizabeth."

"Are you ready?"

"I will be."

"Then I will give you to him. I promised that, too. I can fulfil that, at least. You must not think the prison-walls too dreary. My mother"—

"I understand, Elizabeth."

And they sailed on the morrow. No delay for wandering among the meadows of the pleasant town, for gossip with the men and women who were in childhood playmates of her father and her mother; no strolling along lovely river-banks. Chalons had nothing for Elizabeth; only one green nook of all the world had anything for her,—an island in the sea,—a prison on that island,—and there work to do worthy of Gabriel.

But—wonder of wonders!

Paul and Silas sang songs in their prison, and the jailer heard them; then there came an earthquake.

Who was he that found his cell-doors opened suddenly, and a messenger from

out the courts of heaven there to guide his steps?

History is full of marvellous records; I add this to those. The eleventh hour goes always freighted with the weightiest events.

On board the vessel that carried Elizabeth and her charge back to Foray went a messenger commissioned of the king. He took from court to prison the partial pardon of Cordier. Liberty, but banishment henceforth. Stephen Cordier should be constrained to faithfulness towards his new love. Doomed to perpetual exile, he should be tempted by no late loyalty to Madeline Desperiers. The new acts of his drama should have nought to do with her. Justice forever!

Rascal that he was, according to the word of General Saterges, it was rascality which the General could pardon. He had gained many a victory in desperate strife,—now one other, the last and most complete: the kingdom's fairest star to shine among his honors! The proclamation of Stephen Cordier's pardon would instantly make broad the way to Château Desperiers. She came of a proud race, and he reckoned on her pride.

Let us not glory in that old man's defeat,—for he died ere his enemy received, through Elizabeth Montier, life, and the joy of life. Let us not call him by an evil name to whom the nation gave so fine a funeral,—but rather pause to listen to the music that comes forth in royal glory from the harmonious world of Adolphus,—and turn to look with loving reverence, not with doubt or wonder, and surely not with pity, on the serene face of Her Grace, the Drummer's Daughter.

WORK AND REST.

WHAT have I yet to do ?
Day weareth on,—
Flowers, that, opening new,
Smiled through the morning's dew,
Droop in the sun.

'Neath the noon's scorching glare
Fainting I stand ;
Still is the sultry air,
Silentness everywhere
Through the hot land.

Yet must I labor still,
All the day through,—
Striving with earnest will
Patient my place to fill,
My work to do.

Long though my task may be,
Cometh the end.
God 'tis that helpeth me,
His is the work, and He
New strength will lend.

He will direct my feet,
Strengthen my hand,
Give me my portion meet ;—
Firm in his promise sweet
Trusting I'll stand.

Up, then, to work again !
God's word is given
That none shall sow in vain,
But find his ripened grain
Garnered in heaven.

Longer the shadows fall,—
Night cometh on ;
Low voices softly call,
" Come, here is rest for all !
Labor is done ! "

COLIN CLOUT AND THE FAËRY QUEEN.

EDMUND SPENSER IN A DOMESTIC POINT OF VIEW. HIS MISTRESS AND HIS WIFE.

PART I.—HIS MISTRESS.

THE "Faëry Queen" of Edmund Spenser is before us,—a vast and glittering mausoleum, in which the purpose of the constructor has long been entombed, we fear without hope of a happy resurrection. Nevertheless, into this splendid ruin, hieroglyphed with the most brilliant images the modern mind has yet conceived, we are about to dig,—not with the impious desire of dragging forth the intellectual tenant, now in the fourth century of its everlasting repose, but, haply, to discover in the outer chambers and passages of the pyramid some relics of the individual architect, his family and mode of life. In fact, we are anxious to make the acquaintance of Mistress Spenser and introduce her to the American public. A slight sketch of the poet's life, up to the period of his marriage, may afford us some clue to the quarter from which he selected his bride; we shall therefore give what is known of him in the fewest possible words.

Edmund Spenser, by family, was English, and by birth a cockney. In his "Prothalamion" he thus pleads guilty to the chime of Bow-bells in his infant ear:—

"At length they all to merrie London came,
To merrie London, my most kindly nurse,
That to me gave this life's first native source;
Though from another place I take my name
And house of ancient fame."

At what time of his life he became connected with Ireland is very uncertain; it was probably early. At or about the time of Sir Henry Sidney's viceroyalty, or in the interval between that and the lieutenancy of Lord Grey De Wilton, there was a "Mr. Spenser" ac-

tively and confidentially employed by the Irish government; and that this may have been the poet is, from collateral circumstances, far from improbable. Spenser was the friend and *protégé* of Sir Philip Sidney, (son of the before-named Sir Henry,) and of his uncle, the Earl of Leicester. Lord Grey De Wilton was by marriage connected with both, and lived with them on terms of the closest intimacy, social, literary, and political. In choosing an officer, then, for so important a post as that of secretary, whom would the one select or the others more confidently recommend than a young man of genius, known to all the parties, and who already had some knowledge and experience of Irish affairs? Be this as it may, we know that in 1580, Spenser, then in his twenty-seventh year, accompanied Lord Grey De Wilton into Ireland as secretary; and that he had been there before, in some official capacity not undistinguished, is evidenced by the fact, that the Lord Justice, previously to his arrival, speaks of him as "having many ways deserved some consideration from her Majesty."

We do not care to inquire into the peculiar services for which he was so speedily favored with a large grant of lands forfeited by the Desmonds. Such official transactions, we fear, would reflect little credit on the poet; no doubt he was a good man—according to the morality of his age; and if he did suggest the poisoning of a few thousand human beings of all ages and both sexes, (some go so far as to allege that his fervid imagination contemplated the utter extermination of the race,) he merely acted up to the opinions prevalent in the time and polished court of "Good Queen Bess." The beings were "mere Irishry,"—a stumbling-block in the path of British

civilization, and therefore to be removed,
per fas et nefas.

Spenser took up his residence on the forfeit lands in Cork; there married, and reared a family which inherited his estate; that he subsequently died in England was as mere a casualty as that by which Swift was born in Ireland. Certain it is that the greater and the better portion of his works in prose and verse was composed during his residence in the land of his adoption. Thus, in the sonnets appended to the "Faëry Queen," the poem on which his celebrity rests, he addresses the Earl of Ormond:—

"Receive, most noble lord, a simple taste
Of the wilde fruit which savage soyle hath
bred;
Which, beeing through long wars left al-
most waste,
With brutish barbarisme is overspred."

Again, addressing himself to his patron, Lord Grey, he says,—

"Rude rimes, the which a rustick muse did
weave
In savage soyle, far from Parnasso Mount."

Several other of the finest productions of his brain owe their birth to the "savage soyle" of Ireland; his descriptions of the country, his dialogue on Irish affairs, his "Amoretti" and "Colin Clout's come home again," belong confessedly to this category.

Having discovered thus much about the poet, we now strike out in a new direction in search of his better half. Upon this point, unfortunately, there hangs a mist,—not impenetrable, as we conceive, but yet unpenetrated,—a secret to which the given clue has been neglected, and which remains to the present day the opprobrium of a careless biography. The fact and the date of his marriage in Ireland are obtained from his own writings; but, further than that her name was Elizabeth,—a fact recorded by himself,—the lady of his choice remains unknown, her maiden name and family. Mere trifles these, to be sure,—but interesting in an antiquarian point of view,—and valuable, perhaps, should the inquiry hereafter lead some more than usually acute bookworm

into the real mystery and meaning, the main drift of that inexplicable "Faëry Queen."

One difficulty in the matter is, that Edmund appears to have been a "susceptible subject." He was twice attacked with the tender malady, and records, in glowing numbers, his passion for two mistresses. One he calls *Rosalinde*, and celebrates in the "Shepherd's Calendar"; the other, *Elizabeth*, to whom he was undoubtedly married, is the theme of admiration in his "Amoretti." *Rosalinde* was his early love; *Elizabeth*, the passion of his maturer years. When six-and-twenty, hopeless of *Rosalinde*, he wound up his philomel complainings of her cruelty by a formal commission to his friend Gabriel Harvey (*Hobbinoll*) to declare his suit at an end:—

"Adieu, good Hobbinoll, that was so true;
Tell *Rosalinde* her Colin bids adieu."

It took him fourteen years—surely a sufficient time!—to recover from this disappointment; for he is in his forty-first year, when, in his Sixtieth Sonnet, he represents himself as having been then one year enamored of *Elizabeth*:—

"So since the winged god his planet cleare
Began in me to move, one yeare is spent;
The which doth longer unto me appeare
Than all those fourty which my life out-
went."

That *Rosalinde* was not, as has been somewhat rashly conjectured, the poetic name of *Elizabeth*, is conclusively established by a poem written between 1591 and 1595, in which he speaks of some insurmountable barrier between them, why "her he might not love."* The wife he loved, and the mistress between whose love and him there existed such a barrier, could not have been the same person, it is evident. But who this fair and false *Rosalinde* was, though known to many of his contemporaries, has become a mystery. That she was a real personage is placed beyond cavil by "E. K.," the ostensible editor of the "Shepherd's

* See *Colin Clout's come home again*.

Calendar"; and he has given us a clue to her name, if we have but the wit to follow it. Now "E. K." we more than shrewdly suspect to have been either Spenser himself, or his friend Gabriel Harvey, or both together. Two more egregious self-laudators are not to be found in the range of English literature: Spenser loses no opportunity of puffing "Colin Clout"; and Harvey was openly charged by Thomas Nash with having forged commendatory epistles and sonnets in his own praise, under the name of *Thorius*, etc. "E. K.," therefore, must be considered as pretty high authority; and what says "E. K."? Why, this: "Rosalinde is also a feigned name, which, being well ordered, will bewray the verie name of his love and mistresse." By "well ordering" the "feigned name" E. K. undoubtedly means disposing or arranging the letters of which it is composed in some form of anagram or metagram,—a species of wit much cultivated by the most celebrated poets of the time, Spenser included, and not deemed beneath the dignity of the learned Camden to expound.

A few examples of this "alchemy of wit," as Camden calls it, will reconcile our modern notions of the *τὸ πρέπον* with the puerile ingenuity thought graceful, at that unripe period of our literature, by some of the most accomplished writers and readers of the day. Let us take an extravagant instance. Sir Philip Sidney, having abridged his own name into *Phil. Sid.*, anagrammatized it into *Philisides*. Refining still further, he translated *Sid.*, the abridgment of *sidus*, into *ἄστρον*, and, retaining the *Phil.*, as derived from *φίλος*, he constructed for himself another pseudonyme and adopted the poetical name of *Astrophil*. Feeling, moreover, that the Lady Rich, celebrated in his sonnets, was the loadstar of his affections, he designates her, in conformity with his own assumed name, *Stella*. Christopher Marlow's name is transmuted into *Wormal*, and the royal Elizabetha is frequently addressed as *Ah-te-basile*! Doctor Thomas Lodge, author of "Ros-

alinde; or Euphues, his Golden Legacy," (which Shakspeare dramatized into "As you like it,") has anagrammatized his own name into *Golde*,—and that of Dering into *Ringde*. The author of "Dolarney's Primrose" was a Doctor *Raynolde*. John Hind, in his "Eliosto Libidinoso," transmutes his own name into *Dinohin*. Matthew Roydon becomes *Donroy*. And Shakspeare, even, does not scruple to alchemize the Resolute John, or John Florio, into the pedantic *Holofernes* of "Love's Labor's Lost." A thousand such fantastic instances of "trifling with the letter" might be quoted; and even so late as the reign of Queen Anne we find this foolish wit indulged. The cynical Swift* stoops to change Miss Waring into *Varina*; Esther (*quasi* Aster, a star) Johnson is known as *Stella*; Essy Van-homrigh figures as *Vanessa*; while Cadenus, by an easy change of syllables, is resolved into *Decanus*, or the Dean himself in *propriâ personâ* and canonicals.

In the "Shepherd's Calendar," the very poem in which Spenser's unknown mistress figures as Rosalinde, the poet has alchemized Grindal, Archbishop of Canterbury, into *Algrind*, and made Ellmor, Bishop of London, *Morell*, (it is to be hoped he was so before,) by merely transposing the letters. What wonder, then, if, complying with an art so general and convenient, he should be found contriving, in the case of both his mistresses at once, to reveal his passion and conceal the name of his enslaver from the public gaze?

The prolific hint of "E. K." set the commentators at work,—but hitherto without success. The author of the life prefixed to Church's edition conjectures Rose Linde,—forsooth, because it appears from Fuller's "Worthies," that in the reign of Henry the Sixth—only eight reigns too early for the birth of our rural beauty—there was one John Linde, a resident in the County of Kent! Not satisfied with this conjecture, Malone suggests that she may have been an Eliza Horden

* Vide Scott's *Life*.

—the *z* changed, according to Camden's rules, into *s*, and the aspirate sunk. Malone's foundation for this theory is, that one Thomas Horden was a contemporary of John Linde, aforesaid, and resided in the same county! Both these conjectures are absurd and unsupported by any collateral evidence. To have given them the remotest air of probability, the critics should have proved some acquaintance or connection between the parties respectively,—some courtship, or contiguity of residence, which might have brought the young people within the ordinary sphere of attraction. Wrong as they were in their conclusions, the search of these commentators was in the right direction. The anagram, "well-ordered," will undoubtedly bewray the secret. Let us try if we may not follow it with better success.

Rosalinde reads, anagrammatically, into *Rose Daniel*; for, according to Camden, "a letter may be doubled, or rejected, or contrariwise, if the sense fall aptly"; we thus get rid of the redundant *e*, and have a perfect anagram. Now Spenser had an intimate and beloved friend and brother-poet, named Samuel Daniel, author of many tragedies and comedies, an eight-canto poem called "The Civil Wars of England," "A Vision of Twelve Goddesses," a prose history of England, and "Musa," a defence of rhyme. Spenser alludes to his poetic genius with high praise in his "Colin Clout." This Daniel had a sister named *Rose*, who was married in due time to a friend of her brother's,—not, indeed, to Spenser, but to a scholar, whose eccentricities have left such durable tracks behind them, that we can trace his mark through many passages of Spenser's love complaints, otherwise unintelligible. The supposition that *Rose Daniel* was *Rosalinde* satisfies every requisite, and presents a solution of the mystery; the anagram is perfect; the poet's acquaintance with the brother naturally threw him into contact with the sister; while the circumstance of her marriage with another justifies the complaint of infidelity, and ac-

counts for the "insurmountable barrier," that is, a living husband. Daniel was the early *protégé* of the Pembroke family, as was Spenser of the house of Leicester. The youthful poets must often have met in the company of their mutual friend, Sir Philip Sidney,—for the Countess of Pembroke was the "Sidney's sister, Pembroke's mother," celebrated by Ben Jonson, and consequently niece, as Sir Philip was nephew, of Robert Dudley, Earl of Leicester. *Rose* and *Edmund* were thus thrown together under circumstances every way favorable to the development of love in a breast so susceptible as that of the "passionate shepherd."

Other circumstances in the life of *Rose Daniel* correspond so strikingly with those attributed to *Rosalinde*, as strongly to corroborate the foregone conclusion.

Rosalinde, after having given encouragement to her enamored shepherd, faithlessly and finally deserted him in favor of a rival. This is evident throughout the "Shepherd's Calendar." The First Eclogue reveals his passion:—

"I love thilk lass, (alas! why do I love?)
And am forlorne, (alas! why am I lorn?)
She deigns not my good will, but doth reprove,
And of my rural music holdeth scorn."

Her scorn, however, may have meant no more than the natural coyness of a maiden whom the learned Upton somewhat drolly designates as "a skittish female."* Indeed, Spenser must have thought so himself, and with reason, for she continues to receive his presents, "the kids, the cracknels, and the early fruit," sent through his friend Hobbinoll (Gabriel Harvey).

We hear of no alteration of his circumstances until we reach the Sixth Eclogue, in which the progress and utter disappointment of his suit are distinctly and bitterly complained of. "This eclogue," says the editorial "E. K.," "is wholly vowed to the complaining of Colin's ill-success in love. For being (as aforesaid) enamoured of a country lass, *Rosalinde*, and having (as it seemeth)

* Upton's *Faëry Queen*, Vol. I. xiv.

found place in her heart, he lamenteth to his dear friend Hobbinoll that he is now forsaken unfaithfully, and in his stead *Menalcas*, another shepherd, received disloyally: and this is the whole argument of the eclogue." In fact, she broke her plighted vow to Colin Clout, transferred her heart to *Menalcas*, and let her hand accompany it.

Now, from this and the preceding circumstances, the inference appears inevitable, that, at or about the time of the composition of this Sixth Eclogue, the *Rosalinde* therein celebrated was married, or engaged to be married, to the person denounced as *Menalcas*.

Whether the ante-nuptial course of *Rose Daniel* corresponded with the faithlessness ascribed to *Rosalinde* we confess we have no documentary evidence to show: but this much is certain, that *Rose* was married to an intimate friend of her brother's; and, from the characteristics recorded of him by *Spenser*, we shall presently prove that that friend, the husband of *Rosalinde*, is no other than the treacherous rival denounced as *Menalcas* in the "*Shepherd's Calendar*." Who, then, is *Menalcas*?

Amongst the distinguished friends of *Samuel Daniel* was a man of much celebrity in his day,—the redoubted, or, as he chose to call himself, the "*Resolute*" *John Florio* (*Shakspeare's Holofernes*). This gentleman, an Italian by descent, was born in London in the same year with *Spenser*, and was a class-fellow with *Daniel* at Oxford. He was the author of many works, well received by the public,—as his "*First Fruits*," "*Second Fruits*," "*Garden of Recreation*," and so forth; also, of an excellent Italian and English dictionary, styled "*A World of Words*,"—the basis of all Anglo-Italian dictionaries since published. He was a good French scholar, as is proved by his translation of *Montaigne*; and wrote some verses, highly prized by *Elizabeth* and her successor, *James I.* Indeed, his general learning and accomplishments recommended him to both courts; and, on the accession of *James*,

he was appointed classical tutor to Prince *Henry*, and reader of French and Italian to the Royal Consort, *Anne of Denmark*; he was also a Gentleman of the Privy Chamber, and Clerk of the Closet to his Majesty; and, finally, it was chiefly through his influence that *Samuel Daniel* was appointed Gentleman Extraordinary and Groom of the Privy Chamber to Queen *Anne*.

Long prior to this prosperous estate, however, his skill as a linguist had recommended him to the patronage and intimacy of many of the chief nobility of *Elizabeth's* court; and at an early period of his life, we find him engaged, as was his friend *Daniel*, as tutor to some of the most illustrious families,—such as *Pembroke*, *Dudley*, *Essex*, *Southampton*, etc.;* all which, together with his friendship for *Daniel*, must needs have brought him into the acquaintance of *Edmund Spenser*, the friend of *Sidney* and his relatives. He was also on the most friendly terms with *Gabriel Harvey*, and a warm admirer (as his works attest) of the genius of *Daniel*. We have thus gathered our *dramatis personæ*, the parties most essentially interested in *Spenser's* unlucky passion, into one familiar group.

Of *Rose Daniel's* marriage with the "*Resolute John Florio*" there is no manner of question. It is recorded by *Anthony à Wood* in his "*Athenæ Oxonienses*," acknowledged by *Samuel Daniel* in the commendatory verses prefixed to *Florio's* "*World of Words*," and she is affectionately remembered in *Florio's* will as his "*beloved wife, Rose*."† Thus, if not *Spenser's* *Rosalinde*, she was undoubtedly a *Rosalinde* to *John Florio*.

We shall now proceed to gather some further particles of evidence, to add their cumulative weight to the mass of slender probabilities with which we are endeavoring to sustain our conjectures.

Spenser's *Rosalinde* had at least a smattering of the Italian. *Samuel Dan-*

iel was an Italian scholar; for his whole system of versification is founded on that model. Spenser, too, was well acquainted with the language; for, long before any English version of Tasso's "*Gerusalemme*" had appeared, he had translated many passages which occur in the "*Faëry Queen*" from that poem, and—without any public acknowledgment that we can find trace of—appropriated them to himself.* What more natural than that Rose should have shared her brother's pleasant study, and, in company with him and Spenser, accepted the tuition of John Florio?

The identity of Florio's wife and Rosalinde may be fairly inferred from some circumstances consequent upon the lady's marriage, and otherwise connected with her fortunes, which appear to be shadowed forth with great acrimony in the "*Faëry Queen*," where the Rosalinde of the "*Shepherd's Calendar*" appears before us again under the assumed name of *Mirabella*. Lest the ascription of these circumstances to particular parties may be imputed to prejudice or prepossession for a favorite theory, we shall state them on the authority of commentators and biographers who never even dreamed of the view of the case we are now endeavoring to establish.

The learned Upton, in his preface to the "*Faëry Queen*," was led to observe the striking coincidence, the absolute similarity of character, between Spenser's Rosalinde and his *Mirabella*. "If the '*Faëry Queen*,'" quoth he, "is a moral allegory with historical allusions to our poet's times, one might be apt to think, that, in a poem written on so extensive a plan, the cruel Rosalinde would be in some way or other typically introduced; and methinks I see her plainly characterized in *Mirabella*. Perhaps, too, her expressions were the same that are given to *Mirabella*,—'*the free lady*,' '*she was born free*,'" etc.†

* Book II. Canto vi. etc.—See Black's *Life of Tasso*, Vol. II. p. 150.

† Upton, Vol. I. p. 14.—*Faëry Queen*, Book VI. Canto vi. st. 16, 17.

"We are now come," says Mr. G. L. Craik, by far the most acute and sagacious of all the commentators on Spenser, "to a very remarkable passage. Having thus disposed of Turpin, the poet suddenly addresses his readers, saying,—

'But turn we back now to that *lady free*
Whom late we left riding upon an ass
Led by a *carle and fool* which by her side
did pass.'

"This is the '*fair maiden clad in mourning weed*,' who, it may be remembered, was met, as related at the beginning of the preceding canto, by Timias and Serena. There, however, she was represented as attended only by a *fool*. What makes this episode especially interesting is the conjecture that has been thrown out, and which seems intrinsically probable, that the '*lady*' is Spenser's own Rosalinde, by whom he had been jilted, or at least rejected, more than a quarter of a century before. His unforgetting resentment is supposed to have taken this revenge."

So far with Mr. Upton and Mr. Craik we heartily concur as to the identity of Rosalinde and *Mirabella*; and feel confident that a perusal and comparison of the episode of *Mirabella* with the whole story of Rosalinde will leave every candid and intelligent reader no choice but to come to the same conclusion. We shall now collate the attributes assigned in common to those two impersonations in their maiden state, and note the correspondence.

Both are of humble birth,—Rosalinde being described in the "*Shepherd's Calendar*" as "the widow's daughter of the glen"; her low origin and present exalted position are frequently alluded to,—her beauty, her haughtiness, and love of liberty. *Mirabella* is thus described in Book VI. "*Faëry Queen*," Canto vii:—

"She was a lady of great dignity,
And lifted up to honorable place;
Famous through all the land of Faërie:
Though of mean parentage and kindred base,
Yet decked with wondrous gifts of Nature's
grace."

"But she thereof grew proud and insolent,
And scorned them all that love unto her
meant."

"She was born free, not bound to any wight."

Of Rosalinde we hear in "Colin Clout"
that her ambition is

"So high in thought as she herself in place."

And that she

"Loatheth each lowly thing with lofty eye."

Her beauty, too, is dwelt upon as a "thing celestial,"—her humble family alluded to,—the boasted freedom of her heart; and upon Rosalinde and Mirabella an affectation of the demigoddess-ship, which turned their heads, is equally charged. In all essential characteristics they are "twin cherries growing on one stalk."

Of Rose Daniel's life so little is known, particularly during her unmarried years, that we are unable to fasten upon her the unamiable qualities of the allegorical beauties we assume to be her representatives; but if we can identify her married fortune with theirs,—then, in addition to the congruities already mentioned, we can have no hesitation in imputing to her the disposition which brought down upon *them*, so bitterly and relentlessly, the poetic justice of the disappointed shepherd. We may thus dispose of them in brief.

Mirabella's lot was severe. She was married (if we rightly interpret the language of the allegory) to a "*fool*,"—that is to say, to a very absurd and ridiculous person, under whose conduct she was exposed to the "whips and scorns," the disdain and bitter retaliation, natural to the union of a beautiful and accomplished, though vain and haughty woman, with a very eccentric, irritable, and bombastic humorist.

Rosalinde was married—with no better fate, we fear—to the vain and treacherous Menalcas.

And Rose Daniel became the wife of the "Resolute John Florio."

We shall commence with the substantial characters, and see how their histories fall in with the fortunes attributed

to the allegorical. Rose Daniel's husband, maugre his celebrity and places of dignity and profit, was beset with tempers and oddities which exposed him, more perhaps than any man of his time, to the ridicule of contemporary wits and poets. He was, at least in his literary career, jealous, envious, irritable, vain, pedantic and bombastical, petulant and quarrelsome,—ever on the watch for an affront, and always in the attitude of a fretful porcupine with a quill pointed in every direction against real or supposititious enemies. In such a state of mental alarm and physical vamping did he live, that he seems to have proclaimed a promiscuous war against all gainsayers,—that is, the literary world; and for the better assurance to them of his indomitable valor, and to himself of indemnity from disturbance, he adopted a formidable prefix to his name; and to "any bill, warrant, quittance, or obligation," to every address, prelude, preface,* introduction, or farewell, accompanying any of his numerous works, he subscribed himself the Resolute,—"*Resolute John Florio*."

Conduct so absurd, coupled with some personal defects, and a character so petulantly vainglorious, exposed the "Resolute" to the bitter sarcasm of contemporary writers. Accordingly we find him through life encompassed by a host of tormentors, and presenting his *chevaux-de-frise* of quills against them at all and every point. In the Epistle Dedicatory to the second edition of his Dictionary, we find him engaged *morsu et unguibus* with a swarm of literary hornets, against whom he inveighs as "sea-dogs,—land-critics,—monsters of men, if not beasts rather than men,—whose teeth are cannibals'—their tongues adders' forks,—their lips asps' poison,—their eyes basilisks,—their breath the breath of a grave,—their words like swords of Turks, which strive which shall dive deepest into the Christian lying before them." Of a verity we may say that John Florio was sadly exercised when

* *Vide* that to Queen Anne.

he penned this pungent paragraph. He then falls foul of the players, who—to use the technical phrase of the day—“staged” him with no small success. With this “common cry of curs” in general, and with *one poet and one piece* of said poet’s handiwork in particular, he enters into mortal combat with such vehement individuality as enables us at a glance to detect the offence and the offender. He says, “Let Aristophanes and his comedians make plays and scour their mouths on Socrates, these very mouths they make to vilify shall be the means to amplify his virtues,” etc. “And here,” says Doctor Warburton, “Shakspeare is so clearly marked out as not to be mistaken.” This opinion is fortified by the concurrence of Farmer, Steevens, Reid, Malone, Knight, Collier, and Hunter; and, from the additional lights thrown upon this subject by their combined intelligence, no doubt seems to exist that Holofernes, the pedantic schoolmaster in “Love’s Labor’s Lost,” had his prototype in John Florio, the Resolute.

“Florio,” according to Farmer, “gave the first affront by asserting that ‘the plays they play in England are neither right comedies nor tragedies, but representations of histories without any decorum.’” We know that Shakspeare must, of his own personal knowledge of the man, have been qualified to paint his character; for while the great dramatist was the early and intimate friend of the Earl of Southampton, the petulant lexicographer boasts of having for years been domesticated in the pay and patronage of that munificent patron of letters. Warburton thinks “it was from the ferocity of his temper, that Shakspeare chose for him the name which Rabelais gives to his pedant of Thubal Holoferne.” Were the matter worth arguing, we should say, it was rather from the proclivity with which (according to Camden’s rules) the abbreviated Latin name *Joh. nes Florio* or *Floreo* falls into Holofernes. Rabelais and anagrammatism may divide the slender glory of the product between them.

But neither Shakspeare’s satire nor Florio’s absurdities are comprehended within this single character. Subsequent examination of the text of “Love’s Labor’s Lost” has enabled the critics to satisfy themselves that the part of *Don Adriano de Armado*, the “phantastical courtier,” was devised to exhibit another phase in the character of the Resolute Italian. In Holofernes we have the pedantic tutor; in Don Adriano a lively picture of a ridiculous lover and pompous retainer of the court.

By a fine dramatic touch, Shakspeare has made each describe the other, in such a way that the portrait might stand for the speaker himself, and thus establishes a dual-identity. Thus, Armado, describing Holofernes, says, “That’s all one, my fair, sweet, honey monarch; for I protest the schoolmaster is exceeding fantastical,—too, too vain,—too, too vain; but we will put it, as they say, to *fortuna della guerra*”;—whilst Holofernes, not behind his counterpart in self-esteem, sees in the other the defects which he cannot detect in himself. “*Novi hominem tanquam te*,” quoth he;—“his humor is lofty; his discourse peremptory; his tongue filed; his eye ambitious; his gait majestic; and his general behavior vain, ridiculous, and thrasonical. He is too picked, too spruce, too affected, too odd, as it were; too peregrinate, as I may call it; he draweth out the thread of his verbosity finer than the staple of his argument. I abhor such fanatical phantasms,” etc.

Should further proof be needed that Florio, Holofernes, and Armado form a dramatic trinity in unity, we can find it in the personal appearance of the Italian. There was something amiss with the *face* of the Resolute, which could not escape the observation of his friends, much less his enemies. A friend and former pupil of his own,—Sir Wm. Cornwallis,—speaking in high praise of Florio’s translation of Montaigne, observes, —“It is done by a fellow less beholding to Nature for his fortune than to wit; yet lesser for his *face* than his fortune. The truth is, he looks more like a good

fellow than a wise man; and yet he is wise beyond either his fortune or education.* It is certain, then, that, behaving like a fool in some things, he looked very like a fool in others.

Is it not a remarkable coincidence, that both his supposed dramatic counterparts have the same peculiarity? When Armado tells the "country lass" he is wooing, that he will "tell her wonders," she exclaims,—"skittish female" that she is,— "What, with that *face*?" And when Holofernes, nettled with the ridicule showered on his abortive impersonation of Judas Maccabæus, says, "I will not be put out of countenance,"—Byron replies, "Because thou hast no face." The indignant pedant justifies, and, pointing to his physiognomy, inquires, "What is this?" Whereupon the waggish courtiers proceed to define it: it is "a cittern-head," "the head of a bodkin," "a death's-face in a ring," "the face of an old Roman coin, scarce seen," and so forth.

The satire here embodied is of a nature too personal to be considered the mere work of a riotous fancy. It is a trait individualizing and particularizing the person at whom the more general satire is aimed; and, coupled with the infirmities of the victim's moral nature, it fastens upon poor Florio identity with "the brace of coxcombs." Such satire may be censured as ungenerous; we cannot help that,—*litera scripta manet*,—and we cannot rail the seal from the bond. Such attacks were the general, if not universal, practice of the age in which Shakespeare flourished; and we have no right to blame him for not being as far in advance of his age, morally, as he was intellectually. A notorious instance of a personal attack under various characters in one play is to be found in Ben Jonson's "Bartholomew Fair," wherein he boasts of having, under the characters of Lanthorn, Leatherhead, the Puppet-showman, and Adam Overdo, satirized the celebrated Inigo Jones,—

"By all his titles and whole style at once
Of tireman, mountebank, and Justice
Jones."

It was probably to confront and outface "Aristophanes and his comedians," and to "abrogate the scurrility" of the "sea-dogs" and "land-critics," that our Resolute lexicographer prefixed to the Enlarged Edition of his Dictionary and to his translation of Montaigne, his portrait or effigies, engraved by Hole. This portrait would, to a person unapprised of any peculiarity in the original, present apparently little or nothing to justify the remark of Cornwallis. But making due allowance for the address, if not the flattery, of a skilful painter, it were hardly possible for the observer, aware of the blemish, not to detect in the short and close-curved fell of hair, the wild, staring eyes, the contour of the visage,—which, expanding from the narrow and wrinkled forehead into cheek-bones of more than Scottish amplitude, suddenly contracts to a pointed chin, rendered still more acute by a short, peaked beard,—not to detect in this lozenge-shaped visnomy and its air, at once haggard and grotesque, traits that not only bear out the remark of his pupil, but the raillery also of the court wits in Shakspeare's dramatic satire.

Whatever happiness Rose Daniel may have had in the domestic virtues of her lord, his relations with the world, his temper, eccentricities, and personal appearance could have given her little. That he was an attached and affectionate husband his last will and testament gives touching *post-mortem* evidence.

Let us return to the fortunes of the faithless Rosalinde. It appears she married Menalcas,—the treacherous friend and rival of the "passionate shepherd." Who, then, was Menalcas? or why was this name specially selected by our poet to designate the man he disliked?

The pastoral name *Menalcas* is obviously and pointedly enough adopted from the Eclogues of Virgil; in which, by comparing the fifteenth line of the second with the sixty-sixth of the third, we shall find he was the rival who (to use

* Cornwallis's *Essays*, p. 99.

the expression of Spenser) "by treachery did underfong" the affections of the beautiful Alexis from his enamored master. In this respect the name would well fit Florio, who, from his intimacy with the Daniels and their friends, could not but have known the passion of the poet, and the encouragement at one time given him by his fickle mistress.

Again, there was at this time prevalent a French conceit,—“imported,” as Camden tells us, “from Calais, and so well liked by the English, although most ridiculous, that, learned or unlearned, he was nobody that could not hammer out of his name an invention by this wit-craft, and picture it accordingly. Whereupon,” he adds, “who did not busy his braine to hammer his devise out of this forge?”* This wit-craft was the *rebus*.

Florio's rebus or device, then, was a Flower. We have specimens of his fondness for this nomenclative punning subscribed to his portrait:—

“Floret adhuc, et adhuc florebit: floreat ultra
Florius hac specie floridus, — optat
amans.”

And it was with evident allusion to this conceit that he named his several works his “First Fruits,” “Second Fruits,” “Garden of Recreation,” and so forth. Spenser did not miss the occasion of reducing this figurative flower to a worthless weed:—

“Go tell the lass her Flower hath wox a
weed.”

In the preceding stanza we find this weed distinctly identified as Menalcas:—

“And thou, Menalcas! that by treachery
Didst underfong my lass to wax so light.”

Another reason for dubbing Florio *Menalcas* may be found in the character and qualities ascribed to the treacherous shepherd by Virgil. He was not without talent, for in one of the Eclogues he bears his part in the poetical contention with credit; but he was unfaithful and fraudulent in his amours, envious, quarrelsome, scurrilous, and a braggart;

* *Camden's Remains*, folio, 1614, p. 164.

and his *face* was remarkable for its dark, Italian hue,—“*quamvis ille fuscus*,” etc. Compared with the undoubted character of John Florio, as already exhibited, that of Menalcas so corresponds as to justify its appropriation to the rival of Spenser.

There is a further peculiarity in the name itself, which renders its application to John Florio at once pointed and pregnant with the happiest ridicule. Florio rejoiced in the absurd prefix of Resolute. Now Menalcas is a compound of two Greek words (*μένος* and *ἀλκή*) fully expressive of this idea, and frequently used together in the sense of RESOLUTION by the best classical authorities,—thus, *μένος δ'ἀλκῆς τε λάθωμαι*.* Again, in Liddell and Scott's Greek-English Lexicon *μένος* in composition is said to “bear always a collateral notion of resolve and firmness.” And here we have the very *notion* expressed by the very word we want. Menalcas is the appropriate and expressive *nom de guerre* of the “Resolute.”

Every unprejudiced reader will admit, that in emblem, name, character, and appearance, John Florio and Menalcas are allegorically identical; and it follows, as a consequence, that Rosalinde, married to the same person as Rose Daniel, is one and the same with her anagrammatic synonyme,—and that her sorrows and joys, arising out of the conduct of her husband, must have had the same conditions.

Having identified Rosalinde with Rose Daniel, it may be thought that nothing further of interest with respect to either party remains, which could lead us into further detail;—but Spenser himself having chosen, under another personification, to follow the married life of this lady, and revenge himself upon the treachery of her husband, we should lose an opportunity both of interpreting his works and of forming a correct estimate of his character, if we neglected to pursue with him the fortunes of Mirabella. Like her type and prototype, we find that she has to suffer those mortifica-

* *Iliad*, Z. 265.

tions which a good wife cannot but experience on witnessing the scorn, disdain, and enmity which follow the perversity of a wayward husband. Such, at least, we understand to be the meaning of those allegorical passages in which, as a punishment for her cruelty and pride, she is committed by the legal decree of Cupid to the custody and conduct of Scorn and Disdain. We meet with her for the first time as

“a fair maiden clad in mourning WEED,
Upon a mangy JADE unmeetly set,
And a leud fool her leading thorough dry
and wet.”

Again she is

“riding upon an ass
Led by a carle and fool which by her side
did pass.”

These companions treat her with great contempt and cruelty; the Carle abuses her

“With all the evil terms and cruel mean
That he could make; and eke that angry
fool,
Which followed her with cursed hands un-
cleane
Whipping her horse, did with his smarting-
tool
Oft whip her dainty self, and much augment
her dool.”

All this, of course, is to be understood allegorically. The *Carle* and *Fool*—the former named Disdain, the latter Scorn—are doubtless (as in the case of Holofernes and Armado) the double representatives of the same person. By the ass on which she rides is signified, we suppose, the ridiculous position to which marriage has reduced her haughty beauty; the taunts and scourges are, metaphorically, the wounds of injured self-respect.

The Carle himself is extravagantly and most “Resolutely” painted as a monster in nature,—stern, terrible, fearing no living wight,—his looks dreadful,—his eyes fiery, and rolling from left to right in search of “foeman worthy of his steel”; he strides with the stateliness of a crane, and, at every step, rises on tiptoe; his dress and aspect resemble those of the

Moors of Malabar, and remind us forcibly of the swarthy Menalcas. Indeed, if we compare this serio-comic exaggeration of the Carle with the purely comic picture of Don Armado given by Holofernes, we shall see at a glance that both depict the same object of ridicule.

That Mirabella is linked in wedlock to this angry Fool is nowhere more clearly depicted than in the passage where Prince Arthur, having come to her rescue, is preparing to put her tormentor to death, until his sword is arrested by the shrieks and entreaties of the unhappy lady that his life may be spared for her sake:—

“Stay, stay, Sir Knight! for love of God ab-
stain
From that unwares you weetlesse do in-
tend!
Slay not that carle, though worthy to be
slain;
For more on him doth than himself depend:
My life will by his death have lamentable
end.”

This is the language of a virtuous wife, whom neither the absurdities of a vain-glorious husband, nor “the whips and scorns of the time,” to which his conduct necessarily exposes her, can detach from her duties and affections.

Assuming, then, that the circumstances of this allegory identify Mirabella with Rosalinde, and Rosalinde with Rose Daniel, and, in like manner, the Fool and Carle with Menalcas and John Florio, have we not here a thrice-told tale, agreeing so completely in all essential particulars as to leave no room for doubt of its original application to the early love-adventures in which the poet was disappointed? And these points settled, though intrinsically of trivial value, become of the highest interest, as strong corroboration of the personal import of all the allegorical characters introduced into the works of Spenser. Thus, in the “Shepherd’s Calendar,” the confidant of the lover is Hobbinoll, or Gabriel Harvey; and in the “Faëry Queen,” the adventurers who come to Mirabella’s relief are Prince Arthur, Sir Timias, and Serena,

the well-known allegorical impersonations of Spenser's special friends, the Earl of Leicester, Sir Walter Raleigh, and Elizabeth Throckmorton, to whom Sir Walter was married. Are not these considerations, added to the several circumstances and coincidences already detailed, conclusive of the personal and domestic nature of the history conveyed in both the poetical vehicles? And do they not amount to a moral demonstration, that, in assigning the character and adventures of Mirabella and Rosalinde to the sister of Samuel Daniel, the wife of John Florio, we have given no unfaithful account of the first fickle mistress of Edmund Spenser?—We shall next ascertain the name and history of his wife from the internal evidence left behind him in his works.

PART II.—SPENSER'S WIFE.

THE second passion of our poet, having had birth

"In savage soyle, far from Parnasso Mount," is more barren of literary gossip and adventure, and may, therefore, we trust, be compressed into narrow limits.

The chief evidence on which we shall have to rely in this case must be of a similar nature with the former;—not that we shall have to interpret allegories, but the true reading of an anagram; for we may set out on our pursuit, assured, that, according to the poetical alchemy of his age, Spenser did not fail to screen his second *innamorata* under the same "quintessential cloud of wit" as his first; and that we shall find in his homage some *sobriquet*, "the right ordering of which" (as in the former case) "will bewray the verie name of his love and mistresse."

On this point, however, his biographies and biographers have hitherto preserved absolute silence. They tell us he was married, and had several children by his wife; but of the name, the rank, or the country of the lady they confess their ignorance. Todd informs us, that he "married a person of very inferior rank to himself;"—"a country lass";—and he

quotes the "Faëry Queen" to prove his assertion:—

"For, certes, she was but a country lass."

It is true, those words occur in the passage cited by the commentator from the "Faëry Queen"; most probably they refer to the person in dispute. But she was no more "a country lass," in the ordinary acceptation of the phrase, than was Spenser himself (Clerk of the Council of Munster) "a shepherd's boy." Had Mr. Todd consulted that portion of our poet's works especially devoted to record this passion, its progress and issue, he would have found she was a "lady," whose rank was rather "disparaged" than otherwise by "sorting" with Edmund Spenser, albeit his blood was noble:—

"To all those happy blessings which you have

With plenteous hand by Heaven upon you thrown,

This one disparagement they to you gave,

That you your love lent to so mean a one." *Amoretti*. Sonnet lxxi.

Spenser devoted two entire poems expressly to this passion,—to wit, the "Amoretti," describing its vicissitudes, and the "Epithalamion, or Marriage Song," in which he celebrates its consummation. There are many allusions to it also in the "Faëry Queen" and "Colin Clout's come home again"; and from these sources we propose to supply the name, the lineage, and residence of the happy fair.

She was, undoubtedly, a person of rank and blood, residing in the poet's vicinage, and is so described in many of the Sonnets. She is constantly addressed as "a lady," enjoying the respect and the elegancies, if not the luxuries, of her condition,—well-educated,—accomplished in the arts of design and embroidery,—at whose father's house the poet was no infrequent visitor. Her residence, or that of her family, could not have been far from Kilcolman Castle; and was seated, most probably, on the banks of the Mulla, (Spenser's favorite stream,) a tributary of the Blackwater, which empties into the sea at Youghal. For she is seen for

the first time in the "Faëry Queen" as the love of Colin Clout, (Spenser,) dancing among the Nymphs and Graces,—herself a fourth Grace,—on a mountain-top, the description of which exactly corresponds with all his other descriptions of his beloved Mole,—a mountain which nearly overhangs his castle;* and, undoubtedly, the bridesmaids and companions who attended her at the hymeneal altar were the "Nymphs of Mulla," and

"of the rivers, of the forest green,
And of the sea that neighbours to her near,"—a localization which would fix her family mansion somewhere between Kilcolman Castle and the prosperous seaport town of Youghal,—but somewhat nearer to the former. This limits our inquiries within the narrow range of the lands bordering the Mulla waters.

But our poet, we believe, did not stop with these ambiguous indications of her birthplace and family; he had promised her to immortalize the triumph of his passion, and to leave to all posterity a monument of the "rare wonderment" of the lady's beauty.† He had gone farther; and, in three several sonnets, ‡ vowed to eternize her name—"your glorious name in golden monument"—after his own fashion, and to the best of his abilities. We have no right, then, to doubt that he fulfilled his promise; and if we can fix upon any distinctive appellation or epithet addressed to her, common to the several poems which professedly reveal his passion, and solvable into the name of a person whose residence and circumstances correspond with those ascribed to the lady by her worshipper, may we not most reasonably conclude that we have at length discovered the long-lost secret?

To begin with the beginning,—the "Amoretti." Here she is an *Angel*, in all moods and tenses, the "leaves," "lines," and "rhymes" are taught, that, "when they behold that *Angel's* blessed look," they shall "seek her to please

alone."* In a subsequent sonnet, she is an

"*Angel* come to lead frail minds to rest
In chaste desires, on heavenly beauty bound."†

Again, the poet denies that

"The glorious portrait of that *Angel's* face"
can be expressed by any art, by pen or pencil.‡

Again, she is

"Of the brood of *Angels* heavenly born."§
And yet again, she is

"Divine and born of heavenly seed."||
Once more we are bid

"Go visit her in her chaste bower of rest,
Accompanied with *Angel-like* delights."¶

Turn we next to the "Epithalamion." And here the same cuckoo-note is repeated *usque ad nauseam*. We are told, that, to look upon her,

"we should ween
Some *Angel* she had been."**

Even her bridesmaids (her sisters, probably) are thought to be *Angels*, and, addressing them, the bridegroom says,

"Sing, ye sweet *Angels*, Alleluja sing!"††

Finally, in "Colin Clout's come home again," the poet very dexterously evades the royal anger of Elizabeth, sure to be aroused by the preference of any beauty to her own. To deceive the Queen,—to whom, in gratitude for past favors, and, mayhap, with a lively appreciation of others yet to come, he is offering up homage,—he describes her Majesty by the very same imagery he had elsewhere employed to depict his lady-love; and ostensibly applies to the royal Elizabeth the amatory terms which are covertly meant for an Elizabeth of his own,—between whom and her royal type he either saw or affected to see a personal resemblance. Here we find her placed by the poet

"Amongst the seats of *Angels* heavenly wrought,
Much like an *Angel* in all form and fashion."

* Sonnet i. † Sonnet viii. ‡ Sonnet xvii.

¶ Sonnet lxxxiii. ** Stanza 9.

†† Stanza 13.

* *Faëry Queen*, Book VI. Canto x.

† Sonnet lxix.

‡ Sonnets lxxiii., lxxv., and lxxxii.

The metaphoric "Angel" of enamored swains is at once so trite and obvious, that both the invention and vocabulary of the lover who abides by it so perpetually must have been poor and narrow beyond anything we can conceive of Spenser's fecundity of language and imagery, if we sit down content to imagine that no more is meant by its recurrence than meets the eye. We are satisfied that this title or simile—call it what you will—is the key-word of the mystery; and we must now look around the neighborhood of the Mulla for a family-surname out of which this "Angel" can be extracted by the "alchemy of wit."

On consulting the "Great Records of Munster," Vol. VI., we find a family residing in the neighborhood of Kilcolman Castle whose name and circumstances correspond exactly with all the requirements of our Angelic theory. The Nagles were a very ancient and respectable family, whose principal seats were in the northern parts of the County of Cork and the adjoining borders of the County of Waterford. There seem to have been two races of them, distinguished by the color of their hair into the Red Nagles and the Black Nagles; and of the former, the lord or chieftain of the tribe resided at Moneanymmy, an ancient preceptory of the Knights of St. John, beautifully seated on the banks of the Mulla, where it disembogues its tribute into the Blackwater, on its passage to Cappoquin and Youghal, and at a convenient distance from Spenser's Kilcolman. Elizabeth Nagle belonging to the Red branch of the family, we shall find no difficulty in accounting for her alleged resemblance to Queen Elizabeth.

The proprietor of Moneanymmy, strictly contemporaneous with Spenser, was John Nagle, whose son, David, died in the city of Dublin in 1637. It is therefore but fair to suppose that in 1593 (the year of Spenser's marriage) this David might have had a sister of marriageable age; for he himself, by his marriage with Ellen Roche of Ballyhowly, had a daughter, Ellen, who in due time was married

to Sylvanus, the eldest son of Edmund Spenser. If our supposition be correct, therefore, Ellen and Sylvanus were linked by the double bond of cousinhood and matrimony.

Unfortunately for our Spenserian inquiry, however, the full and regular pedigree of these Nagles commences only with David, whose marriage and the issue thereof are recorded at large in Irish books of heraldry; whereas the preceding generations, to a remote antiquity, are merely notified by the bare names of the son and heir as they succeeded to the inheritance.

John Nagle may have had a daughter marriageable at the time of Spenser's marriage; and she may have married the poet,—and did, we are convinced,—even though her family belonged to the Romish persuasion, and the bridegroom to the Protestant Church.

To this untoward circumstance—the difference in religion—there is curious reference made in a remarkable passage of the "Amoretti," which seems not only to indicate the name of her family, but to screen the poet himself from the penalties denounced against Protestants who intermarried with Roman Catholics. In the Sixty-first Sonnet, the lady is said to be

"divinely wrought,

And of the brood of Angels heavenly born;
And with the crew of blessed Saints upbrought,
Each of which did her with their gifts adorn."

Here we have distinctly her *birth* and *education*, each assigned to a different source. She is of the "brood" or family of anagrammatic "Angels,"—otherwise, Nagles; but has been "upbrought," or instructed, by persons whom Spenser denominates "Saints," or Orthodox Protestants; for Spenser was by party and profession a Puritan; and the Puritans were "Saints,"—to such as chose to accept their own account of the matter.

But there may be a yet deeper meaning, an anagrammatic appropriateness, in this phrase, "crew of blessed Saints." The Nagles of Moneanymmy had intermarried frequently with the St. Legers

of Doneraile; and thus such a close intimacy was established between the families as to warrant the supposition that a child of the one house might have been reared amongst the members of the other. Elizabeth Spenser (born Nagle) may not unlikely have been educated by the Puritan St. Legers. The name St. Leger, as Camden remarks, is a compound name, derived from the German *Leodigar* or *Leger*, signifying "the Gatherer of the People." Verstigan also gives it the same translation, as originating from *Leod*, *Lud*, or *Luyd*, which, he says, means "folk or people." * Therefore St. Leger seems to signify a folk, a gathering, a legion or "crew" of saints, a holy crowd or crew,—which may have been the quibble extorted by Spenser's "alchemy of wit" from the "upbringing" of Elizabeth Nagle, his wife. He calls her with marked emphasis his "sweet *Saint*," his "sovereign *Saint*"; and in the "Epithalamion" the temple-gates are called on to

"Receive this *Saint* with honors due."

In praying to the gods for a large posterity, he places his request on the ground,

"That from the earth (which may they long possess

With lasting happiness!)

Up to your haughty palaces may mount

Of blessed *Saints* for to increase the count."

There is yet another solution, beside the anagrammatic one, for the name of "Angel" so sedulously applied by the poet to his beloved. The Nagle family, according to heraldry, were divided into three branches, distinguished by peculiarities of surname. The Southern branch signed themselves "Nagle,"—the Meath or Midland branch, "Nangle,"—while the Connaught or Western shoot rejoiced in the more euphonious cognomen of *Costello*! Let the heralds account for these variations; we take them as we find them. The letter N, as we are informed, accord-

* Verstigan's *Restitution of Decayed Intelligence*, p. 226.

ing to the genius of the Irish tongue, is nothing more than a prefix, set, *euphonia gratiâ*, before the radical name itself, when commencing with a vowel. Thus, the N'Angles of Ireland were the Angles whose heroic deeds are duly recorded in the lists of the battle of Hastings. They went over to Ireland with Strongbow; one branch assumed (can the heralds tell us why?) the name of Costello;—another became N'Angles, and the Southern shoot dwarfed down their heavenly origin into prosaic Nagle. The well-known punning exclamation of Pope Gregory, on observing the fairness and beauty of some English children,—"*Non Angli, sed Angeli forent, si essent Christiani*,"—may have set the fervid brain of Spenser on fire, and suggested the divine origin of her he loved. Between Elizabeth de Angelis—the pun of Gregory—and Elizabeth de Angulo—the latter being the derivation of heralds and lawyers—what poet could hesitate a moment?

Our task is done. We think we have established our case. By anagram, Elizabeth Nagle makes a perfect *Angel*; by heraldry and a pontifical pun, the N'Angles of the County of Meath are *Angels* in indefeasible succession; Elizabeth belonged to the Red branch of her family, and therefore must have resembled the royal Elizabeth; she was brought up among the "crew of Saints" in the St. Leger family; and, finally, her place of residence corresponds with that depicted by the "passionate shepherd" as the home of his second mistress. We think we have satisfied all the requirements of reasonable conviction, and confidently await the verdict of that select few who may feel interest in this purely literary investigation.

Guided by the rules of anagram here laid down and illustrated, some future commentator, more deeply versed in the history and scandal of the Elizabethan era, may be able to identify real personages with all the fantastic characters introduced in the "Faëry Queen."

MISS WIMPLE'S HOOP.

[Concluded.]

CHAPTER III.

A YEAR had passed since Maddy's flitting. The skimped delaine was sadly rusty,—Miss Wimple very poor. The profits of the Hendrik Athenæum and Circulating Library accrued in slow and slender pittances. A package of envelopes now and then, a few lead pencils, a box of steel pens, a slate pencil to a school-boy, were all its sales. Almost the last regular customer had seceded to the "Hendrik Book Bazaar and Periodical Emporium,"—a pert rival, that, with multifarious new-fangled tricks of attractiveness, flashed its plate-glass eyes and turned up its gilded nose at Miss Wimple from the other side of the way.

But Miss Wimple's proud and honorable fund, for the relief of the shop, by no means fell off. As she had anticipated, her expert and nimble needle was in steady demand by all the folks of Hendrik who had fine sewing to give out. Her earnings from this source were considerable; and, severely stinting herself in the very necessities of life by a strained ingenuity of economy, to which the skimped delaine—turned and altered to the utter exhaustion of the cleverest dressmaker's invention, and magically rejuvenated, as though again and again dipped in the fountain of perpetual youth—bore conclusive testimony, she bravely reinforced her fund from time to time.

Miss Wimple's repasts were neither frequent nor sumptuous; "all the delicacies of the season" hardly found their way to her table; and in her bleak little nest, for it was now winter, a thin and scanty shawl but coldly did the office of a blanket.

But Miss Wimple partook of her tea and dry toast with a cheerful heart, and shivered in her nest with illustrious patience,—regaled by satisfied honor, and

warmed by the smiles of courage and of hope.

Between Simon and herself negotiations rested where we left them last; only there was now a heartier welcome for him when he came, and often a sparkling smile, that seemed to say, he had waited well, and not in vain, she hoped,—a smile that, to the eye of his healthy spirit, was an earnest of the rose-star's reappearance; it was only behind the rusty skimped delaine, as behind a cloud. His visits were not so rare as before, nor always "upon business"; he lingered sometimes, and sometimes had *his* way.

One night, Simon was outrageously rebellious; he had cheated Sally of half an hour, and spent it in rank mutiny; he compared the rose-star to the remotest of the asteroids, as seen through Lord Rosse's telescope, and instituted facetious comparisons between Miss Wimple's honorable fund and the national debt of England. It was near closing-time; Miss Wimple said, "Now, Simon, *will* you go?"—she had said that three times already. Some one entered. O, ho! Miss Wimple snatched away her hand:—"Now go, or never come again!" Simon glanced at the visitor,—a woman,—a stranger evidently, and poor,—a beggar, most likely, or one of those Wandering Jews of womankind, who, homeless, goalless, hopeless, tramp, tramp, tramp, unresting, till they die. She had almost burst in, quite startling Miss Wimple; but now she stood by the glass case, with averted face, and shabby shawl drawn suspiciously about her, and waited to be noticed, peering, meanwhile, through the little window into the dark street.

"Good-night, little Sally!" said Simon; "put up your bars, and so put up my bars. Now there's a fine speech for you!—if my name were Philip Withers, you'd call it poetry."

The strange woman actually stamped with her foot twice, and moved a step nearer to the window. Miss Wimple took it for a gesture of impatience, and at once arose to accost her. Simon eyed her curiously, and somewhat suspiciously, as he passed; but, taking her attire for his clue, he thought he recognized one of a class with whom Miss Wimple was accustomed to cope successfully; so he took his leave unconcerned.

Miss Wimple approached the stranger. "What will you have?" she asked. But the woman only followed Simon with her eyes, not heeding the question.

"Do you hear me?" repeated she; "I say, what will you have, Madam?"

By that time, Simon had disappeared among the distant shadows of the street. The woman turned suddenly and confronted Miss Wimple.

"Look at me," she said.

Miss Wimple looked, and saw a pale and haggard, almost fierce, face, that had once been fair,—one that she might, she fancied, have met somewhere before.

"You seem to have suffered,—to suffer now. What can I do for you?"

"Look at me!"

"I see; you are very wretched, and you were not always as you are now. You are cold; are you hungry also? I, too, am very poor; but I will do all I can. I will warm you and give you food."

The woman walked to where the bright camphene lamp hung, and stood under it.

"Now look at me, Miss Wimple."

"I have looked enough; desperation on a young woman's face is not a pleasant sight to see. If you have a secret, best keep it. I have to deal only with your weariness, your hunger, and your half-frozen limbs. If I can do nothing for those, you must go.—Merciful Heaven! Miss Madeline Splurge!"

"Yes!—Now hide me, quick, or some one will be coming; and warm me, and feed me, or I shall surely die on your hands."

Not another word said Miss Wimple,—

asked no question, uttered no exclamation of surprise; but straightway ran and closed the windows, put up the bars, adjusted the shutters in the glass door, and screwed them down. Next she took Madeline's hand and led her up the narrow staircase to the nest, seated her in the little Yankee rocking-chair, and wrapped her in the scanty, faded shawl that served for a coverlet. Then she ran quickly down into the cellar, and, with a hammer, broke in pieces an old packing-box;—it was a brave achievement for her tender hands. Back to the nest again with the sticks;—Madeline slept in the chair, poor heart!

Miss Wimple made a fire in her little stove, and when some water was hot, she roused her guest with a kiss. Silently, languidly, and with closed eyes, Madeline yielded herself to the kind offices of her gentle nurse, who bathed her face and neck, her hands and feet, and dressed her hair; and when that was done, she placed a pillow under the wanderer's head, and, with another kiss, dismissed her to sleep again.

Then she prepared tea and toast, and, running down to the street, returned quickly with some fresh eggs and a morsel of golden butter, wherefrom she prepared a toothsome supper, the fragrance of which presently aroused the famished sufferer, so that she opened her eyes feebly, and smiled, and kissed Miss Wimple's hand when she came to draw her nearer to the table. Then Madeline ate,—not heartily, but enough to comfort her; and very soon her head fell back upon the pillow, and she would have slept in the chair again, holding Miss Wimple's hand. But Miss Wimple arose and took the sheets from the cot, and, having warmed them by the fire, made up the bed afresh,—a most smooth, sweet, and comfortable nest; and, raising Madeline in her arms, supporting her still sleeping head upon her shoulder, she very tenderly and skilfully removed her garments, all coarse and torn, soiled and damp, and clad her afresh in pure night-clothes of her own. But first—for Madeline began

to shiver, and her teeth had chattered slightly—Miss Wimple untied her own warm petticoat of quilted silk, that for comfort and for decency had been her best friend through the hard winter,—wherefore it was most dearly prized and ingeniously saved,—and put it upon Madeline, whom then she led, almost carrying her, as one may lead a worn-out and already slumbering child, to the nest, and laid her gently there, drawing the covering snugly about her, and spreading the faithful shawl over all. And all the while, not a word had been spoken by either;—with one, it was the silence of pious carefulness,—with the other, of newly-found safety and perfect rest. Then Miss Wimple placed the lamp on the floor behind the door, fed the stove with fresh sticks, and with her feet on the little iron hearth, and her head resting on her knees, thought there all night.

All night poor Madeline's slumber was broken by incoherent mutterings, convulsive starts, and, more than once, a fearful cry; and when the day dawned, she suddenly sat erect, stared wildly about her, and raved. A fierce, though brief, fever had seized her; she was delirious, and knew not where she was. When Miss Wimple would have soothed her, tenderly caressing, and promising her a sister's kindness and protection,—a home safely guarded from intrusion,—Madeline assailed her savagely, bidding her be off, with her smooth treachery, her pretty lies.

“‘Sister!’—devil! Do I not know what a hell your ‘home’ is?—and as for ‘safety,’ shall I seek that among snakes? Oh, I am sick of all of you!—have I not told you so a hundred times?—sick with the contempt I feel for you, and weary of your stupid tricks.”

“Madeline,” said Miss Wimple, “look at me! Here,—touch my face, my dress! Do you not know me now? Do you not see that I am not your mother, nor Josephine, nor Adelaide, but only Sally Wimple, little Miss Wimple, of the book-store? What harm could I do you?—how could I offend or hurt you? Look

me in the eyes, I say, and know me, and be calm. See! this is my chamber,—this is my bed; below is the little shop,—the Athenæum, you remember. We are alone in the house; there is no one to hear or see. You came to me,—did you not?—over the long, weary road, through the darkness and the bitter cold, for warmth and food, for rest and safety; and I have hidden you away, and watched by you. Look around you,—look through that window; do you not know those trees, the mulberries by the Athenæum?—they are bare now; but you have seen them so before, a dozen winters. Look at this face,—look at this dress,—look at this dress!—Ah! now you know all about it,—‘little Miss Wimple,’ of course; and this shall be your home, and you are safe here.”

When Miss Wimple began to speak, she stood somewhat off from the bed; for Madeline, with a gesture full of hate, and close-set lips that looked dangerous, had thrust her back. But as she proceeded with her calm and clear appeal, Madeline was arrested, in the very movement of springing from the bed, in an attitude “worth a painter’s eye,” half-sitting, half-reclining, supported by her right arm, which, rigidly extended, was planted pillar-like in the bed,—with her left hand tossing aside the bed-clothes,—her knees drawn up, as for the instant of stepping out upon the floor,—her right shoulder, bare, round, and white, thrust from the night-dress, which in the restlessness of her distraction had burst its chaste fastenings, bestowing a chance glimpse of a most proud and beauteous bosom,—a glimpse but dimly caught through the thick brown meshes of her dishevelled hair. So, now, with impatient eyes and eager lips, she rested and listened. And when Miss Wimple said, —“I have hidden you away and watched by you,” the fierce look was softened to one of pitiful reflection and recollection; and at the words, “Look at this dress! Ah! now you know all about it,—‘little Miss Wimple,’ of course!” she sat up and stretched forth her arms beseeching—

ly, and in a moment was sobbing helplessly on Sally's neck.

A little while Miss Wimple, still and thoughtful, held her so, that her soul's bitterness might pour itself out in wholesome tears; then she gently stroked the tangled brown hair, and said,—“Sit close beside me now, and lean upon my bosom, and tell me all,—where you have been, and how you have fared, and what you would have me do.”

With a brave effort, Madeline controlled herself, and replied, firmly, though with averted face,—

“You remember, dear Miss Wimple, our last interview. I insulted you then.”

Miss Wimple made no sign. Madeline blushed,—brow, neck, and bosom,—crimson.

“And then I told you that I believed in you as I believed in little else, in this world or the next; and I said, that, if in my hour of shame and outcasting, I could implore the help of any human being, I would come to you before all others. I have come. You thought me raving then, and pitied me, because you did not understand. Presently you will understand, and you will still pity me,—but with a difference.

“I fled away that very night, you recollect,—fled from my self-contempt, from the sickening scorn I felt for them,—for *him*.”

There was agony in the effort with which she uttered that last word. She named no names, but, with a sort of desperation, raised her head and looked Miss Wimple in the face; in the quick, sensitive glances they interchanged at that moment the omission was supplied.

“Though my flight was premeditated, I took with me no clothes save those I wore; but I had concealed on my person every jewel and trinket I possessed. With these,—for I readily converted them into money,—I purchased a safe asylum in an obscure but decent family, whose poverty did not afford them the indulgence of a scrupulous fastidiousness or impertinent curiosity; it was enough

for their straitened conscience that I had the manners and the purse of a lady,—they asked no questions which might cost them a profitable boarder, the only one they could accommodate in their poor way. I had no fear that any hue-and-cry would be raised for me; I had left behind me two who would prevent that,—in that, my worst foes were my best friends. If I had any relatives who cared for me enough to pursue me, I rejoiced in at least one sister on whose cunning, if not good sense, I could rely, to convince them of the futility of such efforts,—one *friend* whose fears would be ingenious and busy to put the best-laid chase at fault.

“So I lay concealed and safe till the time came when I had to purchase pity, help, and precious secrecy. My discreet hosts could furnish those extras; but they were poor, and such luxuries are expensive in New York;—it was not long before my last dollar was gone. I had been ill,—*ill*, Miss Wimple,—and every way crippled; I could not, if the work had offered itself to me, have earned more then. My last trinket was gone; I had pawned whatever I could spare from the hard exigencies of living; for I am no coward,—I did not wish to die,—I had challenged my fate, and would meet it. I had even changed with the women of the house the silk dress I wore, and my fine linen, for the mean rags you cleansed me of last night,—that they might pay themselves so; and when all was expended, and the last trick tried that pride, honor, and modesty could wink at, I came away in the night, leaving no unsettled scores behind me. But I saw my own resources sinking fast; I knew I must presently be debtor to some one for protection, aid, and counsel. I remembered you,—and that I had said I could beg of none but you; therefore I am here.

“And now, Miss Wimple,”—and as she spoke, Madeline arose, and, standing before her companion, said her say slowly, proudly, with head erect and unflinching eyes,—“I told you I believed in you, as I believed in nothing then, on earth or

in heaven,—as I believe only in God's mercy now. I will prove that that was no merely pretty phrase, meant cunningly to cheat you of your forgiveness for a coarse insult. Since I saw you last, I have been—a mother; I have brought forth a child in shame and sin and blasphemous defiance,—and God has been merciful to it and to me, and has taken it unto Himself. I think you also will be merciful; you will help me to save myself from the pit that yawns just now at my feet; you will help me to prove it false, that a woman who has strayed off so far in her wilful way may not, if she be strong and truly proud, retrace her steps, to fall in at last—though last of all the stragglers—with the happy procession of honored women,—of women who have done the best they could, and borne their burden bravely.”

Miss Wimple sat on the side of the bed, her chin resting on her clasped hands, her gaze fixed vacantly on the floor, — “Poor baby! Dead,—thank God!” was all she said.

“Miss Wimple,” said Madeline, “I have addressed myself to your heart, rather than to your understanding, your education. I had no right to do so. If my presence is, in your opinion, an outrage to your house, I am ready to go now. I can face the street, the town; no one will dare to stop me, if any were inclined.”

“Be seated, Miss Splurge,—you are very welcome here. My appreciation of the difference between your education and mine is as kind as you could wish. This is a question of hearts,—and our hearts have been always right, I hope; we are as woman to woman, and the womanly part of either of us may still be trusted. Be seated,—I have a word to say for myself”; and, as she spoke, Miss Wimple went to her little bureau, and, unlocking a drawer, drew from it a miniature rose-wood cabinet; unlocking that, again, she took something out, which, as she returned to resume her seat beside Madeline, was hidden in her hand.

“Miss Splurge,” said Miss Wimple,

“the night on which you disappeared so strangely from this place, I had been visiting a sick friend on the other side of the river, and returned home at a late hour,—that is, about nine o'clock, perhaps. As I entered the covered bridge, I heard the voices of a lady and a gentleman in excited conversation.”

Madeline became deadly pale; but she did not speak, uttered no exclamation,—only a slight movement of her eyebrows expressed eagerness, as she turned more attentively to Miss Wimple, who proceeded as though unconscious of any trace of emotion in her companion.

“The voice of the gentleman was familiar to me; the lady's I did not, at first, recognize,—something had changed its quality. Supposing themselves alone,—for it was plain they had not heard me approach and enter the bridge,—they were incautious; their words reached me distinctly. I might have retraced my steps and waited till they had gone; but the moon was shining brightly, and the night was very still,—in a pause of their conversation they might have heard or seen me; I chose to spare them that. So I fell back into a corner, where the shadows were deepest, and remained quite quiet until they went away. I have told you that I heard their words; but I did not understand them then;—now, I do.”

Madeline bowed her head. Miss Wimple seemed not to observe that, but continued in the same quiet, even tone:—

“When they had gone, I found, lying in the moonlight near the bridge—this.”

Miss Wimple held out the little pocket-book. Madeline started, made a quick movement, as though to snatch the book, but checked herself with an effort, and said, with stern composure,—

“Well?”

“Well,” said Miss Wimple, “there it is, and it is yours. It contains a card, for the safety of which you were once concerned. It has remained as safe, from that hour to this,—not only from my curiosity, but that of all others, be they friends or foes of yours,—as though you

had kept it hidden in your bosom, and defended it with your teeth and nails; *on my honor!*"

In these last words, and only then, Miss Wimple showed that she could remember an insult, and avenge it—in her own way. She dropped the pocket-book into the lap of Madeline, who, without a word, placed it in her bosom.

"And now, my poor Madeline," said Miss Wimple, "we will speak no more of these things. I beg you to understand me clearly,"—and Miss Wimple suddenly altered her tone,—*"we must not recur to this subject. You will remain with me until we shall have decided what is best for us to do. You are quite safe in this house; that you were ever here need not be known hereafter, unless your honor or your happiness should require that we divulge it. I must go now and open the shop; and when I return to you, we will speak, if you please, of other things."*

"But Miss Wimple's Hoop,—will you never come to that? Or is it your intention to omit the part of Hamlet by particular request?"

Slowly and fairly,—we come to it now.

CHAPTER IV.

WHEN the neat and modest little mistress of the Hendrik Athenæum and Circulating Library descended to open the shop and take down the bars, all her sense of delicacy was shocked, and she was brought to shame; for her meek skirts, missing the generous support of the quilted silk petticoat, clung about her mortified extremities in thin and limp dejection. It was plain to Miss Wimple that she looked poverty-stricken,—an aspect most dreadful to the poor, and upon which the brothers and sisters of penury who by hook or by crook contrive to keep up appearances for the nonce have no mercy. "To-day," she thought, "callers will delight me not, nor customers neither." But Miss Wimple was in a peculiarly provoking predicament, and for such there is ever a malignant star;—callers and customers dropped in, one

after another, all day, as they had rarely come before,—as though, indeed, her most spiteful enemy had got wind of the petticoat affair, and sent them to plague her.

That day, Miss Wimple had recourse to as much painfully ingenious dodging behind the low counters as though she had a cloven foot to hide. When evening came, she could have sat down—if she had been any other plagued woman in the world but Sally Wimple—and had a good cry. It was bitter weather, and she had shivered much;—she did not mind that; but to look poverty-stricken! No, she did not cry *outside*, but it was a narrow escape. In her trouble, her eyes wandered around the shop beseechingly; and lo! she beheld in the window a timely hooped skirt,—a daring speculation wherein she had lately invested, in consideration of the growing importance of her millinery department; and straightway Miss Wimple went and took the hoop, and offered it up for a pride-offering in the stead of her delicacy, that was so dear to her. It was a thing of touching artlessness to do; only so cunning-simple a soul as Sally Wimple could ever have thought of it. She sat up late that night, engaged in compromising with her prejudices, by drawing out the whalebones, one by one, from the "Alboni," shaving them down with a piece of glass, very thin, and tucking them,—until all their loud defiance was subdued, and for Miss Wimple's Hoop it might be tenderly deprecated that it was nothing to speak of, "such a *leetle* one."

The sacrifice was made, and, let us hope, not merely figuratively accepted by Him to whom *prejudices* may arise to-day an offering not less honored than was the blood of rams in the hour when Abraham laid his first-born on an altar in the thicket of Jehovah-jireh.

If any challenge the probabilities of this incident, and cavil at the chance that Miss Wimple's necessity could, under any circumstances, bring forth such an invention, I hope I have only to remind them that that brave angel had become straitened to a point whereat she had neither

material from which to erect another quilted petticoat, nor the means of procuring it, even if she could spare the time necessary to the making of one,—which she could not, being now closely occupied between the engagements of her hired needle and the newly-found cares that Charity had imposed upon her.

But, however the probabilities may appear, Miss Wimple's Hoop was a shaved-whalebone fact; and the quilted petticoat would never have been missed, but for the officious scrutiny of the eyes, and the provoking prating of the tongues, of a sophisticated few who marvelled greatly at the pliancy and the "perfect set" of Miss Wimple's Alboni,—“and that demure little prig, too! who'd have thought it?”

As for Simon Blount, he was quick to perceive the new experience to which the skimped delaine had been introduced, and at first it disturbed and embarrassed him; but his light, elastic temper soon recovered its careless buoyancy, with a sly smile at what he considered an oddity, newly discovered, in the character of his prim sweetheart. “Oh! it's all right, of course,” he thought; “Sally knows what she's about; but it's very funny!”

And so, if this strange disturbing of the established order of “things” in the kingdom of Wimple had rested with the exaltation of the Hoop, that body politic would presently have been reduced to tranquillity, no doubt, and the all-agogness of Hendrik would have come quietly to nought, like any other popular flutter following upon a new thing under the sun. But in a romantic cause the conscientiousness of Miss Wimple, for all her seeming matter-of-fact, took on a quality of chivalry; and she displayed a Quixotism most tiltfully disposed toward any windmill of conventional proprieties that might plant itself in the way by which her beauteous and distressed damsel was to escape. So, before all the decencies of Hendrik had recovered from the shock of the Hoop, she threw them into a new and worse “conniption” by an even more

daring innovation upon their good, easy notions of her; for the next thing she did was—a basque and flounces. Thus it happened:—

Madeline had become quite another Madeline,—say a Magdalen, rather,—under the gentle discipline of her admirable angel. Her wonted distraction had subsided into a pensive sadness, which manifested itself in many a grateful, graceful tenderness toward that glorifier of the skimped delaine. She had observed the Hoop at once, and greeted it with a solitary smile, accepting it for a happy sign and a token; for she had recognized Simon Blount when she turned into the shop, that night, out of the darkness and the cold, and, with the alert intelligence of a woman, even so self-absorbed as she was then, had construed his gallant “good-night.” She thought she understood Miss Wimple's Hoop, because she had not discovered the poetry in Miss Wimple's quilted petticoat. They had not spoken of those things again. Delicacy was the law for those two; and to do their best, and thankfully, bravely, accept the first deliverance Heaven might send them, was their religion. Like two Micawbers of Faith, Hope, and Charity, they waited for something to “turn up.”

Miss Wimple invested a daily three-cent piece in a New York paper, and diligently conned the “Wants” before the Marriages and Deaths,—extraordinary woman! An “opening” had but to show itself, and Miss Wimple was ready to fling her character into the breach for the benefit of her Magdalen. Strong-minded woman!

At last it came. A gentleman who had recently lost his wife wanted a house-keeper and governess for his two little girls,—the offices to be united in the person of “a lady by birth, education, and associations”; to such a liberal salary would be given; and in case she should be in straitened circumstances, a reasonable advance would be made, “to enable the lady to assume at once the position of a respected member of his family.” The very place!

Now what did that dashing Miss Wimple-Quixote—of such is the Kingdom of Heaven!—but sit down and pour her enormous little heart out in a letter to a person she had never seen or heard of,—telling him everything but names and localities, and appealing, with an inspiration, to his divine spark. There is no doubt that, “for that occasion only,” Providence sent an advertiser to the “Tribune” to justify the large faith of Pity in skimped delaine; for the word of Hope and Love that Miss Wimple let fall, unstudied, from the heart, fell upon a genial mind, and lo!—

“It raised a sister from the dust,
It saved a soul from death!”

The gentleman—the nobleman!—thanked his unknown correspondent, whose hand he would esteem it an honor to touch, for the opportunity she had afforded him to do good in a graceful way. Mrs. Morris (Miss Wimple had written: “Let us know this poor lady as ‘Mrs. Morris,’ a childless widow”) should be most welcome to his house; she need never be aware that the sad passages of her history had come to his knowledge, and by all over whom he exercised authority or influence her *sorrows* should be revered. He took the liberty to inclose a check, which Mrs. Morris would have the goodness to regard as a small advance on her salary; she would make whatever preparation she might deem necessary, at her perfect leisure; he would be happy to see her as soon as it should be quite agreeable to her to come. Once more, with all his heart, he thanked the admirable lady who had in so remarkable a manner distinguished him by her noble impulse of confidence. It would be his dearest duty hereafter to deserve it. And he gave his address: “Lawrence Osgood, Fourteenth St., New York.”

It was evident that the “necessary preparations” for Madeline’s appearance in this new rôle could not be made in Hendrik. Miss Wimple was distressingly sensitive for the safety of her *protégée* from scandalous discovery. Even she

herself could not expend any considerable portion of Mr. Osgood’s advance without arousing surmise and provoking dangerous prying. Besides, how should she get the money for the check?—to whom dare she confess herself in possession of it? Of course, *there was* a conclusive impossibility. Nevertheless, something must be done at once to put Madeline at least in travelling trim; for the things of which—to use her own sensitive expression—Miss Wimple had “cleansed” her when she came were out of the question. It was as true of this poor young lady in her trunkless plight, as of any dishevelled Marius in crinoline, who sits down and weeps among the brand-new ruins of a Carthage of satin, lawns, and laces, that she had Nothing to Wear. So Miss Wimple, encouraged by the happy success of the Hoop stratagem, forthwith began to cast about her; and for the present Mr. Osgood’s letter and the check were hushed up in her bosom.

Now Miss Wimple and Madeline Splurge were examples of how much our views of a person’s character have to do with our notions of his or her stature or carriage. All Hendrik spoke of the demure heroine of the skimped delaine as “Little Miss Wimple”; and Madeline, though the youngest of the sisters, was universally known as “Miss Splurge,”—as it were, awfully. Yet Miss Wimple and Madeline were almost exactly “of a size,” by any measurement, and Miss Wimple’s clothes were a sweet fit for Madeline; the petticoat experiment had discovered that. So the skimped delaine, Miss Wimple thought, must be promoted to the proud person of the handsome Madeline, and something must be found to take its place.

Now, among store of respectable family-rubbish, scrupulously saved by half a graveyard-full of female relations,—for the women-folk of the Wimples had been ever noted for their thrift,—a certain quaint garment had come down to Sally from her great-grandmother. It was a black “silken wonder,” wherewith, no doubt, that traditionally dear, delightful

creature was wont to astonish the streets, in the days of her vanity and frivolous vexation of spirit.

A generous expanse of cape pertained to it, and it was cut much shorter behind than before, in order to display to advantage the pert red heels whereon that antique Wimple aforetime exalted herself. "With some trifling alterations," said Miss Wimple to herself, "this will do nicely for me; and my delaine—which is not so very bad, after all—a little cleaning will do wonders for it—will look sweetly appropriate on the Widow Morris, while her outfit is making in New York."

So Miss Wimple let down the dress behind, by piecing it in the back just below the waist; and from the generous cape she made a basque to hide the alteration; and some stains, like iron-mould, on the skirt, she covered with three flounces, made of some fine crape that was left from her mother's funeral.

"But, by your leave, where was this 'silken wonder' when your unhandy heroine was casting about her for a substitute for the quilled petticoat?"

Anywhere but in her mind. Of the round-aboutness of her directness you have had examples enough already; nothing could be more romantic than her simplest realities, and that which would seem most out-of-the-way to another woman was often "handiest" to her. So, when you ask me, Why did not Sally Wimple sooner think of her great-grandmother's dress? my easiest answer is, Because she *was* Sally Wimple.

When Miss Wimple first put on the new dress, in Madeline's presence, Madeline smiled again, for she thought she understood; and Miss Wimple smiled also, for she knew no one could understand.

Then Miss Wimple broke the news to Madeline, by telling her that "an old friend of her father's," a wealthy Mr. Osgood, of New York, was in want of a governess for his two daughters, and had written to her on the subject;—(a not very improbable story; for Madeline could not but be aware that in the con-

scientious and proud little bookseller was the making of a very respectable "Jane Eyre," under favorable circumstances;)—whereupon she had taken the liberty to recommend a clever and accomplished friend of her own, one Mrs. Morris, a widow,—“of course, that's you, Madeline,”—and Mr. Osgood had accordingly done her the honor to offer the place to Mrs. Morris, and, “with characteristic consideration and delicacy,” had inclosed a check, by way of an advance on her salary, which would be liberal, to defray the expense of an outfit,—“and there it was.” His writing to her, Miss Wimple said, was a circumstance as strange as it was fortunate; for, in fact, she had, personally, but a very slight acquaintance with him, and was “quite sure she should not recognize him, if she were to see him now”;—as for his little girls, she had never seen them, nor even heard their names. But Mr. Osgood's character was of the very highest, and she rejoiced that Madeline would have so honorable, influential, and generous a protector, who had given his word that she should be received and entertained with the consideration due to a superior and esteemed friend.

[Never mind Miss Wimple's white lies, my dear; there is no danger that they will be found filling the blank place in the Recording Angel's book, left where his tear blotted out My Uncle Toby's oath.

And in a purely worldly point of view, too, those touching offerings to Mercy were safe enough; for when Miss Wimple promised Madeline that she would find Mr. Osgood “a singularly discreet person, who would be sure not to annoy her with impertinent curiosity,” it was not said by way of a hint;—she well knew, that, from the moment the proud and jealous Madeline departed across the threshold of the Hendrik Athenæum and Circulating Library, she would set a close and solemn seal upon her heart and upon her lips, and the “old familiar faces” and places would be to her as the things that Memory is a silent widow for. Nevertheless, in writing to Mr. Os-

good, to acknowledge the receipt of the check, and to thank him, that cunning Miss Wimple took the precaution to put him in possession of as much of *her* personality as would serve his purpose in case of accident, and provide for the chance of a shock to his suspicious and vigilant governness.]

Madeline received Miss Wimple's extraordinary good news with the silence of one bewildered. Nor even when she had come fully to appreciate all the beauty and the joy of it, did she give audible expression to her gratitude; she was too proud—or rather say, too religious—to subject the divine emotion to the vulgar ordeal of words; she only kissed Miss Wimple's hands, and mutely laid them on her bosom.

Then Miss Wimple arrayed her *protégée* in the skimmed delaine, for which the "trifling alterations" and the "little cleaning" *had* done wonders,—and Madeline was, as it were, "clothed on with chastity." And Miss Wimple was jubilant over the charming effect, and "went on" in a manner surprising to behold. First she kissed Madeline, and then she kissed the dress; and she told Madeline, in a small torrent of triumph, what a tremendous fellow of a skimmed delaine it was,—how cheap, and how *dear* it was,—what remarkable powers of endurance it had displayed, and with what force and versatility of character it had adapted itself to every new alteration or trimming,—and how she was so used to its ways, and it to hers, that she was almost ready to believe it could "get on her by itself,"—and how she felt sure it was expressly manufactured to do good in the world,—until she had so glorified the lowly skimmed delaine, that Madeline began to feel in it like a queen, whose benignant star has forever exalted her above the vulgar sensation of having Nothing to Wear.

Now Madeline was quite ready to depart on her pilgrimage of penitence. But almost at the parting hour a circumstance occurred which grievously alarmed Miss Wimple, and so roused the devil where-

of Madeline had been but just now possessed, that it stirred within her.

CHAPTER V.

THE "nest" looked out upon the street by two front windows, that were immediately over the sign of the Hendrik Athenæum and Circulating Library. There was also a small side-window, affording a view of a bit of yard, quite private, and pleasant in its season, with an oval patch of grass, some hollyhocks, a grape-vine trained over a pretty structure of lattice to form a sort of summer-house, and a martin-box, in a decidedly original church-pattern, mounted on a tall, white pole. Of course the scene was cheerless and unsightly now; lumpy brown patches of earth showed through the unequally melting snow, where the grass-plot should have been; a few naked and ugly sticks were all the promise of the hollyhocks' yellow glory; the bare grape-vine showed on the dingy lattice like a tangled mesh of weather-stained ropes; and "there were no birds in last year's nest" to make the martin-box look social.

This little window was Madeline's chosen seat; and hither she brought, sometimes a book, but more frequently a portion of Miss Wimple's work from the millinery department, and wholesomely employed her mind, skilfully her fingers. Here she could look out upon the earth and sky, and enjoy, unspied, the sympathy of their desolation,—never daring to think of all the maddening memories that lay under the front windows: those she had never once approached, never even turned her eyes towards; Miss Wimple had observed that.

But on the day of the installation of the basque and the flounces, and the promotion of the skimmed delaine, late in the afternoon, the twilight falling, as Madeline sat at the side-window, gazing vacantly down upon the forlornness of the little yard, and Miss Wimple stood at the front window, gazing as abstractedly down upon the hard, pitiless cold-

ness of the street,—the thoughts of both intent on the *must* of their parting on the morrow, and the *how* of Madeline's going,—suddenly Madeline left her safe seat, and came and leaned upon Miss Wimple's shoulder, looking over it into the street. Only a minute, half a minute, but—surely the Enemy tempted her!—too long; for ere Miss Wimple, quick as she was to take the alarm, could turn and lead her away, Madeline's vigilant, fierce glance had caught sight of him, (alack! Philip Withers!) and, ashen-pale, with parted lips and suspended breath, and wide, blazing eyes, she stood, rooted there, and stared at him. But Miss Wimple dragged her away just in time,—no, he had not seen her,—and for a brief space the two women stood together, near the bed, in the corner farthest from the window; and Miss Wimple held Madeline's face close down upon her own shoulder, and pressed her hand commandingly, and whispered, "Hush!"

So they stood in silence,—no cry, no word, escaped. And when, presently, Madeline, with a long heart-heaved sigh, raised her head and looked Miss Wimple in the face, there was blood on her lips. And blood was on Miss Wimple's dress. Yea! the basqued and flounced disguise was raggedly rent at the shoulder.

Then Madeline went and lay down upon the bed, and turned her face to the wall,—and there was no noise. And Miss Wimple covered the blood and the rents on her shoulder with her mother's lace cape,—the familiar companion of the skimped delaine,—and went down into the shop.

When Miss Wimple, having put up the bars, ascended to the nest to join Madeline in the little cot, Madeline slept quietly enough; but a trace of blood, with all its sad story, was on her lips, and a lingering frown of pain on her brow. Very carefully, not to disturb her, Miss Wimple lay down by her side, but not to sleep;—her thoughts were anxiously busy with the morrow.

In the morning, when Miss Wimple

awoke, her eyes met the eyes of Madeline, no longer fierce and wild, but full of patience and tender gratitude. The brave Magdalen, leaning on her elbow in the bed, had been watching Miss Wimple as she slept, her poor heart fairly oppressed with its thankfulness to God, and to his saving minister. When Miss Wimple opened her eyes, Madeline bent over her and kissed her on the forehead, and Miss Wimple smiled. Then both arose and put on their garments,—Madeline the skimped delaine, and Miss Wimple the flounces. Oh! the grotesque pathos of that exchange!—and Madeline did not remark with what haste, and a certain awkward bashfulness, Miss Wimple retired to a far corner and covered her *shoulders* with the lace cape.

All that day the two women were very still;—the approaching hour of parting was not adverted to between them, but the low tone in which they spake of other and lesser things showed that it was first of all in their thoughts and on their hearts. To the latest moment they merely *understood each other*. The cars went from the branch station at ten o'clock. It was nine when Miss Wimple released from its old-fashioned bandbox—as naturally as if it had been all along agreed upon between them, and not, as was truly the case, utterly forgotten until then—her well-saved and but little used bonnet of black straw, and put it on Madeline's head, kissing her, as a mother does her child, as she tied the bow under her chin; and she took from the bed the faithful shawl, and drew it snugly, tenderly, around Madeline's shoulders,—Madeline only blushing; to resist, to remonstrate, she well knew, had been in vain. There had been some exchanging of characters, you perceive, no less than of costumes.

"And now where shall we put these?" asked Miss Wimple, holding in her hand Mr. Osgood's check, and a trifle of ready money for the immediate needs of the journey.

Madeline replied by silently drawing from her bosom the little pocket-book,

and handing it to her friend, who opened it in a matter-of-course way that was full of delicacy; and—no doubt accidentally, and innocently, as to any trick of pretty sentiment—deposited the check and the bank-note beside that card.

And now it was time to part. Miss Wimple took up the dim chamber-lamp, and led Madeline down the stairs,—both silent, calm: those were not crying women. As they entered the shop, Miss Wimple immediately set down the lamp on the nearest end of the counter, and went with Madeline straight to the door, whither its slender ray hardly reached, and where the blood-spots and the rents on her shoulder might not be noticed,—or, at least, not clearly defined. Then, with a business-like “Ah! I had forgotten,”—admirably feigned,—she hastily removed the shawl from Madeline’s shoulders, and the lace cape from her own; and she put the lace cape on Madeline, and covered it with the shawl. This time Madeline shrank, and would have forbidden the charitable surprise; but Miss Wimple moved as though to open the door, and said,—

“Madeline, in mind, and heart, and soul, do you feel ready?”

“Yes!”

“Then go!—Believe in God and yourself, and do the best you can.”

And Madeline said,—

“And you, also, must believe in me, and pray for me; be patient with me, and wait. If the time should ever come when I can comfort you, with God’s help I will hasten to you, wherever you may be.”

And they kissed each other, and both said, “God bless you!”

So Madeline departed quickly, and presently was lost in the shadows beyond the shop-lamps.

[Next morning, when Sally Wimple went to take down the bars, her neighbors were astonished; for it was already reported and believed that she had been seen going from the Athenæum to the ten o’clock train the night before.]

Then Miss Wimple closed the door

and went back to her room, where she sat down on the bed and had a good cry, which was a great comfort. When, after that, she arose, and, standing before the glass to undress herself, perceived the blood-stains and the rents, she straightway went and brought her work-basket, and, seating herself under the dim lamp, without fear or hesitation cut down the dress, *low-neck*—There!—Then she lay down in the bed and slept sweetly, with a smile on her face.

Ah! cunning, artless Sally Wimple! No wonder the dashing directness of your character had ever by your neighbors been mistaken for simplicity. The thing which was easiest for you to do was ever the hardest thing for you to bear. In the morning, this new Godiva of Hendrik—not less to be honored than she of Coventry, in all she underwent and overcame—descended to her shop, “clothed on with chastity”; and then her dreadful trial began. I claim for her even more merit than the pure heart of the world has accorded to her namesake who

“took the tax away,

And built herself an everlasting name,”

by as much as her task was harder, herself more helpless, and her reward less. Like her of Coventry,

“left alone, the passions of her mind,
As winds from all the compass shift and blow,
Made war upon each other for an hour,
Till Pity won.”

She said to the World,—“If this woman pay your tax, she dies.”

And the World mocked,—“You would not let your little finger ache for such as this!”

“But I would die,” said she,—“and more,—I will bear your mocking and your hisses!”

“Oh! ay, ay, ay! you talk!” said the World.

But we have seen already. She had no herald to send forth and “bid him cry, with sound of trumpet, all the hard condition.” No palfrey awaited her, “trapt in purple, blazoned with armorial gold.” For her, indeed,

"The little wide-mouthed heads upon the
spout,
Had cunning eyes to see;
the blind walls
Were full of chinks and holes; and, over-
head,
Fantastic gables stared."

She had her low churls,—her Peeping Toms,—“compact of thankless earth,” who bored moral auger-holes in fear, and spied. Her nudeness was more complete than hers of Coventry, by as much as ridicule is more ruthless than coarse curiosity.

Not merely the delicacy of her “inmost bower,” but all the protection of her forlornness, she exposed naked to the town, to take that tax away; and when it was removed, she could not hope to build herself “an everlasting name.” Ah, no! Godiva of Hendrik may not live in any “city’s ancient legend.” This poor story must be all her monument; let us lay the cap-stone, then.

All the fingers of scorn in Hendrik were pointed at Miss Wimple; all the sharp tongues of Hendrik hissed at her; and her good name fell at once into the portion of the vilest weeds. Simon Blount saw and heard, and his soul was sorely troubled. Like all true love, loyal and vigilant, his love for Sally was clear-sighted and sagacious. Infatuation is either gross passion or pretence,—the flash and bogus jewelry of the heart; but true love, though its eyes may ache with the seeing, sees ever sharply. All beautiful examples teach that the blindness of Love is not a parable, but an imposture; and Simon saw that Sally was in a false position,—false to herself and to him; for she denied him that confidence which he had a right to share, sharing, as he did, all the scandal and the scorn; and in that, she was unconsciously unjust. She denied herself the aid and comfort of his tender counsel and his approbation, the protection of his understanding and believing, when for him to understand and believe was for her to be safe and bold. For even the pride of Sally Wimple, overdone,

could become arrogance; even her disinterestedness, intemperately indulged in, could take on the form of selfishness.

Simon went to Sally, and said: “Tell me what all this means.” But Sally, weak now in her very strength, said: “Nothing! Let my ways be my own ways still; I alone am answerable for them. Is ‘believing and waiting’ so hard to do? I did not send for you.”

Then Simon conceived a tremendous *coup de cœur*, a daring one enough, as women go,—women of such stuff as the Sally Wimples of this world are made of. He said, “I will try the old trick, the foolish old trick that I always despised, but which must have something sound in it, after all, since it has served the turn, through all time, of people in my predicament.” So Simon went over (not with his heart,—trust him!—but with his legs) to Adelaide Splurge. Miss Wimple, never guessing, saw him go, and made no sign, though her heart fairly cracked: “He will return one day,” she thought; “if it be too late then, so much the better for him, perhaps.”

Of Adelaide, the town had begun, some time since, to say, that she had tired of Philip Withers,—that she did not appreciate him, could not understand him,—he was too deep for her. Foolish town! She had only found him out, and learned to hate him as fiercely as she despised him unutterably. She had truly loved the man, and her shrewd heart had played the detective for his Madeline secret.

For such a Fouché a slighter clue would have sufficed to lead to the conviction of so besotted a traitor, than many an incautious hint of his, and many a tale-telling vaunt of his irresistible egotism, afforded her; for, like all the weak wretches of his sort, there was not a more bungling lout, to try the patience of a clever man, than Philip Withers, when his game lay between his safety and his vanity.

To Adelaide’s hand Simon Blount came timely and well-trained. At once she set him on Withers, as one would

hie on a good dog at a thief; and it was not long before she had the pleasure of seeing the chase brought to the ground.

Withers had heard of a graceful neck, and white, dimpled shoulders, at the Athenæum; so accomplished a connoisseur as he must not let them pass unappreciated. So he hastened to discharge his duty to æsthetic society by honoring them with his admiration and exalting patronage. On any transparent pretext,—the more transparent the better, he thought, for the proprietress of the white shoulders and the bewitching shape, who “no doubt understood,”—he dropped in often at the little bookstore, to begin with a “how-do?” and conclude with an “*au revoir*,”—the ineffable puppy! upon whose vicious vanity the cold, still, statuesque scorn of Miss Wimple was grandly lost. At last, at the Splurge house one evening, in the presence of Adelaide and Simon, he was betrayed by his egotism into boasting, by insinuation, of certain successes at the Circulating Library most damaging to Miss Wimple's reputation for understanding and good taste; he was “in her books,” he said.

An accordant glance passed between Adelaide and Simon. When Withers retired, Simon followed him, and under Adelaide's window, and under her eyes, he boxed the ears of Philip, the Debonair. After that, Mr. Withers was discreeter.

But Miss Wimple's trial was not yet at its worst. The low-necked dress had been as unseasonable as the substitution of the hooped skirt for the quilted petticoat was imprudent. Before Madeline had been gone a week, she contracted, as was to be feared, a heavy cold, which within a month assumed a chronic bronchial form, attended with alarming symptoms. The extreme dejection of spirits, consequent upon her persecuted loneliness, had predisposed her to disease in the first place, and aggravated its character when it came.

At last she fell dangerously ill, and with the closing of the shop—for she could hire no one to attend in it—came

poverty in its most dreadful form. But for the charity of her kind physician, who sent a servant-girl, a mere child, to nurse her, and daily kept her supplied with proper nourishment from his own house, she would, so it seemed to her, have died of neglect and starvation. Yet better, she thought, to depart even so, than linger on, when such lingering taxed the patience and the faith beyond the loftiest examples of religion. Miss Wimple was too stout-hearted to cry for death, though she felt, that, having lived with heroism, she could at least die with presence of mind. She waited with a composure that had a strange quality of pride.

In her New York home, Mrs. Morris, the governess, was as happy as she dared to feel. In Mr. Osgood's family she had found all things as Miss Wimple had promised. Treated with studious deference and consideration, not unmixed with affection, she enjoyed for her secret thoughts the most privileged privacy. Her brave gratitude was superior to the distress a weaker woman might have suffered from the necessity of making Mr. Osgood unreservedly acquainted with her story, in order to enlist his aid to procure tidings of Miss Wimple, whose safety, health, and happiness were now far dearer to her than her own.

She did tell him all, and had reason to thank God for the courage that made it a possible, even an easy, thing for her to do. Her truly noble benefactor and protector, receiving her communication as if he then heard it for the first time, assured her that in thus confiding in the freedom of his mind, and in his honor, she had set up a new and stronger claim to his interest and friendly care. She had but enlarged his obligation to his until then unknown correspondent for having given his children, to whom their governess had already truly endeared herself, so admirable a teacher, so precious a friend.

[“But why,” you will ask, “did not Madeline write to Miss Wimple?”

Because that provident angel had, without explanation, exacted from her a

promise that she would in no case write *first*. In truth, Miss Wimple foresaw her own various suffering, and sought to spare Madeline some cruel pangs, and herself the hard trial of disingenuous correspondence.]

And Mr. Osgood would have started at once for Hendrik, where he was not personally known to any one, to procure tidings of Miss Wimple and allay the anxiety of Mrs. Morris, had Madeline not found, that very day, her name in the *Herald's* list of letters waiting to be called for in the New York Post-Office. That letter was, indeed, for Madeline, and its contents were as follows:—

"TO MISS MADELINE SPLURGE,—Miss Wimple, of Hendrik, is very ill, and poor, and friendless. It has been suggested to the writer of this that you can help her. If you can, and will, there is no time to lose.

"A FRIEND."

The "friend" was Simon Blount. Ever since the Athenæum was closed, he had hung anxiously about the place, frequently dropping in upon the neighbors to ask—quite by-the-byishly, and by chance, it seemed to them—after the health of Miss Wimple; and sometimes he waylaid the little servant, as she passed to and fro between the bookstore and the doctor's residence, and plied her with questions. On such occasions he was sure to make the little maid the depository of certain silver secrets, which forthwith she revealed to Miss Wimple in the shape of whole basketfuls of comfortable stuff, "from the Doctor." Adelaide had given the hint for this letter. Calling at the Athenæum one day, about a fortnight after Madeline's departure, her quick eye caught sight of a bit of paper lying on the counter, whereon was freshly written, "Madeline Splurge." Miss Wimple had been entering some trifling charge in the course of her small book-keeping, and, still dallying with the pen, a passing thought, less idle than anxious, had traced the name. On

that slight foundation Adelaide had built a happy guess, though Simon knew it not,—and though he accepted her suggestion, it amazed him.

Let us lift the curtain now, on the last, an extraordinary, *tableau*. In the Wimple nest a strange company are met at the bidding of Madeline Splurge, who couches a flashing lance for the life and the honor of her benefactress.

Proudly, condescendingly, haughtily superior to the least sparing of herself,—as one who stooped at the bidding of Duty,—she had told her story, from first to last, omitting nothing; with head erect, pale lips, and flashing eyes,—with a passing flush, perhaps, at the more shameful passages, but with no faltering, no dodging, no self-excusing, no beseeching,—scornfully when she spoke of home, and the beginning of the end,—redly, hatefully, wickedly dangerous, when Philip Withers came on the scene,—with tremulous lips and the low tones of Gratitude's most moving eloquence for the story of Miss Wimple and her sublimely simple sacrifice,—modestly and with grateful deference, at the mention of Mr. Osgood and his rare chivalry.

Then, taking from her bosom a small morocco pocket-book, and from the pocket-book a card, she said,—

"And now to toss that *thing* to the geese of Hendrik! Read that, slowly, distinctly, that all may hear!"—and she placed the card in Simon's hand, who ran his eye over it for a moment, then stood up, and read:—

"MADELINE, — For God's sake be merciful, be reasonable! I will comply with your hardest terms, — I will share all I possess with you, [Adelaide smiled,] — I will even marry you after a time; but do not, I implore you, in your recklessness, involve me in your unnecessary ruin; do not fling me under the playful feet of that ingenious shrew, Adelaide. Meet me at the bridge to-night, in memory of our dear old love.

"P. W."

When Simon had read the card, he let it fall on the floor, with a gesture of disgust, and, without looking at Withers, who slunk, pitifully wilted, into a corner, returned to his place on a low stool, where he resumed his former attitude, holding the hand of Sally Wimple, who now, with closed eyes, reclined on Madeline's bosom,—that bosom that was, for her weariness, the type of the complete rest that crowns and blesses a brave struggle,—of that all-for-the-best-ness that comes of the heart's clearings-up. Only Adelaide broke the silence; with her gaze fixed full on Withers, and a triumphant sneer crowning her happy lips, she uttered one word by way of chorus,—“Joseph!”

At that word a faint flush flitted athwart the cheeks of Madeline, and she moved as if uneasy; but she did not speak again, nor turn her eyes to any face but Miss Wimple's.

Josephine Splurge was there; but, perceiving no opening that she could fill to advantage with a delightful quotation, and having no pickle at hand whereto she might give all her mind, she supported a graceful silence with back hair and an attitude.

Mrs. Splurge was there,—and that was all. Not clearly understanding what she was called upon to say or do under the circumstances, nor prepared to take the responsibility of saying or doing anything without being called upon, she said and did nothing at all. Mrs. Splurge, who had had some experience in that wise, had never been of so little consequence before.

Near the head of the bed, his looks directed toward Miss Wimple with an expression of benevolent solicitude, sat a gentleman of middle age, rather handsome, his hair inclined to gray, his attire fine, but studiously simple.

“Mrs. Morris,” he said, “may I be permitted to speak a word here?”

“Surely, Mr. Osgood.”

“Then, ladies and gentlemen, since doubtless we understand each other by this time, I think it advisable that we retire, and leave Miss Wimple to much-needed repose.”

All arose and passed out, Mrs. Splurge leading the way, Mr. Osgood holding the door. Last of all, and with a pitiful shyness, as if dodging some fresh discomfiture and exposure, came Philip Withers.

“The door is at your service, Sir,” said Mr. Osgood, as he passed; “to be sure, the window were more appropriate for your passage; but to attach importance to your existence by suddenly endangering it is an honor I am not prepared to pay you.”

Madeline remained with Miss Wimple.

Now Miss Wimple is Simon Blount's wife, and they live with his mother. The debt of the Athenæum is paid.

Adelaide abides at the Splurge house,—a reserved, bitter, forbidding woman.

Mrs. Splurge still lives; but that is of as little consequence as ever.

I assert it for an astonishing fact,—Philip Withers married Josephine! Truly, the ways of Providence are as just as they are inscrutable. The meanness of Withers, mated to the selfish, helpless, peevish stupidity of Josephine, made an ingenious retribution.

When I was at the opera, a few nights since, I saw in a private box a benevolent-looking gentleman of middle age, evidently well-born and accustomed to wealth. He was accompanied by a lady in elegant mourning,—a lady of decided beauty and distinguished appearance.

Miss Flora McFlimsey was there:—“That,” said she, “is Mrs. Morris, of Fourteenth Street,—a mysterious governess in the family of Mr. Osgood; and the gentleman is Mr. Osgood.”

NATURE AND THE PHILOSOPHER.

WHAT dost thou here, pale chemist, with thy brow
Knotted with pains of thought, nigh hump-backed o'er
Thy alembics and thy stills? These garden-flowers,
Whose perfumes spice the balmy summer-air,
Teach us as well as thee. Thou dost condense
Healthy aromas into poison-drops,
Narcotic drugs of dangerous strength and power,—
And wines of paradise to thee become
Intoxicating essences of hell.
Cold crystallizer of the warm heaven's gold!
Thou rigorous analyst! thou subtle brain!
Gathering thought's sunshine to a focus heat
That blinds and burns and maddens! What, my friend!
Are we, then, salamanders? Do we live
A charmed life? Do gases feed like air?
Pray you, pack up your crucibles and go!
Your statements are too awfully abstract;
Your logic strikes too near our warm tap-roots:
We shall breathe freer in our natural air
Of common sense. What are your gallipots
And Latin labels to this fresh bouquet?—
Friend, 'tis a pure June morning. Ask the bees,
The butterflies, the birds, the little girls.
We are after flowers. You are after—what?
Aconite, hellebore, pulsatilla, rheum.
Take them and go! and take your burning lens!
We dare not bask in the sun's genial beams
Drawn to that spear-like point. Truth comes and goes,
Life-giving in diffusion. Nature flows, extends,
And veils us with herself,—herself God's veil.
But you persist in opening your bladders,
And the three gases that compose the air
You bid us take a breath of, one by one!
For Mother Nature you should have respect:
She does not like these teasings and these jokes.
Philosopher you seem; you'd state all fair;
You would go deep and broad. You're right; but then
Forget not there's an outer to your inner,—
A whole that binds your parts,—a truth for man
As well as chemist,—and your lecture-room,
With magic vials and quaint essences
And odors strange, may teach your students less
Than this June morning, with the sun and flowers.

THOMAS JEFFERSON.*

THE biography before us is so voluminous that it can hardly maintain the popularity to which its subject entitles it. He must be a bold man, and to some degree forgetful of the brevity of life, who, for any ordinary purpose of information or amusement, undertakes to read these huge octavos. True, the theme is somewhat extended; Jefferson's life was a protracted and busy one; he took a leading part in complicated transactions, and promulgated doctrines which cannot be summarily discussed. But the author's prolixity has not grown out of the extent of his theme alone. He is both diffuse and digressive. He introduces much irrelevant matter, and tells everything in a round-about-way. By a judicious exercise of the arts of elimination and compression, we think that all which illustrates the subject might have been comprised in one volume much smaller than the smallest of these.

But Mr. Randall's most serious fault arises from his desire to be thought a fine writer. Without making long extracts, it is impossible to give any conception of the absurdities into which this childish ambition has led him. The tropes and metaphors, the tawdry tinsel, the common tricks of feeble rhetoricians are reproduced here as if they were the highest results of rhetorical art. The display is often amusing. Thus, in describing Mrs. John Adams, Mr. Randall says: "Her lofty lineaments carried a trace of the Puritan severity. They were those of the helmed Minerva, and not of the cestus-girdled Venus." We do not mention this in order to justify a strain of captious criticism, but to ask Mr. Randall, in all seriousness, how it was possible for him to associate a staid and sensible New England matron with Venus and Minerva? What would he say of a writer

who should gravely tell us that Washington's features were those of the cloud-compelling Jupiter, not of Mars, slayer of men,—and that Franklin's countenance resembled that of the wily Ulysses, not that of the far-ruling Agamemnon? We might fill this paper with passages like the one we have quoted. What is the use of this kind of writing? It does not convey any meaning; there is no beauty in it; it increases the size and price of books; it corrupts the taste of the young, is offensive to persons of good sense, and mortifying to those who take pride in the literary reputation of their country. It is the bane of our literature. Many of our prose-writers constantly put language upon paper the use of which in ordinary life would be received by a court as evidence of insanity. If they do so for display, they take the readiest course to defeat their purpose. There is nothing so fascinating as simplicity and earnestness. A writer who has an object, and goes right on to accomplish it, will compel the attention of his readers. But it seems, that in art, as well as in morals and politics, the plainest truths are the last to be understood.

We make these strictures with reluctance. This biography, in many respects, is valuable, and Mr. Randall might easily have made it interesting. He had a subject worthy of any pen, and an abundance of new material. He does not lack skill. His unstudied passages, though never elegant, are well enough. He is industrious. Though we must dissent from some of his conclusions, he is entitled to the praise of being accurate, and is free from prejudice,—except that amiable prejudice which has been well called the *lues Boswelliana*. His delineations of famous personages, though marked by the faults of which we have spoken, show quite unusual perception of character. He has a thorough appreciation of Jefferson's noblest characteristics, and an hon-

* *The Life of Thomas Jefferson*. By HENRY S. RANDALL, LL. D. In three volumes. New York: Derby & Jackson. 1858.

orable sympathy with the philosophy of which Jefferson was a teacher. With resources and qualifications like these, he might have produced a biography which the country would have received with gratitude, and which would have conferred an enviable reputation upon him; as it is, through his neglect of a few wholesome rules which he must have learned when a school-boy, the years of labor he has spent over this book will go for nothing, and the hopes he has built upon it will be disappointed.

There is much conflict of opinion as to the character of Jefferson, and the value of his services. We doubt whether there is another person in our history, as to whom there still exists so strong a feeling of dislike on the one hand, and of admiration on the other. By some he is regarded as a theorist and a demagogue, who, for selfish purposes, opposed the purest patriots, and disseminated doctrines which will pervert our institutions and destroy our social fabric; by others he is revered as the philosopher who first asserted the rights of man, and the statesman who first defined the functions of our government and demonstrated the principles upon which it should be administered. His detractors and admirers both bear witness to the extent and permanency of his influence. He saw all the phases of our national life. He assisted in the struggle for liberty, and in the contest which gave form to that liberty,—while it was his happy fortune to inaugurate the system by which, with occasional deviations, the republic, for more than fifty years, has been governed. He heard the discussion of the Stamp Act, and the debate on the admission of Missouri. He shared in the dispute which the establishment of the Constitution produced, and lived to witness the outbreak of the quarrel which now threatens the existence of the Constitution. His influence was felt through the whole of this long period. Nor was it confined to affairs alone. He took part in all the intellectual action of his countrymen. He was an adept in science, an ingenious mechanic, and a

contributor to literature. He stimulated adventure, and was the judicious patron of architecture and the fine arts. More than any man of his day, to the labors of a practical statesman he brought a mind disciplined by a liberal philosophy; and he adorned the most exalted stations with the graceful fame of learning and polite accomplishments. It is impossible for us to touch every point of this great career. It is difficult to dwell upon a single point without being seduced into a discussion too extended for these pages. We may, however, be permitted, in a rapid manner, to present Mr. Jefferson in some of those relations which seem to us to throw the strongest light upon his character and teachings.

Peter Jefferson, the father of Thomas, was a notable man. His parents were poor, and in early life he went into the backwoods of Virginia as a surveyor. He is described as a person of great stature and strength. His mind was equally robust. He was a natural mathematician, and was remarkable for hardihood and perseverance. His temper was equable, but his passions were strong and his anger terrible. In youth his education had been neglected; but, by the wise employment of his leisure, he obtained considerable reputation for learning throughout the rude region where he lived. This huge man, with gigantic strength and fierce passions, is said to have been endowed with tender sympathies, and to have had a scholar's love for Shakspeare and Addison.

Social distinctions were strictly observed at that day, but Peter Jefferson broke through them and married a daughter of the Randolph family.

Thomas, the third child and oldest son of this marriage, was born at Shadwell, his father's estate, on the 2d of April, 1743. The characteristics of the sire descended to the son,—the physical attributes in milder, and the intellectual in more active forms. Like many men of his class, Peter Jefferson had perhaps an undue sense of the obstacles he had encountered through lack of education,

and was careful to provide for that of his children. As soon as possible, Thomas was sent to school, and when nine years old, under the tuition of a Scottish clergyman, he was introduced to the study of Latin, Greek, and French. His father died when he was fourteen years old, leaving a considerable estate, and particular directions that Thomas should receive a thorough classical training. The executor had some doubt as to whether it would be prudent to send the lad to college in obedience to the paternal request; whereupon Thomas addressed him in a little argument, which is a curious exhibition of the proclivities of his mind. In the mathematical manner which afterwards became common with him, he urged that at home he would lose one fourth of his time on account of the company which was attracted by his presence, and that entertaining so many guests would be a heavier charge upon the estate than the expense of his residence at Williamsburg.

The young disputant prevailed, and, in 1760, he was sent to William and Mary College. He remained there two years. His acquirements, during this time, though probably not so great as Mr. Randall would have us believe, must have been large. He had equal aptitude for the classics and mathematics. In the latter his proficiency was remarkable, and he always retained his taste for it. Though never a critical classical scholar, he could read Latin with ease. He was conversant with French, and had some familiarity with Greek. In later life he studied Anglo-Saxon and Italian. But Jefferson terminated his collegiate course with a possession far more valuable than all the learning he could gather in the narrow curriculum of a colonial college; study had excited in him that eager thirst for knowledge which is an appetite of the mind almost as unconquerable as the appetites of the body.

After leaving college, he remained at Williamsburg, and entered the office of Mr. Wyeth, a leader at the Virginia bar. Williamsburg was the capital and the centre of the most refined society of

the province. Francis Fauquier was governor. He was an Englishman, of distinguished family, who had lost a large property in a single night's play, and had taken the appointment to Virginia to repair his fortunes. To some of the vices and most of the accomplishments of a man of the world he added fine talents and many solid attainments. He was, withal, a skilful musician and a fascinating conversationalist. Mr. Wyeth, and Dr. Small, professor of mathematics at the college, were in the habit of dining with the governor at stated times, for the purpose of conversation. Jefferson, though not yet twenty years old, was admitted to these parties. Fauquier organized a musical society, and Jefferson, who played upon the violin, belonged to this likewise. In these associations, the young student acquired the easy courtesy and conversational art which afterwards greatly contributed to his success, and distinguished him even among the gentlemen of Paris.

His life, between twenty and thirty, was judiciously employed. A closer student could hardly have been found at Edinburgh or Heidelberg. He pursued his profession persistently, and, in addition, made incursions into the fields of *belles-lettres* and political and physical science. He early conceived a prejudice against metaphysical speculation, which was never removed. We cannot believe that his partiality for romance was much greater. He undoubtedly had that appreciation of the value of this department of letters which every man of sense has, and included it within the circle of his reading because it contains much desirable knowledge. The severest criticism which can be made upon his taste for poetry is conveyed by the statement, that, when young, he admired Ossian, and, when old, admired Moore.

His summers were spent at Shadwell. The responsible charge of a large estate rested upon him, and he introduced into his affairs and studies the extraordinary system which, through life, he carried into all matters, great or small. He commenced keeping a garden-book, which,

with interruptions caused by absence, was continued until he was eighty-one years old. It contains memoranda of vegetable phenomena, and statements of all kinds of information, in any way affecting the economy of horticulture. He likewise kept a farm-book. His accounts were noted, without the loss of a day, through his entire life, and every item of personal expense was separately stated. We often find entries like these: "11*d.* paid to the barber,"—"4*d.* for whetting penknife,"—"1*s.* put in the church-box." On the 4th of July, 1776, we find:—"pd. Sparhawk, for a thermometer, £3 15*s.*—pd. for 7 prs. women's gloves, 27*s.*—gave, in charity, 1*s.* 6*d.*" His meteorological register informs us, that, at 6 o'clock, A. M., of the same memorable day, the mercury stood 68° above; at noon, at 76°; and at 9, P. M., at 73½°. Entries were regularly made in this register, three times a day. Separate books were kept for special accounts, like the expenses of the Presidential mansion. In addition, he made minute records of observation in natural history, and a curious "Statement of the Vegetable Market of Washington, during a Period of Eight Years, wherein the Earliest and Latest Appearance of each Article, within the whole Eight Years, is noted." This table mentions *thirty-seven* different articles, and was compiled during his Presidency. He made a collection of the vocabularies of fifty Indian languages, and two collocations of those passages in the New Testament which contain the doctrines of Jesus. One of these, entitled, "The Life and Morals of Jesus of Nazareth," is an octavo volume, with a complete index. The texts are written out in Greek, Latin, French, and English, and placed in parallel columns.

Mr. Randall makes a long argument to defend Jefferson from the common imputation, that a man who was so fond of detail could not have had much capacity for higher effort. It was hardly worth while to expose a delusion which is so apparent, especially in the case of Jeffer-

son. Men are often seen with great aptitude for the accumulation of facts, and none for the comprehension of principles. Such men, though never great, are always useful. But the most useless and unfortunate organization is that quite common one, where a speculative mind is found which has not sufficient energy to lay hold of details. These philosophers, as the foolish call them, are the ingenious contrivers of the impracticable reforms, the crazy enterprises, and the numberless panaceas for all human ills, which are constantly urged upon the public, and which, under the name of progress, are the most serious obstacles to progress. Both faculties are necessary to one who undertakes high and useful action. Mr. Jefferson was a philosopher because he was a constant and accurate observer; he was correct in his generalizations because he was so in matters of detail.

His career at the bar was short. The acquisition of a science like the law was an easy task for a mind so ingenious and active as his. He had no talent as an advocate, but was at once successful in the more retired and not less difficult departments of the profession. During seven years' practice, his income averaged three thousand dollars a year;—a large sum then, and no mean reward at the present day.

When twenty-nine years old, he married Mrs. Martha Skelton, a young and childless widow, of great beauty. In relation to this affair a pleasant anecdote is told. Mr. Jefferson had a number of rivals. Two of these gentlemen met, one evening, in the drawing-room of Mrs. Skelton's house. While waiting for her to enter, they heard her singing in an adjoining room, and Jefferson playing an accompaniment upon the violin. There was something in the burden of the air, and in the expression with which the performers rendered it, which conveyed unpleasant suggestions; and the two suitors, after listening awhile, departed without seeing the lady. The inevitable account-book mentions the sums paid to the cler-

gyman, fiddlers, and servants, on the occasion of the marriage.

His wife's fortune, as he informs us, doubled his own, and placed him in a position of pecuniary independence. He soon abandoned his profession, and thenceforward his career was a public one. He entered political life at the time when it first became evident that a war with England must occur, and threw himself into the extreme party. He was admirably fitted for success in a legislative body. His talents were deliberative, rather than executive. He had no power in debate, but he possessed qualities which we believe are more uniformly influential in a public assemblage,—tact, industry, a conciliatory disposition, and systematic habits of thought. He was always familiar with the details of legislation. The majority of the members of a legislature can seldom know much about its business. Those questions which excite popular attention and become party tests are inquired into; but most matters attract no attention and are not party tests. Only a few men of great industry and rare powers are familiar with these. In the British House of Commons, it is said, there are not more than thirty or forty such members. In either branch of our Congress the proportion is no larger. It is a great power to know that which others find it necessary to know; and if to this information one adds good judgment and a persuasive intellect, his influence will be almost unbounded. Young as he was, no one could approach Jefferson without seeing that he had read and thought much. While most of his comrades in Virginia had been wasting their youth in horse-racing and cock-fighting, he had been an enthusiastic student of books and Nature. Upon all subjects likely to excite inquiry his knowledge was full and precise, and his opinions those of a sagacious and philosophic mind. His manners were attractive; he never engaged in dispute; he expressed himself freely to those who sought his society for information or an intelligent comparison of opinion; but his

lips were closed in the presence of a disputant. The patience with which he listened to others, and the modest candor with which he expressed himself, usually disarmed the contentious; when they did not, he went no farther. If his views were false, he did not wish them to prevail; if they were true, he felt certain that sooner or later they would prevail. A temperament like this might have placed a less firm man under the imputation of disingenuousness; but such an imputation could not rest upon him. No one was in doubt as to his opinions. He generally anticipated inquiry, and selected his ground before others saw that action would be necessary. There were capable lawyers and men of wide experience in our Revolutionary legislatures, but there was no one whose influence was more powerful and felt upon a greater variety of subjects than that of Jefferson.

He might, however, have possessed all of these characteristics, and enjoyed the consideration among his fellow-legislators which they confer, without being well known to the public, if he had not united to them the ability to write elegant and forcible English. The circumstances of the time made literary talents unusually valuable. The daily press has driven the essayist out of the political field. But for several generations elaborate disquisitions upon politics had been usual in England; in this regard pamphlets then occupied the place of our newspapers. Bolingbroke, Swift, Johnson, and Burke, all the serious and some of the gay writers, acquired repute by this kind of effort. Neither were the speeches of leading men circulated then as at present. At the time of the Revolution, an oration never reached those who did not hear it. This gave a great advantage to the writer. The pamphlets of Otis and Thomas Paine were read by multitudes who never heard a word of the eloquence of Henry and Adams. A high standard of taste had been created, and success in political dissertation was difficult, but, when obtained, it was of proportionate

value, and the source of wide and permanent influence. Jefferson found a function requiring much the same talents with that of the pamphleteer, but possessing some advantages over it. The only means which the Continental Congress and the colonial legislatures had of communicating with their constituents and the mother country was by formal addresses. These documents were arguments upon public questions, possessing the force which an argument always has when it is the expression of great numbers of minds. An audience was certain. At home they were sure to be read, and in England they attracted the attention of every one connected with affairs. Jefferson's literary talents were soon discovered. One successful performance in the Virginia House of Delegates established a reputation which the Declaration of Independence has made immortal.

In every point of view, Jefferson is entitled to a high place in American literature. As a mere rhetorician, he has few equals; as a political writer, not more than two or three. An adherence to logical forms and the use of mathematical illustrations are his most noticeable faults. But they are not found in his more elaborate performances. He has the supreme merit of perfect clearness, naturalness, and grace of expression. Though never eloquent, he sometimes rises to an earnest and dignified declamation. Not unfrequently he has achieved the highest success, and clothed valuable thought in language so appropriate, that the phrases have passed into the national vocabulary and become popular catchwords. His first inaugural address contains more of those expressions which are daily heard in our political discussions than any other American composition. There has been some speculation as to how it was possible for a gentleman, with no other discipline than that afforded by a colonial establishment, to obtain a mastery over so difficult an art. There is little reason for surprise. Jefferson's training had been good; he was familiar with the best models; above all, Nature

had given him the qualities which, with the requisite knowledge, insure literary success,—good sense, good taste, and an ear sensitive to the melody of prose.

We do not propose to follow Jefferson throughout his political career. As to his Revolutionary services there is little difference of opinion. His course during the administrations of Washington and Adams has given occasion to most of the criticism which he has encountered. We will direct our attention chiefly to that period of his life. He appeared then as the leader of a party which was intent upon carrying certain principles into operation, and for a comprehension of his conduct an examination of those principles is necessary.

Mr. Randall would have done a good service, if he had made a brief analysis of Jefferson's political system. It affords a fine theme and is much needed, because Jefferson himself left no systematic exposition of his doctrines. They must be sought for through a large number of state papers and a voluminous correspondence. Like all public men, he has been misrepresented both by opponents and adherents. There is a vague impression abroad that he enunciated certain liberal theories, that he was an ardent philanthropist, and that his opinions were those which have prevailed among the modern French philosophers; but the boundaries of his system do not seem to be well defined in the public mind. His theory of politics may, with sufficient accuracy, be said to be embraced in the following propositions:—First. All men are politically equal. Second. A representative government upon the basis of universal suffrage is the direct result of that equality, and the surest means of preserving it. Third. The sphere of government is limited, and its action must be confined to that sphere.

The first proposition is contained in the statement which occurs in the Declaration of Independence, "that all men are created equal." This remark has been severely criticized, and we think there has been much confusion as to its mean-

ing Jefferson could not have intended to say that all men are equal in the sense of being alike. Such an assertion would be absurd. Undoubtedly he recognized, as every one must, the infinite diversity and disparity of intellectual and physical qualities. He was speaking of man in his social relations, and in the same sentence he qualified the general assertion by particularizing the respects as to which the quality exists,—saying, that men “are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness.” The equality of which he spoke does not consist in equal endowments, but in equal rights,—in the right of each man to the enjoyment of his individual gifts, whatever they may be.

The proposition, that a representative government upon the basis of universal suffrage is the direct result of man’s equality and the surest means of preserving it, opens a wide field for discussion, into which we will not enter. It is not peculiar to Jefferson. We must, however, remark, that he did not hold the extreme opinions upon this subject which have been attributed to him. He thought that popular institutions could be established, and the elective franchise safely made universal, only in an intelligent and virtuous community. In France he advised La Fayette and Barnave to be contented with a constitutional monarchy. When the South American States rebelled, and Clay and many other statesmen were enraptured with the prospect of a Continent of Republics, Jefferson declared that they were not prepared for republican governments, and could not maintain them. At the same time, he was very far from thinking, as some of our modern writers do, that men can become fit for freedom by remaining slaves.

The third proposition, that the sphere of government is limited and its action should be confined to that sphere, is the one to the illustration of which Mr. Jefferson specially devoted himself. Upon his services in this respect rest his claims to consideration as a political philosopher.

It has been the custom to think that the government was the only source of honor; it is still looked upon as the source of the highest honor. By barbarians the monarch is deified. In many civilized countries of our own time kings are said to rule by special favor of the Deity; no one stands erect, no loud word is spoken in their presence; and, indeed, everywhere they are approached with a reverence so great that more could hardly be shown to God himself. This homage is not given on account of eminent personal attributes. These persons are well understood to be often mean in mind and meaner in morals. The same feeling is shown towards other high officials. To be in the public service is eagerly coveted; such employment attracts the finest minds, and is most munificently rewarded. It is so in this country. We are accustomed to confer upon official characters honors which we would refuse to a Shakspeare or a Newton. Yet it is well known, that, while the comprehension and elucidation of the great laws which govern society are a labor which will task the strength of the strongest, in ordinary times affairs may be, and generally are, quite acceptably administered by men of no marked intellectual superiority. It is not necessary to say that the sentiment must be wrong which leads us to such strange errors,—which obliterates the broadest distinctions, and persuades us to give to feebleness and vice rewards which should be given to genius and virtue alone.

For the wisest purposes, the Creator has planted within us an instinctive disposition to revere the illustrious of our kind. To win that admiration is the most powerful incentive to action,—it is the ardent desire of passionate natures. The sweet incense of popular applause is more delicious than wine to the senses of man. Deservedly obtained, it heals every wound, and soothes all pain; nay, the mere hope of it will steel him against every danger, and sustain him amidst disease, penury, neglect, and oppression. To bestow this reverence is a

pleasure hardly less exquisite. While we commune with the intellects and contemplate the virtues of the great, some portion of their exceeding light descends upon us, their aspiring spirits enter our breasts and raise us to higher levels. But to yield our homage to those who do not deserve it is to pervert a pure and noble instinct. We cannot worship the degraded, except by sinking to lower depths of degradation.

When one considers that the admitted functions of government have been almost without limit, this mistaken sentiment is not to be wondered at. Why should not they who are able to provide for every want of the body or soul be revered as superior beings? Governments have established creeds, and set bounds to science; they have been the censors of literature, and held men in slavery; they have told the citizen how many meals to eat, how many prayers to say, how to wear his beard, and in what manner to educate his children; there is no action so trivial, no concern so important, nor any sentiment so secret, that the governing power has not interfered with and sought to control it. This system has invariably failed; constantly coming in contact with each man's sense of individuality, it has been the prolific source of revolutions, despotisms, the ruin of states, the extirpation of races,—and in its mildest forms, where life has been preserved, everything which makes life desirable has been destroyed. In most countries this system still exists to a great degree, nor is there any country whence it is entirely eradicated.

Seeing the constant and uniform occurrence of these evils, Mr. Jefferson was led to believe that they were not caused by a remediable imperfection in the existing system, but by radical defects. He concluded that they were produced by an attempt on the part of government to do what it could not,—that the power of government was limited by absolute and inherent laws, like those which limit the strength of man,—and that there were certain functions belonging to govern-

ment, in going beyond which it not only failed of its purpose, but did positive harm. In this view, the definition of these functions becomes a task of great difficulty and involves the whole science of politics. We cannot follow his entire line of argument, and without detail there is danger that our statement will not be sufficiently qualified. His general theory, however, is simple, and is drawn from his first proposition as to the equal rights of man. He held that the object of society is the preservation of these great rights. Since experience teaches us, that, however incompetent we may be to decide upon the interests of others, we are able to regulate our own, this social purpose will be best accomplished by leaving to each one all the liberty consistent with the general safety. Security, being the only common object, should be the sole duty of the common agent. The government being confined to the performance of this negative duty, it must not exercise its power except when necessary. The inquiry, Is it necessary? not, Is it advantageous? is the test to be applied to every measure. The rigid application of this rule excludes the state from any interference with commerce and industry,—from all matters of religion and opinion,—and limits its financial operations to providing in the most direct manner for its own support. But it is to be noticed, that it is consistent with this scheme, and indeed the fruit of it, that, in the sphere which it does occupy, the government should be absolute.

Mr. Jefferson formed the governmental machinery in strict accordance with this principle. As many measures are necessary for one portion of a community and not for another, he insisted that local affairs should be placed in the hands of local authorities. The integrity of his system depends not only upon the limitation of the governing power, in a general sense, but as well upon the division and dispersion of it.

The principal exception which Jefferson made was in respect of education.

But, according to his view, this can hardly be regarded as an exception. The general safety depends so directly upon that recognition of mutual rights which is not to be found except among intelligent men, that he advised the establishment, not only of common schools, but likewise of colleges and schools of Art.

To those who objected, that this system would limit the action and decrease the splendor of a nation, Jefferson replied, that its effects were quite the reverse. In proportion as a government assumes the duties which ought to be performed by the citizen, it acts as a check upon individual and national development. Under a despotism, culture must be confined to a few, nor can there be much variety of effort and production. Under a government which is confined to its proper field, the talents of each man may be freely used, and he will not be forced into relations for which he is unsuited. The absurd prejudice, that public employment is the most honorable, will pass away. The man of letters and the man of science, the poet, the artist, and the inventor, the financier, the navigator, the merchant, every one who performs beneficial service and displays great qualities, will be rewarded. Every one who is conscious that he possesses such qualities will be stimulated to strive for that reward. This universal action will give birth to all the things which adorn a state. Social disturbances will excite investigation, and evils which governments have never been able to reach may be removed. Competition will make the accumulation of large estates difficult, property will be equalized, but no motive to effort destroyed. Science will be encouraged. Every day will add to the number of those contrivances which facilitate labor, increase production, lessen distance, and raise man from the degradation of an existence wholly occupied with providing for his physical wants. Under these elastic laws, religion, philanthropy, art, learning, the social amenities, the domestic influences, all humanizing agents, will have opportunity and work

harmoniously for the advancement of the race.

It will be seen that Mr. Jefferson's political system was that which, in the language of the modern schools, is called the individual theory. It has been said, that it is based upon too favorable an estimate of human character, and that he obtained it from the French philosophers.

It seems to us that the reproach of Utopian opinions may more justly be thrown upon his opponents. The latter do not escape the evil from which they fly. They proceed upon the belief that man is unfit for self-government; but since every government is one of men, if he cannot control himself, how shall he rule over others? Whatever may be said about the superiority of men of genius, it is certain that there never has existed an intellect capable of providing for all the minute and varying necessities of each individual among many millions. The history of legislation shows that the best-disciplined minds find it difficult to devise a single statute affecting a single interest which will be precise in its terms and equal in its operation. These railers at the majority of their kind seem to expect in the minority a greater than human perfection. Mr. Jefferson proceeded upon a more moderate estimate of the abilities, and a more just appreciation of the weakness of men. It is *because* we are easily led astray and blinded by passion, that he thought us unfit to govern others, and that we should limit our efforts to self-government. His confidence in man was no greater than that which is the foundation of Christianity. The whole Christian scheme is one of the broadest democracy. The most important truths are there submitted to the general judgment and conscience of mankind, with no other recommendation than their value and the force of the evidence by which they are attested. Can it be said that we are not fit to decide upon a tax, yet are fit to decide our fate for all the mysterious future? If Jefferson was an enthusiast, every clergyman who calls his

hearers to repentance must be mad. He did have confidence in his fellows,—he did believe that we are not helpless slaves of sin,—that the evils which afflict us are not inevitable,—and that we have power to lead lives of justice and virtue. Who will accuse him because of this confidence?

The charge of French principles originated in a political contest. It was true in the narrow application which it had at first, but false in that which was afterwards given to it. There is a marked distinction between him and the politicians of France. Rousseau, perhaps the ablest, certainly the most popular, of those who preceded the Revolution, is an example. The *Contrat Social* constantly carries the idea, that the government is the seat of all power and the source of all national action. No suggestion is made, that there are individual functions with which the state cannot interfere to advantage. The same opinions prevailed among the Encyclopedists and Economists, they were announced by the Gironde and the Mountain, and practically carried out by Robespierre and Barras. The Girondists made cautious approaches towards federalism, but one looks in vain through the speeches of Vergniaud for an intimation of individualism. The modern *doctrinaires* have retained the same principles. Legitimists, Imperialists, Republicans, Socialists, and Communists are all in favor of a centralized and unlimited government. The last two classes wish to exercise the governing power upon the minutest details of life,—to establish public baths, shops, theatres, dwellings, to control the amusements and direct the occupations of the citizen, and to decide his social status by law. Comte himself, whose general system might be expected to lead him to a different conclusion, outdoes them all, and proposes to prescribe creeds, establish fasts, feasts, and forms of worship, and even to name those who shall receive divine honors. There is no trace here of that scrupulous regard for personal independence and that invincible distrust of govern-

mental action which characterized Jefferson. It is true, he and the Gallic writers agreed upon certain fundamental propositions; but they were peculiar neither to him nor them. Some of the same principles were announced by Locke and Beccaria, by Hobbes, who maintained the omnipotence of the state, and by Grotius, who insisted upon the divine right of kings. To agree with another upon certain matters does not make one his disciple. No one mistakes the doctrines of Paul for those of Mohammed, because both taught the immortality of the soul. To confound Jefferson with Rousseau or Condorcet is about as reasonable as to confound Luther with Loyola, or Ricardo with Jeremy Bentham.

Although we deny that Jefferson was indebted to France for his political system, it cannot be claimed that he was the author of it. He himself used to assert, that the scheme of a limited and decentralized government was produced by the events which caused the settlement of the country and the subsequent union of the colonies. The emigration to America was stimulated by the great Protestant and Catholic dispute which occupied Europe nearly two centuries, and during which time the original thirteen colonies were founded. The sentiment of religious freedom was the active principle of all the alliances, wars, intrigues, and adventures of that stormy period. The rights of conscience were maintained, in defiance of the rack and the stake. They were stubbornly asserted in regard to the smallest matters. Lines of separation, so fine as hardly to be perceptible, were defended to the last. The Catholic was not more irreconcilably opposed to the Protestant, than the Lutheran to the Quaker, or the Puritan to the Baptist. Men who differed merely about the meaning of a single passage of Scripture thought each other unfit to sit at the same table. The immigrants were exiles. By the conditions under which they acted, as being from the defeated party, and as being among those whom defeat did not subdue, they

must have had the enthusiasm of their time in its most earnest form. Each man came here intent upon his right to worship God in his own way. *That* he could never forget. It had been impressed upon him by everything which can affect the understanding or touch the heart of man,—by the memory of success and defeat,—by his own sufferings and the martyrdom of his brethren,—by Bunyan's fable and by Milton's song.

But they did not lack bigotry. They were as ready to persecute those who differed with them here as they had been at home. The last and greatest social truth, that the surest way of protecting our own liberties is by respecting those of others, was forced upon the colonists. So general had been the stimulants to emigration, that every European sect and party was represented in America. Hither came Calvinists and Lutherans, Cavaliers and Roundheads, Conformists and Non-Conformists, the precise Quaker and the elegant Huguenot, those who fled from the tyranny of Louis and those who fled from the tyranny of Charles, worshippers of the Virgin and men who believed that to kneel before a crucifix was as idolatrous as to kneel before the seven-headed idols of Hindostan. These sects and parties were so equally balanced that toleration became a necessity. Seeing that they could not oppress, men were led to think oppression wrong, and toleration was exalted to a virtue. The theocratic spirit which prevailed at first passed away, and the great principle was established that governments have nothing to do with religion. It does not require much penetration to discover that a government which has unlimited power over the person and property of the citizen will not long respect the scruples of his conscience. Religious liberty gave birth to political freedom. The separation of the settlements from each other, even in the same establishment, made local provisions necessary for defence, and for the transaction of local business, and led to the division of the government.

When united action was necessary, the colonies did not attempt to reconcile their differences; they made a union for those purposes which were common to all. The general principles which were asserted during the Revolution were logical necessities of that event. It was a rebellion against an unjust exercise of power. Why unjust? For no other reason than because the Americans had an equal right with Englishmen to govern themselves. But that right must be one which was common to all men. The rebels knew this. They did not follow Burke through his labored argument to prove that the measures of the British ministry were inexpedient. They could not defend their conduct before the world upon the narrow ground of a violation of the relations between a dependency and its mother country. Those relations were not understood, and such a defence would not have been listened to. They appealed at once to the laws of God, and for their justification addressed those universal human instincts which give us our ideas of national and individual freedom. The declaration that men are created equal excited no surprise *then*. They believed it without a thought that it had entered the mind of a fantastic recluse in the retirement of *l'Hermitage*, and, in obedience to that belief, they severed the ties of tradition and kindred, exposed their homes and the lives of those whose lives were dearer to them than their own to the rage of civil war, and placed all they hoped for and everything they loved upon the perilous hazard of the sword.

At such a time Jefferson was led to the pursuit of politics. He was not in the situation of one who, in disgust at the misery which surrounds him, retires to his study, and, from the impulses of a kind heart, the dreams of poets, and the speculations of philosophers, fashions a society in which there is neither envy, anger, ambition, nor avarice, but where, amid Arcadian joys, all men live in peace and happiness. He was compelled to think because he had need to act,—to make real laws for real societies. To do

this, he did not meditate upon human frailty and perfectibility; he did not attempt to frame institutions carefully graduated to suit the dissimilar dispositions, faculties, and desires of men. In the spirit with which he had observed the phenomena of Nature in order to discover the laws which produced them, he inspected the social phenomena of his country to learn the laws by which it might be governed. He studied the processes by which a few hamléts, hastily built upon a savage shore, had grown into powerful communities,—by which the heirs to centuries of bitter recollections had been made to forget the jealousies of race, the enmities of party, the bad hatred of sect, and united into one brotherhood for the accomplishment of a common and noble purpose. He took man as he found him, and believed he could govern himself because he had done so.

He endeavored to give symmetry to the system which was already established. It is not strange that in this way he arrived at rules of policy, and assisted to put in operation a government, more perfectly adapted to our wants, more nicely adjusted to our strength and our weakness, giving freer opportunity to individual effort, and more firmly establishing national prosperity, better able to resist sedition or foreign assault, than any which painful toil has created, or the imaginations of the benevolent conceived, from the days of Plato to those of Fourier.

In our next number we shall allude to certain questions, raised by Mr. Randall's book, connected with the early politics of the country; and we shall likewise undertake the more pleasing task of describing the domestic life and the character of Jefferson.

A PRISONER OF WAR.

RÜGEN is a small island, and its chief town is named Rügen also. They are both part of Prussia, as they were in 1807, when Prussia and France were at war. At that time Herr Grosshet was burgomaster, and a very important burgomaster, it should be understood,—taking in proof thereof Herr Grosshet's own opinion on the subject. According to the same high authority the burgomaster was also wondrously sharp; and the consequence of the burgomaster's sharpness was, that an amount of smuggling went on in the town which was simply audacious. None knew better than the burgomaster that the smuggling was audacious; scarcely a shopkeeper he knew, but laughed to his nose; but his dignity was so great, and he had made the central authority believe so strongly in him, that he could not lay a complaint; and the consequence of *that* was, that, though the townspeople laughed at their mayor,

they would not have parted with him on any account. Not a soul in the town but knew of the smuggling,—not a soul who, publicly, was in the least aware of that illegality.

Bertha, as she was commonly called, did not positively belong to the town, but she had lived in it for sixteen years,—at the beginning of which time a very great commotion was created by her discovery, at the age of three, sitting staring on the sea-beach.

She was adopted by the town generally; for there were kind hearts in it,—as most towns have, for that matter; but she was specially adopted by Frau Klass, who took her home and straightway reared her, under the name of Bertha,—for the reason that she had once had a daughter with that name. The new Bertha in time met with a proposal from a flaxen-haired young sailor named Daniel, who left Rügen the next day with a

considerably lightened heart. When the foundling had reached nineteen, three things had happened:—Dan. had been away three years, and the town had given him up forever; Bertha's mother was no more; and Bertha rather found it her duty to submit to be married to the most odious of his sex, Jodoque by name,—a man who was detested by no one more heartily than by Bertha herself.

I say Bertha found it her duty to be married, and thus:—Frau Klass called Jodoque her nephew, and tried to justify a testament in Bertha's favor by suggesting to her the compensation to her nephew of marrying him. Thus Frau Klass tried to follow both her inclination and her duty, and died serenely at a great age,—assuring Bertha with her last breath that Daniel must be dead, and that Jodoque was an admirable youth, when known, and not at all poor.

So Bertha came into possession of a little farm and a little house. *She* tried to reconcile duty with inclination by suggesting to Jodoque the propriety of waiting; and he *had* waited, till he began to question the probability of his ever entering upon the tenancy of his late aunt's farm.

But Bertha at last yielded a consent; and the entire town, ever bearing in mind its universal parentage of Bertha, determined to go to great lengths of rejoicing on the wedding-day; and the burgomaster, a fool and a good man, was certainly not indifferent.

I have said France and Prussia were at war at this time; and, indeed, there were a score of young French prisoners at the fort,—or rather, nineteen, for one got away the very day before that mentioned as Bertha's wedding-day. Two hours after his escape he was kissing the hand of Bertha herself, who had promised him her protection, and hidden him in Frau Klass's own dark room.

Bertha had served the young Frenchman—who shall be called Max—with his breakfast, and was sitting in her porch, wondering about a good many things, when Herr Jodoque arrived. She

was thinking how she should get the prisoner away,—what would be said of her, if found out,—how decidedly odious Jodoque was,—how handsome the Frenchman was,—and how she thought he was better-looking even than Daniel, the sailor who had been away three years.

So Herr Jodoque came up to the door of the little cottage, bringing with him a basket. Jodoque believed in the burgomaster as a grand man, and though nobody knew better than Jodoque that he was not very clever, he rather tried in manner to imitate the important mayor.

It is, and was, the custom in Rügen for the bridegroom to make a present, in a fancy basket, to the bride; and that the town might not talk, Jodoque brought *his* bride a basket, though it was not particularly large, nor was it particularly heavy.

Here is an inventory of its contents, which, with itself, Jodoque laid down with considerable effect:—*Imprimis*,—one piece of cloth, on the use of which Jodoque gave an essay. *Item*,—three cards of knitting-wool, for mittens. *Item* and *finis*,—one white rabbit, the skin of which, Jodoque suggested, would make him a cap.

"Good!" said Bertha;—"Jodoque," she added.

"My angel!"

"You know Madame Kurrig's?"

"At the very other end of the town?"

"Go there!"

"Go there, angel?—why?"

"The silver teapot!"

"*My* sil—my aunt's silver teapot?"

"Just so,—Madame Kurrig!"

"Has got it?—I go!—My aunt's silver teapot!"

He ran down the little road towards the silver teapot,—for, indeed, Madame Kurrig did not bear a superior character,—but he had not proceeded far when he came upon the burgomaster, who was in great tribulation. Only nineteen prisoners were at the fort, and the governor had sent down a rather imperative message to the mayor, who, replying that his loyal town could not conceal a fugitive,

met with such an answer as he had never received before in all his life. It is a deplorable fact that he and the town were recommended to go to a place, a visit to which the burgomaster at least hoped he should not be compelled to make.

The burgomaster was in the habit of asking people's opinions and never listening to their answers, and he now asked Jodoque what he was to do. Jodoque suggesting that the mayor could not want advice, the mayor admitted there was something in that,—but still a word was a word. Things, in fact, were in a pretty state for the burgomaster, now he had to do with the escape of a French prisoner. And this was the case. The French were off the town, and at that time the French had the luck to be generally sure in the matter of victory. Now if the French took the town, and learned that the burgomaster had taken a Frenchman, (for the burgomaster felt sure he could recover the runaway, if he chose,) the burgomaster would perform that *pas seul* upon the ambient air which is far from a pleasant feat; while if the French did *not* take the town, and it was brought home to him that he had neglected the duties of his office, he would lose the position of burgomaster and be a degraded man.

Jodoque sadly wanted to reach Madame Kurrig's, but the burgomaster sadly wanted help, — though he would not confess it openly; — so he hooked himself on to Jodoque and uttered this sentence, — “And this detested smuggler, too!” — the effect of which was, that Jodoque became utterly pale and trembled violently. This behavior the burgomaster attributed to his own proper presence, and asked himself, — Could he survive degradation? No, better the tight-rope performance! So he made up his mind to recapture the missing Frenchman.

He, meantime, being a blithe, courageous young midshipman, was gayly chattering with his protectress. There he was laughing at her good-naturedly as she trembled for his sake, and chattering broken German as best he could. Wealth

is a good thing, and health a better; but surely high-spirited hope is worth more than the philosopher's stone.

“No, Mademoiselle,—I could bear the dark room no longer. Better an hour in the light of your blue eyes than an age in that dark room!”

“Still—nevertheless—it is dangerous to leave the room. The burgomaster”——

“Cannot see all the way here from the town; besides, if he could, your presence would dazzle him, and I should be safe.”

“So you can trust your secret with me,—a woman?”

“I would trust it with two women,—three,—for with every disclosure there would be a fear the less that I should be found. You cannot comprehend that,—now consider.”

“La! I cannot.”

“How good you are! How would they punish you, if they learned the truth?”

“Oh, a good heart—I do think I have a good heart—don't weigh this way and that when there is a good action to be done.”

“And done for the sake of a poor stranger.”

“Stranger? Nonsense! I meet you,—you are in misfortune; therefore we are old friends. And an old friend may surely lend a room to her old friend.”

“And your name?”

“They call me Bertha.”

“And you are single?”

“If you ask me that question an hour hence, I shall say, ‘No.’”

“No!—the only harsh word you have used.”

“Why harsh?”

“Well, shut up in a dark room, you have your thoughts to yourself; and you think, and think, and think again; and you always think of the same thing; and then—then you wake up, and there's an end to your dream.”

“And how do you know I have not dreamt?—The clothes I got for you fit you well; you look a German. Ah, you make a grimace!”

“So, you are going to be married.”

“In one hour—less five minutes.”

"Ah! which way am I to go?"

"Straight back into the house."

"Nonsense!—I should compromise you."

"The house is mine; surely I may do as I like with it."

"And when may I reach the coast?"

"When the night reaches us."

"Good!—and—and good-bye!"

"Well,—yes,—good-bye, I suppose,—and—and promise me one thing?"

"I do promise."

"Don't look at him."

"Him! Whom?"

"My husband—who is coming."

"He is so handsome?"

"Oh, magnificent! Good-bye! good-bye!"

Here he ran back into the dark room, while Bertha, who was a spoilt child, if the truth may be told, pulled moodily at one of the two long, black plaits of hair she wore. And it must be set down, sad as it is, that, seeing Jodoque coming up the road to claim her, accompanied by a sailorly-looking personage, she went in and shut the door with a deal of vigor.

The sailorly-looking personage was young, broad-chested, handsome, and had not been in that part of Prussia for some six years. Jodoque, prompted to sudden hospitality, had offered the sailorly personage a seat at his marriage dinner-table, and he, with a great laugh, accepted the invitation. He strolled leisurely on by the side of the bridegroom, until he heard the bride's name, when behold the effect produced! For he started back, and at first showed signs of choking his informant. However, after an awkward stare, he moved on again.

They soon came up to the door, and Jodoque was wondering why his bride did not open it wide to him, when a bright, stout little woman, dressed out in her best, came tripping through the garden-gate, through which the two had just passed. This little woman's name was Doome;—nobody knew why she was called Doome, but everybody called her Doome, all over the little town.

"Good morning, gentlemen! God pre-

serve you, Jodoque! Good morning, Bertha!"—for here the door opened.

As she opened and appeared at the door, the sailor looked hard at her; but she did not start as she returned his look. He thought all women were alike and forgot; but if this broad-chested sailor could have seen his own blue jacket of six years before, perhaps it would have been a good argument to induce him to pardon Bertha's forgetfulness.

"Good day, Miss!" said he, and brushed his cap from his head.

The same explanation touching the sailor's presence was then given to Bertha that I have given to you,—given as the whole party were welcomed into the plain little house by its very far from plain mistress.

"Do you remember faces, Mistress?" said the sailor to Doome.

"Yes, friend sailor."

"Do you remember them for six years?"

"La! no woman can remember for six years," said Doome.

"I think *you* could, Mistress," said the sailor.

And thereupon the stout little Doome blushed and curtsied.

Meanwhile the bride was thinking of the young Frenchman, and how she could keep her secret, with half the town at the house and about it, as there would be in another half-hour. She thought more of the young stranger every moment, and especially when she gazed upon her future,—which seemed to grow more disagreeable each time she looked at it.

The young sailor, keeping his eyes away from Bertha,—who set to work drawing a huge mug of beer, in which piece of hospitality Jodoque hoveringly helped her,—and addressing himself to Doome, said,—"Do you know, I was nearly snapped up by a shark some months ago?"

With a sympathetic shudder the little woman replied, "The shark was doubly cruel—who could—who could take out of the world so—so fine a young man!"

"Ah! I wish he had!"

"Wish he had?"

"Yes,—his teeth wouldn't have been half so sharp as the teeth biting away at my heart now!"

"Dear!"

"Have you ever had a lover?"

Here the little woman laughed outright. A lover! She could have honestly answered, "Yes," if the handsome sailor had asked her if she had had several score. A lover, indeed!

"Ah! well, suppose you only had one, when you were a poor girl, and he left you, what then?"

"Oh, I'd kill him first, and cry myself dead afterwards."

"Well, *my* sweetheart has gone from me."

"What! what!—given you up for *any* one?"

"Yes, and—and—I don't think he's my master,—unless it's in dollars."

"Ah!—And who saved you from the shark?"

"A young French officer,—bless him! He harpooned my scaly friend, and found a friend for life,—though it a'n't much a poor sailor-fellow can do for an officer. And, though we're at war with the French, I'd be hanged sooner than fire at his ship."

Here Bertha, assisted by Jodoque, set the big jug down upon the table with a bang. And here, too, something fell down in a neighboring room,—precisely as though a person, journeying in a dark chamber, had upset a heavy wooden chair. The noise sent Doome right into the sailor's arms, and also sent Jodoque right behind Bertha, who turned pale.

"There's some one in the room," said Jodoque.

"No, no!" said Bertha—"tis poor aunt's room; no one goes there. It's only the rats,—that's all,—only the rats."

For a stranger, the sailor showed a great deal of curiosity; for he turned very red, and said, "Suppose you look and see."

"Oh, no, no! Never mind. 'Tis only rats. No one ever goes into that room."

My dear, dear guardian died in that room."

"Yes, Mistress," said the sailor, "but rats don't throw down chairs and tables."

"No, surely no!" said Jodoque.

"And if the house were mine," said the sailor, suiting the action to the word, "why, I'd go up to the door like this,—and I'd put my hand on the latch, and click it should go,—and"—

Bertha ran up to the door too, laid her hand upon the sailor's arm, and drew him away, as he quite willingly let her. Indeed, he trembled and looked pleadingly at her, as she touched him; and he murmured to himself, "Six years make a good deal of change."

"You, a guest, have no right to touch that door."

"If I were your husband, I should have."

"Surely,—but you are not."

"Yes, but this honest man here is as good as your husband."

"No!"

"No?" said the other three; and Jodoque, but for presence of mind, might have overthrown the big jug of beer.

"No,—for, truly, I'm not going to marry Jodoque."

"Not going to marry me?"

"Not going to marry him?—Why, as sure as you call me Doome, there are the townsfolk, and the musicians, and the good father, and the burgomaster, all with their faces already turned this way, I would wager these new ribbons of mine!"

"Let them all come!"

"To send them back again?"

"No, to witness my marriage."

"And who's the bridegroom?"

"Somebody all of you have forgotten."

"No," said Doome, "I never forget a soul."

"Do you remember the poor sailor-boy Daniel?"

"I never saw him," said Doome. "No, friend sailor, you need not squeeze my hand,—I never did see him."

"Well, he has grown a man, and has come home."

"Then," said Jodoque, "I suppose I may go home."

"Come home?—where is he?—Still, my sailor friend, I can't tell why you should tremble."

"Yes, he has come home; and if he will have me, I will marry him."

"And he'll have a good wife, Bertha," said the sailor, and he made a movement as though about to run to the girl; but little Doome, too impulsive to think about the *Fräulein Grundeis*, enthusiastically clasped the arms of her friend's eulogizer.

"Yes,—marry him!—and at this moment he is in that room! And now any one of you may open the door."

"Open the door?—I'll smash the door!" said the sailor, roughly pushing the girl away from him. "So, Daniel is there, is he? Well, let him come!"

He ran up to the door, threw it open, and there, standing just within, was the young French prisoner of war.

"Good morning, all!" he said.

"You are Daniel, are you?" said the sailor, drawing the other forward to the light. "You are Daniel, are you?"

He dragged him near the window and looked quickly at him. Then he turned pale himself, and wrung his hand.

"Yes!" said he, "yes!—it is Daniel himself,—the very Daniel!"

"Ah! so much the better!" said Doome.

"Daniel? the *very* Daniel?" said Bertha, faintly, and turned paler yet.

"I know you, comrade," said the sailor, aside,—*"I know you. You are the French officer who has escaped,—but I'm down in your log for a lump of gratitude; and so, you are Daniel. When a fellow saves you from a shark, perhaps you'll be as willing to give him your name."*

"And why am I to take your name?"

"To give it to Bertha, there!"

"Give it to Bertha?"

"Yes! Sign the contract, which the burgomaster has in his pocket; sign it as Daniel;—'tis your only chance. And when you are gone, I have paid my debt.

And don't let us cross each other again. You gave me my life, but that is no reason you should rob me of my wife!"

"Rob you of your wife?"

"Yes, of Bertha, who loved me six years ago!"

"Why, she has barely known me six hours!"

"True, but she loves you six times as much as she does the memory of Daniel!"

"But I do not care for her, beyond gratitude for sheltering me from pursuit."

"Oh, she has enough love for two of you!"

"Well, to me, one wife or another,—and she is a nice girl,—and, friend Daniel, where shall we go?"

"We?—who?"

"My wife and I," said the other, laughing.

"You, comrade? I will manage for you; but your wife will stop here."

"Stop here?"

"Why, you don't suppose I can give up the good girl I have loved for the six years I've been rolling over the seas! 'Tis true, she doesn't remember me, and thinks me dead; but when she learns the truth, all the old love will come back; and she will like me none the less for aiding you. The burgomaster, who shall be in the plot, shall marry you to *my wife*,—and when you are gone, God speed you! The burgomaster will set all that right, as he can; and Bertha and I will often talk, in our seaside cot, of the French officer that we saved."

Here Doome interrupted the dialogue; for she could not conquer her curiosity farther. So she came up, and complimented the French officer (who was to be called Daniel) on his marriage. "To be sure, he had almost forgotten German; for, as Bertha said, he had left home almost before he could speak like a man, and had been in the French service,—and so there it was! No doubt, now he had come back to Germany, he would soon learn German again, and speak it like a native;—eh, friend sailor?"

"What, little one? I didn't hear you."

The "little one," not dissatisfied at that term, flounced round, and then gave a little scream,—for all the neighbors, with the burgomaster at their head, were approaching the little house. When they arrived, and the change of husbands was announced, not a neighbor but framed a little mental history,—and, indeed, Jodoque cut rather a ridiculous figure. As for the burgomaster,—who knew the real Daniel, having discoursed with him about the French fleet riding off the island, that very morning,—his dignity prevented him from suddenly spoiling matters. Before he could sufficiently recover himself from the blow which his dignity had received, Daniel came up to him and said these two words,—“Your neck!”

"What do you mean, young man?"

"Suppose the French took Rügen?"

"Well, suppose they did?"

"And suppose you had caused the recapture of a French officer?"

"I haven't the least idea that I have caused a recapture; but suppose so?"

"Well, and if he was hung, and if the French took the place, you'd be hung too."

"What do you mean, young man?"

"That man over there is the French officer who has escaped."

"Good gracious me!"

"Yes, and you must suppose him to be me. Marry him to Bertha, and help him to escape to the French fleet."

"No!—on the faith of a burgomaster, no!—on the word of a German, no!"

"But your neck?"

"I don't care. The French may not take the place."

"And the French may. Who'll be the wiser, burgomaster?"

"My conscience, young sailor."

"And you'll save a man."

"Oh, dear! dear! dear!"

"Here! the best table for the burgomaster! The handsomest chair for the burgomaster! Make a good pen for the burgomaster!"

"Oh, dear! dear! dear!"

The burgomaster then, in the homely German fashion, asked the usual questions, filled up the marriage-contract, and then handed the pen to the bride. She trembled rather as she put her name to the paper, but not so much as the young sailor.

As for the Frenchman, he hesitated before he put his name down,—and when he had done so, he flung the pen away, as though he had done wrong. One hour after that, these two young people were married in the village church.

The little village festivities which followed need not be dwelt upon; but imagine the summer-evening come, and Daniel and the French officer stealing down to the rocky beach. The young sailor showed a deal of doubtful feeling as he saw the tearful energy with which little Bertha parted with her make-believe husband; and when little Doome, who had been let into all the secrets, except the one that Daniel kept to himself,—namely, that he was Daniel,—when little Doome crept up to condole with him on the hard case of the newly-married pair, it must be said that he pushed her away quite roughly.

Soon the two men reached the shore. Daniel instinctively went to a little cove where he knew of old a boat would be,—and as darkness came on, the plashing of a couple of oars sounded near the little cove where the boat had been.

"Mind, comrade, I have paid my debt! You may be taken, and you run your chance; though if you get to your ship, you know, one gun, *as you promised your wife*, fired eastward."

"All right, Daniel. You will like me as well as ever, Daniel, in a few days."

"No, comrade, there's a woman between us."

So the French officer went on his venturesome pull of a couple of miles to the French fleet, and the sailor returned to the little cottage, where were sitting Bertha and Doome. The latter, for his cleverness and perhaps good looks, had be-

gun to consider the sailor as worth far more than those sixty youths who had caused her to laugh when he referred to only one of them. But it is a deplorable fact, that, while Doome welcomed Daniel back with a great deal of heartiness, Fräulein Bertha rather looked upon him as cruel; for what need was there that her husband should have gone? He could have hidden till the French took the place, and then he would have been free. For love conflicts with patriotism wofully, and, though nobody could be more grateful than Bertha for the good service Daniel had done her, yet somehow she could not be over-pleased with him. She thanked him, however, very warmly; but it was Doome who set the chair for him, and Doome who got the beer for him, and Doome who proposed the sailor's solace of a pipe. As the pipe was lit by that young woman, Bertha got up to leave the room.

"Where are you going, Bertha?"

"Into the garden. My head aches." And she went out.

"I think, Doome,—they call you Doome, don't they? and a tidy name, too,—I think, Doome, Bertha doesn't like pipes."

"I think the smell of a pipe delicious."

"And what do you think of this pipe?"

"Oh! I think it a beautiful pipe!"

"Hum,—so you've lots of lovers?"

"Well,—I have a few."

"Ah!—do *they* smoke?"

"Yes,—some of them."

"You queer little Doome!—Are any of them rich?"

"Oh, I don't care a bit for money!"

"And what are they?—farmers?"

"I shouldn't like to marry a farmer."

"I suppose Bertha has sat down. I don't hear her step."

"No,—I shouldn't like to marry a farmer,—farmers are such quiet people."

"Don't you marry a sailor!"

"Law, sailor-friend, (I don't know your name,) why?"

"Why? Because, if he went away for

six years, you would forget him; and that's what Fritz says."

"No, Mr. Fritz, I should *not* forget him,—but I should not let him go away for six years."

"But suppose the king ordered him?"

"Then the king don't deserve to have a wife."

"And yet he has."

"So much the worse!"

"Bertha must have sat down."

"You know I don't think I care for one of my lovers. I think I could give them all up,—yes, every one,—if I met with anybody that I could love."

"Yes, and then suppose he didn't care for you?"

As Doome had never considered the probability of any such situation, its suggestion rather startled her. She held her tongue, while Daniel puffed gravely.

Soon Bertha came slowly into the room. "I think he ought to have got there by this time; don't you, Sir?"

"He's named Fritz, Bertha,—call him Fritz."

"Don't you think he ought to be there by this time, Mr. Fritz?"

"Surely, Mistress! You will soon hear the cannon;—'tis not more than two miles, and he left the shore a good hour ago."

So she went up to the window.

"I suppose, Mistress, if he did not come back for six years, you would forget him,—wouldn't you?"

She was so lost in thought, that she didn't answer; so Doome took the answer upon herself. "You are very hard upon us women, Fritz,—Mr. Fritz. No, of course she would not forget him; no wife ever forgets her husband. Why, do you think I should forget you, Fritz,—Mr. Fritz,—if you were my husband, and if you went away for six years?"

"There are women and women, Doome, Fräulein Doome,"—

"Ah!—hark!"

At this moment the sound of a cannon-shot swept over the little cottage, and Daniel, running to the window, and putting his hand out to feel the

breeze, declared that it was fired eastward.

Now Bertha was at the window, and, as the sailor spoke, he looked into her face. She quickly put her arm round his neck in the German fashion, kissed him gratefully, and said, "You good, good man!"

He kissed her in turn, and looked eagerly at her,—but she didn't recognize him, though he kissed her in precisely the manner of six years ago.

He sat down again, and again smoked,—and as, in the most heroic poem, people eat and drink, and as Anne Boleyn would have thought it hard to starve while her trial was going on, surely, as this is only the chronicle of people such as you may meet any day, and not at all heroic, it may not be wrong to state, that plain-spoken, every-day, love-making little Doome got supper ready.

Bertha had saved a prisoner, Daniel had assisted, and little Doome rather liked Daniel, yet nobody ate much; and when Daniel (at the suggestion of Doome) was furnished with a mattress and blanket on the floor, he did not make use of it, but sat smoking,—smoking for hours after the two women had gone off to Bertha's room.

But when the tobacco-pouch was empty, and the pipe was cold, the sailor fell asleep in his chair; and though he had done a good act the preceding day, he did not sleep well, but sighed heavily as he slumbered on.

And now it was that Jodoque, the Discomfited, again came upon the stage. Having been laughed at by every soul in the village, that poor bachelor went to his lonely house, took a small mug of consolatory weak beer, felt convinced that all women were deceivers, vowed that from that time forth he would think no more of matrimony, and went to bed in the dark,—prompted thereto by the power of economy in candles. He had fallen asleep, and slept soundly, when thrift prompted him to remember that one piece of cloth, several balls of wool, and one white rabbit,—his property,—

were at that moment at the deceiver Bertha's. Why should he, the deceived, make the married pair happy, with one piece of cloth, several balls of wool, and a white rabbit? And Jodoque woke up to the terrible truth in a cold sweat. The articles in question were at the deceiver Bertha's. At the first break of day he would go and demand his property. Being unable to sleep through the remainder of the dark hours, he presented but a disreputable appearance when he clapped to the little door of his house.

It was barely light, and it was not an overpowering distance for Jodoque to walk from his house to Bertha's. He knew the household would not be up, but he determined to sit down before it,—besiege it, in fact,—and carry off the cloth, the wool, and the white rabbit, when the enemy should first be moving.

And this is what he saw, as he came up to the cottage:—A young officer in the French uniform was getting in at Bertha's kitchen-window. Jodoque seized the idea, as though it were the white rabbit,—this was the French officer who had escaped yesterday, endeavoring to hide himself in Bertha's house.

Jodoque did not instantly rush forward to re-arrest this prisoner; but it struck him there must be a reward for the recapture; so, determining upon taking the prisoner and the basket at one fell swoop, he tore away to the burgomaster's to inform him of the discovery. He reached the official residence, and drew the pompous little burgomaster to his bedroom-window in a moment. The burgomaster was rather scandalized that such a respectable man as Jodoque should be out at such an hour; but when he heard the information, he grew considerably cold, and rather wished the French fleet would successfully challenge the place at once, and relieve him of his admirable chance of the halter.

Was ever burgomaster in such a fix? He wished his ardent longing for that position had been strangled at his birth. No,—he had saved his neck from the French, he thought to himself, by con-

niving at the escape of a French officer the day previous, and now his neck was in danger for having very properly tried to save it on that previous day.

But action, action! Whatever came of it, he must appear a patriotic burgomaster; so he took his night-cap off, and, in spite of the energetic remonstrances of the burgomaster's lady, was soon down in the street, surrounded by half a dozen men, and making for Bertha's eventful little mansion —

Within which was passing a terrible scene.

The fact is, that, when the false Daniel arrived at the fleet and reported himself, he found that he had escaped with only part of himself, and rather wanted the rest; and as at that time the French navy was allowed a liberty which it has not now, the young officer laid a statement of the whole case before his commander. That daring personage thus recommended:—A French boat to start away for shore with this young officer, and several more in her; that it should touch near Bertha's house; that Bertha should receive the merest hint, and then take passage for the French fleet herself.

The French officer, attended by half-a-dozen more youths, came back to the shore, and, just as day was peeping, came up to the little right-hand window; and as no one answered his tap, he raised the sash and jumped lightly in.

This Jodoque saw and reported to the burgomaster; but he could not tell the remainder.

For Daniel, waked by the tapping on the window-pane, saw who it was, and believing that he had come to steal his wife from him, he clenched his fists, and, as the slim young man jumped down into the room, crushed him almost dead in his strong arms.

"Not a word, or I'll stifle you!"

"Daniel! Daniel!"

"Not a word,—and don't Daniel me, you thief!"

"Thief?"

"Don't speak loud."

"How thief?"

"You would steal my wife from me."

"How *your* wife?"

"Why, Bertha;—she promised to marry me six long years ago, and she would have married me, if *you* had not come and stolen her heart."

"Why, you yourself gave her to me!"

"Ah! I owed you a debt I had to pay. 'Tis paid now. I thought you gone, and the marriage knocked on the head; but now, you've come back, and won't go again!"

"But, Daniel!"

"Don't Daniel *me*, I say, and don't speak loud; at least, *she* sha'n't see you taken off. Lie quiet for her sake, and show your love for her that way."

"And so you'll give me up, old friend, whose life I saved?"

"Saved!—you saved it once, and I saved yours. You took away my hope when you robbed me of my wife;—now I give you a like return."

"And you yourself, Daniel, who harbored me yesterday!"

"That's nothing to you.—Lie still till some one passes."

For the strong sailor had tipped the officer on to the mattress. There he lay,—not from want of courage, but because he did not know what to do.

The sailor felt for his pipe, but he remembered that all the tobacco was smoked up; so he set the pipe down again and bit his nails.

He had not waited a quarter of an hour when a voice said,—“This way, Herr Burgomaster!—this way!”

The sailor and his prisoner both started to their feet; and the burgomaster, coming to the open window, lost the last faint hopes he had had that this said French officer might not, after all, be *the* French officer at whose escape he, the respected burgomaster and butcher, had assisted.

"Mr. Burgomaster, here is a French prisoner,—and I hand him to you as the fit personage to place him in the hands of the commander."

Thus spoke Daniel, and, as he spoke, Bertha appeared at the door of her room,

and with her Doome, who hearing this little speech, all her liking for the sailor vanished on the instant. She was ready to utterly exterminate him, and more than ready to cry, which she did, straightway.

As this is only a little comedy, and by no means tragical, we pass over the next scene, and simply state, that Bertha, before all those neighbors, forgot everybody but her husband,—if he may be called so,—and the church had said so; that Daniel felt great remorse at what he had done; that he told Doome again that he wished the shark had finished him; that Doome didn't or wouldn't hear, for her idol was broken,—and so was Doome's heart, nearly.

The authorities took away the prisoner, and left Bertha and Doome wretched and alone. As for Daniel, he went out wandering by himself,—for he rather felt ashamed to look upon anybody.

At this time, a little boat with a white flag at its prow put off from the French fleet, and bravely approached the bristling fort of Rügen. Nearer and nearer it comes,—nearer and nearer; and in half an hour there is great cheering over the island of Rügen, for peace between Prussia and France is declared.

'Tis true, the peace did not last very long; but it lasted long enough to save the French officer. He was set at liberty at once, and an hour afterwards Daniel could look people in the face again,—all except Doome, who would not cease to be incensed.

"But then," said Daniel, "you know I'd been waiting six years."

"How?" exclaimed Bertha.

"Yes, Bertha,—I'm the real Daniel. Look here!"—and half a little silver cross came forward.

"And you didn't say it when you came!—and you actually gave her to him!—and you saved his life!—and oh! you, you CAPTAIN of a man!"

Thus Doome spoke and was comforted. And Bertha went up to her old

sweetheart and kissed him,* saying, she thought she knew of a better wife for him than she could ever have made,—for, now that Ernest (the French officer) had suffered so much for her sake, she had no right to leave him. And, indeed, they were re-married that day.

It was after Bertha had said she knew of a better wife for him, that Daniel looked at Doome, who, picking up that pipe of his, handed it to him.

"Will you take care of it, Doome?"

"Save when you want it."

"Oh! I mean to come with it."

"'Tis the handsomest pipe in all Germany,—and—I won't part with it till I part with you."

Hence, you see, there were two marriages that morning. Doome parted with the pipe a good deal,—for Daniel loved the sea as heartily as he had loved Bertha and grew to love Doome, who assured him many times that she was a far better wife for him than Bertha would have made. Whereupon Daniel would kiss her,—so you can draw your own conclusion as to his motive. For my part, I say first love is only heart-love,—and you see the heart is not so wise as the head.

By the time the long war was over,—with Waterloo for the last act,—Ernest had made not a little money; so he and Bertha—now a grand lady—came to Rügen. Ernest learned German, perfectly, from his own children and Doome's, and turned his sword into a ploughshare.

As for Daniel,—he gave up the sea and took a wine-shop.

Those four people are now still alive; and if Bertha and Daniel did not marry, their children have,—though it was rather lowering to those grand young ladies and gentlemen, Bertha's children.

Those four, when they meet and clapper their friendly old tongues, can hardly believe that once upon a time they were all at sixes and sevens,—and that Ernest himself was once in that very place a Prisoner of War.

THE "WASHING OF THE FEET," ON HOLY THURSDAY, IN ST. PETER'S.

ONCE more the temple-gates lie open wide :

Onward, once more,

Advance the Faithful, mounting like a tide

That climbs the shore.

What seek they ? Blank the altars stand to-day,

As tombstones bare :

Christ of his raiment was despoiled ; and they

His livery wear.

To-day the puissant and the proud have heard

The "mandate new" : *

That which He did, their Master and their Lord,

They also do.

To-day the mitred foreheads, and the crowned,

In meekness bend :

New tasks to-day the sceptred hands have found ;

The poor they tend.

To-day those feet which tread in lowliest ways,

Yet follow Christ,

Are by the secular lords of power and praise

Both washed and kissed.

Hail, ordinance sage of hoar antiquity,

Which She retains,

That Church who teaches man how meek should be

The head that reigns !

PHYSICAL COURAGE.

THE Romans had a military machine, called a *balista*, a sort of vast crossbow, which discharged huge stones. It is said, that, when the first one was exhibited, an athlete exclaimed, "Farewell henceforth to all courage !" Montaigne relates, that the old knights, in his youth, were accustomed to deplore the introduction of fencing-schools, from a similar apprehension. Pacific King James predicted, but with rejoicing, the same result from iron

armor. "It was an excellent thing," he said,—"one could get no harm in it, nor do any." And, similarly, there exists an opinion now, that the combined powers of gunpowder and peace are banishing physical courage, and the need of it, from the world.

Peace is good, but this result of it would be sad indeed. Life is sweet, but it would not be sweet enough without the occasional relish of peril and the luxury

* *Mandatum Novum*:—hence the name of "Maundy Thursday."

of daring deeds. Amid the changes of time; the monotony of events, and the injustice of mankind, there is always accessible to the poorest this one draught of enjoyment,—danger. "In boyhood," said the Norwegian enthusiast, Ole Bull, "I loved to be far out on the ocean in my little boat, for it was dangerous, and in danger one draws near to God." Perhaps every man sometimes feels this longing, has his moment of ardor, when he would fain leave politics and personalities, even endearments and successes, behind, and would exchange the best year of his life for one hour at Balaclava with the "Six Hundred." It is the bounding of the Berserker blood in us,—the murmuring echo of the old death-song of Regnar Lodbrog, as he lay amid vipers in his dungeon:—"What is the fate of a brave man, but to fall amid the foremost? He who is never wounded has a weary lot."

This makes the fascination of war, which is in itself, of course, brutal and disgusting. Dr. Johnson says, truly, that the naval and military professions have the dignity of danger, since mankind reverence those who have overcome fear, which is so general a weakness. The error usually lies in exaggerating the difference, in this respect, between war and peace. Madame de Sévigné writes to her cousin, Bussy-Rabutin, after a campaign, "I cannot understand how one can expose himself a thousand times, as you have done, and not be killed a thousand times also." To which the Count answers, that she overrates the danger; a soldier may often make several campaigns without drawing a sword, and be in a battle without seeing an enemy,—as, for example, where one is in the second line, or rear guard, and the first line decides the contest. He finally quotes Turenne, and Maurice, Prince of Orange, to the same effect, that a military life is less perilous than civilians suppose.

It is, therefore, a foolish delusion to suppose, that, as the world grows more pacific, the demand for physical courage passes away. It is only that its applica-

tions become nobler. In barbarous ages, men fight against men and animals, and need, like Achilles, to be fed on the marrow of wild beasts. As time elapses, the savage animals are extirpated, the savage men are civilized; but Nature, acting through science, commerce, society, is still creating new exigencies of peril, and evoking new types of courage to meet them. Grace Darling at her oars, Kane in his open boat, Stephenson testing his safety-lamp in the terrible pit,—what were the trophies of Miltiades to these? The ancient Agamemnon faced no danger so memorable as that ocean-storm which beset his modern namesake, bearing across the waters a more priceless treasure than Helen, pride of Greece. And, indeed, setting aside these sublimities of purpose, and looking simply at the quantity and quality of peril, it is doubtful whether any tale of the seakings thrills the blood more worthily than the plain newspaper narrative of Captain Thomas Bailey, in the Newburyport schooner, "Atlas," beating out of the Gut of Canso, in a gale of wind, with his crew of two men and a boy, up to their waists in the water.

It is easy to test the matter. Let any one, who believes that the day of daring is past, beg or buy a ride on the locomotive of the earliest express-train, some cold winter-morning. One wave of the conductor's hand, and the live engine springs snorting beneath you, as no Arab steed ever rushed over the desert. It is not like being bound to an arrow, for that motion would be smoother; it is not like being hurled upon an ocean crest, for that would be slower. You are rushing onward, and you are powerless; that is all. The frosty air gives such a brittle and slippery look to the two iron lines which lie between you and destruction, that you appreciate the Mohammedan fable of the Bridge Herat, thinner than a hair, sharper than a scimitar, which stretches over hell and leads to paradise. Nothing has passed over that perilous track for many hours; the cliffs may have fallen and buried it, the frail bridges may

have sunk beneath it, or diabolical malice put obstructions on it, no matter how trivial, equally fatal to you; each curving embankment may hide unknown horrors, from which, though all others escape, you, on the engine, cannot; and yet, still the surging locomotive bounds onward, beneath your mad career. You draw a long breath, as you dismount at last, a hundred miles away, as if you had been riding with Mazeppa or Brunechilde, and yet escaped alive. And there, by your side, stands the quiet, grimy engineer, turning already to his tobacco and his newspaper, and unconscious, while he reads of the charge at Balaklava, that his life is Balaklava every day.

Physical courage is not, therefore, a thing to be so easily set aside. Nor is it, as our reformers appear sometimes to assume, a mere corollary from moral courage, and, ultimately, to be merged in that. Moral courage is rare enough, no doubt,—probably the rarer quality of the two, as it is the nobler; but they are things diverse, and not necessarily united. There have been men, and still are such, leaders of their age in moral courage, and yet physically timid. This is not as it should be. God placed man at the head of the visible universe, and if he is to be thrown from his control, daunted by a bullet, or a wild horse, or a flash of lightning, or a lee shore, then man is dishonored, and the order of the universe deranged. No matter what the occasion of the terror is, a mouse or a martyrdom, fear dethrones us. "He that lives in fear of death," said Cæsar, "at every moment feels its tortures. I will die but once."

Having claimed thus much, we can still readily admit that we cannot yet estimate the precise effect upon physical courage of a state of permanent national peace, since indeed we are not yet within sight of that desirable consummation. Meanwhile, let us attempt some slight sketch and classification of the different types of physical courage, as already existing, among which are to be enumerated the spontaneous courage of

the blood,—the courage of habit,—magnetic or transmitted courage,—and the courage inspired by self-devotion.

There is a certain innate fire of the blood, which does not dare perils for the sake of principle, nor grow indifferent to them from familiarity, nor confront them under support of a stronger will,—but loves them for their own sake, without reference to any ulterior object. There is no special merit in it, for it is a matter of temperament. Yet it often conceals itself under the finer names of self-devotion and high purpose,—as George Borrow convinced himself that he was actuated by evangelical zeal to spread the Bible in Spain, though one sees, through every line of his narrative, that it was chiefly the adventure which allured him, and that he would as willingly have distributed the Koran in London, had it been equally contraband. No surpluses, no libraries, no counting-house desks can eradicate this natural instinct. Achilles, disguised among the maidens, was detected by the wily Ulysses, because he chose arms, not jewels, from the travelling merchant's stores. In the most placid life, a man may pant for danger; and we know quiet, unobtrusive men who have confessed to us that they never step into a railroad-car without the secret hope of a collision.

This is the courage of heroic races, as Highlanders, Circassians, Montenegrins, Afghans, and those Arabs among whom Urquhart finely said that peace could not be purchased by victory. Where destined to appear at all, it is likely to be developed in extreme youth, which explains such instances as the *gamins de Paris*, and that of Sir Cloudesley Shovel, who in boyhood conveyed a dispatch during a naval engagement, swimming through double lines of fire. Indeed, among heroic races, young soldiers are preferable for daring; such, at least, is the testimony of the highest authorities, as Ney and Wellington. "I have found," said the Duke, "that raw troops, however inferior to the old ones in manœuvring, may be superior to them in down-

right hard fighting with the enemy. At Waterloo, the young ensigns and lieutenants, who had never before seen an enemy, rushed to meet death as if they were playing at cricket."

But though youth is good for an onset, it needs habit and discipline to give steadiness. A boy will risk his life where a veteran will be too circumspect to follow him; but to perform a difficult manœuvre in face of an enemy requires Sicinius with forty-five scars on his breast. "The very apprehension of a wound," said Seneca, "startles a man when he first bears arms; but an old soldier bleeds boldly, for he knows that a man may lose blood and yet win the day." Before the battle of Preston Pans, Mr. Ker of Gräden, "an experienced officer," mounted on a gray pony, coolly reconnoitred all the difficult ground between the two armies, crossed it in several directions, deliberately alighted more than once to lead his horse through gaps made for that purpose in the stone walls,—under a constant shower of musket-balls. He finally returned unhurt to Charles Edward, and dissuaded him from crossing. Undoubtedly, any raw Highlander in the army would have incurred the same risk, with or without a sufficient object; but not one of them would have brought back so clear a report,—if, indeed, he had brought himself back.

The most common evidence of this dependence of many persons' courage on habit is in the comparative timidity of brave men against novel dangers,—as of sailors on horseback, and mountaineers at sea. Nay, the same effect is sometimes produced merely by different forms of danger within the same sphere. Sea-captains often attach an exaggerated sense of peril to small boats; Condé confessed himself a coward in a street-fight; and William the Conqueror is said to have trembled exceedingly (*vehementer tremens*) during the disturbance which interrupted his coronation. It was probably from the same cause, that Mrs. Inchbald, the most fearless of actresses, was once entirely overcome by timidity on assuming a character in a masquerade.

On a larger scale, the mere want of habitual exposure to danger will often cause a whole population to be charged with greater cowardice than really belongs to them. Thus, after the coronation of the Chevalier, in the Scottish insurrection of 1745, although the populace of Edinburgh crowded around him, kissing his very garments when he walked abroad, yet scarcely a man could be enlisted, in view of the certainty of an approaching battle with General Cope. And before this, when the Highlanders were marching on the city, out of a volunteer corps of four hundred raised to meet them, all but forty-five deserted before the gate was passed.* Yet there is no reason to doubt that these frightened citizens, after having once stood fire, might have been as brave as the average. It was a saying in Kansas, that the New England men needed to be shot at once or twice, after which they became the bravest of the brave.

This habitual courage mingles itself, doubtless, with the third species, the magnetic, or transmitted. No mental philosopher has yet done justice to the wondrous power of leadership, the "art Napoleon." The ancients stated it best in their proverb, that an army of stags led by a lion is more formidable than an army of lions led by a stag. It was for this reason that the Greeks used to send to Sparta, not for soldiers, but for a general. When Crillon, *l'homme sans peur*, defended Quillebœuf with a handful of men against Marshal Villars, the latter represented to him, that it was madness to resist such superiority of numbers, to which the answer was simply,—"*Crillon est dedans, et Villars est dehors.*" The event proved that the hero inside was stronger than the army outside.

Every one knows that there is a certain magnetic power in courage, apart

* It is worth mentioning, that among the deserters was one valorous writing-master, who had previously prepared a breastplate of two quires of his own foolscap, inscribing thereon, in his best penmanship,—"*This is the body of J. M.; pray, give it Christian burial.*"

from all physical strength. In a family of lone women, there is usually some one whose presence is held to confer safety on the house; she may be a delicate invalid, but she is not afraid. The same quality explains the difference in the demeanor of different companies of men and women, in great emergencies of danger. Read one narrative of shipwreck, and human nature seems all sublime; read another, and, under circumstances equally desperate, it appears base, selfish, grovelling. The difference lies simply in the influence of a few leading spirits. Ordinarily, as is the captain, so are the officers, so are the passengers, so are the sailors. Bonaparte said, that at the beginning of almost every battle there was a moment when the bravest troops were liable to sudden panic; let the personal control of the general once lead them past that, and the field was half won.

The courage of self-devotion, lastly, is the faculty evoked by special exigencies, in persons who have before given no peculiar evidence of courage. It belongs especially to the race of martyrs and enthusiasts, whose personal terrors vanish in the greatness of the object, so that Joan of Arc, listening to the songs of the angels, does not feel the flames. This, indeed, is the accustomed form in which woman's courage proclaims itself at last, unsuspected until the crisis comes. This has given us the deeds of Flora Macdonald, Jane Lane, and the Countess of Derby; the rescue of Lord Nithisdale by his wife, and that planned for Montrose by Lady Margaret Durham; the heroism of Catherine Douglas, thrusting her arm within the stanchions of the doorway to protect James I. of Scotland, till his murderers shattered the frail barrier; and that sublimest narrative of woman's devotion, Gertrude Van der Wart at her husband's execution. It is possible that all these women may have been timid and shrinking, before the hour of trial; and every emergency, in peace or war, brings out some such instances. At the close of the troubles of 1856, in Kansas, a traveller

chanced to be visiting a lady in Lawrence, who, in opening her work-basket, accidentally let fall a small pistol. She smiled and blushed, and presently acknowledged, that, when she had first pulled the trigger experimentally, six months before, she had shut her eyes and screamed, although there was only a percussion-cap to explode. Yet it afterwards appeared that she was one of the few women who remained in their houses, to protect them by their presence, when the town was entered by the Missourians,—and also one of the still smaller number who brought their rifles to aid their husbands in the redoubt, when two hundred were all that could be rallied against three thousand, in September of that eventful year. Thus easily is the transition effected!

This is the courage, also, of Africans, as manifested among ourselves,—the courage created by desperate emergencies. Supplied by long slavery, softened by mixture of blood, the black man seems to pass at one bound, as women do, from cowering pusillanimity to the topmost height of daring. The giddy laugh vanishes, the idle chatter is hushed, and the buffoon becomes a hero. Nothing in history surpasses the bravery of the Maroons of Surinam, as described by Stedman, or of those of Jamaica, as delineated by Dallas. Agents of the "Underground Railroad" report that the incidents which daily come to their knowledge are beyond all Greek, all Roman fame. These men and women, who have tested their courage in the lonely swamp against the alligator and the bloodhound, who have starved on prairies, hidden in holds, clung to locomotives, ridden hundreds of miles cramped in boxes, head downward, equally near to death if discovered or deserted,—and who have then, after enduring all this, gone voluntarily back to risk it over again, for the sake of wife or child,—what are we pale faces, that we should claim a rival capacity with theirs for heroic deeds? What matter, if none, below the throne of God, can now identify that nameless negro in the Tennessee

iron-works, who, during the last insurrection, said "he knew all about the plot, but would die before he would tell? *He received seven hundred and fifty lashes and died.*" Yet where, amid the mausoleums of the world, is there carved an epitaph like that?

The courage of blood, of habit, or of imitation is not necessarily a very exalted thing. But the courage of self-devotion cannot be otherwise than noble, however wasted on fanaticism or delusion. It enters the domain of conscience. Yet, although the sublimest, it is not necessarily the most undaunted form of courage. It is vain to measure merit by martyrdom, without reference to the temperament, the occasion, and the aim. There is no passion in the mind of man so weak, said Lord Bacon, but it mates and masters the fear of death. Sinner, as well as saint, may be guillotined or lynched, and endure it well. A red Indian or a Chinese robber will dare the stake as composedly as an early Christian or an abolitionist. One of the bravest of all death-scenes was the execution of Simon, Lord Lovat, who was unquestionably one of the greatest scoundrels that ever burdened the earth. We must look deeper. The test of a man is not in the amount of his endurance, but in its motive; does he love the right, he may die in glory on a bed of down; is he false and base, these things thrust discord into his hymn of dying anguish, and no crown of thorns can sanctify his drooping head. Physical courage is, after all, but a secondary quality, and needs a sublime motive to make it thoroughly sublime.

Among all these different forms of courage it is almost equally true that it is the hardest of all qualities to predict or identify, in an individual case, before the actual trial. Many a man has been unable to discover, till the critical moment, whether he himself possessed it or not. It is often denied to the healthy and strong, and given to the weak. The pugilist may be a poltroon, and the book-worm a hero. We have seen the most purely ideal philosopher in this country

face the black muzzles of a dozen loaded revolvers with his usual serene composure. And on the other hand, we have known a black-bearded backwoodsman, whose mere voice and presence would quell any riot among the lumberers,—yet this man, nicknamed by his *employées* "the black devil," confessed himself to be in secret the most timid of lambs.

One reason of this difficulty of estimate lies in the fact, that courage and cowardice often complicate themselves with other qualities, and so show false colors. For instance, the presence or absence of modesty may disguise the genuine character. The unpretending are not always timid, nor always brave. The boaster is not always, but only commonly, a coward. Were it otherwise, how could we explain the existence of courage in Frenchmen or Indians? Barking dogs sometimes bite, as many a small boy, too trustful of the proverb, has found to his cost. "If that be a friend of yours," says Brantôme's brave Spanish Cavalier, "pray for his soul, for he has quarrelled with me." Indeed, the Gascons, whose name is identified with boasting, (*gasconade*,) were always among the bravest races in Europe.

Again, the mere quality of caution is often mistaken for cowardice, while heedlessness passes for daring. A late eminent American sculptor, a man of undoubted courage, is said to have always taken the rear car in a railroad train. Such a spirit of prudence, where well-directed, is to be viewed with respect. We ought not to reverence the blind recklessness which sits on the safety-valve during a steamboat-race, but the cool composure which neither underrates a danger nor shrinks from it. The best encomium is that of Malcolm M'Leod upon Charles Edward:—"He was the most cautious man, not to be a coward, and the bravest man, not to be rash, that I ever saw"; or that of Charles VII. of France upon Pierre d'Aubusson:—"Never did I see united so much fire and so much wisdom."

Still again, men vary as to the form of danger which tests them most severely.

The Irish are undoubtedly a brave nation, but their courage is apt to vanish in presence of sickness. They are not, however, alone in this, if we may judge from the newspaper statements, that, after the recent quarantine riots in New York, a small-pox patient lay all day untended in the Park, because no one dared to go near him. It is said of Dr. Johnson, that he was a hero against pain, but a coward against death. Probably the contrary emotion is quite as common. To a believer in immortality, death, even when premature, can scarcely be regarded as an unmitigated evil, but pain enforces its own recognition. We can hardly agree with the frightened recruit in the farce, who thinks "Victory or Death" a forbidding war-cry, but "Victory or Wooden Legs" a more appetizing alternative.

Beside these complications, there are those arising from the share which conscience has in the matter. "Thrice is he armed that hath his quarrel just," and the most resolute courage will sometimes quail in a bad cause, and even die in its armor, like Bois-Guilbert. It was generally admitted, on both sides, in Kansas, that the "Border Ruffians" seldom dared face an equal number; yet nobody asserted that these men were intrinsically deficient in daring; it was only conscience which made cowards of them all.

But it is, after all, the faculty of imagination which, more than all else, confuses the phenomena of courage and cowardice. A very imaginative child is almost sure to be reproached with timidity, while mere stolidity takes rank as courage. The bravest boy may sometimes be most afraid of the dark, or of ghosts, or of the great mysteries of storms and the sea. Even the mighty Charlemagne shuddered when the professed enchanter brought before him the vast forms of Dietrich and his Northern companions, on horseback. We once saw a party of boys tested by an alarm which appealed solely to the imagination. The only one among them who stood the test was the most cowardly of the group, who escaped the contagion through sheer lack of this

faculty. Any imaginative person can occasionally test this on himself by sleeping in a large lonely house, or by bathing alone in some solitary place by the great ocean; there comes a thrill which is not born of terror, and the mere presence of a child breaks the spell,—though it would only enhance the actual danger, if danger there were.

This explains the effect of darkness on danger. "Let Ajax perish in the face of day." Who has not shuddered over the description of that Arkansas duel, fought by two naked combatants, with pistol and bowie-knife, in a dark room? One thrills to think of those first few moments of breathless, sightless, hopeless, hushed expectation,—then the confused encounter, the slippery floor, the invisible, ghastly terrors of that horrible chamber. Many a man would shrink from *that*, who would march coolly up to the cannon's mouth by daylight.

It is probably this mingling of imaginative excitement which makes the approach of peril often more terrible than its actual contact. "A true knight," said Sir Philip Sidney, "is fuller of gay bravery in the midst than at the beginning of danger." The boy Condé was reproached with trembling, in his first campaign. "My body trembles," said the hero, "with the actions my soul meditates." And it is said of Charles V., that he often trembled when arming for battle, but in the conflict was as cool as if it were impossible for an emperor to be killed.

These stray glimpses into the autobiography of heroism are of inestimable value, and they are scanty at best. It is said of Turenne, that he was once asked by M. de Lamoignon, at the dinner-table of the latter, if his courage was never shaken at the commencement of a battle? "Yes," said Turenne, "I sometimes undergo great nervous excitement; but there are in the army a great multitude of subaltern officers and soldiers who experience none whatever." This goes to illustrate the same point.

To give to any form of courage an available or working value, it is essential

that it have two qualities, promptness and persistency. What Napoleon called "two-o'clock-in-the-morning courage" is rare. It requires great enthusiasm or great discipline to be proof against a surprise. It is said that Suwarrow, even in peace, always slept fully armed, boots and all. "When I was lazy," he said, "and wanted to enjoy a comfortable sleep, I usually took off one spur." In regard to persistency, history is full of instances of unexpected reverses and eleventh-hour triumphs. The battle of Marengo was considered hopeless, for the first half of the day, and a retreat was generally expected, on the part of the French; when Desaix, consulted by Bonaparte, looked at his watch and said,— "The battle is completely lost, but it is only two o'clock, and we shall have time to gain another." He then made his famous and fatal cavalry-charge, and won the field. It was from a noble appreciation of this quality of persistency, that, when the battle of Cannæ was lost, and Hannibal was measuring by bushels the rings of the fallen Roman knights, the Senate of Rome voted thanks to the defeated general, Consul Terentius Varro, for not having despaired of the republic.

Thus armed at all points, incapable of being either surprised or exhausted, courage achieves results which seem miraculous. It is an element of inspiration, something superadded and incalculable, when all the other forces are exhausted. When we consider how really formidable becomes the humblest of quadrupeds, cat or rat, when it grows mad and desperate and throws all personal fear behind, it is clear that there must be a reserved power in human daring which defies computation and equalizes the most fearful odds. Take one man, mad with excitement or intoxication, place him with his back to the wall, a knife in his hand, and the fire of utter frenzy in his eyes,—and who, among the thousand bystanders, dares make the first attempt to disarm him? Desperate courage makes one a majority. Baron Trenck nearly escaped

from the fortress of Glatz at noonday, snatching a sword from an officer, passing all the sentinels with a sudden rush, and almost effecting his retreat to the mountains; "which incident will prove," he says, "that adventurous and even rash daring will render the most improbable undertakings successful, and that desperate attempts may often make a general more fortunate and famous than the wisest and best-concerted plans."

It is this miraculous quality which helps to explain the extraordinary victories of history: as where the army of Lucullus at Tigranocerta slew one hundred thousand barbarians with the loss of only a hundred men,—or where Cortés conquered Mexico with six hundred foot and sixteen horse. The astounding narratives in the chivalry romances, where the historian risks his Palmerin or Amadis as readily against twenty giants as one, secure of bringing him safely through,—or the corresponding modern marvels of Alexandre Dumas,—seem scarcely exaggerations of actual events. A Portuguese, at the siege of Goa, inserted a burning match in a cask of gunpowder, then grasped it in his arms, and, crying to his companions, "Stand aside, I bear my own and many men's lives," threw it among the enemy, of whom a hundred were killed by the explosion, the bearer being left unhurt. John Haring, on a Flemish dyke, held a thousand men at bay, saved his army, and finally escaped uninjured. And the motto of Bayard, *Vires agminis unus habet*, was given him after singly defending a bridge against two hundred Spaniards. Such men appear to bear charmed lives, and to be identical with the laws of Fate. "What a soldier, what a Roman, was thy father, my young bride! How could they who never saw him have discoursed so rightly upon virtue?"

From popular want of faith in these infinite resources of daring, it is a common thing for persons of eminent courage to be stigmatized as rash. This has been strikingly the case, for instance, in modern times, with the Marquis of Wellesley

and Sir Charles Napier. When the Duke of Wellington was in the Peninsula in 1810, the City of London addressed the throne, protesting against the bestowal of "honorable distinctions upon a general who had thus far exhibited, with equal rashness and ostentation, nothing but an useless valor."

But if bravery is liable to exist in excess, on the one side, it is a comfort to think that it is capable of cultivation, where deficient. There may be a few persons born absolutely without the power of courage, as without the susceptibility to music,—but very few; and, no doubt, the elements of daring, like those of musical perception, can be developed in almost all. Once rouse the enthusiasm of the will, and courage can be systematically disciplined. Emerson's maxim gives the best regimen: "Always do what you are afraid to do." If your lot is laid amid scenes of peace, then carry the maxim into the arts of peace. Are you afraid to swim that river? then swim it. Are you afraid to leap that fence? then leap it. Do you shrink from the dizzy height of yonder magnificent pine? then climb it, and "throw down the top," as they do in the forests of Maine. Goethe cured himself of dizziness by ascending the lofty stagings of the Frankfurt carpenters. Nothing is insignificant that is great enough to alarm you. If you cannot think of a grizzly bear without a shudder, then it is almost worth your while to travel to the Rocky Mountains in order to encounter the reality. It is said that Van Amburgh attributed all his power over animals to the similar rule given him by his mother in his boyhood: "If anything frightens you, walk up and face it." Applying this maxim boldly, he soon satisfied himself that man possessed a natural power of control over all animals, if he dared to exercise it. He said that every animal divined by unerring instinct the existence of fear in his ruler, and a moment's indecision might cost one's life. On being asked, what he should do, if he found himself in the desert, face to face with a lion, he an-

swered, "If I wished for certain death, I should turn and run away."

Physical courage may be educated; but it must be trained for its own sake. We say again, it must not be left to moral courage to include it, for the two faculties have different elements,—and what God has joined, human inconsistency may put asunder. The disjunction is easy to explain. Many men, when committed on the right side of any question, get credit for a "moral courage," which is, in their case, only an intense egotism, isolating them from all demand for human sympathy. In the best cause, they prefer to belong to a party conveniently small, and, on the slightest indications of popular approbation, begin to suspect themselves of compromise. The abstract martyrdom of unpopularity is therefore clear gain to them; but when it comes to the rack and the thumbscrew, the revolver and the bowie-knife, the same habitual egotism makes them cowards. These men are annoying in themselves, and still worse because they throw discredit on the noble and unselfish reformers with whom they are identified in position. But even among this higher class there are differences of temperament, and it costs one man an effort to face the brute argument of the slung-shot, while another's fortitude is not seriously tested till it comes to facing the newspaper editors.

We have given but a few aspects of a rich and endless theme, and have depicted these more by examples than analysis, mindful of the saying of Sidney, that Alexander received more bravery of mind by the example of Achilles than by hearing the definition of fortitude. If we have seemed to draw illustrations too profusely from the records of battles, it is to be remembered, that, even if war be not the best nurse of heroisms, it is their best historian. The chase, for instance, though perhaps as prolific in deeds of daring as the camp, has found few Cummings and Gerards for annalists, and the more trivial aim of the pursuit diminishes the permanence of its records. The

sublime fortitude of hospitals, the bravery shown in infected cities, the fearlessness of firemen and of sailors, these belong to those times of peace which have as yet few historians. But we have sought to exhibit the deep foundations and instincts of courage, and it matters little whence the illustrations come. Doubtless, for every great deed ever narrated, there were a hundred greater ones untold; and the noblest valor of the world may sleep unrecorded, like the heroes before Homer.

But there are things which, once written, the world does not willingly let die; embalmed in enthusiasm, borne down on the unconquerable instincts of childhood, they become imperishable and eternal. We need not travel to visit the graves of the heroes: they are become a part of the common air; their line is gone out to all generations. Shakspeares are but their servants; no change of time or degradation of circumstance can debar us from their lesson. The fascination which every one finds in the simplest narrative of daring is the sufficient testimony to

its priceless and permanent worth. Human existence finds its range expanded, when Demosthenes describes Philip of Macedon, his enemy: "I saw this Philip, with whom we disputed for empire. I saw him, though covered with wounds, his eye struck out, his collar-bone broken, maimed in his hands, maimed in his feet, still resolutely rush into the midst of dangers, ready to deliver up to Fortune any part of his body she might require, provided he might live honorably and gloriously with the rest." Would it not be shameful, that war should leave us such memories as these, and peace bequeathe us only money and repose? True, "peace hath her victories, no less renowned than war." No less! but they should be infinitely greater. *Esto miles pacificus*, "Be the soldier of peace," was the priestly benediction of mediæval knights; and the aspirations of humaner ages should lead us into heroisms such as Plutarch never portrayed, and even Bayard and Sidney only prophesied, but died without the sight of.

NOVEMBER.

MUCH have I spoken of the faded leaf;
 Long have I listened to the wailing wind,
 And watched it ploughing through the heavy clouds;
 For autumn charms my melancholy mind.

When autumn comes, the poets sing a dirge:
 The year must perish; all the flowers are dead;
 The sheaves are gathered; and the mottled quail
 Runs in the stubble, but the lark has fled!

Still, autumn ushers in the Christmas cheer,
 The holly-berries and the ivy-tree:
 They weave a chaplet for the Old Year's heir;
 These waiting mourners do not sing for me!

I find sweet peace in depths of autumn woods,
 Where grow the ragged ferns and roughened moss;
 The naked, silent trees have taught me this,—
 The loss of beauty is not always loss!

A VISIT TO THE AUTOCRAT'S LANDLADY.

By the Special Reporter of the "Oceanic Miscellany."

THE door was opened by a stout, red-armed lump of a woman, who, in reply to my question, said her name was Bridget, but Biddy they call her mostly. There was a rickety hat-stand in the entry, upon which, by the side of a schoolboy's cap, there hung a broad-brimmed white hat, somewhat fatigued by use, but looking gentle and kindly, as I have often noticed good old gentlemen's hats do, after they have worn them for a time. The door of the dining-room was standing wide open, and I went in. A long table, covered with an oil-cloth, ran up and down the length of the room, and yellow wooden chairs were ranged about it. She showed me where the Gentleman used to sit, and, at the last part of the time, the Schoolmistress next to him. The chairs were like the rest, but it was odd enough to notice that they stood close together, touching each other, while all the rest were straggling and separate. I observed that peculiar atmospheric flavor which has been described by Mr. Balzac, (the French storyteller who borrows so many things from some of our American leading writers,) under the name of *odeur de pension*. It is, as one may say, an olfactory perspective of an endless vista of departed breakfasts, dinners, and suppers. It is similar, if not identical, in all temperate climates; a kind of neutral tint, which forms the perpetual background upon which the banquet of to-day strikes out its keener but more transitory aroma. I don't think it necessary to go into any further particulars, because this atmospheric character has the effect of making the dining-rooms of all boarding-houses seem very much alike; and the accident of a hair-cloth sofa, cold, shiny, slippery, prickly,—or a veneered side-board, with a scale off here and there, and a knob or two missing,—or a por-

trait, with one hand half under its coat, the other resting on a pious-looking book,—these accidents, and such as these, make no great difference.

The landlady soon presented herself, and I followed her into the parlor, which was a decent apartment, with a smart centre-table, on which lay an accordion, a recent number of the "Pactolian," a gilt-edged, illustrated book or two, and a copy of the works of that distinguished native author, to whom I feel very spiteful, on account of his having, some years ago, attacked a *near friend of mine*, and whom, on Christian principles, I do not mention,—though I have noticed, that, where there is an accordion on the table, his books are apt to be lying near it.

The landlady was a "wilted," (not exactly withered,) sad-eyed woman, of the thin-blooded sort, but firm-fibred, and sharpened and made shrewd by her calling, so that the look with which she ran me over, in the light of a possible boarder, was so searching, that I was half put down by it. I informed her of my errand, which was to make some inquiries concerning two former boarders of hers, in whom a portion of the public had expressed some interest, and of whom I should be glad to know certain personal details,—as to their habits, appearance, and so on. Any information she might furnish would be looked upon in the light of a literary contribution to the pages of the "Oceanic Miscellany," and be compensated with the well-known liberality of the publishers of that spirited, enterprising, and very popular periodical.

Up to this point, the landlady's countenance had kept that worried, watchful look, which poor women, who have to fight the world single-handed, sooner or later grow into. But now her features

relaxed a little. The blow which had crushed her life had shattered her smile, and, as the web of shivered expression shot off its rays across her features, I fancied that Grief had written her face all over with Ws, to mark her as one of his forlorn flock of Widows.

The report here given is partly from the conversation held with the landlady at that time, and partly from written notes which she furnished me; for, finding that she was to be a contributor to the "*Oceanic Miscellany*," and that in that capacity she would be entitled to the ample compensation offered by the liberal proprietors of that admirably conducted periodical,—which we are pleased to learn has been growing in general favor, and which, the public may be assured, no pains will be spared to render superior in every respect,—I say, finding that she was to be handsomely remunerated, she entered into the subject with great zeal, both verbally and by letter. The reader will see that I sometimes follow her orthography, and sometimes her pronunciation, as I may have taken it from writing or from speech.

THE LANDLADY'S ACCOUNT.

THERE is two vacant places at my table, which I should be pleased to fill with two gentlemen, or with a gentleman and his wife, or any respectable people, be they merried or single. It is about the gentleman and the lady that used to set in them places, that inquiries is bein' made. Some has wrote, and some has spoke, and a good many folks, that was unbeknown to me, has come in and wanted to see the place where they used to set, and some days it's been nothin' but ring, ring, ring, from mornin' till night.

Folks will be curious about them that has wrote in the papers. There's my daughter couldn't be easy no way till she'd got a profeel of one of them authors, to hang up right over the head of her bed. That's the gentleman that writes stories in the papers, some in the

same way this gentleman did, I expect, that inquiries is made about.

I'm a poor woman, that tries to get an honest livin', and works hard enough for it;—lost my husband, and buried five children, and have two livin' ones to support. It's a great loss to me, losin' them two boarders; and if there's anything in them papers he left in that desk that will fetch anything at any of the shops where they buy such things, I'm sure I wish you'd ask the printer to step round here and stop in and see what any of 'em is worth. I'll let you have one or two of 'em, and then you can see whether you don't know any body that would take the lot. I suppose you'll put what I tell you into shape, for, like as not, I sha'n't write it out nor talk jest as folks that make books do.

This gentleman warn't no great of a gentleman to look at. Being of a very moderate dimension,—five foot five *he* said, but five foot four more likely, and I've heerd him say he didn't weigh much over a hundred and twenty pound. He was light-complected rather than darksome, and was one of them smooth-faced people that keep their baird and wiskers cut close, jest as if they'd be very troublesome if they let 'em grow,—instead of layin' out their face in grass, as my poor husband that's dead and gone used to say. He was a well-behaved gentleman at table, only talked a good deal, and pretty loud sometimes, and had a way of turnin' up his nose when he didn't like what folks said, that one of my boarders, who is a very smart young man, said he couldn't stand, no how, and used to make faces and poke fun at him whenever he see him do it.

He never said a word aginst any vittles that was set before him, but I mistrusted that he was more partickerlar in his eatin' than he wanted folks to know of, for I've know'd him make believe to eat, and leave the vittles on his plate when he didn't seem to fancy 'em; but he was very careful never to hurt my feelin's, and I don't belief he'd have spoke, if he had found a tadpole in a dish of

chowder. But nothin' could hurry him when he was about his vittles. Many's the time I've seen that gentleman keep in two or three of 'em settin' round the breakfast-table after the rest had swallowed their meal, and the things was cleared off, and Bridget was a-waitin' to get the cloth away,—and there that little man would set, with a tumbler of sugar and water,—what he used to call O Sukray, —a-talkin' and a-talkin',—and sometimes he would laugh, and sometimes the tears would come into his eyes,—which was a kind of grayish blue eyes,—and there he'd set and set, and my boy Benjamin Franklin hangin' round and gettin' late for school and wantin' an excuse, and an old gentleman that's one of my boarders a-listenin' as if he wa'n't no older than my Benj. Franklin, and that schoolmistress settin' jest as if she'd been bewitched, and you might stick pins into her without her hollerin'. He was a master hand to talk when he got a-goin'. But he never would have no disputes nor long arggements at my table, and I liked him all the better for that; for I had a boarder once that never let nothin' go by without disputin' of it, till nobody knowed what he believed and what he didn't believe, only they was pretty sure he didn't believe the side he was a-disputin' for, and some of 'em said, that, if you wanted him to go any particklerlar way, you must do with him just as folks do that drive—well, them obstinate creeturs that squeal so,—for I don't like to name such creeturs in connexion with a gentleman that paid his board regular, and was a very smart man, and knowed a great deal, only his knowledge all laid crosswise, as one of 'em used to say, after t'other one had shet him up till his mouth wa'n't of no more use to him than if it had been a hole in the back of his head. This wa'n't no sech gentleman. One of my boarders used to say that he always said exactly what he was a mind to, and stuck his idees out jest like them that sells pears outside their shop-winders,—some is three cents, some is two cents, and some is only one cent, and if you don't

like, you needn't buy, but them's the articles and them's the prices, and if you want 'em, take 'em, and if you don't, go about your business, and don't stand mellerin' of 'em with your thumbs all day till you've spilt 'em for other folks.

He was a man that loved to stick round home as much as any cat you ever see in your life. He used to say he'd as lief have a tooth pulled as go away anywhere. Always got sick, he said, when he went away, and never sick when he didn't. Pretty nigh killed himself goin' about lecterin' two or three winters,—talkin' in cold country lyceums,—as he used to say,—goin' home to cold parlors and bein' treated to cold apples and cold water, and then goin' up into a cold bed in a cold chamber, and comin' home next mornin' with a cold in his head as bad as the horse-distemper. Then he'd look kind of sorry for havin' said it, and tell how kind some of the good women was to him,—how one spread an edder-down comforter for him, and another fixed up somethin' hot for him after the lecturer, and another one said,—“There now, you smoke that cigar of yours after the lecturer, jest as if you was at home,”—and if they'd all been like that, he'd have gone on lectering forever, but, as it was, he had got pooty nigh enough of it, and preferred a nateral death to puttin' himself out of the world by such violent means as lecterin'.

He used to say that he was always good company enough, if he wasn't froze to death, and if he wasn't pinned in a corner so't he couldn't clear out when he'd got as much as he wanted. But he was a dreadful uneven creetur in his talk, and I've heerd a smart young man that's one of my boarders say, he believed he had a lid to the top of his head, and took his brains out and left 'em up-stairs sometimes when he come down in the mornin'.—About his ways, he was spry and quick and impatient, and, except in a good company,—he used to say,—where he could get away at any minute, he didn't like to set still very long to once, but wanted to be off walkin', or rowin' round

in one of them queer boats of his, and he was the solitariest creetur in his goin's about (except when he could get that schoolmistress to trail round with him) that ever you see in your life. He used to say that usin' two eyes and two legs at once, and keepin' one tongue a-goin', too, was too sharp practice for him; so he had a way of dodgin' round all sorts of odd streets, I've heerd say, where he wouldn't meet people that would stick to him.

It didn't take much to please him. Sometimes it would be a big book he'd lug home, and sometimes it would be a mikerscope, and sometimes it would be a dreadful old-lookin' fiddle that he'd picked up somewhere, and kept a-screechin' on, sayin' all the while that it was jest as smooth as a flute. Then ag'in I'd hear him laughin' out all alone, and I'd go up and find him readin' some verses that he'd been makin'. But jest as like as not I'd go in another time, and find him cryin',—but he'd wipe his eyes and try not to show it,—and it was all nothin' but some more verses he'd been a-writin'. I've heerd him say that it was put down in one of them ancient books, that a man must cry, himself, if he wants to make other folks cry; but, says he, you can't make 'em neither laugh nor cry, if you don't try on them feelin's yourself before you send your work to the customers.

He was a temperate man, and always encouraged temperance by drinkin' jest what he was a mind to, and that was generally water. You couldn't scare him with names, though. I remember a young minister that's go'n' to be, that boards at my house, askin' once what was the safest strong drink for them that had to take somethin' for the stomach's sake and thine awful infirmities. *Aqua fortis*, says he,—because you know that'll eat your insides out, if you get it too strong, and so you always mind how much you take. Next to that, says he, rum's the safest for a wise man, and small beer for a fool.

I never mistrusted anything about him and that schoolmistress till I heerd they

was keepin' company and was go'n' to be merried. But I might have knowed it well enough by his smartin' himself up the way he did, and partin' the hair on the back of his head, and gettin' a blue coat with brass buttons, and wearin' them dreadful tight little French boots that used to stand outside his door to be blacked, and stickin' round schoolma'am, and follerin' of her with his eyes; but then he was always fond of ladies, and used to sing with my daughter, and wrote his name out in a blank book she keeps,—them that has daughters of their own will keep their eyes on 'em,—and I've often heerd him say he was fond of music and picters,—and she worked a beautiful pattern for a chair of his once, that he seemed to set a good deal by; but I ha'n't no fault to find, and there is them that my daughter likes and them that likes her.

As to schoolma'am, I ha'n't a word to say that a'n't favorable, and don't harbor no unkind feelin' to her, and never knowed them that did. When she first come to board at my house, I hadn't any idee she'd live long. She was all dressed in black; and her face looked so delicate, I expected before six months was over to see a plate of glass over it, and a Bible and a bunch of flowers layin' on the lid of the—well, I don't like to talk about it; for when she first come, and said her mother was dead, and she was alone in the world, except one sister out West, and unlocked her trunk and showed me her things, and took out her little purse and showed me her money, and said that was all the property she had in the world but her courage and her education, and would I take her and keep her till she could get some scholars,—I couldn't say not one word, but jest went up to her and kissed her and bu'st out a-cryin' so as I never cried since I buried the last of my five children that lays in the buryin'-ground with their father, and a place for one more grown person betwixt him and the shortest of them five graves, where my baby is waitin' for its mother.

[The landlady stopped here and shed

a few still tears, such as poor women who have been wrung out almost dry by fierce griefs lose calmly, without sobs or hysterical convulsions, when they show the scar of a healed sorrow.]

—The schoolma'am had jest been killin' herself for a year and a half with waitin' and tendin' and watchin' with that sick mother that was dead now and she was in mournin' for. She didn't say so, but I got the story out of her, and then I knowed why she looked so dreadful pale and poor. By-and-by she begun to get some scholars, and then she would come home sometimes so weak and faint that I was afraid she would drop. One day I handed her a bottle of camphire to smell of, and she took a smell of it, and I thought she'd have fainted right away.—Oh, says she, when she come to, I've breathed that smell for a whole year and more, and it kills me to breathe it again!

The fust thing that ever I see pass between the gentleman inquiries is made about, and her, was on occasion of his makin' some very searchin' remarks about griefs, sech as loss of friends and so on. I see her fix her eye steady on him, and then she kind of trembled and turned white, and the next thing I knew was she was all of a heap on the floor. I remember he looked into her face then and seemed to be seized as if it was with a start or spasm-like,—but I thought nothin' more of it, supposin' it was because he felt so bad at makin' her faint away.

Some has asked me what kind of a young woman she was to look at. Well, folks differ as to what is likely and what is homely. I've seen them that was as pretty as picters in my eyes: cheeks jest as rosy as they could be, and hair all shiny and curly, and little mouths with lips as red as sealin'-wax, and yet one of my boarders that had a great name for makin' marble figgers would say such kind of good looks warn't of no account. I knowed a young lady once that a man drowneded himself because she wouldn't marry him, and she might have had her pick of a dozen, but I didn't call her anything great in the way of looks.

All I can say is, that, whether she was pretty or not, she looked like a young woman that knowed what was true and that loved what was good, and she had about as clear an eye and about as pleasant a smile as any man ought to want for every-day company. I've seen a good many young ladies that could talk faster than she could; but if you'd seen her or heerd her when our boardin'-house caught afire, or when there was anything to be done besides speech-makin', I guess you'd like to have stood still and looked on, jest to see that young woman's way of goin' to work.—Dark, rather than light; and slim, but strong in the arms,—perhaps from liftin' that old mother about; for I've seen her heavin' one end of a big heavy chest round that I shouldn't have thought of touchin',—and yet her hands was little and white.—Dressed very plain, but neat, and wore her hair smooth. I used to wonder sometimes she didn't wear some kind of ornaments, bein' a likely young woman, and havin' her way to make in the world, and seein' my daughter wearin' jewelry, which sets her off so much, every day. She never would,—nothin' but a breastpin with her mother's hair in it, and sometimes one little black cross. That made me think she was a Roman Catholic, especially when she got a picter of the Virgin Mary and hung it up in her room; so I asked her, and she shook her head and said these very words,—that she never saw a church-door so narrow she couldn't go in through it, nor so wide that all the Creator's goodness and glory could enter it; and then she dropped her eyes and went to work on a flannel petticoat she was makin',—which I knowed, but she didn't tell me, was for a poor old woman.

I've said enough about them two boarders, but I believe it's all true. Their places is vacant, and I should be very glad to fill 'em with two gentlemen, or with a gentleman and his wife, or any respectable people, be they merried or single.

I've heerd some talk about a friend of that gentleman's comin' to take his place.

That's the gentleman that he calls "the Professor," and I'm sure I hope there is sech a man; only all I can say is, I never see him, and none of my boarders ever see him, and that smart young man that I was speakin' of says he don't believe there's no sech person as him, nor that other one that he called "the Poet." I don't much care whether folks professes or makes poems, if they makes themselves agreeable and pays their board regular. I'm a poor woman, that tries to get an honest livin', and works hard enough for it; lost my husband, and buried five children.

Excuse me, dear Madam, I said,—looking at my watch,—but you spoke of certain papers which your boarder left, and which you were ready to dispose of for the pages of the "Oceanic Miscellany."

The landlady's face splintered again into the wreck of the broken dimples of better days.—She should be much obleeged, if I would look at them, she said,—and went up stairs and got a small desk containing loose papers. I looked them hastily over, and selected one of the shortest pieces, handed the landlady a check which astonished her, and send the following poem as an appendix to my report. If I should find others adapted to the pages of the spirited periodical which has done so much to develop and satisfy the intellectual appetite of the American public, and to extend the name of its enterprising publishers throughout the reading world, I shall present them in future numbers of the "Oceanic Miscellany."

THE OLD MAN OF THE SEA.

A NIGHTMARE DREAM BY DAYLIGHT.

Do you know the Old Man of the Sea, of the Sea?

Have you met with that dreadful old man?
If you haven't been caught, you will be, you will be;

For catch you he must and he can.

He doesn't hold on by your throat, by your throat,

As of old in the terrible tale;
But he grapples you tight by the coat, by the coat,

Till its buttons and button-holes fail.

There's the charm of a snake in his eye, in his eye,

And a polypus-grip in his hands;
You cannot go back, nor get by, nor get by,
If you look at the spot where he stands.

Oh, you're grabbed! See his claw on your sleeve, on your sleeve!

It is Sinbad's Old Man of the Sea!
You're a Christian, no doubt you believe, you believe;—

You're a martyr, whatever you be!

—Is the breakfast-hour past? They must wait, they must wait,

While the coffee boils sullenly down,
While the Johnny-cake burns on the grate, on the grate,
And the toast is done frightfully brown.

—Yes, your dinner will keep; let it cool, let it cool,

And Madam may worry and fret,
And children half-starved go to school, go to school;—

He can't think of sparing you yet.

—Hark! the bell for the train! "Come along! Come along!

For there isn't a second to lose."
"ALL ABOARD!" (He holds on.) "Fsht! ding-dong! Fsht! ding-dong!"—

You can follow on foot, if you choose.

—There's a maid with a cheek like a peach, like a peach,

That is waiting for you in the church;—
But he clings to your side like a leech, like a leech,

And you leave your lost bride in the lurch.

—There's a babe in a fit,—hurry quick! hurry quick!

To the doctor's as fast as you can!
The baby is off, while you stick, while you stick,

In the grip of the dreadful Old Man!

—I have looked on the face of the Bore, of the Bore;

The voice of the Simple I know;
I have welcomed the Flat at my door, at my door;

I have sat by the side of the Slow;

I have walked like a lamb by the friend, by the friend,

That stuck to my skirts like a burr;
I have borne the stale talk without end, without end,

Of the sitter whom nothing could stir:

But my hamstrings grow loose, and I shake,
and I shake,
At the sight of the dreadful Old Man;
Yea, I quiver and quake, and I take, and I
take,
To my legs with what vigor I can!

Oh, the dreadful Old Man of the Sea, of the
Sea!
He's come back like the Wandering Jew!
He has had his cold claw upon me, upon
me,—
And be sure that he'll have it on you!

THE GREAT EVENT OF THE CENTURY.

A LETTER FROM PAUL POTTER, OF NEW
YORK, TO THE DON ROBERTO WAG-
ONERO, COMMORANT OF WASHING-
TON, IN THE DISTRICT OF COLUM-
BIA.

22,728, Five Hundred and Fifty-First St., }
New York, May 1, 1858. }

DEAR DON BOBUS,—Pardon my abrup-
tness. *In medias res* is the rule,
you know, *formose puer*, my excellent
old boy! Bring out the Saint Peray, if
there be a bottle of that flavoured and
flavous tippie in your extensive cellars,—
which I doubt, since you never had more
than a single flask thereof, presented to
you by a returned traveller, who bought
it, to my certain knowledge, of a mixer
in Congress Street, in Boston. We
drank it, O ale-knight, *sub teg. pat. fag.*
more than five years ago, of a summer
evening, in dear old Cambridge, then
undisfigured by the New Chapel. That it
did not kill us as dead as Stilpo of Mega-
ra (*vide Seneca de Const.* for a notice of
that foolish old Stoic) was entirely ow-
ing to my abstinence and your naturally
strong constitution; for I remember that
you bolted nearly the whole of it. You
proved yourself to be a Mithridates of
white lead; while I—but I say no
more. I could quote you an appropriate
passage from the tippler of Teos, and in
the original Greek, if I had not long ago
pawned my copy of Anacreon (Barnes,
12mo. Cantab. 1721) to a fellow in Corn-
hill, who sold it on the very next day to
a total-abstinence tutor. Episodically I
may say, that the purchaser read it to

such purpose, that within a week he rose
to the honor of sleeping in the station-
house, from which keep he was rescued
by a tearful friend, who sent him to the
country, solitude, and spruce-beer.

"It is useless," says the Staggerite, "for
a sober man to knock at the door of the
Muses." It may also be useless for a so-
ber man to try to write letters to "The
New York Scorpion." In your perilous
and unhappy situation you must be a
rule unto yourself. But remember, O
Bobus, the saying of Montaigne, that
"apoplexy will knock down Socrates as
well as a porter." You are not exactly
Socrates; but your best friends have re-
marked that you are getting to be ex-
ceedingly stout. Stick to your cups, but
forbear, as Milton says, "to interpose
them oft." *In medio tutissimus*,—Half a
noggin is better than no wine. For the
sake of the dear old times, spare me the
pain of seeing you a reformed inebriate
or a Martha Washington!

Between Drunken Barnaby and Neal
Dow there is, I trust, a position which a
gentleman may occupy. Because I have
a touch of Charles Surface in my consti-
tution, I need not make a Toodles of my-
self. So bring out the smallest canakin
and let it clink softly,—for I have news
to tell you.

I remember, Bob, my boy, once upon
a certain Fourth of July,—I leave the
particular Fourth as indefinite as Mr.
Webster's "some Fourth" upon which
we were to go to war with England,—
while there was a tintinnabulation of the
bells, and an ear-splitting tantivy of brass-

bands, and an explosion of squibs, which, properly engineered, would have prostrated the great Chinese Wall, or the Porcelain Tower itself,—in short, a noise loud enough to make a Revolutionary patriot turn with joy in his coffin,—that I left my Pottery, after dutifully listening to Mrs. Potter's performance of twenty-eight brilliant variations, *pour le piano*, on "Yankee Doodle," by H. Hertz, (*Op.* 22,378,)—and sought the punches and patriotism, the joy and the juleps of the Waggonero Cottage. I found you, Bobus, as cool as if Fahrenheit and Reaumur were not bursting around you. Well do I remember the patriarchal appearance which you presented, seated in your own garden, (I think you took the prize for pompions at the county exhibition soon after,) under your own wide-spreading elm-tree, reading for facts in one of your nice old folios, and smoking one of those confounded cigars, with which, being proof against them yourself, you were in the habit of poisoning your friends. Solitary and alone, you would have reminded me of Abraham, Isaac, and Jacob,—three distinguished heads of families rolled into one,—but, surrounded as you were by the fruits of a happy union, the triple comparison was not to be resisted. Notwithstanding your hearty welcome, I was a little dispirited,—for I had come from a childless home. God had taken my sole little lamb,—and many miles away, with none to care for the flowers which in the first winter of our bereavement we had scattered upon her rounded grave, she who was the light of our eyes was sleeping. And while we were thus stricken and lonesome and desolate, your quiver was full and running over. I do not mind saying now, that I envied you, as I distributed the squibs, rockets, and other pyrotechnical fodder which I had brought in my pocket for your flock. I gulped it all down, however, with a pretty good grace, and went to my dinner like a philosopher. Do you not remember that I was particularly brilliant upon that occasion, and that I told my best story only three times in the course

of the evening? I flatter myself that I know how to conceal my feelings,—although I punished your claret cruelly, and was sick after it.

I have a notion, dear Don, that I am not writing very coherently, as you, whether *pransus* or *impransus*, almost always do. Under agitating circumstances you are cool, and I verily think that you would have reported the earthquake at Lisbon without missing one squashed *hidalgo*, one drop of the blue blood spilt, one convent unroofed, or one convent belle damaged. Your report would have been minutely circumstantial enough to have found favor with Samuel Johnson, LL.D., who for so long a time refused to believe in the Portuguese convulsion. But we are not all fit by nature to put about butter-tubs in July. I plead guilty to an excitable temperament. The Bowery youth here speak of a kind of perspiration which, metaphorically, they designate as "a cast-iron sweat." This for the last twelve hours has been my own agonizing style of exudation. And, moreover, the startling event of which I am to write has (to borrow again from the sage Montaigne) created in me "so many chimeras and fantastic monsters, one upon another, without design or order, that, the better at leisure to contemplate their strangeness and absurdity, I have begun to commit them to writing, hoping in time to make them ashamed of themselves." The novelty of my position causes me to shamle and shuffle, now to pause painfully, and then to dance like a droll. I go out from the presence of my household, that I may vent myself by private absurdities and exclusive antics. I retire into remote corners, that I may grin fearfully, unseen of Mistress Gamp and my small servant. I am possessed by a shouting devil, who is continually prompting me to give the "hip-hip-hurrah!" under circumstances which might split apex and base of several of my most important arteries,—which might bring on apoplexy, epilepsy, suffusion of the brain, or hernia,—which might cause death,—yes, Sir,—death of the mother, father, and child.

—Really, good friends, I ask your pardon! I do not know what I have done. Did I collar you, Dr. Slop? Send in your bill to-morrow! Did I smash the instruments beyond repair? And should you say now,—just speaking off-hand,—that two hundred and fifty dollars would be money enough to repair them? Of course, I can commit highway robbery, if it be absolutely necessary. My dear Mrs. Gamp, I fully appreciate the propriety of your suggestions. You want one quart of gin;—I comprehend. Shall it be your Hollands, your Aromatic Scheidam, your Nantz, or our own proud Columbian article? You want one quart of rum,—*potus e saccharo confectus*! You want one quart of brandy. You want one gallon of wine. You want a dozen of brown-stout. You want the patent vulcanized India-rubber pump. You want anise,—*pimpinella anisum*;—I comprehend. You want castor-oil,—a very fine medicine indeed,—I tasted it myself when a boy. You want magnesia. You want the patent Vesuvian night-lamp. Madam, that volcanic utensil shall be forthcoming.

Do I rave, Don Bob? Has reason caught the royal trick of the century, and left her throne? Let me be calm, as becometh one suddenly swelled into ancestral proportions! This small lump of red clay shall inherit my name, and my estate, which I now seriously purpose to acquire. For her will I labor. For her I will gorge "The Clarion" with leading articles. For her I will write the long dreamed-of poem in twenty-four parts. For her I will besiege the private dens of my friends the booksellers. Dear, helpless little atomy! infinitesimal object of love! bud, germ, seed, blossom, titbit, morsel, mannikin, tomtit, abbreviation, concentration, quintessence! tiny *multum in parvo*! charming diamond edition! thou small, red possibility! weeping promise of glad days to come! For thee will I put the world under contribution! For thee will I master 'pathy and 'logy and 'nomy and 'sophy! All was and is for thee! For thee sages have

written; for thee science has toiled; for thee looms are clanking, ships are sailing, and strong men laboring! Thou art born to a fortune better than one of gold! I am but thy servant, to bring all treasures and lay them at thy feet! Be remorseless, exacting, greedy of our love and our lore! Come, young queen, into thy queendom! All is thine!

Bobus, my friend, you undoubtedly think that I am beside myself. You are a tough, knotty old tree, and I have only one tender shoot. You may sneer, or you may pity,—I care not one baubee for your praise or your blame. I shall take my own course. I feel my responsibility, Sir! I shall not come to you for advice! I shall pursue the path of duty, Sir!—Come to you, forsooth! What could you give? A lot of rubbish from Confucius, with a farrago of useless knowledge anent the breeching and birching of babies in Japan. I shall seek original sources of information. What do you know, for instance, of lactation and the act of sucking, Sir? I have been, like a good Christian, to my Paley already. Hear the Archdeacon of Carlisle! "The teeth are formed within the gums, and there they stop; the fact being, that their farther advance to maturity would not only be useless to the newborn animal, but extremely in its way; as it is evident that the act of *sucking*, by which it is for some time to be nourished, will be performed with more ease, both to the nurse and to the infant, whilst the inside of the mouth and edges of the gums are smooth and soft, than if set with hard-pointed bones. By the time they are wanted, the teeth are ready." Now, dear Don, is not that an interesting piece of information? You are not a mother, and probably you never will be one; but can you imagine anything more unpleasant to the maternal sensibilities than a child born with teeth? Mentally and prophetically unpleasant, as suggestive of the amiable Duke of Gloster, who came into the world grinning at dentists; physically unpleasant, in respect of bites, and the impossibility

of emulating the complying conduct of Osric the water-fly, whose early politeness was vouched for by the Lord Hamlet. Bethink you, moreover, Don, of a wailing infant, full furnished with two rows of teeth—and nothing to masticate! whereas he must have been more cruel than the “parient” of the Dinah celebrated in song as the young lady who did not marry Mr. Villikins, that does not have something ready for them to do by the time the molars and bicuspid appear. I know the perils of dentition. But have we not the whole family of carminatives? Did the immortal Godfrey live and die in vain? Did not a kind Providence vouchsafe to us a Daffy? Are there not corals? Are there not India-rubber rings? And is there not the infinite tenderness and pity which we learn for the small, wailing sufferer, as, during the night which is not stilly, while the smouldering wick paints you, an immense, peripatetic *silhouette*, upon the wall, you pace to and fro the haunted chamber, and sing the song your mother sang while you were yet a child? What a noble privilege of martyrdom! What but parental love, deathless and irresistible, could tempt you thus, in drapery more classical than comfortable, to brave all dangers, to aggravate your rheumatism, to defy that celebrated god, Tirednature's sweetrestorer, and to take your snatches of sleep *à pied*, a kind of fatherly walking Stewart, as if you were doing your thousand miles in a thousand hours for a thousand dollars, and were sure of winning the money? Believe me, my friend, the world has many such martyrs, unknown, obscure, suffering men, whose names Rumor never blows through her miserable conch-shell,—and I am one of them. As Bully Bertram says, in Maturin's piment to play,—“I am a wretch, and proud of wretchedness.” A child, the offspring of your own loins, is something worth watching for. Such a father is your true Tapley;—there is some credit in coming out jolly under such circumstances. The unnatural parent, as those warning cries

break the silence, may counterfeit Death's counterfeit, and may even be guilty of the surpassing iniquity of simulating a snore. *Nunquam dormio*; I am like “The Sun” newspaper,—sleepless, tireless, disturbed, but imperturbable. I meet my fate, and find the pang a pleasant one. And so may I ever be, through all febrile, cutaneous, and flatulent vicissitudes,—careful of chicken-pox, mild with mumps and measles, unwearied during the weaning, growing tenderer with each succeeding rash, kinder with every cold, gentler with every grief, and sweeter-tempered with every sorrow sent to afflict my little woman! 'Tis a rough world. We must acclimate her considerately.

Of the matter of education I also have what are called “views.” I may be peculiar. School-committee-men who spell Jerusalem with a G, drill-sergeants who believe in black-boards and visible numerators, statistical fellows who judge of the future fate of the republic by the average attendance at the “Primaries,” may not agree with me in my idea of bending the twig. I do believe, that, if Dame Nature herself should apply for a school, some of these wise Dogberries would report her “unqualyfyde.” I will not murder my pretty pet. So she be gentle, kindly, and loving, what care I if at sixteen years of age she cannot paint the baptism of John upon velvet, does not know a word of that accursed French language, breaks down in the “forward and back” of a cotillon, and cannot with spider fingers spin upon the piano the swiftest Tarantelle of Chopin — $\text{♩} = 2558 \text{ Metronome}$? We will find something better and braver than all that, my little Alice! Confound your Italianos!—the birds shall be the music-masters of my tiny dame. Moonrise, and sunset, and the autumnal woods shall teach her tint and tone. The flowers are older than the school-botanies;—she shall give them pet names at her own sweet will. We will not go to big folios to find out the big Latin names of

the butterflies; but be sure, pet, they and you shall be better acquainted. And long before you have acquired that most profitless of all arts, the art of reading, we will go very deeply into ancient English literature. There is the story of the enterprising mouse, who, at one o'clock precisely, ran down the clock to the cabalistic tune of "Dickory, dickory, dock." There are the bold bowl-mariners of Gotham. There is "the man of our town," who was unwise enough to destroy the organs of sight by jumping into a bramble-bush, and who came triumphantly out of the experiment, and "scratched them in again," by boldly jumping into another bush,—the oldest discoverer on record of the doctrine that *similia similibus curantur*. There are Jack and Gill, who, not living in the days of the Cochineate, went up the hill for water, and who, in descending, met with cerebral injuries. There are the dietetic difficulties of Mr. and Mrs. Sprat, with the happy solution of a problem at one time threatening the domestic peace of this amiable pair. Be sure, little woman, we will find merry morsels in the silly-wise book! And there will be other silly-wise books. Cinderella shall again lose her slipper, and marry the prince; the wolf shall again eat little Red Ridinghood; and the small eyes grow big at the adventures of Sinbad, the gallant tar. Will not this be better, Don Bob, than pistil and stamen and radicle?—than wearing out B B B lead pencils in drawing tumble-down castles, rickety cottages, and dumpling-shaped trees?—than acquiring a language which has no literature fit for a girl to read?—than mistressing the absurd modern piano music?—than taking diplomas from institutes, which most certainly do not express all that young women learn in those venerable seats of learning? We will not put stays upon our pet until we are obliged to do so. Birdie shall abide in the paternal nest, and sing the old home-songs, and walk in the old

home-ways, until she has a nice new nest of her own.

Do I dote, Don Bob? Is there a smirk, a villanous, unfeeling, disagreeable, cynical sneer, lurking under your confounded moustache? I know you of old, you miserable, mocking Mephistopheles!—you sneerer, you scoffer, you misbeliever! No more of that, or I will travel three hundred miles expressly to break your head. Take a glass of claret, Bob, and be true to your better nature; for I suppose you have a better nature packed away somewhere, if one could but get at it. Those who have no children may laugh, but as a *paterfamilias* you should be ashamed to do so.* And after all, this is a pretty serious business. As I sit here and dream and hope and pray, and try to compute the infinite responsibility which has come with this infinite joy, I am very humble, and I murmur, "Who is sufficient? who is sufficient?" And if you will look at the right-hand corner of this page, you will find a great splashy blot. Lachrymal, Bob, upon my word! 'Tis time to write "Yours, &c." Moreover, I am needed for some duty in the nursery. Pleasant dreams! Health and happiness to Señora Wagonero, and all the little doubleyous. With assurances, &c., I remain, &c., &c.,

PAUL POTTER.

P. S.—Could you tell me the precise age at which Japanese children begin to learn the use of globes?

P. P. S.—Do Spanish nurses use Daf-fy? Is there any truth in the statement of Don Lopez Cervantes Murillo, that Columbus was "brought up by hand"?

P. P. P. S.—Could you give me the aggregate weight of all the children born in the Island of Formosa, from 1692 to the present time, with the proportion of the sexes, and the average annual mortality, and any other perfectly useless information respecting that island?

P. P.

THE LAST LOOK.

Naushon, September 22d, 1858.

BEHOLD—not him we knew!
This was the prison which his soul looked through,
Tender, and brave, and true.

His voice no more is heard;
And his dead name—that dear familiar word—
Lies on our lips unstirred.

He spake with poet's tongue;
Living, for him the minstrel's lyre was strung:
He shall not die unsung!

Grief tried his love, and pain;
And the long bondage of his martyr-chain
Vexed his sweet soul,—in vain!

It felt life's surges break,
As, girt with stormy seas, his island lake,
Smiling while tempests wake.

How can we sorrow more?
Grieve not for him whose heart had gone before
To that untrodden shore!

Lo, through its leafy screen,
A gleam of sunlight on a ring of green,
Untrodden, half unseen!

Here let his body rest,
Where the calm shadows that his soul loved best
May slide above his breast.

Smooth his uncurtained bed;
And if some natural tears are softly shed,
It is not for the dead.

Fold the green turf aright
For the long hours before the morning's light,
And say the last Good Night!

And plant a clear white stone
Close by those mounds which hold his loved, his own,—
Lonely, but not alone.

Here let him sleeping lie,
Till Heaven's bright watchers slumber in the sky,
And Death himself shall die!

A SAMPLE OF CONSISTENCY.

MR. CALEB CUSHING,—“the Ajax of the Union,” as he has lately been styled, —for what reason we know not, unless that Ajax is chiefly known to the public as a personage very much in want of light,—Mr. Caleb Cushing has received an invitation to dine in South Carolina. This extraordinary event, while it amply accounts for the appearance of the comet, must also be held to answer for the publication by Mr. Cushing of a letter almost as long, if not quite so transparent, as the comet’s tail. Craytonville is the name of the happy village, already famous as “the place of the nativity” of Mr. Speaker Orr, and hereafter to be a shrine of pilgrimage, as the spot where Mr. Cushing might have gone through the beautiful natural processes of mastication and deglutition, had he chosen. We use this elegant Latinism in deference to Mr. Ex-Commissioner Cushing; for, as he evidently deemed “birth-place” too simple a word for such a complex character as Mr. Orr, we could not think of coupling his own name with so common a proceeding as eating his dinner. It may be sectionalism in us,—but, at the risk of dissolving the Union, we will not yield to any Southern man a larger share of the dictionary (unless it be Webster’s) than we give to a gentleman who was born at—we beg pardon, the place of whose nativity was—Newburyport.

Mr. Cushing has distinguished himself lately as the preacher-up of a crusade against modern philanthropy; and we do not wonder at it, if the offer of a dinner be so rare as to demand in acknowledgment a letter three columns long. Or perhaps he considered the offer itself as an instance of that insane benevolence which he reprobates, and accordingly punished it with an epistle the reading of which would delay the consummation of the edacious treason till all the meats were cold and the more impatient conspirators driven from the table. Or

were those who had invited him *negrophilists*, (to use Mr. Cushing’s favorite word,) and therefore deserving of such retribution? Not at all; they were all *leucophilists*, as sincere and warm-hearted as himself. Or perhaps this letter expresses Mr. Cushing’s notion of what a proper answer to a dinner-invitation should be. We have no “Complete Letter-Writer” at hand, and consequently cannot compare it with any classic models; but, if we remember rightly, that useful book is not in as many volumes as the Catalogue of the British Museum is to be, and the examples there given must necessarily be denied so sea-serpentine a voluminousness. We suspect that the style is original with the Ex-Brigadier-Attorney-General, but, while we allow it the merit of novelty, we think there are some grave objections to its universal adoption. It would be a great check on hospitality; for, by parity of reason, the invitation should be as tedious as the reply, and a treaty of dinner would take nearly as much time as a treaty of peace. This would be a great damage to the butchers, whose interests (to borrow a bit of political economy from Mr. Cushing’s letter) are complementary to those of the dinner-giver and the diner. Again, it would be fatal to all conversation, supposing the dinner at last to take place; for the Amphitryon, on the one hand, has already exploited everything he knows and does not know, from Sanconiathon, Manetho, and Berosus, to Dr. Hickok,—and the guests—but the thought of their united efforts is too appalling. In short, (if we may use that term in connection with such a subject,) we cannot believe, and certainly do not hope, that Mr. Cushing’s system will ever become popular. Even if it should, we think that an improvement upon it might be suggested. We subjoin a form of invitation and answer, which any of our readers are at liberty to use, if they should ever need them.

Punkinopolis, 28th Sept., 1858.

My dear N. N.,

I send, by the bearer, the Correspondence of Horace Walpole and Burke's "Letters on a Regicide Peace," which are, probably, as entertaining and eloquent as anything I could write. I send also Cicero "De Amicitia," Brillat-Savarin's "Physiologie du Gout," the Works of Athenæus, and the "Banquet" of Plato. If, after a perusal of these works, you are not convinced that I entertain the most friendly feelings towards you, and that I wish you to dine with me on this day twelvemonth, I do not know what further arguments to employ.

Yours faithfully,

g.c. g.c.

Baldeagleville, Feb. 10, 1859.

My dear g.c. g.c.,

The wagon, which accompanies this, will bring you a copy of the "Encyclopædia Britannica." The reading of this choice morceau of contemporary literature will suggest to you nearly all I have to say in reply to your interesting communication of the 28th September last. By reading, in succession, the articles Confucius, Fortification, Sandwich Islands, and Æsthetics, you will form some notion of the mingled emotions with which

I remain

Yours truly,

N. N.

P. S. The amount of time required for mastering the Greek language, in order thoroughly to enjoy some passages of your charming note, alone prevents me from sending so full an answer as I should wish.

In these days, when everybody's correspondence is published as soon as he is dead,—or during his life, if he is unfortunate enough to be the Director of an Observatory, and there is a chance of injuring him by the breach of confidence,—we cannot help thinking that the forms

we have given above are not only more compendious, but safer, than Mr. Cushing's. If his method should come into vogue, posterity would be deprived of the letters of this generation for nearly a century by the time necessary to print them, and then, allowing for the imperious intervals of sleep, would hardly contrive to get through them in less than a couple of centuries more. We leave to those who have read Mr. Cushing's reply to the Craytonville invitation the painful task of estimating the loss to the world from such a contingency. Meanwhile, the perplexing question arises,—If such be the warrior-statesman's measure of gratitude for a dinner, what would be his scale for a breakfast or a dish of tea? Cæsar announced a victory in three words; but in this respect he was very inferior to Mr. Cushing, whose style is much more copious, and who shows as remarkable talents in the command of language as the other general did in the command of troops.

On first reading Mr. Cushing's letter, its obscurity puzzled us not a little. There are passages in it that would have pleased Lycophron himself, who wished he might be hanged if anybody could understand his poem. Dilution was to be expected in a production whose author had to make three columns out of "Thank you, can't come." Even a person overrunning with the milk of human kindness, as Mr. Cushing, on so remarkable an occasion, undoubtedly was, might be pardoned for adopting the shift of dealers in the dearer vaccine article, and reinforcing his stores from a friendly pump. The expansiveness of the heart would naturally communicate itself to the diction. But, on the other hand, repeated experiments failed to detect even the most watery flavor of conviviality in the composition. The epistles of Jacob Behmen himself are not farther removed from any contamination with the delights of sense. Was this, then, a mere Baratàrian banquet, a feast of reason, to which Mr. Cushing had been invited? Or did he intend to pay an indirect tribute of re-

spect to his ancestry by sending what would produce all the hilarious effect of one of those interminable Puritan graces before meat? No, the dinner was a real dinner,—the well-known hospitality of South Carolina toward Massachusetts ambassadors forbids any other supposition,—and Mr. Cushing's letter itself, however dark in some particulars, is clear enough in renouncing every principle and practice of the founders of New England. We must find, therefore, some other reason why the Ex-Commander of the Palmetto Regiment, when the Carolinians ask the pleasure of his society, gives them instead the agreeable relaxation of a sermon,—an example which, we trust, will not prove infectious among the clergy.

It occurred to us suddenly that the next Democratic National Convention is to assemble in Charleston. It is not, therefore, too early to send in sealed proposals for the Presidency; and if this letter is Mr. Cushing's bid, we must do him the justice to say that we think nobody will be found to go lower. We doubt if it will avail him much; but the precedent of Northern politicians going South for wool and coming back shorn is so long established, that a lawyer like himself will hardly venture to take exception to it. Like his great namesake, the son of Jephunneh, he may bring back a gigantic bunch of grapes from this land of large promise and small fulfilment, but we fear they will be of the variety which sets the teeth on edge, and fills the belly with that east wind which might have been had cheaper at home.

If, nevertheless, Mr. Cushing is desirous of being a candidate, it is worth while to consider what would be the principles on which he would administer the government, and what are his claims to the confidence of the public. We are beginning to discover that the personal character of the President has a great deal to do with the conduct of the almost irresponsible executive head of the Republic. What, then, have been Mr. Cushing's political antecedents, and what is his present creed?

There are many points of resemblance between his character and career and those of the present Chancellor of the English Exchequer. Belonging to a part of the country whose opinions are to all intents and purposes politically proscribed, he has gone over to a party whose whole policy has tended to harass the commerce, to cripple the manufactures, and to outrage the moral sense of New England, and has won advancement and prominence in that party by his talents, contriving at the same time to make his origin a service rather than a detriment. Like Mr. Disraeli, he has been consistent only in devotion to success. Like him, accomplished, handsome, plucky, industrious, and dangerous, if unconvincing, in debate, he brings to bear on every question the immediate force of personal courage and readiness, but none of that force drawn from persistent principle, whose defeats are tutorings for victory. With a quick eye for the weak point of an enemy, and a knack of so draping commonplaces with rhetoric that they shall have the momentary air of profound generalizations, he is also, like him, more cunning in expedients than capable of far-seeing policy. Adroit in creating and fostering prejudice, acute in drawing metaphysical distinctions which shall make wrong seem right by showing that it is less wrong than it appeared, he is unable to see that public opinion is never moulded by metaphysics, and that, with the people, instinct is as surely permanent as prejudice is transitory. Like Mr. Disraeli, versatile, he is liable to forget that what men admire as a grace in the intellect they condemn as a defect in the character and conduct. Gifted, like him, with various talents, he has one which overshadows all the rest,—the faculty of inspiring a universal want of confidence. As a popular leader, the advantage which daring would have given him is more than counterpoised by an acuteness and refinement of mind which have no sympathy with the mass of men, and which they in turn are likely to distrust from imperfect comprehension. Ill-adapted

for the rough-and-tumble contests of a Democracy, he is admirably fitted to be the minister or the head of an oligarchical Republic. We wish all our Northern Representatives had the boldness and the abilities, we hope none of them will be seduced by the example, of Mr. Cushing.

He is one of those able men whose imputed is even greater than their real mental capacity; because the standard of ordinary men is success,—and success, of a certain kind, is assured to those mixed characters which combine the virtue of courage with the vice of unscrupulousness. An ambitious man, like Louis Napoleon, for example, who sets out with those two best gifts of worldly fortune, a face with nothing but brass and a pocket with nothing but copper in it, has a brilliant, if a short, career before him, and will be sure to gain the character of ability; for if ambition but find selfishness to work upon, it has that leverage which Archimedes wished for. But time makes sad havoc with this false greatness, with this reputation which passes for fame, and this adroitness which passes for wisdom, with merely acute minds. When Plausibility and Truth divided the world between them, the one chose To-day and the other To-morrow.

To enable us to construct a theory of Mr. Cushing's present position, we have two recent productions in print,—his Fourth of July Oration at New York, and his Letter to the Craytonville Committee. But he has seen too many aspirants for the Presidency contrive to drown themselves in their inkstands, and is far too shrewd a man, to elaborate any documentary evidence of his opinions. If we arrive at them, it must be by a process of induction, and by gathering what evidence we can from other sources. Mr. Cushing knows very well that the multitude have nothing but a secondary office in the making of Presidents, and addresses to them only his words, while the initiated alone know what meaning to put on them. If, for example, when he says *servant* he means *slave*, when he says *Negrophilist* he

means *Republican*, and when he says *false philanthropy* he means *the fairest instincts of the human heart*, we have a right to suspect that there is also an esoteric significance in the phrases, *Loyalty to the Union*, *Nationality*, and *Conservatism*.

Had a constituent of Mr. Cushing, in the Essex North District, taken a nap of twenty years,—(and if he had invited his Representative to dinner, and got such an answer as the Craytonville letter, the supposition is not extravagant,)—what would have been his amazement, on waking, to find his Member of Congress haranguing an assembly of Original Democrats in Tammany Hall! Caius Marcius addressing the Volscian council of war would occur to him as the only historic parallel for such a rhetorical phenomenon. The one was an ideal, as the other is a commonplace example of the ludicrous contradictions in which men may be involved, who find in personal motives the justification of public conduct. That the chairman of the meeting should have had in his pocket a letter from the candidate of the Buffalo Convention, and that Mr. John Van Buren should have sat upon the platform, while the orator charged the leaders of the Republican Party with interested motives, were merely two of those incidental circumstances by which Fact always vindicates her claim to be more satiric than Fiction. But when Mr. Cushing speaks with exultation of the past and with confidence of the future of the Original Democratic Party, we can think of nothing like it but Charles II. taking the Solemn League and Covenant, with an unctuous allusion to the persecutions we Covenanters have undergone, and the triumphs of vital piety to which we look forward.

Mr. Cushing claims that the Democratic Party has originated and carried through every measure that has become a part of the settled policy of the government. This is not very remarkable, if we consider that the party has been in power during by far the greater part

of our national existence, and that under our system the administration is practically a dictatorship for four years. Mr. Everett long ago pointed out the advantage we should gain by having a responsible ministry. As it is, the representative branch of our government is practically a nullity. What with his immense patronage, the progress of events, and the chance of luring the opposing party into by-questions, the Presidential Micawber of the moment is almost sure that something will turn up to extricate him from the consequences of his own incompetency or dishonesty. The only check upon this system is the chance that the temerity engendered by irresponsible power may lead the executive to measures which, as in the case of Kansas, shall open the eyes of thinking men to the real designs and objects of those in office. An opposition is necessarily transitory in its nature, if it be not founded on some principle which, reaching below the shifting sands of politics, rests upon the primary rock of morals and conscience. In such a principle only is found the nucleus of a party which the adverse patronage of a corrupt executive can but strengthen by attracting from it its baser elements. Such an opposition the Democratic Party seems lately to have devoted all its policy to build up, and now, confronted with it, can find no remedy but in the abolishment of morals and conscience altogether.

The Democratic Party, like the distinguished ancestor of Jonathan Wild, has been impartially on both sides of every question of domestic policy which has arisen since it came into political existence. It has been *pro* and *con* in regard to a Navy, a National Bank, Internal Improvements, Protection, Hard Money, and Missouri Compromise. Its leading doctrine was State Rights; its whole course of action, culminating in the Dred Scott decision, has been in the direction of Centralization. During all these changes, it has contrived to have the Constitution always on its side by the simple application of Swift's axiom, "Orthodoxy

is *my* doxy, Heterodoxy is *thy* doxy," though it has had as many doxies as Cowley. Sometimes it has even had two at once, as in refusing to the iron of Pennsylvania the protection it gave to the sugar of Louisiana. Pennsylvania avenged herself by the fatal gift of Mr. Buchanan. There is one exception to the amiable impartiality of the party,—it has been always and energetically proslavery. In this respect Mr. Cushing has the advantage of it, for he has been on both sides of the Slavery question also. It must be granted, however, that his lapse into *Negrophilism* was but a momentary weakness, and that without it the Whig Party would have lost the advantage of his character, and the lesson of his desertion, in Congress. He is said to be master of several tongues, and it is therefore quite natural that he should have held a different language at different times on many different questions.

A creed so various that it seemed to be, not one, but every creed's epitome, could not fail to be strangely attractive to a mind so versatile as that of Mr. Cushing; yet we cannot deny to his conversion some remarkable features which give it a peculiar interest. In some respects his case offers a pleasing contrast to that of the Rev. John Newton; for, as the latter was converted from slave-trading to Christianity, so Mr. Cushing (whatever he may have renounced) seems to have embraced something very like the principles which the friend of Cowper abandoned,—another example of the beautiful compensations by which the balance of Nature is preserved. And his conversion was sudden enough to have pleased even Jonathan Edwards himself. Up to the ripe age of forty-two he had been joined to his idols. It is a proverb, that he who is a fool at forty will be a fool at fourscore; yet Mr. Cushing, who is certainly no fool, had been blind to the beauties of Original Democracy for a year or two beyond that alliterative era. The Whigs had just succeeded in electing their candidates, and it seemed as if nothing short of an almost Prov-

idental interposition could save him. That interposition came in the death of General Harrison, which took away the last earthly hope of Whig advancement. It was what the jockeys call "a very near thing." But for that,—it is a sad thought,—Mr. Cushing might have been on our side now. This was the *gratia operans*. Mr. Tyler, who succeeded to the Presidency, had Democratic proclivities; this was the *gratia coöperans*; and finally we see the *gratia perficiens* in the appointment of our catechumen to the Chinese Commissionership. From the Central Flowery Kingdom he returned a full-blown Original Democrat. In 1853, Mr. Pierce, finding himself elected President for no other reason apparently than that he had failed to distinguish himself in the Mexican War, appointed Mr. Cushing his Attorney-General on the same benevolent principle,—consoling him for having to sheathe a bloodless sword by giving him a chance to draw the more dangerous Opinion.

We have alluded only to such facts in Mr. Cushing's history as are fresh in the remembrance of our readers; and it would not have been worth our while to allude even to these, if he had not seen fit to speak of the leading men of the Republican Party as "dangerous, because they have *no fixed principle, no stable convictions, no samples of consistency to control their acts*; because their *only creed is what has been called the duty of success*; and because their success—the successful accomplishment of a sectional organization of the government on the ruins of its nationality—would be the *de facto* dissolution of the Union." In his Letter he says also, that "it is a fact humiliating to confess that the cant of negroism still has vogue as one of the minor instruments of demagoguery in Northern States." The coolness of such charges, coming from Mr. Cushing, is below the freezing-point of quicksilver. Shall we take lessons in fixedness of principle from the Whig-Antislavery Member from Federalist Essex?—in stable convictions from the

Tyler-Commissioner to China?—in consistency from the Democratic Attorney-General?—in an amalgam of all three from the Coalition Judge? Shall we find a more pointed warning of the worthlessness of success in the words than in the example of the orator? Since Reynard the Fox donned a friar's hood, and, with the feathers still sticking in his whiskers, preached against the damnable heresy of hen-stealing, there has been nothing like this!

In China, they set great store by porcelain that has been often broken and mended again with silver wire, prizing it more highly than that which is sound and fresh from the hands of the potter. There is a kind of political character of the same description,—hollow-ware, not generally porcelain, indeed,—cracked in every direction, but deftly bound together with silver strips of preferment, till it is consistent enough to serve all the need of its possessor in receiving large messes of the public pottage. How the Chinese would have admired Mr. Tyler's Commissioner, if they had known the exquisite perfection of *crackle* displayed in his political career! To be sure, the Chinese are our antipodes.

The imputation of inconsistency is one to which every sound politician and every honest thinker must sooner or later subject himself. Fools and dead men are the only people who never change their opinions or their course of action. The course of great statesmen resembles that of navigable rivers, avoiding immovable obstacles with noble bends of concession, seeking the broad levels of opinion on which men soonest settle and longest dwell, following and marking the almost imperceptible slope of national tendency, yet forever recruited from sources nearer heaven, from summits where the gathered purity of ages lies encamped, and sometimes bursting open paths of progress and civilization through what seem the eternal barriers of both. It is a loyalty to great ends, an anchored cling to solid principles, which knows how to swing with the tide, but not to be carried away

by it, that we demand in public men,—and not persistence in prejudice, sameness of policy, or stolid antagonism to the inevitable. But we demand also that they shall not too lightly accept Wrong instead of Right, as inevitable; and there is a kind of change that is suspicious because it is sudden,—and detrimental to the character in proportion as it is of advantage to the man; and the judgment of mankind allows a well-founded distinction between an alteration of policy compelled by events, and an abandonment of professed principles tainted with any suspicion of self-interest. We hold that a Representative is a trustee for those who elected him,—that his political apostasy only so far deserves the name of conversion as it is a conversion of what was not his to his own use and benefit; and we have a right to be impatient of instruction in duty from those whom the hope of promotion could nerve to make the irrevocable leap from a defeated party to a triumphant one, and who can serve either side, if so they only serve themselves. It is this kind of freedom from prejudice that has brought down our politics to the gambling level of the stock-market; it is this kind of unlucky success, and the readiness of the multitude to forgive and even to applaud it, that justify the old sarcasm, *Patibulum inter et statum quàm leve discrimen!*

It is not for inconsistencies of policy in matters of indifference that we should blame a man or a party, but for making questions of honor and morals matters of indifference. Inconsistency is to be settled, not by seeming discrepancies between the action of one day and that of the next, but by the experience which enables us to judge of motives and impulses. Time, which reconciles apparent contradictions, impeaches real ones, and shows a malicious satirical turn, in forcing men into positions where they must break their own necks in attempting to face both ways. Nor is it for inconsistency that we condemn the Democratic Party. There are no trade-winds for the Ship of State, unless it be navigated

by higher principles than any the political meteorologists have yet discovered. But there have been mysterious movements, of late, which raise a violent presumption that our Democratic captain and officers are altering the rig and adapting the hold of the vessel to suit the demands of a traffic condemned by the whole civilized world. They are painting out the old name, letter by letter, and putting "Conservative" in its stead. They seem to fancy there is such a thing as a slave-trade-wind, and are attempting to beat up against what they profess to believe a local current and a gust of popular delusion. We think they are destined to find that they are striving against the invincible drift of Humanity and the elemental breath of God. It is an ominous *consistency* with which we charge the Democratic Party.

Mr. Cushing affirms, that the Republicans have no argument but the "cry of *Slavepower!*"—which is as eloquent a one as the old Roman's *Delenda est Carthago*, to those who know how many years of bitter experience, how many memories of danger and forebodings of aggression, are compressed in it. But he is mistaken; Democratic administrations have been busy in supplying arguments, and we complain rather of their abundance than their paucity. The repeal of the Missouri Compromise, the Kansas policy, which even office-holders who had gulped their own professions found too nauseous to swallow, and the Dred Scott decision,—if these be not arguments, then history is no teacher, and events have no logic.

Mr. Cushing adroitly evades the real matter in issue, and assumes that it is a mere question of the relative amount of federal office secured by the North and the South respectively. This may be a very natural view of the case in a man whose map of nationality would seem to be bounded North by a seat in Congress, East by a Chinese Embassy, West by an Attorney-Generalship, and South by the vague line of future contingency; but it hardly solves the difficulty. With char-

acteristic pluck he takes the wolf by the ears. The charge being, that the power of the Slave States has been gaining a steady preponderance over that of the Free States by means of the federal administration, he answers it by saying that he has made it a subject of "philosophic study," and has found that Massachusetts has had a "pretty fair run of the power of the Union,"—whatever that may be. The phrase is unfortunate, for it reminds one too much of the handsome competence with which a father once claimed to have endowed his son in giving him the run of the streets since he was able to go alone. But let us test Mr. Cushing's logic by an equivalent proposition. He is executor, we will suppose, of an estate to be divided among sixteen heirs; he pays A his portion, and claims a discharge in full. What would not Mr. Buchanan give for a receipt by which office-seekers could be so cheaply satisfied!

"Philosophic study," to be sure! It may be easy for gentlemen, the chief part of whose productive industry has been the holding of office or the preparing of their convictions for the receipt of more, to be philosophic; but it is not so easy for Massachusetts to be satisfied, when she sees only those of her children so rewarded who misrepresent her long-cherished principles, who oppose the spread of her institutions, who mock at her sense of right and her hereditary love of freedom, and are willing to accept place as an equivalent for the loss of her confidence. The question, Who is in office? may be of primary importance to Mr. Cushing, but is of little consequence to the Free States. What concerns them is, How and in what interest are the offices administered? If to the detriment of free institutions, then all the worse that sons of theirs can be found to do that part of the work which involves (as affairs are now tending) something very like personal dishonor. It is no matter of pride to us that the South has never been able to produce a sailor skilful enough and bold enough to take command of a slaver.

Mr. Cushing affects to see in the his-

tory of the Slavery Agitation nothing but a series of injuries inflicted by the North on the South. He charges "some of the Northern States" with acts of aggression upon the South "which would have been just cause of war as between foreign governments." He prudently forbears to name any. Does he mean, that persons have been found in some of those States unnational enough, un-Original-Democratic enough, to give a cup of water to a hunted Christian woman, or to harbor an outcast Christian man, without first submitting their hair to a microscopic examination? Does he mean, that we have said hard things of our Southern brethren? Grose's "Classical Dictionary of the Vulgar Tongue" is open to them as well as to us, and the Richmond "South" is surely not in the habit of sprinkling the Northern subjects of its animadversion with rose-water. No,—what Mr. Cushing means is this,—that there are men at the North who will not surrender the principles they have inherited from three revolutions because they are threatened with a fourth that will never come,—who do not consider it an adequate success in our experiment of self-government that we can produce such types of nationality as reckon the value of their country by the amount of salary she pays,—who will not believe that there is no higher kind of patriotism than complicity in every violent measure of an administration which redeems only its pledges to a faction of Southern disunionists,—who will not admit that slave-holding is the only important branch of national industry, because the profession of that dogma enables unscrupulous men to enter the public service poor and to leave it rich. Has any citizen of a Southern State ever failed to obtain justice (that is to say, in the language of Original Democracy, his *nigger*) in a Northern court? Has Massachusetts ever mobbed an envoy or brutally assaulted a Senator of South Carolina? Has any Northern State ever nullified an article of the Federal Constitution, as every seaboard Slave-State has always done in respect

to the colored citizens of the North? When a man's allowing himself to be kicked comes to be reckoned an outrage on the kicker, then Mr. Cushing's notion of what constitutes a "just cause of war" will deserve as much consideration as Mr. G. T. Curtis's theory that hustling a deputy-marshal is "levying" it. We can remember when the confirmation of an ambassador to England (where the eminent fitness of the nomination was universally conceded) was opposed by several Southern Senators on the ground that he had expressed an interest in the success of West India emancipation. If Original Democrats have their way, it will not be long before it is made constructive treason to have read that chapter of the Acts of the Apostles which relates the misguided philanthropy of Philip in endeavoring to convert an Ethiopian into anything but a chattel.

We are inclined to think that a too amiable willingness to be kicked has been generally considered "just cause of war as between foreign governments,"—especially on the part of the stronger of the two. History seems to show this,—and also, that the sooner a nation gets over its eccentric partiality for this kind of appeal to its reasoning faculty, the more likely it is to avoid the risks of war. At any rate, the forbearance of the South has been such, that, in spite of the great temptation, she has hitherto refrained from sending her fleets and armies northward, and we are glad to find that Mr. Cushing is inclined to take a cheerful view of the permanency of our institutions. He tells us, it is true, in one place, that the success of the Republican Party would be "the *de facto* dissolution of the Union"; but in a moment of calmer reflection he assures us that there are thirty million Americans who stand ready "to devour and swallow up" the "handful of negrophillist Union-baters." We have great faith in the capacity of the American people, yet we somewhat doubt whether any one of them could swallow up what he had already devoured, unless, indeed, he performed that feat which has hitherto

been the opprobrium of Jack-puddings, and jumped down his own throat afterwards. However, a man of Mr. Cushing's warmth of nature might well find himself carried beyond the regions of ordinary rhetoric in contemplating so beautiful and affecting a vision, and it is enough that we have the consolation of knowing that he either spoke with a disregard of the census, which we cannot believe possible in one so remarkable for accuracy of statement, or that he acquits every man, woman, and child in the country of any hostility to the Union. It is cheering to have this matter set finally at rest by so eminent an authority, and we are particularly glad that the necessity for so painful an experiment in swallowing is a great way off; for, though a "handful" would not go far among so many, yet, if its components be as unpleasant as Mr. Cushing represents them, it would certainly give a colic to every patriot who got a bite. After so generous an exculpation of the American people from any desire to pull their own house about their ears, we are left to conclude that the only real danger to be apprehended, in case of a Republican success, is a *de facto* and *de jure* dissolution of that union between certain placemen and their places which has lasted so long that they have come to look on it as something Constitutional. When that day is likely to arrive, we shall see such samples of consistency, and such instances of stable conviction, in finding out on which side of their bread the butter lies, as cannot fail to gratify even Mr. Cushing himself.

But we must not congratulate ourselves too soon. In the interval between the fifth of July, when his oration was delivered, and the seventh of August, which is the date of the Craytonville letter, Mr. Cushing seems to have reviewed his opinion on the state of the Union. There is more cause for alarm than appeared on the surface; but this time it is not because we have fallen out of love with the South, but that we have become desperately enamored of negroes. Nurses will have to

scare their refractory charges with another bugaboo; for the majority of Massachusetts infants would jump at the chance of being carried off by the once terrible Ugly Black Man. Our great danger is from *Negrophilism*; though Mr. Cushing seems consoled by the fact, that it is a danger to Massachusetts, and not to South Carolina. We think Mr. Cushing may calm his disinterested apprehensions. We believe the disease is not so deep-seated as he imagines; and as we see no reason to fear the immediate catastrophe of the Millennium from any excess of benevolence on the part of Mr. Cushing and his party toward white men, (whose cause he professes to espouse,) we are inclined to look forward with composure to any results that are likely to follow from sporadic cases of sympathy with black ones. There is no reason for turning alarmist. In spite of these highly-colored forebodings, it will be a great while before our colored fellow-citizens, or fellow-denizens, (or whatever the Dred Scott decision has turned them into,) will leave mourning-cards in Beacon Street, or rear mulatto-hued houses on that avenue which it is proposed to build from the Public Garden into the sunset.

It is adroit in Mr. Cushing thus to shift the front of his defence, but it is dreadfully illogical. It is very convenient to make it appear that this is a quarrel of races; for, in such a case, a scruple of prejudice will go farther than a hundred-weight of argument. In assuming to be the champion of the downtrodden whites against the domineering blacks, Mr. Cushing enlists on his side the sympathy and admiration which are sure to follow the advocate of the weak and the defenceless. He comes home to New England, finds his own color proscribed, and at once takes the part of *amicus curiæ* for the weak against the strong in the forum of Humanity. We do not wonder, that a gentleman, who has devoted so much ingenuity, so much time and talent, to making black appear white, should at last deaden the nicety of his sense for the distinction between the two, and thus reverse

the relation of the two colors; but we do wonder, that, in choosing Race as a convenient catchword, he should not see that he is yielding a dangerous vantage-ground to the Native American Party, whose principles he seems so pointedly to condemn. We say *seems*,—for he is carefully indefinite in his specifications, and hedges his opinions with a thicket of ambiguous phrases, which renders it hard to get at them, and leaves opportunity for future evasion. If a war of race be justifiable in White against Black, why not in so-called Anglo-Saxons against Kelts? The one is as foolish and as wicked as the other, and the only just method of solution is the honest old fair field and no favor, under which every race and every individual man will assume the place destined to him in the order of Providence. We have a great distrust of ethnological assumptions; for there is, as yet, no sufficient basis of observed fact for legitimate induction, and the blood in the theorist's own veins is almost sure to press upon the brain and disturb accurate vision, or his preconceptions to render it impossible. Gervinus reads the whole history of Europe in the two words, *Teutonic* and *Romanic*; Wordsworth believed that only his family could see a mountain; Dr. Prichard, led astray by a mistaken philanthropy, believed color to be a matter of climate; and Dr. Nott considers that the outline shown by a single African hair on transverse section is reason enough for the oppression of a race. If the black man be radically inferior to the white, or radically different from him, the folly of white-washing him will soon appear. But, on the other hand, if his natural relation to the white man be that of slave to master, our Southern brethren have wasted a great deal of time in prohibitory and obscurantist legislation; they might as well have been passing acts to prevent the moon from running away, or to make the Pleiades know their place.

It will be a blessed day for the world when men are as willing to help each other as they are to assist Providence.

The "London Cotton-Plant," a journal established to sustain the interests of Slavery in the Old World, is almost overpowered with acute distress for the Order of Creation, and offers its sustaining shoulder to the System of the Universe. "Fear nothing," it seems to say, "glorious structure of the Divine Architect! Giddings shall not touch you, nor shall Seward lay his sacrilegious hand on you!" "Who are ye?" murmurs the Voice, "that would recedit the works of the Almighty?" "Sublime, but misguided object of our compassion, we prefer to remain in the modest seclusion of namelessness, but we are published at Red-Lion Court, Fleet Street, and are sold for one shilling!" To judge from Mr. Cushing's letter, he has studied this organ of the sympathizers with the Pre-established Harmonies,—certainly there is a singular coincidence in the sentiments of both, so far as we can make them out. Both call themselves conservative, both are anti-philanthropists, both claim that public opinion is tending in the direction of their views, both affirm that their cause is that of the white man, and both appear to mean by white man the same thing,—the owner of a slave.

But is not Mr. Cushing's anxiety misdirected, and wilfully so, in seeking the material for its forebodings of danger to the Union in the Free States? The only avowed disunionists of the North are the radical Abolitionists, whose position is the logical result of their admitting that under the Constitution it is impossible to touch Slavery where it exists, and who, therefore, seek in a dissolution of the federal compact an escape from complicity with what they believe an evil and a wrong,—with what, till within the last twenty years, was conceded to be such by the South itself. If Mr. Cushing be so great an admirer of stability in conviction, he might have found in these men the subject of something other than vituperation. There are men among them who might have won the foremost places of political advancement, could they have sacrificed their princi-

ples to their ambition, could they believe that public honors would heal as well as hide the wounds of self-respect. It is the South that advocates disunion, from sectional motives, and adds the spice of treason. The "London Cotton-Plant" says,—

"If she [the South] is denied 'equality' within the Union, she can have 'independence' out of it. Already in European cabinets the possibility of this contingency is contemplated. We but perform a public duty when we tell Mr. Douglas that *there is in Europe more than one power able and willing and prepared to take the Cotton States of America, and with them the other 'Slave'-States, so-called by free-negroists, under their protection, as valuable and desirable allies.* . . . And more, he can say by authority that she [the South] has active and successful agents in every part of Europe preparing the way for equal existence, commercially as well as politically, so long as the Union exists, or the active support of powerful allies, if driven as a last resort to appeal to the civilized world against tyranny and oppression." *

But what does the "Cotton-Plant" understand by "equality"? Nothing less than the reopening of the slave-trade. Speaking of the chance that the captured slaves of the "Echo" would be sent back to Africa, and resenting such a procedure as "a brand upon our section and upon our social condition," it affirms that

"This labor-question of the South does not depend upon such miserable clap-trap as Kansas or the Fugitive Slave Law. It rests upon a full, open, and deliberate recognition of the rights of the Southern people; and the Senator from Illinois, by moving the abrogation of the so-called slave-trade treaty with England, allowing the South to supply herself with labor as she may see fit, would give, indeed, unquestioned assurance of his disposition and courage to follow the principle of the white-basis to its logical and constitutional consequence."

It declares that the sending home of the Africans would be "a practical reversal of the Dred Scott decision," and adds,—*"We have no fear that our people will long remain passive under such an accumulating weight of inequality."* †

Is not this explicit enough? and does

* *London Cotton-Plant*, 21st August, 1858.

† *Ibid.* 18th September, 1858.

not the "white-basis" sufficiently explain what is meant by the systematic depreciation of the colored race in Mr. Cushing's letter?

The Democratic Party is the party of "Progress." What is the direction of that progress likely to be? What is the lesson of the past? Hitherto this party has been the ally and the tool, not of the moderate, but of the extreme propagandists of the South. The Carolinians with their Scotch blood received also a strong infusion of Scotch logic. They felt that their system was inconsistent with the immortal assertion of Jefferson in the Declaration of Independence, and with the principles of the Revolution,—that its extension was a direct reversal of the creed and the policy of the men by whom our frame of government was established. They accepted the alternative, and assumed the aggressive. The principles of the Revolution must be crushed out, the traditions of the Fathers of the Republic repudiated,—and that, too, by means of the party calling itself Democratic, through which alone the South could control the policy of the government.

Accordingly, a reaction was put in motion and steadily pressed, precisely similar in kind to that organized by Louis Napoleon against the principles of the French Revolution, and supported by precisely the same warnings of the danger of civil commotion, and by appeals to the timidity of Property and the cupidity of Trade. The party which had so long vaunted the derivation of its fundamental truth from the Law of Nature was compelled to make it a part of its creed that there was nothing higher than an ordinance of man. The party of State-Rights was forced to proclaim that a decision of the Supreme Court was sovereign over all the rights of the States. The party whose leading dogma it is, that all power proceeds from and resides in the people, that all government rests on the consent of the governed, was driven into refusing to submit a constitution to the people whose destiny was to be decided by it. And all this has been done, not for the

security of Slavery where it exists, but to serve the truculent purposes of its indefinite extension. To acquiesce in the honesty and justice of such a course of policy as the last few years have shown, to assist in inaugurating a future that shall accord with it, is nationality and conservatism! No wonder Mr. Cushing is charmed with the consistency of his new allies. Do they propose to steal Cuba?—they are the party who would extend the area of Freedom. Do they make Slavery a matter of federal concern by means of the Supreme Court?—they are the party who maintain that it is an affair of local law. Do they disfranchise a race?—they are the party of equal rights. And the whole wretched imbroglio of creed which is the condemnation of their action, and of action which is the death of their creed, is dubbed Nationality. If sectionalism be the reverse of all this, we confess that we prefer sectionalism. It is a nationality which has no Northern half, a conservatism which abolishes all our heroic traditions.

If the Democratic Party has been urged to such extreme measures and such motley self-stultification by the pressure of the South, if every downward step has been only the more likely to be taken because it seemed impossible six months before, what are we not to look for, now that its leaders are emboldened by success, and its lieutenants are eager for more plunder at the easy price of more perfidy? Already, as we have seen, the reopening of the slave-trade is demanded; already fresh enactments are called for, expressly to render it in future impossible for the people of a Territory to loosen the grip of Slavery, as those of Kansas have done. And to prepare the way for this, we are forced to hear continual homilies on the supremacy of law, on what are called "legal conscience" and "legal morality,"—phrases which sound well, but cover nothing more than the absurd fallacy, that everything is legal which can by any hocus-pocus be got enacted.

The doctrine, that there is no higher law than the written statute, is but one of the symptoms of the steady drift of our leading politicians toward materialism, toward a faith which makes the products of man's industry of more value than man himself, and finds the god of this lower world in the law of demand and supply. "Cotton is King!" say such reasoners as Mr. Cushing;—"Conscience is King!" said such actors as the Puritans. To have a moral sense may be very unwise, very visionary, very unphilosophic; but most men are foolish enough to have one, and the enforcing of any law which wounds it is sure to arouse a resistance thoroughly pervading their whole being and lasting as life itself. The carrying away of a single fugitive* gave the Republicans a tenure of power in Massachusetts, as firm, and likely to be as enduring, as that of the Whigs was once. The propagandists of Slavery overreached themselves when they compelled the people of the North to be their accomplices. The higher law is not a thing men argue about, but act upon. People who admit the right of property a thousand miles off go back to first principles when the property comes to their door in the upright form of man and appeals for sympathy with a human voice.

Mr. Cushing represents Massachusetts to be a Babel of *isms*, so many square miles of Bedlam, from Boston Corner to Provincetown. Is this intended as a depreciation of our free institutions, by showing the results to which they inevitably lead? Has a Rarey for vicious hobbies been a *desideratum* so long, and has such a benefactor of his species found his avatar at last in Mr. Cushing? He tells us, however, that the delusion of *Negrophilism*, that is, Republicanism, is on the wane, and is destined to speedy extinction. The very extravagancies he speaks of as so rife and so rampant are to us evidence of the contrary. They

* It is a coincidence that the recapture of runaways did more than anything else to abolish villanage in England.

prove the depth to which the religious instincts of the Northern people have been stirred upon the question of Slavery. Such extravagancies have accompanied every great moral movement of mankind. The Reformation, the great Puritan Rebellion, the French Revolution, brought them forth in swarms. A profound historical thinker, Gervinus, remarks, that the political enthusiasm of a nation is slow to warm and swift to cool, but that its moral enthusiasm is quickly stirred and long in subsiding. Thinking men will ask themselves whether the *isms* Mr. Cushing enumerates be not the external symptoms of such an enthusiasm,—and whether it be wise, under the names of "Nationality" and "Conservatism," to urge aggressions to the point where it becomes the right and the duty of men to consider the terrible necessity of a change in their system of government; whether it be unpatriotic to resist the extension of a system which makes the mass of the population an element of danger and weakness in the body politic, as its advocates admit by their scheme for a foreign protectorate of their proposed independent organization,—a system which renders public education impossible, exhausts the soil, necessitates sparseness of population, and demoralizes the governing classes.*

The ethical aspects of Slavery are not and cannot be the subject of consideration with any party which proposes to act under the Constitution of the United States. Nor are they called upon to consider its ethnological aspect. Their concern with it is confined to the domain of politics, and

* See COBB on *Slavery*, (Philadelphia: T. & J. W. Johnson & Co., 1858,) where these admissions are made. (Introd. pp. 218-220.) This work, written by Mr. Thomas R. R. Cobb, of Georgia, is, considering the natural prepossessions of the author, singularly calm and candid. We commend it to our readers, as bringing together a great deal of information, and still more as showing the remarkable change which has come over the Southern mind, even among moderate men, on the subject of Slavery. We shall take a future occasion to notice it more fully.

they are not called to the discussion of abstract principles, but of practical measures. The question, even in its political aspect, is one which goes to the very foundation of our theories and our institutions. It is simply,—Shall the course of the Republic be so directed as to subserve the interests of aristocracy or of democracy? Shall our Territories be occupied by lord and serf, or by intelligent freemen?—by laborers who are owned, or by men who own themselves? The Republican Party has no need of appealing to prejudice or passion. In this case, there is a meaning in the phrase, Manifest Destiny. America is to be the land of the workers, the country where, of all others, the intelligent brain and skilled hand of the mechanic, and the patient labor of those who till their own fields, are to stand them in greatest stead. We are to inaugurate and carry on the new system which makes Man of more value than Property, which will one day put the living value of industry above the dead value of capital. Our republic was not born under Cancer, to go backward. Perhaps we do not like the prospect? Perhaps we love the picturesque charm with which novelists and poets have invested the old feudal order of things? That is not the question. This New World of ours is to be the world of great workers and small estates. The freemen whose capital is their two hands must inevitably become hostile to a system clumsy and barbarous like that of Sla-

very, which only carries to its last result the pitiless logic of selfishness, sure at last to subject the toil of the many to the irresponsible power of the few.

It may temporarily avail the Party of Slavery-Extension to announce itself as the party of the white man, of the sacredness of property, and the obligation of law; it may draw to their ranks a few well-meaning persons, whose easy circumstances make them uneasy,—a few leaders of defunct parties, with a general capacity for misdirection and nobody to misdirect; but it will avail the Republican Party more to claim and to prove that it is the party of Man, no matter what his color or creed or race,—of the sacredness of that property which every human being has in himself,—and of the obligation of that law which outlives legislatures and statute-books, and is the only real security of all law. The cry of "Conservatism" may be efficacious for a season; but time will make plainer and plainer the distinction between the false conservatism which for its own benefit would keep things as they are, which smooths imminent ruin delusively over, as Niagara is smoothest on the edge of the abyss, and that true conservatism which works upon things as they are, to prepare them for what they must be,—recognizes the necessity of change, to forestall revolution with healthy development,—and believes that there is no real antagonism between Old and New, but only a factitious one, the result of man's obstinacy or self-seeking.

LITERARY NOTICES.

Brief Expositions of Rational Medicine: To which is prefixed The Paradise of Doctors, a Fable. By JACOB BIGELOW, M. D., Late President of the Massachusetts Medical Society, Physician of the Massachusetts General Hospital, etc. Boston: Phillips, Sampson, and Company, 13, Winter Street. 1858.

Two doctrines, each containing a fraction of truth, have lain soaking in the

mind of our free-and-easy community so long, that what strength they had is well-nigh got out of them.

Doctrine the first is, that a man who has devoted himself to a particular calling is to be considered necessarily ignorant thereof,—and that certain babes and sucklings in that particular branch of knowledge, and all others, are to be accepted as the true oracles with regard to its mysteries.

Doctrine the second is, that every new theory accepted by any number of persons has some important truth at the bottom of it.

The first of these doctrines has its real meaning. It is true that there may be a common feeling of justice in the minds of ignorant people which shall override the decisions of a learned Chief-Justice. It is true that a man may brutalize himself by a contemplation of theological cruelties, until decent parents are ashamed to have their children listen to his libels on the Father of All. It is true that a physician may become such a drug-peddling routine, that sensible mothers see through him, and know enough to throw his trash out of the window as soon as he turns his back.

The second doctrine has its real meaning. Until men turn into beasts, they must have some arguments addressed to their reason before they will believe, and still more before they will act. Spiritualism has its significance, as an appeal from the gross materialism and heathen ideas of another life so commonly entertained. Mormonism has its logic, as an appeal from the enforced celibacy of one sex, and to the Oriental Abrahamic instincts of the other. Homœopathy has its fraction of sanity, as a protest against that odious tendency of physicians to give nauseous stuff to people because they are ailing, which sickened the pages of old pharmacopœias with powders of earthworms and *album Græcum*, and even now makes illness terrible where it reigns unrebuked.

Swallow these two paragraphs of concession as the infusion drawn from those two doctrines laid down at starting, and throw away the effete axioms as fit only for old women to coddle and drench themselves withal. Having done this, the reader is ready for the book the title of which we have prefixed.

DR. BIGELOW's name is a guaranty that it shall contain many thoughts in not over-many words. It is a pledge that we shall be emancipated from all narrow technicalities and officinal idols, while following his guidance. As a man of rare sagacity and wide range of knowledge, a man of science before he became a leading practitioner in the highest range of his profession, a philosopher whom his fellows have thought worthy to preside over their deliberations, a physician whom his brethren

have honored with their highest office, though no man among them ever assailed the pleasing and profitable delusions of his craft so sharply,—he may well be listened to, even though he has given his life to the subject on which he writes.

As this little book is neither (to speak in pharmaceutic phrase) the water, nor the spirit, but the very *essential oil*, of the author's thoughts on the matters of which he treats, it is only by a destructive analysis we can resolve it into its elements. We shall only touch upon its contents, and recommend the book itself to all who have ever known sickness, or expect ever to know it, or to have a friend liable to it.

"The Paradise of Doctors" is a pleasant bait to those wary readers who will bite at the bare hook of quackery, but must be tempted before they will venture into a book of medicine which has not lying as its staple material.

Then comes a consideration of the five methods of treating disease now most prevalent in civilized countries; namely, 1. The Artificial. 2. The Expectant. 3. The Homœopathic. 4. The Exclusive. 5. The Rational.

Perfect candor, perfect clearness, the good-nature of a successful man above all petty jealousies, the style of a scholar who has hardly an equal among us in his profession and few equals out of it, the honesty which belongs to science, and the acuteness which is conferred by practice mark this brief essay. It follows in the same course of thought as the admirable "Discourse on Self-limited Diseases," the delivery of which many years ago marked the commencement of a new epoch in the movement of the medical mind among us. An hour's reading given to this new lesson of wisdom will turn many a self-willed, proud-hearted medical skeptic into a humble and consistent patient of the regular profession.

Thoughts on Matter and Force: or Marvels that encompass us: comprising Suggestions illustrative of the Theory of the Universe. By THOMAS EWBANK. New York: D. Appleton & Co. London: Trübner & Co. 1858.

THE human longing for the Infinite is as strong now as it was when the first *ology*,

aiming to grasp it, conceived its first myth, and comprehended something so far below what humanity itself now is or knows, that we use it, along with the more recent productions of Mrs. Goose, to amuse children. This persistent trait in human nature is truly noble, however fruitless. But it is not altogether fruitless. Though the intellectual world has really come no nearer the object of its search, it has advanced far beyond its starting-point, and made valuable progress, which a lower motive could never have prompted. The wisest of mean men, as he was the meanest of wise ones, did very well to check the metaphysical modes and tendencies of human study, and advise the previous comprehension of facts within reach. This worldly wisdom has already made us all wonderfully rich in the chariots and horses of thought. The consequence is, we now rush forth into the infinite in various directions, and, from inconceivable distances of time and space, bring home marvels that are truly sublime.

Mr. Ewbank's "Suggestions" are of this sort, though the turn-out with which he has been exploring the boundless is not, perhaps, quite up to the latest improvements in the Baconian carriage-factory. There can be no doubt of the boldness with which his really modest and unpretending little book grapples with the largest of all subjects, whatever we may think of its success. Postulating, for the purpose of his cosmogony, two, and only two, absolute entities,—matter and spirit,—Mr. Ewbank makes force a property or attribute of the former, which the latter can only direct or make use of, not originate. He does not admit that spirit can overcome the inertia of matter. Whatever inertia may be, it is superable or destructible only by the force or motion of matter itself,—matter being incapable of rest. "Instead of matter being innately inert," says Mr. Ewbank, "as many think, motion is its natural condition." How the spiritual direction—or shall we call it *bossing*?—of motion or force (which only, according to Mr. Ewbank, produces results) applies itself,—what is its *point d'appui*, its mode of modifying, its why of causing,—he does not attempt to explain to us. He recognizes the universal gravitating or contractile force, from which, as successive sequences, proceed heat and expansion; but he does

not suggest that spirit has any more to do with the first than with any succeeding term in the series. It exerts no force, moves nothing; yet spirit produces all the results. "No regular or useful form," says our author, "*can be produced by unbridled force. Intelligence must be present.*" So it is the business of the spirit to bridle force,—or matter's motion,—mount the restless steed, and ride to a purpose! Shall we ever see the bits of that bridle?

On the subject of material form, we find the following passage, which, while, perhaps, the most original in the book, is to us the least instructive:—

"However multiplied interior actions may be, the universe, as a whole, must have a *common movement*, or none. One division cannot, in relation to the rest, stand still, lag behind, fly off, or diverge from its place, without destroying all unity. The earth is full of motions; but they do not interfere with her general and uniform motion. So it is with the universal orb: its rotation is, we believe, fundamental,—the basis of all other movements, without which there could be none other.

"In everything, there is virtue in FORM; and we surmise that vastly more depends on the configuration and movement of matter, as *one mass*, than has been suspected. As perfect a whole as any of its parts, must not the universe have a definable outline or shape,—one to which nothing amorphous can possibly belong? What is its figure? It can hardly be a cube, cylinder, or prism of any kind: indeed, we might as reasonably suppose it a three-sided figure as one bounded at all by straight lines. No one extending in one direction more than in another could have met the exigencies of creation; and that the universe is a sphere may also be inferred from fluid matter naturally assuming that form,—perhaps because its elements have it. Had atoms been bounded by plane-surfaces, so, we may suppose, had worlds, drops of water, and soap-bubbles.

"The universe is spherical, then, because its molecules are: and it moves, because they are incapable of rest."

Does this mean that the totality of matter is finite?—that it can be viewed, spiritually, from the outside,—even from such a distance as to appear infinitely small? If so, can there be infinite power, either material or spiritual? If the universe is spherical because its molecules are, can the molecules compose any other than the spherical form? Do we gain much by

reasoning from an assumption below the ken of the microscope to a conclusion above that of the telescope?

Mr. Ewbank, however, does not often indulge in a logical stride so long or on such shaky footing as this. Through more or less cloudiness of expression, he gives us many striking and satisfactory views, looking towards a complete synthesis of the glorious system of things to which we belong, makes out the universe as habitable and cheerful as it is wide, and leaves us admiring its good more than marvelling at its evil. He maintains that all solar and planetary bodies have a central, vital heat, produced and maintained by the same cause,—to wit, the gravitating or condensing force; its intensity being as the mass. In the sun, the mass is so great, that, in spite of its inferior density, more and intenser heat is generated by condensation than in any or all of the planets. If the whole orb is not incandescent, there is such intense heat in its central portion as to generate gases, which, being thrown up through its atmosphere, to a height at least as great as the whole diameter of our globe, condense there again with an ineffably brilliant combustion. The solid crust of the sun, he thinks, may be comparatively cool,—as cool, perhaps, as our tropical climates,—by the favor of cloud-curtains, which operate as screens, and reflect off into space the heat of the combustion overhead. He might have given more reasons than he has for this conclusion. Whether our terrestrial aurora-borealis is caused by the combustion of gases that have been generated by internal heat or not, we know that the combustion of gas in the upper regions of our atmosphere would not warm the surface of the earth much more than it would that of the moon. It is easy enough to make out, from facts which our terrene science has revealed to us, how the sun may be a perpetual fountain of light, heat, and force to its most distant planets, without having itself any superabundance of either of these emanations for its own domestic consumption. The solar population may have no more sunshine than we do, and may have even that mitigated with the luxury of ice-creams, if not with that of arctic explorations and polar bears. Whether they have as good opportunities as we for astronomical observations is a little doubtful; but

their thermological studies must flourish abundantly, to say nothing of their advantages in pyrotechnics.

A Text-Book of Vegetable and Animal Physiology, designed for the Use of Schools, Seminaries, and Colleges in the United States. By HENRY GOADBY, M. D., Professor of Vegetable and Animal Physiology and Entomology in the State Agricultural College of Michigan, Fellow of the Linnæan Society of London, etc., etc. Embellished with upwards of four hundred and fifty Illustrations. New York: D. Appleton and Company, 346 and 348, Broadway. 1858.

THE name of Mr. Goadby is embalmed in a preservative solution invented by him and known as Goadby's Fluid. Those who have visited the Royal College of Surgeons in London tell us of very exquisite anatomical preparations made by him while employed as Minute Dissector to that institution. We are grateful to Mr. Goadby for consecrating his narrow but sure immortality and his excellent mechanical talent to the service of the New World and especially of the State of Michigan.

It does not follow from this that Mr. Goadby has written a good book on Animal and Vegetable Physiology, nor that he could write such a book. Starting with this proposition, we are candid rather than sanguine as we open the volume. We find that it is not in any true sense a treatise upon Physiology, but chiefly upon the Minute Anatomy of Animals and Vegetables, with some incidental physiological commentaries.

On closer examination, we find it to be the work of a microscopist, and not that of a physiologist or a scholar. Its merits are principally its illustrations, many of which are from original dissections, some of which are very good diagrams, others ordinary, and some—such as the view of the human brain and spinal chord on page 282—wretched. The colored figures are washed with dull tints in a very shabby and negligent way. The text is mainly an account of the objects illustrated in the figures, and will prove interesting to the working microscopist as explaining the observations of a skilful dissector. As

a "Text-Book of Physiology for Schools and Colleges," it is of course without value.

English microscopists, if we might judge by this work and that of Mr. Hassall, are not remarkable for scholarship. The showy and in some respects valuable work of the latter gentleman was disgraced by constant repetitions of gross blunders in spelling. Mr. Goadby is not much above his countryman in literary acquirements, if we may judge by his treatment of the names of Schwann and Lieberkuhn, whom he repeatedly calls Schawn and Leiberkuhn, and by the indignity which he offers to the itch-insect by naming it *Acarus Scabiei*. It is not necessary to give further examples; but, if the general statement be disputed, we are prepared to speckle the book with corrections until it looks like a sign-board with a charge of small shot in it.

Nothing that we have said must be considered as detracting from Mr. Goadby's proper merits as an industrious and skilful specialist, who is more able with his microscope than with his pen, and more at home with the latter in telling us what he has seen than in writing a general treatise on so vast a subject as Physiology.

Lettres de Silvio Pellico, recueillies et mises en ordre, par M. GUILLAUME STEFANI. Traduites et précédées d'une Introduction, par M. ANTOINE DE LATOUR. Paris: 1857. pp. liii., 493. 8vo.

SILVIO PELLICO is one of the most touching ghosts that glide through the chambers of the memory. Even the rod of the pedagogue and the imprisonment of the school-room (for it has been the misfortune of "Le mie Prigioni" to be doomed to serve as a "class-book" to beginners in modern languages) have proved unable to diminish the sympathy felt for the Spielberg prisoner.

This volume will increase his pure fame. It will be read with painful interest. It will do more for Italian independence than all the ravings of revolutionary manifestoes and all the poignant-strokes of political assassins which can be written or given from now till doomsday. No one can read it without a swelling heart and a tear-filled eye, for it discloses involuntarily and

indirectly the unspeakable unhappiness of Italy. Here are the sad accounts of some loved friend or admired countryman snatched away to prison, or hurried into exile, for a letter written, or a visit paid, or an intemperate speech uttered; while no preparation is made for the long departure, and papers, even the most familiar and prized, are seized and never restored. Another page presents the exile's struggles for daily bread, his privations, his longings for the Italian sun and sky and soil, for the native land; another, the earnest prayer from jail-walls for the Bible, for books upon our Saviour's sufferings (nothing less than voices from heaven can breathe comfort in Austrian dungeons!) Then the moving letters written from one prisoner's family to another's (yesterday unacquainted, to-day near kinsmen in the bonds of sorrow) to sustain each other in the common afflictions, craving with avidity the least intelligence from the living tombs of tyranny, sharing with generous alacrity all their tidings. How musically endearing Italian diminutives fall upon the ear employed in this office! Here we have Pellico's own letters to his parents to calm their natural grief, filled with pious concealment of his own mental and bodily torment, with encouragements to hope an early pardon, and to turn their eyes to Religion, which never yet refused consolation to the afflicted. We have never read a more distressing letter than he wrote to his family, when, at last pardoned, he was once more free. Seven years had passed away since he heard from them; he knew not if one still lived to welcome him home,—if his kindred had forgotten, or execrated him as one who had dragged their common parents sorrowing and gray-haired down to the grave. Has the world among all its manifold sorrows any sorrow like unto this?

The late M. de Lamennais was wont to speak with contempt of Silvio Pellico, as being a weak, spiritless craven, who accepted with resignation when he should have plotted to end the thralldom of his country. Yet what can a man do, when the classes above him and those below him, when noble and priest and peasant, live contented in the silence of despotism, (calling it peace,) without one thought of other days, without one sentiment of pride in the deeds of their illustrious forefathers?

What is a Christian's duty, when his country is bled and plundered and ground down to the dust under the iron heel of military despotism, when the political fabric of his native land is crumbling, and his countrymen are listless, selfish, sensual, unpatriotic, not unhappy so long as their bellies are filled and their backs covered? Shall he lift his streaming eyes to heaven with the resigned ejaculation, "Father, not my will, but thine, be done"?—or shall he, in holy despair, throw his life away on Austrian bayonets? Terrible problem!

The Household Book of Poetry. Collected and edited by CHARLES A. DANA. New York: D. Appleton & Co. 1858. pp. 798.

THIS book contains extracts from upwards of three hundred authors of all periods and countries. It is made more complete by the addition of some of the most famous Latin hymns and canticles of the Church. The different pieces are classified upon a judicious system. It is handsomely printed, and not cumbrous in form. What can we say more in its praise? Only this,—that, after giving it a pretty thorough examination, we are satisfied that it is the best collection in the language. Individual tastes and idiosyncrasies will, of course, find some wants to lament, and some superfluities to condemn. A book containing so much from living writers will excite jealousies; and the writers themselves will, in some cases, be dissatisfied with the selections made from their works. But what the general reader asks is only, whether the compiler has shown skill in suiting the general taste, as well as judgment in directing it. We think this collection the most catholic and impartial we have ever seen. That is the highest praise we can bestow, and it implies that the editor has attained the success most difficult as well as essential in such an undertaking.

Curiosities of Literature. By ISAAC DISRAELI. 4 vols. Boston: William Veazie. 1858.

POSSESSING this book, Robinson Crusoe might have enjoyed all the pleasures of what Dr. Johnson called "browsing in a library," and that a large and choice one. It contains in itself all the elements of a liberal education in out-of-the-way-ness.

Everybody knows and likes this *Museum Absconditum*, as Sir Thomas Browne would have called it,—and we take particular pleasure in being able to recommend to our readers so beautiful an edition of it. It is in all respects equal to the handsomest kind of English printing, and has the added merit of being cheap. It is from the press of Houghton & Company, which has done so much to raise the standard of American printing. If Mr. Houghton go on as he has begun, his name will deserve a place with those of Elzevir, Baskerville, Foulis, and others of his craft, who have done good books the justice of a mechanical that matches their intellectual workmanship.

WE have not space in this number to give Mr. White's Shakspeare the welcome it deserves. We have examined it with some care, and can speak with decision of its very great merits. It is characterized by taste, industry, and conscientiousness. We believe it to be, in all essential respects, the best—it is certainly the most beautiful—edition of Shakspeare. This is also from the press of Houghton & Company.

WE notice with pleasure among recent literary announcements those of a History of France, by Parke Godwin, Esq., and of New England, by Dr. J. G. Palfrey. Both are *desiderata*, and the reputation of the authors is such as to warrant the highest anticipations.

THE
ATLANTIC MONTHLY.

A MAGAZINE OF LITERATURE, ART, AND POLITICS.

VOL. II.—DECEMBER, 1858.—NO. XIV.

THE IDEAL TENDENCY.

WE are all interested in Art; yet few of us have taken pains to justify the delight we feel in it. No philosophy can win us away from Shakspeare, Plato, Angelo, Beethoven, Goethe, Phidias,—from the masters of sculpture, painting, music, and metaphor. Their truth is larger than any other,—too large to be stated directly and lodged in systems, theories, definitions, or formulas. They suggest and assure to us what cannot be spoken. They communicate life, because they do not endeavor to measure life. Philosophy will present the definite; Art refers always to the vast,—to that which cannot be comprehended, but only enjoyed and adored. Art is the largest expression. It is not, like Science, a basket in which meat and drink may be carried, but a hand which points toward the sky. Our eyes follow its direction, and our souls follow our eyes. Man needs only to be shown an open space. He will rise into it with instant expansion. We are made partakers of that illimitable energy. Only poetry can give account of poetry, only Art can justify Art; and we cannot hope to speak finally of this elastic Truth, to draw a circle around that which is vital, because it has in it something of infinity,—but we may hope

to remove a doubt growing out of the very largeness which exalts and refreshes us. Art is not practical. It offers no precept, but lies abroad like Nature, not to be grasped and exhausted. Neither is it anxious about its own reception, as though any man could long escape the benefit which it brings. Every principle of science, every deduction of philosophy, is a tool. Our very religion, as we dare to name it, is a key which opens the heavens to admit myself and family. Art offers only life; but perhaps that will appear worth taking without looking beyond. Can we look beyond? Life is an end in itself, and so better than any tool.

What is that which underlies all arts as their essence, the thing to be expressed and celebrated? What is poetry, the creation from which the artist is named? We shall answer boldly: it is no shaping of forms, but a making of man. Nature is a *plenum*, is finished, and the Divine account with her is closed; but man is only yet a chick in the egg. With him it is still the first day of creation, and he has not received the benediction of a completed work. And yet the completion is involved and promised in our daily experience. Man is a perpetual seeker. He sees always just before him

his own power, which he must hasten to overtake. He weighs himself often in thought; yet it is not his present, but a presumptive value, of which he is taking account. We are continually entering into our future, and it is so near us, we are already in every hour so full of it, that we draw without fraud on the credit of to-morrow. The student who has bought his first law-book is already a great counsellor. With the Commentaries he carries home consideration and the judicial habit. Some wisdom he imbibes through his pores and those of the sheepskin cover. Now he is grave and prudent, a man of the world and of authority; but if he had chosen differently, and brought home the first book of Theology, his day would have been tinted with other colors. For every choice carries a future involved in itself, and we begin to taste that when we take our course toward it. The habit of leaning forward and living in advance of himself has made its mark upon every man. We look not at the history or performance of the stranger, but at his pretensions. These are written in his dress, his air and attitude, his tone and occupation. The past is already nothing, the present is sliding away; to know any man, we must keep our eyes out in advance on the road he is following. For man is an involuntary, if not a willing traveller. Time does not roll from under his feet, but he is carried along with the current, and can never again be where or what he was. Nothing in his experience can ever be quite repeated. If you see the same trees and hills, they do not appear the same from year to year. Yesterday they were new and strange; you and they were young together. To-day they are familiar and disregarded. Soon they will be old friends, prattling to gray hairs of the brown locks and bounding breath of youth.

The pioneer of our growth is Imagination. Desire and Hope go on before into the wilderness of the unknown; they open paths; they make a clearing; they build and settle firmly before we

ourselves in will and power arrive at this opening, but they never await our coming. They are the "Fore-runners," off again deeper into the vast possibility of being. The boy walks in a dream of to-morrow. Two bushels of hickory-nuts in his bag are no nuts to him, but silver shillings; yet neither are the shillings shillings, but shining skates, into which they will presently be transmuted. Already he is on the great pond by the roaring fire, or ringing away into distant starry darkness with a sparkling brand. Already, before his first skates are bought, before he has seen the coin that buys them, he is dashing and wheeling with his fellows, a leader of the flying train.

That early fore-reaching is a picture of our entire activity. "Care is taken," said Goethe, "that the trees do not grow into the sky"; but man is that tree which must outgrow the sky and lift its top into finer air and sunshine. The essential seed is Growth; not shell and bark, nor kernel, but a germ which pierces the soil and lifts the stone. Spirit is such a germ, and perpetual reinforcement is its quality; so that the great Being is known to us as a becoming Creator, adding himself to himself, and life to life, in perpetual emanation.

The boy's thought never stops short of some personal prowess. It is ability that charms him. To be a man, as he understands manliness, is to have the whole planet for a gymnasium and play-ground. He would like to have been on the other side of Hydaspes when Alexander came to that stream. But he soon discovers that wit is the sword of sharpness,—that he is the ruler who can reach the deepest desire of man and satisfy that. If there is power in him, he becomes a careful student, examines everything, examines his own enthusiasm, examines his last examination, tries every estimate again and again. He distrusts his tools, and then distrusts his own distrust, lifting himself by the very boot-straps in his metaphysics, to get at some foundation which will not move. He will know what he is

about and what is great. He puts Cæsar, Milton, and Whitfield into his crucible; but that which went in Cæsar comes out a part of himself. The bold yet modest young chemist is egotistical. He cannot be anybody else but John Smith. Why should he? Who knows yet what it is to be John Smith? Napoleon and Washington are only playing his own game for him, since he so easily understands and accepts their play. A boy reads history as girls cut flowers from old embroidery to sew them on a new foundation. They are interested in the new, and in the old only for what they can make of it. So he sucks the blood of kings and captains to help him fight his own battles. He reads of Bunker's Hill and the Declaration of Independence with constant reference to the part he shall take in the politics of the world. His motto is, *Sic semper tyrannis!* Benjamin Franklin, and after him John Smith,—perhaps a better man than he. We live on that *perhaps*. Every great man departed has played out his last card, has taken all his chances. We are glad to see his power limited and sealed up. Shakspeare, we say, did not know everything; and here am I alone with the universe, nothing but a little sleepiness between me and all that Shakspeare and Plato knew or did not know. If I should be jostled out of my drowsiness, who can tell what may be given me to see, to say, or to do? Let us make ready and get upon some high ground from which we may overlook the work of the world; for the secret of all mastery is dormant, yet breathing and stirring in you and me.

Out of such material as we can gather we make a world in which we walk continually up and down. In it we find friends and enemies, we love and are loved, we travel and build. In it we are kings; we ordain and arrange everything, and never come away worsted from any encounter. For this sphere arises in answer to the practical question, What can I be and do? It is an embodiment of the force that is in me. Every dreamer, therefore, goes on to see himself among

men and things which he can understand and master, with which he can deal securely. The stable-boy has hid an old volume among the straw, and he walks with Portia and Desdemona while he grooms the horses. Already in his smock-frock he is a companion for princes and queens. But the rich man's son, well born, as we say, in the great house yonder, has one only ambition in life,—to turn stable-boy, to own a fast team and a trotting-wagon, to vie with gamesters upon the road. That is an activity to which he is equal, in which his value will appear. Both boys, and all boys, are looking upward, only from widely different levels and to different heights.

The young blasphemers do not love blasphemy, but to have his head and be let alone by Old Auntie, who combs his hair as if he were a girl. So always there is some ideal aim in the mixed motive. Out of six gay young men who drive and drink together, only one cares for the meat and the bottle. With the rest this feasting gallantly on the best, regardless of expense, is part of a system. It is in good style, is convivial. For these green-horns of society to live together, to be *convive*, is not to think and labor together, as wise men use, but to laugh and be drunken in company.

Into the lowest courses there enters something to keep the filth from overwhelming self-respect. The advocates of slavery have not, as it appears, lost all pretence of honor and honesty. Thieves are sustained by a sense of the injustice of society. They do but right an old wrong, taking bravely what was accumulated by cautious cunning. They cultivate many virtues, and, like the best of us, make much of these, identify themselves with these. If a man is harsh and tyrannical, he regrets that he has too much force of character. And it is not safe to accuse a harlot of stealing and lying. She has her ideal also, and strives to keep the ulcer of sin within bounds,—to save a sweet side from corruption.

Is this stooping very low to look for the Ideal Tendency? The greater gain,

if we find it prevailing in these depths. We may doubt whether thieves and harlots are subject to the same law which irresistibly lifts us, for we know that our own sin is not quite like other sin. But I must not offer all the cheerful hope I feel for the worst offenders, because too much faith passes for levity or impiety; and men thank God only for deliverance from great dangers, not for preservation from all danger. For gratitude we must not escape too easily and clean, but with some smell of fire upon us.

Yet in our own experience this planning what we shall do and become is constant, and always we escape from the present into larger air. The boy will not be content with that skill in skating which occupies his mind to-day. That belongs to the day and place, but next year he goes to the academy and fresh exploits engage him. He works gallantly in this new field and harness, because his thought has gone forward again, and he sees through these studies the man of thought. Already as a student he is a philosopher, a poet, a servant of the Muse. Bacon and Milton look kindly on him in invitation, he is walking to their company and in their company. The young hero-worshipper cannot remain satisfied with mere physical or warlike prowess. He soon sees the superiority of mental and moral mastery, of creation of good counsel. He will reverence the valiant reformer who brings justice in his train, the saint in whom goodness is en-
amored of goodness, the gentleman whose heart-beat is courtesy, the prophet in whom a religion is born, all who have been inspired with liberal, not dragged by sordid aims.

How beautiful to him is the society of poets! He reads with idolatry the letters and anecdotes of Coleridge and Wordsworth, Goethe and Schiller, Beethoven and Raphael. Look at the private thought of these men in familiar intercourse: no plotting for lucre, but a conspiracy to reach the best in life. The saints are even more ardent in aspiration, for their tender hearts were pressed and saddened

by fear. They are now set on fire by a sense of great redemption. They are prisoners pardoned.

For scholars the world is peopled only with saints, philosophers, and poets, and the studious boy seeks his own amid their large activity. So much of it meets his want, yet the whole does not meet all his want. He must combine and balance and embrace conflicting qualities. Every day his view enlarges. What was noble last year will now by no means content his conscience. Duty and beauty have risen.

The Ideal Tendency characterizes man, affords the only definition of him; and it is a perpetual, irresistible expansion. No matter on what it fastens, it will not stay, but spreads and soars like light in the morning sky.

To-day we are charmed with our partners, and think we can never tire of Alfred and Emily. To-morrow we discover without shame, after all our protestations and engagements, that their future seems incommensurate with our own. To our surprise, they also feel their paths diverging from ours. We part with a show of regret, but real joy to be free.

Both parties have gained from their intercourse a certainty of power and promise of greater power. Silly people fill the world with lamentation over human inconstancy; but if we follow love, we cannot cling to the beloved. We must love onward, and only when our friends go before us can we be true both to friendship and to them.

How eager and tremulous his excitement when at last the youth encounters all beauty in a maiden! Now he is on his trial. Can he move her? for he must be to her nothing or all. How stately and far-removed she seems in her crystal sphere! All her relations are fair and poetic. Her book is not like another book. Her soft and fragrant attire, can it be woven of ribbons and silk? She, too, has dreamed of the coming man, heroic, lyrical, impassioned; the beat of his blood a pæan and triumphal march; a man able to cut paths for her and lead her to all that is worthiest in life. Her

day is an expectation; her demand looks out of proud eyes. Can he move this stately creature, pure and high above him as the clear moon yonder, never turning from her course,—this Diana, who will love upward and stoop to no Endymion? Now it will appear whether he can pass with another for all he is to himself. This will be the victory for which he was born, or blackest defeat. If she could love him! If he should, after all, be to her only such another as her cousin Thomas, who comes and goes with all his pretensions as unregarded as Rover the house-dog! Between these *ifs* he vacillates, swung like a ship on stormy waters, touching heaven and hell.

Meanwhile the maiden dares hardly look toward this generous new-comer, whose destiny lies broad open in his courage and desire. Others she could conciliate and gently allure, but she will not play with the lion. She will throw no web around his strength to tear her heart away, if it does not hold him. For the first time she guards her fancy. She will not think of the career that awaits him, of the help there is in him for men, and the honor that will follow him from them,—of the high studies, tasks, and companionship to which he is hastening. What avails this avoidance, this turning-away of the head? A fancy that must be kept is already lost. She read his quality in the first glance of deep-meaning eyes. When at last he speaks, she sees suddenly how beyond all recovery he had carried away her soul in that glance. They marry each the expectation of the other. It was a promise in either that shone so fair. Happy lovers, if only as wife and husband they can go on to fulfil the promise! For love cannot be repeated; every day it must have fresh food in a new object; and unless character is renewed, love must leave it behind and wander on.

If the wife is still aspiring,—if she lays growing demands on her hero,—if her thought enlarges and she stands true to it, separate from him in integrity as he saw her first, following not his, but her

own native estimate,—she will always be his mistress. She will still have that charm of remoteness which belongs only to those who do not lean and borrow, to natures centred for themselves in the deep. There is something incalculable in such independence. It is full of surprise for the most intimate. In one breast the true wife prepares for her husband a course of loves. Every day she offers a new heart to be won. Every day the woman he could reach is gone, and there again before him is the inaccessible maiden who will not accept to-day the behavior of yesterday. This withdrawal and advancement from height to height is true virginity, which never lies down with love but keeps him always on foot and girded for fresh pursuit. Noble lovers rely on no pledges, point to no past engagements, but prefer to renew their relation from hour to hour. The heroic woman will command, and not solicit love. Let him go, when I cease to be all to him, when I can no longer fill the horizon of his imagination and satisfy his heart. But if there is less ascension in a woman, she is no mate for an advancing man. He must leave her; he walks by her side alone. So we pass many dear companions, outgrowing alike our loves and our fears.

Once or twice in youth we meet a man of sounding reputation or real wisdom, whose secret is hid above our discovery. His manners are formidable while we do not understand them. In his presence our tongues are tied, our limbs are paralyzed. Thought dies out before him, the will is unseated and vacillates, we are cowed like Antony beside Cæsar. In solitude we are ashamed of this cowardice and resolve to put it away; but when the great man returns, our knees knock and we are as weak as before. It is suicide to fly from such mortification. A brave boy faces it as well as he can. By-and-by the dazzle abates, he sees some flaw, some coarseness or softness, in this shining piece of metal; he begins to fathom the motives and measure the orbit of this tyrannous benefactor. They are the true

friends who daunt and overpower us, to whom for a little we yield more than their due.

This rule is universal, that no man can admire downward. All enthusiasm rises and lifts the subject of it. That which seems to you so base an activity is lifted above low natures. What matter, then, where the standard floats at this moment, since it cannot remain fixed?

Perfection retreats, as the horizon withdraws before a traveller, and lures us on and on. It even travels faster than our best endeavors can follow, and so beckons to us from farther and farther away. We may give ourselves to the ideal, or we may turn aside to appetite and sleep; but in every moment of returning sanity we are again on our feet and again upon an endless ascending road.

When a man has tasted power, when he sees the supply there is so near in Nature for all need, he hungers for reinforcement. That desire is prayer. It opens its own doors and takes supplies from God's hand. No wise man can grudge the necessary use of the mind to serve the body with shelter and food, for we go merrily to Nature, and with our milk we drink order, justice, beauty, and benignity. We cannot take the husks on which our bodies are fed, without expressing these juices also, which circulate as sap and blood through the sphere. We cannot touch any object but some spark of vital electricity is shot through us. Every creature is a battery, charged not with mere vegetable or animal, but with moral life. Our metaphysical being is fed from something hidden in rocks and woods, in streams and skies, in fire, water, earth, and air. While we dig roots, and gather nuts, and hunt and roast our meat, our blood is quickened not in the heart alone. Deeper currents are swelled. The springs of our humanity are opened in Nature; for that which streams through the landscape, and comes in at the eye and ear, is plainly the same fluid which enters as consciousness, and is the life by which we live. While we enjoy this spiritual refreshment and keep ourselves

open to it, we may dig without degradation; but if our minds fasten on the thing to be done, on commodity and safety, on getting and having, those avenues seem to close by which the soul was fed. Then we forget our incalculable chances and certainties; we go mad, and make the mind a muck-rake. If a man will direct his faculties to any limited and not to ilimitable ends, he cripples his faculties. No matter whether he is deluded by a fortune or a reputation or position, if he does not give himself wholly to grow and be a man, regardless of minor advantages, he has lost his way in the world. "Be true," said Schiller, "to the dream of thy youth." That dream was generous, not sordid. We must be surrendered to the perfection which claims us, and suffer no narrow aim to postpone that insatiable demand.

But the potency of life will bring back every wanderer, as he well knows. Every sinner keeps his trunk packed, ready to return to the good. The poor traders really mean to buy love with their gold. Feeling the hold of a chain which binds us even when we do not cling to it, we grow prodigal of time and power. The essence of life, as we enjoy it, is a sense of the inextinguishable ascending tendency in life; and this gives courage when there is yet no reverence or devotion.

In development of character is involved great change of circumstances. We cannot grow or work in a corner. It is not for greed alone or mainly that men make war and build cities and found governments, but to try what they can do and become, to justify themselves to themselves and to their fellows. We desire to please and help,—but still more, at first, to be sure that we can please and help. If he hears any man speak effectually in public, the ambitious boy will never rest till he can also speak, or do some other deed as difficult and as well worth doing. For the trial of faculty we must go out into the world of institutions, range ourselves beside the workers, take up their tools and strike

stroke for stroke with them. Every new situation and employment dazzles till we find out the trick of it. The boy longs to escape from a farm to college, from college to the city and practical life. Then he looks up from his desk, or from the pit in the theatre, to the gay world of fashion,—harder to conquer than even the world of thought. At last he makes his way upward into the sacred circle, and finds there a little original power and a great deal of routine. These fine parts are like those of players, learned by heart. The men who invented them, with whom they were spontaneous, seem to have died out and left their manners with their wardrobes to narrow-breasted children, whom neither clothes nor courtesies will fit. So in every department we find the snail freezing in an oyster-shell. The judges do not know the meaning of justice. The preacher thinks religion is a spasm of desire and fear. A young man soon loses all respect for titles, wigs, and gowns, and looks for a muscular master-mind. Somebody wrote the laws, and set the example of noble behavior, and founded every religion. Only a man capable of originating can understand, sustain, or use any institution. The Church, the State, the Social System come tumbling ruinous over the heads of bunglers, who cannot uphold, because they never could have built them, and the rubbish obstructs every path in life. An honest, vigorous thinker will clear away these ruins and begin anew at the earth. When the boy has broken loose from home, and fairly entered the world that allured him, he finds it not fit to live in without revolutions. He is as much cramped in it as he was in the ways of the old homestead. Feeding the pigs and picking up chips did not seem work for a man, but he finds that almost all the activity of the race amounts to nothing more; no more thought or purpose goes into it. Men find Church and State and Custom ready-made, and they fall into the procession, ask no searching questions, but take things for granted without reason; and their imita-

tion is as easy as picking up chips. It is no doing, but merely sliding down hill. The way of the world will not suit a valiant boy. To make elbow-room and get breathing-space, he becomes a reformer; and when now he can find no new worlds to conquer, he will make a world, laying in truth and justice every stone. The same seeker, who was so fired by the sight of his eyes, looking out from a mill-yard or a shoe-shop on the many-colored activity of his kind, who ran such a round of arts and sciences, pursuing the very secret of his being in each new enterprise, is now discontented with all that has been done. He begins again to look forward,—he becomes a prophet, instead of the historian he was. He easily sees that a true manhood would disuse our ways of teaching and worshipping, would unbuild and rebuild every town and house, would tear away the jails and abolish pauperism as well as slavery. He sees the power of government lying unused and unsuspected in spelling-books and Bibles. Now he has found a work, not for one finger, but for fighting Hercules and singing Apollo, worthy of Minerva and of Jove. He will try what man can do for man.

The history of every brave girl is parallel with that of her play-fellow and yoke-fellow. She sighs for sympathy, for a gallant company of youths and maidens worthy of all desire. Her music, drawing, and Italian are only doors which she hopes to open upon such a company. She longs for society to make the hours lyrical, for tasks to make them epic and heroic. The attitudes and actions of imaginative young persons are exalted every moment by the invisible presence of lovers, poets, inspired and inspiring companions. Such as they are we also shall be; when we walk among them and with them, we shall wash our hands of all injustice, meanness, and pretension. Women are as tired as men of our silly civilization, its compliments, restraints, and compromises. They feel the burden of routine as heavily, and keep their elasticity under it as long as

we. What they cannot hope to do, a great-hearted man, some lover of theirs, shall do for them; and they will sustain him with appreciation, anticipating the tardy justice of mankind. Every generous girl shares with her sex that new development of feminine consciousness, which the vulgar have named, in derision, a movement for woman's rights. She will seek to be more truly woman, to assert her special power and privilege, to approach from her own side the common ideal, offering a pure soprano to match the manly bass.

We all look for a future, not only better than our own past, but better than any past. Humanity is our inheritance, but not historical humanity. Man seems to be broken and scattered all abroad. The great lives are only eminent examples of a single virtue, and by admiration of every hero we have been crippled on some one side. If he is free, he is also coarse; if delicate, he is overlaid by the gross world; saints are timid and feverish, afraid of being spattered in the first puddle; heroes are profane. We must melt up all the old metal to make a new man and carry forward the common consciousness. Every failure was part of the final success. We go over a causeway in which every timber is some soldier fallen in this enterprise. Who doubts the result doubts God. We say, regretfully, "If I could only continue at my best!" and we ache with the little ebb, between wave and wave, of an advancing tide. But this tide is Omnipotence. It rises surely, if it were only an inch in a thousand years. The changes in society are like the geologic upheaval and sinking of continents; yet man is morally as far removed from the savage as he is physically superior to the saurian. We do not see the corn grow or the world revolve; yet if motion be given as the primal essence, we must look for inconceivable results. Wisdom will take care of wisdom, and extend. Consider the growth of intellect in the history of your own parish for twenty years. See how old views have died out of New

England, and new ones come in. Every man is fortified in his opinions, yet no man can hold his opinions. The closer they are hugged, the faster in any community they change. The ideas of such men as Swedenborg, Goethe, Emerson, float in the air like spores, and wherever they light they thrive. The crabbedest dogmatist cannot escape; for, if he open his eyes to seek his meat, some sunshine will creep in. We have combustibles stored in the stupidest of us, and a spark of truth kindles our slumbering suspicion. Since the great reality is organized in man, and waits to be revealed in him, it is of no avail to shut out the same reality from our ears. Thinkers are held to be dangerous, and excluded from the desks of public instruction; but the boys were already occupied with the same thoughts. They would hear nothing new at the lecture, and they are more encouraged by the terror of the elders than by any word the wise man could speak. In pursuit of truth, the difficulty is to ask a question; for in ability to ask is involved ability to reach an answer. The serious student is occupied with problems which the doctors have never been able to entertain, and he knows that their discourse is not addressed to him. If you have not wit to understand what I seek, you may croak with the frogs: you are left out of my game.

And the old people, unhappily, suspect that this boy, whose theory they do not comprehend, is master of their theory. They are puzzled and panic-stricken; they strike in the dark. In all controversy, the strong man's position is unassailed. His adversary does not see where he is, but attacks a man of straw, some figment of his own, to the amusement of intelligent spectators. Always our combatant is talking quite wide of the whole question. So the wise man can never have an opponent; for whoever is able to face and find him has already gone over to his side. By material defences, we shut out light for a little, by going where only our own views are repeated, and so boxing our

selves from all danger of conviction; but if a strong thinker could gain the mere brute advantage of having an audience confined in their seats to hear him out, he would carry them all inevitably to his conclusion. They know it and run away. But the press has made our whole world of civilization one great lecture-room, from which no reading man can escape, and the only defence against progress is stolid preoccupation with trade or trifles. Yet this persistency is holding the breath, and can no more be continued in the mind than that in the body. Blundering and falsehood become intolerable to the blunderers; they must return to thought, and that is proper in a single direction, is approached by ten thousand avenues toward the One. It is religious, not ignorance or dogma. We cannot think without exploration of the divine order and recognition of its divinity, without finding ourselves carried away by it to service and adoration. All good is assured to us in Truth, and Truth follows us hard, drives us into many a corner, and will have us at last. So Love surprises all, and every virtue has a pass-key to every heart. Out of conflicting experience, amid barbarism and dogmatism, from feathers that float and stones that fall, we deduce the great law of moral gravitation, which binds spirit to spirit, and all souls to the best. Recognition of that law is worship. We rejoice in it without a taint of selfishness. We adore it with entire satisfaction. Worship is neither belief nor hope, but this certainty of repose upon Perfection. We explore over our heads and under our feet a harmony that is only enriched by dissolving discords. The drag of time, the cramp of organization, are only false fifths. It is blasphemy to deny the dominant. We cannot escape our good; we shall be purified. When our destiny is thus assured to us, we become impatient of sleep and sin, and redouble exertion. We devote ourselves to this certainty, and our allegiance is religion. There is nothing in man omitted from the uplift of Ideality. That is a central and total

expansion of him, is an inmost entering into his inmost, is more himself than he is himself. All reverence is directed toward this Creator revealed in flesh, though not compassed. We adore him in others, while yet we despise him in ourselves. Every other motion of man has an external centre, is some hunger or passion, acts on us from its seat in Nature or the body, and we can face it, deny and repudiate it with the body; but this is the man flowing down from his source.

We must not be tempted to call things by too fine names, lest we should disguise them. All that is great is plain and familiar. The Ideal Tendency is simple love of life, felt first as desire and then as satisfaction. The men who represent it are not seekers, but finders, who go on to find more and more; for in the poet desire has fulfilled itself. Enjoyment makes the artist. He has gone on before us, reaching into the abyss of possibility; but he has reached more mightily. He begins to know what is promised in the universal attraction, in this eager turning of all faces toward our future. There is a centre from which no eye can be diverted, for it is the beam of sight. Look which way you will, that centre is everywhere. The universe is flooded with a ray from it, and the light of common day on every object is a refraction or reflection of that brightness.

Shallow men think of Ideality as another appetite, to be fed with pretty baubles, as the body is satisfied with meat and sleep; but the representative of that august impulse feels in it his immortality, and by all his lovely allegories, mythologies, fables, pictures, statues, manners, songs, and symphonies, he seeks to communicate his own feeling, that by specific gravity man must rise. It is no wonder, then, that we love Art while it offers us reinforcement of being, and despise the pretenders, for whom it is pastime, not prophecy.

For, in spite of all discouragement from the materialists, men stultified by trade or tradition, we have trusted the high desire and followed it thus far. We

felt the sacredness of life even in ourselves, and there was always reverence in our admiration. We could not be made to doubt the divinity of that which walked with us in the wood or looked on us in the morning. The grasses and pebbles, the waters and rocks, clouds and showers, snow and wind, were too brother-like to be denied. They sang the same song which fills the breast, and our love for them was pure. The men and women we sought, were they not worthy of honor? The artist comes to bid us trust the Ideal Tendency, and not dishonor him who moves therein. He is no trifler, then, to be thrust aside by the doctors with their sciences, or the economists with production and use. He offers manhood to man and womanhood to woman.

We have named Ideality a love of life.

Nay, what is it but life itself,—and that loving but true living? What word can have any value for us, unless it is a record of inevitable expansions in character. The universe is pledged to every heart, and the artist represents its promise. He sings, because he sees the man-child advancing, by blind paths it may be, but under sure guidance, propelled by inextinguishable desires toward the largest experience. He is no longer afraid of old bugbears. He feels for one, that nothing in the universe, call it by what ugly name you will, can crush or limit the lift of that heaven which works in the breast. Out of all eyes there looks on him the same expectation, and what for others is a great *perhaps* for him has become unavoidable certainty.

THE HOUR BEFORE DAWN.

"The mind of man is first led to adore the forces of Nature, and certain objects of the material world; at a later period, it yields to religious impulses of a higher and purely spiritual character."

HUMBOLDT.

CHAPTER I.

ALPHEUS and Eleusa, Thessalian Greeks, travelled in their old age, to escape poverty and misfortune, which had surely taken joint lease with themselves of a certain hut among the hills, and managed both household and flock.

The Halcyon builds its nest upon a floating weed; so to the drifting fortunes of these wanderers clung a friendless child, innocent and beautiful Evadne.

Some secret voice, the country-people say, lured the shepherd from his home, to embark on the Ægean Sea, and lead the little one away, together with his aged wife, to look for a new home in exile. Mariners bound for Troas received them into their vessel, and the voyage began.

The Greeks lamented when they beheld the shores of Asia. Heavy clouds and the coming night concealed the landmarks which should have guided their approach, and, buffeted by the uncertain winds, they waited for the morning. By the light of dawn, they saw before them an unknown harbor, and the dwellings of men; and here the mariners determined to be rid of their passengers, who vexed them by their fears; while to these three any port seemed desirable, and they readily consented to put off towards the shore. At the hour when the winds rise, at early dawn, they gladly parted from the seamen and the tossing ship, and took the way before them to the little town.

No fisherman, shadowless, trod the sands; no pious hand lighted the fire of

sacrifice in the vanishing twilight; even the herds failed to cry out for the coming day. Strange fears began to chill the hearts of the Thessalians. They walked upon a trackless way, and when they entered the dwellings they found them untenanted. Over the doorways hung vines dropping their grapes, and birds flew out at the open windows. They climbed a hill behind the town, and saw how the sea surrounded them. The land on which they stood was no promontory, but an island, separated by a foaming interval of water from the shore, which they now saw, not distant, but inaccessible.

Then these miserable ones clung to each other on the summit of the rock, gazing, until they were fully persuaded of their misfortune. The winds waved and fluttered their garments, the waters uttered a voice breaking on the rocky shore, and rose mute upon the farther coast. The rain now began to fall from a morning cloud, and the travellers, for the first time, found shelter under a foreign roof.

All day they watched the sails approaching the headlands, or veering widely away and beating towards unseen harbors, as when a bird driven by fear abandons its nest, but drawn by love returns and hovers around it. Four days and nights had passed before the troubled waves ceased to hinder the craft of the fisherman. The Greeks saw with joy that their signals were answered, and a boat approached, so that they could hear a man's voice crying to them,—

"What are you who dwell on the island of the profane, and gather fruits sacred to Apollo?"

"If I may be said to dwell here," replied the old man, "it is contrary to my own will. I am a Greek of Thessaly. Apollo himself should not have forbidden me to gather the wild grapes of this island, since I and this child and Eleusa, my wife, have not during many days found other food."

"It is indeed true," exclaimed the boatman, "that madness presently falls

upon those who eat of these grapes, since you speak impious words against the god. Behold, yonder is woody Tenedos, where his altar stands; it is now many years, since, filled with wrath against the dwellers here, he seized this rock, and hurled it into the sea; the very hills melted in the waves. I myself, a child then, beheld the waters violently urged upon the land. Moved without winds, they rose, climbing upon the very roofs of the houses. When the sea became calm, a gulf lay between this and the coast, and what had been a promontory was left forever an island. Nor has any man dared to dwell upon it, nor to gather its accursed fruits. Many men have I known who saw gods walking upon this shore, visible sometimes on the high cliffs inaccessible to human feet. Therefore, if you, being a stranger, have ignorantly trespassed on this garden, which the divinities reserve, perhaps for their own pleasure, strive to escape their resentment and offer sacrifices on the altar of Tenedos."

"Give me a passage in your boat to the land yonder, and I will depart out of your coasts," replied the Greek.

The fisherman, hitherto so friendly, remained silent, and words were wanting to him wherewith to instruct the stranger. When he again spoke, he said,—

"Why, old man, not having the vigor or the carelessness of youth, have you quitted your home, leading this woman into strange lands, and this child, whose eyes are tearful for the playmates she has left? I call a little maid daughter, who is like unto her, and she remains guarded at home by her mother, until we shall give her in marriage to one of her own nation and language."

"Waste no more words," answered the old man; "I will narrate my story as we row towards your harbor."

"It were better for you," said the boatman, "that they who brought you hither should take you into their ship again. Enter our town, if you will, but be not amazed at what shall befall you. It is a custom with us to make slaves of those

who approach us unsolicited, in order to protect ourselves against the pirates and their spies, who have formerly lodged themselves among us in the guise of wayfaring men, and so robbed us of our possessions. Therefore it is our law, that those who land on our coast shall, during a year, serve us in bondage."

Anger flamed in the eye of the stranger.

"You do well," he cried, "to ask of me why I left the land which bore me. Never did I there learn to suspect vile and inhospitable customs. If you have pity for the aged and the unfortunate, and would not gladly see them cast into slavery, bring hither some means of life to this rock, which cowards have abandoned for me. Meanwhile, I will watch for some friendly sail, which, approaching, may bear me to any harbor, where worse reception can hardly await me.—Know that I fear not the anger of your gods; many years have I lived, and I have never yet beheld a god. My father has told me, that, in all his wanderings, among lonely hills, at the hour of dawn, or by night, or, again, in populous places, he has never seen one whom he believed to be a god. Moreover, in Athens itself are those who doubt their existence. Leave me to gather the grapes of Apollo!"

So saying, he turned away from the shore, not deigning to ask more from the stranger.

When the golden crescent moon, no sooner visible than ready to vanish in the rosy western sky, was smiling on the exiles with the old familiar look she wore above the groves of Thessaly, the sad-hearted ones were roused again by the voice of their unknown friend.

"Come down to the shore," he cried; "I have returned to you with gifts; my heart yearns to the child; she is gentle, and her eyes are like those of the stag when the hunters surround him. Take my flasks of oil and wine, and these cakes of barley and wheat. I bring you nets, and cords also, which we fishermen know how to use. May the gods, whom you despise, protect you!"

Late into the night the Greeks remained upon the border of the sea, wondering at their strange fate. To the idle the day is never sufficiently long,—the night also is wasted in words.

CHAPTER II.

THE days which the exiles passed in solitude were not unhappy. The child Evadne pruned the large-leaved vines, and gave the rugged cheeks of certain melons to the sun. The continual hope of departure rendered all privations supportable.

Was it hope, or was it fear, that stirred their bosoms when at last a sail appeared not distant? They hoped that its white wings might turn seaward!

"Mother," cried the shepherd, "no seaman willingly approaches this shore, for the white waves warn him how the rocks lie beneath the water. Even walls and roofs of houses are seen, or guessed at, ingulfed formerly by the sea; and the tale of that disaster, as told us by the fisherman, is doubtless known to mariners, who, fearing Apollo, dare not land upon this island. While, on the other hand, we have heard how pirates, and even poor wayfaring folk, are so ill-received in the bay, that from them, though they be not far off, we yet look for no assistance. Let us, then, be content, and cease to seek after our fate, which doubtless is never at rest from seeking after us. And let us not be in haste to enter again into a ship, (so fearful and unnatural a thing for those born to walk upon the land,) nor yet to beg our way along painful and unknown roads, in search of men of a new religion and a different language from that of Greeks. Neither, dear wife, if we must suffer it, let us dread slavery too much. Life is long enough for those who die young, and too long for the aged. One year let us patiently give, more especially if it be unavoidable to give it. Vex me with no more lamentations; some unforeseen accident may relieve us from our misfortunes."

Eleusa, the good old wife, ever obedient to the husband of her youth, talked no more of departure, nor yet complained of their miserable lodgings in the ruined huts, on which her housewifely care grieved to expend itself in vain.

Evadne would not be restrained from wandering. She penetrated alone the wildest thickets; the nests of timid birds were known to her; and she traced the bee to his hidden city. Deep in the woods she discovered a wide chasm, in which the water of the sea palpitated with the beating of the great heart of Ocean from which it flowed. Trees were still erect, clasped by the salt waves, but quite dead; and all around their base were hung fringes of marine growth, touched with prismatic tints when seen through the glittering water, but brown and hideous when gathered, as the trophy remaining in the hand which has dared to seize old Proteus by the locks. All around this avenue, into which the sea sometimes rushed like an invading host of armed men, the laurels and the delicate trees that love to bend over the sources of the forest-streams hung half-uprooted and perilously a-tiptoe over the brink of shattered rocks, and withered here and there by the touch of the salt foam, towards which they seemed nevertheless fain to droop, asking tidings of the watery world beyond.

The skeleton-arms of the destroyed ones were feeble to guard the passage of the ravine. Evadne broke a way over fallen trees and stepping-stones imbedded in sea-sand, and gained the opposite bank. The solitude in which she found herself appeared deeper, more awful, than before the chasm lay between the greater island and the less. She listened motionless to the soft, but continual murmur of the wood, the music of leaves and waves and unseen wings, by which all seeming silence of Nature is made as rich to the ear as her fabrics to the eye, so that, in comparison, the garments of a king are mean, though richly dyed, embroidered on every border, and hung with jewels.

While the little wood-ranger stood and

waited, as it were, for what the grove might utter, her eye fell upon the traces of a pathway, concealed, and elsewhere again disclosed, overgrown by sturdy plants, but yet threading the shady labyrinth. She followed the often reappearing line upon the hillside, and as she climbed higher, with her rose the mountains and the sea. The shore, the sands, the rocky walls, showed every hue of sunbeams fixed in stone. The leafy sides of Tenedos had caught up the clear, green-tinted blue of the sea, and wore it in a noonday dream under the slumberous light that rested on earth and sea and sky. Above the horizon, far away, the very clouds were motionless; and where the sunbeams marked a tranquil sail, it seemed, with wave and cloud, to express only Eternal Repose. But the eager child pressed onward, for the crown of the hill seemed almost reached, and she longed for a wider, wider view of the beautiful *Ægean*.

Suddenly she arrived where a sculptured stone lay in the pathway. Some patient and skilful hand had wrought there the emblem of a rose, and among the chiselled petals stood drops of rain, collected as in a cup. On the border a pure white bird had just alighted, and Evadne watched how it bent and rose and seemed to caress the flower of stone, while it drank of the dew around and within it. Her eyes filled with tears as she mused on the vanished hand of Art, whose work Nature now reclaimed for this humble, but grateful use. The dove took wing, and the child proceeding came to a level turf where a temple of white marble stood. Eight slender columns upheld a marble canopy, beneath which stood the image of a god. One raised hand seemed to implore silence, while the other showed clasping fingers, but they closed upon nothing. Around the statue's base lay scattered stones. Evadne gathered them, and reunited they formed the lyre of Apollo. She replaced, for an instant, in the cold and constant grasp a fragment of the ruined harp. Then the aspect of the god became regretful,

sad, as of one who desires a voice from the lips of the dead. Hastily she flung the charm away, and gentle grace returned to the listening boy, from whom, sleeping, some nymph might have stolen his lyre, whose complaining chords now vibrated to his ear and called their master to the pursuit. Evadne reposed on the steps of the temple, and fixedly gazed upon the god. Her fancy endowed the firm hand with an unbent bow; then the figure seemed to pause in the chase, and listen for the baying of the hounds. Then she imaged a shepherd's staff, and the shepherd-god waited tenderly for the voice of a lost lamb.

"So stood Apollo in Thessaly," she softly said, "when he carried the shepherd's staff. Oh that I were the lost Thessalian lamb for whom he waits, that he might descend and I die for joy on his breast!"

Then, half afraid that the lips might break their marble stillness in reply, she asked the protection of the deity, whom she was fain to adore, but whom her adopted parents dared to despise.

Sole worshipper at a deserted shrine, she had no offering to place there, but of flowers. She wove a crown and laid it at his feet, and, while she bent by the pedestal, to hang a garland there, oh, terror! a voice cried, "Evadne! Evadne!" A tide of fear rushed to her heart. The god stood motionless yet. Who could have uttered her name? A falling branch, a swift zephyr, may have seemed for an instant articulate, and yet it was surely a human voice which had called her. Her reverie was broken now, like a cataract brought to its downfall. A moment since, all was peace and joyfulness; now she remembered, with alarm, how long she had left her foster-parents alone, and the way by which she had come was unknown, as if she had never traced it. She crossed the floor of the temple, and, as she turned to whisper, "Farewell! beautiful god!" the form gently inclined itself, and the uplifted hand stirred lightly. Evadne darted forward and looked no more behind. She bounded over chasms in the pathway, and broke the

tender branches before her with impatient hands, so that her descent from the temple was one mad flight.

CHAPTER III.

WHEN Evadne returned to Alpheus and to her foster-mother, she was silent concerning her discovery, and it seemed the more sweet to her for being secret. Her thoughts made pilgrimages to the temple hidden by the laurels once set to adorn it, and the deserted God of Youth and Immortal Beauty drew from her an untaught and voiceless worship. How tedious now appeared the labors of their half-savage life!—for the ensnaring of fish and the gathering of fruits for the little household gave the child no leisure to climb the hill a second time, to seek the lost temple, now all her own. Two weary days had passed, and on the morning of the third Evadne performed all her labors, such as they were, of field or of the house.

Eleusa was absorbed in the art, new to her, of repairing a broken net, when the child abruptly fled away into the forest, crying out, "I go to seek wild grapes." She would not hear the voices calling her back. She gained rapidly the path, already familiar, and wherein every bough and every leaf seemed expectant of her coming footsteps.

Hamadryads veiled themselves, each in her conscious tree, eluding human approach. She steals more gently along, that she may haply surprise a vision. The little grassy plain appears beyond the wavering oak-branches. It is reached at last, and there,—surely it is no delusion,—there rests a sleeping youth! Another step, and she bent aside the boughs. He stands erect, listening.

"It is the god!" she cries; and, falling back, would have been precipitated from the rock, had not the youth rapidly bounded forward and grasped her hand.

"Little one, beautiful child," he cried, "do not fear me! I have indeed played the god formerly, to scare from my hunting-ground the poor fools who dread the

anger of Apollo. Tell me, who are you, thus wandering in the awful garden of the gods? Who brought you hither, and what name has been given you?"

Trembling still, and not knowing how to relate it, Evadne stammered forth some words of her history. Her senses were bewildered by the beauty of the hunter-boy, who now appeared how different from the marble god! Bold, and as if ever victorious, with an undaunted brow, like Bacchus seen through the tears of sad Ariadne awakened. Strong and swift were his limbs, as those of a panther. His cheek was ruddy, and his half-naked form was brown, as those appear who dwell not under a roof, but in the uncertain shade of the forest. His locks were black and wildly disordered, and his eyes were most like to a dark stream lighted with golden flashes; but the laughing beauty of his lip no emblem could convey.

Soon, seated on the turf, the story of each child was related.

"I am nobly born," said the boy, "but I love the life of a hunter. My father has left me alone, and when I am a man, I, too, shall follow him to Rome. But liberty is sweeter than honor or power. I escape often from my tutor, who suspects not where I hide myself, and range all the forests. Embarking by night, in former years, I often visited this island. I know where to gather fruits and seek vineyards among the ruined huts of the village beneath us. By night I descend and gather them, for my free wanderings by day caused the fishermen to relate that a god walked upon the shore. When some, more curious or bold, turned their prow hitherward, to observe what form moved upon the hill, I rolled great rocks down, with a thundering noise, into the sea, and have terrified all men from the spot."

"We now call the vineyards and gardens ours," said Evadne, "but it appears they truly belong to you. Descend to the shore and we will share with you, not only the ripest clusters of the vines, but wine and loaves which the fisherman brings us."

"Bring me hither the wine, and I will gladly drink of it, nor waste one drop in oblation; but I must not descend to the shore, and you must be silent concerning me, for my tutor offers large rewards to any one who will disclose where I hide myself. The slaves on the coast here are ready to betray me. I have watched them sailing near the island, lured by the promise of a handful of gold, but not daring to land upon it, lest they should behold, against his will, a divine being."

"Then I will climb up hither and bring you the fruits," said Evadne.

"Nay, my bird," answered the boy, "lay them only on the altar, below, and when it is safe to descend, call me."

"If I call softly, you cannot hear me; and I cannot call loudly enough to reach you upon this hill."

"The secrets of the island are not known to you," her companion said, and arose quickly; "follow me,—I will teach you. You know not why Apollo is listening? It is for the good of the worshippers, who care not to mount the hill to adore him. Above the town stands an altar; voices uttered there are brought up hither by an echo. There the pious repaired once, and laid their gifts, and songs and the music of flutes sounded in honor of the deity, who was held too sacred to be approached. Hold me not too sacred, little one!—you shall approach without fear; but give me your voice at this altar, when your foster-father sleeps."

"But what shall I call you?" cried the laughing Evadne.

"Call *Hylas*. Echo has often repeated the name, they say, in the country of Mysia, and these groves shall learn it of you! Now follow me over the floor of the temple,—but lightly! lightly! See how the god would warn us away! He nods on his pedestal; even the loud thunder may some day cause his fall; already he is half shaken down from his shrine by earthquakes."

Then, firmly, bold Hylas held trembling Evadne, who glanced for an instant down the leafy passage of echoes.

CHAPTER IV.

WHEN the day was over, Alpheus called to him his foster-child.

"You have willingly followed us into our exile," he said, "nor have you ever inquired whither we lead you. Listen to me; I shall confide to you a secret, so that, if evil befall us, you may go on and fulfil your journey.

"In Asia stands a city, called Thyatira, and there dwell men of a new religion, called Christians. Of this faith I know as yet but little. But, dear Evadne, your father is yet living, and has sent, praying me to conduct you to him, that you may be taught among Christians. I have labored to fulfil his wish, for in our youth we were dear to each other. The moon saw us nightly upon the hills, guarding our flocks, and by day we practised the labors and the sports of Greeks."

"What is the religion of my father?" asked the child.

"I cannot tell it to you; I know only that the Christians worship one god."

"Apollo, then, is my choice."

"Not so, child. The god of Christians is not known to us; but he shall overthrow the idols of the whole world. The bow of Diana, the lyre of Apollo, are already broken."

The child started. Was the temple known to Alpheus, too? Had he seen there the fragments of a shattered harp?

The old man continued his discourse, but Evadne's thoughts had flown away towards the lost temple.

"There alone will I worship," she murmured to herself. She dreamed of adoring the deity of stone, but Hylas haunted all her thoughts. Yes, Evadne! one god is sufficient for you!

Under cover of the darkness, the friendly boatman drew near, and the islanders heard the unaccustomed sound of the boat drawn up the beach by the youth, whose superstitious fears began to vanish as he observed that no calamity fell upon these dwellers on the sacred spot.

"I come," he said, "with gifts truly, but also with good tidings. Have patience yet awhile. Your retreat is still unknown, and, after a few days, I may find you the means of escape."

Evadne alone was silent, and her tears flowed secretly.

The sun was already set, on the following day, before she stole away to meet the hunter-boy. In his hand, as he advanced joyously to greet her, he bore a white dove, which his arrow had pierced.

"I struck it," he said, while he pointed to its broken wing and bleeding breast, "when it alighted on the edge of a stone fallen from the temple."

Evadne concealed her ready tears and uttered no reproach against her hero; but she pressed the dead bird to her bosom.

"Tell me, Hylas," she asked, "do you worship this god before us, or that of the Christians?"

The boy laughed gayly.

"I worship this strong right arm," he said, "and my own bold will, which has conquered and shall conquer again! The stories of the gods are but fables. To us who are brave nothing can be forbidden; it is the weak who are unfortunate, and no god is able either to assist or to destroy us. As to the Christians, they are a despised people, a race of madmen, who, pretending to love poverty and martyrdom, are followed by the rude and ignorant. As for us, we are gods, both to them and to ourselves."

Evadne knew that she herself must be counted among the rude and ignorant; she dared not raise her eyes to the young noble, who watched her quivering lip, and but dimly guessed how he had wounded her.

"Leave caressing the dead bird," he said, at last, "and I will tell you tales of Rome and its glories."

And he charmed back again her innocent smiles, with noble traditions of kings, of gods, and of heroes, till the round moon stood above Gargarus, cold, in a rose-tinted heaven.

But again at sunrise the child sought

the spot to bring a basket, heavy with gifts, for Hylas. He came at the call of Evadne, fresh, glowing, beautiful as a child rocked on the breast of Aurora, and upheld by her cool, fanning wings. His cheek wore the kiss of the Sun, and his closely curling locks were wet by the scattered fountain, cold in the shaded grove. He broke the early silence of the air with song and story, and named for the admiring child the towns, the headlands, and the hills, over which the eye delighted to wander.

"Now is the hour," he said, "when mariners far away behold for a little while the dome of this temple. They believe that the gods have rendered it invisible except at the rising day; but, in truth, the oaks, the laurels, and the unpruned ivy conceal it from view, at all times, except when the rays from the east strike upward. I have delighted to teach the people fables concerning this island and the lost temple; for as long as they fear to tread upon this spot, I have a retreat for myself, where I range unmolested.

"See yonder, so white among the dark cypress-trees, my father's villa! It has gardens and shady groves, but I love best the wild branching oaks which give their shade to Evadne! Far away in the purple distance stands the Mount of Ida. There dwelt Paris, content with the love of Enone, until he knew himself to be the son of a king, for whom Argive Helen alone was found worthy; for his eyes had rested once upon immortal charms, of which the green eternal pines of Ida are still whispering the story. See how the people of this village of Athos flock together! Some festival occupies them. I see them going forth from the gates in hurrying crowds; and now a band of men approaches. Some one is about to enter their town, to whom they wish to do honor, and doubtless they bear green branches to strew in the way. I know not what festival they celebrate, for the altars are all deserted."

"I see a boat put off from the shore,"

said Evadne, "and it seems to turn its prow hitherward."

But it soon was concealed by the woody hill-top, although its course was seen to be directed towards the ruined huts upon the shore. Not long after, the children heard the name of "Evadne," brought faintly by the echoes, like the words of unseen ghosts who strive to awaken some beloved sleeper unconscious of their presence.

Evadne feared to return, and dared not stay. For the first time, the voice of her foster-father failed to bring her obedient footsteps; for her fluttering heart suspected something strange and unwelcome awaiting her. She wept at parting from Hylas, and the boy detained her. He also seemed troubled.

"Dear little one," he said, "betray me not! These men of Athos have seen me, and have authority to bring me bound before some ruler who has entered their town. They come to look for me now. I fly to my hiding-place, and you will deny that you saw any one in this forest."

He was gone down the face of the cliff, with winged feet, light of tread as Jove's messenger. More slowly, Evadne retraced the downward path, and lingered on the banks of the ravine, where the bitter waters were sobbing among the rocks. She lay down upon the ground, and dreamed, while yet waking, of her home in Thessaly, of her unknown father in the Christian city of Thyatira, and of Hylas, ever Hylas, and the pain of parting. How long she hid herself she guessed not, until the sun at the zenith sent down his brightest beam to discover the lost Thessalian lamb. Then, subdued and despairing, she travelled on to meet the reproaches that could not fail to await her.

CHAPTER V.

At midnight the sleepless girl stole from her couch, and laid on the altar beyond the village heavy clusters of grapes and the richest fruits from her store of dainties. "Hylas!" she softly cried, and

the sleepless echo repeated the name; but though she watched long, no form emerged from the forest. Timidly she flitted back to her dwelling, and waited for an eastern gleam. At last the veil of night was lifted a little, a wind ruffled the waves, and the swaying oaks repeated to the hills the message of coming splendors from the Orient. Evadne gladly saw that the stars were fewer and paler in the sky, and she walked forth again, brushing cold dew from the vines and the branches. A foreboding fear led her first to look at the altar where she had left her offering. It was untouched. Then she entered the still benighted wood, and passed the cold gray waters. Arrived at the temple, she felt a hateful stillness in the place.

"Hylas!" she loudly called, "come to me! For *you* there is no danger; but for me, they will take me away at sunrise. The Christians will come to-day and carry me hence. Oh, Hylas! where do you hide yourself?"

But only a strong and angry wind disturbed the laurels around the temple, and all was still. Then the song of the birds began all around her, and a silver gleam shot across the eastern horizon. Suddenly rosy-tinged signals stood among the sad-colored torn clouds above her head. The hour for her departure was approaching. She gazed intently down among the pines, where Hylas had disappeared, and painfully and slowly began to descend. The wild-eyed hares glanced at her and shrank into concealment again. The birds uttered cries of alarm, and the motionless lizards lay close to her feet. Her heart beat anxiously when she heard the sudden stroke of a bird's wing, scared from its nest, and she paused often to listen, but no human voice was heard.

She penetrated slowly thus to that shore of the island which she had never yet visited. She reached a border of white sand, and studied its surface. She found a record there,—traces of footsteps, and the long trail of a boat, drawn from a thicket of laurels to the shore, and down to the water's edge. She stood

many minutes contemplating these signs. She imaged to herself the retreat by night, by the late rising light of the waning moon. She seemed to see the youth, his manly arm urging the boat from its hiding-place. In this spot his foot pressed the sand. There he walked before and drew the little craft behind him. He launched it here, and, had not the winds urged the water up the shore, his last footstep might have remained for Evadne to gaze at.

He is surely gone! To return for the smiles of Evadne? She knows not if he will return; but she glances upward at the sky, and feels that she soon will have quitted the island, this happy island, forever!

Upward through the wood again she toils to take a last look at the temple. The spot seemed already to have forgotten her. And yet here lies a withered crown she wove once for Hylas; and here she finds at last the dart she lost for him, when she drew his bow in play. Now she sees on the shore at Athos an assembly of the people, and the men push off their boats. The village is already alive, and awake. The rising of the sun is looked for, and the clouds are like a golden fleece. Slowly above the tree-tops the swans are waving their great pinions, to seek the stream of Cays-ter. All creatures recognize the day, and only one weeps to see the light.

Evadne knew that on yonder shore waited the dreaded messengers who would gather the homeless into the Christian fold. She stayed to utter one farewell to the cold, the cruel marble, with its unvaried smile.

"Be my god!" she cried, aloud. "In whatever strange land, to whatever unknown religion I may be led, the god of this forgotten temple shall have the worship of my heart!"

She crossed the marble pavement. She clasped with her white cold arms the knees of Apollo—Hold! the form totters!—it is too late!—it must fall! She rises to flee away, but the very floor is receding from her tread. And slowly, with

a majesty even in destruction, the god bows himself, and drops from his pedestal.

The crashing fall is over. The foundations of the shrine, parted long ago by earthquakes, and undermined by torrents, have slipped from their place. Stones slide gradually to the brink of the rock, and some have fallen near the sculptured rose; and yet some portions of the graceful temple stand, and will support the dome yet, until some boisterous storm shakes roughly the remaining columns.

But the god is dethroned, shivered, ruined. Evadne should arise and go. The daylight overflows the sky, and she is quite, quite still, where the hand of Apollo has laid her. Her forehead was but touched by fingers that once held the lyre; and a crimson stream flows through the locks upon her brow. A smile like that which the god wore is fixed and changeless now upon her lip. Why does she smile? Because, in the dawn of life, of grief, of love, she found peace.

The sun was up, and there was no more silence or repose along the coast. Vigor and toil gave signs of their awakening. Sails were unfurled upon the wavering masts, and showed white gleams, as the sunlight struck each as it broadened out and swayed above its bright reflection below. Oars were dipped in the smooth sea, and an eager crowd stood waiting to visit the exiles on the once dreaded island. Evadne was already missed. Again and again voices called upon her, the echoes repeated the sound, and the groves had but one voice,—“Evadne!” She stirred not at the sound, but her smile grew sweeter, and her brow paler, and cold as the marble hand that pressed it.

Oh, Alpheus! oh, Eleusa! chide not! you will be weeping soon! She has, indeed, angered you of late. She left her foster-parents alone, and threaded the forest. She hid herself when you called, and, when the fisher's boat was waiting to convey her with you to the shore, where friends were ready to receive her

and lead her to her father, then she was wandering!

Eleusa is querulous. No wonder! for the child is sadly changed. They will see her soon; a Christian prophet comes to break the heathen spell of the island. The men of yonder village consent to abjure the worship of Apollo. They come with the teacher of a new religion to consecrate the spot anew. The busy crowd, as on a day of festival, embark to claim again the once deserted spot.

Alpheus and Eleusa wait sadly for their approach, for trouble possesses their hearts. They pine for their once gentle, submissive child. But the teacher comes, and hails them in words of a new benediction. *The Great Name* is uttered also in their hearing. Calmness returns to them, in the presence of the holy man. It is not Paul, mighty to reprove, and learned as bold,—it is that “one whom Jesus loved.” He has rested on his bosom, and looked on him pierced on the cross. The look from his dying eyes and the tones of his tender love are ever present in the soul of this beloved disciple. The awful revelations of Patmos had not yet illumined his eyes. His locks were white as the first blossoms of the spring, but his heart was not withered by time, and men believed of him that he should never see death. Those who beheld him loved him, and listened because they loved. What he desired was accomplished as if a king had commanded it, and what he taught was gathered in among the treasures of the heart.

The first care of the Apostle was to seek the lost child, and the youths of his company went on, and scaled the hill. Meanwhile, not far from the altar, on which an unregarded offering lay, the people gathered round their master, while to Alpheus and Eleusa he related the immortal story of Judea.

Before mid-day the villagers had returned to their dwellings. With John, their friend and consoler, two mourners departed from the island, where fabled Apollo no longer possessed a shrine. His

altar was torn away; a newly-made grave was marked by a cross roughly built of its broken stones.

"I will return here," said the fish-

erman of Athos, "when you are far away in some Christian city of Asia. I will return and carve here the name of 'Evadne.'"

THE SKATER.

THE skater lightly laughs and glides,
 Unknowing that beneath the ice
 Whereon he carves his fair device
 A stiffened corpse in silence slides.

It glareth upward at his play;
 Its cold, blue, rigid fingers steal
 Beneath the trendings of his heel;
 It floats along and floats away.

He has not seen its horror pass;
 His heart is blithe; the village hears
 His distant laughter; he careers
 In festive waltz athwart the glass.—

We are the skaters, we who skim
 The surface of Life's solemn flood,
 And drive, with gladness in our blood,
 A daring dance from brim to brim.

Our feet are swift, our faces burn,
 Our hopes aspire like soaring birds;
 The world takes courage from our words,
 And sees the golden time return.

But ever near us, silent, cold,
 Float those who bounded from the bank
 With eager hearts, like us, and sank
 Because their feet were overbold.

They sank through breathing-holes of vice,
 Through treacherous sheens of unbelief;
 They know not their despair and grief:
 Their hearts and minds are turned to ice.

THOMAS JEFFERSON.*

[Concluded.]

MR. JEFFERSON returned from France in the autumn of 1789, and the following spring took office as Secretary of State. He was unwilling to abandon his post abroad, but the solicitations of Washington controlled him. He plainly was the most suitable person for the place. Franklin, the father of American diplomacy, was rapidly approaching the close of his long and busy life, and John Adams, the only other statesman whose diplomatic experience could be compared with that of Thomas Jefferson, was Vice President.

It would be a tedious task to enter into a detail of the disputes which arose in Washington's Cabinet, nor is it necessary to do so. Most candid persons, who have examined the subject, are convinced that the differences were unavoidable, that they were produced by exigencies in affairs upon which men naturally would disagree, by conflicting social elements, and by the dissimilar characters, purposes, and political doctrines of Jefferson and Hamilton. Jefferson's course was in accordance with the general principles of government which from his youth he had entertained.

As to the accusation, so often made, that he opposed an administration of which he was a member and which by the plainest party-rules he was bound to support, it is completely answered by the statement, that his conduct was understood by Washington, that he repeatedly offered to resign, and that when he retired it was in opposition to the President's wish. It is not worth while for us to apply a higher standard of party loyalty to Washington's ministers than he himself applied.

One great difficulty encountered by

the politicians of that day seems to have been purely fanciful. Strictly speaking, the government did not have a policy. It went into operation with the impression that it would be persistently resisted, that its success was doubtful, and that any considerable popular disaffection would be fatal to it. These fears proved to be unfounded. The day Washington took the oath, the government was as stable as it now is. Disturbing elements undoubtedly existed, but they were controlled by great and overruling necessities, recognized by all men. Thus the final purpose of the administration was accomplished at the outset. The labor which it was expected would task the patriotism and exercise the skill of the most generous and experienced was performed without an effort,—as it were, by a mere pulsation of the popular heart. The question was not, How shall the government be preserved? but, How shall it be administered? This is evident now, but was not seen then. The statesmen of the time believed that the Union was constantly in danger, and that their best efforts were needed to protect it. In this spirit they approached every question which presented itself. Thinking that every measure directly affected the safety of the republic, a difference of opinion could not be a mere disagreement upon a matter of policy. In proportion to the intensity of each man's patriotism was his conviction that in his way alone could the government be preserved, and he naturally thought that his opponents must be either culpably neglecting or deliberately plotting against the interests of the country. Real difficulties were increased by imaginary ones. Opposition became treason. Parties called themselves Republicans and Federalists;—they called each other monarchists and anarchists. This delusion has always char-

* *The Life of Thomas Jefferson*. By HENRY S. RANDALL, LL. D. In three volumes. New York: Derby & Jackson. 1858.

acterized our politics; noisy politicians of the present day stigmatize their adversaries as disunionists; but during the first twenty years it was universal, and explains the fierce party-spirit which possessed the statesmen of that period, and likewise accounts for many of their errors.

Among these errors must be placed the belief which Jefferson had, that there was a party of monarchists in the country. Mr. Randall makes a long argument in support of this opinion, and closes with an intimation that those who refuse to believe now cannot be reached by reason. He may rank us with these perverse skeptics; for, in our opinion, his argument not only fails to establish his propositions, but is strong against them. Let it be understood;—the assertion is not, that there were some who would have preferred a monarchy to a republic, but that, after the government was established, Ames, Sedgwick, Hamilton, and other Federal leaders, were plotting to overturn it and create a monarchy. Upon this we have no hesitation in taking issue. The real state of the case, and the circumstances which deceived Mr. Jefferson, may be briefly set forth.

Jefferson left France shortly after the taking of the Bastille. He saw the most auspicious period of the Revolution. During the session of the Estates General, the evils which afflicted France were admitted by all, but the remedies proposed were, as yet, purely speculative. The roseate theories of poets and enthusiasts had filled every mind with vague expectations of some great good in the future. Nothing had occurred to disturb these pleasing anticipations. There was no sign of the fearful disasters then impending. The delirium of possession had not seized upon the nation,—her statesmen had not learned how much easier it is to plan than to achieve,—nor had the voice of Burke carried terror throughout Europe. Even now, it is impossible to read the first acts of that drama without being moved to sympathetic enthusiasm. What emotions must it not have excited while the awful catas-

trophe was yet concealed! Tried by any received test, France, for centuries, had been the chief state in Europe,—inferior to none in the arts of war, superior to any in the arts of peace. Fashion and letters had given her an empire more permanent than that which the enterprise of Columbus and the fortune of Charles gave to Spain, more extended than that which Trafalgar and Waterloo have since given to England. Though her armies were resisted, her wit and grace were irresistible; every European prince was her subject, every European court a theatre for the display of her address. The peculiar spirit of her genius is not more distinctly to be seen in the verse of Boileau than in that of Pope,—in the sounding periods of Bossuet than in Addison's easy phrase. The spectacle of a nation so distinguished, which had carried tyranny to a perfection and invested it with a splendor never before seen, becoming the coryphæus of freedom, might easily have fascinated a mind less impressible by nature, and less disposed by education for favorable impressions, than that of Jefferson. He shared the feeling of the hour. His advice was asked, and respectfully listened to. This experience, while, as he says, it strengthened his preconceived convictions, must have prevented him from carefully observing, certainly from being affected by, the influences which had been at work in his own country. He came home more assured in republicanism, and expecting to find that America had kept pace with him.

But many things had occurred in America to excite doubts of the efficiency of republican institutions. The government of the Confederation was of little value. During the war, common interests and dangers had bound the Colonies together; with peace came commercial rivalries, boundary disputes, relations with other countries, the burdens of a large debt,—and the scanty powers with which Congress had been clothed were inadequate to the public exigencies. The Congress was a mere conven-

tion, in which each State had but one vote. To the most important enactments the consent of nine States was necessary. The concurrence of the several legislatures was required to levy a tax, raise an army, or ratify a treaty. The executive power was lodged in a committee, which was useless either for deliberation or action. The government fell into contempt; it could not protect itself from insult; and the doors of Congress were once besieged by a mob of mutinous soldiery. The States sometimes openly resisted the central government, and to the most necessary laws, those for the maintenance of the national credit, they gave but a partial obedience. They quarrelled with each other. New York sent troops into the field to enforce her claims upon her New England neighbors. The inhabitants of the Territories rebelled. Kentucky, Vermont, and Tennessee, under another name, declared themselves independent, and demanded admission into the Union. In New Hampshire and Pennsylvania, insurrections took place. In Massachusetts, a rebellion was set on foot, which, for a time, interrupted the sessions of the courts. An Indian war, attended by the usual barbarities, raged along the northern frontier. Foreign states declined to negotiate with a government which could not enforce its decrees within its own borders. England haughtily refused to withdraw her troops from our soil; Spain closed the Mississippi to the commerce and encroached upon the territory of the Confederation. Every consideration of safety and advantage demanded a government with strength enough to secure quiet at home and respect abroad. It is not to be denied that many thoughtful and experienced men were discouraged by the failure of the Confederation, and thought that nothing but a monarchy could accomplish the desired purpose.

There were also certain social elements tending in the same direction, and these were strongest in the city of New York, where Jefferson first observed them. That city had been the centre of the

largest and most powerful Tory community in the Colonies. The gentry were nearly all Tories, and, during the long occupation of the town, the tradespeople, thriving upon British patronage, had become attached to the British cause. There, and, indeed, in all the cities, there were aristocratic circles. Jefferson was of course introduced into them. In these circles were the persons who gave dinners, and at whose tables he heard the opinions expressed which astonished and alarmed him.

What is described as polite society has never been much felt in American politics; it was not more influential then. Besides, in many cases, these opinions were more likely to have been the expression of affectation than of settled conviction. Nothing is more common than a certain insincerity which leads men to profess and seemingly believe sentiments which they do not and cannot act upon. The stout squire who prides himself upon his obstinacy, and whose pretty daughter manages him as easily as she manages her poodle, is a favorite character in English comedy. Every one knows some truculent gentleman who loudly proclaims that one half of mankind are knaves and the other half would be if they dared, but who would go mad with despair if he really believed the atrocious principles he loves to announce. Jefferson was not so constituted as to make the proper allowance for this kind of insincerity. Though undemonstrative, he was thoroughly in earnest. In fact, he was something of a precisian in politics. He spoke of kings and nobles as if they were personal foes, and disliked Scott's novels because they give too pleasing a representation of the institution of chivalry. He probably looked upon a man who spoke covetously of titles much as a Salem elder a century before would have looked upon a hard-swearing Virginia planter. In the purse-proud citizens, who, after dinner, used to talk grandly about the British Constitution, he saw a set of malignant conspirators, when in fact not one in ten had ever

thought seriously upon the subject, or had enough force of character to attempt to carry out his opinions, whatever they might have been.

The political discontents were hardly more formidable. We have admitted that some influential persons were in favor of a monarchy; but no one took a decided step in that direction. In all the published correspondence there is not a particle of evidence of such a movement. Even Hamilton, in his boldest advances towards a centralization of power, did not propose a monarchy. Those who were most doubtful about the success of a republic recognized the necessity of making the experiment, and were the most active in establishing the present one. The sparsity of the population, the extent of the country, and its poverty, made a royal establishment impossible. The people were dissatisfied with the Confederation, not with republicanism. The breath of ridicule would have upset the throne. The King, the Dukes of Massachusetts and Virginia, the Marquises of Connecticut and Mohawk, Earl Susquehanna and Lord Livingston, would have been laughed at by every ragamuffin. The sentiment which makes the appendages of royalty, its titles and honors, respectable, is the result of long education, and has never existed in America. Washington was the only person mentioned in connection with the crown; but had he attempted to reach it, he would have lost his power over the people. He was strong because he had convinced his country that he held personal objects subservient to public ones,—that, with him, “the path of duty was the way to glory.” He had none of the magnetism which lulls the senses and leads captive the hearts of men. Had he clothed himself in the vulgar robes of royalty,—had he taken advantage of the confidence reposed in him for a purpose of self-aggrandizement, and that of so petty and commonplace a kind,—he would have sunk to a level with the melodramatic heroes of history, and that colossal reputation, which rose, a fair exha-

lation from the hearts of grateful millions, and covered all the land, would have vanished like a mist.

Whatever individuals may have wished for, the charge of monarchical designs cannot be brought against the Federalists as a party. New England was the mother of the Revolution, and became the stronghold of Federalism. In South Carolina and New York, a majority of the inhabitants were Tories; the former State voted for Mr. Jefferson every time he was a candidate, the latter gave him his election in 1800. It requires a liberal expenditure of credulity to believe that the children of the Puritans desired a monarchy more than the descendants of the Cavaliers and the adherents of De Lancy and Ogden. Upon this subject Jefferson does not seem to have understood that disposition which can be dissatisfied with a measure, and yet firm and honest in supporting it. Public men constantly yield or modify their opinions under the pressure of political necessity. He himself gives an instance of this, when, in stating that he was not entirely content with the Constitution, he remarks that not a member of the Federal Convention approved it in all its parts. Why may we not suppose that Hamilton and Ames sacrificed their opinions, as well as Mr. Jefferson and the framers of the Constitution?

The evidence with which Mr. Randall fortifies his position is inconclusive. It consists of the opinions of leading Republicans, and extracts from the letters of leading Federalists. The former are liable to the objection of having been prompted by political prejudices; the latter will not bear the construction which he places upon them. They are nothing more than expressions of doubt as to the stability of the government, and of regret that one of a different kind was not adopted,—most of which were made after the Federalists were defeated. We should not place too literal a construction upon the repinings of disappointed placemen. Mr. Randall, we believe, has been in political life, and ought to be accustomed to the

disposition which exists among public men to think that the country will be ruined, if it is deprived of their services. After every election, our ears are vexed by the gloomy vaticinations of defeated candidates. This amiable weakness is too common to excite uneasiness.

An argument of the same kind, and quite as effective as Mr. Randall's, might be made against Jefferson. His letters contain predictions of disaster in case of the success of his opponents, and the Federalists spoke as harshly of him as he of them. They charged him with being a disciple of Robespierre, said that he was in favor of anarchy, and would erect a guillotine in every market-place. He called them monarchists, and said they sighed after King, Lords, and Commons. Neither charge will be believed. The heads of the Federalists were safe after the election of Mr. Jefferson, and the republic would have been safe if Hamilton and Adams had continued in power.

Both parties formed exaggerated opinions. That Jefferson did so, no one can doubt who observes the weight he gave to trifles,—his annoyance at the etiquette of the capital,—at the levees and liveries,—at the President's speech,—the hysterical dread into which he was thrown by the mere mention of the Society of the Cincinnati, and the "chill" which Mr. Randall says came over him "when he heard Hamilton praise Cæsar." This spirit led him to the act which every one must think is a stain upon his character: we refer to the compilation of his "Ana." As is well known, that book was written mainly for the purpose of proving that the Federalists were in favor of a monarchy. It consists chiefly of reports of the conversations of distinguished characters. Some of these conversations—and it is noticeable that they are the most innocent ones—took place in his presence. The worst expressions are mere reports by third parties. One story rests upon no better foundation than that Talleyrand told it to Volney, who told it to Jefferson. At one place we are informed, that, at a St. Andrew's Club dinner, the

toast to the President (Mr. Adams) was coldly received, but at that to George the Third "Hamilton started to his feet and insisted on a bumper and three cheers." This choice bit of scandal is given on the authority of "Mr. Smith, a Hamburg merchant," "who received it from Mr. Schwarthouse, to whom it was told by one of the dinner-party." At a dinner given by some members of the bar to the federal judges, this toast was offered: "Our King in old England,"—Rufus King being the American minister in that country. Whereupon Mr. Jefferson solemnly asks us "to observe the *double entendre* on the word King." Du Ponceau told this to Tenche Coxe, who told it to Jefferson. Such stuff is repeated in connection with descriptions of how General and Mrs. Washington sat on a raised sofa at a ball, and all the dancers bowed to them,—and how Mrs. Knox mounted the steps unbidden, and, finding the sofa too small for three, had to go down. We are told that at one time John Adams cried, "Damn 'em! you see that an elective government will not do,"—and that at another he complimented a little boy who was a Democrat, saying, "Well, a boy of fifteen who is not a Democrat is good for nothing,—and he is no better who is a Democrat at twenty." Of this bit of treason Jefferson says, "Ewen told Hurt, and Hurt told me." These are not mere scraps, published by an indiscreet editor. They were revised by Mr. Jefferson in 1818, when he was seventy-five years old, after, as he says, the passions of the time were passed away,—with the intention that they should be published. It is humiliating to record this act. No justification for it is possible. It is idle to say that these revelations were made to warn the country of its danger. As evidence they are not entitled to a thought. More flimsy gossip never floated over a tea-table. Besides, for such a purpose they should have been published when the contest was in progress, when the danger was imminent, not after the men whom he arraigned were defeated and most of them in their graves. Equally unsatisfactory is the ex-

cuse, that they illustrate history. This may be true, but it does not acquit Mr. Jefferson. Pepys tells us more than Hume about the court of Charles II., and Boswell's *Life of Johnson* is the best biography in the language,—but he must be a shabby fellow who would be either a Boswell or a Pepys. Mr. Randall's excuse, that the act was done in self-vindication, is the worst of all. Jefferson was the victor and needed no defence, surely not so mean and cowardly a defence. That a grave statesman should stoop to betray the confidence of familiar intercourse,—that a skeptical inquirer, who systematically rejected everything which did not stand the most rigid tests, should rely on the ridiculous gossip of political circles,—that a deliberate and thoughtful man should jump to a conclusion as quickly as a child, and assert it with the intolerance of a Turk, certainly is a strange anomaly. We can account for it only by supposing that upon the subject of a monarchy he was a little beside himself. It is certain, that, through some weakness, he was made to forget gentlemanly propriety, and the plainest rules for the sifting of testimony;—let us believe that the general opinions which he formed, and which his biographer perpetuates, resulted from the same unfortunate weakness.

We have dwelt upon this subject, both on account of the prominence which Mr. Randall has given it, and because, as admirers of Mr. Jefferson, we wished to make a full and distinct statement of the most common and reasonable complaint against him. The biographer has done his hero a great injury by reviving this absurd business, and has cast suspicion upon the accuracy of his book. It is time that our historians approached their subjects with more liberal tempers. They should cease to be advocates. Whatever the American people may think about the policy of the Federalists, they will not impute to them unpatriotic designs. That party comprised a majority of the Revolutionary leaders. It is not strange that many of them fell into error. They were wealthy and had the pride of wealth.

They had been educated with certain ideas about rank, which a military life had strengthened. The liberal theories which the war had engendered were not understood, and, during the French Revolution, they became associated with acts of atrocity which Mr. Jefferson himself condemned. Abler men than the Federalists failed to discriminate between the crime and the principles which the criminals professed. Students of affairs are now in a better position than Mr. Jefferson was, to ascertain the truth, and they will not find it necessary to adopt his prejudices against a body of men who have adorned our history by eloquence, learning, and valor.

Jefferson's position in Washington's government must have been extremely disagreeable. There was hardly a subject upon which he and Hamilton agreed. Washington had established the practice of disposing of the business before the Cabinet by vote. Each member was at liberty to explain his views, and, owing to the wide differences in opinion, the Cabinet Council became a debating society. This gave Hamilton an advantage. Jefferson never argued, and, if he had attempted it, he would have been no match for his adversary. He contented himself with a plain statement of his views and the reasons which influenced him, made in the abstract manner which was habitual with him. Hamilton, on the other hand, was an adroit lawyer, and a painstaking dialectician, who carefully fortified every position. He made long speeches to the Cabinet, with as much earnestness as one would use in court. Though Jefferson had great influence with the President, he was generally outvoted. Knox, of course, was against him. Randolph, the Attorney-General, upon whose support he had a right to depend, was an ingenious, but unsteady, sophist. He had so just an understanding, that his appreciation of his opponent's argument was usually stronger than his confidence in his own. He commonly agreed with Jefferson, and voted with Hamilton. The Secretary of State was not allowed to control his own

department. Hamilton continually interfered with him, and had business interviews with the ministers of foreign countries. The dispute soon spread beyond the Cabinet, and was taken up by the press. Jefferson again and again asked leave to resign; Washington besought him to remain, and endeavored to close the breach between the rival Secretaries. For a time, Jefferson yielded to these solicitations; but finally, on the 31st of December, 1793, he left office, and was soon followed by Hamilton.

After reaching Monticello, Mr. Jefferson announced, that he had completely withdrawn from affairs, and that he did not even read the journals, preferring to contemplate "the tranquil growth of lucern and potatoes." These bucolic pleasures soon palled. Cultivating lucern and potatoes is, without doubt, a dignified and useful employment, but it is not likely to content a man who has played a great part, and is conscious that he is still able to do so. We soon find him a candidate for the Presidency, and, strange as it may seem, in 1797, he was persuaded to leave his "buckwheat-dressings" and take the seat of Vice-President.

Those who are interested in party tactics will find it instructive to read Mr. Randall's account of the opposition to Adams's administration. His correspondence shows that Adams was the victim of those in whom he confided. He made the mistake of retaining the Cabinet which Washington had during the last year or two of his term, and a weaker one has never been seen. His ministers plotted against him,—his party friends opposed and thwarted him. The President had sufficient talent for a score of Cabinets, but he likewise had many foibles, and his position seemed to fetter his talents and give full play to his foibles. The opposition adroitly took advantage of the dissensions of their adversaries. In Congress, the Federalists were compelled to carry every measure by main force, and every inch of ground was contested. The temporizing Madison, formerly leader of the Republicans in the House of Repre-

sentatives, had been succeeded by Albert Gallatin, a man of more enterprising spirit and firmer grasp of thought. He was assisted by John Randolph, who then first displayed the resources of his versatile and daring intellect. Mr. Jefferson, also, as the avowed candidate for the succession, may be supposed to have contributed his unrivalled knowledge of the springs of human action. Earnest as the opposition were, they did not abuse the license which is permitted in political contests. But the Federalists pursued Mr. Jefferson with a vindictiveness which has no parallel in this country. They boasted of being gentlemen, and prided themselves upon their standing and culture, yet they descended to the vilest tricks and meanest scandal. They called Jefferson a Jacobin,—abused him because he liked French cookery and French wines, and wore a red waistcoat. To its shame, the pulpit was foremost in this disgraceful warfare. Clergymen did not hesitate to mention him by name in their sermons. Cobbett said, that Jefferson had cheated his British creditors. A Maryland preacher improved this story, by saying that he had cheated a widow and her daughters, of whose estate he was executor. He was compared to Rehoboam. It was said, that he had a negro mistress, and compelled his daughters to submit to her presence,—that he would not permit his children to read the Bible,—and that, on one occasion, when his attention was called to the dilapidated condition of a church, he remarked, "It is good enough for him who was born in a manger." According to his custom, he made no reply to these slanders, and, except from a few mild remarks in his letters, one cannot discover that he heard of them.

Mr. Adams did not show his successor the customary courtesy of attending his inauguration, leaving Washington the same morning. The new President, entirely unattended and plainly dressed, rode down the avenue on horseback. He tied his horse to the paling which

surrounded the Capitol grounds,* and, without ceremony, entered the Senate Chamber. The contrast between this somewhat ostentatious simplicity and the parade at the inaugurations of Washington and Adams showed how great a change had taken place in the government.

The Presidency is the culmination of Mr. Jefferson's political career, and we gladly turn to a contemplation of his character in other aspects.

The collections of Jefferson's writings and correspondence, which have been published, throw no light upon his domestic relations. We have complained of the prolixity of Mr. Randall's book, but we do not wish to be understood as complaining of the number of family letters it contains. They form its most pleasing and novel feature. They show us that the placid philosopher had a nature which was ardent, tender, and constant. His wife died after but ten years of married life. She was the mother of six children, of whom two, Martha and Maria, reached maturity. Though still young, Mr. Jefferson never married again, finding sufficient opportunity for the indulgence of his domestic tastes in the society of his daughters. Martha, whom he nicknamed Patsey, was plain, resembling her father in features, and having some of his mental characteristics. Maria, the youngest, inherited the charms of her mother, and is described as one of the most beautiful women of her time. Her natural courtesy procured for her, while yet a child, from her French attendants, the *sobriquet* of Polie, a name which clung to her through life.

Charged with the care of these children, Jefferson made their education one of his regular occupations, as systematically performed as his public duties. He planned their studies, and descended to the minutest directions as to dress and deportment. While they were young, he himself selected every article of clothing for them, and even after they were married, continued their constant and confi-

dential adviser. When they were absent, he insisted that they should inform him how they occupied themselves, what books they read, what tunes they played, dwelling on these details with the fond particularity of a lover. Association with his daughters seemed to awaken his noblest and most refined impulses, and to reveal the choicest fruit of his reading and experience. His letters to them are models of their kind. They contain not only those general precepts which an affectionate parent and wise man would naturally desire to impress upon the mind of a child, but they also show a perception of the most subtle feminine traits and a sympathy with the most delicate feminine tastes, seldom seen in our sex, and which exhibits the breadth and symmetry of Jefferson's organization. One of the most characteristic of these letters is in the possession of the Queen of England, to whom it was sent by his family, in answer to a request for an autograph.

His daughters were in France with him, and were placed at school in a convent near Paris. Martha was captivated by the ceremonials of the Romish Church, and wrote to her father asking that she might be permitted to take the veil. It is easy to imagine the surprise with which the worldly diplomatist read the epistle. He did not reply to it, but soon made a visit to the Abbaye. He smiled kindly at the young enthusiast, who came anxiously to meet him, told the girls that he had come for them, and, without referring to Martha's letter, took them back to Paris. The account-book shows that after this incident the young ladies did not diminish their attention to the harpsichord, guitar, and dancing-master.

Maria, who was married to John W. Eppes, died in 1804, leaving two children. Martha, wife of Thomas M. Randolph, survived her father. She was the mother of ten children. The Randolphs lived on Mr. Jefferson's estate of Monticello, and after he retired from public life he found his greatest pleasure in the society of the numerous family which surrounded him,—a pleasure which in-

creased with his years. Mr. Randall publishes a few letters from some of Jefferson's grand-daughters, describing their happy child-life at Monticello. Besides being noticeable for grace of expression, these letters breathe a spirit of affection for Mr. Jefferson which only the warmest affection on his part could have elicited. The writers fondly relate every particular which illustrates the habits and manners of the retired statesman; telling with what kindness he reproved, with what heartiness he commended them; how the children loved to follow him in his walks, to sit with him by the fire during the winter twilight, or at the window in summer, listening to his quaint stories; how he directed their sports, acted as judge when they ran races in the garden, and gathered fruit for them, pulling down the branches on which the ripest cherries hung. All speak of the pleasure it gave him to anticipate their wishes by some unexpected gift. One says that her Bible and Shakspeare came from him,—that he gave her her first writing-desk, her first watch, her first Leghorn hat and silk dress. Another tells how he saw her tear her dress, and in a few days brought a new and more beautiful one to mend it, as he said,—that she had refused to buy a guitar which she admired, because it was too expensive, and that when she came to breakfast the next morning the guitar was waiting for her. One of these ladies seems to give only a natural expression to the feelings which all his grandchildren had for him, when she prettily calls him their good genius with magic wand, brightening their young lives by his kindness and his gifts.

Indeed, the account which these volumes give of Monticello life is very interesting. The house was a long brick building, in the Grecian style, common at that time. It was surmounted by a dome; in front was a portico; and there were piazzas at the end of each wing. It was situated upon the summit of a hill six hundred feet high, one of a range of such. To the east lay an undulating plain, unbroken save by a solitary peak; and upon

the western side a deep valley swept up to the base of the Blue Ridge, which was twenty miles distant. The grounds were tastefully decorated, and, by a peculiar arrangement which the site permitted, all the domestic offices and barns were sunk from view. The interior of the mansion was spacious, and even elegant; it was decorated with natural curiosities,—Indian and Mexican antiquities, articles of *virtù*, and a large number of portraits and busts of historical characters. The library—which was sold to the government in 1815—contained between nine and ten thousand volumes. He had another house upon an estate called Poplar Forest, ninety miles from Monticello.

Mr. Jefferson was too old to attempt any new scientific or literary enterprise, but as soon as he reached home he began to renew his former acquaintances. His meteorological observations were continued, he studied botany, and was an industrious reader of three or four languages. When nearly eighty, we find him writing elaborate disquisitions on grammar, astronomy, the Epicurean philosophy, and discussing style with Edward Everett. The coldness between him and John Adams passed away, and they used to write one another long letters, in which they criticized Plato and the Greek dramatists, speculated upon the end for which the sensations of grief were intended, and asked each other whether they would consent to live their lives over again. Jefferson, with his usual cheerfulness, promptly answered, Yes.

He dispensed a liberal hospitality, and in a style which showed the influence of his foreign residence. Though temperate, he understood the mysteries of the French *cuisine*, and liked the wines of Médoc. These tastes gave occasion to Patrick Henry's sarcasm upon gentlemen "*who abjured their native victuals*." Mr. Randall tells an amusing anecdote of a brandy-drinking Virginian, who wondered how a man of so much taste could drink cold, sour French wine, and insist-

ed that some night he would be carried off by it.

No American has ever exerted so great and universal an attraction. Men of all parties made pilgrimages to Monticello. Foreigners of distinction were unwilling to leave the country without seeing Mr. Jefferson; men of fashion, artists, *littérateurs*, *savants*, soldiers, clergymen, flocked to his house. Mrs. Randolph stated, that she had provided beds for fifty persons at a time. The intrusion was often disagreeable enough. Groups of uninvited strangers sometimes planted themselves in the passages of his house to see him go to dinner, or gathered around him when he sat on the portico. A female once broke a window-pane with her parasol to get a better view of him. But no press of company was permitted to interfere with his occupations. The early morning was devoted to correspondence; the day to his library, to his workshop, or to business; after dinner he gave himself up to society.

Making every allowance for the exaggerations of his admirers, it cannot be doubted that Jefferson was a master of conversation. It had contributed too much to his success not to have been made the subject of thought. It is true, he had neither wit nor eloquence; but this was a kind of negative advantage; for he was free from that striving after effect so common among professed wits, neither did he indulge in those monologues into which eloquence betrayed Coleridge and seduces Macaulay. He had great tact, information, and worldly knowledge. He never disputed, and had the address not to attempt to control the current of conversation for the purpose of turning it in a particular direction, but was always ready to follow the humor of the hour. His language, if seldom striking, never failed to harmonize with his theme, while, of course, the effect of everything he said was heightened by his age and reputation.

Unfortunately, his latter days were clouded by pecuniary distress. Although prudent and methodical, partly from

unavoidable circumstances, and partly from the expense of his enormous establishment, his large estate became involved. The failure of a friend for whom he had indorsed completed his ruin and made it necessary to sell his property. This, however, was not done until after his death, when every debt was paid, even to a subscription for a Presbyterian church.

As is well known, the chief labor of his age was the establishment of the University of Virginia. He was the creator of that institution, and displayed in behalf of it a zeal and energy truly wonderful. When unable to ride over to the University, which was eight miles from Monticello, he used to sit upon his terrace and watch the workmen through a telescope. He designed the buildings, planned the organization and course of instruction, and selected the faculty. He seemed to regard this enterprise as crowning and completing a career which had been devoted to the cause of liberty, by providing for the increase and diffusion of knowledge.

In February, 1826, the return of a disease by which he had at intervals been visited convinced Jefferson that he should soon die. With customary deliberation and system, he prepared for his decease, arranging his affairs and giving the final directions as to the University. To his family he did not mention the subject, nor could they detect any change in his manner, except an increased tenderness in each night's farewell, and the lingering gaze with which he followed their motions. His mental vigor continued. His will, quite a long document, was written by himself; and on the 24th of June he wrote a reply to an invitation to the celebration at Washington of the ensuing Fourth of July. It is difficult to discover in what respect this production is inferior to his earlier performances of the same kind. It has all of the author's ease and precision of style, and more than his ordinary distinctness and earnestness of thought. This was his last letter. He rapidly declined, but preserved possession of his

faculties. He remarked, as if surprised at it, upon his disposition to recur to the scenes of the Revolution, and seemed to wish that his life might be prolonged until the Fourth of July. This wish was not denied to him; he expired at noon of that day, precisely fifty years after the Declaration of Independence. A few hours afterwards the great heart of John Adams ceased to beat.

So much has been said about Mr. Jefferson's religious opinions, and our biographer gives them such prominence, that we shall be pardoned for alluding to them, although they are not among the topics which a critic generally should touch. Mr. Randall says that Jefferson was "a public professor of his belief in the Christian religion." We do not think that this unqualified statement is supported by Jefferson's explanation of his views upon Christianity, which Mr. Randall subsequently gives. Religion, in the sense which is commonly given to it, as a system of faith and worship, he did not connect with Christ at all. He was a believer in the existence of God, in a future life, and in man's accountability for his actions here: in so far as this, he may be said to have had a system of worship, but not of Christian worship. He regarded Christ simply as a man, with no other than mortal power,—and to worship him in any way would, in his opinion, have been idolatry. His theology recognized the Deity alone. The extracts from his public papers, upon which Mr. Randall relies, contain nothing but those general expressions which a Mohammedan or a follower of Confucius might have used. He said he was a Christian "in the only sense in which Christ wished any one to be"; but received Christ's teachings merely as a system, and not a perfect system, of morals. He rejected the narratives which attest the Divine character or the Divine mission of the Saviour, thinking them the fictions of ignorance and superstition.

He was, however, far from being a scoffer. He attended the Episcopal service regularly, and was liberal in his do-

nations to religious enterprises. Nor do we think that this conformity arose from weakness or hypocrisy, but rather from a profound respect for opinions so generally entertained, and a lively admiration for the character and life of Christ.

If a Christian is one who sincerely believes and implicitly obeys the teachings of Jesus so far as they affect our relations with our fellow-men, then Mr. Jefferson was a Christian in a sense in which few can be called so. Though the light did not unseal his vision, it filled his heart. Among the statesmen of the world there is no one who has more rigidly demanded that the laws of God shall be applied to the affairs of Man. His political system is a beautiful growth from the principles of love, humility, and charity, which the New Testament inculcates.

When reflecting upon Mr. Jefferson's mental organization, one is impressed by the variety and perfectness of his intellectual faculties. He united the powers of observation with those of reflection in a degree hardly surpassed by Bacon. Yet he has done nothing which entitles him to a place among the first of men. It may be said, that, devoted to the inferior pursuit of politics, he had no opportunity to exercise himself in art or philosophy, where alone the highest genius finds a field. But we think his failure—if one can fail who does not make an attempt—was not for want of opportunity. He did not possess any imagination. He was so deficient in that respect as to be singular. The imagination seems to assist the mental vision as the telescope does that of the eye; he saw with his unaided powers only.

He says, "Nature intended him for the tranquil pursuits of science," and it is impossible to assign any reason why he should not have attained great eminence among scientific men. The sole difficulty might have been, that, from very variety of power, he would not give himself up to any single study with the devotion which Nature demands from those who seek her favors.

Within his range his perception of

truth was as rapid and unfailing as an instinct. Without difficulty he separated the specious from the solid, gave great weight to evidence, but was skeptical and cautious about receiving it. Though a collector of details, he was never incumbered by them. No one was less likely to make the common mistake of thinking that a particular instance established a general proposition. He sought for rules of universal application, and was industrious in the accumulation of facts, because he knew how many are needed to prove the simplest truth. The accuracy of his mental operations, united with great courage, made him careless of authority. He clung to a principle because he thought it true, not because others thought it so. There is no indication that he valued an opinion the more because great men of former ages had favored it. His self-reliance was shown in his unwillingness to employ servants. Even when very feeble, he refused to permit any one to assist him. He had extraordinary power of condensation, and, always seeing the gist of a matter, he often exposed an argument of hours by a single sentence. Some of his brief papers, like the one on Banking, contain the substance of debates, which have since been made, filling volumes. He was peculiar in his manner of stating his conclusions, seldom revealing the processes by which he arrived at them. He sets forth strange and disputed doctrines as if they were truisms. Those who have studied "The Prince" for the purpose of understanding its construction will not think us fanciful when we find a resemblance between Jefferson's mode of argumentation and that of Machiavelli. There is the same manner of approaching a subject, the same neglect of opposing arguments, and the same disposition to rely on the force of general maxims. Machiavelli exceeded him in power of ratiocination from a given proposition, but does not seem to have been able to determine whether a given proposition was right or wrong.

In force of mind Jefferson has often been surpassed: Hamilton was his su-

perior. As an executive officer, where action was required, he could not have been distinguished. It is true, he was a successful President, but neither the time nor the place demanded the highest executive talents. When Governor of Virginia, during the Revolution, he was more severely tried, and, although some excuse may be made for him, he must be said to have failed.

Upon matters which are affected by feeling and sentiment, the judgment of woman is said to surpass that of our sex,—her more sensitive instincts carrying her to heights which our blind strength fails to reach. If this be true, Jefferson in some respects resembled woman. We have already alluded to the delicacy of his organization; it was strangely delicate, indeed, for one who had so many solid qualities. Like woman, he was constant rather than passionate; he had her refinement, disliking rude company and coarse pleasures,—her love of luxury, and fondness for things whose beauty consists in part in their delicacy and fragility. His political opponents often refused to speak with him, but their wives found his society delightful. Like woman, his feelings sometimes seemed to precede his judgment. Such an organization is not often a safe one for business; but in Mr. Jefferson, with his homely perceptions, it accomplished great results.

The attributes which gave him his great and peculiar influence seem to us to have been qualities of character, not of the mind. Chief among these must be placed that which, for want of a better term, we will call sympathy. This sympathy colored his whole nature, mental and moral. It gave him his many-sidedness. There was no limit to his intellectual tastes. Most persons cherish prejudices, and think certain pursuits degrading or useless. Thus, business-men sneer at artists, and artists sneer at business-men. Jefferson had nothing of this. He understood and appreciated the value of every employment. No knowledge was too trivial for him; with the same affectionate interest, he observed the

courses of the winds and the growth of a flower.

Sympathy in some sort supplied the place of imagination, making him understand subjects of which the imagination alone usually informs us. Thus, he was fond of Art. He had no eye for color, but appreciated the beauties of form, and was a critic of sculpture and architecture. He valued everything for that which belonged to it; but tradition sanctified nothing, association gave no additional value. He committed what Burke thought a great crime, that of thinking a queen nothing but a woman. He went to Stratford-on-Avon, and tells us that it cost him a shilling to see Shakspeare's tomb, but says nothing else. He might have admired the scenery of the place, and he certainly was an admirer of Shakspeare; but Stratford had no additional beauty in his eyes because Shakspeare was born and buried there. After his death, in a secret drawer of his secretary, mementoes, such as locks of hair, of his wife and dead children, even of the infant who lived but a few hours after birth, were found, and accompanying each were some fond words. The packages were neatly arranged, and their envelopes showed that they had often been opened. It needed personal knowledge and regard to awaken in him an interest in objects for their associations.

The characteristic of which we speak showed itself in the intensity and quality of his patriotism. There never was a truer American. He sympathized with all our national desires and prejudices, our enterprise and confidence, our love of dominion and boundless pride. Buffon asserted that the animals of America were smaller than those of Europe. Jefferson flew to the rescue of the animals, and certainly seems to have the best of the argument. Buffon said, that the Indian was cold in love, cruel in war, and mean in intellect. Had Jefferson been a descendant of Pocahontas, he could not have been more zealous in behalf of the Indian. He contradicted Buffon upon every point, and cited Lo-

gan's speech as deserving comparison with the most celebrated passages of Grecian and Roman eloquence. Nowhere did he see skies so beautiful, a climate so delightful, men so brave, or women so fair, as in America. He was not content that his country should be rich and powerful; his ardent patriotism carried him forward to a time when the great Republic should give law to the world for every department of thought and action.

But this sympathetic spirit is most clearly to be seen in that broad humanity which was the source of his philosophy. He sympathized with man,—his sufferings, joys, fears, hopes, and aspirations. The law of his nature made him a democrat. Men of his own rank, when introduced to him, found his manner cold and reserved; but the young and the ignorant were attracted from the first. Education and interest did not affect him. Born a British subject, he became the founder of a democracy. He was a slaveholder and an abolitionist. The fact, that the African is degraded and helpless, to his, as to every generous mind, was a reason why he should be protected, not an excuse for oppressing him.

Though fitness for the highest effort be denied to Jefferson, yet in the pursuit to which he devoted himself, considered with reference to elevation and wisdom of policy and actual achievement, he may be compared with any man of modern times. It is the boast of the most accomplished English historian, that English legislation has been controlled by the rule, "Never to lay down any proposition of wider extent than the particular case for which it is necessary to provide." Therefore politics in England have not reached the dignity of a science; and her public men have been tacticians, rather than statesmen. Burke may be mentioned as an exception. No one will claim for Jefferson Burke's amplitude of thought and wealth of imagination, but he surpassed him in justness of understanding and practical efficiency. Burke was never connected with the government, except during the short-lived Rockingham

administration. Among Frenchmen, the mind instinctively recurs to the wise and virtuous Turgot. But it was the misfortune of Turgot to come into power at the beginning of the reign of Louis XVI. It became his task to reform a government which was beyond reform, and to preserve a dynasty which could not be preserved. His illustrious career is little more than a brilliant promise. Jefferson undoubtedly owed much to fortune. He was placed in a country removed from foreign interference, with boundless resources, and where the great principles of free government had for generations been established,—among a people sprung from many races, but who spoke the same language, were governed by similar laws, and whose minds' rebellion had prepared for the reception of new truths and the abandonment of ancient errors. To be called upon to give symmetry and completeness to a political system which seemed to be Providentially designed for the nation over which it was to extend, to be able to connect himself with the future progress of an agile and ambitious people, was certainly a rare and happy fortune, and must be considered, when we claim superiority for him over those who were placed in the midst of apathy and decay. His influence upon us may be seen in the material, but still more distinctly in the social and moral action of the country. With those laws which here restrain turbulent forces and stimulate beneficent ones,—with the bright visions of peace and freedom which the unhappy of every European race see in their Western skies, tempting them hither,—with the kind spirit which here loosens the bonds of social prejudice, and to ambition sings an inspiring strain,—with these, which are our pride and boast, he is associated indissolubly and forever. With the things which have brought our country into disrepute—we leave it for others to recall the dismal catalogue—his name cannot be connected.

Not the least valuable result of his life is the triumphant refutation which it gives to the assertion, so often made

by blatant sophisters, that none but low arts avail in republics. He has been called a demagogue. This charge is the charge of misconception or ignorance. It is true, he believed that his doctrines would prevail; he was sensitive to the opinions of others, nor was he "out of love with noble fame"; but his successes were fairly, manfully won. He had none of the common qualifications for popularity. No glare of military glory surrounded him; he had not the admired gift of eloquence; he was opposed by wealth and fashion, by the Church and the press, by most of the famous men of his day,—by Jay, Marshall, the Pinckneys, Knox, King, and Adams; he had to encounter the vehement genius of Hamilton and the *prestige* of Washington; he was not in a position for direct action upon the people; he never went beyond the line of his duty, and, from 1776 to his inaugural address, he did not publish a word which was calculated to excite lively, popular interest;—yet, in spite of all and against all, he won. So complete was the victory, that, at his second election, Massachusetts stood beside Virginia, supporting him. He won because he was true to a principle. Thousands of men, whose untutored minds could not comprehend a proposition of his elaborate philosophy, remembered that in his youth he had proclaimed the equality of men, knew that in maturity he remained true to that declaration, and, believing that this great assurance of their liberties was in danger, they gathered around him, preferring the scholar to orators and soldiers. They had confidence in him because he had confidence in them. There is no danger in that demagogism the art of which consists in love for man. Fortunate, indeed, will it be for the Republic, if, among the aspirants who are now pressing into the strife, and making their voices heard in the great exchanges of public opinion, there are some who will imitate the civic virtues and practise the benign philosophy of Thomas Jefferson!

We take leave of this book with reluctance. It is verbose and dull, but it has

led us along the path of American renown; it recites a story which, however awkwardly told, can never fall coldly on an American ear. It has, besides, given us an opportunity, of which we have gladly availed ourselves, to make some poor amends for the wrongs which

Jefferson suffered at the hands of New England, to bear our testimony to his genius and services, and to express our reverent admiration for a life which, though it bears the traces of human frailty, was bravely devoted to grand and beneficent aims.

A BUNDLE OF IRISH PENNANTS.

"Did you ever see the 'Three Chimneys,' Captain Cope?" I asked.

"I can show you where they are on the chart, if that'll do. I've been right over where they're laid down, but I never saw the Chimneys myself, and I never knew anybody that had seen them."

"But they are down on the chart," broke in a pertinacious matter-of-fact body beside us.

"What of that?" replied the captain; "there's many a shoal and lone rock down on the charts that nobody ever could find again. I've had my ship right over the Chimneys, near enough to see the smoke, if they had been there."

So opened the series of desultory conversations here set down. It is talk on board ship, or specimen "yarns," such as really are to be picked up from nautical men. The article usually served up for magazine-consumption is, of course, utterly unlike anything here given, and is as entirely undiscoverable anywhere on salt water as the three legendary rocks above alluded to. The place was the deck of the "Elijah Pogram," one of Carr & Co.'s celebrated Liverpool liners, and the time, the dog-watches of a gusty April night; the latitude and longitude, anywhere west of Greenwich and north of the line that is not inconsistent with blue water.

The name "Irish Pennant" is given, on the *lucus-a-non* principle, (just as a dead calm is "an Irish hurricane, straight up and down,") to any dangling

end of rope or stray bit of "shakings," and its appropriateness to the following sketches will doubtless be perceived by the reader, on reaching the end.

The question was asked, not so much from a laudable desire of obtaining information as to set the captain talking. It was a mistake on my part. Sailors do not like point-blank questions. They remind them unpleasantly, I suppose, of the Courts of Admiralty, or they betray greenness or curiosity on the asker's part, and thus effectually bar all improving conversation.

There is one exception. If the inquirer be a lady, young and fair, the chivalry of the sea is bound to tell the truth, the whole truth, and often a good deal more than the truth.

And at the last reply a pair of bewitching dark eyes were turned upon that weather-beaten mariner; that is to say, in plain English, a young and rather pretty lady-passenger looked up at Captain Cope, and said,—

"Do tell us some of your sea-stories, Captain Cope,—do, please!"

"Why, Ma'am," replied he, "I've no stories. There's Smith of the 'Wittenagemot' can tell them by the hour; but I never could."

"Weren't you ever wrecked, Captain Cope?"

"No,—I can't say I ever was, exactly. I was mate of the 'Moscow' when she knocked her bottom out in Bootle Bay; but she wasn't lost, for I went master of her after that."

"Were you frightened, Captain Cope?"

"Well, no,—I can't say I was; though I must say I never expected to see morning again. I never saw any one more scared than was old Captain Tucker that night. We dragged over the outer bar and into Bootle Bay, and there we lay, the ship full of water, and everything gone above the monkey-rail. The only place we could find to stand was just by the cabin gangway. The 'Moscow' was built with an old-fashioned cabin on deck, and right there we hung, all hands of us. The old man he read the service to us,—and that wouldn't do, he was so scared; so he got the black cook, who was a Methodist, and made him pray; and every two minutes or so, a sea would come aboard and all in among us,—like to wash us clean out of the ship.

"After midnight the life-boat got alongside, and all hands were for scrambling aboard; but I'd got set in my notion the ship would live the gale out, and I wouldn't go aboard. Well, the old man was too scared to make long stories, and he tumbled aboard the life-boat in a hurry. The last words he said to me, as he went over the side, were,—'Good-bye, Mr. Cope! I never shall see you again!' However, he got up to the city, to Mrs. McKinney's, and there he found a lot of the captains, and he was telling them all how he'd lost his ship, and what a fool poor Cope was to stick aboard of her, and all that. When the morning came, the gale had broke, and the old man began to think he'd been in too much of a fright, and he'd better get the tug and go down to look after the ship.

"I was so knocked up, for want of sleep, and the gale and all, that, when they got down to us, my head was about gone. I don't remember anything, myself; but they told me, that, when they got aboard, I was poking about decks as if I was looking for something.

"How are you, Mr. Cope?" sung out old Tucker. 'I never expected to see you again in this world.'

"I can't find my razor-strop," says I; 'I've lost my razor-strop.'

"Never mind your strop," says he. 'What you want is to go aboard the tug and be taken care of. We'll find your strop.'

"Well, they could hardly get me away, I was so set that I must have that strop; but after I got up to town, and had a bath and some breakfast, and a couple of hours' sleep or so, I was all right again. That was the end of old Tucker's going to sea; and when the 'Moscow' was docked and refitted, I got her, and kept her until the firm built me the 'Pogram,' here."

"Mr. Brown, isn't it about time we were getting in that mizzzen to'gall'nt-s'l? It's coming on to blow to-night."

"Steward," (as that functionary passed us,) "put a handful of cigars in my monkey-jacket pocket, and have a cup of coffee ready for me about twelve."

"Then you mean to be up, to-night?" said the father of pretty Mrs. Bates,—the only one of us to whom Captain Cope fairly opened his heart.

"Why, yes, Mr. Roberts,—I think I shall. It looks rather dirty to the eastward, and the barometer has fallen since morning. I've two as good mates as sail; but if anything is going to happen, I'd rather have it happen when I'm on deck,—that's all."

"Wasn't Stewart, of the 'Mexican,' below, when she struck?"

"Yes, he was,—and got blamed for it, too. I don't blame him, myself; he was on deck the next minute; and if he had been there before, it would have made no difference with that ship;—but if I lose a vessel, I don't want to be talked about as he was. I went mate with him two voyages, and he'd put on his night-gown and turn in comfortably every night, and leave his mates to call him; but I never could do that. I don't find fault with any man that can; only it's not my way."

"But don't you feel sleepy, Captain Cope?" asked Mrs. Bates.

"Not when I'm on deck, Ma'am; though, when I first went mate, I could sleep anyhow and anywhere. I sailed out of Boston to South America, in a topsail-schooner, with an old fellow by

the name of Eaton,—just the strangest old scamp you ever dreamed of. I suppose by rights he ought to have been in the hospital; he certainly was the nearest to crazy and not be it. He used to keep a long pole by him on deck,—a pole with a sharp spike in one end,—and any man who'd get near enough to him to let him have a chance would feel that spike. I've known him to keep the cook up till midnight frying doughnuts; then he'd call all hands aft and range 'em on the quarter-deck, and go round with his hat off and a plate of doughnuts in his hand, saying, as polite as you please, 'Here, my man, won't you take a doughnut?—they won't hurt you; nice and light; had them fried a purpose for you.' And then he'd get a bottle of wine or Curaçoa cordial, and go round with a glass to each man, and make him take a drink. You'd see the poor fellows all of a shake, not knowing how to take it,—afraid to refuse, and afraid still more, if they didn't, that the old man would play 'em some confounded trick. In the midst of it all, he'd seem as if he'd woke up out of a dream, and he'd sing out, in a way that made them fellows scatter, 'What the —— are all you men doing here at this time of night? Go forrard, every man jack of you! Go forrard, I tell you!' and it was 'Devil take the hindmost!'

"Well,—the old man was always on the look-out to catch the watch sleeping. He never seemed to sleep much himself;—I've heard *that's* a sign of craziness;—and the more he tried, the more sure we were to try it every chance we had. So sure as the old man caught you at it, he'd give you a bucketful of water, slap over you, and then follow it up with the bucket at your head. Fletcher, the second mate, and I, got so we could tell the moment he put foot on the companion-way, and, no matter how sound we were, we'd be on our feet before he could get on deck. But Fletcher got tired of his vagaries, and left us at Pernambuco, to ship aboard a homeward-bound whaler, and in his place we got a fellow named Tubbs, a regular duff-head,—couldn't

keep his eyes open in the daytime, hardly.

"Well,—we were about two days out of Pernambuco, and Tubbs had the middle watch, of a clear starlight night, with a steady breeze, and everything going quietly, and nothing in sight. So, in about ten minutes after the watch got on deck, every mother's son of them was hard and fast. The wind was a-beam, and the old schooner could steer herself; so, even the man at the helm was sitting down on a hencoop, with one arm round the tiller, and snoring like a porpoise. I heard the old man rouse out of his bunk and creep on deck, and, guessing fun was coming, I turned out and slipped up after him. The first thing I saw was old Eaton at work at the tiller. He got it unshipped and braced up with a pair of oars and a hencoop, without waking the man at the helm,—how, I couldn't tell,—but he was just like a cat; and then he blew the binnacle-light out; and then he started forrard, with his trumpet in his hand. He caught sight of me, standing half-way up the companion-way, and shook his fist at me to keep quiet and not to spoil sport. He slipped forward and out on to the bowsprit, clear out to the end of the flying-jib-boom, and stowed himself where he couldn't be well seen to leeward of the sail. Then he sung out with all his might through the trumpet, '*Schooner ahoy, there! Port your helm!—port H-A-A-A-RD!* I say,—you're right aboard of us!'—And then he'd drop the trumpet, and sing out as if in the other craft to his own crew, and then again to us. Of course, every man was on his feet in a second, thinking we were all but afoul of another vessel. The man who was steering was trying, with all his might, to put his helm a-port,—and when he found what was to pay there, to ship the tiller. This wasn't so easy; for the old man had passed the slack of the main-sheet through the head of the rudder, and belayed it on one of the boom-cleats, out of reach,—and, what with just waking up, and half a dozen

contradictory orders sung out at once, besides expecting to strike every minute, he had almost lost what little wits he had.

"As for Tubbs, he was like a hen with her head cut off,—one minute at the lee rail, and the next in the weather-rigging, then forrard to look out for the strange craft, and then aft to see why the schooner didn't answer her helm. Meanwhile, he was singing out to the watch to brace round the fore-topsail and help her, to let fly the jib-sheets, and to haul aft the main-boom; the watch below came tumbling up, and everybody was expecting to feel the bunt of our striking the next minute. I laughed as though I should split; for nobody could see me where I stood, in the shadow of the companion-way, and everybody was looking out ahead, for the other vessel. First I knew, the old man had got in board again, and was standing there aft, as if he'd just come on deck. 'What's all this noise here?' says he.—'What are you doing on deck, Mr. Cope? Go below, Sir!—Go below, the larboard watch, and let's have no more of this!—Who's seen any vessel? Vessel, your eye, Mr. Tubbs! I tell you, you've been dreaming.' Then, as he got his head about to the level of the top of the companion-way, and out of the reach of any spare belaying-pin that might come that way, says he,—'I've just come in from the end of the flyin'-jib-boom, and there was no vessel in sight, except one topsail-schooner, *with the watch all asleep*,—so it can't be her that hailed you.'

"That cured all sleeping on the watch for *that* voyage, I tell you. And as for Tubbs, you had only to say, 'Port your helm,' and he was off."

Just then Mr. Brown came aft to ask if it wasn't time to have in the fore-topgallant-sail,—and a little splash of rain falling broke up our party and drove most of us below. I knew that reefing topsails would come in the course of an hour or so, if the wind held on to blow as it did; so, as I waited to see that same, I lighted a cheroot, and as soon as the

fore-topgallant-sail was clewed up I made my way forward, for a chat with Mr. Brown, the English second mate.

Mr. Brown was a character. He was a thorough English sailor;—could do, as he owned to me in a shamefaced way, that was comical enough, "heverything as could be done with a rope aboard a ship." He had been several India voyages, where the nice work of seamanship is to be learned, which does not get into the mere "ferry-boat" trips of the Liverpool packet-service. He had been in an opium clipper, the celebrated — of Boston,—and left her, as he told her agent, "because he liked a ship as 'ad a lee-rail to her; and the —'s lee-rail," he said, "was commonly out of sight, pretty much all the way from the Sand'eads to the Bocca Tigris." He was rich in what he called "'ats," having one for every hour of the day, and, for aught I know, every day in the year. It was Fred —'s and my daily amusement to watch him, and we never seemed to catch him coming on deck twice in the same head-gear. He took quite a fancy to me, because I did not bother him when busy, and because I liked to listen to his talk. So, handing him a cigar, as a prefatory to conversation, I asked him our whereabouts. "Four hundred miles to the heast'ard of Georges we were this noon, and we've made nothink to speak of since, Sir. This last tack has lost us all we made before. I hought to know where we are. I've drifted 'ere without even a 'en-coop hunder me. I was third mate aboard the barque 'Jenny,' of Belfast, when she was run down by the steamer 'United States.' The barque sunk in less than seven minutes after the steamer struck us, and I come up out of her suction-like. I found myself swimming there, on top, and not so much as a capstan-bar to make me a life-buoy. I knew the steamer was hove to, for I could hear her blw hoff steam; and once, as I came up on a wave, I got a sight of her boats. They were ready enough to pick us up, and we was ready enough to be picked up, such as were left; but how to do it was

another matter, with a sea like this running, and a cloud over the moon every other minute. I soon see that swimming wouldn't 'old out much longer, and I must try something helse. Now, Sir, what I'm a-telling you may be some use to you some day, if you have to stay a couple of hours in the water. If you can swim about as well as most men can, you can tell 'ow long a man's strength would last him 'ereaways to-night. Besides, I was spending my breath, when I rose on a sea, in 'ollering,—and you can't swim and 'oller. So I tried a trick I learned, when a boy, on the Cornish coast, where I was born, Sir;—it's one worth knowing. I doubled back my feet hunder me till my 'eels come to the small of my back, and I could float as long as I wanted to, and, when I rose on a wave, 'oller. They 'eard me, it seems, and pulled round for me, but it was an hour before they found me, and my strength was nigh to gone. I couldn't 'oller no more, and was about giving up. But they picked up the cook, and he told 'em he knowed it was Mr. Brown's voice, and begged 'em to keep on. The last I remember was, as the steamer burned a blue light for her boats, when they caught a sight of me in the trough of the sea. I saw them too, and gave a last screech, and then I don't remember hanythink, Sir, till Cookie was 'elping 'aul (Mr. Brown always dropped his aspirates as he grew excited) me into the boat. Now, just you remember what I've been a-telling you about floating."—*"Forrard there! Stand by to clew up and furl the main to'gall'n-s'!! Couple of you come aft here and brail up the spanker! Lively, men, lively!"*—And Mr. Brown was no longer my Scheherazade.

When I got back to the shelter of the wheel-house, I found the captain and old Roberts still comfortably braced up in opposite corners and yarning away. There was nothing to be done but to watch the ship and the wind, which promised in due time to be a gale, but as yet was not even a reefing breeze. They had got upon a standing topic be-

tween the two, — vessels out of their course. The second night out, we had made a light which the captain insisted was a ship's light, but old Roberts declared was one of the lights on the coast of Maine,—Mount Desert, or somewhere thereabouts. He was an old shipping-merchant, had been many a time across the water in his own vessels, and thought he knew as much as most men. So, whenever other subjects gave out, this, of vessels drifted by unsuspected currents out of their course, was unfailing. They were at it now.

"When I was last in Liverpool," said the captain, "there was a brig from Machias got in there, and her captain came up to Mrs. McKinney's. He told us that it was thick weather when he got upon the Irish coast, and he was rather doubtful about his reckoning; so he ordered a sharp look-out for Cape Clear. According to his notion, he ought to be up with it about noon, and, as the sun rose and the fog lifted a little, he was hoping to sight the land. Once or twice he fancied he had a glimpse of it, but wasn't sure,—when the mate came aft and reported that they could hear a bell ringing. 'Sure enough,' he said, 'there was the toll of a bell coming through the mist.'

"'That's some ship's bell,' said he to the mate; 'only it's wonderful heavy for a ship, and it can't be a church-bell on shore,—can it?'

"And while they were arguing about it, a cutter shot out of the fog and hailed if they wanted a pilot.

"'Pilot!' says the Down-Easter,—'pilot!—where for? No, thank ye, not yet,—I can find my way up George's without a pilot. What bell's that?'

"'Rather think you can, Captain; but you'll want a pilot here;—that's the bell on the floating light off Liverpool.'

"'What!' says the captain,—'have I come all the way up Channel without knowing it? I've been on the look-out for Cape Clear ever since daybreak, and here, by ginger, I've overrun my reckoning three hundred miles.'"

"Well," said old Roberts, "one of my

captains, Brandegee, you know, who had the 'China,' got caught, one November, just as he was coming on the coast, in a gale from the eastward. He knew he was somewhere near Provincetown, but how near he couldn't say. It was snowing, and blowing, and ice-making all over the decks and rigging, and an awful night generally. He did not dare to run before it, because it was blowing at a rate to take him half way in Worcester County in the next twenty-four hours. He couldn't stand to the south'ard, because that would put the back of Cape Cod under his lee. He was afraid to stand to the north'ard, not knowing precisely where the coast of Maine might be. So he hove the ship to, under as little sail as he could, and let her drift. I've heard him say, he heard the breakers a hundred times that night," ('I'll bet he did,' ejaculated the captain,) "and it seemed like three nights in one before morning came. When it did come, wind and sea appeared to have gone down. The look-outs were half dead with cold and sleep and all; but they made out to hail land on the weather bow.

"'Good George!' said old Brandegee, 'how did land get on the *weather* bow? We must have got inside of Cape Cod, and that must be Sharkpainter Hill.'

"'Land on the lee quarter,' hailed the watch, again; and in a minute more, 'Land on the lee beam,—land on the lee bow.'

"Brandegee sung out to heave the lead and let go both anchors, and he said, that, but for the gale having gone down so, he should have expected to strike the next minute. Just as the anchors came home and the ship headed to the wind, the second mate came aft, rubbing his eyes and looking very queer.

"'Captain Brandegee,' says he, 'if I was in Boston Harbor, I should say that there was Nix's Mate.'

"'Well, Mr. Jones,' says the old man, dropping out the words very slowly, 'if—that's—Nix's Mate,—Rainsford Island—ought—to—be—here away,—and—as—I'm—a—living—man, THERE IT IS!'

"Half-frozen as they were, there was a cheer rung out from that crew that waked half the North-End out of their morning nap.

"'Just my plaguy luck!' said the old fellow to me, as he told it. 'If I'd held on to my anchors another half-hour, I might have come handsomely alongside of Long Wharf and been up to the custom-house before breakfast.'

"He had drifted broadside square into Boston Harbor, past Nahant, the Graves, Cohasset Rocks, and every thing."

"I've heard of that," said the captain,— "and as it's my opinion it couldn't be done twice, I don't mean to try it."

"I hear the noise about thy keel,
I hear the bell struck in the night,
I see the cabin-window bright,
I see the sailor at the wheel,"—

repeated Fred —, in my ear. "Come below out of this wet and rain," added he.

We passed the door of the mate's stateroom as we went below, and, seeing it ajar, and Mr. Pitman, the mate, sitting there, we looked in.

"Come in, gentlemen," said he; "my watch on deck is in half an hour, and I'm not sleepy to-night."

F—— took up a carved whale's tooth, and asked if Mr. Pitman had ever been in the whaling business.

"Two voyages,—one before the mast, one boat-steerer;—both in the Pacific. But whaling didn't suit me. I've a Missus now, and a couple of as fine boys as ever you saw; and I rather be where I can come home oftener than once in three years."

"How did you like whaling?" said I.

"Well, I don't believe there's any man but what feels different alongside of a whale from what he does on the ship's deck. Some of those Nantucket and New Bedford men, who've been brought up to it, as you may say, take it naturally, and think of nothing but the whale. I've heard of one of them boat-steerers who got ketched in a whale's mouth and didn't come out of it quite as whole as he went in. When they asked him what he thought when the whale nabbed him,

he said he 'thought she'd turn out about forty barrels.'

"There's a good many things about the whale, gentlemen, that everybody don't know. Why does one whale sink when he's killed, and another don't? Where do the whales go to, now and then?—I sailed with one captain who used to say, that, books or no books, can't live under water or not, *he knew* that whales do live under water months at a time. I can't say, myself; but this I can say,—they go ashore. You may look hard at that, but I've seen it. We were off the coast of South America, in company with five other ships; and all our captains were ashore one afternoon. We had to pull some two miles or so to go off to them, and, starting off, all hands were for racing. I was pulling stroke in the captain's boat, and the old man gives us the word to pull easy, and let 'em head on us. It was hard work to hold in, with every one of the boats giving way, strong, the captains singing out bets, and cheering their men,—singing out, 'Break your backs and bend your oars!' 'There she blows!' and all that. But the old man kept muttering to us to take it easy and let them head on us. We were soon the last boat, and then, as if he'd given up the race, he gave the word to 'easy.'

"'Good-night, Capt. T—— I we'll send your ship in to tow you off,' was the last words they said to us.

"'There'll be something else to tow off,' says he. 'It's the race, who shall see Palmer's Island first, that I'm bound to win.'

"He gave the boat a sheer in for the beach, to a little bight that made up in the land,—across the mouth of which we had to pull, in going off.

"'D'ye see that rock on the beach, boys,' says he, 'in range of that lone tree, on the point? Did any of you ever see that rock before? I wish this bloody coast had a few more such rocks! That's a cow whale, and this bight is her nursery, and she is up on the beach for her calf's convenience. Now, then,'—as we opened the bight and got a fair sight of it,—

'give way, strong as you please,—and we'll head her off, before she knows it.'

"We got her and got the calf, and when, next morning, the other ships saw us cutting in, they didn't say much about that race; and 'Old T.'s Nursery' was a byword on the coast as long as we staid there.

"There goes eight bells, and I rather think Mr. Brown will want me on deck." We followed, for there was the prospect of seeing topsails reefed,—the most glorious event of a landsman's sea-experiences. We had begun the day with a dead calm, but toward night the wind had come out of the eastward. Each plunge the ship gave was sharper, each shock heavier. The topmasts were working, the lee-shrouds and backstays straining out into endless curves. A deeper plunge than usual, a pause for a second, as if everything in the world suddenly stood still, and a great white giant seems to spring upon our weather-bow and to leap on board. We hear the crash and feel the shock, and presently the water comes pouring aft,—and Captain Cope calls out to reef topsails,—double-reef fore and mizzen,—one reef in the main. The mates are in the weather-rigging before the word is out of the captain's lips, to take the earings of their respective topsails; and then follows the rush of men up the shrouds and out along the yards. The sails are slatting and flapping, and one can hardly see the row of broad backs against the dusky sky as they bend over the canvas. There are hoarse murmurs, and calls to "light up the sail to windward"; and presently from the fore-topsail-yard comes the cry, ringing and clear,—"*Haul away to leeward!*"—repeated next moment from the main and echoed from the mizzen. Sheltered by the weather-bulwarks, and with one arm round a mizzen-backstay, there is a capital place to watch all this and feel the glorious thrill of the sea,—to look down the sloping deck into the black billows, with here and there a white patch of foam, and while the organ-harp overhead is sounding its magnificent symphony. It

is but wood and iron and hemp and canvas that is doing all this, with some thirty poor, broken-down, dissipated wretches, who, being fit for nothing else, of course are fit for the fo'castle of a Liverpool Liner. Yet it is, for all that, something which haunts the memory long,—which comes back years after in inland vales and quiet farm-houses like brown-moss agates set in emerald meadows, in book-lined studies, and in close city streets. For it is part of the might and mystery of the sea, the secret influence that sets the blood on fire and the heart throbbing,—of any in whose veins runs some of the true salt-water sympathy. Men are born landsmen, and are born on land, but belong to the Ocean's family. Sooner or later, whatever their calling, they recognize the tie. They may struggle against it, and scotch it, but cannot kill it. They may not be seamen,—they may wear black coats and respectable white ties, and have large balances in the bank, but they are the Sea's men,—brothers by blood-relationship, if not by trade, of Ulysses and Vasco, of Columbus and Cabot, of Frobisher and Drake.

Other stories of the sea are floating through my memory as I write,—tales told with elbows leaning on cabin-tables, while the swinging-lamp oscillated drearily overhead, and sent uncertain shadows into the state-room doors. There is the story which Vivian Grey told us of the beautiful clipper "Nighthawk,"—her who sailed with the "Bonita" and "Driving-Scud" and "Mazeppa," in the great Sea-Derby, whose course lay round the world. How, one Christmas-day, off the pitch of Cape Horn, he, standing on her deck, saw her dive bodily into a sea, and all of her to the mainmast was lost in ocean,—her stately spars seemingly rising out of blue water unsupported by any ship beneath;—it seemed an age to him, he said, before there was any fore-castle to be seen rising from the brine. Also, how, caught off that same wild cape, they had to make sail in a reef-topsail-breeze to claw off its terrible rocks, seen but too plainly under their lee. How, as

he said, "about four in the afternoon it seemed to blow worse than ever, and you could see the staunch boat was pressed down under her canvas, and every spar was groaning and quivering, while the ship went bodily to leeward." And next, "how she seemed to come to herself, as it were, with a long staggering roll, and to spring to windward as if relieved of a dead weight; for the gale had broken, and the foam-belt along the cliffs grew dimmer and dimmer, and the land fainter and fainter. And then," he said, "to hear the fo'castle-talk, you would have said that never was such a ship, such spars, such a captain, such seamanship, and such luck, since Father Jason cleared the 'Argo' from the Piræus, for Colchis and a market."

Or I might tell you how Dr. —, the ship-surgeon, was in that Collard steamer which ran down the fishing-boat in the fog off Cape Race,—and how, looking from his state-room window, he saw a mighty cliff so near that he could almost lay his hand upon it. How Fanshaw was on board the "Sea-King" when she was burned, off Point Linus,—and how he hung in the chains till he was taken off, and his hair was repeatedly set on fire by the women—emigrant-passengers—jumping over his head into the sea.

But not so near a-shaking hands with Death did any of them tell, as Ned Kennedy,—who, poor fellow, lies buried in some lone *cañon* of the Sierra Madre. Let us hear him give it in his wild, reckless way. Ned was sitting opposite us, his thick, black hair curling from under his plaid travelling-cap,—his thick eyebrows working, and his hands occupied in arranging little fragments of pilot-biscuit on the table. He broke in upon the last man who was talking, with a—

"Tell you what, boys,—I've a better idea of what all that means. I suppose you both know what the Mediterranean lines of steamers are, and what capital seamanship, and travelling comfort, and all that, you find there. The engineers, however, are Scotch, English, or American, always; because, why? A French

officer once told me the reason. 'You see, *mon ami*,' he said, 'this row of handles which are used to turn these different stops and cocks. Now, my countrymen will take them down and use them properly, each one, just as well as your countrymen; but they will put them back again in their places never.' So it is, and the engineers are all as I say.

"I left Naples for Genoa in the 'Ercolano,' of the Naples line. There were not many passengers on board,—no women,—and what there were were all priests or soldiers. Nobody went by the Neapolitan line except Italians, at that time,—the French company having larger, handsomer, and decidedly cleaner vessels. Of course, as a heretic and a civilian, I had nobody to talk to; so, finding that the engineer had a Saxon tongue in his head, I dove down into his den and made acquaintance. Being shut up there with Italians so much, he thawed out to me at once, and we were sworn brothers by the time we reached Civita Vecchia.

"The 'Ercolano' was as crazy an old tub as ever floated; judging from the extensive colonies which tenanted her berths, she must have been launched about the same time as Fulton's 'Clermont,' or the old 'Ben Franklin,' Captain Bunker, once so well known off the end of Newport wharf. You know how those boats are managed,—stopping all day in port and running at night. We brought up at Leghorn in that way, and Marston, the engineer, proposed to me to have a run ashore. I had no *visé* for Tuscany then, and the Austrian police are very strict; but Marston proposed to pass me off for one of the steamer's officers. So he fished out an old uniform coat of his and made me put it on; and, sure enough, the bright buttons and shoulder-straps carried me through,—only I was dreadfully embarrassed" (Ned never was disturbed at anything,—if an elephant had walked into the cabin, he would have offered him a seat and cigar,) "by the sentries all presenting arms to my coat, which sat upon me as a shirt is supposed to on a bean pole. I overheard one man

attribute my attenuated frame to the effects of sea-sickness.' We went into various shops, and finally into one where all sorts of sea-notions were kept, and Marston said, 'Here's what I've been in search of this month past. I began to think I should have to send to London for it. The 'Ercolano' is a perfect sieve, and may go down any night with all aboard; and here's a swimming-jacket to wear under your coat,—just the thing.' He fitted and bought one, and was turning to go, when a fancy popped into my head: 'Marston,' said I, 'is this coat of yours so very baggy on me?' 'H-e-em,' said he, 'I've known more waxy fits; a trifle of padding wouldn't hurt your looks.' 'I knew it,' said I; 'every soldier we passed seemed to me to smoke me for an impostor, knowing the coat wasn't made for me. Here, let's put one of these things underneath.' I put it on, buttoned the coat over it, inflated it, and the effect was a marvel;—it made a portly gentleman of me at once. I couldn't bear to take it off. 'Just the thing for diligence-travelling in the South of France,' said I; 'keep your neighbor's elbows from your ribs.' I never thought that I must buy a coat to match it. I was so tickled at my own fancy that buy it I would, in spite of Marston's remonstrance. Then we went off and dined, and got very jolly together,—at least, I did,—so that, when we pulled off to the steamer, I thought nothing about my coat or the jacket under it.

"There was a dirty-looking sky overhead, and a nasty cobbling sea getting up under foot as we ran out of Leghorn Harbor, and a little French screw which we left at her anchor was fizzing off steam from her waste-pipe,—evidently meaning to stay where she was. But our captain, having been paid in advance for all the dinners of the voyage, preferred being at sea before the cloth was laid. That made sure of at least twenty out of every twenty-five passengers as non-comedents, and lightened the cook's labors wonderfully. So we were soon jumping and bobbing about and throwing water in a lively

way enough; and our black gowns and blue coats were lying about decks in every direction, with what had been *padres* and soldiers an hour before inside. I lit a cigar and picked out the driest place I could find, and hugged myself on my luck,—another man's coat getting wet on my back, while the air-tight jacket was keeping me dry as a bone.

"As night fell, it grew worse and worse; and the little Sicilian captain came on deck, looking rather wild. He called his pilots and mates into consultation, and from where I lay I could hear the words, 'Spezzia,' and 'Porto Venere,' several times; so I suppose they were debating whether or no to keep her head to the gale, or to edge away a point or two, and run for that bay. But with a head sea and a Mediterranean gale howling down from the gorges of the Ligurian Alps, that thing wasn't so easy. The boat would plunge into a sea and bury to her paddle-boxes, then pitch upward as if she were going to jump bodily out of water, and slap down into it again, while her guards would spring and quiver like card-board. The engine began to complain, as they will when a boat is laboring heavily. You could hear it take, as it were, long breaths, and then stop for a second altogether. I slipped below into the engine-room, and found Marston looking very sober. 'Kennedy,' said he, 'the 'Ercolano' will be somebody's coffin before to-morrow morning, I'm afraid. I'm carrying more steam than is prudent or safe, and the *padrone* has just sent orders to put on more. We are not making a mile an hour, he says; and our only chance is to get under the lee of the land. Look at those eccentrics and that connecting-rod! I expect to see something go any minute; and then—there's no use saying what will come next.' He sat down on his bench and covered his face with his hands.

"It seems, the 'Spezzia' question was decided about that time on deck, and the 'Ercolano's' bow suffered to fall off in the direction of that bay. The effect was that the next sea caught us full on

the weather-bow with a shock that pitched everything movable out of its place. There was a twist and a grind from the machinery, a snap and a crash, and then part after part gave way, as the strain fell upon it in turn. Marston, with an engineer's instinct, shut off the steam; but the mischief was done. We felt the 'Ercolano' give a wild sheer, and then a long, sickening roll, as if she were going down bodily,—and we sprang for the companion-ladder. Everything on deck was at sixes and sevens when we reached it. '*Sangue di San Gennaro! siamo perduti!*' howled the captain; and even the poor sea-sick passengers seemed to wake up a little. It was a bad look-out. We got pretty much of every wave that was going, so there was hardly any standing forward; and, having no steam on, the wind and the sea had their own way with us. The gallant little *padrone* seemed to keep up his pluck, and made out to show a little sail, so as to bring her by the wind; but that, in a long, sharp steamer, didn't mend matters much. To make things completely cheerful and comfortable, word was passed up that we were leaking badly. I confess I didn't see much hope for us; and having lugged up my valise from below, where there was already a foot of water over the cabin-floor, I picked out the little valuables I could stow about me and kicked the rest into a corner. Still we had our boats, and, as the gale seemed to be breaking a little, there was hope for us. At last they managed to get them into the water, and keep them riding clear under our lee. The priests were bundled in like so many wet bales of black cloth, and then the soldiers, and Marston and I tried to follow; but a 'No room for heretics here,' enforced by a bit of brown steel in a soldier's hands, kept us back. The chance wasn't worth fighting for, after all. I didn't believe the steamer would sink, any way. I was aboard the 'San Francisco' when she drifted for nine days. However, there wasn't much time left for us to speculate on that,—for a rush of firemen and crew and the like

into the boats was the next thing, and then the fasts were cast off or cut, and the wind and sea did the rest. They shot away into the darkness. A couple of firemen, two of the priests, and a soldier were left on board. The firemen went to getting drunk,—the priests were too sick to move or care for anything,—the soldier sat quietly down on the cabin-skylight; Marston and I climbed on to the port paddle-box to look out for a sail.

"The clouds had broken with the dying of the gale, and the moon shone out, lighting up the foaming sea far and wide, and showing our water-logged or sinking craft. Every wave that swept over us found its way below, and we settled deeper and deeper. Still, if we could only hold on till morning, those seas are alive with small craft, and we stood a good chance of being picked off. I was saying as much to Marston when the 'Ercolano' gave a lurch and then dove bows first into the sea. A great wave seemed to curl over us, and then to thrust us by the shoulders down into the depths, and all was darkness and water. I went down, down, and still I was dragged lower still, though the pressure from above ceased, and I was struggling to rise. I struck out with hands and feet;—I was held fast. I felt behind me and found a hand grasping my coat-tails. Marston had seized me, and with the other hand was clinging to the iron rail on the top of the paddle-box,—clinging with the death-grip of a drowning man, if you know what that is. I tried to unclasp the fingers,—to drive him from his hold on the rail. Of course I couldn't; it was Death's hand, not his, that was holding there, and my own strength was going, when a thought flashed into my mind. I tore open my coat, and it slipped from me like a grape-skin from the grape, and I went up like an arrow.

"Never shall I forget the blessed light of heaven, and the sweet air in my lungs once more. Bad off as I was, it was better than being anchored to a sinking wreck by a dead man's grasp. I heard a voice near me that night repeating

the Latin prayers of the Romish Church for the departing soul, but I couldn't see the speaker. The moon had gone under a cloud again, but there was light enough for me to catch a glimpse of some floating wreck on the crest of a wave above me; and then it came down right on top of me,—a lot of rigging and a spar or two,—our topmast and yard, which had gone over the side just before we foundered. I climbed on to it, and found my prospects hugely improving,—especially as clinging to the other end was the soldier left on board. As soon as I could persuade him I was no spook or mermaid, he was almost as pleased as I was, especially when he found I was the 'eretico.' He was a Swiss, it seemed, of King Ferdinand's regiments, going home on furlough, and a Protestant, which was why he was left on board.

"Between us both we managed to get the spars into some sort of a raft-shape, so that they would float us more comfortably; and there we watched for the morning. When that came, the sea had smoothed itself, and the wind died away considerably,—as it does in the Mediterranean at short notice. We looked every way for the white lateen-sails of the coasting and fishing craft, but in vain. It grew hotter and hotter as the sun got higher, and hope and strength began to give out. I lay down on the raft and slept,—how long I don't know, for my first consciousness was my friend's cry of "A ship!" I looked up, and there, sure enough, in the northeast, was a large ship, running before the wind, right in our direction. I suspect poor Fritzeli must have been asleep also, that he hadn't seen her before,—for she was barely a couple of miles off. She was apparently from Genoa or Spezzia; but the main thing was, that she was travelling our road, and that with a will. I tore off my shirt-sleeve at the shoulder, and waved it, while Fritzeli held up his red sash. But it was an anxious time. On she came,—a big frigate. We could see a commodore's pendant flying at the main, and almost hear the steady rush of wa-

ter under her black bows. Did they see us, or not? There was no telling; a man-of-war walks the sea's roads without taking hats off to everybody that comes along. A quiet report goes up to the officer of the deck, a long look with a glass, and the whole affair would be settled without troubling us to come into council. On she came, till we could see the guns in her bow ports, and almost count the meshes in her hammock netting. The shadow of her lofty sails was already fallen upon us before she gave a sign of recognition. Then her bow gave a wide sheer, and her whole broadside came into view, as she glided by the spars where we were crouching. An officer appeared at her quarter and waved his gold-banded cap to us, as the frigate rounded to, to the leeward of us,—and the

glorious stripes and stars blew out clear against the hot sky. A light dingey was in the water before the main yard had been well swung aback, and a midshipman was urging the men, who needed no urging, to give way strong. I didn't know how weak I had got, till they were lifting me aboard the boat. An hour after, when I had had something to eat and was a little restored and had told my story, the officer of the deck was relieved and came below to see me.

"'I fancy, Sir, we've just passed something of your steamer,' he said,—'a yawl-boat, bottom up, with a name on the stern which we couldn't well make out: *Erco* something, it looked like. Hadn't been long in the water, I should say.'

"And that was the last of the steamer. Fritzeli and I were the sole survivors."

THE JOLLY MARINER:

A BALLAD.

It was a jolly mariner
As ever hove a log;
He wore his trousers wide and free,
And always ate his prog,
And blessed his eyes, in sailor-wise,
And never shirked his grog.

Up spoke this jolly mariner,
Whilst walking up and down :—
"The briny sea has pickled me,
And done me very brown;
But here I goes, in these here clo'es,
A-cruising in the town!"

The first of all the curious things
That chanced his eye to meet,
As this undaunted mariner
Went sailing up the street,
Was, tripping with a little cane,
A dandy all complete!

He stopped,—that jolly mariner,—
And eyed the stranger well :—
"What that may be," he said, says he,

"Is more than I can tell;
But ne'er before, on sea or shore,
Was such a heavy swell!"

He met a lady in her hoops,
And thus she heard him hail:—
"Now blow me tight!—but there's a sight
To manage in a gale!
I never saw so small a craft
With such a spread o' sail!"

"Observe the craft before and aft,—
She'd make a pretty prize!"
And then, in that improper way,
He spoke about his eyes,
That mariners are wont to use,
In anger or surprise.

He saw a plumber on a roof,
Who made a mighty din:—
"Shipmate, ahoy!" the rover cried,
"It makes a sailor grin
To see you copper-bottoming
Your upper-decks with tin!"

He met a yellow-bearded man,
And asked about the way;
But not a word could he make out
Of what the chap would say,
Unless he meant to call him names
By screaming, "Nix furstay!"

Up spoke this jolly mariner,
And to the man said he,
"I haven't sailed these thirty years
Upon the stormy sea,
To bear the shame of such a name
As I have heard from thee!"

"So take thou that!"—and laid him flat.
But soon the man arose,
And beat the jolly mariner
Across his jolly nose,
Till he was fain, from very pain,
To yield him to the blows.

'Twas then this jolly mariner,
A wretched jolly tar,
Wished he was in a jolly-boat
Upon the sea afar,
Or riding fast, before the blast,
Upon a single spar!

'Twas then this jolly mariner
 Returned unto his ship,
 And told unto the wondering crew
 The story of his trip,
 With many oaths and curses, too,
 Upon his wicked lip !—

As hoping—so this mariner
 In fearful words harangued—
 His timbers might be shivered, and
 His le'ward scuppers danged,
 (A double curse, and vastly worse
 Than being shot or hanged !)

If ever he—and here again
 A dreadful oath he swore—
 If ever he, except at sea,
 Spoke any stranger more,
 Or like a son of—something—went
 A-cruising on the shore !

SUGGESTIONS.

"Waste words, addle questions."

BISHOP ANDREWS.

AFFAIRS.

WHEN affairs are at their worst, a bold project may retrieve them by giving an assurance, else wanting, that hope, spirit, and energy still exist.

AFFINITIES.

Place an inferior character in contact with the finest circumstances, and, from wanting affinities with them, he will still remain, from no fault of his own, insensible to their attractions. Take him up the mount of vision, and show him the finest scene in Nature, and, instead of taking in the whole circle of its beauty, he will, quite as likely, have his attention engrossed by something mean and insignificant under his nose. I was reminded of this, on taking a little boy, three years old, to the top of the New York Reservoir. Placing him on one

of the parapets, I endeavored to call his attention to the more salient and distant features of the extended prospect; but the little fellow's mind was too immature to be at all appreciative of them. His interest was confined to what he saw going on in a dirty inclosure on the opposite side of the street, where two or three goats were moving about. After watching them with curious interest for some time, "See, see !" said he, "dem is pigs down dare !" Was there need for quarrelling with my fine little man for seeing pigs where there were only goats, or goats where there was much worthier to be seen ?

AFTER THE BATTLE.

A brave deed performed, a noble object accomplished, gives a fillip to the spirits, an exhilaration to the feelings, like that imparted by Champagne, only more

permanent. It is, indeed, admirably well said by one wise to discern the truth of things, and able to give to his thought a vigorous expression, that "a man feels relieved and gay when he has put his heart into his work and done his best; but what he has said or done otherwise shall give him no peace."

APPLAUSE.

Noble acts deserve a generous appreciation. Indeed, it is a species of injustice not to warmly applaud whatever is wisely said or ably done. Fine things are shown that they may be admired. When the peacock struts about, it is to show what a fine tail he has.

ARTISTS.

The artist's business is with the beautiful. The repugnant is outside of his province. Let him study only the beautiful, and he will always be pleased; let him treat only of the beautiful, with a true feeling for it, and he will always give pleasure.

The artist must love both his art and the subjects of his art. Nothing that is not lovable is worth portraying. In the portrait of Rosa Bonheur, she is appropriately represented with one arm thrown affectionately around the neck of a bull. She must have loved this order of animals, to have painted them so well.

AUTHORS.

Instead of the jealousies that obtain among them, there is no class that ought to stand so close together, united in a feeling of common brotherhood, to strengthen, to support, and to encourage, by mutual sympathy and interchange of genial criticism, as authors. A sensitive race, neglect pierces like sharp steel into the very marrow of their being. And still they stand apart! Alive to praise, and needing its inspiration, their relations are those of icebergs,—cold, stiff, lofty, and freezing. What infatuation is this! They should seek each other out, extend the hand of fellowship, and bridge the

distance between them by elaborate courtesies and kindly recognitions.

AN AUTHOR'S FIRST BOOK.

No man is a competent judge of what he himself does. An author, on the eve of his first publication, and while his book is going through the press, is in a predicament like that of a man mounted on a fence, with an ugly bull in the field that he is obliged to cross. The apprehended silence of the journals concerning his merits—for no notice is the worst notice—constitutes one of the "horns of his dilemma"; while their possibly invidious comments upon his want of them constitute another and equally formidable "horn." Between these, and the uncertainty as to whether he will not in a little time be cut by one-half of his acquaintances and only indulgently tolerated by the other half, his experience is apt to be very peculiar, and certainly not altogether agreeable. Never, therefore, envy an author his feelings on such an occasion, on the score of their superior enjoyment, but rather let him be visited with your softest pity and tenderest commiseration.

BOOKS.

A book is only a very partial expression of its author. The writer is greater than his work; and there is in him the substance, not of one, or a few, but of many books, were they only written out.

CAUSE AND EFFECT.

Small circumstances illustrate great principles. To-day my dinner cost me sixpence less than usual. This is an incident not quite so important as some others recorded in history, but the causes of it originated more than two thousand years ago. It will also serve to explain the principle, that causes are primary and secondary, remote and immediate,—and that historians, when they speak of certain effects as produced by certain causes, refer usually only to the last of a chain of causes. Socrates one day had a conversation with Aristippus, in which

he threw out certain remarks on the subject of temperance. Being overheard by Xenophon, they were subsequently committed to writing and published by him. These, falling in my way last evening, made such an impression on my mind, that I was induced to-day to forego my customary piece of pudding after dinner, to the loss of the eating-house proprietor, whose receipts were thus diminished, first, by a few observations of an ancient Greek, secondly, by a report given of them by a bystander, and, thirdly, by the accidental perusal of them, after twenty centuries, by one of his customers.

CHEERFULNESS.

Sullen and good, morbid and wise, are impossible conditions. The best test, both of a man's wisdom and goodness, is his cheerfulness. When one is not cheerful, he is almost invariably stupid. A sad face seldom gets into much credit with the world, and rarely deserves to. "Sorrow," says old Montaigne, "is a base passion."

"The quarrel between Gray and me," said Horace Walpole, "arose from his being too serious a companion." In my opinion, this was a good ground for cutting the connection. What right has any one to be "too serious a companion?"

COWARDS.

In desperate straits the fears of the timid aggravate the dangers that imperil the brave. For cowards the road of desertion to the enemy should be left open; they will carry over to them nothing but their fears. The poltroon, like the scabard, is an incumbrance when once the sword is drawn.

CRITICISM.

No work deserves to be criticized which has not much in it that deserves to be applauded. The legitimate aim of criticism is to direct attention to what is excellent. The bad will dig its own grave, and the imperfect may be safely left to that final neglect from which no amount of present undeserved popularity can rescue it.

Ever so critical of things: never but good-naturedly so of persons.

CULTURE.

Partial culture runs to the ornate; extreme culture to simplicity.

DEATH.

Without death in the world, existence in it would soon become, through overpopulation, the most frightful of curses. To death we owe our life; the passing of one generation clears the way for another; and thus, in the economy of Providence, the very extinction of being is a provision for extending the boon of existence. Even wars and disease are *a good misunderstood*. Without them, child-murder would be as common in Christendom as it is in over-populated China.

DEBTORS AND CREDITORS.

To interest a number of people in your welfare, get in debt to them. If they will not then promote your interest, it is because they are not alive to their own. It is to the advantage of creditors to aid their debtors. Caesar owed more than a million of dollars before he obtained his first public employment, and at a later period his liabilities exceeded his assets by ten millions. His creditors constituted an important constituency, and doubtless aided to secure his elections.

DIFFICULTIES.

Great difficulties, when not succumbed to, bring out great virtues.

DISGUST.

A fit of disgust is a great stimulator of thought. Pleasure represses it.

EARNESTNESS.

M. de Buffon says that "genius is only great patience." Would it not be truer to say that genius is great earnestness? Patience is only one faculty; earnestness is the devotion of all the faculties: it is the cause of patience; it gives endurance.

overcomes pain, strengthens weakness, braves dangers, sustains hope, makes light of difficulties, and lessens the sense of weariness in overcoming them. Yes, War yields its victories, and Beauty her favors, to him who fights or woos with the most passionate ardor,—in other words, with the greatest earnestness. Even the simulation of earnestness accomplishes much,—such a charm has it for us. This explains the success of libertines, the coarseness of whose natures is usually only disguised by a certain conventional polish of manners: “their hearts seem in earnest, because their passions are.”

EDUCATION OF THE SEXES.

Girls are early taught deceit, and they never forget the lesson. Boys are more outspoken. This is because boys are instructed that to be frank and open is to be manly and generous, while their sisters are perpetually admonished that “this is not pretty,” or “that is not becoming,” until they have learned to control their natural impulses, and to regulate their conduct by precepts and example. The result of all this is, that, while men retain much of their natural dispositions, women have largely made-up characters.

EMERSON'S ESSAYS.

I have not yet been able to decide whether it is better to read certain of Emerson's essays as poetry or philosophy. Perhaps, though, it would be no more than just to consider them as an almost complete and perfect union of the two. Certainly, no modern writer has more of vivid individuality, both of thought and expression,—and few writers, of any age, will better bear reperusal, or surpass him in the grand merit of suggestiveness. There is much in his books that I cannot clearly understand, and passages sometimes occur that once seemed to me destitute of meaning; but I have since learned, from a greater familiarity with what he has written, to respect even his obscurities, and to have faith that there is at all times behind his words both a man and a meaning.

ENGLISHMEN.

There is in the character of perhaps a majority of Englishmen a singular comingling of the haughty and the subservient,—the result, doubtless, of the mixed nature, partly aristocratic and partly democratic, of the government, and of the peculiar structure of English society, in which every man indemnifies himself for the subserviency he is required to exhibit to the classes above, by exacting a similar subserviency from those below him. Thackeray, who is to be considered a competent judge of the character of his countrymen, puts the remark into the mouth of one of his characters, that, “if you wish to make an Englishman respect you, you must treat him with insolence.” The language is somewhat too strong, and it would not be altogether safe to act upon the suggestion; but the witticism embodies a modicum of truth, for all that.

EXAMPLE.

Example has more followers than reason.

EXCITEMENT COUNTERVAILS PAIN.

We wince under little pains, but Nature in us, through the excitement attendant upon them, seems to brace us to endure with fortitude greater agonies. A curious circumstance, that will serve as an illustration of this, is told by an eminent surgeon of a person upon whom it became necessary to perform a painful surgical operation. The surgeon, after adjusting him in a position favorable to his purpose, turned for a moment to write a prescription; then, taking up the knife, he was about making an “imminent deadly breach” in the body of his subject, when he observed an expression of distress upon his countenance. Wishing to reassure him, “What disturbs you?” he inquired. “Oh,” said the sufferer, “you have left the pen in the inkstand!” and this being removed, he submitted to the operation with extraordinary composure.

FACT AND FANCY.

"See, nurse! see!" exclaimed a delighted papa, as something like a smile irradiated the face of his infant child,—
 "an angel is whispering to it!" "No, Sir," replied the more matter-of-fact nurse,—
 "it is only wind from its stomach."

FINE HOUSES.

To build a huge house, and furnish it lavishly,—what is this but to play baby-house on a large scale?

FINE LADIES.

If you would know how many of the "airs" of a fine lady are "put on," contrast her with a woman who has never had the advantages of a genteel training. What appear as the curvettings and prancings of a high-mettled nature turn out, from the light thus afforded, to be only the tricks of a skilful grooming.

FUTURE LIFE.

Altogether too much thought is given to the next world. One world at a time ought to be sufficient for us. If we do our duty manfully in this, much consideration of our relations to that next world may be safely postponed until we are in it.

GREAT MEN.

Oh, the responsibility of great men! Could some of these—the originators of new beliefs, of new methods in Art, of new systems of state and ecclesiastical polity, of novel modes of practice in medicine, and the like—"revisit the pale glimpses of the moon," and look upon the streams of blood and misery that have flowed from fountains they have unsealed, they would skulk back to their graves faster and more affrighted than when they first descended into them.

HABITS.

Habit, to a great extent, is the forcing of Nature to your way, instead of leaving her to her own. Struck by this consideration, "He is a fool, then, who has any habits," said W. Softly, my dear Sir,

—the position is an extreme one. Bad habits are very bad, and good habits, blindly followed, are not altogether good, for they make machines of us. Occasional excesses may be wholesome; and Nature accommodates herself to irregularities, as a ship to the action of waves. Good habits are in the nature of allies: we may strengthen ourselves by an alliance with them, but they should not outnumber the forces they act with. Habits are the Hessians of our moral warfare: the good or the ill they do depends on the side they fight on.

HEROISM.

The race of heroes, though not prolific, is never extinct. Nature, liberal in this, as in all things else, has sown the constituent qualities of heroism broadcast. Elements of the heroic in character exist in almost every individual; it is only the felicitous combination of them all in one that is rare.

IDEAS.

Ideas, in regard to their degrees of merit, may be divided, like the animal kingdom, into classes or families. First in rank are those ideas that have in them the germs of a great moral unfolding,—as the ideas of a religious teacher, like Socrates or Confucius. Next in merit are those ideas that lay open the secrets of Nature, or add to the combinations of Art,—as the ideas of inventors and discoverers. Next in the order of excellence are all new and valuable ideas on diseases and their treatment, on the redress of social abuses, on government and laws and their administration, and all similar ideas on all other subjects connected with material welfare or intellectual and moral advancement. Last and least, ideas that are only the repetition of other ideas, previously known, though not so well expressed.

INSTITUTIONS.

When an institution, not designed to be stationary, ceases to be progressive, it is usually because its officers have lost

their ambition to make it so. In such a contingency, they had better be called upon to resign, and thus to open the way for a more executive and energetic management.

LAWYERS.

The lawyer's relation to society is like that of the scarecrow to the cornfield; concede that he effects nothing of positive good, and he still exerts a wholesome influence from the terror his presence inspires.

LEADERSHIP.

He who aspires to be leader must keep in advance of his column. His fears must not play traitor to his occasions. The instant he falls into line with his followers, a bolder spirit may throw himself at the head of the movement initiated, and from that moment his leadership is gone.

LET THE RIGHT PREVAIL.

It is better that ten times ten thousand men should suffer in their interests than that a right principle should not be vindicated. Granting that all these will be injured by the suppression of the false, an infinitely greater number will as certainly be prejudiced by throwing off the allegiance due to truth. Throughout the future, all have an interest in the establishment of sound principles, while only a few in the present can have even a partial interest in the perpetuation of error.

LIGHTS AND SHADOWS.

It is pleasanter and more amiable to applaud than to condemn, and they who look wisely to their happiness will endeavor, as they go through life, to see as much to admire, and as few things that are repugnant, as possible. Nothing that is not distinctively excellent is worthy of particular study or comment.

LOVERS' DIFFERENCES.

Their love for each other is only partial who differ much and widely. When

a loving heart speaks to a heart that loves in return, an understanding is easily arrived at.

WHAT LOVE PROVES.

The existence of so much love in the world establishes that there is in it much of the excellence that justifies so exalted a passion. Almost every man has been a lover at some period in his life, and, out of so many lovers, it is unreasonable to suppose that all of them have been mistaken in their estimates.

MAGNANIMITY.

Justice to the defeated exalts the victor from a subject of admiration to an object of love. To the fame of superior courage or address he thereby adds the glory of a greater magnanimity. Praise, too, of a vanquished opponent makes our victory over him appear the more signal.

MANHOOD.

The question is not, the number of facts a man knows, but how much of a fact he is himself.

MEAN MEN.

If a man is thoroughly mean by nature, let him give full swing to his meanness. Such a fellow brings discredit upon generosity by putting on its semblance. If he attempts to disguise the smallness of his soul, he only adds to his contemptible trait of meanness the still more despicable vice of hypocrisy. Mean by the sacred institution of Nature, and without a generous trait to mar the excellence of his native meanness, so long as he continues unqualifiedly mean, he exists a perfect type of a particular character, and presents to us a fine illustration of the vast capabilities of Nature.

METHODS OF THE ENTERPRISING.

Great personal activity at times, and closely sedentary and severely thoughtful habits at other times, are the forces by which able men accomplish notable enterprises. Sitting with thoughtful brows by their evening firesides, they originate and

mature their plans; after which, with energies braced to their work, they move to the easy conquest of difficulties accounted formidable, because they have deliberated upon and mastered the *best methods* for overcoming them.

MILITARY SCHOOLS.

The existence of military schools is a proof that the other schools have not done their duty.

NATURE AND ART.

The art of being interesting is largely the art of being *real*,—of being without art.

NEWSPAPERS.

The world is not fairly represented by its newspapers. Life is something better than they make it out to be. They are mainly the records of the crimes that curse and the casualties that afflict it, the contests of litigants and the strifes of politicians; but of the sweet amenities of home and social life they are and must be silent. Not without a reason has the poet fled from the "poet's corner."

NON-COMMUNICANTS.

Certain minds are formed to take in truths, but not to utter them. They hoard their knowledge, as misers their gold. Their communicativeness is small. Their appreciation of principles is greater than their sympathy for persons.

OPINIONS.

The best merit of an opinion is, that it is sound; its next best merit, that it is briefly expressed.

POETS AND POETRY.

The "twelve rules for a poet" are eleven too many. The poet needs but one rule for his guidance as a poet,—namely, never to write poetry.*

POPULAR ASPIRANTS.

The fate of a popular aspirant is often

* I speak, of course, only of the discreet poet. Great poets are never discreet. Their genius overrides their discretion.

like that of a prize ox. When in his best condition, he is put up for exhibition; decorated with flowers and ribbons, and afterwards led out to be slaughtered.

PRAISE.

No one, probably, was ever injured by having his good qualities made the subject of judicious praise. The virtues, like plants, reward the attention bestowed upon them by growing more and more thrifty. A lad who is told often that he is a good boy will in time grow ashamed to exhibit the qualities of a bad one.

PRIDE.

Pride is like the beautiful acacia, that carries its head proudly above its neighbor plants,—forgetting that it, too, like them, has its root in the dirt.

PROVERBS.

Invention and the Graces preside at the birth of a good proverb. Aside from the ideas expressed in them, they are deserving of the attention of literary men and all students of expression, from the infinite variety of turns of style they exhibit. "If you don't want to be tossed by a bull, toss the bull." Here, for instance, the thought is not only spirited, but it is so rendered as to give to the idea both the force of novelty and the agreeableness of wit. The words are as hard and compact, and the thought flies as swift, as a bullet.

PUBLIC MEN.

A public man may reasonably esteem it a piece of good fortune to be vigorously attacked in the newspapers. In the first place, it lifts him prominently into notice. Then, a plausible defence will divide public opinion, while a triumphant vindication will more fully establish him in the popular regard. Even if unable to offer either, the notoriety so acquired will in time soften into a counterfeit of celebrity so like the original that it will easily pass for it. Besides, the world is charitable, and will forget old sins in consideration of later virtues.

MANNERS OF REFORMERS.

Reformers, from being deeply impressed with the evils they seek to redress, and actively engaged in a warfare against them, are apt to contract a certain habit of denunciation, extending to persons and things at large, and by which their character for amiability is injuriously affected. This is particularly noticeable in that portion of the press devoted to Progress.

REQUESTS.

It is well to dress in your best when you go to press a request. It is not so easy to resist the solicitations of a well-dressed importunate.

RICH AND POOR.

Grace resides with the cultivated, but strength is the property of the people. Art with these has not emasculated Nature.

RICH TO EXCESS.

Intellectually, as many suffer from too much physical health as too little. A fat body makes a lean mind.

RULE OR RUIN.

A thoroughly vigorous man will not actively belong to any associated body, except to rule in it. Not to control in its affairs is to have his individuality cut down to the standard of those that do. He must stamp himself upon the institution, or its enfeebling influence will be stamped upon him.

SANS PEUR.

No man is competent greatly to serve the cause of truth till he has made audacity a part of his mental constitution.

There are some dangers that are to be courted,—courted and braved as a coy mistress is to be wooed, with all the more vigor as the day makes against us. When Fortune frowns upon her worthy wooer, it is still permitted him to think how pleasant it will be ere long to bask in her smiles.

SLIGHTS.

In seasons when the energies flag and our ambition fails us, a rebuff is a blessing, by rousing us from inaction, and stirring us to more vigorous efforts to make good our pretensions.

SOCIAL REGENERATION.

Private worth is the only true basis of public prosperity. Still, ministers and moralists do but tinker at the regeneration of the world in merely recommending individual improvement. The most prolific cause of depravity is the social system that forms the character to what it is. The virtues, like plants, to flourish, must have a soil and air adapted to them. A plant at the seaside yields soda; the same plant grown inland produces potash. What society most needs, for its permanent advancement, is uniformity of inheritance.

SPEAKERS.

A speaker should put his character into what he says. So many speakers, like so many faces, have no individuality in them!

SPEAKING AND TALKING.

There is often a striking contrast between a man's style of writing and of talking,—for which I offer this explanation: He ponders what he writes; he talks without system. As an author, therefore, he is sententious; as a conversationist, loose and verbose;—or the reverse of this may be true.

SPEECH.

Language was given to us that we might say pleasant things to each other.

PREVAILING STYLES.

In literary performances, as in Gothic architecture, the taste of the age is largely in favor of the pointed styles. Our churches and our books must bristle all over with points, or they are not so much thought of.

SUNDAY.

The poor man's rich day.

THINGS WORTH KNOWING.

Only the good is worth knowing, and only the beautiful worth studying.

TOBACCO.

Tobacco in excess fouls the breath, discolours the teeth, soils the complexion, deranges the nerves, reduces vitality, impairs the sensibility to beauty and to pleasure, abets intemperance, promotes idleness, and degrades the man.

TRADE-LIFE.

Formerly, when great fortunes were made only in war, war was a business; but now, when great fortunes are made only by business, business is war.

TRUTH-SEEKERS.

Hamlet, in the ghost scene, is a fine example of the *questioning spirit* pursuing its inquiries regardless of consequences. The apparition which affrights and confounds his companions only spurs his not less timid, perhaps, but more speculative nature into following and plying it with questions. Only thus should Truth be followed, with an interest great enough to overmaster all fears as to whither she may lead and what she may disclose.

UGLY MEN.

When a man is hideously ugly his only safety is in glorying in it. Let him boldly claim it as a distinction.

THE WALK.

The walk discloses the character. A placid and composed walk bespeaks the

philosopher. He walks as if the present was sufficient for him. A measured step is the expression of a disciplined intellect, not easily stirred to excesses. A hurried pace denotes an eager spirit, with a tendency to precipitate measures. The confident and the happy swing along, and need a wide sidewalk; while an irregular gait reveals a composite of character,—one thing to-day, another to-morrow, and nothing much at any time.

WINE.

In vino there is not only *veritas*, but sensibility. It makes the face of him who drinks it to excess blush for his habits.

WISDOM.

Wisdom comes to us as guest, but her visits are liable to sudden terminations. In our efforts to retain the wisdom we have acquired, an embarrassment arises like that of the little boy who was scolded for having a dirty nose. "Blow your nose, Sir." "Papa, I do blow my nose, but it won't stay blowed."

WOMEN AS JUDGES OF CHARACTER.

It is more honorable to have the regards of a few noble women than to be popular among a much greater number of men. Having in themselves the qualities that command our love, they are, for that reason, the better able to appreciate the traits that deserve to inspire it. The heart must be judged by the heart, and men are too intellectual in the processes by which they form their regards.

AVERAGE WORTH.

A wife should accept her husband, and a friend his friend, upon a general estimate. Particulars in character and conduct should be overlooked.

BULLS AND BEARS.

CHAPTER I.

THE ARTISTS' EXHIBITION, AND WHAT
CAME OF IT.

THERE was an exhibition of pictures in an upper room on Washington Street. The artists had collected their unsold productions, and proposed to offer them at auction. There were sketches of White Mountain scenery, views of Nahant and other beaches, woodland prospects, farm-houses with well-sweeps, reedy marshes and ponds, together with the usual variety of ideal heads and figures,—a very pretty collection. The artists had gone forth like bees, and gathered whatever was sweetest in every field through a wide circuit, and now the lover of the beautiful might have his choice of the results without the fatigue of travel. Defects enough there were to critical eyes,—false drawing, cold color, and unsuccessful distances; still there was much to admire, and the spirit and intention were interesting, even where the inexperience of the painter was only too apparent.

A group of visitors entered the room: a lady in the prime of beauty, richly but modestly dressed, casting quick glances on all sides, yet with an air of quiet self-possession; a gentleman, her brother apparently, near forty years of age, dignified and prepossessing; a second lady, in widow's weeds; and a young gentleman with successful moustaches, lemon-colored gloves, and one of those bagging coats which just miss the grace of flowing outline without the compensation of setting off a good figure. The lady first mentioned seemed born to take the lead; it was no assumption in her; *incedo regina* was the expression of her gracefully poised head and her stately carriage. "A pretty bit," she said, carelessly pointing with her parasol to a picture of a rude country bridge and dam.

"Yes," said her elder brother, "spirited and lifelike. Who is the painter, Marcia?"

The beauty consulted her catalogue. "Greenleaf,—George Greenleaf."

"A new name. Look at that distant spire," he continued, "faintly showing among the trees in the background. The water is surprisingly true. A charming picture. I think I'll buy it."

"How quickly you decide," said the lady, with an air of languor. "The picture is pretty enough, but you haven't seen the rest of the collection yet. Gamboge paints lovely landscapes, they say. I wouldn't be enthusiastic about a picture by an artist one doesn't know anything about."

A gentleman standing behind a screen near by moved away with a changed expression and a deepening flush. Another person, an artist evidently, now accosted the party, addressing them as Mr. and Miss Sandford. After the usual civilities, he called their attention to the picture before them.

"We were just admiring it," said Mr Sandford.

"Do you like it, Mr. Easemann?" asked the lady.

"Yes, exceedingly."

"Ah! the generosity of a brother artist," replied Miss Sandford.

"No; you do the picture injustice,—and me too, for that matter; for," he added, with a laugh, "I am not generally supposed to ruin my friends by indiscriminate flattery. This young painter has wonderfully improved. He went up into the country last season, found a picturesque little village, and has made a portfolio of very striking sketches."

Miss Sandford began to appear interested.

"Quite promising," said the Adonis in the baggy coat, silent until now.

"Yes, he has blossomed all at once. He talks of going abroad."

"Bettah stay at home," said the young gentleman, languidly. "I've been through all the gallews. It's always the same

stowy,—always the same old humbugs to be admired,—always a doosid boah.”

“One relief you must have had in the galleries,” retorted Easelmann; “your all-round shirt-collar wouldn’t choke you quite so much when your head was cocked back.”

Adonis-in-bag adjusted his polished all-rounder with a delicately gloved finger, and declared that the painter was “a jolly fel-low.”

The gentleman who had blushed a moment before, when the picture was criticized, was still within earshot; he now turned an angry glance upon the last speaker, and was about to cross the room, when Mr. Easelmann stopped him.

“With your permission, Miss Sandford,” said the painter, nodding meaningly towards the person retreating.

“Certainly,” replied the lady.

“Mr. Greenleaf,” said Easelmann, “I wish you to know some friends of mine.”

The gentleman so addressed turned and approached the party, and was presented to “Miss Sandford, Mr. Sandford, Mrs. Sandford, and Mr. Charles Sandford.” Miss Sandford greeted him with her most fascinating smile; her brother shook his hand warmly; the other lady, a widowed sister-in-law, silently curtsied; while the younger brother inclined his head slightly, his collar not allowing any sudden movement. In a moment more the party were walking about the room, looking at the pictures.

When at length the Sandfords were about to leave the room, the elder gentleman said to Mr. Greenleaf,—

“We should be happy to see you with our friend, Mr. Easelmann, at our house. Come without ceremony.”

Miss Sandford’s eyes also said, “Come!” at least, so Greenleaf thought.

Mr. Charles Sandford, meanwhile, who was cultivating the sublime art of indifference, the distinguishing feature and the ideal of his tribe, only tapped his boot with his slender ratan, and then smoothed his silky moustaches.

Greenleaf briefly expressed his thanks for the invitation, and, when the family

had gone, turned to his friend with an inquiring look.

“Famous, my boy!” said Easelmann. “Sandford knows something about pictures, though rather stingy in patronage; and he is evidently impressed. The beauty, Marcia, is not a judge, but she is a valuable friend,—now that you are recognized. The widow is a most charming person. Charles, a puppy, as every young man of fashion thinks he must be for a year or two, but harmless and good-natured. The friendship of the family will be of service to you.”

“But Marcia, as you call her, was depreciating my picture not a minute before you called me.”

“Precisely, my dear fellow; but she didn’t know who had painted it, and, moreover, she hadn’t seen you.”

Greenleaf blushed again.

“Don’t color up that way; save your vermilion for your canvas. You *are* good-looking; and the beauty desires the homage of every handsome man, especially if he is likely to be a lion.”

“A lion! a painter of landscapes a lion! Besides, I am no gallant. I never learned the art of carrying a lady’s fan.”

“I hope not; and for that very reason you are the proper subject for her. Your simplicity and frankness are all the more charming to a woman who needs new sensations. Probably she is tired of her *blasé* and wary admirers just now. She will capture you, and I shall see a new and obsequious slave.”

Greenleaf attempted to speak, but could not get in a word.

“I felicitate you,” continued Easelmann. “You will have a valuable experience, at any rate. To-morrow or next day we will call upon them. Good morning!”

Greenleaf returned his friend’s farewell; then walking to a window, he took out a miniature. It was the picture of a young and beautiful girl. The calm eyes looked out upon him trustfully; the smile upon the mouth had never seemed so lovely. He thought of the proud, dazzling coquette, and then looked upon the image

of the tender, earnest, truthful face before him. As he looked, he smiled at his friend's prophecy.

"This is my talisman," he said; and he raised the picture to his lips.

An evening or two later, as Easelmann was putting his brushes into water, Greenleaf came into his studio. The cloud-compelling meerschaums were produced, and they sat in high-backed chairs, watching the thin wreaths of smoke as they curled upwards to the skylight. The sale of pictures had taken place, and the prices, though not high enough to make the fortunes of the artists, were yet reasonably remunerative; the pictures were esteemed almost as highly, Easelmann thought, as the decorative sketches in an omnibus.

"And did Sandford buy your picture, Greenleaf?"

"Yes, I believe so. In fact, I saw it in his drawing-room, yesterday."

"Certainly; how could I have forgotten it? I must have been thinking of the animated picture there. What is paint, when one sees such a glowing, glancing, fascinating, arch, lovely, tantalizing?"

"Don't! Don't pelt me with your parts of speech!"

"I was trying to select the right adjective."

"Well, you need not shower down a basketful, merely to pick out one."

"But confess, now, you are merely the least captivated?"

"Not the least."

"No little palpitations at the sound of her name? No short breath nor upturned eyes? No vague longings nor 'billowy unrest'?"

"None."

"You slept well last night?"

"Perfectly."

"No dreams of a sea-green palace, with an Undine in wavy hair, and a big brother with fan-coral plumes, who afterwards turned into a sea-dog?"

"No,—I cut the late suppers you tempt me with, and preserve my digestion."

"A great mistake! One good dream in a nightmare will give you more poetical ideas than you can paint in a month. I mean a reasonable nightmare, that you can ride,—not one that rides you. The imagination then seems to scintillate nothing but beautiful images."

"I don't care to become a red-hot iron for the sake of seeing the sparks I might radiate."

"Prosaic again! Now sin and sorrow have their advantages; the law of compensation, you see. Poets, according to Shelly, learn in suffering what they teach in song. And if novelists were always scrupulous, what do you think they would write? Only milk-and-water proprieties, tamely-virtuous platitudes. Do you think Dickens never saw a tap-room or a thief's den?—or that Thackeray is unacquainted with the "Cave of Harmony"? No,—all the piquancy of life comes from the slight *souçon* of wickedness wherewithal we season it."

"I like amazingly to have you wander off in this way; you are always entertaining, whether your ethics are sound or not."

"Don't trouble yourself about ethics. You and I are artists; we want effects, contrasts; we must have our enthusiasms, our raptures, and our despair."

"You ride a theory well."

"Now, my dear Greenleaf, listen. Kindly I say it, but you are a trifle too innocent, too placid,—in short, too youthful. To paint, you must be intense; to be intense, you must feel; and—you see I come back on the sweep of the circle—to feel, one must have incentives, objects."

"So, you will roast your own liver to make a *pâté*."

"Better so than to have the Promethean vulture peck it out for you."

"Well, if I am as you say, what am I to do? I am docile, to-day."

"Fall in love."

"I have tried the experiment."

"It must have been with some insipid girl, not out of her teens, odorous of bread and butter, innocent of wiles, and

ignorant of her capabilities and your own."

"Perhaps, but still I have been in love,—and am."

"Bless me! that was a sigh! The sleeping waters then did show a dimple. Why, man, *you* talk about love, with that smooth, shepherd's face of yours, that contented air, that smoothly sonorous voice! Corydon and Phyllis! You should be like a grand piano after Satter has thundered out all its chords, tremulous with harmonies verging so near to discord that pain would be mixed with pleasure in the divinest proportions."

Greenleaf clapped his hands. "Bravo, Easelmann! you have mistaken your vocation; you should turn musical critic."

"The arts are all akin," he replied, calmly refilling his pipe.

"I think I can put together the various parts of your lecture for you," said Greenleaf. "You think I see Nature in her gentler moods, and reproduce only her placid features. You think I have feeling, though latent,—undeveloped. My nerves need a banging, just enough not to wholly unstring them. For that pleasant experience, I am to fall in love. The woman who has the nature to magnetize, overpower, transport me is Miss Marcia Sandford. I am, therefore, to make myself as uncomfortable as possible, in pursuit of a pleasure I know beforehand I can never obtain. Then, from the rather prosaic level of Scumble, I shall rise to the grand, gloomy, and melodramatic style of Salvator Rosa. *Voilà tout!*"

"An admirable summary. You have listened well. But tell me now,—what do *you* think? Or do you wander like a little brook, without any will of your own, between such banks as Fate may hem you in withal?"

"I will be frank with you. Until last season, I never had a serious, definite purpose in life. I fell in love then with the most charming of country-girls."

"I know," interrupted Easelmann, in a denser cloud than usual,—"*a village Lucy,—a violet 'neath a mossy stone, fair as a star when only one,—you know*

the rest of it. She was fair because there *was* only one."

"Silence, Mephistopheles! it is my turn; let me finish my story. I never told her my love"——

"But let concealment"——

"Attend to your pipe; it is going out. I did *look*, however. The language of the eyes needs no translation. I often walked, sketched, talked with the girl, and I felt that there was the completest sympathy between us. I knew her feelings towards me, as well, I am persuaded, as she knew mine. I gave her no pledge, no keepsake; I only managed, by an artifice, to get her daguerreotype at a travelling saloon."

Easelmann laughed. "Let me see it, most modest of lovers!"

"You sha'n't. Your evil eye shall not fall upon it. After I came to Boston, I took a room and began working up my sketches"——

"Where I found you brushing away for dear life."

"I meant to earn enough to go abroad, if it were only for one look at the great pictures of which I have so often dreamed. Then I meant to come back"——

"To find your Lucy married to a schoolmaster; and with five sickly children."

"No,—she is but seventeen; she will not marry till I see her."

"I admire your confidence, Greenleaf; it is an amiable weakness."

"After I had been here a month or two, I was filled with an unutterable sense of uneasiness. Something was wrong, I felt assured. I daily kissed the sweet lips"——

"Of a twenty-five-cent daguerreotype."

Greenleaf did not notice the interruption. "I thought the eyes looked troubled; they even seemed to reproach me; yet the soul that beamed in them was as tender as ever."

"*Diablerie!* I believe you are a spiritualist."

"At last I could bear it no longer. I shut up my room and took the cars for Innisfield."

"I remember; that was when you gave out that you had gone to see your aunt."

"I found Alice seriously ill. I won't detain you further than to say that I did not leave her until she was completely restored,—until my long cherished feelings had found utterance, and we were bound by ties that nothing but death will divide."

"Really, you are growing sentimental. The waters verily are moved."

"That is because an angel has troubled them. You will mock, I know; but it is nevertheless true, as I am told, that, for the week before I left Boston, she was in a half-delirious state, and constantly called my name."

"And you heard her and came. Sharp senses, and a good, dutiful boy!"

"My presentiment was strange, wasn't it?"

"Oh, don't try to coax me into believing all that! It's very pretty, and would make a nice little romance for a magazine; but you and I have passed the age of measles and chicken-pox. Now, to follow your example, let me make a summary. You are in love, you say, which, for the sake of argument, I will grant. You are engaged. But you are ambitious. You want to go to Italy, and you hope to surpass Claude, as Turner has done—over the left. Then you will return and marry the constant Alice, and live in economical splendor, on a capital—let me see—of eighty-seven dollars and odd cents, being the proceeds of a certain auction-sale. Promising, isn't it?"

Greenleaf was silent,—his pipe out.

"Don't be gloomy," continued Easemann, in a more sympathetic tone. "Let us take a stroll round the Common. I never walk through the Mall at sunset without getting a new hint of effect."

"I agree to the walk," said Greenleaf.

"Let us take Charbon along with us."

"He doesn't talk."

"That's what I like him for; he thinks the more."

"How is one to know it?"

"Just look at him! talk your best,—

parade your poetry, your criticism, your epigrams, your puns, if you have any, and then look at him! By Jove! I don't want a better talker. I know it's in him, and I don't care whether he opens his mouth or not."

CHAPTER II.

SHOWING HOW MUCH IT SOMETIMES COSTS TO BE THOUGHT CHARITABLE.

MR. SANDFORD was a bachelor, and resided in a pleasant street at the West End,—his sister being housekeeper. His house was simply furnished,—yet the good taste apparent in the arrangement of the furniture gave the rooms an air of neatness, if not of elegance. There were not so many pictures as might be expected in the dwelling of a lover of Art, and in many cases the frames were more noticeable than the canvas; for upon most of them were plates informing the visitor that they were presented to Henry Sandford for his disinterested services as treasurer, director, or chairman of the Society for the Relief of Infirm Wood-sawyers, or some other equally benevolent association. The silver pitcher and salver, always visible upon a table, were a testimonial from the managers of a fair for the aid of Indigent Widows. A massive silver inkstand bore witness to the gratitude of the Society of Merchants' Clerks. And numerous Votes of Thanks, handsomely engrossed on parchment, with eminent names appended, and preserved in gilt frames, filled all the available space upon the walls. It was evident that this was the residence of a Benefactor of Mankind.

It was just after breakfast, and Mr. Sandford was preparing to go out. His full and handsome face was serene as usual, and a general air of neatness pervaded his dress. He was, in fact, unexceptionable in appearance, wearing the look that gets credit in State Street, gives respectability to a public platform, and seems to bring a blessing into the abodes of poverty. Nothing but broad and liberal views, generous sentiments, and a

noble self-forgetfulness would seem to belong to a man with such a presence. But his sister Marcia, this morning, seemed far from being pleased with his plans; her tones were querulous, and even severe.

"Now, Henry," she exclaimed, "you are not going to sell that picture. We've had enough changes. Every auction a new purchase, which you immediately fling away."

"You are a very warm-hearted young woman," replied the brother, "and you doubtless imagine that I am able with my limited resources to buy a picture from every new painter, besides answering the numberless calls made upon me from every quarter."

"Why did you bid for the picture, then?"

"I wished to encourage the artist."

"But why do you sell it, then?"

"Monroe wants it, and will give a small advance on its cost."

"But Monroe was at the sale; why didn't he bid for it then?"

"A very natural question, Sister Marcia; but it shows that you are not a manager. However, I'll explain. Monroe was struck with the picture, and would have given a foolish price for it. So I said to him,—'Monroe, don't be rash. If two connoisseurs like you and me bid against each other for this landscape, other buyers will think there is something in it, and the price will be run up to a figure neither of us can afford to pay. Let me buy it and keep it a month or so, and then we'll agree on the terms. I sha'n't be hard with you.' And I won't be. He shall have it for a hundred, although I paid eighty-seven and odd."

"So you speculate, where you pretend to patronize Art?"

"Don't use harsh words, Sister Marcia. Half the difficulties in the world come from a hasty application of terms."

"But I want the picture; and I didn't ask you to buy it merely to oblige Mr. Greenleaf."

"True, sister, but he will paint others,

and better ones, perhaps. I will buy another in its place."

"And sell it when you get a good offer, I suppose."

"Sister Marcia, you evince a thoughtless disposition to trifle with—I hope not to wound—my feelings. How do you suppose I am able to maintain my position in society, to support Charles in his elegant idleness, to supply all your wants, and to help carry on the many benevolent enterprises in which I have become engaged, on the small amount of property left us, and with the slender salary of fifteen hundred dollars from the Insurance Office? If I had not some self-denial, some management, you would find quite a different state of things."

"But I remember that you drew your last year's salary in a lump. You must have had money from some source for current expenses meanwhile."

"Some few business transactions last year were fortunate. But I am poor, quite poor; and nothing but a sense of duty impels me to give so much of my time and means to aid the unfortunate and the destitute, and for the promotion of education and the arts that beautify and adorn life."

His wits were probably "wool-gathering"; for the phrases which had been so often conned for public occasions slipped off his tongue quite unawares. His countenance changed at once when Marcia mischievously applauded by clapping her hands and crying, "Hear!" He paused a moment, seeming doubtful whether to make an angry reply; but his face brightened, and he exclaimed,—

"You are a wicked tease, but I can't be offended with you."

"Bye-bye, Henry," she replied. "Some committee is probably waiting for you." Then, as he was about closing the door, she added,—"I was going to say, Henry, if your charities are not more expensive than your patronage of Art, you might afford me that *moire antique* and the set of pearls I asked you for."

We will follow Mr. Sandford to the

Insurance Office. It was only nine o'clock, and the business of the day did not begin until ten. But the morning hour was rarely unoccupied. As he sat in his arm-chair, reading the morning papers, Mr. Monroe entered. He was a clerk in the commission house of Lindsay and Company, in Milk Street,—a man of culture and refined taste, as well as attentive to business affairs. With an active, sanguine temperament, he had the good-humor and frankness that usually belong to less ardent natures. Simple-hearted and straightforward, he was yet as trustful and affectionate as a child. He was unmarried and lived with his mother, her only child.

"Ah, Monroe," said Sandford, with cordiality, "you don't want the picture yet? Let it remain as long as you can, and I'll consider the favor when we settle."

"No,—I'm in no hurry about the picture. I have a matter of business I wish to consult you about. My mother had a small property,—about ten thousand dollars. Up to this time I haven't made it very profitable, and I thought"—

Just then a visitor entered. The President of the Society for the Reformation of Criminals came with a call for a public meeting.

"You know, my dear Sir," said the President, "that we don't expect you to pay; we consider the calls made upon your purse; but we want your name and influence."

Mr. Sandford signed the call, and made various inquiries concerning the condition and prospects of the society. The President left with a smile and a profusion of thanks. Before Mr. Sandford was fairly seated another person came in. It was the Secretary of the Society for the Care of Juvenile Offenders.

"We want to have a hearing before the city government," said he, "and we have secured the aid of Mr. Greene Satchel to present the case. Won't you give us your name to the petition, as one of the officers? No expense to you; some wealthy friends will take care of

that. We don't desire to tax a man who lives on a salary, and especially one who devotes so much of his time and money to charity."

"Thank you for your consideration," said Mr. Sandford, signing his name in a fair round hand.

Once more the friends were left alone, and Monroe proceeded,—

"I was going on to say that perhaps you might know some chance for a safe investment."

Mr. Sandford appeared thoughtful for a moment.

"Yes,—I think I may find a good opportunity; seven per cent., possibly eight."

"Excellent!" said Monroe.

There was another interruption. A tall, stately person entered the office, wearing a suit of rather antique fashion, apparently verging on sixty years, yet with a clear, smooth skin, and a bright, steady eye. It was the Honorable Charles Wyndham, the representative of an ancient family, and beyond question one of the most eminent men in the city. Mr. Sandford might have been secretly elated at the honor of this visit, but he rose with a tranquil face and calmly bade Mr. Wyndham good morning.

"My young friend," began the great man, "I am happy to see you looking so well this morning. I have not come to put any new burdens on your patient shoulders; we all know your services and your sacrifices. This time we have a little recompense,—if, indeed, acts of beneficence are not their own reward. The Board are to have a social meeting at my house to-night, to make arrangements for the anniversary; and we think a frugal collation will not be amiss for those who have worked for the Society so freely and faithfully."

Mr. Sandford softly rubbed his white hands and bowed with a deprecatory smile.

"I know your modesty," said Mr. Wyndham, "and will spare you further compliment. Your accounts are ready,

I presume? I intend to propose to the Board, that, as we have a surplus, you shall receive a substantial sum for your disinterested services."

They were standing near together, leaning on a tall mahogany desk, and the look of benevolent interest on one side, and of graceful humility on the other, was touching to see. Mr. Sandford laid his hand softly on his distinguished friend's shoulder, and begged him not to insist upon payment for services he had been only too happy to render.

"We won't talk about that now; and I must not detain you longer from business. Good morning!" And with the stateliest of bows, and a most gracious smile, the Honorable Mr. Wyndham retreated through the glass door.

When Mr. Sandford had bowed the visitor out, he returned to Monroe with an expression of weariness on his handsome face. "So many affairs to think of! so many people to see! Really, it is becoming vexatious. I believe I shall turn hunks, and get a reputation for downright stinginess."

"But your visitors are pleasant people," said Monroe,—"and the last, certainly, was a man whom most men think it an honor to know."

"You mean Wyndham. Oh, yes, Wyndham is a good fellow; a little prosy sometimes, but means well. We endure the Dons, you know, if they are slow."

Monroe thought his friend hardly respectful to the head of the Wyndham family, but set it down as an awkward attempt at being facetious.

"Well, about that money of yours?" said Sandford.

"I left it, as a loan on call, at Danforth's. But how do you propose to invest it?"

"I haven't fully made up my mind. Perhaps it is best you should not know. I will guaranty you eight per cent., and agree to return the principal on thirty days' notice. So you can try, meanwhile, and see if you can do better."

Monroe agreed to the proposal, and drew a check on the broker for the amount, for which Sandford signed a note, payable thirty days after presentation. The friends now separated, and Monroe went to his warehouse.

Stockholders began to come to look over the morning papers, and chat about the news, the stocks, and the degeneracy of the times. What a club is to an idle man of fashion,—what a sewing-society is to a scandal-loving woman,—what a billiard-room is to a man about town,—what the Athenæum is to the sober and steadfast bibliolater,—that is the Insurance Office to the retired merchant, bald and spectacled, who wanders like a ghost among the scenes of his former activity. The comfortable chairs, and in winter the social fires in open grates,—the slow-going and respectable newspapers, the pleasant view of State Street, and, above all, the authoritative disposition of public affairs upon the soundest mercantile principles of profit and loss,—all these constitute an attraction which no well-brought-up Bostonian, who has money to buy shares, cares to resist, at least until the increasing size of his buckskin shoes renders locomotion difficult.

To all these solid men Mr. Sandford gave a hearty good-morning, and a frank, cheerful smile. They took up the journals and looked over the telegraphic dispatches, thinking, as they were wont, that the old Vortex was lucky, above all Companies, in its honest, affable, and intelligent Secretary.

Mr. Sandford retired to his private room and looked hastily at his morning letters; but his mind did not seem to be occupied with the business before him. He rang the bell for the office-boy. "Tom," said he, "go and ask Mr. Fletcher to step down here a minute." He mused after the boy left, tapping his fingers on the table to the time of a familiar air. "If I can keep Fletcher from dabbling in stocks, I shall make a good thing of this. I shall keep a close watch on him. To manage men, there is nothing like knowing how to go to work at

them. ALL the fools are jack-a-dandies, and one has only to find where the strings hang to make them dance as he will. I have Fletcher fast. I heard a fellow talking about taming a man, Rarey-fashion, by holding out a pole to him with a bunch of flowers. Pooh! The best thing is a bit of paper with a court seal at the corner, stuck on the end of a constable's staff."

Mr. Fletcher entered presently,—the office where he was employed being only a few doors off. He was a slender young man, with strikingly regular features and delicate complexion; his mobile mouth was covered by a fringy moustache, and his small keen eyes were restless to a painful degree. The sudden summons appeared to have flustered him; for his eyes danced more than usual, giving him the startled and perplexed look of a hunted animal at bay. He was speedily reassured by Sandford's bland voice and encouraging smile.

"A new opening, Fletcher,—a 'pocket,' as the Californians call it. Is there any chance to operate? Just look about. I have the funds ready. Something safe, and fat, too."

"Plenty of chances to those who look for them," replied Fletcher. "The men who are hard up are the best customers; they will stand a good slice off; and if a man is sharp, he can deal as safely with them as with the A 1s, who turn up their noses at seven per cent."

"You understand, I see."

"I think I ought. Papyrus, only yesterday, was asking if anything could be done for him,—about fifteen hundred; offers Sandbag's note with only thirty days to run. The note was of no use to *him*, because the banks require two names, and his own isn't worth a straw. But Sandbag is good."

"We'll take it. About a hundred off?"

Fletcher nodded.

"I've plenty more to invest, Fletcher. Let me know if you see any paper worth buying."

Fletcher nodded again, but looked ex-

pectant, much like a dog (not wishing to degrade him by the comparison) waiting with longing eyes while his master eats his morning mutton-chop.

"Fletcher," said Sandford, "I'll make this an object to you. I don't mind giving you five dollars, as soon as we have Papyrus's indorsement on the note. And, speaking of the indorsement, let him sign his name, and then bring me the note. I wish to put on the name of the person to whose order it is to be payable."

"Then it is on the account"——

"Of whom it may concern," broke in Sandford. "Don't stand with your mouth open. That is my affair."

"But if you pay me only five dollars"——

"That is so much clear gain to you. Do you suppose that we—my backer and I—shall run the risk for nothing? Good morning! Attend to your own affairs at Danforth's properly. Don't burn your fingers with any new experiments. There's a crash coming and stocks will fall. Good morning!"

The Secretary looked relieved when Fletcher closed the door, and speedily dispatched the necessary letters and orders for the Company. Then leaving the affairs of the Vortex in the hands of his clerk, he strolled out for his usual lunch. Wherever he walked, he was met with smiles and greetings of respect. He turned into an alley, entered an eating-house, and took his place at a table; he ordered and ate his lunch, and then left, with a nod towards the counter. The landlord, who began on credit, expected no pay from the man who procured him money accommodations. No waiter had ever seen a sixpence from his purse. How should a man be expected to pay, who spent his substance and his time so freely in charity?

CHAPTER III.

CONTAINING SOME CONFESSIONS NOT
INTENDED FOR THE PUBLIC EAR.

MISS MARCIA SANDFORD, after breakfast, was sitting in her chamber with her

widowed sister-in-law, who had come to spend a few months with her late husband's family. The widow no longer wore the roses of youth, but was yet on friendly terms with Time; indeed, so quietly had their annual settlements passed off, that it would have puzzled any one not in their confidence to tell how the account stood. The simplicity of her dress, the chastened look, and the sobriety of phrase, of which her recent affliction was the cause, might have hinted at thirty-five; but when her clear, placid eye was turned upon you, and you saw the delicate flush deepening or vanishing upon a smooth cheek, and noted the changeful expression that hovered like a spiritual presence around her mouth, it would have been treason to think of a day beyond twenty. She had known but little of Marcia, and that little had shown her only as a lover of dress and of admiration, besides being capricious to a degree unusual even in a spoiled favorite.

A musical *soirée* was under consideration. Marcia was a proficient upon the harp and piano, and, as she had heard that Mr. Greenleaf, the handsome painter, as she called him, was a fine singer, she determined to practise some operatic duets with him, that should move all her musical friends to envy.

"You seem to have taken a strong liking to this Mr. Greenleaf, Marcia."

"Yes, Lydia," replied the beauty, "I do like him, exceedingly,—what I have seen of him. He will do—for a month or so. People are frequently quite charming at first, like fresh bouquets,—but dull and tame enough when the dew is off."

"But you can't have a new admirer, as you have fresh flowers, every day."

"That's true, and pity 'tis, 'tis true."

"What a female Bluebeard you are!"

"Wouldn't you, now, like to meet some new, delightful person every day? Consider how prosaic a man is, after you know all about him."

"I always find something new in a man really worth knowing."

"Do you? I wish I could. I always look them through as I used to my toys. I never cared for my 'crying babies,' after I found out what made them squeak."

"I am afraid the comparison will hold out farther than you intended. You were never satisfied with your toys until you had not only explored their machinery, but smashed them into the bargain."

"But men stand it better than toys. If they get smashed, as you say, they heal wonderfully. I sometimes think, that, like lobsters, they can repair their injuries by new growths,—fresh claws, and fins, and feelers."

"Complimentary, truly! but I notice that you don't speak of vital organs."

"Hearts, you mean, I suppose. That is an obsolete idea,—a relic of superstition."

"But how many of these broken idols have you thrown aside, Marcia? Have you kept account?"

"Dear me! no! Why should I?"

"It would be interesting, I think, to a student of social statistics, to know how many engagements there are to one marriage, how many offers to one engagement, how many flirtations to one offer, and how many tender advances to one flirtation."

"Oh, Lydia! Love and Arithmetic! they never went together. I leave all calculations to my wise and busy brother. I like to wander like a humming-bird, that keeps no account of the flower-cups it has sipped out of."

"Let us reckon. I can help you, perhaps. I have heard you talk of half a dozen. There is Colonel Langford,—one."

"Handsome, proud, and shallow. Let him go!"

"There is Lieutenant Allen,—two."

"Fierce, impatient, and exacting. He can go also. I had as lief be loved by a lion."

"Next is Mr. Lanman,—three."

"Wily, plausible, passionate, and treacherous. He is only a cat in a new sphere of existence."

"Then there is Denims,—I am not sure about the order,—four."

"Rich, vain, and stupid;—there never was such a dolt."

"But you kept him for a longer time than usual."

"Yes, rather; but he was too dull to understand my ironical compliments, or to resent my studied neglect."

"Jaunegant makes five."

"Oh, the precious crony of my brother Charles! The best specimen of the dandy race. The man who gives so much love to himself and his clothes, that he has none to spare for any one else. But, Lydia, this is tedious; we shall never get through at this rate. Besides," with a mock-sentimental air, "you have not been here long enough to know the melancholy history,—to count the wrecks that are strewn along the coast, where the Siren resorts. Let me take up the list. Corning, who really loved me, (six,) and went to sea to cure the heart-ache. I heard of him in State Street a month ago,—with a blue shirt and leather belt, and chewing a piece of tobacco as large as his thumb. He seemed happy as a king."

"I saw a kind of tobacco advertised as '*The Solace*';—the name was given by some disappointed swain, I suppose."

"Probably," said Marcia, smiling. "Then there was Outrack, (seven,) who was so furious at the refusal, that he immediately married the gay Miss Flutter Budget, forty-five, short, stout, and fifty thousand dollars,—he twenty-six, tall, slender, and some distant expectations. I heard him, at a party, call her '*Dear!*'"

"I don't think you get on any faster than I did. We shall have to finish the tour of the portrait-gallery another day."

"You are not tired? I wanted to tell you of several more. Yet I don't know why I should. I declare to you seriously, that I never before mentioned the names of these persons in this way, nor referred to them as rejected lovers."

"I have no doubt of it. It has seemed like a fresh, spontaneous confession."

"There is some magic about you, Sis-

ter Lydia. You invite confidence; or rather, you seem to be like one of those chemical agents that penetrate everything; there's no resisting you. Don't protest. I know what you would say. It isn't your curiosity. You are no Paulina Pry; if you were, precious little you would get from me."

"But, Marcia, let me return a moment to what you were saying. Did the reason never occur to you, why you so soon become tired of your admirers? You see through them, you say. Is it not possible that a lady who has the reputation of caprice,—a flirt, as the world is apt to call her,—though ever so brilliant, witty, and accomplished, may not attract the kind of men that can bear scrutiny, but only the butterfly race, fit for a brief acquaintance? Believe me, Marcia, there is a reason for everything, and, with all your beauty and fascination, you must yourself have the element of constancy, to win the admiration of the best and worthiest men."

"So, you are going to preach?" said Marcia, rather crestfallen.

"No, I don't preach. But what I see, I ought to tell you; I should not be a good sister otherwise."

"I'll think about it. But now for the musical party. I mean to send for Mr. Greenleaf, to practise some songs and duets. He is not a butterfly, I am sure."

"But, Marcia, is it well, is it right, for you to try to fascinate this new friend of yours, unless you feel something more than a transient interest in him?"

"How can I tell what interest I shall feel in him, until I know him better?"

"But you know his circumstances and his prospects. You are not the woman to marry a poor painter. You have too many wants; or rather, you have become accustomed to luxuries that now seem to be necessities."

"True, I haven't the romance for love in a cottage. But a painter is not necessarily a bad match; if he doesn't become rich, he may be distinguished. And besides, no one knows what will happen from the beginning of an acquaintance.

We will enjoy the sunshine of to-day; and if to-morrow brings a darker sky, we must console ourselves as we can."

"What an Epicurean! Well, Marcia, you are not a child; you must act for yourself."

Marcia made no reply, but sat down to her desk to write a note; and her sister-in-law soon after went to her own room.

During all this conversation, Mrs. Sandford was struck by the tone which the beautiful coquette assumed. Her words were aptly chosen, her sentences smoothly constructed; she never hesitated; and there was an ever-present air of consciousness, that left no conviction of sincerity. Whether she uttered sentiments of affection, or sharp criticism upon character, there was the same level flow of language, the same nicely modulated intonation. There was no flash of enthusiasm, none of those outbursts in which the hearer feels sure that the heart has spoken. Mrs. Sandford was thoroughly puzzled. Marcia had never been otherwise than kind; in fact, she seemed to be studiously careful of the feelings of others, except when her position as a reigning belle made it necessary to cut a dangler. This methodical speech and unruffled grace of manner might be only the result of discipline. Truth and honesty *might* exist as well under this artificial exterior as in a more impulsive nature. But the world generally thinks that whoever habitually wears a smiling mask has some secret end to serve thereby. "I like this painter, Greenleaf," she soliloquized, "and I mean to look out for him. I am persuaded that Marcia would never marry him; and I think he is too sensitive, too manly, to be a fit subject for her experiments."

CHAPTER IV.

CONCERNING CONSTANCY AND THE AFFINITIES.

"A MUSICAL *soirée*? Famous, my boy!" said Easemann, as he sat, smoking as usual, in his fourth-story *atelier* with

Greenleaf, watching the sun go down. "Making progress, I see. You have nothing to do; the affair will take care of itself."

"What affair?"

"Don't be stupid (*puff*). Your affair with Miss Sandford (*puff*). There's a wonderful charm in music (*puff*). Two such young people might fall in love, to be sure, without singing together (*puff*). But music is the true *aqua regia*; it dissolves all into its own essence. A piano and a tenor voice will do more than a siege of months, though aided by a battery of bouquets."

"How you run on! I have called twice,—once with you, and the second time by the lady's invitation. Besides, I told you—indiscreetly, I am afraid—that I am really engaged to be married."

"Oh, yes, I have not forgotten the touching story (*puff*); but we get over all things, even such passions as yours. We are plants, that thrive very well for a while in the pots we sprouted in, but after a time we must have a change of soil."

"I don't think we outgrow affection, honor, truth."

"That is all very pretty; but our ideas of honor and truth are apt to change."

"I don't believe you are half so bad a fellow, Easemann, as you would have me think. You utter abominable sentiments, but you behave as well as other people—nearly."

"Thank you. But listen a moment. (*Laying down his pipe.*) Do you have the same tastes you had at eighteen? I don't refer to the bumpkins with whom you played when a boy, and who, now that you have outgrown them, look enviously askance at you. I don't care to dwell on your literary tastes,—how you have outgrown Moore and Festus-Bailey, and are fast getting through Byron. I won't pose you, by showing how your ideas in Art have changed,—what new views you have of life, society;—but think of your ideas of womanly, or rather, girlish beauty at different ages. By Jove, I should like to see your inna-

moratas arranged in chronological order!"

"It would be a curious and instructive spectacle."

"You may well say that! Let me sketch a few of them."

"I think I could do it better."

"No,—every man thinks his own experience peculiar; but life has a wonderful sameness, after all. Besides, you would flatter the portraits. Not to begin too early, and without being particular about names, there was, first, Amanda, aged fourteen; face circular, cheeks cranberry, eyes hazel, hair brown and wavy, awkward when spoken to, and agreeable only in an osculatory way. Now, being twenty-five, she is married, has two children, is growing stout, and always refers to her lord and master as 'He,' never by any accident pronouncing his name. Second, Julia; sixteen, flaxen-haired, lithe, not ungraceful, self-possessed, and perhaps a little pert. She is unmarried; but, having fed her mind with no more solid aliment than country gossip, no sensible man could talk to her five minutes. Third, Laura; eighteen, black hair, with sharp outlines on the temples, eyes heavily shaded and coquettishly managed, jewelry more abundant than elegant, repeats poetry by the page, keeps a scrap-book, and writes endless letters to her female friends. She is still romantic, but has learned something from experience,—is not so impressible as when you knew her. I won't stop to sketch the pale poetess, nor the dancing hoyden, nor the sweet blue-eyed creature that lisped, nor the matron and dangerously-charming widow that caused some perturbations in your regular orbit.

"Now, my dear fellow," Easemann continued, "you fancied that your whole existence depended upon the hazel or the blue or the black eyes, in turn; but at this time you could see their glances turned in rapture upon your enemy, if you have one, without a pang."

"One would think you had just been reading Cowley's charming poem, 'Henrietta first possess.' But what is the moral

to your entertaining little romance? That love must always be transient?"

"Not necessarily, but generally. We are travelling at different rates of progress and on different planes. Happy are the lovers who advance with equal step, cultivating similar tastes, with agreeing theories of life and its enjoyments!"

"Wise philosopher, how comes it, that, with so just an appreciation of the true basis of a permanent attachment, you remain single? I see a gray hair or two, not only on your head, but in that favorite moustache of yours."

"Gray? Oh, yes! gray as a badger, but immortally young. As for marriage, I'm rather past that. I had my chance; I lost it, and shall not throw again."

Easemann did not seem inclined to open this sealed book of his personal history, and the friends were silent. Greenleaf at length broke the pause.

"I acknowledge the justice of your ideas in their general application, but in my own case they do not apply at all. I was not in my teens when I went to Innisfield, but in the maturity of such faculties as I have. Alice satisfies my ideal of a lovely, loving woman. She has capabilities, taste, a thirst for improvement, and will advance in everything to which I am led."

"I won't disturb your dreams, nor play the Mephistopheles, as you sometimes call me. I am rather serious to-day. But here you are where every faculty is stimulated, where you unconsciously draw in new ideas with your daily breath. Alice remains in a country town, without society, with few books, with no opportunity for culture in Art or in the minor graces of society. You are not ready to marry; your ambition forbids it, and your means will not allow it. And before the time comes when you are ready to establish yourself, think what a difference there may be between you! The thought is cruel, but worth your consideration none the less.—But let us change the subject. What are you doing? Any new orders?"

"Two new orders. One for a large picture from Mr. Sandford. The price is

not what it should be, but it will give me a living, and I am thankful for any employment. I loathe idleness. I die, if I haven't something to do."

"Mere uneasiness, my youthful friend! Be tranquil, and you will find that laziness has its comforts. However, to-morrow let me see your pictures. You lack a firmness and certainty of touch that nothing but practice will give. But your forms are faithfully drawn, your eye for color is sharp and true, and, what is more than all, you have the poetry which informs, harmonizes, and crowns all."

"I am grateful for your friendly criticism," said Greenleaf, with a sudden flush. "You know that people call you blunt, and that most of the artists think you almost malicious in your severity; but you are the only man who ever talks sincerely to me."

Easelmann noticed the emotion, and spoke abruptly,—

"Depend upon it, if I see anything faulty, you will know it; if you think

that friendly, I am your friend. But look over there, where the sunset clouds are reflected in the Back Bay. Now, if I should put those tints of gold and salmon and crimson and purple, with those delicate shades of apple-green, into a picture, the mob would say, 'What an absurd fellow this painter is! Where did he find all that Joseph's coat of colors?' The mob is a drove of asses, Greenleaf."

"Come, let us take our evening stroll."

"Have you seen Charbon, to-day?"

"No. But I should like to."

"We'll call for him."

"Yes, I rather like his brilliant silence."

"Next week, let us go to Nahant. I want you to try your hand on a coast view. But what, what are you about? At that trumpery daguerreotype again? Let me see the beauty,—that's a good boy!"

"No!"

"Then put it up. If you won't show it, don't aggravate a fellow in that way."

[To be continued.]

SPIRITS IN PRISON.*

I.

O YE, who, prisoned in these festive rooms,

Lean at the windows for a breath of air,

Staring upon the darkness that o'erglooms

The heavens, and waiting for the stars to bare

Their glittering glories, veiled all night in cloud,

I know ye scorn the gas-lights and the feast!

I saw you leave the music and the crowd,

And turn unto the windows opening east;

I heard you sigh,—“When will the dawn's dull ashes

Kindle their fires behind yon fir-fringed height?

When will the prophet clouds with golden flashes

Unroll their mystic scrolls of crimson light?”

Fain would I come and sit beside you here,

And silent press your hands, and with you lean

Into the midnight, mingling hope and fear,

Or pining for the days that might have been!

* 1 Peter, iii. 19.

II.

Are we not brothers? In the throng that fills
 These strange enchanted rooms we met. One look
 Told that we knew each other. Sudden thrills,
 As of two lovers reading the same book,
 Ran through our hurried grasp. But when we turned,
 The scene around was smitten with a change:
 The lamps with lurid fire-light flared and burned;
 And through the wreaths and flowers,—oh, mockery strange!—
 The prison-walls with ghastly horror frowned;
 Scarce hidden by vine-leaves and clusters thick,
 A grim cold iron grating closed around.
 Then from our silken couches leaping quick,
 We hurried past the dancers and the lights,
 Nor heeded the entrancing music then,
 Nor the fair women scattering delights
 In flower-like flush of dress,—nor paused till when,
 Leaning against our prison-bars, we gazed
 Into the dark, and wondered where we were.
 Speak to me, brothers, for ye stand amazed!
 I come, your secret burthen here to share!

III.

I know not this mysterious land around.
 Black giant trees loom up in form obscure.
 Odors of gardens and of woods profound
 Blow in from out the darkness, fresh and pure.
 Faint sounds of friendly voices come and go,
 That seem to lure us forth into the air;
 But whence they come perchance no ear may know,
 And where they go perchance no foot may dare.

IV.

A realm of shadowy forms out yonder lies.
 Beauty and Power, fair dreams pursued by Fate,
 Wheel in unceasing vortex; and the skies
 Flash with strange lights that bear no name nor date.
 Sweet winds are breathing that just fan the hair,
 And fitful gusts that howl against the bars,
 And harp-like songs, and groans of wild despair,
 And angry clouds that chase the trembling stars.
 And on the iron grating the hot cheek
 We press, and forth into the night we call,
 And thrust our arms, that, manacled and weak,
 Clutch but the empty air, and powerless fall.

V.

And yet, O brothers! we, who cannot share
 This life of lies, this stifling day in night,—
 Know we not well, that, if we did but dare
 Break from our cell, and trust our manhood's might,

When once our feet should venture on these wilds,
 The night would prove a sweet, still solitude,—
 Not dark for eyes that, earnest as a child's,
 Strove in the chaos but for truth and good ?
 And oh, sweet liberty, though wizard gleams
 And elfin shapes should frighten or allure,
 To find the pathway of our hopes and dreams,—
 By toil to sweeten what we should endure,—
 To journey on, though but a little way,
 Towards the morning and the fir-clad heights,—
 To follow the sweet voices, till the day
 Bloomed in its flush of colors and of lights,—
 To look back on the valley and the prison,
 The windows smouldering still with midnight fires,
 And know the joy and triumph to have risen
 Out of that falsehood into new desires !
 O friends ! it may be hard our chains to burst,
 To scale the ramparts, pass the sentinels ;
 Dark is the night ; but we are not the first
 Who break from the enchanter's evil spells.
 Though they pursue us with their scoffs and darts,
 Though they allure us with their siren song,
 Trust we alone the light within our hearts !
 Forth to the air ! Freedom will dawn ere long !

PUNCH.

NOT inebriating, but exhilarating punch ; not punch of which the more a man imbibes the worse he is, but punch of which the deeper the quaffings the better the effects ; not a compound of acids and sweets, hot water and fire-water, to steal away the brains,—but a finer mixture of subtler elements, conducive to mental and moral health ; not, in a word, punch, the drink, but “ Punch,” the wise wag, the genial philosopher, with his brevity of stature, goodly-conditioned paunch, next-to-nothing legs, protuberant back, bill-hook nose, and twinkling eyes,—to speak respectfully, Mr. Punch, attended by the solemnly-sagacious, ubiquitous-ly-versatile “ Toby,” together with the invisible company of skirmishers of the quill and pencil, producing in his name those ever-welcome sheets, flying forth the world over, with hebdomadal punctuality. Of the ingredients and salutary influence of this Punch—an institution and power of the age, no more to be overlooked among the forces of the nineteenth century than is the steam-engine or the magnetic telegraph—we propose to speak ;—not, however, because of the comicality of the theme ; for the fun that surrounds, permeates, and saturates it would hardly move us to discourse of it here, if it had not higher claims to attention. To take Punch only for a clown is to mistake him egregiously. Joker as he is, he himself is no joke. The fool's-cap he wears does not prove him to be a fool ; and even when he touches the tip of his nasal organ with his fore-finger and winks so irresistibly, meaning lurks in his facetious features,

to assure you he does not jest without a purpose, or play the buffoon only to coin sixpences. The fact, then, we propose to illustrate is this:—that Punch is a teacher and philanthropist, a lover of truth, a despiser of cant, an advocate of right, a hater of shams,—a hale, hearty old gentleman, whose notions are not dyspeptic croakings, but healthful opinions of good digestion, and who, though he wear motley and indulge in drolleries without measure, is full of sense and sensibility.

The birth-place and parentage of Punch are involved in some doubt,—a fate he shares with several of the world's other heroes, ancient and modern. Accounts differ; and as he has not chosen to settle the question autobiographically, we follow substantially the narrative*—that ought to be true; for, mythical or historic, it appropriately localizes and fitly circumstances the nativity of the humorist of the age.

In 1841, Mark Lemon, a writer of considerable ability, was the landlord of the Shakspeare Head, Wych Street, London. A tavern with such a publican and such a name was, of course, frequented by a circle of wits, with whom, in the year just mentioned, originated "Punch." Lemon (how could there be punch without a lemon?) has been the editor from the outset. From which of the knot of good fellows the bright idea of the unique journal first emanated does not appear. The paternity has been ascribed to Douglas Jerrold. Its name might have been suggested by the place of its birth. If so, it at once lost all associations with the ladle and the bowl, and received a wider and better interpretation. The hero of the famous puppet-show was chosen for the typical presiding genius and sponsor of the novel enterprise. And there is no neater piece of allegorical writing in our language than the introductory article of the first number, wherein is exquisitely shadowed forth "the moral" of the work, "Punch,"—suggestive of that "graver puppetry," the

"visual and oral cheats," "by which mankind are cajoled." Punch, the exemplar of boldness and philosophic self-control, is the quaint embodiment of the intention to pursue a higher object than the amusement of thoughtless crowds,—an intention which has been adhered to with remarkable fidelity. The first number appeared July 17th, and the serial has lived over a decade and a half, and grown to the bulk of thirty-four or thirty-five volumes. It was not, however, built in a day. It knew a rickety infancy and hours of peril, and owes its rescue from neglect and starvation, its subsequent and constantly increasing prosperity, to the enterprising publishers, — Bradbury and Evans, — who nursed and resuscitated it at the critical moment. Well-known contributors to the letter-press have been Jerrold, Albert Smith, & Beckett, Hood, and Thackeray; whilst Henning, Leech, Meadows, Browne, Forrester, Gilbert, and Doyle have acted as designers. Of these men of letters and art, Lemon and Leech, it is said, alone remain; some of the others broke off their connection with the work at different periods, and some have passed away from earth. Their places have been supplied by the Mayhews, Tom Taylor, Angus Reach, and Shirley Brooks, and the historical painter, Tenniel. These changes have mostly been made behind the scenes; the impersonality of the paper—to speak after the Hibernian style—being personified by Mr. Punch himself,—ostensibly, by a well-preserved and well-managed conceit, its sole conductor through all its vicissitudes and during the whole of its brilliant career. Whatever becomes of correspondents, Punch never resigns and never dies. The baton never falls from his grasp. He sits in his arm-chair, the unshaken Master of the Revels,—though thrones totter, kings abdicate, and revolutions convulse empires. Troubles may disturb his household; but thereby the public does not suffer. He still lives,—immortal in his funny and fascinating idiosyncrasies.

* See Parton's *Humorous Poetry*.

The ingredients of Punch, the instrumentalities by which he has won fame and victories, are almost too multifarious for enumeration. All the merry imps which beset Leigh Hunt, when about to compile selections from the comic poets, belong to Punch's retinue. Doubles of Similes, Buffooneries of Burlesques, Stalkings of Mock Heroics, Stances in the Tails of Epigrams, Glances of Innuendoes, Dry Looks of Irony, Corpulencies of Exaggerations, Ticklings of Mad Fancies, Claps on the Backs of Horse Plays, Flounderings of Absurdities, Irresistibilities of Iterations, Significances of Jargons, Wailings of Pretended Woes, Roarings of Laughter, and Hubbubs of Animal Spirits, all appear, singly or in companies, to flash, ripple, dance, shoot, effervesce, and sparkle, in prose and verse, vignettes, sketches, or elaborate pictures, on the ever-shifting and always entertaining pages of the London Charivari. Of one prominent form of the exhibition of this inexhaustible arsenal, namely, *the illustrations*, special notice is to be taken. These, notwithstanding their oddity, extravagance, and burlesqueness, by reason of their grace, finish, and good taste, frequently get into the proximity of the fine arts. This elevation of sportive drawing is mainly to be put to the credit of manly John Leech,—“the very Dickens of the pencil.” He and his associates have proved that the humorous side of things may be limned with mirth-provoking truth, and that vices and follies may be depicted with a vigorous and accurate crayon, without coarseness or vulgarity, or pandering to depraved sentiments. Herein is most commendable success. Punch's gallery—with but few, if any exceptions—may be opened to the purest eyes. In it there is much of Hogarthian genius, without anything that needs a veil. In alluding to the agencies of Punch, it would be doing him great injustice to leave the impression that they are all of a mirthful character. Often is he tearfully, if at the same time smilingly, pathetic. Seriousness, certainly, is not his forte, and he is not given to homilies

and moral essays. Usually he gilds homœopathic pills of wisdom with a thick coating of humor. Yet, now and then, his vein is an earnest vein, and he speaks from the abundance of a tender and deeply-moved heart. This is especially true of some of his poetical effusions, which rank high among the best fugitive pieces of the times. That Hood's “Song of the Shirt” was an original contribution to his columns is almost enough of itself to show that Punch, like some other famous comedians, can start the silent tear, as well as awaken peals of laughter. And this is but one of many instances in point that might be cited. In his productions you often meet golden sentences of soberest counsel, beautiful tributes to real worth, stirring appeals for the oppressed, and touching eulogies of the loved and lost.

Thus much of the history and machinery of Punch. His salutary influence is to be spoken of next. But before venturing upon what may seem indiscriminate praise, let it be confessed that our hero is not without his weaknesses. Nothing human is perfect, and Punch is very human. The good Homer sometimes nods; so doth the good Punch. He does not always perform equally well,—keep up to his highest level. If he never entirely disappoints his audience, he fails sometimes to shoot the brightest arrows of his quiver and hit his mark so as to make the scintillating splinters fly. Now and then he has been slightly dull, forgotten himself and his manners, gone too far, got into the wrong box, missed seizing the auricular appendage of the right pig, run things into the ground,—blundered as common and uncommon people will. Under these general charges we must, painful as it is to speak of the errors of a favorite, enter a few specifications.

The writer of the prospectus, before referred to, seems to have had a premonitory fear—growing out of his bad treatment of Judy—that Punch in his new vocation might fail of uniform gentlemanliness towards the ladies; and time

has shown that there were some little grounds for the apprehension. The droll hunchback's virulent dislike of mothers-in-law seems the nursed-up wrath of an unhappy personal experience. Vastly amusing as were the "Caudle Lectures," it is a question whether excessive indulgence in the luxury of satire upon a prolific theme did not infuse into them overbitter exaggeration, not favorable to the culture of domestic felicity. Did these celebrated curtain-homilies stand alone, their sharp and unrivalled humor might save Punch from the censure of being once in a while the least bit of a Bluebeard. But, for the most gallant gentleman, on the whole, in the United Kingdom, he is not so invariable in fairness towards the fair as could be wished. The follies and frivolities of absurd fashions are his proper game; and he does brave service in hunting them down. Still, his warfare against crinoline, small bonnets, and other feminine fancies in dress, has been tiresomely inveterate. Even Mr. Punch had better, as a general rule, leave the management of the female toilette to those whom it most nearly concerns. But in his case, the scolding or pouting should not be inexorable; for in one way he atones amply for all his impertinence. He paints his young ladies pretty and graceful, being, with all his sly satire, evidently fond of the sex, the juvenile portion at least. Surely, a compliment so uniform and tasteful must more than outweigh his teasing and banter with the amiable subjects of both.

Of Punch as a local politician we are hardly fair judges, and it may be a mistaken suspicion that he has occasionally given up to party what was meant for mankind. With respect to "foreign affairs," we shall be safer in saying, that, with all his cosmopolitanism, he is a shade or two John-Bullish. Thanking him for his fraternal cordiality towards "Jonathan," we must doubt if it will do to trust implicitly his reports and impressions of men and things across the Channel. That he is more than half right, however, when lingering remains

of insular prejudice tinge his solicitude to save his native land from entangling alliances, and keep its free government from striking hands with despotism, we incline to believe; and we honor him that his loyalty is not mere adulation, but duly seasoned with the democratic principle that would have the stability of the throne the people's love,—the people being of infinitely greater importance than the propping-up or the propagation of royal houses. In one sad direction Punch's patriotism and humanity, it seems to us, were wrathful exaggerations, open to graver objection than yielding unconsciously to a natural bias. In his zeal against terrible outrages, he forgot that two wrongs never make a right. We refer to his course on the Indian Revolt. From the way he raised his voice for war, almost exterminating, and with no quarter, one would think the British rule in the East had been the rule of Christian love,—that Sepoys and other subjects had known the reigning power only as patriarchal kindness,—and so, without excuse, a highly civilized, justly and tenderly treated people, suddenly, and without provocation, became rebellious devils, and rebellious only because they were devils. In the hour of horror-struck indignation, was not Punch too blood-thirsty, vindictive, unjust, and oblivious to the truth of history, that the insurgents are poor superstitious heathens, whom a selfish policy may have kept superstitious and heathenish? True, he was the witness of broken hearts and desolate hearth-stones at home, and daily heard of hellish atrocities inflicted on the women and children abroad,—enough to crush out for the moment every thought but the thought of vengeance. Yet, even at such a crisis, he should have remembered, that England, in strict accordance with the stern, unrelenting logic of events, having sown to the wind, might therefore have reaped the whirlwind. It is among the mysteries of Providence, that retributive justice, when visiting nations, often involves innocent victims,—but it is retributive justice still; and tracing up

rightly the chain of causes and effects, it may be that the tragedies of Delhi and Lucknow are attributable, to say the least, as much to the avarice of the dominant as to the depravity of the subjugated race. The bare possibility that this might be the truth a philosopher like Punch ought not to have overlooked, in the suddenness and fire of his anger.

Finally, Punch is no ascetic, but quite the reverse. He cannot be expected, any more than his namesake, the beverage, to go down with the apostles of temperance. He is a convivialist,—moderately so,—and no teetotaler. He evidently prefers roast-beef and brown-stout to bran-bread and cold water, and has gone so far as to sing the praises of pale-ale. He thinks the laboring classes should have their pot of beer, if the nobility and gentry are to eat good dinners and take airings in Hyde Park, on Sundays. He is a Merry Englishman, as to the stomach,—and, like a Merry Englishman, enjoys good living. There is no denying this fact; but here is the whole front of his offending. Remember that he was born at the Shakspeare's Head, and has had a publican for his right-hand man.

These are defects, it may be; and yet not by its defects are we to judge of a work of Art. Of that generous and just canon Punch should have the full benefit. Try him by that, and he has abounding virtues to flood and conceal with lustrous and far-reaching light his exceptional errors. To brief notices of some of these—regretting the want of room to enlarge upon them as it would be pleasant to do—we gladly turn.

Punch is to be loved and cherished as the maker of mirth for the million. Saying this, we do not propose to go into an argument to excuse, justify, or recommend hilarity for its own sake or its medicinal effects on overtasked bodies and souls. Desperate attempts have been made to prove the innocence of fun, and the allowableness of wit and humor. Assuming or conceding that

the jocose elements or capacities of human nature need apology and defence, very nice distinctions have been drawn, and very ingenious sophistry employed, to prove that the best of people may, within certain limits, crack jokes, or laugh at jokes cracked for them. These efforts to accommodate stern dogmas to that pleasant stubborn fact in man's constitution, his irresistible craving for play, and irresistible impulse to laugh at whatever is really laughable, are about as necessary as would be an essay maintaining the harmlessness of sunshine. The *fact* has priority over the dogmas, and is altogether too strong to need the patronizing special-pleading they suggest. Instead of going into the metaphysics of the question about the lawfulness and blamelessness of humor shown or humor relished, suppose we cut the knot by a delightful illustration of the compatibility of humor with the highest type of character.

No one will deny the sincerity, earnestness, devotedness, sublime consecration to duty, of the heroine of the hospitals of Scutari. No one will dispute the practical piety of the gentle, but fearless, the tender-hearted, but truly strong-minded woman, who made the lazaret-house her home for months together,—ministered to its sick, miserable, and ignorant inmates,—put, by the unostentatious exercise of indomitable faith and unswerving self-sacrifice, the love and humanity of the Gospel in direct and strongest contrast with the barbarisms of war. No one will deny or dispute this now. That heroic English maiden, whose shadow, as it fell on his pillow, the rude soldier kissed with almost idolatrous gratitude, has won, without thought of seeking it, and without the loss of a particle of humility and womanly delicacy, the loving admiration of all Christendom. Well, she

“whose presence honors queenly guests,
Who wears the noblest jewel of her time,
And leaves her race a nobler, in her name,”

shall be the sufficient argument here,—especially as none have paid finer, more delicate, or truer tributes to her virtue than Punch. In a recent sketch of

her career, accompanying her portrait in the gallery of noted women, this sentence is given from a descriptive letter:—"Her general demeanor is quiet and rather reserved; still, I am much mistaken, if she is not gifted with a very lively sense of the ridiculous." Here is a delightful, and, we doubt not, true intimation. Since the springs of pathos lie very near the springs of humor, in the richest souls, the fair Florence must, in moments of weariness, have glanced with merry eyes over the pages of Punch, or handed, with smiling archness, his inimitable numbers to her wan and wounded patients, kindly to cheat them into momentary forgetfulness of their agonies. If this were so, who shall say that the use or enjoyment of wit is not as right as it is natural? None, unless it be the narrowest of bigotries,—like those who objected to this heroic lady's mission of mercy to the East, because she did not echo their sectarian shibboleths, and would not ask whether a good nurse were Protestant or Romanist. —

We may repeat, therefore, as a prime excellence of Punch, that he is the maker of mirth for the million. He is mainly engaged in furnishing titillating amusement,—and he furnishes an article, not only marketable, but necessary. All work makes Jack a dull boy,—and not infrequently an unhappy, if not bad boy,—whether Jack be in the pulpit, the counting-room, the senate-house, or digging potatoes; and what is true of Jack is equally true of Gill, his sister, sweetheart, or wife. That Punch every week puts a girdle of smiles round the earth, interrupts the serious business of thousands by his merry visits, and with his ludicrous presence delights the drawing-room, cheers the study, and causes side-shakings in the kitchen,—entitles him to be called a missionary of good. Grant this,—then allow, on the average, five minutes of merriment to each reader of each issue of Punch,—then multiply these 5 minutes by—say 50,000, and this again by 52 weeks, and this, finally, by 17 years, and thus cipher out, if

you have a tolerably capacious imagination, the amount of happiness which has flowed and spread, like a river of gladness, through the world, from that inexhaustible, bubbling, and sparkling fountain, at 85, Fleet Street, London.

Punch is the advocate of true manliness. Velvet robes and gilded coronets go for nothing with him, if not worn by muscular integrity; and fustian is cloth-of-gold, in his eyes, when it covers a stout heart in the right place. He has no mercy on snobbism, flunkeyism, or dandyism. He whips smartly the ignoble-noble fops of the household-troops,—parading them on toy-horses, and making them, with suicidal irony, deplore the hardships of comrades in the Crimea. He sneers at the loungers, and the delicate, dissipated *roués* of the club-house,—though their names were once worn by renowned ancestors, and are in the peerage. Fast young men are to him befooled prodigals, wasting the wealth of life in profitless living. He is not, however, an anchorite, or hard upon youth. On the contrary, he is an indulgent old fellow, and too sagacious to expect the wisdom of age from those sporting their freedom-suits. Still, he has no patience with the foppery whose whole existence advertises fine clothes, patronizes taverns, saunters along fashionable promenades, and ogles opera-dancers. In this connection, his hits at "the rising generation" will be called to mind. Punch has found out that in England there are no boys now,—only male babies and precocious men;—no growing up,—only a leap from the cradle, robe, and trousers to the habiliments and manners of a false manhood. Punch has found out and frequently illustrates this fact, and furnishes a series of pictures of Lilliputians aping the questionable doings of their elders. It is observable, however, that he confines these portraits of precocity chiefly to one sex. Whether this be owing to his innate delicacy and habitual gallantry, or to the English custom of keeping little girls,—and what we should call large girls also—at home longer, and under more re-

straint, than in our republic, we cannot say. Were he on this side of the Atlantic, he might possibly find occasion to be less partial in the use of his reproving fun. Young misses seem to be growing scarce, and young ladies becoming alarmingly numerous. The early date at which the cry comes for long skirts, parties, balls, and late hours, for lace, jewelry, and gold watches, threatens to rob our homes of one of their sweetest charms,—the bright presence of joyous, gentle, and modest lasses, willing to be happy children for as many years as their mothers were, on their way to maidenhood and womanhood.

Punch is a reformer,—and of the right type, too; not destructive, declamatory, vituperative; not a monomaniac, snarly, and ill-natured,—as if zeal in riding a favorite hobby excused exclusiveness of soul and any amount of bad temper. He would not demolish the social system and build on its ruins a new one; being clearly of the opinion that the growths of ages and the doings of six thousands of years are to be respected,—that progress means improvement upon the present, rather than overthrow of the entire past. Calm, hopeful, cheerful, and patient, he is at the same time bold and uncompromising, and a bit radical into the bargain. In his own delicious way, he has been no mean advocate of liberal principles and measures. He has argued for the repeal of the corn and the modification of the game laws, the softening of the cruelties of the criminal code, and the fair administration of law for all orders and conditions of men and women. He has had no respect for ermine, lawn, or epaulets, in his assaults upon the monopolies and sinecures of Church and State, circumlocution offices, nepotism, patronage, purchase, and routine, in army or navy. He wants the established religion to be religious, not a cover for aristocratic preferences and dog-in-the-manger laziness,—and government administered for the whole people, and not merely dealing out treasury-pap and fat offices for the pensioned few. Punch is loyal, sings

lustily, “God Save the Queen,” and stands by the Constitution. He is a true-born Englishman, and patriotic to the backbone; but none are too high in place or name for his merciless ridicule and daring wit, if they countenance oppressive abuses. It is a tall feather in his fool’s-cap, that his fantastic person is a dread to evil-doers on thrones, in cabinets, and red-tape offices. Crowned tyrants, bold usurpers, and proud statesmen are sensitive, like other mortals, to ridicule, and know very well how much easier it is to cannonade rebellious insurgents than to put down the general laugh, and that the point of a joke cannot be turned by the point of the bayonet. “Punch” was seized in Paris on account of the caricature of the “Sphinx,” but after twenty-four hours’ consideration the order of confiscation was rescinded, and the irreverent publication now lies upon the tables of the reading-rooms. So, iron power is not beyond the reach of the shafts of wit; once make it ridiculous, and it may continue to be dreaded, but will cease to be respected.

Limits permitting, it would be pleasant to refer at length to various other marked graces of Punch,—such, for example, as his care for true Art, by exposing to merited contempt the abortions of statuary, painting, and architecture that come under his accurate eye,—his concern for good letters, exhibited in fantastic parodies of affectations, mannerisms, absurdities of plot, and vices of style in modern poets and novelists,—his “*nil nisi bonum*,” and, where there is no “*bonum*,” his silent “*nil*,” of the dead, whom when living he pursued with unrelenting raillery,—his cool, eclectic judgments, freedom from extremes, and other manifestations of clear-headedness and refined sentiment, glimmering and shooting through his rollicking drollery, quick wit, and quiet humor. But we must pass them by, to emphasize a quality that out-tops and outshines them all,—his humanity.

This is Mr. Punch’s specialty, generating his purest fun and consecrating his versatile talents to highest ends. Where-

ever he catches meanness, avarice, selfishness, force, preying upon the humble and the weak, he is sure to give them hard knocks with his baton, or home-thrusts with his pen and pencil. His practical kindness is charmingly comprehensive, too. He speaks for the dumb beast, pleads for the maltreated brutes of Smithfield Market, craves compassion for skeleton omnibus-horses, with the same ready sympathy that he fights for cheated fellow-mortals. In the court of public opinion, he is volunteer counsel for all in any way defrauded or kept in bondage by pitiless pride, barbarous policy, thoughtless luxury, or wooden-headed prejudice. His sound ethics do not admit that the lower law of man's enactment can, under any circumstances, override or abrogate the higher laws of God. Consequently, he judges with unbiased, instinctive rectitude, when he shows up in black and white the Model Republic's criminal anomaly, by making the African Slave a companion-piece to the Greek Slave, among "Jonathan's" contributions to the great Crystal Palace Exhibition. In this same vein of a wide-ranging application of the Golden Rule, he is ever on the alert to brand inhuman deeds and institutions, wherever found. You cannot very often hit him with the "*tu quoque*" retort, insinuate that he lives in a house of glass, or charge him with visiting his condemnation upon distant iniquities whilst winking at iniquities of equal magnitude directly under his nose.

Punch is no Mrs. Jellyby, brimful of zeal for Borrio boolas in far-off Africas, and utterly stolid to disorders and distresses under his own roof. Proud of the glory, he feels and confesses the shame of England; and the grinding injustice of her caste-system, aristocracy, and hierarchy does not escape the lash of his rebuke. He is the friend of the threadbare curate, performing the larger half of clerical duty and getting but a tittle of the tithes,—of the weary seamstress, wetting with midnight tears the costly stuff which must be ready to adorn heartless rark and fashion at to-morrow's pag-

eant,—of the pale governess, grudgingly paid her pittance of salary without a kind word to sweeten the bitterness of a lonely lot. He is the friend even of the work-house juveniles, and, as their champion, castigates with cutting sarcasm and stinging scorn the reverend and honorable guardians, who, just as, full of hope, they had reached the door of the theatre, prohibited a band of these wretched orphans from availing of a kind-hearted manager's invitation to an afternoon performance of "Jack and the Bean-Stalk." Truly, Punch is more than half right, as, in his indignation, he declares, "It will go luckily with some sour-faced Christians, if, with the fullest belief in their own right of entry of paradise, they are not '*stopped at the very doors*'"; and the parson, in the case, gets but his deserts, when at his lugubrious sham-piety are hurled stanzas like these:—

" Their little faces beamed with joy
Two miles upon their way,
As they supposed, each girl and boy,
About to see the play.
Their little cheeks with tears were wet,
As *back again* they went,
Balked by a sanctimonious set,
Led by a Reverend Gent.

" And if such Reverend Gents as he
Could get the upperhand,
Ah, what a hateful tyranny
Would override the land!
That we may never see that time,
Down with the canting crew
That would out of *their pantomime*
Poor little children do!"

Punch is the friend of all who are friendless, and, with a generous spirit of protection, gives credit to whom credit is due, whatever conventionality, precedent, monopoly, or routine may say to the contrary. During the Crimean War, he took care of the fame of the rank-and-file of the army. The dispatches to Downing Street, reporting the gallantry of titled officers, were more than matched by Punch's imitative dispatches from the seat of war, setting forth the exploits of Sergeant O'Brien, Corporal Stout, or Private Gubbins. He saw to it that those who had the hardest of the fight, the

smallest pay, and the coarsest rations, should not be forgotten in the gazetting of the heroes. Indeed, our comic friend's fellowship of soul with the humblest members of the human family is a notable trait; it is so ready, and yet withal so judicious. It is no part of his philosophy, as already intimated, violently and rashly to disturb the existing order of things, and set one class in rebellion against other classes. He simply insists upon the recognition of the law of mutual dependence all round. This is observable in his dealing with the vexed question of domestic service. The prime trouble of housekeeping comes in frequently for a share of his attention; and underneath ironical counsels, you may trace, quietly insinuating itself into graphic sketches, the genial intent fairly to adjust the relations between life above and life below stairs. Accordingly, Punch sees no reason why Angelina may have a lover in the parlor, whilst Bridget's engagement forbids her to entertain a fond "follower" in the kitchen; and he perversely refuses to see how it can be right for Miss Julia to listen to the soft nonsense of Captain Augustus Fitzroy in the drawing-room, and entirely wrong for Molly, the nursery-maid, to blush at the blunt admiration of the policeman, talking to her down the area. Punch is independent and original in this respect. His strange creed seems to be, that human nature *is* human nature,—whether, in its feminine department, you robe it in silk or calico, and, in its male department, button a red coat over the breast of an officer of the Guards, or put the coarse jerkin on the broad back of the industrious toilsman. And according to this whimsical belief, he writes and talks jocosely, but with covert common sense. His warm and catholic humanity runs up and down the whole social scale with a clear-sighted equity. His philanthropy is what the word literally signifies,—the love of man as man, and because he is a man. Without being an impracticable fanatic, advocating impossible theories, or theories that can grow into realities only

with the gradual progress of the race,—without indulging in fanciful visions of unapproached Utopias,—without imagining that all, wherever born and however nurtured, can reach the same level of wealth and station,—he holds, not merely that

"Honor and shame from no condition rise,"

but also, be the condition high or low, the worthy occupant of it, by reason of the common humanity he shares with all above and all beneath and all around him, has a brother's birthright to brotherly treatment, to even-handed justice and open-handed charity.

We have taken it for granted that Punch is a household necessity and familiar friend of our readers; and, resisting as far as possible the besetting temptation to refer in detail to the many pictorial and letter-press illustrations of his merits, have spoken of him as "a representative man,"—the universally acknowledged example of the legitimate and beneficent uses of the sportive faculties; thus indirectly claiming for these faculties more than toleration.

The variety in human nature must somehow be brought into unity, and its diversified, strongly contrasted elements shown to be parts of a symmetrical and harmonious whole. The philosophy, the religion, which overlooks or condemns any of these elements, is never satisfactory, and fails to win sincere belief, because of its felt incompleteness. All men have an instinctive faith that in God's plan no incontestable facts are exceptional or needless facts. Science assumes this in regard to the phenomena of the natural world; and, in its progressive searches, expects to discover continual proof that all manifestations, however opposite and contradictory, are parts of one beneficent scheme. Accordingly, Science starts on its investigations with the conviction that the storm is as salutary as the sunshine,—that there is utility in what seems mere luxury,—and that Nature's loveliness and grandeur, Nature's oddity and grotesqueness, have a substantial value, as well as Nature's wheat-harvests.

Now the same principle is to be recognized in dealing with things spiritual. It may not be affirmed that anything appertaining to universal consciousness—spontaneous, irresistible, as breathing—is of itself base, and therefore to be put away; since so to do is to question the Creative Wisdom. The work of the Infinite Spirit must be consistent; and you might as truly charge the bright stars with malignity as denounce as vile one faculty or capacity of the mind. Consequently, there is a use for all forms of wit and humor.

Punch represents a genuine phase of human nature,—none the less genuine because human nature has other and far different phases. That there is a time to mourn does not prove there is no time to dance. Punch has his part, and his times to play it, in the melodrama, the mixed comedy and tragedy, of existence. What we have to do is to see that he interferes with no other actor's *rôle*, comes upon the stage in fitting scenes, keeps to the text and the impersonations which right principle and pure taste assign him. His grimaces are not for the church. He may not sing his catches when penitent souls are listening to the "Miserere," drop his torpedo-puns when life's mystery and solemnity are pressed heavily upon the soul,—be irreverent, profane, or vulgar. He must know and keep his place. But he should have his place, and have it confessed; and that place is not quite at the end of the procession of the benefactors of the race. Punch, as we speak of him now, is but a generic name for Protean wit and humor, well and wisely employed. As such, let Punch have his mission; there is ample room for him and his merry doings, without interfering with soberer agencies. Let him go about tickling mankind; it does mankind good to be tickled occasionally. Let him broaden elongated visages; there are many faces that would be improved by horizontal enlargement, by having the corners of the mouth curved upward. Let him write and draw "as funny as he can"; there are dull talking and melancholy pictures in abundance to counter-

balance his pleasantry. Let him amuse the children, relax with jocosity the sternness of adults, and wreath into smiles the wrinkles of old age. Let him, in a word, be a Merry Andrew,—the patron and promoter of frolicsomeness. To be only this is nothing to his discredit; and to esteem him for being only this is not to pay respect to a worthless mountebank.

But Punch is and can be something more than a caterer of sport. Kings, in the olden time, had their jesters, who, under cover of blunt witticisms, were permitted to utter home-truths, which it would have cost grave counselors and dependent courtiers their heads to even whisper. Punch should enjoy a similar immunity in this age,—and society tolerate his free and smiling speech, when it would thrust out sager monitors. If it be true that

"Fools rush in where angels fear to tread,"

something like the converse of this saying is also true. Not fools exactly, but wisdom disguised in the motley of wit, often gains entrance to ears deaf to angelic voices. There are follies that are to be laughed out of their silliness and sinfulness. There are tyrants, big and little, to be dethroned by ridicule. There are offences, proof against appeals to conscience, that wince and vanish before keen satire. Even as a well-aimed joke brings back good-humor to an angry mob, or makes mad and pugnacious bullies cower and slink away from derision harder to stand than hard knocks,—even so will a quizzical Punch be efficient as a philanthropist, when sedate exhortations or stern warnings would fail to move stony insensibility.

As an element in effective literature, a force in the cause of reform, the qualities Punch personifies have been and are of no slight service. And herein those qualities have an indefeasible title to regard. Let there be no vinegar-faced, wholesale denunciation of them, because sometimes their pranks are wild and overleap the fences of propriety

Rather let appreciation of their worthiness accompany all reproving checks upon their extravagances. Let nimble fun, explosive jokes, festoon-faced humor, the whole tribe of gibes and quirks, every light, keen, and flashing weapon in the armory of which Punch is the keeper, be employed to make the world laugh, and put the world's laughter on the side of all right as against all wrong. If this be not done, the seriousness of life will darken into gloom, its work become slavish tasks, and the conflict waged be a terrible conflict between grim vir-

tues and fiendish vices. If you could shroud the bright skies with black tempest-clouds, burn to ashes the rainbow-hued flowers, strike dumb the sweet melodies of the grove, and turn to stagnant pools the silver streams,—if you could do this, thinking thereby to make earth more of a paradise, you would be scarcely less insane than if you were to denounce and banish all

“ Quips, and cranks, and wanton wiles,
Nods, and becks, and wreathed smiles,
Sport, that wrinkled care derides,
And laughter, holding both his sides ”

THE SUBJECTIVE OF IT.

TOWARD the close of a dreamy, tranquil July day, a day made impressive beyond the possible comprehension of a dweller in civilization by its sun having risen for us over the unbroken wilderness of the Adirondack, a mountain-land in each of whose deep valleys lies a blue lake, we, a party of hunters and recreation-seekers, six beside our guides, lay on the fir-bough-cushioned floor of our dark camp, passing away the little remnant of what had been a day of rest to our guides and of delicious idleness to ourselves. The camp was built on the bold shore of a lake which yet wants a name worthy its beauty, but which we always, for want of such a one, call by that which its white discoverer left it, — Tupper's Lake, — whose waters, the untremulous mirror of the forests and mountains around and the sky above, gleamed to us only in blue fragments through the interstices of the leafy veil that intervened. The forest is unbroken to the water's edge, and even out over the water itself it stretches its firs and cedars, gray and moss-draped, with here and there a moisture-loving white-birch, so that from the very shore one sees only suggestive bits of distance and sky; and from where we were

lying, sky, hills, and the water below were all blue alike, and undistinguishable alike, glimpses of a world of sunlight, which the grateful shadow we lay in made delicious to the thought. We were sheltered right woodsman-like;—our little house of fresh-peeled bark of spruces, twelve feet by nine, open only to the east, on which side lay the lake, shielded us from wind and rain, and the huge trees shut around us so closely that no eye could pierce a pistol-shot into their glades. There were blue-jays all about us, making the woods ring with their querulous cries, and a single fish-hawk screamed from the blue overhead, as he sailed round and round, watching the chances of a supper in the lake. Between us and the water's edge, and a little to one side of the path we had bushed out to the shore, was the tent of the guides, and there they lay asleep, except one who was rubbing up his “man's” rifle, which had been forgotten the night before when we came in from the hunt, and so had gathered rust.

Three of our party were sleeping, and the others talked quietly and low, desultorily, as if the drowsiness had half conquered us too. The conversation had

rambled round from a discussion on the respective merits of the Sharp's and the Kentucky rifles (consequent on a trial of skill and rifles which we had had after dinner) to Spiritualism,—led to this last topic by my relation of some singular experiences I had met in the way of presentiments and what seemed almost like second-sight, during a three-months' sojourn in the woods several summers before. There is something wonderfully exciting to the imagination in the wilderness, after the first impression of monotony and lonesomeness has passed away and there comes the necessity to animate this so vacant world with something. And so the pines lift themselves grimly against the twilight sky, and the moanings of the woods become full of meaning and mystery. Living, therefore, summer after summer, as I had done, in the wilderness, until there is no place in the world which seems so much like a home to me as a bark camp in the Adirondack, I had come to be what most people would call morbid, but what I felt to be only sensitive to the things around, which we never see, but to which we all at times pay the deference of a tremor of inexplicable fear, a quicker and less deeply drawn breath, an involuntary turning of the head to see something which we know we shall not see, yet are glad to find that we do not,—all which things we laugh at as childish when they have passed, yet tremble at as readily when they come again. J., who was both poet and philosopher, singularly clear and cold in his analyses, and at the same time of so great imaginative power that he could set his creations at work and then look on and reason out the law of their working as though they were not his, had wonders to tell which always passed mine by a degree; his experiences were more various and marvellous than mine, yet he had a reason for everything, to which I was compelled to defer without being convinced. "Yes," said he, finally knocking out the ashes from his meerschaum, as we rose, at the Doctor's suggestion, to take a row out on the lake while the sun was setting,—

"Yes, I believe in *your* kind of a 'spiritual world,'—but that it is purely subjective."

I was silenced in a moment;—this single sentence, spoken like the expression of the experience of a lifetime, produced an effect which all his logic could not. He had rubbed some talismanic opal, pronouncing the spirit-compelling sentence engraved thereon, and a new world of doubts and mysteries, marvels and revelations burst on me. One phase of existence, which had been hitherto a reality to me, melted away into the thinness of an uncompleted dream; but as it melted away, there appeared behind it a whole universe, of which I had never before dreamed. I had puzzled my brains over the metaphysics of subjectivity and objectivity and found only words; now I grasped and comprehended the round of the thing. I looked through the full range of human cognitions, and found, from beginning to end, a proclamation of the presence of that arch-magician, Imagination. I had said to myself,—
 "The universe is subjective to Deity, objective to me; but if I am his image, what is that part of me which corresponds to the Creator in Him?" Here I found myself, at last, the creator of a universe of unsubstantialities, all of the stuff that dreams are made of, and all alike unconsciously evoked, whether they were the dreams of sleep or the hauntings of waking hours. I grew bewildered as the thought loomed up in its eternal significance, and a thousand facts and phenomena, which had been standing in the darkness around my little circle of vision, burst into light and recognition, as though they had been waiting beyond the outer verge for the magic words. J. had spoken them.

Silent, almost for the moment unconscious of external things, in the intense exaltation of thought and feeling, I walked down to the shore. Taking the lightest and fleetest of our boats, we pushed off on the perfectly tranquil water. There was no flaw in the mirror which gave us a duplicated world.

Line for line, tint for tint, the noble mountain that lifts itself at the east, robed in primeval forest to its very summit, and now suffused with rosy light from the sun, already hidden from us by a low ridge in the west, was reproduced in the void below us. The shadow of the western ridge began to climb the opposite bluffs of the lake shore. We pulled well out into the lake and lay on our oars. If anything was said, I do not remember it. I was as one who had just heard words from the dead, and hears as prattle all the sounds of common life. My eyes, my ears, were opened anew to Nature, and it seemed even as if some new sense had been given me. I felt, as I never felt before, the cool gloom of the shadow creep up, ridge after ridge, towards the solitary peak, irresistibly and triumphantly encroaching on the light, which fought back towards the summit, where it must yield at last. It drew back over ravines and gorges, over the wildernesses of unbroken firs which covered all the upper portion of the mountain, deepening its rose-tint and gaining in intensity what it lost in expanse,—diminished to a handbreadth, to a point, and, flickering an instant, went out, leaving in the whole range of vision no speck of sunlight to relieve the wilderness of shadowy gloom. I had come under a spell,—for, often as I had seen the sun set in the mountains and over the lakes, I had never before felt as I now felt, that I was a part in the landscape, and that it was something more to me than rocks and trees. The sunlight had died on it. J. took up the oars and our silently-moving boat broke the glassy surface again. All around us no distinction was visible between the landscape above and that below, no water-line could be found; and to the west, where the sky was still glowing and golden, with faint bands of crimson cirrus swept across the deep and tremulous blue, growing purple as the sun sank lower, we could distinguish nothing in the landscape. Neither sound nor motion of animate or inanimate thing disturbed the scene, save that of

the oars, with the long lines of blue which ran off from the wake of the boat into the mystery closing behind us. A rifle-shot rang out from the landing and rolled in multitudinous echoes around the lake, dying away in faintest thunders and murmurings from the ravines on the side of the mountain. It was the call to supper, and we pulled back to the light of the fire, which was now glimmering through the trees from the front of the camp.

Supper over, the smokers lighted their pipes and a rambling conversation began on the sights and sounds of the day. For my own part, unable to quiet the uneasy questioning which possessed me, I wandered down to the shore and took a seat in the stern of one of the boats, which, hauled part of their length upon the sandy beach, reached out some distance among the lily-pads which covered the shallow water, and whose folded flowers dotted the surface, the white points alone visible. The uneasy question still stirred within me; and now, looking towards the northwest, where the sky yet glowed faintly with twilight, a long line of pines, gaunt and humanesque, as no tree but our northern white-pine is, was relieved in massy blackness against the golden gray, like a long procession of giants. They were in groups of two and three, with now and then an isolated one, stretching along the horizon, losing themselves in the gloom of the mountains at the north. The weirdness of the scene caught my excited imagination in an instant, and I became conscious of two mental phenomena. The first was an impression of motion in the trees, which, whimsical as it was, I had not the slightest power to dispel. I trembled from head to foot under the consciousness of this supernatural vitality. My rational faculties were as clear as ever they had been, and I understood perfectly that the semblance of motion was owing to two characteristics of the white-pine, namely,—that it follows the shores of the lakes in lines, rarely growing back at any distance from the water, except when it follows, in

the same orderly arrangement, the rocky ridges,—and that, from its height above all other forest-trees, it catches the full force of the prevalent winds, which here are from the west, and consequently leans slightly to the east, much as a person leans in walking. These traits of the tree explained entirely the phenomenon; yet the knowledge of them had not the slightest effect to undeceive my imagination. I was awe-struck, as though the phantoms of some antediluvian race had arisen from the valleys of the Adirondack and were marching in silence to their old fane on the mountain-tops. I covered in the boat under an absolute chill of nervous apprehension.—The second phenomenon was, that I heard *mentally* a voice which said distinctly these words,—“The procession of the Anakim!”—and at the same time I became conscious of some disembodied spiritual being standing near me, as we are sometimes aware of the presence of a friend without having seen him. Every one accustomed to solitary thought has probably recognized this kind of mental action, and speculated on the strange duality of Nature implied in it. The spiritualists call it “impressional communication,” and abandon themselves to its vagaries in the belief that it is really the speech of angels; men of thought find in it a mystery of mental organization, and avail themselves of it under the direction of their reason. I at present speculated with the philosophers; but my imagination, siding with the spiritualists, assured me that some one spoke to me, and reason was silenced. I sat still as long as I could endure it, alone, and then crept back, trembling, to the camp,—feeling quiet only when surrounded by the rest of the party.

My attendant dæmon did not leave me, I found; for now I heard the question asked, half-tauntingly,—“Subjective or objective?”

I asked myself, in reply,—“Am I mad or sane?”

“Quite sane, but with your eyes opened to something new!” was the instantaneous reply.

On such expeditions, men get back to the primitive usages and conditions of humanity. We had arisen at daybreak; darkness brought the disposition to rest. We arranged ourselves side by side on the couch of balsam and cedar boughs which the guides had spread on the ground of the camp, our feet to the fire, and all but myself soon slept. I lay a long time, excited, looking out through the open front of the camp at the stars which shone in through the trees, and even they seemed partakers of my new state of existence, and twinkled consciously and confidentially, as to one who shared the secret of their own existence and purposes. The pine-trees overhead had an added tone in their moanings, and indeed everything, as I regarded it, seemed to manifest a new life, to become identified with me: Nature and I had all things in common. I slept, at length,—a strange kind of sleep; for when the guides awoke me, in the full daylight, I was conscious of some one having talked with me through the night.

In broad day, with my companions, and in motion, the influences of the previous evening seemed to withdraw themselves to a remote distance,—yet I was aware of their awaiting me when I should be unoccupied. The day was as brilliant, as tranquil as its predecessor, and the council decided that it should be devoted to a “drive,” for we had eaten the last of our venison for breakfast. The party were assigned their places at those points of the lake where the deer would be most likely to take the water, while my guide, Steve M—, and myself went up Bog River, to start him. The river, a dark, sluggish stream, about fifty feet wide, the channel by which the Mud Lakes and Little Tupper's Lake, with its connected lakes and ponds, empty into Tupper's Lake, is a favorite feeding-ground with the deer, whose breakfast is made on the leaves of the *Nuphar lutea* which edge the stream. We surprised one, swimming around amongst the leaves, snatching here and there the choicest of them, and when he turned to go out and rose

in the water, as his feet touched bottom, I gave him a ball without fatal effect, and landing, we put Carlo on the track, which was marked by occasional drops and clots of blood, and hearing him well off into the woods, and in that furious and deep bay which indicates close pursuit, we went back to our boat and paddled upstream to a run-way Steve knew of, where the deer sometimes crossed the river. We pushed the boat into the overhanging alders which fringe the banks, leaning out into and over the water, and listened to the far-off bay of the hound. It died away and was entirely lost for a few minutes, and then came into hearing from the nearer side of the ridge, which lay back from the river a hundred rods or so, and I cocked my rifle while Steve silently pushed the boat out of the bushes, ready for a start, if the deer should "water." The baying receded again, and this time in the direction of the lake. The blood we had found on the trail was the bright, red, frothy blood which showed that the ball had passed through the lungs, and, as we knew that the deer would not run long before watering, we were sure that this would be his last turn and that he was making in earnest for the lake, where some of the boats would certainly catch him.

The excitement of the hunt had brought me back to a natural state of feeling, and now, as I lay in the stern of the boat, drifting slowly down-stream, and looked up into the hazy blue sky, in the whole expanse of which appeared no fragment of cloud, and the softened sunshine penetrated both soul and body, while the brain, lulled into lethargy by the unbroken silence and monotony of forest around, lost every trace of its midsummer madness,—I looked back to the state of the last evening as to a curious dream. I asked myself where-in it differed from a dream, and instantly my daemon replied, "In no wise." The instant reply surprised me, without startling me from my lethargy. I responded, as a matter of course, "But if no more than a dream, it amounts to

nothing." It answered me, "But when a man dreams wide awake?" I pondered an instant, and it went on: "And how do you know that dreams are nothing? They are real while they last, and your waking life is no more; you wake to one and sleep to the other. Which is the real, and which the false? since you assume that one is false." I only asked myself again the eternal question, "Objective or subjective?" and the daemon made no further suggestion. At this instant we heard the report of a gun from the lake. "That's the Doctor's shot-gun," said Steve, and pulled energetically down-stream; for we knew, that, if the Doctor had fired, the deer had come in,—and if he had missed the first shot, he had a second barrel, which we should have heard from.

Among the most charming cascades in the world is certainly that which Bog River makes where it falls into Tupper's Lake. Its amber water, black in the deep channel above the fall, dividing into several small streams, slips with a plunge of, it may be, six feet over the granite rocks, into a broad, deep pool, round which tall pines stand, and over which two or three delicate-leaved white-birches lean, from which basin the waters plunge in the final foamy rush of thirty or forty feet over the irregularly broken ledge which makes the bold shore of the lake. Between the two points of rock which confine the stream is thrown a bridge, part of the military road from the Mohawk settlements to those on the St. Lawrence, built during the war of 1812. On this bridge I waited until Steve had carried the boat around, when we reëmbarked for the camp.

Arriving at the landing, we found two of the guides dressing the Doctor's deer, and the others preparing for dinner. As night came on my excitement returned, and I remained in the camp while the others went out on the lake,—not from fear of such an experience as I had the night before, for I enjoyed the wild emotions, as one enjoys the raging of the sea around the rocks he stands on, with a

kind of tremulous apprehension,—but to see what effect the camp would produce on the state of feeling which I had begun to look at as something normal in my mental development. The rest of the party had gone out in two boats, and three of the guides, taking another, went on an excursion of their own; the two remaining, having cleared the supper-things away and lighted their pipes, were engaged in their tent, playing *old sledge* by the light of a single candle. There was a race out on the lake, and a far-off merriment, with an occasional halloo, like a suggestion of a busy world somewhere, but all so softened and toned down that it did not jar on my tranquillity. There was a crackling fire of green logs as large as the guides could lift and lay on, and they simmered in the blaze, and lit up the surrounding tree-trunks and the overhanging foliage, and faintly explored the recesses of the forest beyond. I lay on the blankets, and near to me seemed to sit my *dæmon*, ready to be questioned.

At this instant there came a doubt of the theological position of my ghostly *vis-a-vis*, and I abruptly thought the question, “Who are you?”

“Nobody,” replied the *dæmon*, oracularly.

This I knew in one sense to be true; and I replied, “But you know what I mean. Don’t trifle. Of what nature is your personality?”

“Do you think,” it replied, “that personality is necessary to existence? We are spirit.”

“But wherein, save in the having or not having a body, do you differ from me?”

“In all the consequences of that difference.”

“Very well,—go on.”

“Don’t you see that without your circumstances you are only half a being?—that you are shaped by the action and reaction between your own mind and surrounding things, and that the body is the only medium of this action and reaction? Do you not see that without this there would have been no consciousness

of self, and consequently neither individuality nor personality? Remove those circumstances by removing the body, and do you not remove personality?”

“But,” said I, “you certainly have individuality, and wherein does that differ from personality?”

“Possibly you commit two mistakes,” replied the *dæmon*. “As to the distinction, it is one with a difference. You are personal to yourself, individual to others; and we, though individual to you, may be still impersonal. If spirit takes form from having something to act on, the fact that we act on you is sufficient, so far as you are concerned, to cause an individuality.”

I hesitated, puzzled.

It went on: “Don’t you see that the inertia of spirit is motion, as that of matter is rest? Now compare this universal spirit to a river flowing tranquilly, and which in itself gives no evidence of motion, save when it meets with some inert point of resistance. This point of resistance has the effect of action in itself, and you attribute to it all the eddies and ripples produced. You *must* see that your own immobility is the cause of the phenomena of life which give you your apparent existence;—our individuality to you may be just as much the effect of your personality; you find us only responsive to your own mental state.”

I was conscious of a sophistry somewhere, but could not, for the life of me, detect it. I thought of the Tempter; I almost feared to listen to another word; but the *dæmon* seemed so fair, so rational, and, above all, so confident of truth, that I could not entertain my fears.

“But,” said I, finally, “if my personality is owing to my physical circumstances, to my body and its immobility, what is the body itself owing to?”

“All physical or organic existence is owing to the antagonism between certain particles of matter, fixed and resistant, and the all-pervading, ever-flowing spirit; the different inertias conflict, and end by combining in an organic being, since neither can be annihilated or transmuted.

ed. Perhaps we can tell you, by-and-by, how this antagonism commences; at present, you would scarcely be able to comprehend it clearly."

This I felt, for I was already getting confused with the questions that occurred to me as to the relations between spirit and matter.

I asked once more, "Have you never been personal, as I am?—have you never had a body and a name?"

"Perhaps," was the reply,—“but it must have been long since; and the trifling circumstances which you call life, with all their direct and recognizable effects, pass away so soon, that it is impossible to recall anything of it. There seems a kind of consciousness when we have something to act against, as against your mind at the present moment; but as to name, and all that kind of distinctiveness, what is the use of it where there is no possibility of confusion or mistake as to identity? We have said that we are spirit; and when we say that spirit is one and matter one, we have gone behind personal identity.”

"But," asked I, "am I to lose my individual existence,—to become finally merged in a universal impersonality? What, then, is the object of life?"

"You see the plants and animals all around you growing up and passing away,—each entering its little orbit, and sweeping through this sphere of cognizance back again to the same mystery it emerged from; you never ask the question as to them, but for yourself you are anxious. If you had not been, would creation have been any less creation?—if you cease, will it not still be as great? Truly, though, your mistake is one of too little, not of too much. You assume that the animals become nothing; but, truly, nothing dies. The very crystals into which all the so-called primitive substances are formed, and which are the first forms of organization, have a spirit in them; for they obey something which inhabits and organizes them. If you could decompose the crystal, would you annihilate the soul

which organized it? The plant absorbs the crystal, and it becomes a part of a higher organization, which could no more exist without its soul; and if the plant is cut down and cast into the oven, is the organic impulse food for the flames? You, the animal, do but exist through the absorption of these vegetable substances, and why should you not obey the analogical law of absorption and aggregation? You killed a deer to-day;—the flesh you will appropriate to supply the wants of your own material organization; but the life, the spirit which made that flesh a deer, in obedience to which that shell of external appearance is moulded,—you missed that. You can trace the body in its metamorphoses; but for this impalpable, active, and only real part of the being,—it were folly to suppose it more perishable, more evanescent, than the matter of which it was master. And why should not you, as well as the deer, go back into the great Life from which you came? As to a purpose in creation, why should there be any other than that which existence always shows,—that of existing?"

I now began to notice that all the leading ideas which the daemon offered were put in the form of questions, as if from a cautious non-committalism, or as if it dared not in so many words say that they were the absolute truth. I felt that there was another side to the matter, and was confident that I should detect the sophistry of the daemon; but then I did not feel able to carry the conversation farther, and was sensible of a readiness on the part of my interlocutor to cease. I wondered at this, and if it implied weariness on its part, when it was replied,—“We answer to your own mind; of course, when that ceases to act, there ceases to be reaction.” I cried out in my own mind, in utter bewilderment,—“Objective or subjective?” and ceased my questionings.

The camp-fire glowed splendidly through the overhanging branches and foliage, and I longed for a revel of light. I asked the guides to make a “blaze,” and, after a minute’s delay and an ejaculation of

"Game, to your high, low, jack," they emerged from the tent and in a few minutes had cut down several small dead spruces and piled the tops on the fire, which flashed up through the pitchy, inflammable mass, and we had a pyrotechnical display which startled the birds, that had gone to rest in the assurance of night, into a confused activity and clamor. The heat penetrated the camp and gave me a drowsiness which my disturbed repose of the night before rendered extremely grateful, and when the rest of the party returned from their row, I was asleep.

It was determined, the next morning, in council, to move; and one of the guides having informed us of a newly-opened carry, by which we could cross from Little Tupper's Lake, ten miles above us, directly to Forked Lake, and thence following the usual route down the Raquette River and through Long Lake, we could reach Martin's on Saranac Lake without retracing our steps, except over the short distance from the Raquette through the Saranac Lakes,—after breakfast, we hurriedly packed up our traps and were off as early as might be. It is hard boating up the Bog River, and hard work both for guides and tourists. All the boats and baggage had to be carried three miles, on the backs of the guides, and, help them as much as we could, the day had drawn nearly to its close before we were fairly embarked on Little Tupper's, and we had then nearly ten miles to go before reaching Constable's Camp, where we were to stop for the night. I worked hard all day, but in a kind of dream, as if the dead weight I carried with weariness were only the phantom of something, and I were a fantasy carrying it;—the actual had become visionary, and my imaginings nudged me and jostled me almost off the path of reason. But I had no time for a *séance* with my *dæmon*. The next day I devoted with the guides to bushing out the carry across to Forked Lake, about three and a half miles, through perfectly pathless woods; for we found Sam's statements as to the carry

being chopped out entirely false; only a blazed line existed; so all the guides, except one, set to work with myself bushing and chopping out, while the other guide and the rest of the party spent the day in hunting. At the close of the day we had completed nearly two miles of the path, and returned to Constable's Camp to sleep. The next day we succeeded in getting the boats and baggage through to Bottle^d Pond, two and a half miles, and the whole party camped on the carry,—the guides anathematizing Sam, whose advice had led us on this road. The next afternoon found us afloat on Forked Lake, weary and glad to be in the sunlight on blue water again. Hard work and the excitement of responsibility in engineering our road-making operations had kept my visitor from dream-land away, and as we paddled leisurely down the beautiful lake,—one of the few yet untouched by the lumbermen,—I felt a healthier tone of mind than I had known since we had entered the woods. As we ran out of one of the deep bays which constitute a large portion of the lake, into the principal sheet of water, one of the most perfectly beautiful mountain-views I have ever seen burst upon us. We looked down the lake to its outlet, five miles, between banks covered with tall pines, and far away in the hazy atmosphere a chain of blue peaks raised themselves sharp-edged against the sky. One singularly-shaped summit, far to the south, attracted my attention, and I was about to ask its name, when Steve called out, with the air of one who communicates something of more than ordinary significance,—*"Blue Mountain!"* The name, Steve's manner, and I know not what of mysterious cause, gave to the place a strange importance. I felt a new and unaccountable attraction to the mountain. Some enchantment seemed to be casting its glamour over me from that distance even. There was thenceforward no goal for my wanderings but the Blue Mountain. It is a solitary peak, one of the southernmost of the Adirondacks, of

a very quaint form, and lies in a circlet of lakes, three of which in a chain are named from the mountain. The way by which the mountain is reached is through these lakes, and their outlet, which empties into Raquette Lake. I had determined to remain in the woods some weeks, and now concluded to return, as soon as I had seen the rest of the party on their way home, and take up quarters on Raquette Lake for the rest of my stay.

That night we camped at the foot of Forked Lake, and not one of the party will ever forget the thunder-storm that burst on us in our woods-encampment among the tall pines, two of which, near us, were struck by the lightning. I tried in vain, when we were quiet for the night, to get some information on the subject of my attraction to the Blue Mountain. My dæmon appeared remote and made no responses. It seemed as if, knowing my resolution to stay alone there, it had resolved to be silent until I was without any cause for interruption of our colloquies. Save the consciousness of its remote attendance, I felt no recurrence of my past experience, until, having seen my friends on the road to civilization again, I left Martin's with Steve and Carlo for my quarters on the Raquette. We hurried back up the river as fast as four strong arms could propel our light boat, and resting, the second night, at Wilbur's, on Raquette Lake, I the next morning selected a site for a camp, where we built a neat little bark-house, proof against all discomforts of an elemental character, and that night I rested under my own roof, squatter though I was. The dæmon seemed in no haste to renew our former intimate intercourse,—for what reason I could not divine; but a few days after my settling, days spent in exploring and planning, it resumed suddenly its functions. It came to me out on the lake, where I had paddled to enjoy the starlight in the delicious evening, when the sky was filled with luminous vapor, through which the stars struggled dimly, and in which the landscape was almost as clearly visible as by moonlight.

"Well!" said I, familiarly, as I felt it take its place by my side, "you have come back."

"Come back!" it replied; "will you never get beyond your miserable ideas of space, and learn that there is no separation but that of feeling, no nearness but that of sympathy? If you had cared enough for us, we should have been with you constantly."

I was anxious to get to the subject of present interest, and did not stop to discuss a point which, in one, and the highest sense, I admitted.

"What," I asked, "was that impulse which urged me to go to the Blue Mountain? Shall I find there anything supernatural?"

"Anything supernatural? What is there above Nature, or outside of it?"

"But nothing is without cause; and for an emotion so strong as I experienced, on the sight of those mountains, there must have been one."

"Very likely! if you go after it, you will find it. You probably expect to find some beautiful enchantress keeping her court on the mountain-top, and a suite of fairies."

I started, for, absurd as it may seem, that very idea, half-formed, undeveloped from very shame at my superstition, had rested in my mind.

"And," said I, at a loss what to say, "are there no such things possible?"

"All things are possible to the imagination."

"To create?"

"Most certainly! Is not creation the act of bringing into existence? and does not your Hamlet exist as immortally as your Shakspeare? The only true existence, is it not that of the Idea? Have you not seen the pines transfigured?"

"And if I imagined a race of fairies inhabiting the Blue Mountain, should I find them?"

"If you *imagined* them, yes! But the imagination is not voluntary; it works to supply a necessity; its function is creation, and creation is needed only to fill a vacuum. The wild Arab, feeling his

own insignificance, and comprehending the necessity for a Creating Power, finds between himself and that Power, which to him, as to you the other day, assumes a personality, an immense distance, and fills the space with a race half divine, half human. It was the necessity for the fairy which created the fairy. You do not feel the same distance between yourself and a Creator, and so you do not call into existence a creative race of the same character; but has not your own imagination furnished you with images to which you may give your reverence? It may be that you diminish that distance by degrading the Great First Cause to an image of your personality, and so are not so wise as the Arab, who at once admits it to be unattainable. Each man shapes that which he looks up to by his desires or fears, and these in their turn are the results of his degree of development."

"But God, is not He the Supreme Creator?"

"Is it not as we said, that you measure the Supreme by yourself? Can you not comprehend a supreme law, an order which controls all things?"

In my meditations this doubt had often presented itself to me, and I had as often put it resolutely aside; but now to hear it urged on me in this way from this mysterious presence troubled me, and I shrank from further discussion of the topic. I earnestly desired a fuller knowledge of the nature of my colloquist.

"Tell me," said I, "do you not take cognizance of my personality?—do you read my past and my future?"

"Your past and future are contained in your present. Who can analyze what you are can see the things which made you such; for effect contains its cause;—to see the future, it needs only to know the laws which govern all things. It is a simple problem: you being given, with the inevitable tendencies to which you are subject, the result is your future; the flight of one of your rifle-balls cannot be calculated with greater certainty."

"But how shall we know those laws?" said I.

"You contain them all, for you are the result of them; and they are always the same,—not one code for your beginning, and another for your continuance. Man is the complete embodiment of all the laws thus far developed, and you have only to know yourself to know the history of creation."

This I could not gainsay, and my mind, wearied, declined to ask further. I returned to camp and went to sleep.

Several days passed without any remarkable progress in my knowledge of this strange being, though I found myself growing more and more sensitive to the presence of it each day; and at the same time the incomprehensible sympathy with Nature, for I know not what else to call it, seemed growing stronger and more startling in the effects it produced on the landscape. The influence was no longer confined to twilight, but made noon-day mystical; and I began to hear strange sounds and words spoken by disembodied voices,—not like that of my *dæmon*, but unaccompanied by any feeling of personal presence connected therewith. It seemed as if the vibrations shaped themselves into words, some of them of singular significance. I heard my name called, and the strangest laughs on the lake at night. My *dæmon* seemed averse to answering any questions on the topic of these illusions. The only reply was,—“You would be wiser, not knowing too much.”

Ere many days of this solitary life had passed, I found my whole existence taken up by my fantasies. I determined to make my excursion to the Blue Mountain, and, sending Steve down to the post-office, a three-days' journey, I took the boat, with Carlo and my rifle, and pushed off. The outlet of the Blue Mountain Lakes is like all the Adirondack streams, dark and shut in by forest, which scarcely permits landing anywhere. Now and then a log fallen into the water compels the voyager to get out and lift his boat over; then a shallow rapid must be dragged over; and when the stream is clear of obstruc-

tion, it is too narrow for any mode of propulsion but poling or paddling.

I had worked several weary hours, and the sun had passed the meridian, when I emerged from the forest into a wild, swampy flat,—“wild meadow,” the guides call it,—through which the stream wound, and around which was a growth of tall larches backed by pines. Where the brook seemed to reënter the wood on the opposite side, stood two immense pines, like sentinels, and such they became to me; and they looked grim and threatening, with their huge arms reaching over the gateway. I drew my boat up on the boggy shore at the foot of a solitary tamarack, into which I climbed as high as I could to look over the wood beyond.

Never shall I forget what I saw from that swaying look-out. Before me was the mountain, perhaps five miles away, covered with dense forest to within a few hundred feet of the summit, which showed bare rock with firs clinging in the clefts and on the tables, and which was crowned by a walled city, the parapet of whose walls cut with a sharp, straight line against the sky, and beyond showed spire and turret and the tops of tall trees. The walls must have been at least a hundred and fifty feet high, and I could see here and there between the group of firs traces of a road coming down the mountain-side. And I heard one of those mocking voices say, “The city of silence!”—nothing more. I felt strongly tempted to start on a flight through the air towards the city, and why I did not launch forth on the impulse I know not. My blood rushed through my veins with maddest energy, and my brain seemed to have been replaced by some ethereal substance, and to be capable of floating me off as if it were a balloon. Yet I clung and looked, my whole soul in my eyes, and had no thought of losing the spectacle for an instant, even were it to reach the city itself. The glorious glamour of that place and moment, who can comprehend it? The wind swung my tree-top to and fro, and I climbed up until the tree bent with my weight like a twig under a bird’s.

Presently I heard bells and strains of music, as though all the military bands in the city were coming together on the walls; and the sounds rose and fell with the wind,—one moment entirely lost, another full and triumphant. Then I heard the sound of hunting-horns and the baying of a pack of hounds, deep-mouthed, as if a hunting-party were coming down the mountain-side. Nearer and nearer they came, and I heard merry laughing and shouting as they swept through the valley. I feared for a moment that they would find me there, and drive me, intruding, from the enchanted land.

But I must fathom the mystery, let what would come. I descended the tree, and when I had reached the boat again I found the whole thing changed. I understood that my city was only granite and fir-trees, and my music only the wind in the tree-tops. The reaction was sickening; the sunshine seemed dull and cold after the lost glory of that enchantment. The Blue Mountain was reached, its destiny fulfilled for me, and I returned to my camp, sick at heart, as one who has had a dear illusion dispelled.

The next day my mind was unusually calm and clear. I asked my dæmon what was the meaning of the enchantment of yesterday.

“It was a freak of your imagination,” it replied.

“But what is this imagination, then, which, being a faculty of my own, yet masters my reason?”

“Not at all a faculty, but your very highest self, your own life in creative activity. Your reason is a faculty, and is subordinate to the purposes of your imagination. If, instead of regarding imagination as a pendant to your mental organization, you take it for what it is, a function, and the noblest one your mind knows, you will see at once why it is that it works unconsciously, just as you live unconsciously and involuntarily. Men set their reason and feeling to subdue what they consider a treacherous element in themselves; they succeed only

in dwarfing their natures, and imagination is inert while reason controls; but when reason rests in sleep, and you cease to live to the external world, imagination resumes its normal power. You dream;—it is only the revival of that which you smother when you are awake. You consider the sights and sounds of yesterday follies; you reason;—imagination demonstrates its power by overturning your reason and deceiving your very senses.”

“You speak of its creations; I understand this in a certain sense; but if these were such, should not they have permanence? and can anything created perish?”

“Nonsense! what will these trees be to-morrow? and the rocks you sit on, are they not changing to vegetation under you? The only creation is that of ideas; things are thin shadows. If man is not creative, he is still undeveloped.”

“But is not such an assumption trenching on the supremacy of God?” I asked.

“What do you understand by ‘God?’”

“An infinitely wise and loving Controller of events, of course,” I replied.

“Did you ever find any one whose ideas on the subject agreed with yours?”

“Not entirely.”

“Then your God is not the same as the God of other men; from the Fee-Jeean to the Christian there is a wide range. Of course there is a first great principle of life; but this personality you all worship, is it not a creation?”

I now felt this to be the great point or the dæmon’s urging; it recurred too often not to be designed. Led on by the sophistry of my tempter, I had floated unconsciously to this issue, practically admitting all; but when this suggestion stood completely unclothed before me, my soul rose in horror at the abyss before it. For an instant all was chaos, and the very order of Nature seemed disorder. Life and light vanished from the face of the earth; my night made all things dead and dark. A universe without a God! Creation seemed to me for that moment but a galvanized corpse. What my emotions were no human being who has not felt them can conceive. My first impulse was to suicide; with the next I cried from the depths of my despair, “God deliver me from the body of this death!” It was but a moment,—and there came, in the place of the cold questioning voice of my dæmon, one of ineffable music, repeating words familiar to me from childhood, words linked to everything loved and lovely in my past:—“Ye believe in God, believe also in me.” The hot tears for another moment blotted out the world from sight. I said once more to the questioner, “Now who *are* you?”

“Your own doubts,” was the reply; and it seemed as if only I spoke to myself.

Since that day I have never reasoned with my doubts, never doubted my imagination.

ALL'S WELL.

SWEET-VOICED Hope, thy fine discourse

Foretold not half life's good to me;

Thy painter, Fancy, hath not force

To show how sweet it is to be!

Thy witching dream

And pictured scheme

To match the fact still want the power;

Thy promise brave

From birth to grave

Life's boon may beggar in an hour.

Ask and receive,—'tis sweetly said ;
 Yet what to plead for know I not ;
 For Wish is worsted, Hope o'ersped,
 And aye to thanks returns my thought.
 If I would pray,
 I've nought to say
 But this, that God may be God still ;
 For Him to live
 Is still to give,
 And sweeter than my wish his will.

O wealth of life beyond all bound !
 Eternity each moment given !
 What plummet may the Present sound ?
 Who promises a *future* heaven ?
 Or glad, or grieved,
 Oppressed, relieved,
 In blackest night, or brightest day,
 Still pours the flood
 Of golden good,
 And more than heartfull fills me aye.

My wealth is common ; I possess
 No petty province, but the whole ;
 What's mine alone is mine far less
 Than treasure shared by every soul.
 Talk not of store,
 Millions or more,—
 Of values which the purse may hold,—
 But this divine !
 -I own the mine
 Whose grains outweigh a planet's gold.

I have a stake in every star,
 In every beam that fills the day ;
 All hearts of men my coffers are,
 My ores arterial tides convey ;
 The fields, the skies,
 And sweet replies
 Of thought to thought are my gold-dust,—
 The oaks, the brooks,
 And speaking looks
 Of lovers' faith and friendship's trust.

Life's youngest tides joy-brimming flow
 For him who lives above all years,
 Who all-immortal makes the Now,
 And is not ta'en in Time's arrears
 His life's a hymn
 The seraphim
 Might hark to hear or help to sing,
 And to his soul

The boundless whole
Its bounty all doth daily bring.

"All mine is thine," the sky-soul saith;
"The wealth I am, must thou become:
Richer and richer, breath by breath,—
Immortal gain, immortal room!"
And since all his
Mine also is,
Life's gift outruns my fancies far,
And drowns the dream
In larger stream,
As morning drinks the morning-star.

THE BIRDS OF THE PASTURE AND FOREST.

HE who has always lived in the city or its suburbs, who has seldom visited the interior except for purposes of trade, and whose walks have not often extended beyond those roads which are bordered on each side by shops and dwelling-houses, may never have heard the birds that form the subject of this sketch. These are the birds of the pasture and forest,—those shy, melodious warblers, who sing only in the ancient haunts of the Dryads, and of those nymphs who waited upon Diana in her hunting-excursions, but who are now recognized only by the beautiful plants which, with unseen hands, they rear in the former abodes of the celestial huntress. These birds have not probably multiplied, like the familiar birds, with the increase of human population and the extension of agriculture. They were perhaps as numerous in the days of King Philip as they are now. Though they do not shun mankind, they keep aloof from cultivated grounds, living chiefly in the deep wood or on the edge of the forest, and in the bushy pasture.

There is a peculiar wildness in the songs of this class of birds, that awakens a delightful mood of mind, similar to that which is excited by reading the figurative lyrics of a romantic age. This feeling is, undoubtedly, to a certain extent, the effect of association. Having always heard their notes in rude, wild, and wood-

ed places, they never fail to bring this kind of scenery vividly before the imagination, and their voices affect us like the sounds of mountain-streams. There is a little Sparrow which I often hear about the shores of unfrequented ponds, and in their untrodden islets, and never in any other situations. The sound of his voice, therefore, always enhances the sensation of rude solitude with which I contemplate this wild and desolate scenery. We often see him perched upon a dead tree that stands in the water, a few rods from the shore, apparently watching our angling operations from his leafless perch, where he sings so sweetly, that the very desolation of the scene borrows a charm from his voice that renders every object delightful. This bird I believe to be the *Fringilla palustris* of Wilson.

It is certain that the notes of the solitary birds, compared with those of the Robin and Linnet, excite a different class of sensations. I can imagine that there is a similar difference in the flavors of a cherry and a cranberry. If the former is sweeter, the latter has a spicy zest that is peculiar to what we call natural fruit. The effect is the same, however, whether it be attributable to some intrinsic quality, or to association, which is indeed the source of some of the most delightful emotions of the human soul.

Nature has made all her scenes, and

the sights and sounds that accompany them, more lovely, by causing them to be respectively suggestive of a certain class of sensations. The birds of the pasture and forest are not frequent enough in cultivated places to be associated with the garden or village inclosure. Nature has confined particular birds and animals to certain localities, and thereby adds a poetic and a picturesque attraction to their features. There are also certain flowers that cannot be cultivated in the garden, as if they were designed for the exclusive adornment of those secluded arbors which the spade and the plough have never profaned. Here flowers grow which are too holy for culture, and birds sing whose voices were never heard in the cage of the voluptuary, and whose tones inspire us with a sense of freedom known only to those who often retire from the world, to live in religious communion with Nature.

When the flowers of early summer are gone, and the graceful neottia is seen in the meadows, extending its spiral clusters among the nodding grasses,—when the purple orchis is glowing in the wet grounds, and the roadsides are gleaming with the yellow blossoms of the hypericum, the merry voice of the Bobolink has ceased, and many other familiar birds have become almost silent. At this time, if we stroll away from the farm and the orchard into more retired and wooded haunts, we may hear, at all times of the day and at frequent intervals, the pensive and melodious notes of the Wood-Sparrow, who sings as if he were delighted at being left almost alone to warble and complain to the benevolent deities of the grove. He who in his youth has made frequent visits to these pleasant and solitary places, and wished that he could live and love forever among the wild-roses, the blushing azaleas, the red summer-lilies, and the thousands of beautiful and sweet-scented flowers that spring up among the various spicy and fruit-bearing shrubs which unite to form a genuine huckleberry-pasture,—he only knows the unspeakable delights which

are awakened by the sweet, simple notes of this little warbler.

The Wood-Sparrow (*Fringilla pusilla*) is somewhat less than a Canary, with a chestnut-colored crown; above of a grayish brown hue, and dusky white beneath. Though he does not seem to be a shy bird, I have never seen him in cultivated grounds, and the inmates of solitary cottages alone are privileged to hear his notes from their windows. He loves the hills which are half covered with young pines, viburnums, cornels, and huckleberry-bushes, and feeds upon the seeds of grasses and wild lettuce, with occasional repasts of insects and berries.

His notes are sweet and plaintive, seldom consisting of more than one strain. He commences slowly, as if repeating the syllable, *de de de de de d' d' d' d' d' d' d' r' r' r'*,—increasing in rapidity, and at the same time rising as it were by semitones, or chromatically, to about a major fourth on the scale. In midsummer, when this bird is most musical, he occasionally lengthens his song by alternately ascending and descending, interposing a few chirping notes between the ascending and descending series. The song loses a part of its simplicity, and, as it seems to me, is not improved by this variation.

While listening to the notes of the Wood-Sparrow, we are continually saluted by the agreeable, though less musical song of the Chewink, or Ground-Robin,—a bird that frequents similar places. This is a very beautiful bird, elegantly spotted with white, red, and black,—the female being of a bright bay color where the male is red. Every rambler knows him, not only by his plumage and his peculiar note, but also by his singular habit of lurking about among the bushes, appearing and disappearing like a squirrel, and watching all our movements. Though he does not avoid our company, it is with difficulty that a marksman can obtain a good aim at him, so rapidly does he change his position among the leaves and branches. In this habit he resembles the Wren. While we are watching his mo-

tions, he pauses in his song, and utters that peculiar note of complaint from which he has derived his name, *Chewink*, though the sound he utters is more like *che-wee*, accenting the second syllable.

The *Chewink* (*Fringilla erythrophthalma*) is a very constant singer during four months of the year, from the middle of April. He is very untiring in his lays, seldom resting for any considerable time from morning till night, being never weary in rain or in sunshine, or at noon-day in the hottest weather of the season. His song consists of two long notes, the first about a third above the second, and the last part is made up of several rapidly uttered notes about one tone below the first note.

There is an expression of great cheerfulness in these notes; but music, like poetry, must be somewhat plaintive in its character, to take strong hold of the feelings. I have never known a person to be affected by these notes as by those of the Wood-Sparrow. While engaged in singing, the *Chewink* is usually perched on the lower branch of a tree, near the edge of a wood, or on the top of a tall bush. He is a true forest-bird, and builds his nest in the thickets that conceal the boundaries of the wood.

The notes of the *Chewink* and his general appearance and habits are well calculated to render him conspicuous, and they cause him to be always noticed and remembered. Our birds are like our men of genius. As in the literary world there is a description of talent that must be discovered and pointed out by an observing few, before the great mass can understand it or even know its existence,—so the sweetest songsters of the wood are unknown to the mass of the community, while many very ordinary performers, whose talents are conspicuous, are universally known and admired.

As we advance into the wood, if it be near mid-day, or before the decline of the sun, the notes of two small birds will be sure to attract our attention. These notes are very similar, and as slender and piercing as the chirp of a grasshopper,

being distinguished from the latter only by a different and more pleasing modulation. The birds to which I refer are the Red Start (*Muscicapa ruticilla*) and the Speckled Creeper (*Sylvia varia*). The first is the more rarely seen of the two, being a bird of the deep forest, and shunning observation by hiding himself in the most obscure parts of the wood. In general appearance, and in the color of his plumage, he bears a resemblance to the Ground-Robin, though not more than half his size. He lives entirely on insects, catching them while they are flying in the air.

His song is similar to that of the Summer Yellow-Bird, so common in our gardens among the fruit-trees, but it is more shrill and feeble. The Creeper's song does not differ from it more than the songs of different individuals of the same species may differ. This bird may be seen creeping like a Woodpecker around the branches of trees, feeding upon the grubs and insects that are lodged upon the bark. He often leaves the forest, and may be seen busily searching the trees in the orchard and garden. The restless activity of the birds of this species affords a proof of the countless myriads of insects that must be destroyed by them in the course of one season,—insects which, if not kept in check by these and other small birds, would multiply to such an extreme as to render the earth uninhabitable by man.

While listening with close attention to the slender notes of either of the last-named birds, often hardly audible amidst the din of grasshoppers, the rustling of leaves, and the sighing of winds among the tall oaken boughs, suddenly the wood resounds with a loud, shrill song, like the sharpest notes of the Canary. The bird that startles one with this vociferous note is the Oven-Bird, (*Turdus aurocapillus*), or Golden-Crowned Thrush. It is the smallest of the Thrushes, is confined exclusively to the wood, and when singing is particularly partial to noon-day. There is no melody in his song. He begins rather low, increasing in loudness as he

proceeds, until the last notes are so loud as to seem almost in our immediate presence. He might be supposed to utter the words, *I see, I see, I see*, etc.,—emphasizing the first word, and repeating the words six or eight times, louder and louder with each repetition. No other bird equals this little Thrush in the emphasis with which he delivers his brief communication. His notes are associated with summer noon-days in the deep woods, and, when bursting upon the ear in the silence of noon, they disperse all melancholy thoughts, and inspire one with a vivid consciousness of life.

The most remarkable thing connected with the history of this bird is his oven-shaped nest. It is commonly placed on the ground, under a knoll of moss or a tuft of grass and bushes, and is formed almost entirely of long grass neatly woven. It is covered with a roof of the same materials, and a round opening is made at the side, for the bird's entrance. The nest is so ingeniously covered with grass and disguised with the appearance of the general surface around it, that it is very seldom discovered. The Cow-Bunting, however, is able to find it, and often selects it as a depository for its own eggs.

Those who are addicted to rambling in pursuit of natural curiosities may have observed that pine-woods are remarkable for certain collections of mosses which have cushioned a projecting rock or the decayed stump of a tree. When weary with heat and exercise, it is delightful to sit down upon one of these green velveted couches and take note of the objects immediately around us. We are then prepared to hear the least sound that invades our retreat. Some of the sweetest notes ever uttered in the wood are distinctly heard only at such times; for when we are passing over the rustling leaves, the noise made by our progress interferes with the perfect recognition of all delicate sounds. It was when thus reclining, after half a day's search for flowers, under the grateful shade of a pine tree, now watching the white clouds

that sent a brighter day-beam into these dark recesses, as they passed luminously overhead, and then noting the peculiar mapping of the grounds underneath the wood, diversified with mosses in swelling knolls, little islets of fern, and parterres of ginsengs and Solomon's-seals,—in one of these cloisters of the forest, I was first greeted by the pensive note of the Green Warbler, as he seemed to utter in supplicatory tones, very slowly modulated, "Hear me, Saint Theresa!" This strain, as I have observed many times since, is, at certain hours, repeated constantly for ten minutes at a time, and it is one of those melodious sounds that seem to belong exclusively to solitude.

The Green Warbler (*Sylvia virens*) is a small bird, and though his notes may be familiar to all who have been accustomed to strolling in the woods, the species is not numerous in Massachusetts, the greater number retiring farther north in the breeding-season. Nuttall remarks in reference to this bird, "His simple, rather drawling, and somewhat plaintive song, uttered at short intervals, resembled the syllables *'te dé terûsca*, sometimes *te derisca*, pronounced pretty loud and slow, and the tones proceeded from high to low. In the intervals, he was perpetually busied in catching small cynips, and other kinds of flies,—keeping up a smart snapping of his bill, almost similar to the noise made by knocking pebbles together." There is a plaintive expression in this musical supplication, that is apparent to all who hear it, no less than if the bird were truly offering prayers to some tutelary deity. It is difficult, in many cases, to determine why a certain combination of sounds should affect one with an emotion of sadness, while another, under the same circumstances, produces a feeling of joy. This is a part of the philosophy of music which has not been explained.

While treating of the Sylvias, I must not omit to notice one of the most important of the tribe, and one with which almost everybody is acquainted,—the Maryland Yellow-Throat (*Sylvia trichas*). This species is quite common and famil-

iar. He is most frequently seen in a willow-grove that borders a stream, or in the shrubbery of moist and low grounds. The angler is greeted by his notes on the rushy borders of a pond, and the botanist listens to them when hunting for those rose-plants that hide themselves under dripping rocks in some wooded ravine. The song of the Yellow-Throat resembles that of the Warbling Vireo, delivered with somewhat more precision, as if he were saying, *I see you, I see you, I see you*. His notes are simply lively and agreeable; there is nothing plaintive about them. The bird, however, is very attractive in his appearance, being of a bright olive-color above, with a yellow throat and breast, and a black band extending from the nostrils over the eye. This black band and the yellow throat are the marks by which he is most easily identified. The Yellow-Throat remains tuneful till near the last week in August.

But if we leave the wood while those above described are the only singing-birds we have heard, we have either returned too soon, or we did not penetrate deeply enough into the forest. The Wood-Sparrow prepared our ears for a concert more delightful than the Red Start or the Yellow-Throat are capable of presenting, and we have spent our time almost in vain, if we have not heard the song of the Wood-Thrush (*Turdus melodus*). His notes are not startling or conspicuous; some dull ears might not hear them, though poured forth only a few rods distant, if their attention were not directed to them. Yet they are loud, liquid, and sonorous, and they fail to attract attention only on account of the long pauses between the different strains. We must link all these strains together to enjoy the full pleasure which the song of this bird is capable of affording, though any single strain alone is sufficient to entitle the bird to considerable reputation as a songster.

The song of the Wood-Thrush consists of about eight or ten different strains, each of considerable length. After each

strain the bird makes a pause of about three or four seconds. I think the effect of this sylvan music is somewhat diminished by the length of the pauses or rests. It may be said, however, that during each pause our susceptibility is increased, and we are thus prepared to be more deeply affected by the next note. Whether the one or the other opinion be correct, it is certain that any one who stops to listen to this bird will become spellbound, and deaf to almost every other sound in the grove, as if his ears were enchained to the song of the Siren.

The Wood-Thrush sings at almost all hours of the day, though seldom after sunset. He delights in a dusky retreat, and is evidently inspired by solitude, singing no less in gloomy weather than in sunshine. Late in August, when other birds have mostly become silent, he is sometimes the only songster in the wood. There is a liquid sound in his tones that slightly resembles that of a glassichord; though in some parts of the country he has received the name of Fife-Bird, from the clearness of his intonations. By many persons this species is called the Hermit-Thrush.

The Veery (*Turdus Wilsonii*) has many habits like those of the Wood-Thrush, and some similarity of song. He is about the size of a Blue-Bird, and resembles the Red Thrush, except that the brown of his back is slightly tinged with olive. He arrives early in May, and is first heard to sing during some part of the second week of that month, when the song of the Bobolink commences. He is not one of our familiar birds; and unless we live in close proximity to a wood that is haunted by a stream, we shall never hear his voice from our doors or windows. He sings neither in the orchard, nor the garden, nor in the suburbs of the city. He shuns the exhibitions of art, and reserves his wild notes for those who frequent the inner sanctuary of the groves. All who have once become familiar with his song await his arrival with impatience, and take note of his silence in midsummer with regret.

Until this little bird has arrived, I always feel as an audience do at a concert, before the chief singer has made her appearance, while the other performers are vainly endeavoring to soothe them by their inferior attempts.

This bird is more retiring than any other important singing-bird, except the Wood-Thrush,—being heard only in solitary groves, and usually in the vicinity of a pond or stream. Here, especially after sunset, he pours forth his brilliant and melancholy strains with a peculiar cadence, and fills the whole forest with sound. It seems as if the echoes were delighted with his notes, and took pleasure in passing them round with multiplied reverberations. I am confident this bird refrains from singing when others are the most vocal, from the pleasure he feels in listening either to his own notes, or to the melodious responses which others of his own kindred repeat in different parts of the wood. Hence he chooses the dusk of evening for his vocal hour, when the little chirping birds are mostly silent, that their voices may not interrupt his chant. At this hour, during a period of nine or ten weeks, he charms the evening with his strains, and often prolongs them in still weather till after dusk, and whispers them sweetly into the ear of night.

No bird of his size has more strength of voice; but his song, though loud, is modulated with such a sweet and flowing cadence, that it comes to the ear with all the mellowness of the softest warbling. It would be difficult to describe his song. It seems at first to be wanting in variety. I was long of this opinion, though I was puzzled to account for its pleasing and extraordinary effect on the mind of the listener. The song of the Veery consists of five distinct strains or bars. They might, perhaps, be represented on the musical staff, by commencing the first note on D above the staff and sliding down with a trill to C, one fifth below. The second, third, fourth, and fifth bars are repetitions of the first, except that each commences and ends a few tones lower than the preceding.

Were we to attempt to perform these notes with an instrument adapted to the purpose, we should probably fail, from the difficulty of imitating the peculiar trilling of the notes, and the liquid ventriloquial sounds at the conclusion of each strain. The whole is warbled in such a manner as to produce upon the ear the effect of harmony. It seems as if we heard two or three concordant notes at the same moment. I have never noticed this effect in the song of any other bird. I should judge that it might be produced by the rapid descent from the commencing note of each strain to the last note about a fourth or fifth below, the latter being heard simultaneously with the reverberation of the first note.

Another remarkable quality of the song is a union of brilliancy and plain-tiveness. The first effect is produced by the commencing notes of each strain, which are sudden and on a high key; the second, by the graceful chromatic slide to the termination, which is inimitable and exceedingly solemn. I have sometimes thought that a part of the delightful influence of these notes might be attributable to the cloistered situations from which they were delivered. But I have occasionally heard them while the bird was singing from a tree in an open field, when they were equally pleasing and impressive. I am not peculiar in my admiration of this little songster. I have observed that people who are strangers to the woods, and to the notes of birds, are always attracted by the song of the Veery.

In my early days, when I was at school, I boarded in a house near a grove that was vocal with these Thrushes; and it was then I learned to love their song more than any other sound in Nature, and above the finest strains of artificial music. Since that time I have lived in town, apart from their sylvan retreats, which I have visited only during my hours of leisure; but I have seldom failed, each returning year, to make frequent visits to the wood to listen to their notes, which cause full half the pleasure

I derive from a summer-evening walk. If in any year I fail to hear the song of the Veery, I feel a painful sense of regret, as when I have missed an opportunity to see an absent friend, during a periodical visit.

The Veery is not one of our latest singers. His notes are not often heard after the middle of July.

We should not be obliged to penetrate the wood to learn the habits of another Thrush, not so remarkable for his musical powers as interesting on account of his manners. I allude to the Cat-Bird, (*Turdus felivox*), well known from his disagreeable habit of mewling like a kitten. He is most frequently seen on the edge of a wood, among the bushes that have come up, as it were, to hide its baldness and to harmonize it with the plain. He is usually attached to low, moist, and retired situations, though he is often very familiar in his habits. His nest of dry sticks is sometimes woven into a currant-bush in a garden that adjoins a wood, and his quaint voice may be heard there as in his own solitary haunts. The Cat-Bird is not an inveterate singer, and never seems to make music his employment, though at any hour of the day, from dawn until dusk in the evening, he may be heard occasionally singing and complaining.

Though I have been all my life familiar with the notes and manners of the Cat-Bird, I have not yet been able to discover that he is a mocker. He seems to me to have a definite song, unlike that of any other bird, except the Red Mavis,—not made up of parts of the songs of other birds, but as unique and original as that of the Song-Sparrow or the Robin. In the songs of all birds we may detect occasional strains that resemble parts of the song of some other species; but the Cat-Bird gives no more of these imitations than we might reasonably regard as accidental. The modulation of his song is somewhat similar to that of the Red Thrush, and it is sometimes difficult to determine, at first, when the bird is out of sight, whether we are listening to the

one or the other; but after a few seconds, we detect one of those quaint turns that distinguish the notes of the Cat-Bird. I never yet mistook the note of the Cat-Bird for that of any species except the Red Thrush. The truth is, that the Thrushes, though delightful songsters, possess inferior powers of execution, and cannot equal the Finches in their capacity of learning and performing the notes of other birds. Even the Mocking-Bird, as compared with many other species, is a very imperfect imitator of any notes which are difficult of execution.

The mewling note of the Cat-Bird, from which his name is derived, has been the occasion of many misfortunes to his species, causing them to share a portion of that contempt which almost every human being feels towards the feline race, and that contempt has been followed by persecution. The Cat-Bird has always been proscribed by the New England farmers, who from the first settlement of the country have entertained a prejudice against many of the most useful birds. The Robin and a few diminutive Fly-Catchers are almost the only exceptions. But the Robin is now in danger of proscription. Within a few years past, the horticulturists, who are unwilling to lose their cherries for the general benefit of agriculture, have made an effort to obtain an edict of outlawry against him, accusing him of being entirely useless to the farmer and the gardener. Their efforts have caused the friends of the Robin to examine his claims to protection, and the result of their investigations is demonstrative proof that the Robin is among the most useful birds in existence. The Cat-Bird and other Thrushes are similar in their habits of feeding and in their services to agriculture.

The Red Mavis (*Turdus rufus*) has many habits similar to those of the Cat-Bird, but he is not partial to low grounds. He is one of the most remarkable of the American birds, and is generally considered the finest songster in the New England forest. Nuttall says, "He is inferior only to the Mocking-Bird in musical tal-

ent"; but I should question his inferiority. He is superior to the Mocking-Bird in variety, and is surpassed by him only in the intonation of some of his notes. But no person is ever tired of listening to the Red Mavis, who constantly varies his song, while the Mocking-Bird tires us with his repetitions, which are often continued to a ludicrous extreme.

It is unfortunate that our ornithologists should, in any cases, have adopted the disagreeable names which our singularly unpoetical countrymen have given to the birds. The little Hair-Bird, for example, is called the "Chipping-Sparrow," as if he were in the habit of making chips, like the Carpenter-Bird; and the Red Thrush is called the "Thrasher," which is a low corruption of Thrush, and would signify that the bird had some peculiar habit of *threshing* with his wings. The word "chipping," when used for "chirping," is incorrect English; and "thrasher" is incorrect in point of fact. No such names should find sanction in books. Let us repudiate the name of "Thrasher" for the Red Thrush, as we would repudiate any other solecism.

The Red Mavis, or Thrush, is most musical in the early part of the season, when he first arrives, or in the month of May; the Veery is most vocal in June, and the Wood-Thrush in July; the Cat-Bird begins early and sings late, and fills out with his quaint notes the remainder of the singing season, after the others have become silent. When one is in a thoughtful mood, the songs of the Wood-Thrush and the Veery surpass all others in their delightful influence; and when I am strolling in the solitary pastures, it seems to me that nothing can exceed the simple melody of the Wood-Sparrow. But without claiming for the Red Thrush any remarkable power of exciting poetic inspiration, his song in the open field has a charm for all ears, and can be appreciated by the dullest of minds. Without singing badly, he pleases the millions. He sings occasionally at all hours of the day, and, when employed in singing, de-

votes himself entirely to song, with evident enthusiasm.

It would be difficult, either by word or by note, to give one who has never heard the song of the Red Thrush a correct idea of it. This bird is not a rapid singer. His performances seem to be a sort of *recitative*, often resembling spoken words, rather than musical notes, many of which are short and guttural! He seldom whistles clearly, like the Robin, but he produces a charming variety of tone and modulation. Thoreau, in one of his quaint descriptions, gives an off-hand sketch of the bird, which I will quote:—"Near at hand, upon the topmost spray of a birch, sings the Brown Thrasher, or Red Mavis, as some love to call him,—all the morning glad of your society, that would find out another farmer's field, if yours were not here. While you are planting the seed, he cries,—'Drop it, drop it,—cover it up, cover it up,—pull it up, pull it up, pull it up.'"

We have now left the forest and are approaching the cultivated grounds, under the shade of those fully expanded trees which have grown without restraint in the open field. Here as well as in the wood we find the Pewee, or Phœbe, (*Muscicapa nunciola*), one of our most common and interesting birds. He seems to court solitude, and his peculiar note harmonizes well with his obscure and shady retreats. He sits for the most part in the shade, catching his feast of insects without any noise, merely flitting from his perch, seizing his prey, and then resuming his station. This movement is performed in the most graceful manner, and he often turns a somerset, or appears to do so, if the insect at first evades his pursuit,—and he seldom fails in capturing it. All this is done in silence, for he is no singer. The only sounds he utters are an occasional clicking cherup, and now and then, with a plaintive cadence, he seems to speak the word *pewee*. As the male and female bird cannot be readily distinguished, I have not been able to determine whether this sound is uttered by both sexes, or by the male alone.

So plainly expressive of sadness is this peculiar note, that it is difficult to believe that the little being that utters it can be free from sorrow. Certainly he can have no congeniality of feeling with the sprightly Bobolink. Perhaps, with the rest of his species, he represents only the fragment of a superior race, which, according to the metempsychosis, have fallen from their original importance, and this melancholy note is but the partial utterance of sorrow that still lingers in their breasts after the occasion of it is forgotten.

Though a shy and retiring bird, the Pewee is known to almost every person, on account of its remarkable note. Like the swallow, he builds his nest under a sheltering roof or rock, and it is often fixed upon a beam or plank under a bridge that crosses a small stream. Near this place he takes his station, on the branch of a tree or the top of a fence, and sits patiently waiting for every moth, chafer, or butterfly that passes along. Fortunately, there are no prejudices existing in the community against this bird that provoke men to destroy him. As he is known to feed entirely on insects, he cannot be suspected of doing mischief on the farm or in the garden, and is considered worthy of protection.

I would remark in this place, that the Fly-Catchers and Swallows, and a few other species that enjoy an immunity in our land, would, though multiplied to infinity, perform only those offices which are assigned them by Nature. It is a vain hope that leads one to believe, while he is engaged in exterminating a certain species of small birds, that their places can be supplied and their services performed by other species which are allowed to multiply to excess. The preservation of every species of indigenous birds is the only means that can prevent the over-multiplication of injurious insects.

As we return homeward, we soon find ourselves surrounded by the familiar birds that shun the forest and assemble around the habitations of men. Among them the Blue-Bird meets our sight, upon the

roofs and fences as well as in the field and orchard. At the risk of introducing him into a company to which he does not strictly belong, I will attempt in this place to describe some of his habits. The Blue-Bird (*Sylvia sialis*) arrives very early in spring, and is detained late in the autumn by his habit of raising two or more broods of young in the season. He is said to bear a strong resemblance to the English Robin-Redbreast, being similar in form and size, each having a red breast and short tail-feathers, with only this manifest difference, that one is olive-colored above where the other is blue. But the Blue-Bird does not equal the Redbreast as a songster. His notes are few, not greatly varied, though melodious and sweetly and plaintively modulated, and never loud. On account of their want of variety, they do not enchain a listener, but they constitute a delightful part in the woodland melodies of morn.

The importance of the inferior singers in making up a general chorus is not always appreciated. In an artificial musical composition, as in an oratorio or an anthem, though there is a leading part, which is commonly the air, that gives character to the whole, yet this principal part would often be a very indifferent piece of melody, if performed without its accompaniments. These accompaniments by themselves would seem still more unimportant and trifling. Yet if the composition be the work of a master, however trifling and comparatively insignificant these brief strains or snatches, they are intimately connected with the harmony of the piece, and could not be omitted without a serious derangement of the grand effect. The inferior singing-birds, on the same principle, are indispensable as aids in giving additional effect to the notes of the chief singers.

Though the Robin is the principal musician in the general orison of dawn, his notes would become tiresome, if heard without accompaniments. Nature has so arranged the harmony of this chorus, that one part shall assist another; and so exquisitely has she combined all the differ-

ent voices, that the silence of any one can never fail to be immediately perceived. The low, mellow warble of the Blue-Bird seems a sort of echo to the louder voice of the Robin; and the incessant trilling or running accompaniment of the Hair-Bird, the twittering of the Swallow, and the loud and melodious piping of the Oriole, frequent and short, are sounded like the different parts of a regular band of instruments, and each performer seems to time his part as if by design. Any discordant sound, that may happen to be made in the midst of this performance, never fails to disturb the equanimity of the singers, and some minutes must elapse before they recommence their parts.

It would be difficult to draw a correct comparison between the different birds and the various instruments in an orchestra. It would be more easy to signify them by notes on the gamut. But if the Robin were supposed to represent the German flute, the Blue-Bird might be considered as the flageolet, frequently, but not incessantly, interposing a few mellow strains, the Swallow and the Hair-Bird the octave flute, and the Golden Robin the bugle, sounding occasionally a low but brief strain. The analogy could not be carried farther without losing force and correctness.

All the notes of the Blue-Bird—his call-notes, his notes of alarm, his chirp, and his song—are equally plaintive, and closely resemble each other. I am not aware that this bird ever utters a harsh note. His voice, which is one of the earliest to be heard in the spring, is associated with the early flowers and with all pleasant vernal influences. When he first arrives, he perches upon the roof of a barn or upon some still leafless tree, and pours forth his few and frequent notes with evident fervor, as if conscious of the delights that await him. These mellow notes are all the sounds he utters for several weeks, seldom chirping, crying, or scolding like other birds. His song is discontinued in the latter part of summer; but his peculiar plaintive call, consisting of a single note pen-

sively modulated, continues all day, until the time of frost. This sound is one of the melodies of summer's decline, and reminds us, like the notes of the green nocturnal grasshopper, of the fall of the leaf, the ripened harvest, and all the melancholy pleasures of autumn.

The Blue-Bird builds his nest in hollow trees and posts, and may be encouraged to breed and multiply around our habitations, by erecting boxes for his accommodation. In whatever vicinity we may reside, whether in the clearing or in the heart of the village, if we set up a little bird-house in May, it will certainly be occupied by a Blue-Bird, unless preoccupied by a bird of some other species. There is commonly so great a demand for such accommodations among the feathered tribes, that it is not unusual to see birds of several different species contending for the possession of one box.

After the middle of August, as a new race of winged creatures awake into life, the birds, who sing of the seed-time, the flowers, and of the early summer harvests, give place to the inferior band of insect-musicians. The reed and the pipe are laid aside, and myriads of little performers have taken up the harp and the lute, and make the air resound with the clash and din of their various instruments. An anthem of rejoicing swells up from myriads of unseen harpists, who heed not the fate that awaits them, but make themselves merry in every place that is visited by sunshine or the south-wind. The golden-rod sways its beautiful nodding plumes in the borders of the fields and by the rustic roadsides; the purple gerardia is bright in the wet meadows, and the scarlet lobelia in the channels of the sunken streamlets. But the birds heed them not; for these are not the wreaths that decorate the halls of their festivities. Since the rose and the lily have faded, they have ceased to be tuneful; some, like the Bobolink, assemble in small companies, and with a melancholy chirp seem to mourn over some sad accident that has befallen them;

others still congregate about their usual resorts, and seem almost like strangers in the land.

Nature provides inspiration for every sentiment that contributes to the happiness of man, as she provides sustenance for his various physical wants. But all is not gladness that elevates the soul into bliss; we may be made happy by sentiments that come not from rejoicing, even from objects that awaken tender recollections of sorrow. As if Nature designed that the soul of man should find sympathy, in all its healthful moods, from the voices of her creatures, and from the sounds of inanimate objects, she has provided that all seasons should pour into his ear some pleasant intimations of heav-

en. In autumn, when the harvest-hymn of the day-time has ceased, at early night-fall, the green nocturnal grasshoppers commence their autumnal dirge, and fill the mind with a keen sense of the rapid passing of time. These sounds do not sadden the mind, but deepen the tone of our feelings, and prepare us for a renewal of cheerfulness, by inspiring us with the poetic sentiment of melancholy. This sombre state of the mind soon passes away, effaced by the exhilarating influence of the clear skies and invigorating breezes of autumn, and the inspiring sounds of myriads of chirping insects that awake with the morning and make all the meadows resound with the shout of their merry voices.

SONG OF THE WOOD-SPARROW.

NOTE.—In the early part of the season the song ends with the first double bar; later in the season it is extended, in frequent instances, as in the notes that follow.

SONG OF THE CHEWINK.

SONG OF THE GREEN WARBLER.

SONG OF THE WOOD-THRUSH.

too too tillere lere too tillere tillere

too issele issele tse se se se s s s s se

too tillery tillery oo villill villill too too illery lery

eh villia villia villia tse tse s s s s s s s s se

too tillere tillere oo airree eh etc

Norw.—I have not been able to detect any order in the succession of these strains, though some order undoubtedly exists, and might be discovered by long-continued observation. The intervals in the above sketch cannot be given with exactness.

SONG OF THE VEERY.

e-e ve re a e-e vere a e-e vere a e-e vere vere ill lily

or,

e villia villia villia villia ve rehu.

Norw.—I am far from being satisfied with the above representation of the song of the Veery, in which there are certain trilling and liquid sounds that hardly admit of notation.

SONG OF THE RED MAVIS.

drop it drop it cover it up cover it up

pull it up pull it up pull it up tut tut tut see see see there you have it hae it hae it

see tut tut tut work away work away drop it drop it cover it up cover it up. etc.

NOTE.—The Red Mavis makes a short pause at the end of each bar. These pauses are irregular in time, and cannot be correctly noted.

NOTE OF THE PEWEE.

pe - a - wee pe - a - wee.

SONG OF THE BLUE-BIRD.

THE MINISTER'S WOOING.

CHAPTER I.

MRS. KATY SCUDDER had invited Mrs. Brown, and Mrs. Jones, and Deacon Twitchel's wife to take tea with her on the afternoon of June second, A. D. 17—.

When one has a story to tell, one is always puzzled which end of it to begin at. You have a whole corps of people to introduce that *you* know and your reader doesn't; and one thing so presupposes another, that, whichever way you turn your patchwork, the figures still seem ill-arranged. The small item that I have given will do as well as any other to begin with, as it certainly will lead you to ask, "Pray, who was Mrs. Katy Scudder?"—and this will start me systematically on my story.

You must understand that in the then small seaport-town of Newport, at that time unconscious of its present fashion and fame, there lived nobody in those days who did not know "the Widow Scudder."

In New England settlements a custom has obtained, which is wholesome and touching, of ennobling the woman whom God has made desolate, by a sort of brevet rank which continually speaks for her as a claim on the respect and consideration of the community. The Widow Jones, or Brown, or Smith, is one of the fixed institutions of every New England village,—and doubtless the designation acts as a continual plea for one whom bereavement, like the lightning of heaven, has made sacred.

The Widow Scudder, however, was one of the sort of women who reign queens in whatever society they move in; nobody was more quoted, more deferred to, or enjoyed more unquestioned position than she. She was not rich,—a small farm, with a modest, "gambrel-roofed," one-story cottage, was her sole domain; but she was one of the much-admired class who, in the speech of New England, are said to have "faculty,"—a

gift which, among that shrewd people, commands more esteem than beauty, riches, learning, or any other worldly endowment. *Faculty* is Yankee for *savoir faire*, and the opposite virtue to shiftlessness. Faculty is the greatest virtue, and shiftlessness the greatest vice, of Yankee man and woman. To her who has faculty nothing shall be impossible. She shall scrub floors, wash, wring, bake, brew, and yet her hands shall be small and white; she shall have no perceptible income, yet always be handsomely dressed; she shall have not a servant in her house,—with a dairy to manage, hired men to feed, a boarder or two to care for, unheard-of pickling and preserving to do,—and yet you commonly see her every afternoon sitting at her shady parlor-window behind the lilacs, cool and easy, hemming muslin, cap-strings, or reading the last new book. She who hath faculty is never in a hurry, never behindhand. She can always step over to distressed Mrs. Smith, whose jelly won't come,—and stop to show Mrs. Jones how she makes her pickles so green,—and be ready to watch with poor old Mrs. Simpkins, who is down with the rheumatism.

Of this genus was the Widow Scudder,—or, as the neighbors would have said of her, she that *was* Katy Stephens. Katy was the only daughter of a shipmaster, sailing from Newport harbor, who was wrecked off the coast one cold December night and left small fortune to his widow and only child. Katy grew up, however, a tall, straight, black-eyed girl, with eyebrows drawn true as a bow, a foot arched like a Spanish woman's, and a little hand which never saw the thing it could not do,—quick of speech, ready of wit, and, as such girls have a right to be, somewhat positive withal. Katy could harness a chaise, or row a boat; she could saddle and ride any horse in the neighborhood; she could cut any garment that ever was seen or thought of; make cake,

jelly, and wine, from her earliest years, in most precocious style;—all without seeming to derange a sort of trim, well-kept air of ladyhood that sat jauntily on her.

Of course, being young and lively, she had her admirers, and some well-to-do in worldly affairs laid their lands and houses at Katy's feet; but, to the wonder of all, she would not even pick them up to look at them. People shook their heads, and wondered whom Katy Stephens expected to get, and talked about going through the wood to pick up a crooked stick,—till one day she astonished her world by marrying a man that nobody ever thought of her taking.

George Scudder was a grave, thoughtful young man,—not given to talking, and silent in the society of women, with that kind of reverential bashfulness which sometimes shows a pure, unworldly nature. How Katy came to fancy him everybody wondered,—for he never talked to her, never so much as picked up her glove when it fell, never asked her to ride or sail; in short, everybody said she must have wanted him from sheer wilfulness, because he of all the young men of the neighborhood never courted her. But Katy, having very sharp eyes, saw some things that nobody else saw. For example, you must know she discovered by mere accident that George Scudder always was looking at her, wherever she moved, though he looked away in a moment, if discovered,—and that an accidental touch of her hand or brush of her dress would send the blood into his cheek like the spirit in the tube of a thermometer; and so, as women are curious, you know, Katy amused herself with investigating the causes of these little phenomena, and, before she knew it, got her foot caught in a cobweb that held her fast, and constrained her, whether she would or no, to marry a poor man that nobody cared much for but herself.

George was, in truth, one of the sort who evidently have made some mistake in coming into this world at all, as their internal furniture is in no way suited

to its general courses and currents. He was of the order of dumb poets,—most wretched when put to the grind of the hard and actual, for if he who would utter poetry stretches out his hand to a gainsaying world, he is worse off still who is possessed with the desire of living it. Especially is this the case, if he be born poor, and with a dire necessity upon him of making immediate efforts in the hard and actual. George had a helpless invalid mother to support; so, though he loved reading and silent thought above all things, he put to instant use the only convertible worldly talent he possessed, which was a mechanical genius, and shipped at sixteen as a ship-carpenter. He studied navigation in the fore-castle, and found in its calm diagrams and tranquil eternal signs food for his thoughtful nature, and a refuge from the brutality and coarseness of sea-life. He had a healthful, kindly animal nature, and so his inwardness did not ferment and turn to Byronic sourness and bitterness; nor did he needlessly parade to everybody in his vicinity the great gulf which lay between him and them. He was called a good fellow,—only a little lumpish,—and as he was brave and faithful, he rose in time to be a shipmaster. But when came the business of making money, the aptitude for accumulating, George found himself distanced by many a one with not half his general powers.

What shall a man do with a sublime tier of moral faculties, when the most profitable business out of his port is the slave-trade? So it was in Newport in those days. George's first voyage was on a slaver, and he wished himself dead many a time before it was over,—and ever after would talk like a man beside himself, if the subject was named. He declared that the gold made in it was distilled from human blood, from mothers' tears, from the agonies and dying groans of gasping, suffocating men and women, and that it would sear and blister the soul of him that touched it; in short, he talked as whole-souled unpractical fellows are apt

to talk about what respectable people sometimes do. Nobody had ever instructed him that a slave-ship, with a procession of expectant sharks in its wake, is a missionary institution, by which closely-packed heathens are brought over to enjoy the light of the gospel.

So, though George was acknowledged to be a good fellow, and honest as the noon-mark on the kitchen floor, he let slip so many chances of making money as seriously to compromise his reputation among thriving folks. He was wastefully generous,—insisted on treating every poor dog that came in his way, in any foreign port, as a brother,—absolutely refused to be party in cheating or deceiving the heathen on any shore, or in skin of any color,—and also took pains, as far as in him lay, to spoil any bargains which any of his subordinates founded on the ignorance or weakness of his fellow-men. So he made voyage after voyage, and gained only his wages and the reputation among his employers of an incorruptibly honest fellow.

To be sure, it was said that he carried out books in his ship, and read and studied, and wrote observations on all the countries he saw, which Parson Smith told Miss Dolly Persimmon would really do credit to a printed book; but then they never *were* printed, or, as Miss Dolly remarked of them, they never seemed to come to anything,—and coming to anything, as she understood it, meant standing in definite relations to bread and butter.

George never cared, however, for money. He made enough to keep his mother comfortable, and that was enough for him, till he fell in love with Katy Stephens. He looked at her through those glasses which such men carry in their souls, and she was a mortal woman no longer, but a transfigured, glorified creature,—an object of awe and wonder. He was actually afraid of her; her glove, her shoe, her needle, thread, and thimble, her bonnet-string, everything, in short, she wore or touched, became invested with a mysterious charm. He wondered at the im-

pudence of men that could walk up and talk to her,—that could ask her to dance with such an assured air. *Now* he wished he were rich; he dreamed impossible chances of his coming home a millionaire to lay unknown wealth at Katy's feet; and when Miss Persimmon, the ambulatory dress-maker of the neighborhood, in making up a new black gown for his mother, recounted how Captain Blatherem had sent Katy Stephens "most the splendidest India shawl that ever she did see," he was ready to tear his hair at the thought of his poverty. But even in that hour of temptation he did not repent that he had refused all part and lot in the ship by which Captain Blatherem's money was made, for he knew every timber of it to be seasoned by the groans and saturated with the sweat of human agony. True love is a natural sacrament; and if ever a young man thanks God for having saved what is noble and manly in his soul, it is when he thinks of offering it to the woman he loves. Nevertheless, the India-shawl story cost him a night's rest; nor was it till Miss Persimmon had ascertained, by a private confabulation with Katy's mother, that she had indignantly rejected it, and that she treated the Captain "real ridiculous," that he began to take heart. "He ought not," he said, "to stand in her way now, when he had nothing to offer. No, he would leave Katy free to do better, if she could; he would try his luck, and if, when he came home from the next voyage, Katy was disengaged, why, then he would lay all at her feet."

And so George was going to sea with a secret shrine in his soul, at which he was to burn unsuspected incense.

But, after all, the mortal maiden whom he adored suspected this private arrangement, and contrived—as women will—to get her own key into the lock of his secret temple; because, as girls say, "she was *determined* to know what was there." So, one night, she met him quite accidentally on the sea-sands, struck up a little conversation, and begged him in

such a pretty way to bring her a spotted shell from the South Sea like the one on his mother's mantel-piece, and looked so simple and childlike in saying it, that our young man very imprudently committed himself by remarking, that, "When people had rich friends to bring them all the world from foreign parts, he never dreamed of her wanting so trivial a thing."

Of course Katy "didn't know what he meant,—she hadn't heard of any rich friends." And then came something about Captain Blatherem; and Katy tossed her head, and said, "If anybody wanted to insult her, they might talk to her about Captain Blatherem,"—and then followed this, that, and the other, till finally, as you might expect, out came all that never was to have been said; and Katy was almost frightened at the terrible earnestness of the spirit she had evoked. She tried to laugh, and ended by crying, and saying she hardly knew what; but when she came to herself in her own room at home, she found on her finger a ring of African gold that George had put there, which she did not send back like Captain Blatherem's presents.

Katy was like many intensely matter-of-fact and practical women, who have not in themselves a bit of poetry or a particle of ideality, but who yet worship these qualities in others with the homage which the Indians paid to the unknown tongue of the first whites. They are secretly weary of a certain conscious dryness of nature in themselves, and this weariness predisposes them to idolize the man who brings them this unknown gift. Naturalists say that every defect of organization has its compensation, and men of ideal natures find in the favor of women the equivalent for their disabilities among men.

Do you remember, at Niagara, a little cataract on the American side, which throws its silver sheeny veil over a cave called the Grot of Rainbows? Whoever stands on a rock in that grotto sees himself in the centre of a rainbow-circle, above, below, around. In like manner, merry, chatty, positive, busy, housewifely

Katy saw herself standing in a rainbow-shrine in her lover's inner soul, and liked to see herself so. A woman, by-the-by, must be very insensible, who is not moved to come upon a higher plane of being, herself, by seeing how undoubtingly she is insphered in the heart of a good and noble man. A good man's faith in you, fair lady, if you ever have it, will make you better and nobler even before you know it.

Katy made an excellent wife; she took home her husband's old mother and nursed her with a dutifulness and energy worthy of all praise, and made her own keen outward faculties and deft handiness a compensation for the defects in worldly estate. Nothing would make Katy's black eyes flash quicker than any reflections on her husband's want of luck in the material line. "She didn't know whose business it was, if *she* was satisfied. She hated these sharp, gimlet, gouging sort of men that would put a screw between body and soul for money. George had that in him that nobody understood. She would rather be his wife on bread and water than to take Captain Blatherem's house, carriages, and horses, and all,—and she *might* have had 'em fast enough, dear knows. She was sick of making money when she saw what sort of men could make it,"—and so on. All which talk did her infinite credit, because *at bottom* she *did* care, and was naturally as proud and ambitious a little minx as ever breathed, and was thoroughly grieved at heart at George's want of worldly success; but, like a nice little Robin Redbreast, she covered up the grave of her worldliness with the leaves of true love, and sung a "Who cares for that?" above it.

Her thrifty management of the money her husband brought her soon bought a snug little farm, and put up the little brown gambrel-roofed cottage to which we directed your attention in the first of our story. Children were born to them, and George found, in short intervals between voyages, his home an earthly paradise. He was still sailing, with

the fond illusion, in every voyage, of making enough to remain at home,—when the yellow fever smote him under the line, and the ship returned to Newport without its captain.

George was a Christian man;—he had been one of the first to attach himself to the unpopular and unworldly ministry of the celebrated Dr. H., and to appreciate the sublime ideality and unselfishness of those teachings which then were awakening new sensations in the theological mind of New England. Katy, too, had become a professor with her husband in the same church, and his death, in the midst of life, deepened the power of her religious impressions. She became absorbed in religion, after the fashion of New England, where devotion is doctrinal, not ritual. As she grew older, her energy of character, her vigor and good judgment, caused her to be regarded as a mother in Israel; the minister boarded at her house, and it was she who was first to be consulted in all matters relating to the well-being of the church. No woman could more manfully breast a long sermon, or bring a more determined faith to the reception of a difficult doctrine. To say the truth, there lay at the bottom of her doctrinal system this stable corner-stone,—“Mr. Scudder used to believe it,—I will.” And after all that is said about independent thought, isn't the fact, that a just and good soul has thus or thus believed, a more respectable argument than many that often are adduced? If it be not, more's the pity,—since two-thirds of the faith in the world is built on no better foundation.

In time, George's old mother was gathered to her son, and two sons and a daughter followed their father to the invisible,—one only remaining of the flock, and she a person with whom you and I, good reader, have joint concern in the further unfolding of our story.

CHAPTER II.

As I before remarked, Mrs. Katy Scudder had invited company to tea. Strictly

speaking, it is necessary to begin with the creation of the world, in order to give a full account of anything. But, for popular use, something less may serve one's turn, and therefore I shall let the past chapter suffice to introduce my story, and shall proceed to arrange my scenery and act my little play on the supposition that you know enough to understand things and persons.

Being asked to tea in our New England in the year 17— meant something very different from the same invitation in our more sophisticated days. In those times, people held to the singular opinion, that the night was made to sleep in; they inferred it from a general confidence they had in the wisdom of Mother Nature, supposing that she did not put out her lights and draw her bed-curtains and hush all noise in her great world-house without strongly intending that her children should go to sleep; and the consequence was, that very soon after sunset the whole community very generally set their faces bedward, and the tolling of the nine-o'clock evening-bell had an awful solemnity in it, sounding to the full. Good society in New England in those days very generally took its breakfast at six, its dinner at twelve, and its tea at six. “Company tea,” however, among thrifty, industrious folk, was often taken an hour earlier, because each of the *invitées* had children to put to bed, or other domestic cares at home, and, as in those simple times people were invited because you wanted to see them, a tea-party assembled themselves at three and held session till sundown, when each matron rolled up her knitting-work and wended soberly home.

Though Newport, even in those early times, was not without its families which affected state and splendor, rolled about in carriages with armorial emblazonments, and had servants in abundance to every turn within-doors, yet there, as elsewhere in New England, the majority of the people lived with the wholesome, thrifty simplicity of the olden time, when labor and intelligence went hand in hand,

in perhaps a greater harmony than the world has ever seen.

Our scene opens in the great old-fashioned kitchen, which, on ordinary occasions, is the family dining and sitting-room of the Scudder family. I know fastidious moderns think that the working-room, wherein are carried on the culinary operations of a large family, must necessarily be an untidy and comfortless sitting-place; but it is only because they are ignorant of the marvellous workings which pertain to the organ of "faculty," on which we have before insisted. The kitchen of a New England matron was her throne-room, her pride; it was the habit of her life to produce the greatest possible results there with the slightest possible discomposure; and what any woman could do, Mrs. Katy Scudder could do *par excellence*. Everything there seemed to be always done and never doing. Washing and baking, those formidable disturbers of the composure of families, were all over with in those two or three morning-hours when we are composing ourselves for a last nap,—and only the fluttering of linen over the green yard, on Monday mornings, proclaimed that the dreaded solemnity of a wash had transpired. A breakfast arose there as by magic; and in an incredibly short space after, every knife, fork, spoon, and trencher, clean and shining, was looking as innocent and unconscious in its place as if it never had been used and never expected to be.

The floor,—perhaps, Sir, you remember your grandmother's floor, of snowy boards sanded with whitest sand; you remember the ancient fireplace stretching quite across one end,—a vast cavern, in each corner of which a cozy seat might be found, distant enough to enjoy the crackle of the great jolly wood-fire; across the room ran a dresser, on which was displayed great store of shining pewter dishes and plates, which always shone with the same mysterious brightness; and by the side of the fire, a commodious wooden "settee," or settle, offered repose to people too little accustomed to luxury to ask

for a cushion. Oh, that kitchen of the olden times, the old, clean, roomy New England kitchen!—who that has breakfasted, dined, and supped in one has not cheery visions of its thrift, its warmth, its coolness? The noon-mark on its floor was a dial that told of some of the happiest days; thereby did we right up the shortcomings of the solemn old clock that tick-tacked in the corner, and whose ticks seemed mysterious prophecies of unknown good yet to arise out of the hours of life. How dreamy the winter twilight came in there,—as yet the candles were not lighted,—when the crickets chirped around the dark stone hearth, and shifting tongues of flame flickered and cast dancing shadows and elfish lights on the walls, while grandmother nodded over her knitting-work, and puss purred, and old Rover lay dreamily opening now one eye and then the other on the family group! With all our ceiled houses, let us not forget our grandmothers' kitchens!

But we must pull up, however, and back to our subject-matter, which is in the kitchen of Mrs. Katy Scudder, who has just put into the oven, by the fireplace, some wondrous tea-rusks, for whose composition she is renowned. She has examined and pronounced perfect a loaf of cake, which has been prepared for the occasion, and which, as usual, is done exactly right. The best room, too, has been opened and aired,—the white window-curtains saluted with a friendly little shake, as when one says, "How d'ye do?" to a friend;—for you must know, clean as our kitchen is, we are genteel, and have something better for company. Our best room in here has a polished little mahogany tea-table, and six mahogany chairs, with claw talons grasping balls; the white sanded floor is crinkled in curious little waves, like those on the sea-beach; and right across the corner stands the "buffet," as it is called, with its transparent glass doors, wherein are displayed the solemn appurtenances of company tea-table. There you may see a

set of real China teacups, which George bought in Canton, and had marked with his and his wife's joint initials,—a small silver cream-pitcher, which has come down as an heirloom from unknown generations,—silver spoons and delicate China cake-plates, which have been all carefully reviewed and wiped on napkins of Mrs. Scudder's own weaving.

Her cares now over, she stands drying her hands on a roller-towel in the kitchen, while her only daughter, the gentle Mary, stands in the doorway with the afternoon sun streaming in spots of flickering golden light on her smooth pale-brown hair,—a *petite* figure in a full stuff petticoat and white short gown, she stands reaching up one hand and cooing to something among the apple-blossoms,—and now a Java dove comes whirring down and settles on her finger,—and we, that have seen pictures, think, as we look on her girlish face, with its lines of statuesque beauty, on the tremulous, half-infantile expression of her lovely mouth, and the general air of simplicity and purity, of some old pictures of the girlhood of the Virgin. But Mrs. Scudder was thinking of no such Popish matter, I can assure you,—not she! I don't think you could have done her a greater indignity than to mention her daughter in any such connection. She had never seen a painting in her life, and therefore was not to be reminded of them; and furthermore, the dove was evidently, for some reason, no favorite,—for she said, in a quick, imperative tone, "Come, come, child! don't fool with that bird,—it's high time we were dressed and ready,"—and Mary, blushing, as it would seem, even to her hair, gave a little toss, and sent the bird, like a silver fluttering cloud, up among the rosy apple-blossoms. And now she and her mother have gone to their respective little bedrooms for the adjustment of their toilettes, and while the door is shut and nobody hears us, we shall talk to you about Mary.

Newport at the present day blooms like a flower-garden with young ladies of the best *ton*,—lovely girls, hopes of their

families, possessed of amiable tempers and immensely large trunks, and capable of sporting ninety changes of raiment in thirty days and otherwise rapidly emptying the purses of distressed fathers, and whom yet travellers and the world in general look upon as genuine specimens of the kind of girls formed by American institutions.

We fancy such a one lying in a rustling silk *négligée*, and, amid a gentle generality of rings, ribbons, puffs, laces, beaux, and dinner-discussion, reading our humble sketch;—and what favor shall our poor heroine find in her eyes? For though her mother was a world of energy and "faculty," in herself considered, and had bestowed on this one little lone chick all the vigor and all the care and all the training which would have sufficed for a family of sixteen, there were no results produced which could be made appreciable in the eyes of such company. She could not waltz or polk, or speak bad French or sing Italian songs; but, nevertheless, we must proceed to say what was her education and what her accomplishments.

Well, then, she could both read and write fluently in the mother-tongue. She could spin both on the little and the great wheel, and there were numberless towels, napkins, sheets, and pillow-cases in the household store that could attest the skill of her pretty fingers. She had worked several samplers of such rare merit, that they hung framed in different rooms of the house, exhibiting every variety and style of possible letter in the best marking-stitch. She was skilful in all sewing and embroidery, in all shaping and cutting, with a quiet and deft handiness that constantly surprised her energetic mother, who could not conceive that so much could be done with so little noise. In fact, in all household lore she was a veritable good fairy; her knowledge seemed unerring and intuitive; and whether she washed or ironed, or moulded biscuit or conserved plums, her gentle beauty seemed to turn to poetry all the prose of life.

There was something in Mary, however, which divided her as by an appreciable line from ordinary girls of her age. From her father she had inherited a deep and thoughtful nature, predisposed to moral and religious exaltation. Had she been born in Italy, under the dissolving influences of that sunny, dreamy clime, beneath the shadow of cathedrals, and where pictured saints and angels smiled in clouds of painting from every arch and altar, she might, like fair St. Catherine of Siena, have seen beatific visions in the sunset skies, and a silver dove descending upon her as she prayed; but, unfolding in the clear, keen, cold New England clime, and nurtured in its abstract and positive theologies, her religious faculties took other forms. Instead of lying entranced in mysterious raptures at the foot of altars, she read and pondered treatises on the Will, and listened in rapt attention while her spiritual guide, the venerated Dr. H., unfolded to her the theories of the great Edwards on the nature of true virtue. Womanlike, she felt the subtle poetry of these sublime abstractions which dealt with such infinite and unknown quantities,—which spoke of the universe, of its great Architect, of man, of angels, as matters of intimate and daily contemplation; and her teacher, a grand-minded and simple-hearted man as ever lived, was often amazed at the tread with which this fair young child walked through these high regions of abstract thought,—often comprehending through an ethereal clearness of nature what he had laboriously and heavily reasoned out; and sometimes, when she turned her grave, childlike face upon him with some question or reply, the good man started as if an angel had looked suddenly out upon him from a cloud. Unconsciously to himself, he often seemed to follow her, as Dante followed the flight of Beatrice, through the ascending circles of the celestial spheres.

When her mother questioned him, anxiously, of her daughter's spiritual estate, he answered, that she was a child of a

strange graciousness of nature, and of a singular genius; to which Katy responded, with a woman's pride, that she was all her father over again. It is only now and then that a matter-of-fact woman is sublimated by a real love; but if she is, it is affecting to see how impossible it is for death to quench it; for in the child the mother feels that she has a mysterious and undying repossession of the father.

But, in truth, Mary was only a recast in feminine form of her father's nature. The elixir of the spirit that sparkled within her was of that quality of which the souls of poets and artists are made; but the keen New England air crystallizes emotions into ideas, and restricts many a poetic soul to the necessity of expressing itself only in practical living.

The rigid theological discipline of New England is fitted to produce rather strength and purity than enjoyment. It was not fitted to make a sensitive and thoughtful nature happy, however it might ennoble and exalt.

The system of Dr. H. was one that could have had its origin in a soul at once reverential and logical,—a soul, moreover, trained from its earliest years in the habits of thought engendered by monarchical institutions. For although he, like other ministers, took an active part as a patriot in the Revolution, still he was brought up under the shadow of a throne, and a man cannot ravel out the stitches in which early days have knit him. His theology was, in fact, the turning to an invisible Sovereign of that spirit of loyalty and unquestioning subjugation which is one of the noblest capabilities of our nature. And as a gallant soldier renounces life and personal aims in the cause of his king and country, and holds himself ready to be drafted for a forlorn hope, to be shot down, or help make a bridge of his mangled body, over which the more fortunate shall pass to victory and glory, so he regarded himself as devoted to the King Eternal, ready in His hands to be used to illustrate and build up an Eternal Commonwealth,

either by being sacrificed as a lost spirit or glorified as a redeemed one, ready to throw not merely his mortal life, but his immortality even, into the forlorn hope, to bridge with a never-dying soul the chasm over which white-robed victors should pass to a commonwealth of glory and splendor whose vastness should dwarf the misery of all the lost to an infinitesimal.

It is not in our line to imply the truth or the falsehood of those systems of philosophic theology which seem for many years to have been the principal outlet for the proclivities of the New England mind, but as psychological developments they have an intense interest. He who does not see a grand side to these strivings of the soul cannot understand one of the noblest capabilities of humanity.

No real artist or philosopher ever lived who has not at some hours risen to the height of utter self-abnegation for the glory of the invisible. There have been painters who would have been crucified to demonstrate the action of a muscle,—chemists who would gladly have melted themselves and all humanity in their crucible, if so a new discovery might arise out of its fumes. Even persons of mere artistic sensibility are at times raised by music, painting, or poetry to a momentary trance of self-oblivion, in which they would offer their whole being before the shrine of an invisible loveliness. These hard old New England divines were the poets of metaphysical philosophy, who built systems in an artistic fervor, and felt self exhale from beneath them as they rose into the higher regions of thought. But where theorists and philosophers tread with sublime assurance, woman often follows with bleeding footsteps;—women are always turning from the abstract to the individual, and feeling where the philosopher only thinks.

It was easy enough for Mary to believe in *self-renunciation*, for she was one with a born vocation for martyrdom; and so, when the idea was put to her of suffering eternal pains for the glory of God and the good of being in general, she

responded to it with a sort of sublime thrill, such as it is given to some natures to feel in view of uttermost sacrifice. But when she looked around on the warm, living faces of friends, acquaintances, and neighbors, viewing them as possible candidates for dooms so fearfully different, she sometimes felt the walls of her faith closing round her as an iron shroud,—she wondered that the sun could shine so brightly, that flowers could flaunt such dazzling colors, that sweet airs could breathe, and little children play, and youth love and hope, and a thousand intoxicating influences combine to cheat the victims from the thought that their next step might be into an abyss of horrors without end. The blood of youth and hope was saddened by this great sorrow, which lay ever on her heart,—and her life, unknown to herself, was a sweet tune in the minor key; it was only in prayer, or deeds of love and charity, or in rapt contemplation of that beautiful millennial day which her spiritual guide most delighted to speak of, that the tone of her feelings ever rose to the height of joy.

Among Mary's young associates was one who had been as a brother to her childhood. He was her mother's cousin's son,—and so, by a sort of family immunity, had always a free access to her mother's house. He took to the sea, as the most bold and resolute young men will, and brought home from foreign parts those new modes of speech, those other eyes for received opinions and established things, which so often shock established prejudices,—so that he was held as little better than an infidel and a castaway by the stricter religious circles in his native place. Mary's mother, now that Mary was grown up to woman's estate, looked with a severe eye on her cousin. She warned her daughter against too free an association with him,—and so ——— We all know what comes to pass when girls are constantly warned not to think of a man. The most conscientious and obedient little person in the world, Mary resolved to be very careful. She never

would think of James, except, of course, in her prayers; but as these were constant, it may easily be seen it was not easy to forget him.

All that was so often told her of his carelessness, his trifling, his contempt of orthodox opinions, and his startling and bold expressions, only wrote his name deeper in her heart,—for was not his soul in peril? Could she look in his frank, joyous face and listen to his thoughtless laugh, and then think that a fall from mast-head, or one night's storm, might—Ah, with what images her faith filled the blank! Could she believe all this and forget him?

You see, instead of getting our tea ready, as we promised at the beginning of this chapter, we have filled it with descriptions and meditations,—and now we foresee that the next chapter will be equally far from the point. But have patience with us; for we can write only as we are driven, and never know exactly where we are going to land.

CHAPTER III.

A QUIET, maiden-like place was Mary's little room. The window looked out under the overarching boughs of a thick apple-orchard, now all in a blush with blossoms and pink-tipped buds, and the light came golden-green, strained through flickering leaves,—and an ever-gentle rustle and whirr of branches and blossoms, a chitter of birds, and an indefinite whispering motion, as the long heads of orchard-grass nodded and bowed to each other under the trees, seemed to give the room the quiet hush of some little side-chapel in a cathedral, where green and golden glass softens the sunlight, and only the sigh and rustle of kneeling worshippers break the stillness of the aisles. It was small enough for a nun's apartment, and dainty in its neatness as the waxen cell of a bee. The bed and low window were draped in spotless white, with fringes of Mary's own knotting. A small table under the looking-glass bore the library of a well-taught young woman of those

times. "The Spectator," "Paradise Lost," Shakspeare, and "Robinson Crusoe" stood for the admitted secular literature, and beside them the Bible and the works then published of Mr. Jonathan Edwards. Laid a little to one side, as if of doubtful reputation, was the only novel which the stricter people in those days allowed for the reading of their daughters: that seven-volumed, trailing, tedious, delightful old bore, "Sir Charles Grandison,"—a book whose influence in those times was so universal, that it may be traced in the epistolary style even of the gravest divines. Our little heroine was mortal, with all her divinity, and had an imagination which sometimes wandered to the things of earth; and this glorious hero in lace and embroidery, who blended rank, gallantry, spirit, knowledge of the world, disinterestedness, constancy, and piety, sometimes walked before her, while she sat spinning at her wheel, till she sighed, she hardly knew why, that no such men walked the earth now. Yet it is to be confessed, this occasional raid of the romantic into Mary's balanced and well-ordered mind was soon energetically put to rout, and the book, as we have said, remained on her table under protest,—protected by being her father's gift to her mother during their days of courtship. The small looking-glass was curiously wreathed with corals and foreign shells, so disposed as to indicate an artistic eye and skilful hand; and some curious Chinese paintings of birds and flowers gave rather a piquant and foreign air to the otherwise homely neatness of the apartment.

Here in this little retreat Mary spent those few hours which her exacting conscience would allow her to spare from her busy-fingered household-life; here she read and wrote and thought and prayed;—and here she stands now, arraying herself for the tea company that afternoon. Dress, which in our day is becoming in some cases the whole of woman, was in those times a remarkably simple affair. True, every person of a certain degree of respectability had state and festival robes;

and a certain camphor-wood brass-bound trunk, which was always kept solemnly locked in Mrs. Katy Scudder's apartment, if it could have spoken, might have given off quite a catalogue of brocade satin and laces. The wedding-suit there slumbered in all the unsullied whiteness of its stiff ground brodered with heavy knots of flowers; and there were scarfs of wrought India muslin and embroidered crape, each of which had its history,—for each had been brought into the door with beating heart on some return voyage of one who, alas, should return no more! The old trunk stood with its histories, its imprisoned remembrances,—and a thousand tender thoughts seemed to be shaping out of every rustling fold of silk and embroidery, on the few yearly occasions when all were brought out to be aired, their history related, and then solemnly locked up again. Nevertheless, the possession of these things gave to the women of an establishment a certain innate dignity, like a good conscience; so that in that larger portion of existence commonly denominated among them “every day,” they were content with plain stuff and homespun. Mary's toilette, therefore, was sooner made than those of Newport belles of the present day; it simply consisted in changing her ordinary “short gown and petticoat” for another of somewhat nicer materials,—a skirt of India chintz and a striped jaeconet short-gown. Her hair was of the kind which always lies like satin; but, nevertheless, girls never think their toilette complete unless the smoothest hair has been shaken down and rearranged. A few moments, however, served to braid its shining folds and dispose them in their simple knot on the back of the head; and having given a final stroke to each side with her little dimpled hands, she sat down a moment at the window, thoughtfully watching where the afternoon sun was creeping through the slats of the fence in long lines of gold among the tall, tremulous orchard-grass, and unconsciously she began warbling, in a low, gurgling voice, the words of a familiar hymn, whose grave

earnestness accorded well with the general tone of her life and education:—

“Life is the time to serve the Lord,
The time to insure the great reward.”

There was a swish and rustle in the orchard-grass, and a tramp of elastic steps; then the branches were brushed aside, and a young man suddenly emerged from the trees a little behind Mary. He was apparently about twenty-five, dressed in the holiday rig of a sailor on shore, which well set off his fine athletic figure, and accorded with a sort of easy, dashing, and confident air which sat not unhandsomely on him. For the rest, a high forehead shaded by rings of the blackest hair, a keen, dark eye, a firm and determined mouth, gave the impression of one who had engaged to do battle with life, not only with a will, but with shrewdness and ability.

He introduced the colloquy by stepping deliberately behind Mary, putting his arms round her neck, and kissing her.

“Why, James!” said Mary, starting up, and blushing. “Come, now!”

“I have come, haven't I?” said the young man, leaning his elbow on the window-seat and looking at her with an air of comic determined frankness, which yet had in it such wholesome honesty that it was scarcely possible to be angry. “The fact is, Mary,” he added, with a sudden earnest darkening of the face, “I won't stand this nonsense any longer. Aunt Katy has been holding me at arm's length ever since I got home; and what have I done? Haven't I been to every prayer-meeting and lecture and sermon, since I got into port, just as regular as a psalm-book? and not a bit of a word could I get with you, and no chance even so much as to give you my arm. Aunt Kate always comes between us and says, ‘Here, Mary, you take my arm.’ What does she think I go to meeting for, and almost break my jaws keeping down the gapes? I never even go to sleep, and yet I'm treated in this way! It's too bad! What's the row? What's anybody been saying about me? I always have waited

on you ever since you were that high. Didn't I always draw you to school on my sled? didn't we always use to do our sums together? didn't I always wait on you to singing-school? and I've been made free to run in and out as if I were your brother;—and now she is as glum and stiff, and always stays in the room every minute of the time that I am there, as if she was afraid I should be in some mischief. It's too bad!"

"Oh, James, I am sorry that you only go to meeting for the sake of seeing me; you feel no real interest in religious things; and besides, mother thinks now I'm grown so old, that— Why, you know things are different now,—at least, we mustn't, you know, always do as we did when we were children. But I wish you did feel more interested in good things."

"I *am* interested in one or two good things, Mary,—principally in you, who are the best I know of. Besides," he said quickly, and scanning her face attentively to see the effect of his words, "don't you think there is more merit in my sitting out all these meetings, when they bore me so confoundedly, than there is in your and Aunt Katy's doing it, who really seem to find something to like in them? I believe you have a sixth sense, quite unknown to me; for it's all a maze,—I can't find top, nor bottom, nor side, nor up, nor down to it,—it's you can and you can't, you shall and you sha'n't, you will and you won't;"—

"James!"

"You needn't look at me so. I'm not going to say the rest of it. But, seriously, it's all anywhere and nowhere to me; it don't touch me, it don't help me, and I think it rather makes me worse; and then they tell me it's because I'm a natural man, and the natural man understandeth not the things of the Spirit. Well, I *am* a natural man,—how's a fellow to help it?"

"Well, James, why need you talk everywhere as you do? You joke, and jest, and trifle, till it seems to everybody that you don't believe in anything. I'm afraid mother thinks you are an infidel, but I

know that can't be; yet we hear of all sorts of things that you say."

"I suppose you mean my telling Deacon Twitchel that I had seen as good Christians among the Mahometans as any in Newport. Didn't I make him open his eyes? It's true, too!"

"In every nation, he that feareth God and worketh righteousness is accepted of Him," said Mary; "and if there are better Christians than us among the Mahometans, I am sure I'm glad of it. But, after all, the great question is, 'Are we Christians ourselves?' Oh, James, if you only were a real, true, noble Christian!"

"Well, Mary, you have got into that harbor, through all the sandbars and rocks and crooked channels; and now do you think it right to leave a fellow beating about outside, and not go out to help him in? This way of drawing up, among you good people, and leaving us sinners to ourselves, isn't generous. You might care a little for the soul of an old friend, anyhow!"

"And don't I care, James? How many days and nights have been one prayer for you! If I could take my hopes of heaven out of my own heart and give them to you, I would. Dr. H. preached last Sunday on the text, 'I could wish myself accursed from Christ for my brethren, my kinsmen'; and he went on to show how we must be willing to give up even our own salvation, if necessary, for the good of others. People said it was hard doctrine, but I could feel my way through it very well. Yes, I would give my soul for yours; I wish I could."

There was a solemnity and pathos in Mary's manner which checked the conversation. James was the more touched because he felt it all so real, from one whose words were always yea and nay, so true, so inflexibly simple. Her eyes filled with tears, her face kindled with a sad earnestness, and James thought, as he looked, of a picture he had once seen in a European cathedral, where the youthful Mother of Sorrows is represented,

"Radiant and grave, as pitying man's decline;
All youth, but with an aspect beyond time."

Mournful, but mournful of another's crime;
 She looked as if she sat by Eden's door,
 And grieved for those who should return no
 more."

James had thought he loved Mary; he had admired her remarkable beauty, he had been proud of a certain right in her before that of other young men, her associates; he had thought of her as the keeper of his home; he had wished to appropriate her wholly to himself;—but in all this there had been, after all, only the thought of what she was to be to him; and this, for this poor measure of what he called love, she was ready to offer, an infinite sacrifice.

As a subtle flash of lightning will show in a moment a whole landscape, tower, town, winding stream, and distant sea, so that one subtle ray of feeling seemed in a moment to reveal to James the whole of his past life; and it seemed to him so poor, so meagre, so shallow, by the side of that childlike woman, to whom the noblest of feelings were unconscious matters of course, that a sort of awe awoke in him; like the Apostles of old, he "feared as he entered into the cloud"; it seemed as if the deepest string of some eternal sorrow had vibrated between them.

After a moment's pause, he spoke in a low and altered voice:—

"Mary, I am a sinner. No psalm or sermon ever taught it to me, but I see it now. Your mother is quite right, Mary; you are too good for me; I am no mate for you. Oh, what would you think of me, if you knew me wholly? I have lived a mean, miserable, shallow, unworthy life. You are worthy, you are a saint, and walk in white! Oh, what upon earth could ever make you care so much for me?"

"Well, then, James, you will be good? Won't you talk with Dr. H.?"

"Hang Dr. H.!" said James. "Now, Mary, I beg your pardon, but I can't make head or tail of a word Dr. H. says. I don't get hold of it, or know what he would be at. You girls and women don't know your power. Why, Mary, you are a living gospel. You have al-

ways had a strange power over us boys. You never talked religion much, but I have seen high fellows come away from being with you as still and quiet as one feels when one goes into a church. I can't understand all the hang of predestination, and moral ability, and natural ability, and God's efficiency, and man's agency, which Dr. H. is so engaged about; but I can understand *you*,—*you* can do me good!"

"Oh, James, can I?"

"Mary, I'm going to confess my sins. I saw, that, somehow or other, the wind was against me in Aunt Katy's quarter, and you know we fellows who take up the world in both fists don't like to be beat. If there's opposition, it sets us on. Now I confess I never did care much about religion, but I thought, without being really a hypocrite, I'd just let you try to save my soul for the sake of getting you; for there's nothing surer to hook a woman than trying to save a fellow's soul. It's a dead-shot, generally, that. Now our ship sails to-night, and I thought I'd just come across this path in the orchard to speak to you. You know I used always to bring you peaches and juneatings across this way, and once I brought you a ribbon."

"Yes, I've got it yet, James."

"Well, now, Mary, all this seems mean to me,—mean, to try and trick and snare you, who are so much too good for me. I felt very proud this morning that I was to go out first mate this time, and that I should command a ship next voyage. I meant to have asked you for a promise, but I don't. Only, Mary, just give me your little Bible, and I'll promise to read it all through soberly, and see what it all comes to. And pray for me; and if, while I'm gone, a good man comes who loves you, and is worthy of you, why, take him, Mary,—that's my advice."

"James, I am not thinking of any such things; I don't ever mean to be married. And I'm glad you don't ask me for any promise,—because it would be wrong to give it; mother don't even like me to be

much with you. But I'm sure all I have said to you to-day is right; I shall tell her exactly all I have said."

"If Aunt Katy knew what things we fellows are pitched into, who take the world headforemost, she wouldn't be so selfish. Mary, you girls and women don't know the world you live in; you ought to be pure and good; you are not as we are. You don't know what men, what women,—no, they're not women!—what creatures, beset us in every foreign port, and boarding-houses that are gates of hell; and then, if a fellow comes back from all this and don't walk exactly straight, you just draw up the hems of your garments and stand close to the wall, for fear he should touch you when he passes. I don't mean you, Mary, for you are different from most; but if you would do what you could, you might save us.—But it's no use talking, Mary.

Give me the Bible; and please be kind to my dove,—for I had a hard time getting him across the water, and I don't want him to die."

If Mary had spoken all that welled up in her little heart at that moment, she might have said too much; but duty had its habitual seal upon her lips. She took the little Bible from her table and gave it with a trembling hand, and James turned to go. In a moment he turned back, and stood irresolute.

"Mary," he said, "we are cousins; I may never come back; you might kiss me this once."

The kiss was given and received in silence, and James disappeared among the thick trees.

"Come, child," said Aunt Katy, looking in, "there is Deacon Twitchel's chaise in sight,—are you ready?"

"Yes, mother."

[To be continued.]

THE AUTOCRAT GIVES A BREAKFAST TO THE PUBLIC.

BEFORE my friend the Professor takes his place at our old table, where, Providence permitting, he means to wish you all a happy New Year on or about the First of January next, I wish you to do me the favor of being my guests at the table which you see spread before you.

This table is a very long one. Legs in every Atlantic and inland city,—legs in California and Oregon,—legs on the shores of 'Quoddy and of Lake Pontchartrain,—legs everywhere, like a millipede or a banian-tree.

The schoolmistress that was,—and is,—(there are her little scholars at the side-table,)—shall pour out coffee or tea for you as you like.

Sit down and make yourselves comfortable.—A teaspoon, my dear, for Minnesota.—Sacramento's cup is out.

Bridget has become a thought, and serves us a great deal faster than the sticky lightning of the submarine *par vagum*, as the Professor calls it.—Pepper for Kansas, Bridget.—A sandwich for Cincinnati.—Rolls and sardines for Washington.—A bit of the Cape Ann turkey for Boston.—South Carolina prefers dark meat.—Fifty thousand glasses of *eau sucrée* at once, and the rest simultaneously.—Now give us the nude mahogany, that we may talk over it.—Bridget becomes a mighty wind and peels off the immeasurable table-cloth as a northwester strips off the leafy damask from the autumn woods.

[At this point of the entertainment the Reporter of the "Oceanic Miscellany" was introduced, and to his fluent and indefatigable pen we owe the further

account of the proceedings.—*Editors of the "Oceanic Miscellany."*]

—The liberal and untiring editors of the "Oceanic Miscellany" commissioned their special reporter to be present at the Great Breakfast given by the personage known as the Autocrat of the Breakfast-Table, furnishing him with one of the *caput-mortuum* tickets usually distributed on such occasions.

The tables groaned with the delicacies of the season, provided by the distinguished caterers whose names are familiar in our mouths as household words. After the usual contest for places,—a proceeding more honored in the breach than the observance,—the band discoursed sweet music. The creature comforts were then discussed, consisting of the various luxuries that flesh is heir to, together with fish and fowl, too numerous to mention. After the material banquet had cloyed the hungry edge of appetite, began the feast of reason and the flow of soul. As, take him for all in all, the bright particular star of the evening was the distinguished individual who played the part of mine host, we shall make no apology for confining our report to the

SPEECH OF THE AUTOCRAT.

I THINK on the whole we have had a good time together, since we became acquainted. So many pleasant looks and words as have passed between us must mean something. For one person who speaks well or ill of us we may safely take it for granted that there are ten or a hundred, or an indefinite number, who feel in the same way, but are shy of talking.

Now the first effect of being kindly received is unquestionably a pleasing internal commotion, out of which arises a not less pleasing secondary sensation, which the unthinking vulgar call conceit, but which is in reality an increased consciousness of life, and a most important part of the mechanism by which a

man is advertised of his ability to serve his fellows, and stirred up to use it.

In the present instance, the immediate effects of the warm general welcome received were the following demonstrations:—

1. The purchase of a glossy bell-crowned hat, which is worn a little inclined to one side, at the angle of self-reliance,—this being a very slight dip, as compared to the outrageous slant of country dandies and the insolent obliquity indulged in by a few unpleasantly conspicuous city youth, who prove that "it takes three generations to make a gentleman."

2. A movement towards the acquisition of a pair of pantaloons with a stripe running down the leg; also of a slender canary-colored cane, to be carried as formerly in the time when Mr. Van Buren was President.—[*A mild veto from the schoolmistress was interposed.*]

3. A manifest increase of that *monstraridigitativeness*,—if you will permit the term,—which is so remarkable in literary men, that, if public opinion allowed it, some of them would like to wear a smart uniform, with an author's button, so that they might be known and hailed everywhere.

4. An undeniable aggravation of the natural tendency to caress and cosset such products of the writer's literary industry as have met with special favor. This is shown by a willingness to repeat any given stanza, a line of which is referred to, and a readiness to listen to even exaggerated eulogy with a twinkling stillness of feature and inclination of the titillated ear to the operator, such as the Mexican Peccary is said to show when its dorsal surface is gently and continuously irritated with the pointed extremity of a reed or of a magnolia-branch. What other people think well of, we certainly have a right to like, ourselves.

All this self-exaltation, which some folks make so much scandal of, is the most natural thing in the world when one gets an over-dose of fair words. The more I reflect upon it, the more I am

convinced that it is well for a man to think too highly of himself while he is in the working state. Sydney Smith could discover no relation between Modesty and Merit, excepting that they both began with an M. Considered simply as a machine out of which work is to be got, the wheels of intellect run best when they are kept well oiled by the public and the publisher.

Therefore, my friends, if any of you have uttered words of kindness, of flattery, of extreme over-praise, even, let me thank you for it. Criticism with praise in it is azotized food; it makes muscle; to expect a man to write without it is like giving nothing but hay to a roadster and expecting to get ten miles an hour out of him. A young fellow cannot be asked to go on making love forever, if he does not get a smile now and then to keep hope alive. The truth is, Bridget would have whisked off the table-cloth and given notice of quitting, and the whole establishment would have gone to pieces at the end of No. 1, if you had not looked so very good-natured about it that it was impossible to give up such amiable acquaintance.

The above acknowledgments and personal revelations are preliminary to the following more general statement, which will show how they must be qualified.

Every man of sense has two ways of looking at himself. The first is an everyday working view, in which he makes the most of his gifts and accomplishments. It is the superficial stratum in which praise and blame find their sphere of action,—the region of comparisons,—the habitat where envy and jealousy are to be looked for, if they have not been weeded out and flung into the compost-heap of dead vices, with which, if we understand moral husbandry, we fertilize our living virtues. It is quite foolish to abuse this thin upper layer of our mental soil. The grasses do not strike their roots deep in towards the centre, like the oaks, but they are the more useful and necessary vegetable of the two. The cheap, but perpetual activities of life

grow out of this upper stratum of our being. How silly to try to be wiser than Providence! Don't tell me about the vain illusions of self-love. There is nothing so real in this world as Illusion. All other things may desert a man, but this fair angel never leaves him. She holds a star a billion miles over a baby's head, and laughs to see him clawing and battling himself as he tries to reach it. She glides before the hoary sinner down the path which leads to the inexorable gate, jingling the keys of heaven at her girdle.

Underneath this surface-soil lies another stratum of thought, where the tap-roots of the larger mental growths penetrate and find their nourishment. Out of this comes heroism in all its shapes; here the enterprises that overshadow half the planet, when full grown, lie, tender, in their cotyledons. Here there is neither praise nor blame,—nothing but a passionless self-estimate, quite as willing to undervalue as to rate too highly. The less clay and straw the task-master has given his servant, the smaller the tale of bricks he will be required to furnish. Many a man not remarkable for conceit has shuddered as some effort or accident has revealed to him a depth of power of which he never thought himself the possessor and broken his peace with the fatal words, "Sleep no more!"

This deeper self-appreciation is a slow and gradual process. At first, a child thinks he can do everything. I remember when I thought I could lift a house, if I would only try hard enough. So I began with the hind wheel of a heavy old family-coach, built like that in which my Lady Bountiful carried little King Pippin, if you happen to remember the illustrations of that story. I lifted with all my might, and the planet pulled down with all its might. The planet beat. After that, my ideas of the difference between my will and my muscular force were more accurately defined. Then came the illusion, that I could, of course, "lick," "serve out," or "polish off," various small boys who had been or might be obnoxious to me. The event of the dif-

ferent "set-tos" to which this hypothesis led not uniformly confirming it, another limitation of my possibilities was the consequence. In this way I groped along into a knowledge of my physical relations to the organic and inorganic universe,

A man must be very stupid indeed, if, by the time he is fully ripened, he does not know tolerably well what his physical powers are. His weight, his height, his general development, his constitutional force, his good or ill looks, he has had time to find out; and he is a fool, if he does not carry a reasonable consciousness of these conditions with him always. It is a little harder with the mind; but some qualities are generally estimated fairly enough by their owners. Thus, a man may be trusted when he says he has a good or a bad memory. Not so of his opinion of his own judgment or imagination. It is only by a very slow process that he finds out how much or how little of these qualities he possesses. But it is one of the blessed privileges of growing older, that we come to have a much clearer sense of what we can do and what we cannot, and settle down to our work quietly, knowing what our tools are and what we have to do with them.

Therefore, my friends, if I should at any time put on any airs on the strength of your good-natured treatment, please to remember that these are only the growth of that thin upper stratum of character I was telling you of. I conceive that the fact of a man's coming out in a book or two, even supposing them to have a success such as I should never think of, is to the sum total of that man's life and character as the bed of tulips and hyacinths you may see in spring, at the feet of the "Great Elm," on our Boston Common, is to the solemn old tree itself. The serene, strong life, reaching deep underground and high overhead, robed itself in April and disrobed itself in October when the Common was a cow-pasture, and observes the same seasons now that the old tree is belted with an iron girdle and finds its feet covered with flowers. Alas! my friends, the fence and the tulips are pain-

fully suggestive. Authorship is an iron girdle, and the blossoms of flattery that are scattered at its feet are useful to it only as their culture keeps the soil open to the sun and rain. No man can please the reading public ever so little without being too highly commended for it in the heat of the moment; and so, if he thinks of starting again for the prize of public approbation, he finds himself heavily handicapped, and perhaps weighted down, simply because he has made good running for some former stakes.

I don't like the position of my friend the Professor. I consider him fully as good a man as myself.—I have, you know, often referred to him and quoted him, and sometimes got so mixed up with him, that, like the Schildbürgers at their town-meeting, I was puzzled to disentangle my own legs from his, when I wanted to stand up by myself, they were got into such a snarl together.—But I don't like the position of my friend the Professor.

The first thing, of course, when he opens his mouth, will be to compare him with his predecessor. Now, if he has the least tact in the world, he will begin dull, so as to leave a wide margin for improvement. You may be perfectly certain that he can talk and write just as well as I can; but you don't think, surely, that he is going to begin where I left off. Not unless we are to have a wedding in the first number;—and you are not sure whether or not there is to be any wedding at all while the Professor holds my seat at the table.

But I will tell you one thing,—if you sit a year or so at a long table, you will see what life is. Christenings, weddings, funerals,—these are the three legs it stands on; and you have a chance to see them all in a twelvemonth, if the table is really a long one. I don't doubt the Professor will have something to tell besides his opinions and fancies; and if you like a book of thoughts with occasional incidents, as well as a book of incidents with occasional thoughts, why, I see no reason why you should not accept this talk of the Professor's as kindly as if it

had a fancy name and called itself a novel.

Life may be divided into two periods,—the hours of taking food, and the intervals between them,—or, technically, into the *alimentary* and the *non-alimentary* portions of existence. Now our social being is so intensified during the first of these periods, that whoso should write the history of a man's breakfasts or dinners or suppers would give a perfect picture of his most important social qualities, conditions, and actions, and might omit the non-alimentary portion of his life altogether from consideration. Thus I trust that the breakfasts of which you have had some records have given you a pretty clear idea, not only of myself, but of those more interesting friends and fellow-boarders of mine to whom I have introduced you, and with some of whom, in company with certain new acquaintances, my friend the Professor will keep you in relation during the following year. So you see that over the new table-cloth which is going to be spread there may very possibly be a new drama of life enacted; but all that, if it should be so, is incidental and by the way;—for what the Professor wishes particularly to do, and means to do, is to talk about life and men and things and books and thoughts; but if there should be anything better than talk occurring before his eyes, either at the small world of the breakfast-table or in the greater world without, he holds himself at liberty to relate it or discourse upon it.

I suppose the Professor will receive a good many letters, as I did, containing suggestions, counsel, and articles in prose and verse for publication. He desires me to state that he is very happy to hear from known and unknown friends, provided they will not mistake him for an editor, and will not be offended if their communications are not made the subject of individual notice. There may be times when, having nothing to say, he will be very glad to print somebody's note or copy of verses; I don't think it very likely; for life is short, and the world

is brimful, and rammed down hard, with strange things worth seeing and telling, and Mr. Worcester's great Quarto Dictionary is soon coming out, crammed with all manner of words to talk with,—so that the Professor will probably find little room, except for an answer to a question now and then, or the acknowledgment of some hint he may have thought worth taking.

—The speaker shut himself off like a gas-burner at this point, and the company soon dispersed. I sauntered down to the landlady's, and obtained from her the following production from the papers left by the gentleman, whose pen, ranging from grave to gay, from lively to severe, has held the mirror up to Nature, and given the form and pressure of his thoughts and feelings for the benefit of the numerous and constantly-increasing multitudes of readers of the "Oceanic Miscellany," a journal which has done and is doing so much for the gratification and improvement of the masses.

A Poem from the Autocrat's Loose Papers.

[I find the following note written in pencil on the MSS.—*Reporter Oc. Misc.*]

This is a true story. Avis, Avise, or Avice, (they pronounce it *Avvis*), is a real breathing person. Her home is not more than an hour and a half's space from the palaces of the great ladies who might like to look at her. They may see her and the little black girl she gave herself to, body and soul, when nobody else could bear the sight of her infirmity,—leaving home at noon, or even after breakfast, and coming back in season to undress for the evening's party.

AVIS.

I MAY not rightly call thy name,—
Alas! thy forehead never knew
The kiss that happier children claim,
Nor glistened with baptismal dew.

Daughter of want and wrong and woe,
I saw thee with thy sister-band,
Snatched from the whirlpool's narrowing flow
By Mercy's strong yet trembling hand.

—"Avis!"—With Saxon eye and cheek,
At once a woman and a child,
The saint uncrowned I came to seek
Drew near to greet us,—spoke and smiled.

God gave that sweet sad smile she wore
All wrong to shame, all souls to win,—
A heavenly sunbeam sent before
Her footsteps through a world of sin.

—"And who is Avis?"—Hear the tale
The calm-voiced matrons gravely tell,—
The story known through all the vale
Where Avis and her sisters dwell.

With the lost children running wild,
Strayed from the hand of human care,
They find one little refuse child
Left helpless in its poisoned lair.

The primal mark is on her face,—
The chattel-stamp,—the pariah-stain
That follows still her hunted race,—
The curse without the crime of Cain.

How shall our smooth-turned phrase relate
The little suffering outcast's ail?
Not Lazarus at the rich man's gate
So turned the rose-wreathed revellers pale.

Ah, veil the living death from sight
That wounds our beauty-loving eye!
The children turn in selfish fright,
The white-lipped nurses hurry by.

Take her, dread Angel! Break in love
This bruised reed and make it thine!—
No voice descended from above,
But Avis answered, "She is mine."

The task that dainty menials spurn
The fair young girl has made her own;
Her heart shall teach, her hand shall learn
The toils, the duties yet unknown.

So Love and Death in lingering strife
Stand face to face from day to day,
Still battling for the spoil of Life
While the slow seasons creep away.

Love conquers Death; the prize is won;
See to her joyous bosom pressed
The dusky daughter of the sun,—
The bronze against the marble breast!

Her task is done; no voice divine
Has crowned her deed with saintly fame;
No eye can see the aureole shine
That rings her brow with heavenly flame.

Yet what has holy page more sweet,
Or what had woman's love more fair
When Mary clasped her Saviour's feet
With flowing eyes and streaming hair?

Meek child of sorrow, walk unknown,
The Angel of that earthly throng,
And let thine image live alone
To hallow this unstudied song!

LITERARY NOTICES.

Sir Walter Raleigh and his Time, with other Papers. By CHARLES KINGSLEY, Author of "Hypatia," "Two Years Ago," etc. Boston: Ticknor & Fields. 12mo.

THIS collection of Mr. Kingsley's miscellaneous writings is marked by the same qualities of mind and temper which have given celebrity and influence to his novels. An earnest man, with strong convictions springing from a fervid philanthropy, fertile in thought, confident in statement, resolute in spirit, with many valuable ideas and not a few curious crotchets, and master of a style singularly bold, vivid, passionate, and fluent, he always stimulates the mind, if he does not always satisfy it.

The defects of his intellect, especially in the treatment of historical questions, proceed from the warmth of his temperament. His impulses irritate his reason. Intellectually impatient with all facts and arguments which obstruct the full sweep of his theory, he has an offensive habit of escaping from objections he will not pause to answer, by the calling of names and the introduction of Providence. He is most petulantly disdainful of others when he has nothing but paradoxes with which to oppose their truisms. He has a trick of adopting the manner and expressions of Carlyle, in speaking of incidents and characters to which they are ludicrously inapplicable, and becomes flurried and flippant

on occasions where Carlyle would put into the same words his whole scowling and scornful strength. He frequently mistakes sympathy with suffering for insight into its causes, and an eloquent statement of what he thinks desirable for an interpretation of what really is. He has bright glimpses of truth, but they are due rather to the freedom of his thinking than to its depth; and in the hurry and impatient pressure of his impulses, he does not discriminate between his ideas and his whims. He seems to be in a state of insurrection against the limitations of his creed, his profession, and his own mind, and the impression conveyed by his best passages is of splendid incompleteness. It would be ungracious to notice these defects in a writer who possesses so many excellences, were it not that he forces them upon the attention, and in their expression is unjust to other thinkers. His intellectual conceit finds its vent in intellectual sauciness, and is all the worse from appearing to have its source in conceit of conscience and benevolence.

In spite of these faults, however, Mr. Kingsley's reputation is not greater than he deserves. He is one of the most sincere, truthful, and courageous of writers, has no reserves or concealments, and pours out his feelings and opinions exactly as they lie in his own heart and brain. We at least feel assured that he has no imperfections which he does not express, and that there is no disagreement between the book and the man. He is commonly on the right side in the social and political movements of the day, if he does not always give the right reasons for his position. His love, both of Nature and human nature, is intense and deep, and this gives a cordiality, freshness, and frankness to his writings which more than compensate for their defects.

The present volume of his miscellanies contains not only his essays and reviews, but his four lectures on "Alexandria and her Schools," and his "Loose Thoughts for Loose Thinkers." Of the essays, those on "North Devon" and "My Winter Garden" are the best specimens of his descriptive power, and those on "Raleigh" and "England from Wolsey to Elizabeth," of his talents and accomplishments as a thinker on historical subjects. The literary papers on "Tennyson," "Burns,"

"The Poetry of Sacred and Literary Art," and "Hours with the Mystics," are full of striking and suggestive, if somewhat perverse, thought. The volume, as a whole, is read with mingled feelings of vexation and pleasure; but whether provoked or delighted, we are always interested both in the author and his themes.

A Journey due North: Being Notes of a Residence in Russia. By GEORGE AUGUSTUS SALA. Boston: Ticknor & Fields 16mo.

ALTHOUGH the matter of this brilliant volume is of intrinsic interest, its charm is due more to the mode of description than even to the things described. It gives us Russia from a Bohemian point of view. The characteristics of Mr. Sala are keen observation, vivid description, lively wit, indomitable assurance, and incapacity of being surprised. To his resolute belief in himself, in what he sees with his own eyes and conceives with his own brain, the book owes much of its raciness, its confident, decisive, "knowing" tone, its independence of the judgments of others, and its freedom from all the deceptions which proceed from such emotions as wonder and admiration. The volume is read with a pleasure similar to that we experience in listening to the animated talk of an acquaintance fresh from novel scenes of foreign travel, who reproduces his whole experience in recalling his adventures, and gives us not merely incidents and pictures, but his own feelings of delight and self-elation.

The three introductory chapters, describing the journey to St. Petersburg, are perhaps the most brilliant portions of the book. The delineations of his fellow-passengers, in the voyage from Stettin to Cronstadt, especially the portraits of the swearing Captain Smith and the accomplished Russian noble, are admirable equally for their humor and their sagacity. The account of the landing at Cronstadt, the scenes at the Custom-House, the author's first walk in St. Petersburg, and his first drive in a droschky, are masterpieces of familiar narration, and fairly convert the readers of his book into companions of his journey. The description of the manners and customs of the Russian people, the

shrewd occasional comments on the policy of the government, and the thorough analysis of the rascality of the Russian police, are admirable in substance, if somewhat flippant in expression. In power of holding the amused attention of the reader, equally by the pertinence of the matter and the impertinence of the tone, the volume is unexcelled by any other book on the subject of Russia.

The New Priest in Conception Bay. Boston : Phillips, Sampson & Co. 1858. 2 vols. 12mo.

THE southeastern portion of the island of Newfoundland, as may be seen by a glance at the map, may be well described by that expressive epithet of "nook-shot-ten," which in Shakspeare is applied to the mother-land of which it is a dependent. The land is indented by bays and estuaries, so that it bears the same relation to the water that the parted fingers of an outstretched hand do to the spaces of air that are between them. One of these inlets bears the name of Conception Bay; and it is around the shores of this bay that the scene of this novel is laid. Everything in it suffers a sea-change; everything is set to the music of the winds and the waves. We find ourselves among a people with whom the sea is all, and the land only an appendage to the sea,—a place to dry fish, and mend nets, and haul up boats, and caulk ships. But though the view everywhere, morally and physically, is bounded by the sea, and though one of the finest of the characters is a fisherman, yet the moving springs of the story are found in elements only accidentally connected with the sea, and by no means new to novel-writers or playwrights. The plot of the novel is taken from, or founded upon, the peculiar relations existing between the Roman Catholic priesthood and the female sex; and, with only a change in costume and scenery, the events might have taken place in Maryland, Louisiana, or France.

The novel is one of a peculiar class. To borrow a convenient phraseology recently introduced into the language, its interest is more subjective than objective,—or, in other words, is derived more from marked and careful delineations of indi-

vidual character than from the march of events or brilliant procession of incidents. With a single exception,—the abduction of the fisherman's daughter,—the occurrences narrated are such as might happen any day in any small community living near the sea. Novels constructed on this plan are less likely to be popular than those in which the interest is derived from a skilfully-contrived plot and a rapid and stirring succession of moving events. To what extent the work before us may be popular we will not undertake even to guess; for we have had too frequent experience of the capriciousness of public taste to hazard any prediction as to the reception a particular book may meet with, especially if it rely exclusively upon its own merits, and be not helped by the previous reputation of the writer. But we certainly can and will say that to readers of a certain cast it will present strong attractions, and that no candid critic can read it without pronouncing it to be a remarkable work and the production of an original mind. The author we should judge to be a man who had lived a good deal in solitude, or at least removed from his intellectual peers,—who had been through much spiritual struggle in the course of his life,—who had been more accustomed to think than to write, at least for the press,—and whose own observation had revealed to him some of the darker aspects of the Roman Catholic faith and practice.

There is very little skill in the construction of the plot. Most of the events stand to each other in the relation of accidental and not of necessary succession, and might be transposed without doing any harm. Many pages are written simply as illustrations of character; and a fair proportion of the novel might be called with strict propriety a series of sketches connected by a slight thread of narrative. But it would be unreasonable to deal sharply with an author for this defect; for the faculty of making a well-constructed story, in which every event shall come in naturally, and yet each bring us one step nearer to the journey's end, is now one of the lost arts of earth. But this is not all. A considerable portion of it must be pronounced decidedly slow. We use the word not in its slang application, but in the sense in which Goldsmith used it in the first line of "The

Traveller," or rather, as Johnson told him he used it, when he said to him,—“You do not mean tardiness of locomotion; you mean that sluggishness of mind which comes upon a man in solitude.” But the slowness of which novel-readers will complain is not mere commonplace, least of all is it dulness. It is the leisurely movement of a contemplative mind full of rich thought and stored with varied learning. Such a writer *could not* have any sympathy with the mercurial, vivacious, light-of-foot story-tellers of the French school. The author of “The New Priest in Conception Bay,” we surmise, has not been in the habit of packing up his thoughts for the market, by either writing for the press, or conversing with clever and nimble-witted men and women, and thus does not always distinguish between cargo and dunnage. The current of the story often flows with a very languid movement. It happens, rather unluckily, that this is particularly true of the first seventy pages of the first volume. We fear that many professional novel-readers may break down in the course of these pages; and we confess ourselves to have been a little discouraged. But after the ninth chapter, and the touching account which Skipper George gives of the death of his boys,—a story which the most indifferent cannot peruse without emotion,—the reader may be safely left in the author’s hands. They will go on together to the end, after this, on good terms. And the prospect brightens, and the horses are whipped up, as we advance. The second volume is much more interesting, in the common sense of the word,—more stirring, more rapid, more animated, than the first.

It is but putting our criticism into another form to say that the novel is too long, and, as a mere story, might with advantage be compressed into at least two-thirds of its present bulk. There are, especially, two departments or points to which this remark is applicable. In the first place, the conversations are too numerous, too protracted, and run too much into trivialities and details. In the second place, the descriptions of scenery are too frequently introduced, and pushed to a wearisome enumeration of particulars and minute delineation of details. In this peculiarity the author is kept in countenance by most respectable

literary associates. This sort of Pre-Raphaelite style of scenery-painting in words is a characteristic of most recent American novels, especially such as are written by women. Every rock, every clump of trees, every strip of sea-shore, every sloping hillside, sits for its portrait, and is reproduced with a tender conscientiousness of touch wholly disproportioned to the importance of the subject. When human hearts and human passions are animating or darkening the scene, we do not want to be detained by a botanist’s description of plants or a geologist’s sketch of rocks. The broad, free sweeps of Scott’s brush in “The Pirate” are more effective than the delicate needle-point lines of the writer before us.

We think, too, that too much use is made of those strange and uncouth dialects which have to be represented to the eye by bad spelling. We have the familiar Yankee type in Mr. Bangs, and a new form of phraseology in the speech of the Newfoundland fishermen. A little of this is well enough, but it should not be pushed to an extreme. The author’s style, in general, is vigorous and expressive; it is the garb of an original mind, and often takes striking forms; but in grace and simplicity there is room for improvement, and we doubt not that improvement will come with practice.

There are many passages which we should like to quote as specimens of the imaginative power, forcible description, and apt illustration which are shown in this work. Whether the author has ever written verse or not, he is a poet in the best sense of that much-abused word. To him Nature in all its forms is animated; it sympathizes with all his moods, and takes on the hues of his thought. There are very few of these paragraphs that are easily separable; they are fixed in the page, and cannot be understood apart from it. Besides, many of these beauties are minute,—a gleaming word here and there,—but making the track of the story glow like the phosphorescent waters of the tropics.

We give a few paragraphs at random :—

“Does the sea hold the secret?”

“Along the wharves, along the little beaches, around the circuit of the little coves, along the smooth or broken face of rock, the sea, which cannot rest, is busy. These little waves

and this long swell, that now are here at work, have been ere now at home in the great inland sea of Europe, breathed on by soft, warm winds from fruit-groves, vineyards, and wide fields of flowers,—have sparkled in the many-colored lights, and felt the trivial oars and dallying fingers of the loiterers, on the long canals of Venice,—have quenched the ashes of the Dutchman's pipe, thrown overboard from his dull, laboring *treckschuyt*,—have wrought their patient tasks in the dim caverns of the Indian Archipelago,—have yielded to the little builders under water means and implements to rear their towering altar, dwelling, monument.

"These little waves have crossed the ocean, tumbling like porpoises at play, and, taking on a savage nature in the Great Wilderness, have thundered in close ranks and countless numbers against man's floating fortress,—have stormed the breach and climbed up over the walls in the ship's riven side,—have followed, howling and hungry as mad wolves, the crowded raft,—have leaped upon it, snatching off, one by one, the weary, worn-out men and women,—have taken up and borne aloft, as if on hands and shoulders, the one chance human body that is brought in to land, and the long spar, from which man's dangling cordage wastes by degrees, and yields its place to long, green streamers, much like those that clung to this tall, taper tree when it stood in the Northern forest.

"These waves have rolled their breasts about amid the wrecks and weeds of the hot stream that comes up many thousands of miles out of the Gulf of Mexico, as the great Mississippi goes down into it, and by-and-by these waves will move, all numb and chilled, among the mighty icebergs and ice-fields that must be brought down from the poles."

"She asked, 'Have you given up being a priest, Mr. Urston?'

"'Yes!' he answered, in a single word, looking before him, as it were along his coming life, like a quoit-caster, to see how far the uttered word would strike; then, turning to her, and in a lower voice, added, 'I've left that, once and forever.'"

"He stood still with his grief; and, as Mr. Wellon pressed his honest, hard hand, he lifted to his pastor one of those childlike looks that only come out on the face of the true man, that has grown, as oaks grow, ring around ring, adding each after-age to the childhood that has never been lost, but has been kept innermost. This fisherman seemed like one of those that plied their trade, and were the Lord's disciples, at the Sea of Galilee, eighteen hundred years ago. The very flesh and

blood inclosing such a nature keep a long youth through life. Witness the genius, (who is only the more thorough man,) poet, painter, sculptor, finder-out, or whatever; how fresh and fair such an one looks out from under his old age! Let him be Christian, too, and he shall look as if—shedding this outward—the inward being would walk forth a glorified one."

"As he mentioned his fruitless visits, a starting, most repulsive leer just showed itself in Ladford's face; but it disappeared as suddenly and wholly as a monster that has come up, horrid and hideous, to the surface of the sea, and then has sunk again, bodily, into the dark deep, and is gone, as if it had never come, except for the fear and loathing that it leaves behind. This face, after that look, had nothing repulsive in it, but was only the more subdued and sad."

The author's mind so teems with images, that he does not always discriminate between the good and the bad. Occasionally we find some that are manifestly faulty and overstrained.

"It is one on which the tenderness of the deep heart of the Common Mother breaks itself; over which *the broad, dark, silent wings of a dread mystery are stretched.*"

"Her voice had in it that tender *touch* which *lays itself, warm and loving*, on the heart."

"And then her voice began to *drop down*, as it were, *from step to step*,—and the *steps seemed cold and damp, as it went down them lingeringly*:—'or for trial,—disappointment,—whatever comes!'—and at the last, it *seemed to have gone down into a sepulchral vault.*"

We do not admire any one of the above,—least of all the last, in which the human voice is embodied as a sexton going down the steps of a tomb. Why, too, as a matter of verbal criticism, should the author use such words as "tragedist," "exhibitress," and "cheaty?"

In the delineation of character the author shows uncommon power and is entitled to high praise. His portraits are animated, life-like, and individual. Father Terence is drawn with a firm and skilful touch. The task which the author prescribed to himself—to present an ecclesiastic without learning, without intellectual power, without enthusiasm, and with the easy habits of a careless and enjoyable tem-

perament, and yet who should be respectable, and even venerable, by reason of the soundness of his instincts and his thorough right-heartedness—was not an easy one; but in the execution he has been entirely successful. We cannot but surmise that he has met sometime and somewhere a living man with some of the characteristic traits of Father Terence. Father Ignatius, the conventional type of the dark, wily, and dangerous ecclesiastical intriguer, is an easier subject, but not so well done. He is a little too melodramatic; and we apply with peculiar force to him a criticism to which all the characters are more or less obnoxious, that he is too constantly and uniformly manifesting the peculiar traits by which the author distinguishes him from others. Father Debreë and Mrs. Barré are drawn with powerful and discriminating touch, and we recognize the skill of the writer in the fact that we had read a considerable portion of the novel before we had any suspicion of the former relations between them. We may here say that we think that the women who may read this work will want to know, a little more fully and distinctly than the author has seen fit to tell, what were the causes and influences which led to the severing of those relations. We cannot state our meaning more clearly, without doing what we think should never be done in the review of a new novel, and that is, telling the story, and thus removing half the impulse to read it. Skipper George and his household, and the smuggler Ladford, are very well drawn,—not distinctly original, and yet with distinctive individual traits, which sharp observation must, to some extent, have furnished the author with.

But to our commendation of the characters we must make one exception: we humbly and respectfully submit that Mr. Bangs is a portentous bore, and we heartily wish that he had been drowned before he ever set his foot upon the shores of Newfoundland. It is possible, however, that in this case we are not impartial judges; for we confess, that, for our own private reading, we are heartily weary of the Yankee,—we mean as a literary creation,—of the eternal repetition of the character of which Sam Slick is the prototype,—which is for the most part a caricature, and no more to be

found upon the solid earth than a griffin or a centaur. And in our judgment the theological discussions between this worthy and Father Terence are not in good taste. The author surely would not have us suppose that the wretched, skimble-skamble stuff which the latter is made to talk is any fair representative of the arguments by which the Church of Rome maintains its dogmas and vindicates its claims. A considerable amount of literary skill and a quick perception of the ludicrous are shown in the ridiculous aspect which the good Father's statements and reasonings are made to assume in passing through Mr. Bangs's mind; but we doubt whether such exhibitions are profitable to the cause of good religion, and whether the advantage thereby secured to Protestantism is not purchased at the price of some danger to Christianity. It is not well to teach men the art of making mysteries ridiculous.

But we take leave of our author and his book with high respect for his powers,—we do not know but that we may say his genius,—and with no small admiration for this particular expression of them. The very minuteness of our criticism involves a compliment. It has been truly said, that many men never write a book at all, but that very few write only one. We think that the author of "*The New Priest in Conception Bay*" must and will write more. A mind so fruitful and inventive, a spiritual nature so high and earnest, and an observation so keen and correct, cannot fail to accumulate materials for future use. We predict that his next novel will be better than this,—that it will have all its substantial and essential merits, and will show more constructive skill and a more practised hand in literary artisanship. His gold will be more neatly wrought, and not less pure and abundant.

Summer Time in the Country. By REV. ROBERT ARIS WILLMOTT. London and New York: George Routledge. Square 12mo. Illustrated.

WE first made the acquaintance of this work in a shilling volume, a "railway-library edition," and were charmed with its genial tone, its nice appreciation of rural scenery, its agreeable and unpedantic

learning. It is a diary for the summer months, with notes upon the changing aspects of Nature, reminiscences from the poets, and appropriate comments. We are glad now to welcome the book in this form, wherein satin paper, careful typography, delicate engravings, and handsome binding have been employed to give it an appropriate dress.

Annual Obituary Notices of Eminent Persons who died in the United States during the Year 1857. By NATHAN CROSBY. Boston: Phillips, Sampson, & Co. 8vo. pp. 430.

THE object of this work is best stated in the words of the author, as being "the result of a long and earnest desire to give a more permanent and accessible memorial to those who have originated and developed our institutions,—those whose names should be remembered by the generations to come, as the statesmen, the soldiers, the men of science and skill, the sagacious merchants, the eminent clergymen and philanthropists,—those who have brought our country to the prosperity and distinction it now enjoys."

Eulogies, funeral sermons, and obituaries soon pass out of remembrance, and an annual compilation like this cannot fail to be of service. The work appears to have been done with impartiality and care.

The Poetical Works of Edgar Allan Poe, with an Original Memoir. Illustrated by F. R. PICKERSGILL, JOHN TENNIEL, BIRKET FOSTER, FELIX DARLEY, and others. New York: J. S. Redfield. 8vo. pp. 250.

THE poems of Poe have taken their place in literature; it is too late to attempt anything like a contemporaneous criticism, too early to anticipate the judgment of posterity. But whatever were the faults of this gifted and erratic genius, much that he has written has become a part of the thought and memory of the present gen-

eration of readers, and will doubtless go to our children with equal claims.

In this volume it would seem that the arts connected with book-making have culminated; paper, typography, drawing, and engraving are all admirable. There are no fewer than fifty-three wood-engravings, of various degrees of excellence, but all exquisitely finished. The lovers of fine editions of poetry will find this a gift-book which the most fastidious taste will approve. If we could add that this mechanical excellence was from American hands, it would be much more grateful to our national pride.

Black's Atlas of North America. Boston: Little, Brown, & Co.

NOTHING could well be more convenient than this series of twenty maps. They are carefully executed, of a size not too large for easy handling, and bound in a thin, light volume. They are preceded by some introductory statistical matter which is very useful for purposes of ready reference, and accompanied by an index so arranged that one can find the name he seeks on any map with great facility. We have seen no maps of North America which seemed to us, on the whole, at once so cheap and good.

AMONG the announcements of illustrated works in press, we notice "The Stratford Gallery, comprising Forty-five Ideal Portraits described by Mrs. J. W. Palmer. Illustrated with Fine Engravings on Steel, from Designs by Eminent Hands."

In one vol. 8vo. Antique morocco. New York: D. Appleton & Co.

THE many admirers of the "AUTOCRAT" will learn with pleasure that a fine edition of his charming volume is in preparation, with tinted paper, illustrated by Hoppin, and bound in elegant style. Probably no holiday-book will be in such demand this season.
